III. *TEACHING OF THE OT.*—In order to discover the general trend of the OT teaching it is essential first to discuss, however briefly, the exegesis of the separate passages which speak, or may be reasonably thought to speak, of the coming of a Messiah; in no other way is it possible to realize the precise extent and nature of the hope. The examination is complicated not merely by difficulties of interpretation, but also by questions as to authenticity and date. Here it should be noted that, if critics reject as late certain passages which refer to the Messiah, it is by no means always from any *a priori* unwillingness to allow the Messianic hope to be of early date or to find it in a particular prophet, but because on external evidence such passages seem to be inconsistent with the context. In many cases they presuppose the Exile in a way which seems to be impossible in a pre-Exilic writer; in others the note of hope and promise seems to nullify the message of judgment and punishment which occupies the central place. Here the criterion to be applied is a very delicate one. How far did threats and promises actually exist side by side in the message of the same prophet? At what point do the promises become so contradictory of the threats that they can be regarded only as later insertions? However these questions may be answered in any particular case, it may not be superfluous to point out that, when a passage is regarded as 'unauthentic' and late, it does not lose its value, either historical or religious; and it still remains evidence of the Messianic hope, only in a different age and circle from that to which it is commonly assigned. The principle being admitted that the prophetic books are composite works, comprising elements of various periods, each case must be judged solely on its merits.

1. **The data.**—It will be well to begin with 2 S 7 as the passage which is most clearly typical of the OT belief, at any rate on one side. It seems to be Deuteronomic in tone, and can hardly be earlier than the reign of Josiah. Its main purport is to insist on the permanence of the Davidic dynasty (vv.$^{11.\ 16}$). In its context this is contrasted with the fall of Saul's house (v.^{15}), but we may also assume an implied contrast with the various short-lived dynasties of the Northern Kingdom (cf. Hos 8^{4}). The passage itself does not speak of any single pre-eminent or final successor of David and is in no way eschatological, but precisely in proportion as the actual occupants of the throne proved themselves unworthy would it be natural to look for some one king who could realize the ideal. And, if at the same time there were other expectations of a wonderful Saviour, the two lines of hope would easily coalesce. At any rate, the personal Messiah in the OT is nearly always associated with the Davidic dynasty, and the references in the early prophets which have any claim to be regarded as Messianic are all connected with it. They may, indeed, be older than 2 S 7, and in any case this passage will hardly be the origin of the hope; it rather embodies and gives literary form to something which already existed.

In Am 9^{11-15} there is a promise of the restoration of the Davidic dynasty, with no reference to a personal Messiah, but the passage is almost certainly an Exilic addition (so J. Wellhausen, K. Marti, G. A. Smith, etc., though S. R. Driver[*] defends it with some hesitation).

In Hosea it may not be necessary, with Marti and Volz, to reject all passages which speak of future happiness, but the only verse which is in any way Messianic in the strict sense is 3^{5}, 'Afterward shall the children of Israel return, and seek the Lord their God, and David their king.' Here, again, the stress is laid on the Davidic dynasty; but either the whole verse or at least the words 'David their king' are of doubtful authenticity.

The crux of the question with regard to early Messianic prophecy is reached when we come to Isaiah.

(*a*) Is $7^{14\text{ff.}}$.[†]—Until a new factor was introduced by considerations derived from comparative religion, it was becoming generally agreed that the passage had no reference to the birth, miraculous or otherwise, of a Saviour-child or king at all. As Gray points out, the promised sign is not necessarily a marvel or miracle (cf. Ex 3^{12}, 1 S $2^{27\text{ff.}}$), but is to be found 'in the chain of events predicted.' By the time a child shortly to be born reaches a certain age the promised deliverance will have come. His name Immanuel does not imply the divinity of the child, or even that he will play a rôle as God's agent in the deliverance (as a matter of fact, there is not the least hint that he does anything of the sort), but, after the common Hebrew usage, expresses the point of view of the parents; it is the reverse of Ichabod (1 S 4^{21}). H. Gressmann,[‡] however, and others argue that the passage is intelligible only if we suppose an already existing belief in the advent of a divine Saviour-child, who is to be born mysteriously. On this view the virgin is 'the virgin of prophecy,' the mother spoken of in the tradition; 'butter and honey' are the food of the gods, as in Iranian and Greek myth; and the whole passage has a mythological background. The theory has an undeniable fascination, but its main hypothesis cannot yet be regarded as proved (see below, 2 (*d*)). In this case it rests on the probably false assumption that the sign must be of a miraculous nature. Further, neither the article nor the noun in *hāʿalmāh* requires the meaning put upon it. If we reject the reference to the wife of Isaiah or Ahaz or to some other particular mother, the definite article may be generic as in Am 3^{12}, while it is now generally agreed that *ʿalmāh* does not necessarily denote virginity, and is certainly not the word which would have been chosen if the supernatural character of the birth without a human father had been the point to be emphasized. 'Butter and honey' may be merely a symbol of plenty, a variant of the common 'milk and honey.'[1] But perhaps the chief objection to the mythological view is to be found in the fact, to which attention has already been called, that Immanuel does not play any part in the deliverance, nor does he afterwards appear as a factor in this or any other prophet's hopes for the future. The apparent reference to Immanuel in 8^{8} is quite meaningless; there has been nothing to suggest that the child is the king to whom the land belongs, and we should probably read with LXX 'for God is with us' (cf. v.^{10}).[2]

---

[1] *The Words of Jesus*, p. 291; see p. 292 for later Jewish use of the term.

[*] *Cambridge Bible*, 'Joel and Amos,' Cambridge, 1897, p. 119 ff.

[†] Reference should be made to the very full and excellent discussion of this and the other Isaianic passages in G. B. Gray, *ICC*, 'Isaiah,' Edinburgh, 1912.

[‡] *Der Ursprung der israelitisch-jüdischen Eschatologie*, Göttingen, 1905, p. 272 ff.; A. Jeremias, *Babylonisches im Neuen Testament*, Leipzig, 1905, p. 64 ff.; C. F. Burney, *JThSt* x. [1908–09] 580 ff. For criticism see C. Clemen, *Primitive Christianity and its Non-Jewish Sources*, Eng. tr., Edinburgh, 1912, p. 143.

(*b*) Is $9^{6\text{ff.}}$ is a passage of a very different character. We have here a true Davidic Messiah, but it is important to note that the restoration is the work of Jahweh Himself; the child is not himself a conqueror, but is born to be Prince of Peace. The fourfold name is remarkable, and, as Gray points out, 'mighty God' must not be toned down to 'mighty hero'; it is unique in the OT. Clemen[3] admits that all four titles are 'perhaps mythological,' and the passage suggests the influence of the *Hofstil* (see below). The child apparently ascends the throne at once—a suggestion that it is empty at the time of his birth; this may perhaps imply an Exilic date, though there is nothing else in the passage itself which necessitates its being placed later than Isaiah.[4] It is, in fact, the clearest and best passage to establish an early expectation of a Messiah. It is, however, very remarkable that the passage seems to have had no influence on later literature, being never referred to either in the OT or in the Apocalypses or the NT.[5]

(*c*) Is $11^{1\text{ff.}}$ had, on the contrary, a great influence on later thought, and lies behind the picture of the Messiah as drawn in many apocalyptic passages; in particular, the term 'Branch' became technical. Here, again, the Messiah is Davidic, with a special endowment of the Spirit. We note, too, the stress laid on the return of the Golden Age—a feature which may be derived from foreign mythology. At any rate, we have the Davidic Messiah in a clearly eschatological setting; v.^{1} seems to imply a date after 586 B.C.;[6] the metaphor is that of a tree cut down to the stump and sending out fresh shoots, which would describe exactly the revival of the kingdom after its ruin at the fall of Jerusalem.

Mic $5^{2\text{ff.}}$ is peculiarly difficult.[*] Omitting minor questions of reading and exegesis, the main points are as follows. (*a*) The passage follows, though it may not be originally connected with, an eschatological passage in ch. 4 (cf. Is 2) where there is no mention of a Messiah. (*b*) It speaks of a Messianic king born at Bethlehem Ephrathah, and, therefore, Davidic; in spite of his humble origin (so G. A. Smith, *The Twelve Prophets*, London, 1896, i. 413 ff.), he is to be a great and apparently a peaceful ruler. Is more than this hinted at? In particular, does v.^{2b} imply pre-existence or merely the antiquity of the family from which he springs? And what is the meaning of 'she which travaileth'? Gressmann and others explain it of the divine mother, and J. M. P. Smith admits this, but regards the verse as a late gloss, implying a Messianic interpretation of Is 7^{14}; the change of person from both v.^{2b} and v.^{4} is very awkward, and so is the contradiction between Jahweh's abandonment of His people and the previous verse. But, even if a mysterious birth is hinted at, there is no suggestion that the mother is a virgin or that the child is in any way connected with Immanuel. Whatever the date of the verse, it is far better to follow some of the older commentators (Calvin, Orelli, etc.) and see in the phrase a reference to the birth-pangs of Zion in $4^{9\text{f.}}$, where exactly the same word is used for 'travaileth,' while in both passages the return of the remnant is referred to (cf. Hos 13^{13}, Is 26^{17}, where the same figure of travail is used). 'She which travaileth' is, therefore, Zion personified. (*c*) Verse ^{2} certainly implies that there is no reigning king and, therefore, suggests an Exilic date. (*d*) Verse $^{5\text{ff.}}$ seem to belong to a different prophecy (tr. 'This'—not 'This man'—'shall be our protection'). The Messiah drops out, and the confidence of the passage rests on a different basis.[†]

In Jeremiah the main stress is laid on the continuance of the Davidic line, and this figures prominently in the book as we have it—a feature which is significant in view of the Deuteronomic origin of the fundamental passage 1 S 7. In $23^{5\text{ff.}}$[‡] we have the righteous Branch or Shoot (*ṣemaḥ*, not *nēṣer* , as in Is 11), with the name Jahweh Ṣidqēnū, 'The Lord our Righteousness,' perhaps with an ironic reference to Zedekiah, the reigning king. But the application of the same term to Jerusalem in the parallel passage (33^{16}) shows that the main stress is on the dynasty rather than on any single or final representative, and this feature appears clearly in 17^{25} 22^{4} ('kings sitting upon the throne of David'),[§] while in $33^{14\text{ff.}}$ a very special emphasis is laid on the covenant with David, interpreted as meaning that he should never want a successor. In 30^{9} ('they shall serve the Lord their God, and David their king, whom I will raise up unto them') the reference seems to be to each successive representative rather than to any single descendant, or to a belief in the actual return of David himself. Finally, we note that Jahweh Himself is consistently the agent of deliverance, the Davidic king appearing only after the salvation is completed.

The general presentation in Ezekiel agrees with that of Jeremiah. We have references to 'David my servant,' as the ruler of the future (34^{23} 37^{24}), with pictures of the Golden Age and a strong stress on the presence of Jahweh Himself. In $17^{22ff.}$ the cedar twig planted on the mountain of the height of Israel may be a reference to the prophecies of Isaiah (?) and Jeremiah, while 'until he come whose right it is' (21^{27}) suggests the Shiloh prophecy of Gn 49^{10}.[*] On the other hand, in the ideal State of chs. 40 ff. the 'Prince' is only one of a series of kings, and plays a very subordinate part in the reformed Jerusalem. The general impression given by Ezekiel is that he was acquainted with popular hopes of an individual Messiah and, in particular, with the promises attached to the Davidic dynasty; these were too strong to be entirely ignored, but the priest-prophet himself had little real interest in them.

---

[1] It is not necessary for our present purpose to enter on the vexed question whether the passage is a threat or a promise; in either case we must suppose a certain amount of later insertions or of combination of passages written at different periods. Those who regard the passage as a threat take 'butter and honey' as a symbol of scarcity and nomadic fare—a view which Gray criticizes severely.

[2] The fact that the LXX has this rendering here suggests that its rendering *παρθένος* in 7^{14} does not, as is often argued, imply that it interpreted the passage Messianically. For, if it had done so, it would surely not have dropped the only other possible reference to the divine child.

[3] P. 145.

[4] See Gray, *ad loc.* (p. 168), for a criticism of R. H. Kennett's argument (*The Composition of the Book of Isaiah*, London, 1910, p. 71) that the word used for 'boot' means a military boot worn by Syro-Greek soldiers, this implying a Maccabean date. Gray himself leaves the date open.

[5] Dalman, p. 317, n. 1.

[6] So Gray, etc.; Driver, B. Duhm, and G. A. Smith, however, keep the Isaianic date; see *HDB* ii. 488, for Smith's arguments.

[*] See J. M. P. Smith, *ICC*, 'Micah, Zephaniah and Nahum,' Edinburgh, 1912, *ad loc.*; Gressmann, pp. 278, 284.

[†] P. Haupt, in *Trans. of the Congress for the History of Religions*, Oxford, 1908, i. 268, argues for a Maccabean date; so Marti.

[‡] C. H. Cornill and Marti accept the passage as genuine.

[§] So in 3^{15} 23^{4} the rulers in the happy future are shepherds, in the plural (cf. the 'saviours on mount Zion,' Ob ^{21}).

In Hag 2^{23} Zerubbabel is to be the ruler in the Messianic Age. So in Zec 3^{8} 6^{12}[†] he is the 'Branch' and the servant of Jahweh. The importance of the passages is twofold: (*a*) we have the first undoubted example of the identification of a historical person with the Messiah; (*b*) the reference to the Branch shows, even more decisively than in Ezekiel, that earlier prophecies were being studied and interpreted in accordance with contemporary conditions.

Zec 9^{9} belongs to another and a later prophecy. Though the ass may originally have been the symbol of royalty (cf. Gn 49^{11}), it here stands for humility. The king is victorious over his enemies ('saved' rather than 'having salvation'), but the stress is on the peaceful character of his rule. He is not explicitly Davidic.

In the Psalms we are concerned with a group of royal Psalms, especially 2, 45, 72, 89, 110, 132. Here we are met with almost insoluble problems as to date, since there is not even the *a priori* presumption which we have in the case of passages which stand in the writings of a particular prophet. Further, we must allow for the possibility of glosses in the course of the many editings through which the various Psalters passed; such glosses may have emphasized a supposed Messianic reference—*e.g.*, Ps 72^{8-12}.[‡] In all these Psalms we find startling language used of kings, the extent of their dominion, and their power, usually with stress on the Davidic covenant. It is common ground that such language was never strictly true of any Israelite king in either kingdom. Are these Psalms, then, addressed to the expected Deliverer of the future, *i.e.* to the Messiah? The objection to this view is the strong impression made in most cases that a definite living king is addressed; *e.g.*, Ps 45 is clearly an actual marriage song and is accepted as such, *e.g.*, by Kirkpatrick and Briggs. And, if some of these Psalms are to be understood historically, the general similarity of language suggests that the same principle is to be applied to all. A. F. Kirkpatrick,[§] in fact, argues that all have a primary historical reference, of course without prejudice to their spiritual application. In interpreting the language we are helped by the existence of the *Hofstil*, or 'Court style,' to which Gressmann[‖] and others call attention. Exaggerated language of this kind was a regular feature of the court addresses and poems in honour of Oriental monarchs; cf. the language of Ps 21^{4-8}, which is certainly addressed to an actual king. It is possible that this *Hofstil* in Israel, and perhaps elsewhere (see below, **2** (*d*)), included elements derived from the Messianic expectation. If it was believed that some one member of the Davidic dynasty should be the greatest of all, it was natural for the admirers of any king to suggest on his accession that he and no other was the long-desired. In this case the Psalms may be called quasi-Messianic, and at least illustrate the nature of the Messianic hope.

A warning against too strict an interpretation of this *Hofstil* is to be found in the phenomena presented by the Babylonian hymns. We find Nannar addressed as 'begetter of gods and men,' 'King of kings who has no judge superior to him'; but then precisely the same flattery is offered to Asshur, Ishtar, or Nebo.

As H. F. Hamilton points out (*The People of God*, London, 1912, p. 8), 'the ascription of universal dominion to so many of them [*sc.* the gods] was merely a piece of inexpensive flattery which no one mistook for serious truth. . . . It was a sound policy to avoid too much partiality.'

In the same way we must beware of laying too much stress on the uniqueness, majesty, or finality ascribed to the king addressed in any particular Psalm. Its language, taken literally, may seem to be applicable only to a unique Messiah, but in the mouth of an Oriental its application is less strict or exclusive.

The following points are further to be noted. (i.) As in the Prophets, the stress is on the Davidic covenant; 2 S 7 seems to be continually before the poets' eyes. This is especially marked in Ps 89, which refers to the nation and the dynasty, the nation itself being personified in v.$^{40ff.}$ (cf. Is 5, Ps 80^{12}). So 'firstborn' in v.^{27} seems to refer to the description of Israel in Ex 4^{22}, while 'servant' in v.^{39} suggests a parallel with 2 Isaiah. The Psalm as a whole is a prayer for the restoration of the dynasty and the nation, rather than for the coming of any particular king who is to mark a new epoch. The same applies to Ps 132, though 'horn of David to bud' (v.^{17}) may refer to 'the Branch.' Ps 45, however, is not Davidic (Briggs and Sellin ascribe it to N. Israel), nor is Ps 110 except in the title.

(ii.) The language of the Psalter had great influence on later Messianic ideas, terms being used which afterwards became titles of the Messiah. As they occur in the Psalter they are, however, hardly technical; they are not used of one definite figure or king to the exclusion of all others. We have 'anointed' (Ps 2^{2} $89^{38.51}$ $132^{10.17}$) used in its general sense (see above, § II.), 'son' (2^{7}, probably not in 2^{12}), 'firstborn' (89^{27}), while 'thy throne, O God' (45^{6}), *may* imply deification.[*]

(iii.) Ps 110 stands alone in speaking of a priest-king, who is not, however, Levitical; it is very generally regarded as Maccabean, referring to Simon (see, however, Briggs, *ad loc.*).

There remain a few other OT passages, mainly fragments of poetry embedded in the historical books, which require brief notice.

Gn 49^{10}.[†]—It may be taken for granted that Shiloh is not a personal title of the Messiah. The first hint of such a view is found in the Talmud (*Sanh.* 98*b*), and it was not so used till the versions of the 16th century (Driver). The reading and interpretation are both doubtful, but it is possible that the passage is Messianic—'until he come whose right it is' (Ezk 21^{27}; see above) may be a reference.[‡] The question then arises whether the verse is a late addition on the basis of the Isaianic prophecies (Driver), or whether, with Gunkel, Gressmann, and Sellin, we are to regard it as a fragment of pre-prophetic eschatology, not specifically Davidic. But it is a strange eulogy to say that Judah shall rule only till the great one from elsewhere comes. Skinner holds that the reference is simply to the Davidic dynasty; Judah is to be independent till it is merged in the kingdom of its hero.

---

[*] As showing that earlier prophecies were by this time definitely studied, see 38^{17}, where there is a re-editing of Jer 3–6, Zeph 1^{7}.

[†] The text is in disorder; Zerubbabel must have been originally mentioned in 6^{11}; cf. 'crowns' in the plural and 'them both' in v.^{13}. Possibly when the power was centred in the high priest the text was deliberately altered, giving us perhaps the first example of the Levitical Messiah (see Driver, *Cambridge Bible*, *ad loc.*).

[‡] See C. A. and E. G. Briggs, *ICC*, 'Psalms,' Edinburgh, 1906–07, *ad loc.*

[§] See *Cambridge Bible*, 'Psalms,' Cambridge, 1892–1912, vol. i. p. lxxvi ff.

[‖] P. 250 ff.; E. Sellin, *Der alttestamentliche Prophetismus*, Leipzig, 1912, p. 169 ff.

[*] So Gressmann, p. 256. This interpretation, however, which is that of LXX and He $1^{8f.}$, is open to grave objections; note esp. that in v.^{7} we have 'Jahweh thy God.' Briggs supposes an interpolated address to God; Kirkpatrick favours, out of the many suggestions, 'thy throne is the throne of God,' or else 'thy Throne shall be for ever and ever,' *Elohim* having been substituted for an original *jhjh* or *jhvh*, misread as Jahveh.

[†] See Commentaries by Driver and Skinner, *ICC*, *ad loc.*

[‡] O. C. Whitehouse, however (*DCG* ii. 172), thinks that the Genesis passage is moulded on Ezekiel.

Of Gn 3^{15} the most that can be urged in the way of Messianic interpretation is that the passage is a prediction of the ultimate victory of man, the seed of the woman, in the conflict with evil, typified by the serpent. The 'seed' cannot be understood as referring to any definite descendant of Adam in the singular. The same applies to the other predictions in Genesis with regard to the seed of Abraham, where the thought is of the nation; the exegesis of St. Paul in Gal 3^{16} is admittedly untenable.

Nu 24^{17} is usually understood as referring to David's conquest of Moab. But, on the ground that 'star' suggests a semi-mythological figure, Sellin[*] and others find in the passage a trace of a primitive Messianic hope; others regard it as Messianic but late. Note that the passage is certainly corrupt at the close.

Dt 33^{17} may refer only to the dominion of Ephraim (the Song belongs to the N. Kingdom), but Sellin[†] again urges that the hyperbole is too strong and that we have an echo of an early Messianic hope, transferred to Ephraim. In later times the passage influenced the idea of the Messiah ben Joseph.[‡]

Dt 18^{15} (applied Messianically in Ac 3^{22} 7^{37}) is clearly a promise of a succession of prophets, not of a single and final prophet.

A word must be said with regard to the Servant passages of 2 Isaiah. Very few critics now consider these to be Messianic in the strict sense, the reference being either to the actual nation or to the ideal Israel. This is so clear in the early songs that it must also hold good of Is 53; this is best understood of the sufferings of the Exile, which are seen to have a redemptive value not only for the nation, but for the world as a whole.[§] Gressmann,[‖] however, on the ground of the obscure and oracular character of the language, argues that the writer is using already existing material which would be understood by his readers. Is 53 is a mystery hymn, addressed to a dying and rising God; He is treated as an eschatological figure, parallel to that of the Messiah, who is here neither Davidic nor specifically a king. It cannot be said that there is any real evidence for this view (for a criticism see Clemen, p. 149). Nor, again, is it possible to find a suffering God or Messiah in Zec 12^{10}, which clearly refers to some historical martyr.

In Dn $7^{13ff.}$[¶] there can be little doubt that the figure of 'a son of [a] man' appearing 'on' or 'with the clouds of heaven'[**] is, in the context, a symbol of Israel itself, a human being in contrast to the 'beasts,' the hostile world empires. But it is equally clear that the expression came to be understood of a personal Messiah (see below, IV. 2 (*d*) (2)), and it is urged with some reason that it did not originate with Daniel, but had a history behind it. The figure is introduced as familiar, and no explanation is given in the ch. of the coming with clouds, which may, therefore, be assumed to be a recognized element in the conception. Gressmann[1] believes that we have a figure of foreign origin, parallel with the Messiah and afterwards identified with him. To Sellin[2] he is the Messiah transformed, the *Urmensch*, or 'primal man,' of Paradise, who is to return once more; Clemen[3] is inclined to agree with this explanation of the origin.

In $9^{25f.}$ the references in the AV to the Messiah are certainly misleading.[4] In v.^{25} 'the anointed one, the prince,' is either Cyrus or Jeshua; in v.^{26} he is Onias the high priest.

2. Survey of OT teaching.—(*a*) From our review of the OT passages it becomes clear that the expectation of the Messiah in the strict sense occupied a comparatively subordinate place.[5] The fact that in a large number of books and passages which deal with the future he is not mentioned at all is of the greatest significance as showing that his coming was not an essential or invariable element in the national hopes; *e.g.*, he is never mentioned in Zephaniah, which is entirely eschatological, nor in Joel. It cannot be assumed, as the Christian interpreter often unconsciously assumes, that the Messiah is in such cases taken for granted. There is, in fact, no hint of him, and often no room for him. Further, even in books or groups of writing where we have found possible references to him, there are many passages where he is completely ignored (*e.g.*, in Isaiah). The idea is introduced suddenly and sporadically and as suddenly dropped. Jahweh Himself is always the Redeemer and Saviour, and this is the essential and unvarying element in the OT teaching; the stress is on His coming and manifestation and not on that of any representative.[6]

(*b*) There are constant references to hopes connected with the dynasty of David, and these sometimes take the form of the expectation of another David, a specially endowed ruler. During the degradation and after the fall of the monarchy the earlier period was naturally idealized and became to the nation its Golden Age, while it became more and more necessary that he who was to revive its glories should be regarded as no ordinary man, but as the special representative of Jahweh.

(*c*) The way in which the references to the Messiah are introduced and the fact that they are so frequently enigmatic in form suggest that the Messianic belief was, above all, an element in the popular religion. It is wanting in the Priestly writings, and, as we saw, Ezekiel seems to have been somewhat suspicious of it; the prophets do not use it consistently, and it appears and disappears in an extraordinary way. Its connexion with the kingdom would commend it to the mind of the people, while religious teachers could avail themselves of it only with caution and reserve, though it could not always be entirely ignored. It is obvious that these were, in fact, the features which determined Christ's attitude to the hope in later times.

(*d*) In recent years the whole subject has been reconsidered in the light of comparative religion.[7] Gunkel and, especially for our present subject, Gressmann have urged that Jewish eschatology, including the Messianic hope, is not a new development in the prophetic or Exilic periods, but that it goes back to a far earlier age and is really not specifically Jewish at all. They argue that the hope of a semi-divine Deliverer, or *Heilbringer*, was a common possession of the ancient world, especially in Egypt and Babylonia, and that the OT language is intelligible only when understood as one expression of that hope. Sellin essentially agrees as to the antiquity of the belief, which he regards as not merely pre-prophetic but as pre-Davidic, while he rejects the hypothesis of its foreign origin, being ready to admit foreign influence only in colouring and details.[1]

Cheyne, *Bible Problems*, London and New York, 1904; W. O. E. Oesterley, *Evolution of the Messianic Idea*, London, 1908; criticisms in Gray, 'Isaiah,' and Clemen.

We have already had examples of the principles of this school as applied to such passages as Is 7, Mic 5, etc. It is further suggested[2] that the Messiah is the *Urmensch*, or primal man, the hero-king of Paradise, who is to return with the Golden Age at the end. Gressmann rightly points out that the Messiah is the prince of peace rather than a conqueror; *i.e.*, he is the king of the Golden Age restored by Jahweh. Sellin[3] develops this idea. Job 15^{7} suggests a tradition of the first man as pre-existent with God and sharing His wisdom; he finds a trace of this in Gn 3^{6}, 'to make one wise,'[4] while the same word is used in Jer 23^{5}, Is 52^{13}; cf. the stress on wisdom in Is 11^{2}. He is, further, the 'son of man' of Ps 8 and of Daniel, while his pre-existence is hinted at in Is 49^{1} 51^{16}. Gressmann further argues that the idea of world dominion cannot be Hebrew in origin; cf. Ps 72^{8}, where the river Euphrates is the centre of empire (it cannot be a boundary parallel to the 'ends of the earth'). Again, it is suggested that the descriptions of Jahweh ascending the throne and becoming king must have originally referred to a divine Messiah; the latter, Gunkel and Zimmern believe, is Babylonian in origin, while the same may be the case with the *Hofstil* in general.

The point of view is fascinating and has been argued with great ingenuity, but it has been generally felt that it lacks definite proof when we come to the details, whether of the OT passages or of the supposed parallels. As we have seen, the interpretation of the crucial passages is very doubtful. The Immanuel passage does not seem to refer to the Messiah hope at all, while, if 'she which travaileth' in Micah is understood of Zion, the idea of a mysterious origin disappears; the Shiloh passage is open to so many interpretations that it is very unsafe to build on it. It is quite true that with regard to eschatology in general (and it must be remembered that the view which we are considering starts from eschatology and not from the Messianic hope in particular) the prophets from Amos onwards give the impression of dealing with ideas already to some extent familiar, and it is equally true that the same is sometimes the case with the Messianic passages, but this does not justify us in finding the solution of every obscure passage in hypothetical popular traditions. We have already argued that the way in which the allusions to the Messiah are introduced does suggest that the idea was general and popular, used only occasionally and with some reserve by the prophets, so that it cannot be regarded as the discovery of any one of them. But of its great antiquity there is no real evidence. The passages in which it occurs are in many cases placed late on quite definite grounds, and we could hardly prove that it existed before the Exile except in the form of expectations connected with the permanence and glory of the house of David. We must, in fact, admit that data are wanting whereby we might fix with any certainty the period in which the hope arose. We can only say that the way in which the allusions are introduced does militate against its origin being placed in the Exilic period, in spite of the lack of definite evidence to the contrary, though they do not in any way carry it back to a dim antiquity.

A similar verdict of 'not proven' must be passed on the hypothesis of a foreign origin (with regard to foreign influence on details, such as in the *Hofstil* and partial parallels, especially at a later period, the case is somewhat different). The preceding discussions have already dealt with many of the points. Sellin[1] discusses the supposed parallels in some detail, and concludes that there is no real parallel to the expectation of a divine deliverer to come at the *end* of history or to usher in a new era. The most that we find is a yearning for the return of the Golden Age of Paradise, together with the courtier's flattery applied to some particular king that he will be the one to bring this about—*e.g.*, the famous Letter to Assurbanipal. A. H. Gardiner[2] has shown that the Leyden Papyrus has been misinterpreted and contains no reference to a 'Messiah,' while the Golenischeff Papyrus refers to a contemporary king Amen-em-het I. In all these cases we have examples of *Hofstil*, with the natural hope that each new king will bring in an era of peace and happiness, but no real evidence of a genuine expectation of a Messiah, which, Sellin concludes, is peculiar to Israel: 'The ancient East knows no eschatological king.'[3]

To return to the OT, the hypothesis of the wide-spread expectation of a Redeemer-King is not necessary to explain its language. We have in the earliest Messianic passages expectations connected with the revival and increased glory of the dynasty of David. There are also the eschatological hopes of the return of the Golden Age, which probably go back to a comparatively early period; this is to be brought about by Jahweh Himself; but, since all critical periods of progress are in actual experience connected with the appearance of some specially great individual (Israel was familiar with the work of an Abraham, a Moses, a David, or an Elijah), it was natural to believe that this salvation of Jahweh might be mediated by His earthly representative, who would then be looked for among the descendants of David; in this way the national and the eschatological hopes would easily be combined as we find them combined in the late passage Is 11. So far from the Davidic Messiah being the precipitation of widely diffused ideas of a world Saviour, the latter seems to have developed later as the offspring of the union of national and eschatological hopes.

IV. *DEVELOPMENT SUBSEQUENT TO THE OT.*—**I. The data.**—In passing to the period covered by the Apocrypha and the apocalyptic literature, it will be well again to begin by some examination of the actual data.[4]

(*a*) *Books where the Messianic hope is ignored.*—In the eschatology of the Apocrypha, with the exception of 2 Esdras, the Messianic hope is practically ignored. It is just possible that there may be a hint of it in the reference to the coming of the 'faithful prophet' in 1 Mac 14^{41} (cf. 4^{46}), but, if so, the hope appears in a very attenuated form. In 2^{57} the permanence, or, in the context, the restoration, of the Davidic kingdom is mentioned with no reference to the Messiah. In the rest of the books, though there may be hints of the Messianic kingdom in the wider sense (*e.g.*, 2 Mac 2^{18}, Bar 4^{21}, Sir 44–50), nothing is said about a personal Messiah. Wis 2 ff. deals with the sufferings of the righteous in a way that recalls Is 53, and with the future life, but is clearly not Messianic.

[1] P. 231 ff.; see also Clemen.

[2] *Admonitions of an Egyptian Sage*, Leipzig, 1909.

[3] P. 177.

[4] The references are generally to the *Apocrypha and Pseudepigrapha of the Old Testament*, ed. R. H. Charles, Oxford, 1913, as well as to Charles's editions of the separate books; the dates given are generally those adopted by him; see also his *Eschatology*^{2}.

A similar silence is found in some of the apocalyptic literature, and here this silence is all the more significant since the writers are dealing directly with the hopes for the future. The Messiah does not figure in *Enoch* i.–xxxvi., lxxii.–lxxxii., xcii.–cviii., except in cv., where 'my Son' is suddenly introduced; Charles regards the chapter as an independent fragment. In the pictures of the Golden Age in *Jub.* i. 29, xxiii. 26 there is no Messiah; in xxxi. 18 he figures, though not prominently, as the descendant of Judah and as ruler in the temporary Messianic kingdom; Charles, however, considers the clause to be an interpolation. In the *Assumption of Moses*, which comes from a 'Pharisaic Quietist,' there is again no reference; Taxo (ix. 1) cannot be the Messiah;[1] Jahweh Himself is the avenger, and Moses the only mediator. The Messiah is in the same way ignored in 3 and 4 Mac., the *Secrets of Enoch*, the *Letter of Aristeas*, and the later parts of the *Apocalypse of Baruch*.

(*b*) *Books where the Messiah is mentioned.*—In *Enoch* lxxxiii.–xc. (166–161 B.C.) the Messiah appears after the judgment as the 'white bull,' a human figure, with no very active or definite rôle. In the 'parables,' however (xxxvii.–lxxi.; 94–64 B.C.), we have rich material. Especially in xlv.–lvii. he is the central figure, the pre-existent Son of man, judge, ruler, champion, and revealer. Besides Son of man, he is called 'the Elect One' and 'the Righteous,' titles which appear in the NT. 'Messiah' or 'His Anointed' also occurs in xlviii. 10, lii. 4, and Charles regards these as the first example of the use of the word as a technical title, though Dalman[2] strikes out the passages as interpolations.

In the *Testaments of the Twelve Patriarchs* the salient point is that the Messiah is descended from Levi, and is a priest (cf. Ps 110); see *Test. Reub.* vi. 7–12, *Test. Levi*, viii. 14, xviii., *Test. Jud.* xxiv. 1 ff., etc. In *Test. Jud.* xxiv. 5 f., however, we find the usual Messiah ben Judah; so perhaps *Test. Naph.* iv. 5. According to Charles, the former conception is the original, and the book dates from 109–106 B.C., the palmy days of Hyrcanus, the Maccabean dynasty, which came of a priestly family, being then regarded as Messianic. But, after the breach between it and the Pharisees, and the infamies of Hyrcanus' successors, additions were made to the book, reverting to the ordinary view. The conception of the Messiah is that he is a priest and a warrior, sinless, with power over evil spirits, and bringing sin to an end; the ethical note is strongly marked.

In the *Psalms of Solomon* (70–40 B.C.) there is no reference to the Messiah in i.–xvi., though the future deliverance is dealt with. In xvii. and xviii., however, there is a very important description. He is Davidic in contrast to the non-Davidic dynasty of the Hasmonæans; though himself human, he comes with the power and special endowments of God; he is to conquer the nations and purge Jerusalem of sin. The whole picture is full of enthusiastic and vigorous touches, but there are no transcendent traits in the conception. The end and the duration of the Messiah's kingdom are not clear, but 'throughout his days' in xvii. 42 suggests that he is regarded as mortal. He is called 'His' or 'the Lord's anointed,' the title being here certainly a technical one, its first occurrence, if the passages in Enoch are rejected.[3]

In the *Sibylline Oracles*, iii. 49 (168–51 B.C.), we read of 'a holy prince' who is to reign over the whole earth for all ages, though, somewhat inconsistently, judgment follows; iii. 652 (*c.* 140 B.C.) speaks of a king from the sunrise sent by God who is to bring peace to every land. In the later fifth book (before A.D. 130) we have (in 108) again a king sent from God who apparently destroys Nero *redivivus* (Antichrist), while 414 ff. speak of a 'blessed man' from the plains of heaven, who destroys evil-doers and sets up the new temple.

The *Fragment of a Zadokite Work*,[1] first published by S. Schechter in 1910, is placed by Charles in 18–8 B.C. and by most scholars before A.D. 70, and seems to have come from a reforming party among the priests. 'A Teacher of righteousness' has already appeared (i. 7, etc.), and a Messiah is expected (ii. 10, viii. 2 [?], ix. 10, 29, xv. 4, xviii. 8) who is to arise 'from Aaron and Israel.' Charles interprets this phrase as pointing to the sons of Mariamne and Herod. This is not quite certain, but the Messiah is clearly Levitic, as in the *Testaments*, the book being marked by hostility towards Judah. The 'Teacher of righteousness' or the 'Lawgiver' (viii. 5) is a forerunner of the Messiah, though at a considerable interval, and is identified with the 'star' of Nu 24^{17}, the 'sceptre' of the same passage being applied to the Messiah.

In the composite (*Syriac*) *Apoc. of Baruch* the Messiah appears in the three earlier Fragments, A^1, A^2, A^3, written before A.D. 70. In xxix. f. (A^1) he is revealed mysteriously, apparently from heaven, whither he returns in glory; his rôle is a passive one, and the whole conception is materialistic. In xxxix. f. (A^2) and lxxii. ff. (A^3) he is the warrior slaying enemies and ruling over the Gentiles; the influence of Is 11 is marked. In lxx. 9 the phrase 'my servant Messiah' occurs, but the whole verse is regarded as an interpolation. In the three later Fragments, B^1, B^2, B^3, there is the so-called Messianic Kingdom without a Messiah.

4 (2) Esdras is again composite. In $7^{27ff.}$ (*Ezra Apocalypse*) we have the remarkable conception of 'My Son the Messiah' revealed with his companions and dying after a reign of 400 years (cf. 14^9). In 12^{32} (the 'Eagle Vision') he is the Lion of the seed of David who destroys sinners; the text has been interpolated to represent him as pre-existent and dying at the end, in order to agree with 7^{27}. Of chief importance is the 'Son of man' vision (ch. 13), where the Messiah is 'the man,' as in Daniel, 'My Son,' pre-existent, destroying the ungodly by the fire of his mouth and the breath of his lips, and restoring the ten tribes to the heavenly Zion.

Philo makes only very slight references to the Messiah, who is really foreign to his system. That he is mentioned at all must be regarded as a concession to the popular standpoint. *De Execrat.* 8 f. speaks of the restoration of Israel on one day; the dispersed are to return led 'by a divine superhuman appearance, which, though unseen by all others, is visible only to the delivered.' So in *de Præm. et Pœn.* 15–20 the Messiah is a man of war, reference being made to Nu 24^7.

In the same way the Messiah is recognized by Josephus only very occasionally, and that in a way which shows that he did not take the subject very seriously. In *BJ* VI. v. 4 he practically treats Vespasian as the Messiah in the sense that he is to be the destined 'governor of the habitable earth'; cf. the account of his interview with the same emperor in III. viii. 9, and see Suet. *Vesp.* ch. 4, and Tac. *Hist.* v. 13,[2] passages which are good evidence that the existence of the Messianic hope was a recognized feature of Judaism. In *Ant.* X. x. 4 he refuses to explain the 'stone' of Dn 2^{45} on the ground that his history is not concerned with the future.

[2] P. 269.

[3] In xvii. 36 'Anointed Lord' (χριστὸς κύριος) is generally recognized as a mistranslation or misreading of 'the Lord's Anointed.'

[1] Besides the works already quoted see also a survey of recent literature on the book by J. W. Lightley, in the *London Quarterly Review*, Jan. 1915, p. 15.

[2] See *JE*, *s.v.* 'Messiah,' for similar ideas connected with Alexander, on the basis of the interview recorded in Jos. *Ant.* XI. viii. 5.

As evidence of popular views, though not of the belief of Josephus himself, we have the various quasi-Messianic risings which he records: Theudas (*Ant.* XX. v. 1), the Egyptian (*Ant.* XX. viii. 6, *BJ* II. xiii. 5), and the unnamed impostor (*Ant.* XX. viii. 10).

A *Samaritan Hymn for the Day of Atonement*,[1] dated A.D. 1376, but certainly embodying earlier material, speaks of the Messiah under the title *Taeb*, which probably means 'the Restorer,' though A. Merx explains it as *rediens*, *i.e.* probably Moses, whose return was expected. This *Taeb* is not supernatural, but restores the lost dominion of the people, and is a prophet, the conception being based on the figure of Moses in opposition to the beliefs of the Jerusalem Jews. He dies after 110 years, and his death is followed by the Judgment and the end. Jn $4^{25ff.}$ shows the antiquity of some Messianic belief among the Samaritans (cf. Jos. *Ant.* XVIII. iv. 1).

2. Survey of the teaching.—(*a*) We note the sporadic character of the Messianic hope, as in the OT. Certainly the Messiah is mentioned somewhat more frequently, and when he appears we have in some cases a few more details, but it is still true that until the fall of Jerusalem he is not an essential element in Jewish religious thought or even in its eschatology.[2] If it were not for the NT, we should never have imagined that there was a period when the expectation of his coming could be taken for granted as accepted in almost all circles and as the centre of the hope for the future. This aspect is sometimes discussed (*e.g.*, W. Baldensperger, *Die messianisch-apokalyptischen Hoffnungen des Judentums*, Strassburg, 1903, p. 92 ff.) as though the problem were the disappearance of the Messianic hope during the Maccabean period. If our interpretation of the evidence is correct, this misrepresents the facts, since there is nothing to show that the hope was at any previous period either universal or essential. It may be true[3] that the figure of the Davidic king came to seem too small for the larger stage on which Israel now found itself, and that the rule of the Maccabees left the pious Jew for a time well content, but it is best to recognize that the data are insufficient for anything like a chart of the rise and fall of the Messianic hope. The one thing we can say is that in the 1st cent. A.D. the Messianic hope had become more universal than ever before. We recognize that even then it is absent in the *Ass. of Moses*, and is not taken very seriously by Philo or Josephus; but the NT evidence is indisputable, and is confirmed by the fact that the Messiah is an integral part of the creed of later Judaism. The explanation is probably to be sought in the political circumstances of the day and in the dislike of the rule of the Herods and the Romans.

(*b*) There is some evidence which suggests that, as before, the hope was mainly an element in the popular religion. The Apocalypses in which it figures were largely popular products, and the NT proves that its chief strength lay among the people;[4] the popular risings recorded in Josephus show the same thing.

(*c*) We may see two influences at work which tended to throw into higher relief the person and function of the Messiah. From the religious side there was the growing tendency to remove God from active interference with the affairs of the world and to fill His place with a series of intermediate beings.[1] Hence the rôle of the Messiah becomes more important, and functions which in the OT are ascribed to Jahweh Himself are now transferred to him. He becomes the Deliverer and Saviour, as in the *Sib. Or.*, Baruch, and Esdras, and the new conception thus meets a real religious need. Again, as outward conditions became more hopeless, it was inevitable that he who was to restore the nation should be increasingly conceived of as endowed with supernatural powers, or as himself more than man. His coming is to affect the whole world, though it is still always regarded from a strictly Jewish and national standpoint. As a keener interest is taken in the fate of the individual, so the conception is linked with beliefs in judgment and resurrection, and receives altogether a more decided and more varied eschatological colouring, though we remind ourselves once more that it is not an *essential* element in the eschatology of the time.[2]

(*d*) Attempts to distinguish varying types of the hope at different periods and in different classes of writings are not always very convincing. We can, however, trace a double development,[3] though the two lines overlap, and each includes contradictory elements derived from the other—*e.g.*, in the combination of the conceptions of a Warrior-Conqueror and of a supernatural Avenger and Judge, or of earthly and heavenly bliss.[4] (1) We have the conception, which is essentially that of the OT, of the Messiah as a human figure, however miraculously endowed, a warrior and a conqueror, and the Son of David. This is seen best in the *Psalms of Solomon* (where the title 'Son of David' occurs for the first time), and is implied in many passages of the Gospels dealing with the popular hope, especially in the attempts to make Christ king, and in the charges brought at His trial, as well as in the Messianic movements mentioned by Josephus. This Messiah is to conquer the nations (*Sib. Or.* iii. 653, v. 108 f., 416 ff.; Bar 39^7 70^9) and sometimes to convert them (*Test. Jud.* xxiv. 6; *En.* xlviii. 5), though their conversion is also often disconnected from the Messiah (To 13^{11} 14^6, *En.* xc. 30, etc.).

Parallel to this conception is that of the Messiah ben Levi,[5] found in the *Testaments* and the *Zadokite Fragment* (cf. Ps 110), and represented in the NT by the heavenly priesthood of Christ in Hebrews.[6]

(2) We find a belief in a transcendent Messiah, connected chiefly with the title 'Son of man,' in the parables of *Enoch* and 4 Esdras (cf. also *Sib. Or.* v. 414). The phrase is derived from Daniel, and, whatever its meaning and origin there, there can be no doubt that in *Enoch* and Esdras it has a definite Messianic significance;[7] it is possibly even a recognized technical title.[8] The fact is, as Baldensperger[9] points out, that Daniel, though not

---

[1] See A. Cowley, 'Samaritan Doctrine of the Messiah,' in *Exp*, 5th ser., i. [1895] 161 ff.; Bousset, pp 258, 265.

[2] It is possible that the place of the Messiah was sometimes taken by Michael, as a parallel figure; in Dn 12^1 he, and not the Messiah, is the champion of Israel; so in *Ass. Moses*, x. he is the angel who avenges Israel; note his prominence in Rev 12. Bousset (*Die Offenbarung Johannes*, Göttingen, 1896, *ad loc.*) suggests that the Christology of Hermas can be understood only by seeing that Christ takes the place formerly filled in Jewish thought by Michael; cf. also Rev 14^{14}, where the Son of man on the cloud seems to be an angel; note the language of v.^{15}.

[3] Bousset, *Rel. des Judentums*, p. 255 ff.

[4] *Ib.* p. 257.

[1] See Baldensperger, ch. ii.

[2] This eschatological colouring, the signs of the coming of the Messiah ('the Messianic woes,' etc.), the duration and nature of the Messianic kingdom, and its relation to the Judgment and Resurrection, together with the varying ideas as to the fate of the Gentiles therein, are dealt with in art. ESCHATOLOGY, to which reference should be made. See also Schürer, *HJP* II. ii. 137 ff.; W. V. Hague, *JThSt* xii. [1910] 57.

[3] See Hague, p. 72 ff.

[4] Baldensperger, p. 111 ff.

[5] We have not sufficient material to justify us in regarding this as a specifically Sadducean conception as opposed to a Pharisaic Messiah ben David.

[6] For connexion with the *Testaments*, etc., see H. Windisch, *Hebräerbrief*, Tübingen, 1913, p. 67.

[7] Dalman, p. 243.

[8] So Charles, *Eschatology*^{2}, p. 261.

[9] P. 97 ff.

in itself directly Messianic, revived hopes for the future and prepared the way for the apocalyptic Messiah.[1] This transcendent Messiah plays an active rôle as champion of the righteous in *Enoch* lxii. 2, and still more decidedly in 4 Es $13^{9\text{ff.}\ 37\text{ff.}}$. The most significant feature, however, is his appearance as judge, not only of men and the nations, but of evil spirits (*Enoch* lv. 4, etc.); this function is not ascribed to the human king. Except in 4 Es 12^{32}, a Christian interpolation, the transcendent Messiah is never represented as a descendant of David—a fact which may throw light on our Lord's question (Mk $12^{35\text{ff.}}$); He may have been following a recognized line of thought which found the Davidic descent too narrow for the great conception. As is well known, He never speaks of Himself as 'Son of David.' We may note that, though the Apocalypses apparently reject the Davidic descent, they yet use Davidic passages, such as Is 11, Ps 72, 89, in their picture of the Messiah.[2]

(*e*) *Pre-existence and mysterious origin.* — The Son of man is clearly in some sense pre-existent in *Enoch* (*e.g.*, xlviii. 3, 6, xlvi. 1) and in 4 Es 13 and perhaps in 7^{27} 12^{32}, though the former passage is doubtful, and G. H. Box regards the latter as interpolated.[3] The question arises how far a personal pre-existence is really implied. In Jewish thought everything of supreme value was regarded as pre-existing in the mind of God, perhaps to some extent under the influence of the Platonic doctrine of ideas. This applied to such things as the Law and the Temple, while even Moses is pre-existent in *Ass. Moses*, i. 14, iii. 12; it is this sort of pre-existence that is ascribed to the Messiah or his 'Name' in the Targums.[4] But it must be allowed that in *Enoch* and Esdras the Messiah seems to be regarded as pre-existent in a personal sense and revealed from heaven, and this was certainly the view of St. Paul. It should, however, be noted that in 4 Es 7^{28} 'my Son, the Messiah' who is thus revealed dies after 400 years; *i.e.*, he is not a divine being.

This point of view should be distinguished from the hints which we have of the mysterious origin and birth of the human Messiah, since the Son of man of *Enoch* and Esdras is, of course, not born as a man at all. We have doubted the existence of such ideas in Isaiah and Micah, but they are clearly found at a later period—*e.g.*, in the mysterious star of *Test. Levi*, xviii. and in the king ἀπ' ἠελίοιο of *Sib. Or.* iii. 652 (cf. Bar 29^{3}). We have definite evidence of the belief in Jn 7^{27}, Justin Martyr (*Dial.* 8, 110), and the Talmud, the general idea being that the Messiah was to be born in secret (at Bethlehem) and hidden on earth, or even in Paradise, until the time of his revelation.[5] Some such tradition seems to underlie Rev 12; on the question of foreign influence see below, (*g*).

At the same time the passages cited as evidence of a belief in his birth of a virgin or divine mother are unreliable.[6] *Test. Jos.* xix., which seems to speak of a virgin-birth, is with good reason regarded by Charles as corrupt; so in *Enoch* lxii. 5, lxix. 29 he reads for 'son of a woman' 'Son of man,' while the *Midrash Ēkhāh* on La 5^{3} is obscure and of very doubtful date. Nor, again, can 'the travail pangs of the Messiah' imply anything of the kind; the expression is figurative, and applies to the Messiah, not to his mother. According to Justin, *Dial.* 49, the Jewish belief is that the Messiah is to be born ἄνθρωπος ἐξ ἀνθρώπου.

To the circle of ideas connected with pre-existence belongs the identification of the Messiah with the first or the spiritual man.[1] Something has been said of the theory that this underlies the figure of the Son of man (see above, III. 2 (*d*)). Philo (*Leg. Alleg.* i. 31, p. 49, *de Op. Mundi*, 134, p. 32) knows of an earthly and a spiritual man, the latter, whose creation is recorded in Gn 1, coming first, while the former is the man of Gn 2. St. Paul (1 Co $15^{45\text{ff.}}$) represents the spiritual man as coming *after* the psychic or earthly, evidently opposing the other view, and identifies him with the Messiah. So in *Test. Levi* the Messiah brings back Paradise, while the Samaritan title *Taeb* seems to mean 'Restorer' (cf. χρόνοι ἀποκαταστάσεως in Ac 3^{21}). The general idea in St. Paul, however, is the identification of Christ with the ideal archetypal man,[2] as opposed to the historical Adam, and not with any first king of Paradise.

(*f*) *Forerunners of the Messiah.*—The starting-point is Mal 3 f., where Elijah is to return before the Day of Jahweh (cf. Sir 48^{10}); the Messiah is not mentioned, and possibly Elijah is a kind of substitute for him.[3] In the Gospels, however, he has become a forerunner of the Messiah (Mk 1^{2} 6^{15} 8^{28} 9^{11}, Jn 1^{21}). There are again traces of a belief in the return of Moses, based on Dt 18^{15}, and the two are combined in the Transfiguration; these are probably the 'two witnesses' of Rev 11^{3}. In the later Antichrist legend the two witnesses are Enoch and Elijah,[4] who were translated without death. There are also hints of other 'companions' of the Messiah in 4 Es 6^{26} 7^{28} 13^{52}; Ezra appears as such in 14^{9}, Baruch in Bar 76^{2}, Jeremiah in 2 Mac 2^{1} 15^{13}; cf. Mt 16^{13}. We may compare the two predecessors of Saoshyant (see below, (*g*)).

(*g*) *Foreign influence.* — We were doubtful of theories which traced the origin of the Messianic idea to foreign sources, but this does not exclude the possibility of foreign influences at a later time on the details of the conception. Such influence is undoubtedly found in the development of Jewish Apocalyptic. We cannot discuss the wider question of the syncretistic character of its eschatology in general, but must confine ourselves to points which directly affect the conception of the Messiah. Naturally it is in the transcendent Messiah that foreign and mythological traits appear most clearly. Hague,[5] following Gressmann, argues that such ideas lie behind 4 Es 13, and even goes further in holding that a star myth is implied in the appearance of the man 'from the sea.' He also traces[6] the whole idea of a mysterious revelation of the Messiah to Is 45^{15}, 'Verily thou art a God that hidest thyself, O God of Israel, the Saviour,' which, he agrees with Gressmann,[7] cannot be of Jewish origin. He traces it to language such as that used by Assurbanipal: 'I was born in the midst of mountains which no man knoweth . . . thou (Ishtar) . . . hast brought me forth from the mountains, hast called me to shepherd thy people.' Many critics[8] argue in the same way with regard to the conception of a miraculous birth, comparing the language used by Sargon I. ('My mother was poor, my father I knew not'), the beliefs connected with Saoshyant, and the legends of the birth of Cyrus, Alexander, and others; there is, in fact, a general tendency to regard extraordinary men as wonderfully born, and this was particularly marked with regard to Egyptian and Babylonian kings. Without pronouncing on the question of direct influence, we may admit that we find the same general tendency at work with regard to beliefs as to the origin of the Messiah, but always with the important proviso that we have found no real evidence, except in Christian circles, of the idea of his birth from a virgin or divine mother, nor have we yet found any complete parallel to the expectation of a final eschatological king.[1]

---

[1] Dn 7^{13} is interpreted Messianically by Aqiba (*c.* A.D. 120), and gave rise to the later name for the Messiah, *Ănānī*, 'Cloud Man' (Dalman, p. 245).

[2] Dalman, p. 318.

[3] The LXX of Ps 109 [110]^{3}, ἐκ γαστρὸς πρὸ ἑωσφόρου ἐξεγέννησά σε, suggests some kind of pre-existence.

[4] In *JE*, *s.v.* 'Messiah,' it is, however, argued that there are traces in Rabbinic literature of a real pre-existence of the Messiah.

[5] Dalman, p. 301; Hague, p. 83.

Something must be said of the possible influence of Zoroastrianism.[2] Here, again, we would at once admit a general influence in the sphere of eschatology. Moulton allows this, though to a less extent even than Clemen. He draws attention to Bousset's[3] admission that Parsi influence must have come to Israel by way of Babylon 'when strongly tainted with Babylonian elements,' and argues, further, that Zarathushtra himself had very little influence in the West. Hence, all that the Jews can have known was Parsiism in a comparatively debased form, as represented by the Magi (*q.v.*), and this compels us to regard most of the parallels between the higher doctrines of the two religions as pure coincidences. We are concerned here mainly with two points.

(1) A great deal has been said of the connexion between Yima, the first man, and the Messiah. It is held[4] that this lies behind the idea of the 'Son of man' (see above, III. 1 and 2 (*d*)), which, Clemen agrees, 'comes ultimately from Parsiism.' There is, no doubt, some connexion between Yima and the fall story, though Moulton[5] holds that Parsiism is the borrower. Further, as Bousset allows, there is the important difference that, while Yima is king of Paradise, *der Urzeit*, the Messiah is king *der Endzeit*, and there is no trace of this transformation in Iranian legend. We may add that there is also no trace in Hebrew legend of the Messiah as originally king of the first Paradise (see above, (*c*)).

(2) There is undoubtedly a remarkable similarity between the Messiah and Saoshyant, which is originally an epithet rather than a title. The renovation of the world 'is accomplished by the present labours of "those that will deliver," the *saošyantō*. In the Gathas these are simply Zarathushtra himself and his fellow-workers, whom the Prophet's faith pictures as assuredly leading on an immediate regeneration.'[6] The hope failed, and Zarathushtra himself was to return as Saoshyant. This is certainly the one real parallel with the Messiah proper, but it seems impossible to suppose any direct influence. Moulton[7] dismisses it among 'the certainly fortuitous coincidences,' while Bousset[8] holds that the connexion is between Saoshyant and the forerunner Elijah, rather than with the Messiah himself. At the same time there may have been some reaction between the two, affecting details of the conceptions, especially in the idea of the Messiah coming from the sunrise; cf. the ἀπ' ἠελίοιο of *Sib. Or.* iii. 652, and the LXX ἀνατολή for 'branch' in Jer 33^{15}, Zec 6^{12} (cf. Lk 1^{78}).[9]

We must also allow for the influence of Græco-Roman ideas[1] affecting at any rate the periphery of the Messianic hope and its development under Christianity. After Alexander the title σωτήρ ('Saviour') became common, with deification of kings and emperors, accompanied by hints of their wonderful origin. We may instance the well-known Priene inscription, with the legends connected with Augustus. But here, again, it is doubtful whether we really have proof of the existence of a belief in a final world-Saviour who is to usher in a new era, or only the inevitable court flattery which regards each king as greater than any of his predecessors. The single exception is Vergil's famous Messianic *Eclogue*.[2] Here, whether the child who is to be born be the son of Octavian and Scribonia or not, we have a remarkable and almost unique agreement with OT conceptions—the era of Paradise and its king, the Golden Age following on his conquests, plenty without toil, animals sharing in the regeneration, together with the ethical note. Whether through the Sibylline Books or directly through the LXX, Jewish teaching may have penetrated to Roman literary circles, or we may have an echo of Zoroastrianism.[3] On the other hand, the parallel may point to an independent spread of something like a Messianic hope in pagan circles.

(*h*) *Interpretation of prophecies.*—A feature of this period is the habit of working on earlier prophecies—a tendency which we have found as early as Ezekiel and Zechariah; for a later example see To 14^5.[4] In the apocalyptic books there are certain prophetic passages and ideas which became part of the stock-in-trade and are constantly referred to in dealing with the Messianic hope. The chief are Dn 7, Is 11,[5] used continually (*e.g.*, *Ps. Sol.*, Bar.), Ps 2[6] (*e.g.*, *Ps. Sol.*), Ps 45 (*e.g.*, *Test. Jud.* xxiv. 1), Nu 24^{17}, the star of which is applied Messianically in *Test. Levi* xviii. 3, *Jud.* xxiv. 1, but understood of the Teacher of Righteousness in *Zad. Frag.* ix. 8.

We have in this use of prophecy many examples of the scribal methods[7] working mechanically on the data and fusing the old and new into a single picture, of course not without contradictions. The application of a passage does not decide its historical meaning, but only the interpretation which had come to be put upon it. The vagaries of later Rabbinism had already begun—*e.g.*, the interpretation of Am $5^{26f.}$ in *Zad. Frag.* ix. 5 ff. We have an interesting example of independence in 4 Es $12^{12f.}$, where the interpretation of the fourth kingdom as given in Dn 7^{23} is definitely rejected.

It is important to ask in this connexion whether by the first cent. A.D. the OT was in any circles interpreted as pointing to a Suffering Messiah. It is almost certain that it was not. The conception in 4 Es 7 is the quite different one of a human Messiah who is to die after a reign of 400 years (cf. the Samaritan *Taeb*). There is no evidence that Is 53 was interpreted Messianically until a later period, and, when it is, the verses which speak of suffering are applied not to him but to the nation.[8]

[2] See J. B. Mayor, W. W. Fowler, and R. S. Conway, *Virgil's Messianic Eclogue*, London, 1907.

[3] So Moulton, p. 91, interpreting the simile of the closing lines as a reference to the story that Zoroaster laughed when he was born.

[4] It may be remarked that there are hardly any traces in the LXX of an attempt on the part of the translators to introduce a Messianic meaning; χριστός is never introduced where the Heb. has not Messiah. Is 7 is no exception (see above, III. 1), but the title of Ps 45, 'Song of the Beloved,' for 'Song of Loves,' may be intended to suggest a Messianic interpretation. For ἀνατολή for 'Branch' see above, (*g*).

[5] But not Is 9 (see above, III. 1) or 7.

[6] This, however, is comparatively rare (Dalman, p. 268 ff.).

[7] Baldensperger, p. 104.

[8] V. H. Stanton, *HDB*, art. 'Messiah'; see, further, Driver and A. D. Neubauer, *Jewish Interpreters of Is. liii.*, London, 1877;

The most decisive proof of this position comes from the NT. It is clear that the death of the Messiah was not expected in any quarter, and that the crucifixion of Jesus was the great stumbling-block, while it was not easy to find proof of its necessity from the OT. The story of the Ethiopian eunuch (Ac $8^{27ff.}$) seems to be intended to call attention to an interpretation of Is 53 which is evidently not that generally accepted. The admissions of Trypho (Justin, *Dial.* 68, 89 f.) do not express the Jewish belief, but are put into his mouth under the stress of the argument, while the 'pangs of the Messiah' do not refer to his personal sufferings, but to the woes which are to precede his coming.

The Messiah ben Joseph, who does, in fact, die, in contrast to the Messiah ben Judah, appears clearly only after A.D. 135. According to Bousset,[1] he is the Messiah of the ten tribes, slain in the battle by Gog and Magog; the conception seems to be derived from Dt 33^{17}, Zec 12^{10}, and certainly has no connexion with Is 53. It is possible that this figure is connected with the failure and death of Bar Kokhba, explaining them on the lines of the expectation of a preliminary Messiah who was to fall in battle against the enemies of Israel (Rome).

V. *DEVELOPMENT UNDER CHRISTIANITY.*—The starting-point of the evidence of the NT, and especially of the Gospels, is the way in which the Messianic hope is represented as universal. As we have seen, it is taken for granted in the Apocalypses where it occurs, but it is still sporadic in its appearances, and the future can be painted without reference to it. But in the Gospels the expectation of the Messiah is common to all. It appears, indeed, to be taken more seriously by the common people than by their leaders; but Pharisees, priests, and Sadducees all accept the hope without questioning its validity. The point at issue is only whether Jesus is really the Messiah. As regards the nature of the hope, it would appear, as against A. Schweitzer, that it was at least as much political and national as transcendent, corresponding closely to what we find in *Ps. Sol.* The Messiah is to be a king descended from David, and his rule will be opposed to that of the Romans.

A full discussion of our Lord's own attitude to His Messianic claims will be found in art. JESUS CHRIST. We may here emphasize the salient points. (*a*) As against W. Wrede, it is certain that He did regard Himself as in some sense the Messiah. He did not, indeed, proclaim Himself as such in His public teaching; it was His 'secret,' discovered by St. Peter at Cæsarea Philippi, and first avowed to the world at His trial. (*b*) His favourite designation of Himself in this connexion was 'Son of man,' the title being chosen as containing in it elements of transcendence and mystery, and as free from the political implications of Messiah, and still more of Son of David, a title which He avoids. The difficulty is to reconcile His use of this phrase with the absence of any public proclamation of His claim, since from its use in *Enoch* we should infer that it would at once be recognized as a synonym for 'Messiah' itself. The difficulty is eased by eliminating, on literary grounds, a certain number of the passages in which it occurs (cf., *e.g.*, Mt 5^{10} with Lk 6^{32}, or Mt 16^{3} with Mk 8^{27}), while in others its use is ambiguous, since it might be supposed to refer to some other unnamed person (Mk 8^{38}). It is not, however, possible, except by somewhat drastic criticism, to eliminate all passages where it is used publicly of Himself or privately to the disciples before St. Peter's confession.[1] We must, therefore, suppose, in spite of *Enoch*, that it was regarded as Messianic only in certain circles, and that it could still be used, as in Ps 8 and Ezekiel, in a wider sense.

(*c*) He did not regard Himself as the Messiah merely in the strict sense in which we have used the term, but as gathering up in Himself the various lines of OT hopes and promises. It does not, however, appear that direct argument on the basis of the OT played any considerable part in His teaching, except as recorded in the Fourth Gospel. The proofs from the OT in the NT seem rather to reflect a later stage of controversy between Jew and Christian, in which each adopted the same scribal methods of interpretation.

(*d*) Christ added considerably to the content of the Messianic hope, especially in His teaching as to the necessity of the death of the Messiah. It is not possible to decide with any certainty as to the lines by which He was led to this conviction, though it was, no doubt, helped by a growing recognition of the hostility of the ruling powers to His claims and of the inevitable results of their attitude. Further, He must have meditated on the deeper teaching of the OT as implying, especially in Ps 22 and Is 53, that the means of redemption and the condition of glorification were to be found only in suffering, and this quite independently of whether such passages technically applied to the Messiah or not. Though in Acts and 1 Peter the Servant passages are directly quoted, they are used but little in the Gospels, and hardly at all in Christ's own teaching (see Lk 22^{37}, Mk 10^{45} $12^{6ff.}$). It would seem, then, that as the ultimate source of His conviction we are forced to fall back on an intuition which the Christian will regard as a revelation from the Father.

In the light of the expectation of the Parousia, the idea of a twofold advent of the Messiah was introduced, assuming that Jesus was not merely 'the Messiah of the future' during His lifetime. There is no trace in earlier literature of any belief in two comings of the Messiah.

(*e*) It follows, finally, that the title 'Messiah' or 'Christ,'[2] as used in the NT and in Christian literature generally, has a far richer meaning and content than any that we have felt justified in ascribing to it in earlier periods. It gathered into itself the ideas associated with the Wisdom and Logos,[3] and came to include the whole work of redemption from sin and spiritual regeneration accomplished by Jesus. He has become the centre of history and the inaugurator of a new age in a way which both differs from and transcends anything that we find in the OT or Apocalypses as associated with the future Deliverer. He is the mediator of a new covenant and the bearer of a new revelation to a world of which the outward conditions remain unaltered, while with the passing of the Jewish State the nationalist element dropped away once for all. At the same time, the title 'Christ,' with its historical associations, is a reminder, even to those to whom the promises of the OT may mean little in themselves, that the coming of Jesus of Nazareth was not something new and unexpected, but was the true climax of the long preparation of the chosen people. In particular, the fact that functions which in the OT are reserved for Jahweh and not for the Messiah

---

Dalman, *Der leidende und der sterbende Messias*, Berlin, 1888; Schürer, II. ii. 184. Bousset, *Kyrios Christos*, p. 27 ff., agrees, though he leaves open the bare possibility that the wide-spread myths of the dying and rising god may have influenced Jewish Messianic ideas.

[1] *Rel. des Judentums*, p. 264, *Antichrist Legend*, p. 103. But in *JE*, *s.v.* 'Messiah,' the connexion with the ten tribes is denied.

[1] But see Dalman, *Words of Jesus*, p. 260 ff.

[2] It must be remembered that 'Christ' tends to become a proper name and to lose its technical Messianic implications; the distinctive title of Jesus in Hellenistic Christianity is κύριος ('Lord'). See Bousset, *Kyrios Christos*, esp. p. 94 ff.

[3] Note that in Philo the Logos largely takes the place of Messiah; in *de Conf.* 14, p. 414, the 'branch' of Zec 6^{12} is applied to the Logos. Cf. also art. LOGOS.

are in the NT transferred to Christ is of the deepest significance. The real desire of the highest spirits of Israel was not so much for a representative of Jahweh, however exalted, as for a revelation of God Himself. Christian belief finds this satisfied in the Incarnation, and we shall not be disturbed when we find that the OT says comparatively little about the Messiah. The vital question is whether the hopes which it entertained with regard to the coming of God did find their fulfilment in the Christ.

VI. *THE MESSIAH IN LATER JUDAISM.*[1]—From the end of the 1st cent. A.D. a belief in the Messiah was an integral part of the Jewish creed—a proof that the representation of the universality of the hope which we find in the NT is substantially correct. The Messiah is indeed strangely absent from the Mishna, possibly owing to fear of Rome, but he figures both in the Palestinian and in the Babylonian recensions of the *Shᵉmôneh ʿEsrēh*—a fact which indicates that his presence therein must date from the 1st cent. A.D.—and appears constantly in the Talmud. The failure of the Bar Kokhba rising in A.D. 135 marks an important stage. Attempts to anticipate the Messiah's coming were then abandoned, the principle being 'a plague on those who calculate the end,' and the political side was almost dropped. What remained of it was transferred to a temporary Messianic Kingdom, in which Israel was to be restored to Palestine, this national kingdom being, generally speaking, only preparatory to the *ʿôlām hab-bā*, the world to come, where universalistic features are found. The Messiah is Son of David[2] and an earthly deliverer, though in some sense pre-existent and appearing mysteriously (see above, IV. 2 (*e*))—features which need not imply divinity. With the fall of Jerusalem apocalyptic fell into disfavour,[3] and with it the belief in a transcendent Messiah. Polemic with Christians also worked in the same direction, and to this we may attribute the disuse of the title 'Son of man'; the form of the Beatitude in Lk 6²² may be a hint of such controversies.[4] The spiritual side is strongly emphasized in the Rabbinic teaching by its insistence on the need for repentance as the condition of the coming of the Messiah, while we also find considerable detail as to the features of the Messianic era, the Messianic woes, etc.

The twelfth article of the present Jewish creed, as drawn up by Maimonides, is as follows: 'I believe with perfect faith in the coming of the Messiah, and though he tarry I will wait daily for his coming.' Liberal Judaism, however, would seem to have abandoned the hope of a personal Messiah, though it still retains the Messianic hope in a wider and spiritualized sense[5]—a sense in which it may fairly claim to have the general trend of the OT on its side.

LITERATURE.—The literature bearing on special points has been indicated in the course of the article. The following may be mentioned in relation to the whole subject: J. Drummond, *The Jewish Messiah*, London, 1877; V. H. Stanton, *The Jewish and the Christian Messiah*, Edinburgh, 1886; E. C. A. Riehm, *Die messian. Weissagung*, Gotha, 1885, Eng. tr., *Messianic Prophecy*², Edinburgh, 1900; C. A. Briggs, *Messianic Prophecy*, Edinburgh, 1886, and *The Messiah of the Gospels*, do. 1894; P. Volz, *Die vorexilische Jahweprophetie und der Messias*, Göttingen, 1897; E. Schürer, *GJV*³, Leipzig, 1898, Eng. tr., Edinburgh, 1890; W. Bousset, *Die Religion des Judentums im neutestamentlichen Zeitalter*², Berlin, 1906; G. H. Dalman, *Die Worte Jesu*, Leipzig, 1898, 1902, Eng. tr., Edinburgh, 1909; R. H. Charles, *Eschatology, Hebrew, Jewish, and Christian*², London, 1913; together with relevant sections in works on OT and NT Theology, and articles in the Bible Dictionaries.

C. W. EMMET.

MESSIAHS (PSEUDO-).—From the final loss of the independence of the Jewish State until within a few generations ago, Jewish history has known the frequent advent and passing of self-styled Messiahs, prophets of hope in the darkest periods of the Diaspora, self-appointed leaders of the Jewish race in the Return to the land from which their ancestors were exiled. The appearance of a Messiah was often, especially in the case of the earlier ones, accompanied by revolts and uprisings, and these almost invariably occurred at times when, and in localities where, anti-Jewish persecution was prevalent. Moreover, these Messianic movements were frequently, especially in the latter cases, of a political nature. The religious aspect of the rising was, however, seldom absent, and in many instances the new teacher, anxious to signalize his activity and to secure his influence by religious innovations, endeavoured to subvert the basic teachings of Judaism, to which, in consequence, considerable harm sometimes occurred. New sects were created on some occasions; on others wholesale adoption of Muhammadanism or Christianity took place.

Although it is to some extent customary to include a number of Jewish reformers and revolutionists in the category of pseudo-Messiahs, only a proportion of these agitators in reality attributed to themselves the Messianic semi-divinity. Others, often against their own wish, were hailed by their enraptured followers as the divine leader, promised in Jewish tradition to bring the scattered and troubled people back to their inheritance. Just as there existed a belief in an Ephraimitic Messiah who was to be the forerunner of the Davidic Messiah, so, among the pseudo-Messiahs, many pretended to be not the Messiah Himself but His forerunner. The opening of the Christian era saw in the Holy Land a number of these local minor Messiahs. Thus we learn from Josephus (*Ant.* XX. v. 1; also Ac 5³⁶) that about A.D. 44 one Theudas, claiming to be a prophet, told his followers that he would divide the Jordan and enable them to cross dry-shod. They collected on the bank of the river for the miracle to be performed, but before the prophet could take steps to carry out his prophecy the whole party was massacred by a detachment of Roman soldiery. A similar fate overtook the followers of another Messiah, an Egyptian. They collected, it is said to the number of 30,000, on the Mount of Olives to watch the fall of the walls of Jerusalem at the command of their leader, but the proceedings were interrupted by Felix and his soldiery (Jos. *Ant.* XX. viii. 6, *BJ* II. xiii. 5; and Ac 21³⁸). A third pretender preparing to lead the people into the wilderness was destroyed together with his followers by Festus the Procurator (Jos. *Ant.* XX. viii. 10).

A Messiah of a different description was Menaḥem, the son of Judah the Galilæan and the grandson of Hezekiah the leader of the Zealots. He seized the city of Masada together with a large store of arms, with which he supplied his followers, and then attacked Jerusalem. In battle with the soldiers of Agrippa II. Menaḥem was successful, and as a result captured Antonia, one of the defences of the capital. Emboldened by his success, Menaḥem claimed the leadership of all, and thus aroused the jealousy of his colleagues and was assassinated. Menaḥem was the last Judæan Messiah before the destruction of the Temple. Contemporary with these Messiahs of the 1st cent., similar personages arose among the Samaritans, all of whom, after an existence more or less brief, passed away. Prominent among them were Simon **Magus**, who endeavoured to induce the early Christians to join his movement, but who is said ultimately to have become converted to Christianity, together with many of his followers, and **Dositheus**, who, instead of restoring the Hebrew State, founded a Samaritan sect that survived until the 6th century.

[5] See C. G. Montefiore, *Outlines of Liberal Judaism*, London, 1903, pp. 280, 314; also art. JUDAISM, vol. vii. p. 608, etc.

The destruction of the Temple led for a time to a cessation of pseudo-Messianic activity. For sixty years no new Messiah arose until at length, on the accession of Hadrian, the milder government of Trajan gave way to sterner rule. The repressive policy of the Romans aroused once more the spirit of the Jewish people still unsubdued. A rebellion broke out and a leader was immediately to hand in the person of **Bar Kokhba** or Bar Kozibah (probably from the name of his birthplace). Of the personality of this leader little is known. His original name is even doubtful. It is conjectured that he was one Simeon of Cozeba (1 Ch 4^{22}) or Chezib (Gn 38^{5}). The name Bar Kokhba, or 'son of a star,' was given to him by the famous R. Aḳiba, who believed that in him was fulfilled the prophecy: 'There shall come forth a star out of Jacob . . . and shall smite through the corners of Moab, and break down all the sons of Sheth' (Nu 24^{17}). Bar Kokhba does not appear to have adopted the designation of Messiah himself. This dignity was attributed to him by R. Aḳiba and other sages. On the outbreak of the rebellion, the whole province, composed of Judæa, Samaria, and Galilee, was evacuated by the Romans. The army of the Jews at this time has been estimated at as many as from 400,000 to 580,000 fighting men. Unfortunately, little is known of the campaign, but it is certain that the Roman garrison and the generals in command at the time of the outbreak proved respectively inadequate and incapable. The services of Julius Severus, the greatest soldier of the age, were requisitioned from Britain, where he had been waging an arduous war with the martial natives, to recover the prestige of the Roman arms. But even he, with unlimited resources, was at first compelled to remain on the defensive, and trusted to his tactics of cutting off detached parties and supplies to wear out his formidable enemy. In the course of the operations 50 general engagements were fought, and with every victory the numbers of Bar Kokhba's followers increased. From the most remote of the Jewish colonies men came to fight under his banner. Recruits were not drawn solely from Israel; Bar Kokhba's army included non-Jews in its ranks. Those who could not fight helped to fill the rebel coffers. At first the campaign proved a series of successes for the pretender. Jerusalem was soon captured, and served as a capital for Bar Kokhba, who was proclaimed king, and duly carried out the duties of sovereignty. For three years the Holy City remained in his possession, and during that time his armies succeeded in taking 50 walled towns and 985 villages. At length the tide turned. After a desperate struggle, Jerusalem was captured by the Romans, and no two stones of its buildings were left standing on one another. Other towns fell into the same hands until, of all the territories of Bar Kokhba, the town of Bither alone remained. Here the hero made his last stand, but not with the undivided support of the inmates of the fortress. Dissensions broke out among the garrison, and on the 9th of Ab, already the blackest anniversary in the Jewish calendar, Bither was stormed, Bar Kokhba killed, and his body brought in triumph to the Roman camp.

During the pacification that followed the males were slain by the thousand, and the women and children sold into slavery. Unheard of and unspeakable tragedies were enacted. In Bither alone more are said to have been slain than those who took part in the Exodus from Egypt. The number of dead was counted by hundreds of thousands. All those who were able escaped from a country which offered them the only alternatives of slavery and death with torture. Many fled to Arabia, and the considerable Jewish population of that country, even to this day, may be reckoned one of the results of Bar Kokhba's abortive insurrection. R. Aḳiba, who had been thrown into prison at the outbreak of the rebellion, died under torture at its conclusion. The war led to the final breach between the Jews and Judæo-Christians. The latter suffered severities at the hands of Bar Kokhba and his followers, in consequence of their refusal to join in the national uprising.

The fatal results of the Bar Kokhba movement discouraged for some centuries personation of the Messiah. In fact, an attractive opportunity did not occur again until the 5th cent., when, in accordance with a Talmudic computation, the day of the Messiah was supposed to be at hand. It was at this juncture that such a one, self-styled **Moses**, appeared in the island of Crete. Of his origin or his subsequent fate nothing is known. He induced the Jewish population of the island to support his pretensions, and on a specified date promised to lead them dry-shod to the mainland. On the appointed day the Jews gathered round him on a promontory and at his direction some threw themselves into the sea, expecting a path to be opened for them through the waters. The miracle did not occur. Many of the enthusiasts were drowned; others were rescued. The Messiah himself disappeared.

The pretender next to come under notice was **Isaac ben Ya'ḳūb Obadiah Abū 'Īsā al-Iṣfahānī**, who flourished at Iṣfahān at the end of the 7th century. There are two estimates of his claims. The one was that he was merely the forerunner of the Messiah, the other that he was the Messiah Himself. His call came to him through a sudden and miraculous cure from leprosy, and in support of his divinity his disciples pointed out that, although an illiterate before his call, he was able after that event not only to read and write, but even to compose books. The affairs of the khalīfate were at that period in a chaotic condition, and a military movement, such as Isaac's soon became, had good chances of success. The pretender and his followers met the army of the khalīf in battle at Rai (Rhagæ), but Abū 'Īsā was defeated and slain, and with his death the rising came to an end. The movement, however, did not die with its founder. It survived among the 'Īsāvites, the earliest of the Jewish sects of the Diaspora, who did not disappear until a couple of centuries later. Abū 'Īsā's influence on 'Anān, the founder of the Ḳaraites (*q.v.*), and on his ritual was, however, more enduring.

Abū Īsā left at least one disciple of influence. **Yudghān of Hamadān**, called **al-Rā'ī** ('the shepherd'), did not himself claim to be more than a prophet, although his admirers, in accordance with precedent, insisted on his Messiahship. His teachings showed undoubted traces of Ṣūfiism, then at the opening of its career; they were opposed to anthropomorphism, and to a great extent resembled those of his master Abū 'Īsā. After Yudghān's death his disciples adopted an additional doctrine —that of the immortality of their master, who, they contended, was not dead, but would appear again.

Contemporary with Yudghān al-Rā'ī was **Serenus**, a Syrian, who was both a political and a religious reformer. He promised to restore the Jews to the Holy Land, and, perhaps in consequence, his influence spread as far as Spain. His career commenced in A.D. 720, but was very short-lived. He was speedily captured and brought before the khalīf Yazīd II., to whom he excused himself by stating that he had never been serious in his claims; he had merely been amusing himself at the expense of his co-religionists. Serenus was accordingly handed over to the latter for punishment, while his followers, repenting of their heresies, were re-admitted to the fold.

For the next three centuries and a half no Messiah arose in Israel. Then there was in the West a small group of unimportant pretenders: in France (*c.* 1087), at Cordoba (*c.* 1117), and at Fez (*c.* 1127). Of these there are practically no records beyond the mere mention by Maimonides. About 1160, however, one of far greater importance arose in Kurdistān. **David Alroy** (or Alrui) came from the north of Persia, probably Ādharbaijān, being a member of one of the free Jewish tribes which claimed descent from the **Ten Tribes**, and to which the Afghāns, the Afrīdīs, and Paṭhāns of to-day trace their ancestry. The period was again one of political disorganization. One great element of disturbance was the efforts of the Crusaders to recover and to keep possession of the Holy Land. Moreover, intertribal warfare was incessant, and the weakness of the Sultan led almost to a paralysis of the Government. It was in these circumstances that Alroy visited Baghdād, and on his return to his own people he raised the standard of revolt. A large following immediately collected, and Alroy, who had meanwhile proclaimed himself the Messiah, determined to break the yoke of the Muhammadans and to lead the Jews back to Palestine. From this point truth and legend have so intermingled in the story of Alroy that it is impossible to disentangle them. His command of the magic arts led to the acceptance of his mission far and wide. Only the Jews of Baghdād were sceptical, but his hold on the others was so strong that those in Baghdād were quite incapable of suppressing the movement. Alroy is said to have been summoned by the Sultan, to have appeared in answer to the summons and proclaimed his divine mission, to have been cast into prison, and to have miraculously escaped. Despite his magic powers, Alroy's movement was undoubtedly a failure. In all probability he was killed in an unsuccessful attack on the stronghold of Amadia. According to a less reliable version, the governing powers, unable to overthrow the Messiah by fair means, bribed his father or father-in-law to put him to death. On the death of Alroy his followers, in order to appease the Sultan, had to pay a considerable fine. In Alroy's instance also the pretender's death did not mean the end of his cult. The sect of Menaḥemites, named after Menaḥem, the traditional designation of the Messiah, adopted by Alroy, continued for many years.

A century passed before the next prominent pseudo-Messiah appeared upon the scene, but before that period, in 1172, a minor prophet arose in Yemen. His course lasted but a year, at the end of which term he was beheaded, it is said at his own request, in order to show by his return to life that he was indeed the Messiah.

Abraham ben Samuel Abulafia was born at Saragossa in 1240. While still a youth he was attracted to kabbalistic studies, and it was as a kabbalist rather than as a pseudo-Messiah that his career was of most influence. His life was spent in wandering from town to town and from country to country. In 1281 he was in Rome attempting to convert the pope to Judaism—of course without success. His boldness involved him in imprisonment, from which he is said to have escaped miraculously. Four years later, when in Sicily, Abulafia proclaimed himself the Messiah, and announced the millennium for the year 1290. The year denoted came and went, but the millennium still tarried. Abulafia continued his picturesque career for one more year and then disappeared from history. He also, however, left his spiritual descendants, for his teachings were continued by two of his disciples, **Joseph Jikatilla** and **Samuel**, both of Medinaceli. Where Abulafia had failed, they were little likely to succeed, and it was but for a moment that these two meteors flashed in the firmament.

Immediately following them came **Nissim ben Abraham of Avila**, who pointed to 1295 as the year of the millennium. There were sufficient believers to fill the Synagogue on the appointed day, there eagerly to await the divine manifestation; but again disappointment was the prevailing emotion, and, when the watchers found mystic little crosses on their garments, many, accepting them as heavenly manifestations, embraced Christianity. The fate of the prophet, as of many of his predecessors, is unknown.

A century later **Moses Botarel of Cisneros** appeared. As a prophet he was of little consequence. In 1502 **Asher Lämmlein** suddenly arose in Istria and announced that, if the people would prepare themselves, the Messiah would appear that very year. At his suggestion fasting, prayer, and almsgiving became general throughout the empire. Jews and Christians alike accepted his teachings and prepared for the advent of the Messiah and the return to the Holy Land. Here again the precedent was followed: no Messiah appeared; the prophet disappeared.

At the close of the 14th cent. **Jacob Carson** (or **Carcasoni**), a minor prophet, appeared in the north of Spain, and **David Reubeni**, the picturesque emissary of his brother the mysterious king of Khaibar, or the East, also came upon the scene. Khaibar, according to the generally accepted locality of the kingdom, was a district in S. Arabia inhabited by nomad tribes of Israelites, although the view has been put forward that Reubeni came from India (see E. N. Adler, in *Aspects of the Hebrew Genius*, p. xxii, and *Auto de Fé and Jew*, p. xxx).

Reubeni arrived at Venice in 1524 after having visited Palestine and Egypt. He immediately proceeded to Rome, where he procured an audience of the pope, Clement VII., to whom he announced that he had been sent by his brother to obtain allies and assistance in his war with the Sultan. In support of his claims Reubeni brought letters of introduction from Portuguese officers in the East. The Jews of Italy found the means for him to proceed to Lisbon, and he arrived in Portugal in 1525, with the view of inducing the king, John III., to ally himself with the king of Khaibar. For a time the Portuguese policy seemed to favour such an alliance, and King John definitely promised a fleet of 8 ships and 4000 cannon for the assistance of his new ally. At the same time the pressure that was being put upon the Marranos of Portugal was relaxed, doubtless out of deference to the susceptibilities of Reubeni.

The embassy, the ambassador, and the circumstances that surrounded them, as well as the accompanying legends that immediately began to be woven, endowed Reubeni with almost superhuman powers in the eyes of the Jews, for whom the only hope lay in the future to which all their faculties were ever strained. The interest and excitement aroused by his advent were no less intense among the Marranos than among the Jews themselves. Miraculous powers, a semi-divinity, were attributed to him. If any proof of these claims were needed, his existence as a Jew unmolested at the court of one of the most relentless of the persecutors of Jews and Judaizers was considered sufficient. The people looked eagerly towards him and expected, not a momentary palliation of their tortures, but a final release.

By no means the least of those who were dazzled by the appearance and favour of Reubeni was **Solomon Molkho** (previously Diogo Pires) (*c.* 1501–32), an official of the Government, of Jewish descent. Pires, who was a young man of great promise, aroused by the stir caused by Reubeni's mission, abandoned Christianity, adopting his ancestral Judaism in place of it, and endeavoured to attach himself as a disciple to the newcomer. The latter, however, severely discouraged all conversions to Judaism, fearing probably lest in consequence of them trouble might react on him and his mission, and Molkho found little or no favour with him. Molkho's conversion to Judaism had placed his life in great jeopardy; and, deprived of the protection of Reubeni for which he had hoped, he left Portugal for Turkey. In the East Molkho, although hitherto supposed to be quite unlearned in Jewish lore, is said to have displayed a remarkable acquaintance with that subject, and by his eloquence and learning, and the mysterious manner in which he had acquired the latter, he soon collected around him a school of disciples who considered him almost divine. His teachings went without disguise far into the domain of mysticism. By him the advent of the Messiah was foretold for 1540, and the sack of Rome in 1527, an oft-foretold precursor of the millennium, seemed to confirm Molkho's prophecies. The one ambition of the prophet was to earn a martyr's crown, and in pursuance of this aim after a brief sojourn in Turkey he returned to Christendom.

As was expected by Reubeni, the conversion and flight of Molkho, added to other incidents, shook the position which Reubeni had acquired at the Portuguese court. The royal promises, although made apparently in good faith, lacked fulfilment, and the undoubted excitement of which he was the cause among the Neo-Christians of the kingdom rendered his continued presence among them most undesirable; and, after having spent a year at the Portuguese court, Reubeni was asked to withdraw. The ship in which he sailed was wrecked on the coast of Spain, and for a time he was in the hands of the Inquisition. His release was, however, ordered by the emperor, Charles V., and he settled at Avignon, then under the sovereignty of the pope. From Avignon Reubeni removed to Italy, preceded everywhere by the mysterious reputation which he had acquired, and followed by a host of believers, who hailed him as the precursor of the Messiah and even as the Messiah Himself.

Meanwhile Molkho had also come to Italy with the reputation which he had acquired in Turkey, enhanced, if possible, and a following that grew in numbers from day to day. In Rome Molkho, imbued with Messianic tendencies, had visions and foretold floods and earthquakes, which, it must be added, subsequently occurred. More valuable to him, however, were the favour and protection which he had obtained from the pope, Clement VII., and from some of the cardinals. With their assistance he was able to defy his enemies, who were drawn not only from among the emissaries of the Inquisition, but also from the Jews, some of whom shrewdly considered his influence and pseudo-Messiahship harmful rather than beneficial to Jewry. His critics among his own community were, however, numerically insignificant, and his influence among the Jews increased until he became indeed their accepted prophet. By Graetz Molkho has been described at this period of his career as 'the Jewish Savonarola' (*Hist.* ix. 274). In order to avoid the flood which he had foretold would overtake Rome, Molkho repaired to Venice, and here he met once again the first inspirer of his enthusiasm, David Reubeni. His position in regard to Reubeni had, however, undergone a change since their previous meeting; his fellow-prophet, Molkho, met him now, not as a disciple, but as an equal.

Reubeni was still endeavouring to obtain assistance for his brother, the king of Khaibar, and from the authorities in Venice he received some encouragement in his mission. After the flood Molkho returned to Rome, where he was received with enthusiasm as a successful prophet. The pope, the cardinals, and the ambassadors of the Powers vied with one another in their flattering attentions to him. His influence was so great at this period that he was able to secure the indefinite postponement of the introduction of the Inquisition into Portugal; but his Jewish enemies, especially Jacob Mantin of Venice, were untiring, and they ultimately succeeded in securing his arrest by the Inquisition as a renegade Christian, and Molkho was condemned to be burned. All the preparations for the *auto da fé* were made and the victim was in due course consumed by the flames. It was then discovered, however, that the pope, in order to protect his favourite, had gone to the length of substituting another victim, and that Molkho himself was safely hidden within the papal apartments. In the circumstances it is not surprising that Molkho was smuggled out of Rome at the first opportunity.

Molkho thereupon rejoined Reubeni, and the two decided to journey to Ratisbon to plead with the Emperor the cause of the Jews of Khaibar. There is a tradition that advantage was taken of the interview with Charles to endeavour to convert him to Judaism, and it was possibly this attempt that led to the arrest of both the ambassadors. They were put into chains and carried to Mantua, where at the Emperor's request Molkho was again tried by the Inquisition and sentenced to be burned. At the last moment pardon was offered him on condition that he returned to the Christian fold, but he rejected the offer with scorn. He had only one cause for repentance, was his reply, and that was that he had been a Christian in his youth. Molkho's ambition was thereupon gratified and he earned a martyr's crown. Some of his addresses were published by him in 1529 under the title of *The Book of Wonder*. Reubeni was taken to Spain and there handed over to the Inquisition. His ultimate fate is surrounded by mystery, but he appears to have died while in the hands of the Holy Office. The evidence that he was burned is insufficient. A copy of Reubeni's diary is in MS at the Bodleian. Graetz published a portion in his *History*³, ix., and Neubauer published the whole of it in *Mediæval Jewish Chronicles*, ii.

Concerning the existence of Reubeni there can be no legitimate doubt. His mission, however, is not so well authenticated, and there are those, no mean authorities, who consider him to have been merely a charlatan and impostor. Graetz (ix. ch. 8), for instance, judging from the language of Reubeni's *Journal*, expressed the belief that it had been written by a German Jew, and Neubauer held the same view, only more positively. Rieger and Vogelstein (*Gesch. der Juden in Rom*, ii. 41–46, 53–58) are also very sceptical about his *bona fides*, but they express the opinion that he did come from Arabia. Adler (*Auto de Fé and Jew*, p. 30 ff.) seems to have more confidence in Reubeni's credentials, but locates the source of his embassy at Cranganore in India.

Strictly speaking, neither Molkho nor Reubeni should perhaps be included in the list of pseudo-Messiahs, for neither ever claimed divinity. They were Messiahs for the most part against their own inclinations. The same may be said of **Isaac ben Solomon Ashkenazi Luria** (Ari) (1534–72), the founder of the modern kabbala. An ascetic and a mystic, he never pretended to be more than the forerunner of the Messiah, not the Messiah Himself. His principal disciple, **Hayyim Vital Calabrese** (1543–1620), was acclaimed by his master as possessing a soul unsoiled by sin. Around him also a group of mystical legends have collected. On Luria's death Vital succeeded to his position and also claimed to be Messiah ben Joseph, the precursor of Messiah ben David. Both Luria and Vital made Safed the scene of their principal activities. In the time of Vital a rival Messiah arose in the person of **Abraham Shalom**, who in 1574 sent a message to Vital pointing out that the latter was only Messiah ben Joseph, but he, Shalom, was Messiah ben David. He offered, moreover, to shield Vital from the death that would otherwise have been his fate.

The most remarkable and influential of all the pseudo-Messiahs was **Shabbathai Ṣebi**, born, the son of a Sephardi agent of an English mercantile firm, at Smyrna, on the 9th of Ab (the anniversary of the destruction of Jerusalem and a fast day in the Jewish calendar), 1621 or 1626. He is generally believed to have died on the Day of Atonement in 1676. Even as a boy Shabbathai was noteworthy for his physical beauty and his strange introspective habits. For the ordinary learning of the Jew, that of the Talmud, he had no liking, and the time spent by him at the school of R. Joseph Escapa was for the most part wasted. On the other hand, the kabbalistic mysteries of the *Zôhār* had a great attraction for his mind. He threw himself ardently into the study of them, and endeavoured, by carefully following out the ordinances laid down therein, and especially by the practice of asceticism, himself to solve the mysteries that the *Zôhār* professes to offer its students. On attaining manhood, Shabbathai had already acquired a considerable reputation as a kabbalist, which was enhanced by his mode of life, his obvious belief in his magical powers, and his determined aversion to marriage, probably without precedent in the society in which he lived. Meanwhile Shabbathai's father had learnt, through his correspondents in England, something of the hopes and beliefs of the English millenarian sects, then prominent in English thought, and had in particular been apprised of the identification of the year 1666 with the opening of the millennium. By a coincidence, according to the computations of the *Zôhār*, the year 1648 was to mark the appearance of the Jewish Messiah. Shabbathai, encouraged by these signs and by the almost worshipful attitude of his father, who attributed the whole of his material good fortune to his son's saintliness, by nature and education already prepared for the rôle that he was about to adopt, revealed himself in the latter year to a select circle of his followers as the Messiah. In support of his claim he uttered the Tetragrammaton—an act permitted only to the high priest in the Temple on the Day of Atonement. Shabbathai remained at Smyrna for some years after this event, surrounded by a circle of fervent believers, but with little if any influence outside of the district in which he lived. He and his teachings were closely watched by the Rabbinical authorities, who ultimately, considering that he had overstepped the permissible limits, excommunicated him and his disciples on account of their heresy, and banished him from Smyrna. This occurred about 1654 (according to Graetz, 1651).

From Smyrna Shabbathai is believed to have gone to Constantinople, supported in every sense by his disciples and strengthened in particular by two of them—Moses Pinheiro, a man of some scientific knowledge and of mature years, and Abraham Yachini, a distinguished preacher, who, by means of an alleged ancient MS of very doubtful authenticity, rendered Shabbathai still more steadfast in the belief in his own divine mission. It is doubtful whether Shabbathai, if he ever intended to visit Constantinople, did so on this occasion, but it is certain that he arrived at Salonica, where mysticism was likely to find a sympathetic atmosphere, shortly after his banishment from Smyrna. In Salonica Shabbathai showed himself even more intoxicated with the consciousness of his new rôle than he had been at Smyrna, and his acts led here also to his practical expulsion by the Rabbis. After leaving Salonica the new Messiah spent some time wandering about the Orient, promulgating his views and his claims in every city that he visited and gaining adherents in all parts. In 1660 he was in Cairo, where he remained for about two years. There he gained a valuable supporter in the person of Raphael Joseph Chalebi of Aleppo, a mystic who had long awaited almost with impatience the coming of the Messiah, and whose wealth and influence were both extensive.

The approach of the apocalyptic year, 1666, attracted Shabbathai to Jerusalem, where, suppressing temporarily his extravagances, he built up an influence over the people on less theatrical bases. As the representative of the people of the city, he was sent abroad to obtain funds for their relief from an impending calamity, and the success of his mission rendered him all the more popular among the grateful people in whose midst he was sojourning. While in Cairo, Shabbathai succeeded in yet another mission. A Polish Jewess, who at the age of six had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time in Leghorn, where she was reputed to be living an immoral life. Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai; he sent for and married her, declaring that she was his divinely appointed spouse.

Shabbathai thereupon returned to Palestine. Passing through Gaza, he met there Nathan Benjamin Levi, otherwise known as Nathan Gazati, who immediately became the leading advocate of the new Messiah and took unto himself the rôle of Elijah, the forerunner of the Anointed. One of his first steps was to announce the opening of the Messianic Age for the following year, 1666. This prophecy, together with many subsidiary ones, was promulgated far and wide, spreading even to the shores of the North Sea. These claims were, however, not by any means encouraged by the authorities at Jerusalem, and Shabbathai thought it well to find a more congenial centre for his activities. He returned to Smyrna, his journey thither taking the form of a triumphal progress which culminated in a reception at his destination, remarkable for its enthusiasm. At Smyrna, overwhelmed by his reception, he put the final touch to all the rumours that were current regarding his divinity, and formally announced his Messiahship. He was forthwith entrusted with absolute power as the sole ruler of the local Jewish community. Wherever Jews were to be found, the rise of the new Messiah attracted attention. The business of the exchanges of Europe was neglected in order that the latest of miracles might be discussed. The merchants of the North Sea ports wrote to their agents in the Levant for information. Tribute poured in upon the 'King of Kings.' Embassies were sent to him from the four corners of the earth. In the synagogues he was publicly hailed as the Messiah, and those who doubted went in danger of their lives. Even among the Christians believers in his mission were to be found. In Hamburg Protestants went to their pastor and said: 'We have almost certain accounts not only from Jews, but also from our Christian correspondents at Smyrna, Aleppo, Constantinople, and elsewhere in the East that the new Messiah of the Jews does many miracles, and the Jews of the whole world flock to him. What will then become of the Christian doctrine and the belief in our Messiah?' Prophets, male and female, in accordance with Joel's prediction (Jl 2^{28}), arose and exclaimed in Hebrew, a language with which they were supposed to have no acquaintance: 'Shabbathai Ṣebi is the true Messiah of the Race of David; to him the crown and the kingdom are given!' The daughters of R. Peḥina, Shabbathai's bitterest enemy, blessed the name of the pretender, as had been foretold. In Persia the Jewish agriculturists refrained from work on account of the advent of their deliverer who would lead them back to the Promised Land.

At the beginning of the year 1666 Shabbathai left Smyrna for Constantinople, but before doing so he distributed the kingdoms of the earth among his principal followers. As soon as he had landed on European soil, he was arrested by an officer of the Sultan, who placed him in chains, and it was in this condition that Shabbathai approached the capital. Despite his undignified landing, Shabbathai's popularity in no wise languished, and he was received by hosts of believers in his divinity, who, by the gifts which they brought, enabled the 'Messiah' to secure a considerable alleviation of the lot that would otherwise have fallen to him. Shabbathai's courage did not, however, equal his popularity; and, when questioned by the authorities regarding his claims and intentions, he replied that he was merely a Rabbi sent from Jerusalem to collect funds for charitable purposes. Despite this falling away, the influence of the pretender, instead of waning, grew stronger, and in his prison in Constantinople Shabbathai held a court which was attended by Muhammadans and Jews who alike proclaimed his divinity. After two months the prisoner was removed to Abydos, and there his court was continued with, if possible, even greater success than in the capital. His renown and exaggerated reports of the royal manner in which he was treated spread throughout the civilized world. The castle of Abydos became a place of pilgrimage to Jewries far and near. In parts of Europe the Jews made preparations for the return to Palestine under Messianic guidance. In innumerable synagogues prayers for the pretender's welfare were regularly offered; and with every day the excitement both within Abydos and throughout the world increased. Meanwhile Shabbathai, in order apparently to justify his existence, abrogated certain of the Jewish fast days.

Shabbathai's fall was due to the appearance of a rival, one **Nehemiah Ha-Kohen**, who posed as a forerunner of the Messiah. Shabbathai, learning of Nehemiah's prophecies, summoned him to Abydos. After a long journey Nehemiah arrived. An interview with Shabbathai was followed by dissatisfaction on both sides. Nehemiah, fearful of assassination by the Shabbathaians, fled to Constantinople, where he embraced Muhammadanism and denounced to the authorities the treasonable intentions of his rival. Removed to Adrianople, Shabbathai at length realized the critical position in which he was placed. Hoping thereby to save his life, he also embraced Muhammadanism, and was followed in this course by his wife and some of his adherents. The Sultan was much pleased at this act and appointed the pretender one of his doorkeepers. Shabbathai, in order to retain his hold upon the Jews, announced: 'God has made me an Ishmaelite; He commanded, and it was done. The ninth day of my regeneration.' His apostasy, despite the loyalty to him of many of his adherents, shattered his influence in Jewry, and hosts of Jews, their eyes at length opened by the last act of their prophet, repented bitterly of their support of the movement. For a time, in consequence of the schism caused by Shabbathai's apostasy, Turkish Jewry was in great danger of extermination, the fear of wholesale conversions to Muhammadanism being accompanied by that of the massacre of those who refused to follow Shabbathai's example. Powerful influences, however, warded off the latter danger.

Shabbathai seems never to have abandoned his Messianic claims. He managed to found a Judæo-Muhammadan sect of believers, the Dönmeh, who have survived, especially in Salonica, to the present day. After a time he fell into disgrace, was deprived of his office, and banished to Dulcigno, where he died, it is believed in 1676, leaving behind him a controversy which long continued in Israel. The Dönmeh are in a sense crypto-Jews, inasmuch as, while outwardly conforming to Muhammadanism, they practise certain Jewish or debased Jewish rites in secret. There is, however, in practice little secrecy concerning their difference from the Muhammadans, from whom, although they mix in commerce, socially they keep carefully aloof.

Shabbathai was succeeded by quite a shoal of petty Messiahs. The first of the line was **Jacob Querido**, or Jacob Ṣebi, who was the real founder of the sect of Dönmeh. He was in reality the brother of Shabbathai's fourth wife, who for her own purposes pretended that he was her son by the Messiah. Querido's principal doctrine was that the redemption could not come about until the world was either entirely good or entirely wicked, and, as the latter state was by far the easier of attainment, he preached and practised licentiousness in order that the day of the millennium might dawn. Querido died at the end of the 17th cent., and was succeeded in due course by his son **Bereḥiah** (*c.* 1695–1740). Other Shabbathaian Messiahs who flourished at this period were **Miguel** (Abraham) **Cardoso** (1630–1706), a Marrano, **Mordecai Mokiaḫ** (*c.* 1650–1729) of Eisenstadt, **Löbele Prossnitz** († *c.* 1750), and **Judah Ḥasid.** These were all, more or less, prophets of Shabbathai so long as he survived, and they endeavoured to step into his place when he died. Mokiaḫ flourished and preached in Italy and Poland. Prossnitz was of the class of clumsy conjurers; nevertheless he attracted many adherents in Austria and Germany. Ḥasid, who was a leader of the sect of Ḥăsîdhîm, 'the Ultra-holy,' traversed Europe at the head of a considerable following whom he led to Jerusalem. He died, however, immediately after his arrival in that city, and with his disappearance his followers were left leaderless and destitute.

The last of the most prominent of the successors of Shabbathai was **Jacob Frank** (1726–91). He was born in Podolia, where his first occupation was that of distiller. His original name was Jankiev Lejbovicz, but he obtained the new surname of Frank from the subjects of the Sultan in whose midst he sojourned for a long time. An undisguised charlatan and an apostate from more than one faith, he pursued a career of unceasing warfare against Rabbinical Judaism, and in the peculiar views to which he gave expression he described himself as the re-incarnation of all the prophets and Messiahs who had preceded him. In Turkey he obtained considerable renown on account of his kabbalistic learning, and on the return to his birthplace the remnants of the Shabbathaian party, who were known as Zoharites, appointed him their prophet. The Talmudists, however, disapproved most vehemently and forcibly of his teachings, which were leading directly to the destruction of Judaism and of morality in Poland. Frank and the Frankists were excommunicated, but they found a powerful friend in the bishop of Kamenetz, whom they ingratiated by pretended points of strong resemblance between their faith—which was bitterly opposed to Rabbinic Judaism—and Christianity. With his assistance the tables were turned, and for a time the upper hand was gained over the orthodox element in Jewry. With the death of the bishop, however, another change came over the fortunes of the parties. The position of the Frankists became precarious, and in order to secure the safety of his followers Frank instructed them to accept baptism, he himself setting the example. Conversions to Christianity followed on a considerable scale; but, when the converts were discovered to be leading double lives, and, while outwardly Christians, to be following Jewish practices in secret, the attention of the ecclesiastical authorities was directed towards them. Frank was himself arrested in 1760 on a charge of heresy and imprisoned in the castle of Czentschow, where he remained for thirteen years. This imprisonment did not by any means put an end to his movement or his teachings, and his prison became a centre for the promulgation of his doctrines. The invasion of the Russians in 1772 led to his liberation, and he was then free to make a triumphal progress through Poland, Bohemia, and Moravia. He lived in state until his death in 1791. latterly as the Baron of Offenbach, in various continental capitals, always with an immense retinue and a vast treasure, derived from his infatuated adherents, at his command. His later history, however, hardly belongs to the annals of Jewry, for his influence on Judaism had ceased long before his death. His followers, the Frankists, although for a time they kept themselves apart as pseudo-Jews of a peculiar description, were ultimately absorbed into the population in whose midst they lived.

Frank was the last of the series of pseudo-Messiahs to be accepted seriously by any considerable section of Jewry, but there is one other who deserves mention, before the catalogue of these actors on the world's stage is brought to a close. Moses Hayyim Luzzatto (1707–47) differed considerably from most of his predecessors in the rôle in which he also essayed to live. With most, if not all, of them there was a spirit of charlatanry manifest. Not even Luzzatto's most determined enemy could sincerely suggest any such charge against him. One might almost say that he was merely a victim of his own delusions; his predecessors for the most part found the victims of their delusions outside of themselves. Luzzatto, the cultured son of wealthy Italian Jewish parents, was a poet by nature as well as by profession. Early in life, however, he fell under the influence of the kabbalists and the *Zôhār*, and soon the mysteries of this literature took complete possession of him and he firmly believed himself to be divinely inspired. He even went so far as to create unaided a second *Zôhār*, and by the work of his own hands and mind he was convinced of his divine mission. A circle of young devotees soon settled round him, and his fame began to spread to the confines of Jewry. The leaders of orthodox Judaism in Germany were scandalized and, after some difficulty, brought pressure to bear upon the newly arisen prophet to undertake to refrain from teaching, by means of either the spoken or the written word, the new doctrines. Luzzatto gave the desired promise, but was unable to observe it for very long, and, when he once more reverted to the forbidden studies, he was excommunicated by the board of Rabbis of Venice. Ultimately Luzzatto wandered to Palestine, where he died of plague shortly after his arrival.

LITERATURE.—On the general subject of pseudo-Messiahs relatively little has been written. The principal references to the subject are to be found scattered in works on post-Biblical Jewish history. *JE* x. contains a general résumé of the subject with supplementary articles in other volumes dealing with individual pretenders to the Messiahship. Pseudo-Messiahs in general are also dealt with by Joannes à Lent, in *Schediasma historico-philologicum de Judæorum Pseudo-Messiis*, Herborn, 1697; M. Gaster, in *Jewish Chronicle*, Feb. 11 and March 11, 1898; and A. M. Hyamson, *Gentleman's Magazine*, ccxc. [1901] 79–89. For the individual pseudo-Messiahs, H. Graetz, *Geschichte der Juden*, Leipzig, 1868–78, Eng. tr., London, 1891–92, should be consulted. In addition, for Theudas see Josephus, *Ant.* xx. v. 1; Eusebius, *HE* ii. 2, and E. Schürer, *HJP* I. ii. 168. For Dositheus see S. Krauss, in *REJ* xlii. [1901] 27–42; A. Büchler, *ib.* 220–231, and xliii. [1901] 50–71; D. ALBERT M. HYAMSON.

METALS AND MINERALS.—I. Metals.—Fire and metallurgy may be regarded as the two main bases of material culture. The results of the modern applications of steam and electricity have been described as 'puny and insignificant when compared with those which followed the discovery of metals by the men of the stone age';[1] and with the finding of the art of extracting metal from ore 'human culture was revolutionised.'[2] Possibly the first attempts at utilizing metals were made by applying a modification of hammer-work on stone to fragments of surface-ore. Copper and its alloys, especially a native bronze, would naturally be observed first; but the usual order of discovery—copper, bronze, iron—is not absolute; the order varied in different regions. For instance, it is unlikely that the West and Central Africans found any metal earlier than iron, which is so abundant in their country.

Observing the importance to humanity of the discovery of metals and the invention of metallurgy, philosophers have inclined to attribute them to some remarkable cause. Lucretius, *e.g.*, imagined a mighty conflagration; this, in consuming forests covering metalliferous ground, would reduce the outcropping ore to a metallic state.[3] But, with the discovery of fire-making, there are many possibilities, and various lines of discovery may have converged. Gowland suggests that the origin of metallurgy is to be found in the camp-fires of the Neolithic age.[4] When these were made on metalliferous soil, the lumps of metal melted out would at once attract the attention of a stone-working people, and the blows of the stone hammer on the hot and malleable mass would indicate its possibilities. The camp-fire may thus be regarded as the prototype of the most elaborate modern furnaces.[5]

Naturally, a feeling of the importance of metals, and a primitive appreciation of the 'marvels of science' in connexion with the working of them and of their mechanical capability, reacted upon early man with the results usually found when superstition meditates on critical things. The body of beliefs about metals and, in a less degree, minerals is enormous, but reducible to a few simple types which are found everywhere and survive in peasant psychology to this day. Special properties of this or that metal or mineral are taken into account, and cultural reactions of all kinds modify the various beliefs and usages. These may be typically exemplified without unnecessary multiplication.

In common with all skilled crafts in early culture, the miner and the worker in metal are regarded with wonder, and often with its entailed superstitious feelings.

Among the Bangala of the Upper Congo no one is allowed to step over a smith's fire or blow it with his mouth; such acts would pollute the fire and cause bad workmanship. The smith is supposed to use witchcraft in order to perform his smithing well. Neighbouring peoples simply regard the smith with respect.[6] Some African smiths form sacred gilds; the mythical Wayland Smith of Scandinavian lore is a natural deification, as is part at least of the figure of the Greek Hephaistos.

The usual tabus and animistic beliefs are attached to the working of metals, to mining, and to the ore and metal themselves.

The tin-miners of Malaysia have a remarkable code of tabus and body of superstitious ideas, but they are outnumbered by the Chinese workers, who, however, as will be seen, have a similar faith. The ore is supposed not only to be alive but to grow, to be able to move from place to place, to reproduce itself, and to have special likes or affinities for certain people and things, and *vice versa*. 'Hence it is advisable to treat tin-ore with a certain amount of respect, to consult its convenience, and what is, perhaps, more curious, to conduct the business of mining in such a way that the tin-ore may, as it were, be obtained without its own knowledge.'[1] Of the tabued acts observed by the miners, the chief are that no living creature may be killed in the mine; that the *sarong* may not be put on; that shoes may not be worn, or an umbrella used. Numerous charms are employed by the 'mining wizards' for the purpose of clearing away evil spirits and to induce the ore to show itself.[2] The Malay *pawangs* ('medicine-men'), or mining wizards, used to enjoy 'an extraordinary reputation, some of them being credited with the power of bringing ore to a place where it was known that no ore existed, . . . to possess the power of sterilising such ore as existed, and of turning it into mere grains of sand.' No one but him was allowed to wear a black coat at the mine. He used a special language (*bahāsa pantang*, 'tabu language') for his professional duties, and he had 'a wonderful "nose" for tin.'[3] Sometimes each separate grain of ore was credited with personality.[4] It was believed that tin could 'announce its presence by a peculiar noise heard in the stillness of night.'[5] Sometimes the personality of the tin is described as a buffalo, in which shape it makes its way underground,[6] this being perhaps a sophistication of the lode.

'In Sumatra the spirits of the gold mines are treated with as much deference as the spirits of the tin-mines in the Malay Peninsula. Tin, ivory, and the like, may not be brought by the miners to the scene of their operations, for at the scent of such things the spirits of the mine would cause the gold to vanish. . . . In some cases, for example in removing the grains of the gold, a deep silence must be observed; no commands may be given or questions asked, probably because the removal of the precious metal is regarded as a theft which the spirits would punish if they caught the thieves in the act. Certainly the Dyaks believe that gold has a soul which seeks to avenge itself on men who dig the precious metal.'[7]

In Manipur the iron-ore deposits are under the protection of an *ūmang lai* ('forest god'), who is propitiated before the iron is worked.[8] He capriciously moves the iron about. His symbol is a piece of iron a few inches square. The *lai-harauba* ('pleasing the god') is an annual festival. 'The first thing to be done is to bring the lai into a state of activity. Ordinarily speaking he is supposed to remain inert, unless offended in any way.' He 'particularly affects two plants called Leisang Leirel and Langthei, and when he is about to be pleased the Leirangba, a specially selected official, has to fetch them.' The plants are placed in the house of the *lai*, and then taken in a brass vessel by an old lady to the river. She wades about, suddenly stumbles, and then emerges with a vessel full of water. The god has now come.[9] A procession with music is made to the *lai-pham* ('god's place'), where his images (the pieces of iron) are set out. By them is placed the vessel, and a service of prayer and praise is celebrated, after the lighting of a sacred fire for the sacrifice. The god's servants or priestesses are two old women, termed *maibis*, who are often inspired by him and babble incoherently. If a man is similarly possessed by the god, he is known as *maiba* and during the ceremonies wears the dress of a *maibi*. Dramatic performances end the list of events.[10]

The last example is a perfect one for showing the development of an organized cult around a metal and the processes of its acquisition. There is some vagueness, which is worth noting, as to whether the metal itself is personified. As for its being deified, this is hardly to be inferred here or elsewhere.

The god appears to be rather the owner of the site, resembling the Hebrew Baals.

The Malays regarded gold in a similar way. The gold 'spirit' is 'believed to be under the care and in the gift of a *dewa*, or god.' It has the form of a golden roe-deer.[11] The theriomorphism is analogous to that of tin.

The same ideas are found at the other side of the world.

Gold was regarded by the Central Americans as possessed of 'divine qualities,' and it was gathered in fasting and penance.[12]

An interesting detail with regard to the personality of metals is supplied by Malay superstition. The Malays believe that so long as gold is in the earth it has a soul. When the gold is taken by man, the soul flies away.[1] The idea is parallel to those found in agricultural lore; presumably the corn-spirit leaves John Barleycorn when he is ground, if not when he is reaped. The idea is elaborated in Celebes, on the principle that the soul may be retained and will assist the usefulness of the implements when made.

Among the Alfoers of Celebes iron-working is a prominent industry. Iron is credited with a soul, which is apt to desert the metal under the hammer. Every smithy, therefore, includes a bundle of *lamoa* ('gods'), consisting of wooden imitations of iron implements, and in this the soul of the iron resides. '"If we did not hang the *lamoa* over the anvil, the iron would flow away and be unworkable" on account of the absence of the soul.'[2]

This is an interesting application of the principle of the external soul.

The Chinese in their elaborate animism have not neglected metals. They consider metals and ores when in the ground to possess a *shen* ('soul') of animal or human shape, and this figure is either the mineral or a spirit guarding it. 'Gold, jade, and pearls . . . are the *tsing* of Heaven and Earth.'[3] A particular development is towards the Scandinavian idea of gnomes. The Chinese have tales of silver men and of 'women in white'; when they were attacked and knocked down, they disappeared, and silver mines were found on the spot.[4]

The same kind of analogy connects various metals with various things, according to colour or other properties. The Greeks of to-day call jaundice 'the golden disease,' and heal it on the homœopathic principle with a decoction from an English sovereign, English gold being the best.[5]

One or two examples of the miscellaneous wonder-lore which has gathered round metals may be cited.

Fern-seed, itself a mythical vegetable gold-dust, guides to hidden treasures.[6] A Malay recipe for turning brass into gold is to kill a wild pig, and sew up in it a quantity of 'scrap' brass; then pile timber over it, and burn it; when grass has grown over the remains, 'dig up the gold.'[7] Paracelsus made a magic ring of a mixture of all metals joined under certain constellations,[8] and Van Helmont concocted a ring of magic metal which cured disease.[9] An obvious connexion is practically universal between gold and the sun, silver and the moon. Silver is the lunar metal; hence peasants like to have silver in their pockets when they see the new moon, and to turn it for luck, *i.e.* doubling.[10] Throughout the world magnetic iron and ore have excited wonder.

The relative value of the familiar metals is the same in superstition and ordinary usage. It is interesting to note that the Hindus regarded alloys as impure, and never used them for religious purposes.[11] Here may be detected the notion of mixture, adulteration, as a component of the idea of impurity. Another popular division of metals is into 'precious' and 'base.' The Chinese consider gold 'the most genuine matter.'[12] In all the analogous estimates found in every age it would seem that æsthetic ideas supersede economic. Clearly the æsthetic value of gold and silver rather than their importance as currency is to the fore, and either view preponderates over the mechanical importance of iron.

A similar predilection is shown in the genealogies of the metals.

Manu said that gold and silver arose from the union of water and fire.[13] In Chinese philosophy tin 'is produced by the influence of the feminine principle in nature, being classed between silver and lead. The metal arsenic generates itself in two hundred years and after another two hundred years is converted into tin. Tin, being a product of the feminine principle, has tender qualities. When it is submitted to the influence of the masculine principle, it is converted into silver. It is sometimes found that wine kept in tin vessels has a poisonous action on man, which proves that the arsenic had not been completely transformed into tin.'[1]

This notion of transmutation of metals is a curious parallel to modern discoveries of the degeneration of radium into a series of filial metals. The search of the alchemists for the philosopher's stone included a similar hypothesis.

According to the Pahlavi *Bundahišn*, gold, silver, iron, brass, tin, lead, quicksilver, and adamant arose from the various members of the dead Gāyōmarṭ; and 'on account of the perfection of gold it is produced from the life and seed.'[2] The Pahlavi *Šāyast lā-Šāyast* speaks (xv. 15) of the duty of 'propitiating' melted metal, *i.e.* practising 'habits of the heart so unsullied and pure that, when they shall drop melted metal upon it, it does not burn.' But the ordeal slays a sinner. Metal, especially gold and silver, is a 'counterpart of Shatvaīrō himself in the world.'[3] From the divided body of Indra, according to the *Śatapatha Brāhmaṇa*, metals arose, as well as all kinds of substances and living creatures; *e.g.* from his navel came lead.[4] The five elements in Chinese natural philosophy are water, fire, wood, metal, and earth. Wood produces fire, fire earth, earth metals, metals water, and water wood.[5] The idea of animal souls for metals already referred to has probably no cosmological intention.

In the multitudinous superstitions relative to the protective, curative, or dangerous properties of metals or metallic implements, the analogy of their relative value and efficiency—*e.g.*, between gold and steel—seems to predominate. The *Śatapatha Brāhmaṇa* lays down that the slaughtering-knife for the horse should be of gold, that for the *paryaṅgyas* of copper, and that for the other sacrifices to Prajāpati of iron. Gold is a symbol of the nobility, copper of heralds, messengers, and the like, iron of the peasantry.[6] The intrinsic value of gold, its brilliance, analogous to fire and the sun, connect it with vitality. Hence its extraordinary popularity as a panacea to this day among the Chinese, in the form of leaf, dust, decoction, or grease. It is placed in the mouth of the dead to assist revivification and to delay decomposition.[7] The Chinese also put mercury in coffins in order to preserve the body.[8] With no knowledge of embalming they endeavour to insulate, as it were, the coffin against decay. The use of quicksilver may be referred to the analogy between a moving and apparently living metal of worth and organic life. British folklore advises rubbing ringworm with silver.[9]

Metals, in virtue of their various properties, are used both as medicines and as amulets, in either case dependent on magical notions. The Burmese believe that the wearing of silver and gold is itself protective, and base metals may be used in default of precious.[10] Lumps of gold are worn under the skin to secure invulnerability. There is a common practice of covering amulets with gold-leaf to add to their efficacy.[11] For a person to wear something, as if a part of himself, which has a value of its own, adds to his own value and resisting power. On the same line of reasoning, metals of worth are the more useful in warding off ghostly enemies. In European as in Semitic folklore, the most efficacious bullet against a witch is one of silver, or a crooked sixpence;[12] but all metals have efficacy in this direction.

The property of resistance is common to most metals; the precious metals possess the further properties of beauty and value. The strength and hardness of iron make it a favourite charm.

To keep off evil spirits, mourners in India carry a piece of iron—a key or a knife or any iron object. In Scotland after a death a piece of iron was placed in all the provisions in the house 'to prevent death from entering them,' and similar customs obtain in Ceylon and Morocco.[1] 'When Scotch fishermen were at sea, and one of them happened to take the name of God in vain, the first man who heard him called out "Cauld airn," at which every man of the crew grasped the nearest bit of iron and held it between his hands.'[2] To this day in parts of Scotland there survives a queer superstition about 'pigs' and 'iron.' It is unlucky to utter the words 'sow,' 'swine,' or 'pig' when fishing;[3] if you hear a man do so, you must shout 'Cold iron.'

It is a mere coincidence that in modern medicine iron is used as a tonic and that in early culture its 'strength' was absorbed by men.

The people of Nias wear iron arm-rings to keep off evil spirits or witchcraft; and they place iron by the side of sleeping infants for the same purpose. In Sarawak biting a piece of iron is a similar protection. The Torajas believe that iron strengthens one's soul, and hold ceremonies at smithies for this purpose. The people of Halmahera drink water in which iron has been dipped.[4] In Surinam iron arm-rings are supposed to strengthen the wearer.[5]

Several Malay sultans have in their regalia a sacred lump of iron, 'a piece of old scrap-iron with supernatural powers.'[6] Long iron nails are used by the Malays to protect new-born infants, betel-nut scissors to drive away evil spirits from the dead, and a sword is put in a strange river before a man will drink of it. When eating alone in the forest a man will sit on his sword, not only to drive away evil but to 'confirm' himself. Such iron implements are called 'representatives of iron.'[7] Scraps of iron are used in ointments for curing the sick.[8]

The supernatural power of a sharp instrument is, of course, to be added in many cases to the intrinsic power of iron and steel as such.

Lead appears but rarely in superstition. The Atharvaveda speaks[9] of a charm against demons and sorcerers by means of lead. Here, as in mediæval Europe and classical antiquity, the softness and malleability of the metal, and perhaps its weight, were possibly connected with ideas of image-making, for which it is as convenient as wax. The practice of injuring a person by damaging his image or effigy is world-wide. Curses inscribed on leaden tablets were common objects of Greek and Roman superstition; a leaden arrow, in classical belief, destroyed love.[10]

The virtues of metal may be enhanced, as is seen in the last-cited cases, by the form and purpose of the manufactured article. The ring has the additional advantage of enclosing and keeping safe; the coin has the further values of currency and of the personality whose head is stamped on the obverse. British folklore adapted the royal 'touch' for King's Evil by using crown-pieces bearing the head of King Charles I. Sufferers from paralysis or rheumatism collected coppers from the charitable at the church-door, and these were commuted into silver rings which were worn to cure the infirmity.[11]

The acoustic properties of metals have also been important in popular religion.

'The idea that the sound of brass or iron has power to put spirits to flight prevailed also in classical antiquity, from which it may have been inherited by mediæval Christianity.'[12]

In the Far East the virtues of the gong as a repeller of evil are well known. Brass is considered by the Chinese the most effective metal for repelling demons;[13] the sound of a brass instrument is the most terrifying.

A remarkable set of beliefs and practices has a strong tabu against the use of iron and the substitution of other metals or substances, previously used or not. These rules usually apply to critical circumstances and persons.

Iron was not allowed to touch the body of the king of Korea. The Archon of Platæa was forbidden to touch iron. Tools of iron might not be introduced into Greek temples, and the Arval Brothers offered an expiatory sacrifice when an iron graving-tool was used. Roman priests were not allowed iron razors. The hair of the Flamen Dialis might be cut only with a bronze knife. It appears that the Greeks ascribed purificatory powers to bronze. The Pawnees, Hopis, Hottentots, and Gold Coast Negroes retain stone implements for sacred purposes. Circumcision is performed with a quartz knife by the Hottentots and the Ovambo.[1] Among the Damaras blood was ceremonially drawn from the slayer of a man or a lion, but with a flint knife.[2] The druids cut the sacred mistletoe with a golden sickle. When making need-fire, the Scots removed all iron from their persons. In making the Yule-tide fire-wheel (*clavie*), the hammering must be done with a stone. Similar tabus were observed in ancient Palestine and Italy. No iron tool was employed in making Hebrew altars or in the building of the Temple at Jerusalem. The Roman Pons Sublicius, a sacred bridge, was made and repaired without any use of iron or even bronze. Hindus have believed the use of iron for buildings to be productive of epidemics.[3]

Frazer considers that the tabu against iron in ceremonial 'perhaps dates from that early time in the history of society when iron was still a novelty, and as such was viewed by many with suspicion and dislike.'[4] Thus, when iron ploughs were introduced in Poland, some bad harvests followed, and the farmers reverted to the wooden implements.[5] The hypothesis is inconclusive. Iron and steel are used in virtue of their death-dealing qualities to ward off supernatural (no less than physical) evil, and weapons made from them are essentially dangerous weapons. Now, ceremonies practised at critical seasons or with reference to persons or things in a critical and sensitive condition call for special treatment with special apparatus, or at least for peculiar delicacy and care. This attitude is quite a sufficient reason for the employment of less dangerous tools, such as flint, quartz, or the human hand in critical operations, and it also sufficiently explains the ceremonial use of flint or bronze instead of iron, and particularly the use of gold or silver in connexion with very sacred persons or things. In Morocco the last sheaf of harvest is regarded as an incarnation of the *baraka* of the crop. It may not be cut with a sickle of steel or iron, but is plucked with the hand. Compare with this the Moroccan custom of placing steel and salt underneath the stack of wheat in order to keep off the attacks of *znūn*.[6] In the first case, steel is evidently too dangerous a substance for dealing with the delicate sanctity of the Bride of the Fields; in the second, its very dangerousness makes it an ideal defence. It is quite possible that in certain sacred operations—*e.g.*, circumcision and cutting the mistletoe—the phenomenon of rust, indicating decay, may also have been a deterrent from the use of iron. This, or the general notion of the dangerousness of hard metals, may have inspired the Chinese rule that metal buttons may not be used on grave-clothes. They would 'give trouble to the dead by injuring his body while it is decaying in the grave.'[7] On the other hand, the Chinese use gold, jade, and mercury to retard the decay and facilitate the future revival of the dead.

2. Minerals.—The religious associations of minerals in general are fewer and less marked than those of metals, except in the case of salt. The use, however, of stones of various sorts and shapes as fetishes and vehicles of magic is very widely spread; but, as it demands a special study (see art. STONES), it is touched upon here only to illustrate the general attitude towards the mineral world.

Australian medicine-men possess sacred stones full of strength, more or less regarded as 'living spirits.' They swallow them or rub their heads with them to acquire their virtue.[1] In Melanesia magic and worship are closely connected with sacred stones. The stone is not the *vui* (the spirit) nor is the *vui* in the stone, but there is a 'connexion.' The stone is, as it were, the 'outward part' or 'organ' of the *vui*, and the owner of such a stone is its priest.[2] These stones are kept in houses in order to bring *mana* to the inmates. There are special stones for promoting the growth of the crops and for bringing rain or sunshine. The stone is rubbed with food—*e.g.*, coco-nut—to induce it to act. Food placed on a stone and then eaten gives *mana* to the eater.[3]

Both shape and material are concerned in the prestige of sacred stones.

The Australians are partial to a small round black stone, which is easily manipulated; the medicine-man cures a disease by pretending to extract such a stone from the patient's body.[4] In some tribes every man carried a round black pebble of magic power, *bulk*; placing this in contact with anything coming from an enemy sent the magic force into his body, procuring his death or sickness.[5] Rock-crystal, or quartz, is a favourite material for these purposes.[6] Australian medicine-men used bits of rock-crystal for making rain, curing or causing disease, and poisoning water. To cure disease they would extract a piece of rock-crystal, alleging that a hostile sorcerer had placed it in the patient's body.[7] To make rain the sorcerer breaks off a piece of rock-crystal and spits it towards the sky.[8] White quartz is used for this purpose in Queensland. The stones are fixed to a stick and placed at the bottom of a pool, while in some parts a quartz crystal is ground to powder, which is scattered over the women, who pretend that it is rain,[9] the liquid appearance of the crystal possibly suggesting its connexion with rain. The Wa-wamba of Central Africa anoint a rain-stone and place it in water; Mongolians use a bezoar stone.[10] In the Banks' Islands a round stone, called 'sunstone' (*vat loa*), is decorated with radiating feathers and hung in a tree to produce sunshine.[11] In New Guinea a 'wind-stone' is tapped with a stick to produce wind. If it were struck heavily, a hurricane would result. The people of Vancouver have a number of stones, each representing a particular wind, and the required wind is obtained by slightly moving the corresponding stone.[12] Pebbles, being obviously suitable for counting (cf. *calculus*), are naturally used as representatives of persons; in Scottish folk-ritual at Hallowe'en each member of a family is represented by a stone.[13] In Greece a black stone is placed on the head to produce strength, and people carry stones on their heads while jumping over the bonfire.[14]

The use of crystals of quartz or other mineral for 'seeing' is world-wide, and needs no special illustration here (see art. CRYSTAL-GAZING). Again there is to be noted the analogy between the crystal and the liquid stage.

In the Middle Ages the term 'bezoar' covered mineral as well as animal concretions.[15] One variety was the 'madstone,' curative of madness and poisoning.[16] The adder-stone was worn to cure whooping-cough, amber to ward off croup, the snake-stone to remove serpent's poison, the loadstone to cure rheumatism, in recent Scottish custom.[17] Precious stones particularly have in all ages commanded interest by their unique beauty of colour, sparkle, or phosphorescence. The Greeks wore 'amethysts' to prevent intoxication; agate was a panacea of disease; the bloodstone checked bleeding.[1]

The lore of jewels is a subject in itself, but mainly built up of fanciful analogy rather than of genuine superstition. But the Dayaks, among others, suggest the same elements of animism as have prevailed in the case of metals, when they regard a special form of diamond as 'the soul of diamonds.'[2] At the other end of the scale there is the modern English burglar who carries a lump of coal in his pocket as a charm, possibly a charm for invisibility.[3]

The ceremonial use of flint implements for extraordinary purposes, while steel is used for ordinary, has been alluded to above.

The fine jade of China has attracted to itself almost a special cult; it is identified with the heavens, since all precious substances are from the sky. Like gold, it possesses intense vital force, or *yang*. Some jade is of a beautiful azure colour—a fact with which its heavenly origin may be connected. Chinese folklore has stories of jade-wine flowing from mythical rocks of jade. Jade prolongs life, and even produces immortality.[4] In folk-medicine it was used as a sovereign panacea, and administered as a decoction or ointment. Jade-water was procurable from streams flowing by jade rocks, or was made with powdered jade.[5] In accordance with the idea that death is a protracted sleep, the Chinese place in the mouth of the dead objects possessing vital energy (*yang*) to facilitate revival and retard decomposition, such being jade, jasper, nephrite, and agate. Jade, the most precious mineral, being identified with the heavens, intensifies the souls, or *shen*, of those in contact with it; and the same was the case with gold, sometimes identified with jade.[6]

'When the Sovereign fasts, the jade which he swallows is procured by the Manager of the Jade Stores.'

This would accelerate his intercourse with disembodied *shen*, the object of his fast.[7] There were many stories of a luminous variety of jade.[8]

The discovery of salt[9] and its employment in food-preparation constitute an epoch as socially important as the discovery of metals. Neither has been achieved by the Australian natives; and many metal-using savages are still ignorant of salt. But its discovery generally comes early in culture, though long subsequent, in most cases, to the discovery of metal. Owing, perhaps, to its quasi-medicinal properties, as much as to its effect on food stuffs, salt has attracted an extraordinary amount of superstitious and religious attention. The bond, *e.g.*, created in Arabic and other customs by eating salt together is in the highest degree sacred, and may deserve the name of 'salt-communion.' Very holy obligations were 'covenants of salt.'[10] Salt has analogies with blood and all 'strong foods'; on another side it has analogies with 'strong' metals like iron. Primitive peoples ignorant of salt are supposed to correct its absence from their food by drinking fresh blood.

Harmless superstitions about salt have lasted into modern civilization, owing to its having been a sort of symbol of food-communion and of the common meal.

In mediævalism the salt separated the family from the retainers in hall.[11] In Leonardo's fresco of the Last Supper, Judas was to be recognized by the salt-cellar which he had overturned; the detail is visible in the copy by his pupil, Marco d' Oggiono, in the Brera Gallery.

[11] The Latin *salinum* was placed in the centre of the table and rendered it sacred.

Salt has been much used in sacrifice, indicating the analogy between sacred and ordinary meals. *Mola salsa* was offered by the Latins to the *lares*, and salt was sprinkled by Greeks and Latins on the head of the sacrificial animal. On the other hand, the Rabbi Chia, in the 3rd cent., stated that in all salt there is some portion of the salt and sulphur of Sodom, which blinds the person whose eyes it touches.[1] We thus get the two poles usually found belonging to sacred substances, positive and negative, *optimum* and *pessimum*.

Salt has been widely used in protective and curative magic, and the association of ideas may be the same as is seen in the word 'preserve.'

Lao and Siamese women after childbirth washed themselves daily with salt and water, salt being a protection against witchcraft.[2] Moors carry salt in the dark to keep off ghosts,[3] and in Teutonic countries it is placed near infants to protect them.[4] In Morocco it is put in the wheat stack to guard it from *znūn*, and is sprinkled on the hand-mill before grinding the corn.[5] British folk-custom has the charm of carrying salt withershins round a baby before taking it to be baptized.

Salt is a cure for many sicknesses, and procures disenchantment.[6] Like blood and iron, it is a favourite medium for the oath; in early Teutonic custom the swearer dipped his finger in salt, and then took the oath.[7]

As with other trades, sacredness has attached to salt-mining.

In Laos salt-miners observe continence and other tabus.[8] In ancient Germany salt-working was a sacred business.[9] The peoples of Central America worshipped a 'goddess,' Huixtocihuatl, of salt, who was believed to have invented the pan-process.[10]

Prohibitions against the use of salt are instructive for the theory of tabu. Certain professions, and persons in certain states, are forbidden to use salt, as they are forbidden other critical substances.

Mourners may eat no salt among Hindus, Africans, and other peoples. Priests and medicine-men (as among the Egyptians, the Dards, and Central and S. Americans) may eat no salt throughout their lives.[11] The salt-tabu of the Egyptian priesthood is especially emphasized.[12] When travelling, the Central African might not use salt. If he did, and his wives were not behaving well, the salt would act as 'a corrosive poison.'[13] During the ceremonies of firstfruits among the Yuchi Indians of California continence and abstinence from salt are ordered,[14] as is also the case after a solemn communion with a god by the Huichol Indians.[15] No salt may be used in cooking the flesh of the beast or any food at the Gilyak Bear Festival.[16] Some Dayaks after taking heads may not eat salt, or touch iron, or have intercourse with women. Baganda fishermen have the same combined tabu.[17] In Indian ritual the young student, after being brought to his teacher, and the newly-married pair must abstain from salted food for three days.[18]

The following is a luminous instance of the ætiology of the associations of salt.

Among the Nyanja-speaking tribes of British Central Africa the girl at puberty is secluded and may eat no salt. After the seclusion she is married. On the wedding-night she puts salt in the relish which she cooks, and this is set out next morning for relatives to rub on themselves, though not if the husband is impotent.[19]

On this and similar customs, viz. that women at their periods may not put salt in food, lest husband and children contract a disease, Frazer says:

> Abstinence from salt is somehow associated with the idea of chastity. 'Primitive man connects salt with the intercourse of the sexes and therefore forbids the use of that condiment in a variety of circumstances.'[1]

A psychological analysis is assisted by the Rabbinical theory of *kilayim*, the mixture of things differing in species or substance, and by the principle underlying the contrast between Apollo and Dionysus in Greek thought. Persons in a crisis must be chaste; the keynote of chastity is avoidance of alien influence, of mixture. The Apolline ideal is static, that of Dionysus dynamic. The votaries of the latter god celebrated orgies with consumption of flesh, wine, and blood. The principle of the orgy, whether alcoholic, cannibal, flesh-eating, or sexual, is distinctly dynamic—a stimulation of human energy to the utmost degree. Movement and change are among its characteristics; and, in a humble way, salt, as producing chemical change, is in the list of dynamic vehicles. In connexion with sexual intercourse it is analogous to leaven; there is some idea of the process of fermentation, so to say, about the sexual act, as well as the expenditure of vital energy in an ultra-dynamic process.

Alum and sulphur[2] are used, but in a far less degree, as magical substances. Alum is an Egyptian charm against the evil eye,[3] and both are employed in Morocco to protect ploughing oxen from the evil eye.[4] Cinnabar was used in Greek charms for producing invisibility.[5]

The use of coloured ochres, chalk, pipeclay, gypsum, kaolin, and other earths for decorating the body on ceremonial occasions is very widely spread in the lower culture. Magical ideas naturally attach to bituminous deposits and such sources of rock-oil as are found in Western Asia. Chinese folklore includes magical use of oil.[6]

3. In metaphor.—The metallic and mineral world has naturally developed a large literature of metaphor. Gold is in the OT a symbol of purity, of nobility, and of value, and 'brass' (= bronze or copper) is used in the OT as a symbol of hardness.[7] Iron connotes strength and severity—'a rod of iron,' 'a yoke of iron,' 'walls of iron,' 'an iron sinew.'[8] A teacher of the law, said the Rabbis, must be as hard as iron. Being also breakable into pieces, it is a symbol of the Tôrāh with its numerous parts.[9]

The symbolism of Dn 2 and 7 comparing the kingdoms of the world to metals was popular in mediæval literature.

'Gold is Babylon; silver is Media; copper is Greece; iron is not mentioned either at the time of the First or of the Second Temple, since it symbolises Edom (Rome), which had destroyed the Temple.'[10] The Iranians had a longer series of ages—gold, silver, brass, copper, tin, steel, iron.[11]

Philo elaborated a metallic symbolism: gold is wisdom; copper perception.[12] The Sabians associated each planet with a metal, of which the statues of the planetary god were made;[13] and in Mithraism the soul passed through seven gates, each of a different metal — lead, tin, bronze, iron, alloy, silver, and gold—and each corresponding to a planet as well as to a psychic quality.[14] Hesiod's famous metallic series of the ages of the world inspired a considerable literature. The first age, which was the best, was golden; that in which we live is iron.[1] The principle behind this is æsthetic.

A. E. CRAWLEY.

METAMORPHOSIS.—**1. Evidence for the belief.**—Metamorphosis, transformation, or shape-shifting is a power universally believed in at low levels of culture. It survives at higher levels, especially among the masses, though it is also found in myths which are current among the educated or where popular belief tends to take the form of dogma, as when 17th cent. theologians accepted the werwolf superstition as a fact. The evidence for this universal belief is copious, and is found in myths, legends, and sagas, as well as in poetry from all lands; in folk-tales, of which it is one of the commonest themes or the most important incident, as, *e.g.*, in the 'Transformation Combat' or the 'True Bride' cycle;[3] in existing folk-belief, whether among savages or the peasantry; in the writings of modern travellers, explorers, and missionaries, as well as in older literature—Egyptian, Babylonian, Hindu, Greek, and Celtic.

2. Varieties of metamorphosis.—Metamorphosis is asserted of every order of beings and even of inanimate things. (*a*) As far as men are concerned, where the belief is current all men do not necessarily claim the power of transformation, but any man will readily admit that others have this power. Hence we have beliefs in the existence of distant tribes or groups possessing the power of transformation. Generally those who are credited with this power are medicine-men, shamans, sorcerers, wizards, and witches. To multiply instances is unnecessary; suffice it to say that, wherever such a class of people is found, shape-shifting is always one of their magical powers. No European peasant believes that he can change his form, though his savage ancestors did so; with him the belief survives in his firmly-rooted opinion that every witch can do so (see LYCANTHROPY). Among certain peoples, however, every one is believed to have some connexion with an animal form. Thus among the nations of W. Africa the bush-soul, one of the souls which each man possesses, exists in an animal; in Indo-China one of the souls of a man has the power of appearing as a man or as a wer-animal. This aspect of the subject is fully discussed under LYCANTHROPY.

While metamorphosis into animal form is more general, that into tree, plant, or flower is also found here and there. Besides this, numerous myths and tales from all parts of the world explain the origin of some tree or plant by saying that it sprang from the body—the arm, leg, head, or blood of some human being. Similarly, men are sometimes held to have sprung from plants. Where a tree springs from a dead human being the identity of the two is obvious, and here the stories may be based on the fact that trees often do grow from the barrows of the dead. They are supposed to be tenanted by the dead man's spirit or are identified with the man himself.[4]

The medicine-man or wizard has also the power of transforming others. He may supply them with magical means to change their form, but more usually he himself casts a spell upon them and transforms them. This is usually done through malice—and no incident is commoner in folk-tales than this—but it is sometimes meted out as a punishment, though transformation for this reason is generally the act of the gods. In such cases the transformation may be for a longer or shorter period, but it is often of a permanent character.

Instances are found at all levels of culture. Classical mythology knew many such punishments for impiety. The incident enters also into Christian tradition, though it is derived from earlier sources. Thus Christ is represented as a tired traveller who is refused food or on whom a trick is played by a peasant or a Jew, and the result for them is the punishment of transformation to animal form. In many cases groups of megaliths are said to be human beings changed to stone for some act of impiety—the idea perhaps originating in the belief that the stones embody ghosts of the dead buried beneath them.[1] Other instances of petrifaction, in some cases also for a punishment, are found in all mythologies—Australian, American Indian, Greek, Hebrew, etc. The idea of petrifaction may be connected with the fact that many rocks bear some resemblance to human form.[2] In folk-tales the power of petrifying is usually in the hands of witch or wizard, and a touch with a wand, binding the victim with the witch's hair, or the repeating of a spell suffices. Cf. Medusa's head.

(*b*) The power of transformation on the part of men was reflected back upon the gods in all mythologies, from the lowest to the highest—Bushman, Australian, Polynesian, Peruvian, Celtic, Greek, Hindu, Egyptian, etc. There was no limit to the forms which they could take, animal or human, in order to serve their purposes—to escape danger, to benefit men, to carry on amours, and the like. As in Egypt, men looked forward to being able to assume any form in a future life, like the gods.[3] The gods, too, as has been seen, had the power of causing metamorphosis as a punishment to men.

(*c*) Demons and supernatural beings of all kinds were also believed to have similar powers. The *jinn* of Arabia, the *bhūts* of India, the devils of early and mediæval Christianity,[4] the water-horses and other monstrous beings of popular belief, can assume any shape to carry out their ends. Often the form is that of an attractive girl or youth who lures away a human victim to destruction. Ghosts of the dead may appear as animals, or project themselves into animals temporarily, but there is a wide-spread belief in their more permanent assumption of animal forms (see ANIMALS, vol. i. p. 493ᵇ).

(*d*) Animals themselves are sometimes believed to be capable of self-transformation. This is true of the fox in Japan and China and of the tiger in Malaysia (see LYCANTHROPY), and the seal and similar animals are well known in folk-belief to have the power of changing into human shape.

(*e*) Inanimate objects may also be changed into other forms by magical power. The best instance of this occurs in the Transformation Flight group of *Märchen*, in which, *e.g.*, a girl escaping with her lover throws down small objects which become a forest, a mountain, or a lake, and impede the progress of the pursuer (see MacCulloch, *CF*, p. 171 ff.). Examples of this are found not only in European and Asiatic folk-tales, but in Samoan, American Indian, and Basuto stories.

3. Origin of the belief in metamorphosis.—An examination of the enormous mass of evidence for the belief in metamorphosis suggests that man's idea of personality, or perhaps rather of the forms in which personality may lurk, is an exceedingly fluid one. There has everywhere been a stage of human thought when no clear distinction was drawn between man and the rest of the universe, between human and animal, between animate and inanimate. In this stage of thought animate and inanimate are equally believed to be alive; men, animals, and things have the same feelings and passions, or act and speak in the same manner. Or, when the idea of soul or spirit is attained, all are equally alive by virtue of the possession of such a soul or spirit. Such beliefs in the underlying similarity of all things hindered men from having a clear notion of personality. It was not fixed and unalterable; it might assume various forms. There was thus obtained a practical, working belief that men, animals, and spirits or gods, as well as inanimate things, might assume some other form than their own from time to time. Hence it is not surprising to the savage if what he now sees as a man he sees immediately after as an animal or a bush. Where the idea of spirit or soul exists, and where it is thought that the spirit can leave its containing body, nothing is easier than to believe further that it can enter for a time into an animal or a tree. Other lines of thought also served to support the belief in the solidarity of men, animals, and things, and in metamorphosis. Totemism, with its assertion of the kinship of a human clan and an animal or plant species, has given rise to various myths which are rooted in this primitive stratum of thought, and in turn have served to deepen it. Thus it is sometimes thought that at first 'all animals were as men,' as the Algonquins say,[1] and only later took animal form. As the Hareskin Indians think, in the beginning men were animals and animals were men, but afterwards changed their rôles; or, according to the Zuñis, all things were originally animals, but now men, trees, etc., are degenerate animals with souls which can leave their bodies.[2] Again, men were once animals who became men—a common Polynesian belief.[3] Where a clan of one totem dislike the animal which is the totem of another distant clan, they may come to regard the men of that clan as possessed of its nature and liable to assume its form. In all such cases, whether totemistic in origin or not, it is easy to see that men and animals might be supposed to revert temporarily to the other forms which once were theirs.

It is also possible that an analogy between the habits of certain animals and those of human beings, in life or after death, may have aided the belief in metamorphosis. Thus, where ghosts of men are believed to return to the house in which they lived and which is also the haunt of such animals as snakes or rats, it is easy to imagine that these are forms of the dead man. This is the case in Zululand with the snake. Night-roaming animals like the cat, tiger, or wolf might be identified, as they were, with witches, who also roamed in darkness.

Hallucination might be a potent factor in aiding the belief. Savages have often declared that they have witnessed such a change of shape. The preconceived idea suggested the hallucination, and it in turn gave support to the belief. Or persons to whom drugs had been administered might have hallucinations of themselves as animals, as in classical and mediæval instances (see LYCANTHROPY, § 2). Madness, again, has also had its part to play. Its victims, especially where the belief in metamorphosis prevails, often imitate the cries, motions, and actions of animals, and this could only serve to establish the belief more securely. The wer-wolf superstition was largely moulded out of such cases of mania (see LYCANTHROPY, § 3). The custom of dressing in an animal skin at sacred dances, or before a bear-hunt, or of wearing animal-masks in war, would also aid the belief in metamorphosis. The frenzy of the dance would suggest self-transformation to the dancer, while the onlookers or the enemy would imagine that they saw human animals. There is no doubt also that medicine-men have often strengthened the belief by exploiting it—*e.g.*, dressing as an animal, imitating its howls and its actions.[1]

In practice the belief in the power of metamorphosis of men is generally limited to the medicine-man, sorcerer, etc., who transforms his victims usually by a spell, talisman, or potion. Self-transformation is caused in many ways, most of them magical. Sometimes, however, it is the result of a divine, supernatural, or demoniac gift.

METAPHYSICS.—It is not easy to give a quite satisfactory definition of metaphysics. The name throws no real light upon its nature, having referred originally merely to the order of some Aristotelian treatises; but it suggests that the subject is concerned with topics that can be properly dealt with only after the more special sciences (which may be taken to include the vital sciences as well as the more purely physical ones) have been discussed. For the purpose of this sketch, it may suffice to state that the subject of metaphysics is the most fundamental problems of knowledge and reality. It will be convenient to divide the treatment of it into three parts: (1) the general nature of knowledge, (2) the conception of reality and its chief applications, and (3) the bearings of metaphysics on other subjects, especially ethics and religion.

1. Knowledge.—The first thing that has to be noticed about knowledge is the ambiguity of the term. It is here employed in a very wide sense; but it is very commonly understood in a narrower one. Thus, knowledge is frequently distinguished from those modes of apprehension which are called sensation, perception, and imagination. It is thus confined to those modes of apprehension which involve definite thought or conception. Again, it is common, especially since the time of Kant, to contrast knowledge with belief. It is now customary to use the term 'cognition' to include all these modes of apprehension; and it is in this extended sense that the term is here employed. But even cognition is generally distinguished by recent psychologists from other modes of consciousness, which are called feeling, or affection, and willing, or conation. There are valid grounds for these distinctions, but it is important to remember that, so far as we are directly aware of these distinguishable aspects of our consciousness, they are, in the widest sense of the word, known or cognized. We apprehend pleasantness and unpleasantness and the fact of striving just as truly as we apprehend sounds or colours, trees or stars, triangles or systems of philosophy. There are, however, some differences in our ways of knowing which it is very necessary to bear in mind. The most fundamental are those that have been expressed by the terms 'simple apprehension and judgment,' 'immediacy and mediacy,' 'acquaintance and description,' 'enjoyment and contemplation,' 'experiencing and experienced.'[2] It may be well to take the last of these first. Whenever there is knowledge of any kind, there is some one who knows and something that is known. Knowledge does not exist *in vacuo*, but at some particular centre; and that centre is not primarily aware of itself, but of some particular object. Whenever any one reflects upon his knowledge, however, he at once becomes aware of this double aspect: he realizes not only that something is apprehended, but that he apprehends it. What exactly *he* is, and what the *something* is that he apprehends, are matters for further consideration; but the general fact can hardly be disputed. Now, when any one reflects further upon his knowledge, and especially when by intercourse with his fellowmen he is able to compare his own knowledge with that of others, he very soon comes to realize that some of the things that he apprehends are more closely connected with his particular way of apprehending them than others are. He finds that some things are cognized by others in substantially the same way in which they are cognized by him. To this class belong especially facts relating to number, to spatial and temporal order, to the forms of objects in space and time, and to the general conditions under which such objects occur. Such things come to be regarded as being in a special sense objective, *i.e.* as being independent of the particular nature of the being by whom they are apprehended. Some other things are more open to doubt in this respect. There is not the same amount of agreement about colours as there is about forms; and there is still more difference of opinion with regard to the extent to which beauty and ugliness, agreeableness and disagreeableness, are to be ascribed to particular objects that we apprehend. Thus we are led to distinguish some of the things that we know as not specially belonging to ourselves, but being simply objects that we contemplate; and others as being more peculiarly our own, things that we have or enjoy, things that are not merely experienced, but that are bound up with our attitude as experiencing. The things that appear to be most emphatically in the latter class are such characteristics as pleasantness and unpleasantness, beauty and ugliness, emotional experiences, values; but the division between these and such experiences as those of taste, smell, colour, etc., is not a very sharp one. Hence, instead of placing objects in one or other of these divisions, we may be led rather to recognize a subjective and an objective aspect in *all* modes of apprehension.[1]

[2] These are the antitheses that are specially emphasized by G. F. Stout, W. Hamilton, B. Russell, S. Alexander, and C. Lloyd Morgan respectively.

Once this important distinction has been duly recognized, the next that claims our attention is that between immediate and mediate apprehension. Some things are known to us in a quite direct way, and cannot be doubted. When any one has an experience of pain, he may be very uncertain with regard to its source and even with regard to the part of his organism to which it is to be referred; and he may even have some difficulty in distinguishing clearly between the pain that he is experiencing and some other fact that he is experiencing or that he has experienced; but he cannot really doubt that he is having this experience, whatever he may be, and however the object of his experience is to be described or interpreted. Every man is in some degree 'a man of sorrows and acquainted with grief,' and he cannot have any doubt about the grief with which he is acquainted, though he may be quite unable to analyze or describe it, or to explain how it has arisen. As soon as we begin to analyze, to describe, or to explain, we enter into the region within which doubt is possible. Even the naming of an experience may involve some error;[1] for to name it implies that we class it along with some other experiences, and we may be wrong in supposing that it is essentially the same or similar. It may be that what I call my grief should be more properly characterized as simple unpleasantness or as resentment or remorse; and, when I think that I am grieving over my neighbour's misfortunes, I may in reality be considering rather the way in which they affect myself. Knowledge ceases to be immediate as soon as it ceases to be the simple apprehension of something and becomes, implicitly or explicitly, a judgment about something. Here also, however, we have to recognize differences of degree. Though we may conceivably be in error in thinking that grief is the right name for what we are experiencing, yet, if we are really 'acquainted with grief,' we can hardly be mistaken in thinking that what we are experiencing is of the same general kind as what we have experienced before. But we may easily pass to something that we cannot so immediately know. When Lady Constance says, 'Grief fills the place up of my absent child,' we are not likely to be ignorant of what she means by grief, and we can partly apprehend what the rest of her statement means; but, if we have never had any similar experience, our apprehension has very little immediacy. We may even be inclined to doubt whether it has any real meaning at all. It is a description of something that might be apprehended, but with which we do not happen to be acquainted.

Now, the various theories of knowledge turn largely on the distinction between what is immediate and what is mediate, and between what is subjective and what is objective. One theory of knowledge which, in different forms, has played a very conspicuous part in the history of philosophy is to the effect that we have no immediate knowledge of anything but what is essentially subjective. One of the most extreme forms of this theory is found in the doctrine of Descartes, that the only thing of which we are immediately certain is the existence of the self as a conscious or thinking being. What he really brings out, however, is rather that everything of which we are immediately conscious certainly exists as something apprehended. What thus certainly exists is a complex, including certain objects that are apprehended and the fact of their apprehension. But Descartes considered that the objects thus apprehended might be properly described as being 'in the mind,' and that the individual mind should be regarded as a persistent thing within which such objects are contained; and he called the objects 'ideas.' He was thus led to think that the individual mind exists both as something known, *i.e.* as an 'idea,' and as something that persists in a way that is independent of its being immediately known, whereas the other objects that are known are known only as having what he calls 'objective reality,' *i.e.* the kind of reality which consists simply in their being immediately known. But he recognized that *some* of these other objects carry with them the suggestion of a more complete reality than that which belongs to them in the simple fact of their immediate apprehension; and he sought, by various arguments, to give grounds to justify the belief in this more complete kind of reality. In doing this, he founded the doctrine which has been referred to as that of 'representative ideas,' which had a great influence on subsequent speculation. According to this doctrine, the individual mind may be compared to a picture-gallery, the pictures being 'ideas.' One of the pictures is the picture of itself, and that must be supposed to have been always in it. Some others, such as that of God, must also be supposed to have been always there. Some may be supposed to have been painted by itself. Some are daubs of no particular significance. But there are some that appear to be portraits; and these may be supposed to be the portraits of other beings outside the mind, and to have been, as it were, handed in by them. This is, no doubt, a somewhat crude way of stating it; but it appears to be substantially what Descartes sought to maintain; and, with some modifications, it reappears in the writings of several other philosophers. Berkeley dealt it a severe blow by contending that, if we see pictures only in a gallery, we have no ground for supposing that they ever exist in any other way than in a gallery; and Hume improved on this by arguing that, if we see only the pictures, the gallery is an unwarranted supposition. The metaphor that he uses is that of actors on a stage. We see the actors only, and have no reason to suppose that there is a stage. This reduced the whole doctrine almost to an absurdity; and the conception of 'representative ideas' was denounced with considerable force by Thomas Reid. What he had to put in its place, however, was not very clear. Kant took a more fruitful line by urging that we cannot without absurdity regard our knowledge as being confined to what is immediately apprehended by us at any time. We have to recognize certain fundamental orders, such as those of space, time, and causation, which carry us beyond our immediate data and inevitably suggest a coherent system of connexions. In his 'Refutation of Idealism' he urges, against Descartes and Berkeley, that the recognition of such a coherent order is more directly involved in the apprehension of objects distinct from the self than in the apprehension of the subject; and that our knowledge of the persistent reality of the self must, consequently, be regarded as derivative. He contends, however, that the order that we are bound to recognize in the objects which we apprehend is an order that can never be completely systematized, and must, consequently, be treated as 'phenomenal' and distinguished from the real order, which may be supposed to belong to 'things in themselves,' and which we are led to postulate chiefly on moral grounds. But Kant's doctrine carried conviction at least with regard to the necessity of recognizing that some kind of reality belongs to the more mediate forms of apprehension as well as to those that are more immediate. When the significance of this is fully realized, it leads to the doctrine that may be characterized as that of 'epistemological realism,' *i.e.* the doctrine that everything that we in any way cognize has a kind of reality which is not simply to be identified with the fact that it is immediately apprehended at a particular moment.

---

[1] The lack of words to distinguish properly between the subjective and the objective aspects of cognition has been a great source of confusion. Sensation, *e.g.*, has had to do duty both for sensing and for what is sensed; and it is only very recently that it has been common to distinguish between perception and percept, conception and concept. Even now we do not readily grasp what Goethe meant when he said that all the thinking in the world (subjective activity) may not bring us to thought (the apprehension of an objective concept). It is largely the failure to realize this distinction that makes it so difficult for most people to understand such an 'Idealism' as that of Plato or Hegel, in which 'ideas,' or 'thoughts,' mean certain objective forms, orders, or universals. The 'New Realism' has greatly helped to make this distinction clearer.

[1] The difficult subject of error, its nature and conditions, cannot be here discussed. But see the references given at the end of this article.

The acceptance of a doctrine of this kind gives a new interest to the study of the objects of cognition. So long as these objects are regarded merely as a flow of presentations, the interest in them tends to be almost purely psychological—*i.e.* it is directed simply to the way in which they come to be apprehended by the individual consciousness. When they are regarded as things possessing permanent characteristics and permanent orders of their own, they become the subject-matter of an independent study, and may almost be said to have given rise to a new science. This is the science that has been called by Meinong *Gegenstandstheorie*. It is the attempt to distinguish and arrange the different kinds of objects that we apprehend. It is obvious that there is a very great variety of such objects, when this term is understood in its most comprehensive sense. We apprehend, *e.g.*, a great variety of sense-data—sounds, colours, pains, strains, and so forth; we apprehend a great variety of percepts—stones, plants, animals, etc.; we apprehend orders, such as those of time and space, intensive and qualitative differences, causal dependence, etc.; we apprehend hypotheses, valuations, distinctions of beauty and ugliness, good and evil, etc. The study of these corresponds to some extent to the doctrine of categories; but, when it is approached from this point of view, it becomes very much more comprehensive than any of the lists of categories that are commonly set forth; and, in fact, it has a rather different aim from that implied in any of these lists. The problems raised by any such attempt to distinguish and arrange the various types of objects are evidently of a fundamental character, and seem, therefore, to belong properly to the subject-matter of metaphysics. It is possible, however, to discuss some of them to a considerable extent without any definite attempt at a systematic metaphysical construction. This brief indication of the general nature of these problems must suffice here.

2. Reality.—The study of the theory of knowledge and *Gegenstandstheorie* leads to the recognition that, in one sense at least, there is no meaning in the antithesis between the real and the unreal. As Parmenides and Plato urged, pure non-being is not to be thought or spoken of. But there is still a sense in which the things that we apprehend may be said to be more or less real. Sometimes our apprehension of things is very incomplete; and, when we gain a fuller apprehension of them, we may be said to know them more truly. Again, the things that we know are in many cases parts of larger wholes; and, so long as we do not apprehend the wholes of which they are parts, we cannot be said to have a full apprehension even of the parts. This is at least the case when they are parts of an organic unity. We could not be said to know much about the brain if we did not understand the function which it fulfils in the life of the organism. Our apprehension of the part, in such a case, is not the apprehension of what is unreal; but it may be said to be less real when it is thus apprehended than it is when its relations to the whole are understood. And, if the universe is an organic whole, this distinction will apply to the apprehension of all the objects in it. Hence there may still be a sense in which it is legitimate to speak of an antithesis between appearance and reality, or of different degrees of reality, though both these expressions are open to some objection. Now, in apprehending and arranging the various objects of our cognition, we are at least trying to regard them as forming a complete cosmos, such that every object has a definite place in the total order; and constructive metaphysics, as distinguished from *Gegenstandstheorie*, tries to find the way in which the objects of our experience can be so regarded. Here we are met at the outset by various forms of scepticism. Such a scepticism as that of Hume, no doubt, is effectively removed by a more thorough doctrine of knowledge, such as that of Kant. But even Kant ends with the view that our knowledge is only of appearance, and that we can never hope to apprehend things as they are in themselves; and such an agnosticism is defended, in different ways, by a considerable number of philosophical writers. If it is strictly pressed, it means that we have to be content with the theory of knowledge, supplemented by *Gegenstandstheorie*. The doctrine of the newer Realists, of whom Meinong is one of the ablest representatives, tends in this direction, though the supporters of it vary considerably in their applications. In the case of Kant himself, the attitude is modified by the two circumstances that, on the one hand, he had not fully reached the point of view of *Gegenstandstheorie*, not having completely freed himself from the subjectivism of Hume, while, on the other hand, he recognized that, though we cannot know anything about things as forming a real cosmos, we are justified in entertaining certain beliefs with regard to such reality, chiefly on moral grounds. This view of belief, as contrasted with knowledge, has been developed by the Pragmatists, who maintain that the ultimate ground of belief is not knowledge, but rather practical need. In general, the Pragmatists hold, further, that there is no real need to think of the world as a complete cosmos; but this is not an essential part of the Pragmatists' point of view. Bergson, again, while agreeing with the Pragmatists that our purely intellectual beliefs are based on practical needs, thinks that it is possible to reach a more perfect knowledge by means of intuition—a view which to some extent connects him with such earlier philosophers as Plotinus and Schelling. All these ways of thinking, and perhaps some others as well, tend to discredit the attempt to form a constructive doctrine of the objects of knowledge as constituting a cosmos. Yet the attempt continues to be made; and Kant at least recognized that, however futile it may be,[1] it is hardly possible for the human intelligence to refrain from trying it, when the scientific interest has been fully developed in it. All that can be done here, however, is to indicate some of the chief ways in which this attempt has been made.

The earliest attempt at a constructive theory of the cosmos, and certainly one of the most interesting and remarkable, is that which is set forth in the *Upaniṣads*. The difficulties of the subject, especially at so early a stage of human thought, prevent it from being dealt with in a perfectly lucid way; and it relies, in consequence, partly on poetic metaphor and partly on vague paradox; but the doctrine that the cosmos is to be conceived as an unchanging spiritual unity, manifesting itself, especially in human life, in a process of slow development, appears to be definitely indicated; and this view, showing itself most clearly in the conception of a long series of successive embodiments,[2] gained a firm hold on Eastern thought. It is a view to which Western thought also has recurred from time to time; but in general Western thought starts rather from the multiplicity of existing things, and makes only very tentative efforts to apprehend the central unity. Among the Greeks the earliest attempts to frame a theory of the unity of the cosmos took the form of a somewhat crude hylozoism, such as that of Thales. Pythagoras is supposed to have introduced conceptions more akin to those of the East; but, if so, they became gradually modified among his followers through the influence of the more materialistic ways of thinking that were current around them, and eventually through the growing interest in mathematical conceptions. In the end their speculative doctrines seem to have been largely lost in a barren formalism and a rather fantastic play with numerical analogies. The early representatives of the Eleatic school were perhaps more faithful to the conception of the unity of the cosmos; but in the poem of Parmenides it is difficult to distinguish what is to be taken literally from what is only metaphor. He sometimes seems to deny altogether the reality of multiplicity and change; but perhaps he meant only that the cosmos as a whole has to be thought of as one and unchanging, though change and multiplicity are contained within it. In any case, a view of this kind would have been very difficult to set forth clearly with such technical language as he had at his disposal; and it is probable that his views were not well understood by his followers. Anaxagoras recognized very definitely the essential unity of the cosmos and connected it with mind or reason; but he does not draw any clear distinction between mind and matter, and, in attempting to contrast the order that is brought about by mind with a pre-existing disorder, he makes use of an antithesis which is as difficult to justify as that between the real and the unreal.[1] It is with the philosophy of Plato that we first come upon a really coherent attempt to set forth a conception of the cosmos; and, in many respects, it may be doubted whether that attempt has ever been surpassed. His main conception is that of the Good as the principle of order; and he combines this with the recognition of a number of subordinate principles, all regarded as universal types in accordance with which the particular objects of our experience are formed. This view was made in some respects clearer by the Aristotelian conception of a hierarchy of forms leading up to the perfect intelligence; but, on the whole, Aristotle's main interest lay rather in the establishment of special sciences on the basis of this conception of fundamental forms. Plotinus, at a considerably later time, working largely under the influence of Oriental sources, but helped by the Platonic doctrines, succeeded more fully than any one else in ancient times in arriving at a conception of a cosmic system unfolding itself by a process from unity to multiplicity and returning into unity again; but his views are difficult to disentangle, and he tends at times to appeal to a mystical intuition rather than to a clearly reasoned doctrine.

In more modern times the system of Spinoza is the first attempt at a thorough constructive theory of the cosmos. In his emphasis on the unity of the whole he recalls Parmenides. The fact that Parmenides described it as finite, while Spinoza insisted on its infinity, is perhaps a somewhat superficial difference; for they probably understood the term 'infinity' in different senses. More significant is Spinoza's antithesis, derived from the Cartesian philosophy, between the unity of the spatial world and that of the world of thought, and his attempt to represent these two forms of unity as essentially identical. This results in a quasi-mathematical conception of the universe, and makes it appear as what James describes as a 'block universe.' Leibniz endeavoured to remove this defect by his conception of monads, which has served as the basis for subsequent theories of spiritualistic Pluralism. Yet he combines the conception of the complete independence of the monads with the recognition that they are parts of a world-order, the nature of which is definitely determined, and which is selected as the best from an infinite number of possible world-orders. How possibility is to be distinguished from actuality is one of the most difficult problems that are raised by his philosophy;[1] but, on the whole, it must be confessed that his philosophy in general, notwithstanding its great ingenuity, is much more remarkable for the number of problems that it suggests than for the convincing character of the solutions that are proposed. His attempt was followed by a great deal of critical work, especially that done by Hume and Kant; and the constructions that followed upon this critical work are deserving of more careful attention.

---

[1] Kant's view of its futility is mainly based on the difficulties which he brings out in his 'antinomies.' The solution of these is one of the main problems of constructive metaphysics; but this subject is too large and difficult to be discussed here. Hegel's dialectic is the most elaborate attempt to deal with such difficulties. Attempts have also been made by H. Bergson, B. Russell, and others.

[2] The philosophical conception of the continuity of spiritual life ought, no doubt, to be distinguished from the cruder forms of the doctrine of reincarnation; but this is a subject that can only be hinted at here. The bearings of modern philosophy on this subject are best brought out by J. M. E. McTaggart, *Some Dogmas of Religion*, London, 1906, and B. Bosanquet, *The Value and Destiny of the Individual*.

[1] The meaninglessness of any conception of pure chaos or disorder, such as that with which Anaxagoras appears to start, is well brought out in Bergson's *Creative Evolution*, Eng. tr., London, 1911.

The most important is that of Hegel, and it is also one of the most difficult to interpret. What can be said with confidence is that, by means of a more definite interpretation of the Platonic dialectic, he made a very thoroughgoing attempt to arrange all the fundamental concepts involved in thinking about the world in a definite order from the simplest to the most complex. By this means he sought to show that a certain conception of spiritual unity is the most comprehensive of all conceptions, and the only one by means of which a coherent view of the universe can be obtained. He then proceeds to interpret the non-human world ('nature') and the world of human life ('spirit') as an order of growth through which the spiritual significance of the whole is gradually unfolded. It is generally recognized that a considerable part of the working out of his dialectic carries conviction, but that there are several places in which the movement is difficult to follow. The treatment of human life is generally recognized as being highly instructive, while the interpretation of 'nature' is much more open to criticism. No subsequent writer, however, has succeeded in making substantial improvement on the general view of the cosmos that Hegel has presented. Most of those who have made attempts at definitely constructive work are chiefly distinguished from Hegel by the more tentative character of their doctrine. They seem to provide, at most, only the *disjecta membra* of a more complete system. Some of them may also be criticized on the ground that they rest on a subjective conception of knowledge, in a few cases approximating even to the point of view of Berkeley. But into the details of their work we cannot here enter.

It may seem disappointing, after so many centuries of more or less continuous philosophic endeavour, that it should not be possible to refer more definitely to results that are generally accepted as conclusive. But it is hardly surprising that the interpretation of the whole should present more difficulty than that of some special parts. It is probably necessary that we should have a fairly thorough appreciation of the kinds of order that are contained in the parts before we can have any definite conception of the order that is involved in the whole. By the help of mathematics we are getting a more and more thorough insight into the relations that are involved in the orders of number and space. The Platonic conception of Good has been made more definite by modern discussions of orders of valuation. Physical science is helping us to interpret the causal order with more and more definiteness. Such dialectical discussions as those of Bradley, and such attempts to determine the various kinds of objects as those that are made by Meinong, may be expected to throw fresh light on the most fundamental concepts, and thus supply new instruments for the reinterpretation of the whole. But probably our interpretation must always remain, to some extent, tentative.

3. Bearings of metaphysics on other subjects.—It would be a great mistake to suppose that the value of metaphysical speculation is to be measured exclusively by its success in providing us with a coherent doctrine of the cosmos. Any one who thinks seriously about the ultimate problems of knowledge and reality is almost bound to make some attempt to think about the universe as a whole; but the discussion of the special problems may be treated as an end in itself, and the value of such discussion is to be found largely in the light that it throws on other subjects that are commonly and conveniently regarded as distinct. The debt of the special sciences to metaphysical discussion could not easily be over-estimated. Almost all the special sciences, especially those that are concerned with human affairs, were first established on a firm foundation by Aristotle, who used in their establishment his fundamental conceptions of form and matter, potentiality and actuality, together with his general doctrine of categories and causes. The atomic theory was mainly due to Leucippus and Democritus, working on the foundations that had been laid by the Eleatics. Mathematics, physics, and astronomy owed much to the Pythagoreans and, in later times, to the metaphysical analyses of Descartes, Leibniz, and Kant. Some of the most important ideas of modern biology were anticipated by the early hylozoists; and, in many other ways, the foundations of almost every department of knowledge and action can be traced to metaphysical analysis. This tends to be forgotten owing to the fact that, once the results of such analysis have been well established, they are incorporated in the body of the special sciences and arts and habits of life, and the work of clearing up the fundamental principles is largely ignored; just as, in our more ordinary life, we are sometimes apt to forget the labours of those by whom the means of living are provided. Hence it may be worth while to make some reference here to the fundamental conceptions that seem to be involved in several of the most important subjects.

(*a*) *Psychology.*—The fundamental aim of psychology appears to be that of studying the growth of cognition in the individual mind. It may seem strange to say this in view of some recent attempts to produce a 'psychology without cognition,' which does not appear to differ very markedly from other forms of psychology. But in general the roots of any subject, like those of a plant, may often with advantage be kept out of view. We may have 'psychology without a soul,' because we can take the soul for granted; and it is certainly not the business of psychology to consider the soul except as cognizing or cognized. We may even have 'psychology without cognition,' just because it is entirely concerned with that, and consequently need not single it out as one of the special things with which it has to deal. So we may study wealth without welfare, though apart from welfare wealth would have no meaning. Naturally, in studying psychology, it is the modes of apprehension, rather than the fact of apprehension, that chiefly call for attention. But, whether we are considering sense-data or objects of perception or feeling or desire or emotion or attention or thought or will, the primary question for psychology is, What is it that we apprehend? That there are very many modes of apprehension seems clear, but they are all forms of cognition. The recognition of this ought to guard us against any attempt to divide up our conscious life into separate faculties, though it leaves us free to recognize many distinctions and many stages of growth. Hence psychology is best studied genetically;[1] but it is important to guard against the misconception that, in studying the order of growth in our cognition, we are either explaining cognition itself or accounting for its special modes[2] or giving an account of the genesis of the objects that are cognized. The order of the growth of cognition is one thing; other things have orders of their own. These are perhaps the chief ways in which the consideration of the fundamental problem of psychology may help to guard us against misconceptions in its study.

---

[1] No sharp distinction can be drawn between the possible and the actual. To say that anything is possible is to say that it would be if—; and what would be depends entirely on the structure of the actual. In general, things are said to be possible in philosophy when they are not inconsistent with the structure of some special order (*e.g.*, time or space), though they may be inconsistent with the structure of the cosmos. An action, *e.g.*, is possible when it would happen if some one chose to do it. This is well brought out in G. E. Moore's *Ethics*.

(*b*) *Logic.*—The fundamental conception of logic appears to be that of implication. It sets itself to consider the conditions under which one bit of knowledge may be taken to imply another. In order to discover this, it is necessary to determine the precise significance of the knowledge from which we start. Hence the importance of definition and of what are called the 'laws of thought,' the aim of which is to ensure fixity of meaning. Obviously, if A fluctuated in meaning, its implications could not be determined. Formal logic is concerned simply with the attempt to tie down meanings and to discover what they imply. In more concrete forms of logic the doctrine of causation is the chief instrument for the discovery of implications. Hume did much to clear up the general signification of causation by doing away with the obscure conception of efficiency and substituting that of a definite order of sequence. Kant urged that the sequence is essentially logical rather than temporal, and that the general principle of implication—if A, then B—has to be accepted as expressing a necessary order among phenomena. More recent discussions have given still more definiteness to the conception.[3] The dialectic of Hegel is another way in which implications can be brought out. According to this, every conception implies its opposite. The value of these methods cannot be discussed here; but it seems clear that the general significance of implication is one of those ultimate problems that concern metaphysics.

(*c*) *Mathematics.*—The mathematical sciences are closely connected with formal logic. As soon as the general characters of the orders of number and space have been made apparent, the working out of their implications requires no extrinsic considerations. The relations contained in these orders are, however, more complex than the relation of a predicate to a subject or of an individual to a class. But there are many orders from which implications can be directly drawn—*e.g.*, the order of time and that of value. Hence it seems possible to regard mathematics as one of several ways in which the general principle of direct or formal implication can be developed.

It may be well to notice one caution that is suggested by metaphysical reflexion with regard to the application of mathematics. The conclusions reached by the study of the two orders of number and space are so precise and convincing, and some of them can be so readily applied to spatial and temporal objects, that there is a considerable temptation to regard all of them as being directly applicable to such objects. Such an assumption does not appear to be legitimate. It may be doubted, *e.g.*, whether some of the speculations with regard to possible dimensions of space, in excess of three, have any direct application to existing objects. A similar caution is necessary with regard to the conception of infinity. On this point reference may be made to the art. INFINITY.

(*d*) *The natural sciences.*—The natural sciences have nearly always presented a stumbling-block in the way of metaphysical construction. This is due chiefly to the apparent lack of definite order in what are sometimes called the 'brute facts' of the natural world. Hegel compared nature to a bacchantic dance. For Plato also, and for many others,[1] it has tended to appear as a falling off from the unity and intelligibility that are postulated by the conception of a complete cosmos. The objects of nature seem to differ in kind, and no continuity in the ordering of kinds is readily discoverable. This applies to the objects of sense as well as to the objects of perception. There seems to be a gulf fixed between colours, sounds, smells, pains, etc., as well as between mechanical systems, chemical combinations, and organic bodies. Hence it has been sought to bridge these gulfs by teleological conceptions—*i.e.* by the view that differences of kind are to be interpreted by reference to the conception of value, as in some way required for the constitution of the 'best possible world.' But this is at most a postulate; and it is generally recognized that we are not entitled to apply this interpretation in any direct way in the scientific study of natural objects. Apart from this, the chief forms of order that are available are those of time and space, extensive and intensive magnitude, causation, and the general law of continuity in the quantity of what is called energy (a conception that is perhaps still in need of more precise determination). No doubt the doctrine of evolution supplies, to some extent, another principle of order; but it is erroneous to suppose that the earlier stages in this order can be regarded as, in any direct way, implying the later. Epigenesis, or, as Bergson has called it, 'creative evolution,' has to be, in some form, recognized—*i.e.* the doctrine that what comes later is distinct in kind from what comes earlier. It does not follow from this, however, that there is not a definite and intelligible order. But there are still fundamental problems in the study of nature for which metaphysics can as yet offer no very satisfying solution. Still, there is at least the suggestion that a solution might be found in the conception of value. Evolution, in particular, is very naturally thought of as a progress, though a somewhat discontinuous one, towards what is intrinsically better.

(*e*) *Æsthetics.*—In æsthetics at least the conception of value becomes prominent; and its legitimacy within this sphere, where it is applied very largely to objects that can be perceived or imagined, is hardly open to dispute. It is true that sometimes what is described as beautiful may have little claim to be regarded as more than pleasant, and even pleasant only to certain individuals. In this case the valuation is highly subjective, and may hardly deserve to be described as a definite valuation at all. But in the higher forms of art at least an effort is being made to produce something that has intrinsic value; and in some cases it is difficult to resist the conviction that something that is intrinsically valuable—something that may properly be described as 'a joy for ever'—has actually been secured. But the science of æsthetics is still largely in the making.

---

[1] This method was, to all intents, inaugurated by Aristotle, who showed in this, as in many other respects, a sounder grasp of the essentials of the subject than many of its later exponents have had.

[2] It is here that the 'associationist' psychology and such a genetic psychology as that of H. Spencer are at fault.

[3] See esp. B. A. W. Russell, 'On the Notion of Cause,' in *Aristotelian Society's Proceedings*, xiii. [1912–13].

[1] Cf., *e.g.*, what is said by Aristotle in *Met.* xii. 10, where the lack of order in nature is likened to the life of a slave to whom, on account of his low estate, a certain licence is permitted. The religious conception of a 'Fall' appears to be closely connected with this. See H. S. Chamberlain, *The Foundations of the Nineteenth Century*, London, 1909, ii. 34.

(*f*) *Ethics.*—It is in ethics rather than in æsthetics that the conception of intrinsic value comes definitely into prominence. Ethical writers may differ in their views of what is intrinsically valuable —whether it is the good will or pleasure or some form of perfection or completeness of self-conscious life—but almost all recognize that in the moral life men are engaged in the effort to realize something that is intrinsically good, and in the end what is intrinsically best. Yet it is difficult to make the conception of such an ultimate good perfectly clear; and some are inclined to doubt its validity. It must be confessed that we seem to begin with valuations that have little conscious ground. Our primitive likings appear to be based on organic needs; and it is only gradually that we are led to regard them as means to ends that have a truer and more lasting value. We begin with organic impulses, and advance through the pleasant to the beautiful and good. Hence the moral life is still, on the whole, as it was in the time of Socrates, a struggle towards a good that is very imperfectly apprehended, and sometimes even not very consciously pursued. It tends to be guided by custom, convention, positive laws, and generally recognized opinions rather than by any clear apprehension of a good that can be either defined or attained. But in ethical science some attempt is made to define it; and this involves a discussion that may properly be called metaphysical. The discussion of its attainability seems even to involve a general theory of the cosmos.

Apart from the fundamental conception of intrinsic value, the most important problem that concerns ethics is that of freedom. This is closely connected with the conception of value and also with that of causation. It is doubtful whether any definite meaning can be given to moral freedom except that which may be expressed by saying that choice has a real place in the chain of causes; and choice can be interpreted only as a mode of valuation. It is essentially preference, *i.e.* the regarding of one thing as essentially more valuable than another. Thus the problems of value and causation are those that chiefly connect ethics with metaphysics.

Ethical valuations have important bearings on economics and politics; but these cannot be considered here. Nor can we attempt to appraise the significance of what is described by Nietzsche as the 'transvaluation of all values' (*Umwertung aller Werte*).

(*g*) *Religion.*—A chief element in the higher forms of religion consists in a certain intensification of the moral consciousness by its more definite concentration on the conception of intrinsic value —as in such sayings as 'What shall it profit a man, if he shall gain the whole world, and lose his own soul? Or what shall a man give in exchange for his soul?' (Mk 8^{36}). This intensification is generally combined with the conviction that the object of ultimate valuation is real and attainable. A conviction of this kind is sometimes based on a definite metaphysical doctrine. At other times it is based rather on some form of intuition or of revelation, or on the authority of some great teacher, or simply on the intrinsic force of the moral principle itself. The founders of religions and their most influential prophets have generally connected their teaching with some doctrines of a more or less explicitly metaphysical character. Buddhism, which is perhaps the most purely ethical form of religion that has ever had an extensive influence, seems to be rather intimately connected with those Indian forms of metaphysical construction that had their origin in the *Upaniṣads.* It conceives of what has ultimate value as the realization of the higher self, to be achieved by the control of the lower, and especially by the suppression of the lower forms of desire —a process which is supposed to be, in general, attainable only through a cycle of reincarnations. The doctrine of the Pythagoreans, which was largely religious, had a somewhat similar character; and the influence of Plato, so far as it can be described as religious, tends, on the whole, in the same direction; as that of Plotinus even more definitely does. Christianity was perhaps in its origin less definitely metaphysical; but it has been to a large extent interpreted, in the course of its historical development, by means of Platonic and more or less kindred conceptions, and in some of its more recent phases is hardly distinguishable from the more esoteric forms of Buddhism. The relations have been thus expressed by Holmes:

> 'Plato reasoned about God. Buddha kept silence about him. Christ made him the theme of his poetry. . . . As a speculative thinker he does not compete with Plato. As a systematic teacher he does not compete with Buddha. But as a source of spiritual inspiration he has no rival' (*Creed of Buddha, ad fin.*).

The gospel of love is the most inspiring, because it implies, when its meaning is fully developed, that everything has value—a more thorough optimism than anything that is involved in the Platonic Good or the Buddhist Nirvāṇa (whatever the exact interpretation of that may be).[1] It is sometimes urged that metaphysical and religious views of the cosmos, by representing the attainment of the moral ideal as involved in the nature of things, have a certain tendency to weaken the moral motive, by making it appear that individual effort is unnecessary. No doubt some metaphysical systems have claimed to advance 'beyond good and evil'; and the same may be said of some forms of religion. But, on the whole, none of the deeper forms either of metaphysical construction or of religious insight has represented the ideal as attainable in any other way than through the individual choice of what is best.

LITERATURE.—The literature of the subject is so vast that only a selection can be made. A. E. Taylor, *Elements of Metaphysics*, London, 1903, gives a good general survey. F. H. Bradley, *Appearance and Reality*², do. 1908, supplies the most remarkable of recent attempts at metaphysical construction. L. J. Walker, *Theories of Knowledge*, do. 1910, should be consulted. On the special subject of error, the essay by G. F. Stout, in *Personal Idealism*, do. 1902, is very valuable; and it should be supplemented by reference to B. A. W. Russell, *Philosophical Essays*, do. 1910, and F. H. Bradley, *Essays on Truth and Reality*, Oxford, 1914. A. Meinong's views about *Gegenstandstheorie* will be found in his *Untersuchungen zur Gegenstandstheorie und Psychologie*, Leipzig, 1904, and his *Gesammelte Abhandlungen*, do. 1913. His important book *Ueber Annahmen*, do. 1902, ²1910, throws much light upon the subject. On the various attempts at metaphysical construction the Histories of Philosophy must be referred to; E. Caird, *The Evolution of Theology in the Greek Philosophers*, Glasgow, 1904, and R. Adamson, *The Development of Modern Philosophy*, Edinburgh, 1903, may be specially commended. On some of the earlier phases of speculation E. Schuré, *Les grands Initiés*⁴, Paris, 1899, Eng. tr., London, 1912, is extremely interesting, though perhaps some of his statements are too conjectural and lack evidence. A. Drews, *Plotin*, Jena, 1907, is instructive on a philosopher who is too little known. G. F. Stout, *Analytical Psychology*, London, 1909, indicates the most fundamental problems in that subject. On formal logic J. N. Keynes, *Studies and Exercises in Formal Logic*,⁴ do. 1906, and F. C. S. Schiller, *Formal Logic*, do. 1912, may be consulted—the former is constructive, the latter critical. On the foundations of the more concrete type of logic A. Ruge and W. Windelband, *Encyclopædia of the Philosophical Sciences*, do. 1913, furnish all that is needed. J. M. E. McTaggart, *Studies in Hegelian Dialectic*, Cambridge, 1896, and *A Commentary on Hegel's Logic*, do. 1910, supplies interesting material, both for interpretation and for criticism. B. Croce, *What is living and what is dead in the Philosophy of Hegel*, Eng. tr., London, 1915, gives perhaps the most searching examination of the Hegelian method. On mathematics, B. A. W. Russell, *Principles of Mathematics*, Cambridge, 1903, should certainly be consulted. The *Principia Mathematica*, London, 1910-13, by the same writer, in conjunction with A. N. Whitehead, may be referred to as showing the way in which the logical foundations of the subject can be worked out. J. Ward, *Naturalism and Agnosticism*², do. 1903, discusses the foundations of the natural sciences. W. Ostwald, *Vorlesungen über Naturphilosophie*, Leipzig, 1902, may also be specially referred to. B. Croce, *Æsthetic as Science of Expression and General Linguistic*, Eng. tr., do. 1909, is probably the most instructive of recent works on the basis of that subject. On ethics reference should be made to the art. ETHICS (by J. H. Muirhead). The conceptions of value and freedom are well discussed by G. E. Moore, in his *Ethics*, do. 1912. The philosophical significance of the conception of value is brought out with great wealth of illustration by B. Bosanquet in *The Principle of Individuality and Value*, do. 1912, and *The Value and Destiny of the Individual* (*Gifford Lectures*, 1912), do. 1913. A. Meinong, *Psychologisch-ethische Untersuchungen zur Werth-Theorie*, Graz, 1894, and C. Ehrenfels, *System der Werththeorie*, Leipzig, 1897–98, are also important on this subject. The *Gifford Lectures* have done much to show the metaphysical foundations of religion. Perhaps E. Caird, *The Evolution of Religion*, Glasgow, 1893, J. Royce, *The World and the Individual*, New York and London, 1900–01, and J. Ward, *The Realm of Ends*, Cambridge, 1911, are the most noteworthy, in addition to those already mentioned. *The Creed of Christ*^{3}, London, 1906, and *The Creed of Buddha*, New York, 1908, by E. G. A. Holmes, are interesting as bringing out the relations between the two highest forms of religion, and emphasizing the metaphysical conceptions that underlie them. H. Höffding's emphasis on 'the conservation of values' as the fundamental aspect of religion in his *Philosophy of Religion*, London, 1906, has also a very special interest; and so has the characterization of 'the free man's worship' in B. Russell's *Philosophical Essays*. The general views expressed in this art. are further developed in the artt. ETERNITY and INFINITY, in the writer's articles in *Mind*, new ser., xxii. [1913], 'A Sketch of a Philosophy of Order,' and xxiii. [1914], 'The Meaning of Reality,' and *A Manual of Ethics*^{5}, London, 1915, esp. bk. ii. ch. vi. Reference may also be made to artt. EPISTEMOLOGY and ERROR AND TRUTH.

---

[1] The contrast, in this respect, is well, though perhaps too emphatically, brought out by H. S. Chamberlain, i. 187-200.

J. S. MACKENZIE.

METEMPSYCHOSIS.—See TRANSMIGRATION.

METEORS, METEORIC STONES.—See PRODIGIES AND PORTENTS.

METHOD (Logical).—Besides the ideals proper to the concept, the judgment, and inference, there are certain secondary ideals for thought in general. These supplement the primary ideals in a way comparable with that in which, according to the ethics of Butler, the 'adaptations of human nature to virtue' supplement the 'eternal fitnesses of behaviour' which had been described by Clarke. The secondary ideals should be stated with definite reference to the order and process of thinking, whereas the primary ideals are descriptions of truth when thought.

A wide licence has been taken by logical writers in articulating method, methodology, and applied logic; and it is here proposed tentatively to name as secondary ideals systematization, reform, and development. The course of thought must be such as to approach reality in the subtlety of its constituents and the complexity of their interconnexion; to reconstitute concepts, judgments, and inferences, in correspondence with it; and to realize the mutual support that these give to each other, as dealing with the same cosmos.

Method emerged from an outworn analytic and dialectic of Aristotelian origin, and won a place in modern logical theory, chiefly through the use of the topic made by Descartes in introducing his reformation of philosophy, and through the canonic of empirical science introduced by Bacon; and Kant's subsequent definition of it was in fair accordance with the Cartesian tradition:

> 'Just as the doctrine of elements in logic has for its aim the conditions of perfectness in a knowledge related to an object . . . so, general methodology, as the second part of logic, ought to treat, in contrast with it, the form of science in general, or the way to evolve science from a diversity of knowledge' (*Logic*, § 96).

An even more explicit reference to the course of our thinking is desirable, because only in some relation to ordered sequence can the ideals of concept, judgment, and inference become a personal discipline, and give not a mere consciousness of 'validity' or of 'fallacy,' but a development of our natural 'sense of method' (cf. J. Brough, *The Study of Mental Science*, London, 1903, p. 5 ff.). The sense of method is an estimate of the extent to which the several faculties proper to a conviction have actually played their part in it.

1. Systematization.—The most general impulse of thinking is to make a double approach to reality, by analysis and by synthesis. The impulse has been recognized in various logical contexts; in Aristotle's distinction between problems of reason or of essence and problems of fact or of existence; in Descartes's rule of method to divide the difficulties of an investigation, and his rule to conduct our thoughts in the order of simple to complex; in Newton's requirement that natural philosophy should proceed from compounds to ingredients, from motions to forces, and, in general, from effects to causes, before explaining phenomena by causes as principles. The impulse follows, as it were, an indefinitely receding horizon. There is neither simplicity nor complexity that is final, whether in the world of possible perceptions or in the extensions which scientific imagination may make into the imperceptible.

> 'Scientists have tried to find it [the 'simple fact'] in the two extremes, in the infinitely great and in the infinitely small'—the astronomer in distances so great as to reduce a star to a point, the physicist in the atom, the biologist in the cell (H. Poincaré, *Science and Method*, Eng. tr., London, 1914, p. 19).

Even simplicities so laboured as these are provisional, if only because the structure of systematic science based on them is provisional.

> 'In the . . . advance of science an uninterrupted, but progressive series of mental constructions . . . gives us an approximate [but only approximate] idea of the inter-connected system of Reality' (F. Enriques, in *Encyclopædia of Phil. Sciences*, i. 234).

Under this impulse the course of thinking will lead to the actualization of the primary ideals of concept, judgment, and inference, but does not in itself commit our whole nature, as they do, to expectation, submission, and reaction. Its more immediate end is reform within the ideational content.

2. Reform.—Analysis and synthesis provide for continuous revision and reconstitution of such ideational contents as have previously been available for actualizing the primary ideals.

> 'Only inasmuch as we are set free from the accidental associations of ideas formed through single perceptions, by a happy variety of observations and a steady attention to their distinctions and resemblances do we gradually become cognizant of the more general and essential connections, and our conception of things ever more and more adequately' shows the necessary presuppositions of the understanding 'to hold good in the heterogeneous materials of the actual world' (H. Lotze, *Microcosmus*, Eng. tr., London, 1885, bk. ii. ch. iv. § 4 [i. 236]).

The 'perceptions' here spoken of are 'already permeated with the results of sifting critical energy of mind,' but the spirit of reform, more expressly than that of systematization, claims to pass by any warnings from ancient realism as to the sanctity of universals, and equally by those of our modern pure logic as to identities, necessities, and systematic coherencies. Its claim is among the inevitable paradoxes of permanence and change.

(*a*) *Individuation.*—Even the unity of the individual, of 'that which is neither said of any subject nor contained in any subject' (Aristotle), 'the "It" without anything added' (Occam), 'the point in the tissue of reality where it accepts the predicate' (Bosanquet), may be newly isolated and identified. This unity is more directly imposed in perception and is more firmly sustained by social reference and consent than the conceptual, yet there still continues scientific controversy on the more optional identities, such as independent organs or organisms in botanical or zoological growth, concrete standards of measurement in calculation; and even as to whether units are possible at all within the flow of psychical life, or whether a distinction of persons should be made when consciousness has become pathologically discontinuous.

(*b*) *Classification.*—The special store of concepts embodied in the language of a people or in technical

Library of
CIFIC BIBLE SEMIN

terminology may be seen in course of reform, as needs and circumstances without methodical analysis modify the meanings of words. A more methodical initiative in reform proceeds through classification by 'natural kinds,' persistent 'species,' 'types,' or evolutionary 'series'—*e.g.*, metals, grasses, temperament, organisms. But classification can follow only where individuation leads; and also our ultimate interests lie in actual events, open to our influence, rather than in the stereotyped possibilities in a thing, a class, a group, or a series.

(*c*) *Tabulation.*—With the purpose of practical control of nature, Bacon urged the tabulation of instances of event.

> 'Natural and experimental history is so various and diffuse, that it confounds and distracts the understanding, unless it be ranged and presented to view in a suitable order. We must therefore form Tables and Arrangements of Instances, in such a method and order that the understanding may be able to deal with them' (*Novum Organum*, ii. 10).

If our dealing with them is not by way of further analysis into the elements of natural 'form' as Bacon intended, but is numerical, the tables become 'statistics'; and statistics may be summarized through 'graphs'; and the duplication of tables into affirmative and negative may be avoided by 'averages'; and inevitable lapses from accuracy may be regularized as 'probable error.'

(*d*) *Hypothesis.*—Method can pursue the synthesis of simple elements required in judgment, while still suspending the assent or final submission of our nature to its necessity. The course of thought freely varies its subjects and predicates, expands each tentative 'form,' 'causal connexion,' or 'law' into exemplifications, or each imagined 'fact' into natural consequences, and verifies these as independently true or real, or as not so. Many recent writers, including Jevons, Sigwart, and Bosanquet, teach that such a development and trial of ideas is essential for all inductive inference. Thus, if a pencil of light is a composite of varicoloured rays, and is passed through a prism, we shall see the spectrum band; if the process is reversed, we shall reconstitute the untinted whiteness. If eoliths are of human origin, they should serve some purpose, and our ingenuity may discover one.

(*e*) *Colligation.*—A hypothesis may command an indefinite number of such exemplifications or consequences, both already known and waiting for verification. Thus the theory of elliptical orbits for planetary motion covered many planetary positions already registered, and the possibilities of further registrations. This is the 'colligation of facts by means of appropriate conceptions' (Whewell, *Novum Organum Renovatum*, bk. ii. iv.), or the discovery of 'types of order' (Royce, in *Encyc. of Phil. Sciences*, i. 90)—an achievement of intelligence which Whewell considers to be all that is serious in scientific investigation, but which Mill considers as an operation 'subsidiary to induction,' that is to say, to induction as inference (*Logic*, bk. iii. ch. ix. § 3, bk. iv. ch. ii.).

Lotze in his 'pure logic,' and independently of 'methods of investigation,' undertook to exhibit a serial order of schemata for judgment and inference, in which was shown an increasing complexity of conceptual distinctness.

> 'The various forms of thought will be arranged in an ascending series, in which each higher member attempts to make good a defect in the preceding one, due to its failure to satisfy, in regard to its own particular problem, the general impulse of thought to reduce coincidence to coherence' (*Logic*, Introd. § 11).

Thus the categorical form 'S is P,' is followed by the hypothetical, 'if S is X, it is P.' The syllogism, if not a mere *petitio principii*, involves the further conceptions which constitute the induction and analogy supporting its premisses, and these, again, send their roots into larger systems of classification and explanation. Thus the reform of a single concept—*e.g.*, the atom in chemistry, the cell in biology, the vibration in acoustics—may call for readjustments throughout increasing complexities of science.

3. **Development.**—But in method, as in organic life, the whole may decide the part. Nature is more than a 'tissue of uniformities,' as Mill described it. It is a unity. And the ideal of development means that the system of our thinking reacts upon its diversity of content. In perceptual observation, historical narrative, and explanatory conceptions of fact objects and instances are made possible by the growth of knowledge as a whole.

(*a*) *Perceptual extensions.*—Fields of perception beyond those of the natural senses may be opened through science—*e.g.*, in space by the telescope and microscope, in time by the chronoscope and bioscope, in composition of substances by the spectroscope and radioscope. And extensions of sensitivity may be supplemented by artificial mechanisms of record, the chronograph, logograph, and automatograph.

(*b*) *Historical interpretation.*—Records of past events may be given new values by cumulative means of interpretation. Even mere relics may, through a convergence of interpretative hypotheses, as with the relics of pre-historic man, newly disclose remoter ages for methodical retrospect. That our foresight of events yet to come is not similarly from time to time newly lengthened is connected with the fact that here the way of hypothesis cannot be confirmed by verification. Methodical procedure can only assume a number of alternatively possible events, and assign to each a probability.

(*c*) *Explanatory theory.*—A given fact newly known, or more fully observed, may present many varied facets for hypothetical explanation. A chipped flint may be conceived as a geological product, an elastic molecular substance, a surface chemically stained, a contrivance of manufacture, a tool of purpose. And on each facet may centre a separate stress of hypothesis. We may collect contributory explanations of fact in a science predominantly concrete, such as archæology, geology, geography. On the other hand, in sciences comparatively or purely abstract, we may systematize hypotheses among themselves, as empirical, derivative, or ultimate, making exemplification or consequence incidental only—*e.g.*, in physiology, chemistry, mathematics, ethics. But the deepest difference within the 'form of science' is that between *a priori* science, where exemplification or consequence flashes into inference under the magic of intuitive construction, described by Descartes, and empirical science, where the ordered sequence aims and waits to fulfil the primary ideals of inference in '*a posteriori* synthetic judgments' (see artt. INFERENCE and LOGIC).

LITERATURE.—See works mentioned under art. LOGIC. The historical progress may be followed in the works of Aristotle (*Posterior Analytics* and *Topics*), Descartes (*Regulæ*, and *Method*), Arnauld, Bacon, and Whewell (*Philosophy of Discovery*, London, 1860) as mentioned; and in J. Herschel, *Preliminary Discourse on the Study of Natural Philosophy*², London, 1851; W. Whewell, *History of Scientific Ideas*³, do. 1858, and *Novum Organum Renovatum*³, do. 1858. Of recent logical systems, those of J. S. Mill, R. H. Lotze, C. W. von Sigwart, W. Wundt, and J. Venn (*Empirical Logic*², London, 1907) give prominence to method. Besides the definitely methodological books of Davidson, Venn, Jevons, Pearson, and Poincaré, also mentioned, the following may be referred to on special topics: G. C. Lewis, *Methods of Observation and Reasoning in Politics*, London, 1852; G. Gore, *Art of Scientific Discovery*, do. 1878; E. Naville, *La Logique de l'hypothèse*, Paris, 1880; H. Hughes, *Theory of Inference*, London, 1894; T. B. Strong, and others, *Lectures on the Method of Science*, Oxford, 1906; H. Poincaré, *Science and Hypothesis*, Eng. tr.², London, 1914; F. Enriques, *Problems of Science*, Eng. tr., do. 1914; J. Royce, 'The Principles of Logic,' in *Encyclopædia of Philosophical Sciences*, vol. i., Eng. tr., do. 1913.

J. BROUGH.

METHODISM.—I. *History and polity.*—In this article we shall confine ourselves to a description of the origin, growth, and leading features of the Methodism which is connected with the name of John Wesley. The Methodism within the Church of England which resulted in the rise of the Evangelical party is not within our province (see EVANGELICALISM).

1. The rise of Methodism.—According to Wesley, the 'first rise' of Methodism was in Oxford, in November 1729; the second, in Savannah, Georgia, in April 1736; and the third, in London, on 1st May 1738. We pass over the Methodism that found expression in the 'Holy Club' at Oxford, and in the 'Society' formed by Wesley in Savannah, and strike the path which leads to the origin of Methodism as an existing organization. The date, 1st May 1738, is significant. Wesley had returned to England, having learned many bitter lessons in Georgia. By his contact with the Moravians he had been enlightened and disheartened concerning his religious experience. He had learned that, although he had 'followed after the law of righteousness,' he had not attained to it. His disappointment at discovering that he had been pursuing a wrong path was intense. The Moravians explained his failure by showing him that he had not sought righteousness 'by faith, but as it were by works.' His conversations with them left in his mind the unanswered question, What is the faith that leads to salvation? Waiting in London for a solution of the problem that baffled him, he assisted in forming one of the Religious Societies so numerous at the time. His instinct for 'fellowship' was one of the dominant forces of his life, and explains much that happened in his career. The Religious Society which he joined met in the house of James Hutton. It owed much of its character to the advice of Peter Böhler, a Moravian to whom Wesley was unspeakably indebted for spiritual guidance. The Society was founded on 1st May 1738. Rules were drawn up for its management, and, as was the case in Savannah, the members of the Society who were intent on cultivating a deeper religious life were divided into little companies called 'bands.' The Society grew, and its meeting-place was changed to a room in Fetter Lane. At first the Society, like the other Religious Societies, was in connexion with the Church of England; subsequently it was dominated by Moravian influences, and this connexion was broken.

2. Wesley's spiritual crisis.—Methodism, as it now exists, can be understood only by realizing the facts concerning the progress of Wesley's religious experience. By much conversation, by close study of the NT, by prayer 'without ceasing,' he advanced from an intellectual understanding of the meaning of 'saving faith' to the understanding that comes through experience. While he was in the stage of an ever-brightening intellectual apprehension, he preached the doctrine of 'salvation by faith' in many of the London churches. He taught it as it stands in the *Homilies*; but it was resented by clergymen and their congregations, and the churches were closed against him. In this way a policy of exclusion from the churches was commenced, which, after a time, profoundly affected Wesley's relation to the Church of England.

During this preliminary stage, Wesley was oppressed with a 'burden' which was to him 'intolerable'—the burden of unpardoned sin. That load was lifted on 24th May 1738, in a 'room' in Aldersgate Street, the meeting-place of one of the Religious Societies.

> 'I felt I did trust in Christ, Christ alone for salvation; and an assurance was given me that He had taken away *my* sins, even *mine*, and saved *me* from the law of sin and death' (*Journal*, i. 476).

In that decisive hour he entered into an experience, new so far as he was concerned, but an old experience not only among Moravians but also among many Churchmen and Dissenters. It is an extraordinary fact, however, that it had become unintelligible to the mass of English Christians. Wesley's 'conversion' filled him with the spirit of the evangelist. He would gladly have borne his testimony in the churches, but he was compelled to wait until a wider sphere opened before him.

3. Beginning of field-preaching.—In April 1739 Wesley found his opportunity, and began his evangelistic work. George Whitefield, a member of the Oxford 'Holy Club,' had entered into the experience of 'conscious salvation' before Wesley, and had made a deep impression in Bristol by the preaching of the 'new doctrines.' Being excluded from the churches, he went into the open air, and addressed great crowds of people in Bristol and at Kingswood. Having to leave England for America, he wrote to Wesley asking him to take his place; Wesley consented, and on 2nd April 1739 he commenced his famous campaign of 'field-preaching.' In addition to preaching in Bristol and to the Kingswood colliers, he got into close touch with the Religious Societies in the city. His genius for administrative reform found scope in them. He divided them into 'bands.' The Societies in Baldwin Street and Nicholas Street so increased that it became necessary to build a 'Room' for their accommodation. A site was secured near the Horsefair, and the 'Room' was opened on 3rd June 1739. Afterwards Wesley went to London to assist in composing disputes which had arisen in the Fetter Lane Society. He again met Whitefield, who, being detained in England, had spent his time in preaching to multitudes in Moorfields, on Kennington Common, and elsewhere. Wesley joined him in his field-preaching. On 11th November 1739 he held a service amid the ruins of 'the King's Foundery of cannon,' a building near Moorfields, which had been shattered by an explosion. Wesley acquired the site and built a 'Room' upon it, which became famous in Methodist history. Some who indulge in regrets concerning the separation of the Methodists from the Church of England point to the building of these 'Rooms' as 'the parting of the ways'; Methodists maintain that it was the closing of the churches that led to the opening of the 'Rooms.'

4. First Wesleyan Societies.—While he was still a member of the Fetter Lane Religious Society, Wesley formed a Society of a different type at the Foundery. It was started, probably, in the latter end of the year 1739, and is looked upon as the Mother Society of Methodism. In July 1740 Wesley was practically excluded from the Fetter Lane Society. Those who left with him joined the Society at the Foundery. By that time Societies, under the special direction of John and Charles Wesley, existed in London, Bristol, and Kingswood. In 1742 Newcastle-upon-Tyne was visited by Charles Wesley, who formed a Society there on the new pattern. These Societies are called by John Wesley, in the 'Rules' which he drew up for them and published in 1743, 'The United Societies,' and they were the nucleus of the Methodist Church. In the 'Rules' a Society is described as 'a company of men, having the form and seeking the power of godliness; united in order to pray together, to receive the word of exhortation, and to watch over one another in love, that they may help each other to work out their salvation.' In these new organizations the 'band' system was a prominent feature; but, in addition, the Societies were divided into 'classes,' each containing about 12 persons who were placed under the care of a 'leader,' not only for their own spiritual edification, but also that Wesley might be assisted in his pastoral supervision. At first the leaders visited the members at their houses; but, that method proving inconvenient, the members were expected to meet their leader at some fixed place, week by week. The 'Rules' mentioned above are still, with slight alterations, the 'general rules' for Methodists, the 'particular rules,' passed in after years, being contained in the disciplinary 'codes' of the different Methodist churches. In the classes contributions, usually a penny a week, were made for the poor. At a later date these contributions were given for the support of the ministry, a special poor-fund being raised from other sources. Stewards were appointed to manage matters of finance, and the leaders met the ministers and stewards of each Society once a week to pay in the moneys that they had received, and to give information concerning any member who was sick or might need special pastoral attention. Out of these arrangements the Leaders' Meeting arose, which became an integral part of the Methodist organization. The oversight of his Societies weighed heavily on Wesley's mind. He never worshipped numerical success; he was not content to gather together a miscellaneous crowd of people of whom he knew nothing. He supplemented the work of the leaders by visiting the members himself in their homes, and met them once a quarter in the classes for personal conversation on their religious experience. If satisfied, he gave them tickets in recognition of the fact that they were members of the Methodist Society.

5. **Attitude of the clergy.**—Those who have studied the constitution of the Religious Societies will note the affinities and divergences between them and the United Societies. One line of divergence was caused by circumstances which Wesley deeply regretted. The Religious Societies were in close connexion with the Church of England, and many of their members were frequent communicants at the churches. Wesley would have gladly preserved this connexion and practice; but such a course was made impracticable by the conduct of the clergy. In some places they arranged among themselves to repel the Methodists from the Lord's Table. In Bristol, on 27th July 1740, Charles Wesley and a company of Kingswood Methodists were sent away from the sacrament in Temple Church. Charles Wesley, therefore, administered the Lord's Supper to the Methodists in the school at Kingswood which had been built for the training of the colliers' children. In Newcastle-upon-Tyne a similar crisis arose. It is significant that in Newcastle the difficulty was aggravated by the fact that three of the dissenting ministers of the town agreed to exclude from the communion all who would not refrain from hearing the Wesleys. The effect of these exclusions, and of Charles Wesley's action, was speedily seen. The Methodists were diverted into a path which gradually but decisively diverged from the Church of England.

6. **Enlisting of lay-preachers.**—Another line of divergence from the practices of the Religious Societies must also be noted. John Wesley's conversion made him an evangelist. He longed to proclaim the gospel not only to select companies but to the world. His heart responded to the counsel of Lady Huntingdon: 'Attempt nothing less than all mankind' (*Journal*, iii. 48, note 1). But how could that advice be followed by a man in his circumstances? His work taxed all his strength. Charles Wesley helped him, especially in the opening years of his mission, and a few friendly clergymen gave him occasional assistance; but such help was inadequate. The double task of the pastoral care of his Societies and the evangelization of the country was too great for a single man. But the way opened. He had great skill in discovering and using the working-powers of laymen, and he soon found himself at the head of an order of lay-preachers who shared with him the hardships and the successes of his work. In 1738 and 1739 laymen had preached with his consent, but the order of lay-preachers is usually considered to date from 1740. The importance of this step cannot be exaggerated. The lay-preachers were divided into 'itinerants,' 'half-itinerants,' and 'local preachers.' They first abandoned their business and gave themselves entirely to the wandering life of the evangelist, under Wesley's personal supervision. For that work, at the beginning, they got no pay; later on a small sum was given them; but many years elapsed before they were rescued from the pinch of poverty. Assisted by them, Wesley went out 'to reform the nation, particularly the Church, and to spread Scriptural holiness over the land' (*Minutes of Conference*, i. 446). Wesley's work as an evangelist, an educationalist, a philanthropist, a social reformer, and a pioneer in enterprises that have deeply affected the condition of the nation must be passed over here. Some idea of the toils of himself, his preachers, and those who were associated with them in his Societies may be gathered from the fact that, when he died in 1791, there were 136,622 members in the Methodist Societies in Great Britain and Ireland, in other parts of the British Dominions, and in the United States of America.

7. **Institution of the Conference.**—It is now necessary to indicate certain facts which have determined the character of modern Methodism. While Wesley was 'the head of his order,' and spoke the last word in matters of administration, he thoroughly believed that there is safety in 'a multitude of counsellors.' He consulted the bands, the leaders, and persons of experience in his Societies, but the chief evidence of his reliance on the counsel of others is to be seen in the conferences which he held with the clergy who helped him, and with his lay-preachers. He also assembled the stewards at intervals in different parts of the country and conversed with them on financial and spiritual subjects. Out of his annual conferences with the clergy and lay-preachers, with whom lay-officers of the Society were sometimes associated, arose 'the Yearly Conference of the People called Methodists.' Towards the end of his life the vagueness of this description of the Conference was seen to be a danger. The power to appoint preachers to the numerous chapels that had been built would revert after Wesley's death to the Conference so inadequately described. To meet this contingency, on 28th Feb. 1784 Wesley signed a Deed Poll explaining the words 'the Yearly Conference of the People called Methodists,' and declaring 'what persons are members of the said Conference, and how the succession and identity thereof is to be continued.' One hundred 'preachers and expounders of God's Holy Word' then 'under the care of and in connexion with' Wesley were declared to be the Conference, and they and their successors, to be chosen in the manner laid down in the Deed, were 'for ever' to be 'the Conference of the People called Methodists.' This Deed Poll received decisive confirmation in 1835, when the Lord High Chancellor, Lord Lyndhurst, and the Vice-Chancellor, Sir Lancelot Shadwell, upheld its validity in trials which took place in their courts. In his judgment the Vice-Chancellor affirmed that the Conference had been 'the supreme legislative and executive body' in Methodism since the death of Wesley.

The Conference in Wesley's day was more than a consultative assembly. It took complete oversight of preachers and people. It kept an eye on the moral character and doctrinal beliefs of the preachers, and stationed them in their Circuits. We shall accentuate only one part of its functions. In the form of 'Model Deed' for the settlement of chapels then called 'Preaching Houses,' published first in 1763, a clause appears which constitutes Wesley's *Notes upon the New Testament* and his four volumes of *Sermons* as the standard by which trustees were to judge the orthodoxy of the preachers appointed by the Conference. We may also add that the rights of trustees were strengthened by the clause in Wesley's Deed Poll which provided that, with the exception of clergy of the Church of England, the Conference might not appoint a preacher to the same chapel for more than three years successively.

8. **Provision for the sacraments.**—One other point remains to be considered at this stage. The question of the administration of the sacraments to the Societies had to be settled. The bulk of the Methodist people would not go to the parish churches for the sacrament of the Lord's Supper, and provision for its administration in their own chapels was urgently desired. In November 1778 Wesley opened his new chapel in City Road, London. In that chapel the sacraments were administered as they had been in some of the other Methodist chapels in London and the country. Wesley was pressed to extend similar privileges to the rest of his Societies. He saw, however, that, if he yielded, he would have to qualify and appoint some of his lay-preachers to administer the sacraments; and, in his opinion, such appointment necessitated ordination. Time and circumstances led him to a solution of the problem. In 1769 he had sent two of his lay-preachers to New York to direct the work which had been begun there by certain Methodist local preachers. The work in America proved very successful, but the War of Independence gave it a new complexion. The Anglican clergy were scattered, and many of the Methodists had been without the sacraments for years. The Americans would have solved the difficulty by ordaining a sufficient number of their lay-preachers, but Francis Asbury, who had been sent out as a preacher from England by Wesley, checked this movement and advised that Wesley should be consulted. Wesley had satisfied himself that he, as a presbyter, had the power to ordain other presbyters; but he hesitated to do so. In 1784 the American crisis became acute; so, after much thought, he appointed Dr. Thomas Coke, a clergyman who acted with him, and Francis Asbury as 'superintendents' in N. America, and two other preachers as 'elders.' With the exception of Asbury, who was in America, these preachers were set apart by Wesley, assisted by other presbyters of the Church of England, by the imposition of hands. In this way the American difficulty was met, and the Methodist Episcopal Churches, which now number their membership by millions, entered on their remarkable career. Wesley afterwards ordained preachers for Scotland and for Foreign Mission stations. At last he took a still more decisive step in this direction. In 1788 he ordained Alexander Mather 'deacon,' 'elder,' and 'superintendent,' and in 1789 he ordained Henry Moore and Thomas Rankin 'presbyters,' empowering them to administer the sacraments in England. He exhorted them to maintain as close an association as possible with the Established Church; but, when that association was no longer practicable, they were to proceed to confer on other preachers the 'orders' which they had received (see *Proc. Wesleyan Hist. Society*, ix. 145–154).

9. **Influence of Charles Wesley.**—John Wesley is justly considered as the founder of the Methodist Church, and we have, in the main, dwelt on his actions in describing the origin and development of the United Societies. It would be unpardonable, however, if we failed to emphasize the services of his brother, Charles Wesley. During the early days of the 'Revival' he was a daring and successful evangelist, facing the violence of mobs and rivalling his brother in the activities of the wandering preacher's life. Later he settled down in Bristol, and then in London, and his itinerant work was restricted. But his influence as a hymn-writer was strong, and it is still felt not only in Methodism but throughout the Protestant Churches. He died on 29th March 1788.

10. **Events following Wesley's death.**—John Wesley died on 2nd March 1791. His death produced a dangerous crisis. Many thought that the time had come when the Methodist Societies would fall in pieces. Their stability had been secured, in great part, by his firm and reasonable autocracy. Was that autocracy to be exercised by a successor? The answer was in the negative. Then how was the supervision to be maintained which he had exercised over preachers and people during the intervals between the annual meetings of the Conference? The Conference gave the answer by dividing the kingdom into Districts, each containing a small number of Circuits, the preachers in which, being formed into committees, were answerable to the Conference for the maintenance of Methodist discipline. The functions of these Committees were enlarged from time to time, and chairmen, appointed by the Conference, were placed over them. This arrangement has been greatly developed in more modern times. The Committees have grown into District Synods, which exercise great influence in the administration of Methodism.

After Wesley's death the demand for the sacraments became urgent. The party most favourable to the Church of England was first in the field and issued manifestos against administration by the preachers. These provoked replies, and a controversy on the subject was continued until 1795, when an arrangement was made between the Conference and the representatives of the trustees of chapels. This arrangement, contained in the 'Plan of Pacification,' led to the administration of the sacraments in all Methodist chapels. As to ordination, it was decided that the reception of a preacher into 'full connexion with the Conference' should carry with it the right of administration without ordination by imposition of hands. In the case of Foreign Missionaries an exception was made, and they were ordained as in the time of Wesley. In 1836 the Conference determined that all its ministers should be ordained by the imposition of hands.

11. **'Plan of Pacification.'**—Another subject of cardinal importance pressed for settlement. The question had to be answered, Who shall possess the predominant ruling power of Methodism? The country, at the time of Wesley's death, was agitated by the discussions which had accompanied the American War of Independence and the French Revolution. The doctrine of 'the sovereignty of the people' fascinated many minds, and led to a strong wish on the part of some to introduce into Methodism a democratic form of government. But the most serious contest was between the claims of the Conference and of the trustees of chapels. That contest was settled, for the time being, by the 'Plan of Pacification' and by certain regulations that were passed at the Leeds Conference of 1797. In these documents we find the fundamental principles which still govern the Mother Church of

Methodism. The pastoral power of the preachers was safeguarded; but its exercise was limited by giving to the Leaders' Meeting additional rights, as representing the Societies, while matters of finance were placed more completely under the control of the Circuit Quarterly Meetings in which laymen predominated. Thus, in 1795 and 1797, was instituted that remarkable 'balance of power' which is a peculiarity of the system of Methodism. The settlement was almost universally approved. Out of a membership of nearly 100,000, about 5000 persons who were desirous of a democratic form of government united themselves into a Society under the leadership of William Thom and Alexander Kilham, and became the Methodist New Connexion.

12. Connexional system of Wesleyan Methodism.—Speaking of Methodism in the present time, we may say that the Wesleyan Methodist Church, the mother church of the Methodists, has pursued its course along the lines laid down by John Wesley. The Connexional system is intact. The Circuits consist of the several Societies within their boundaries, the Districts are composed of the Circuits in their areas, and 'the Connexion' is the aggregate of all the Societies, Circuits, and Districts in those countries in which Methodism is established in association with the Conference. This great organization is kept together by the unifying power of the Conference. Every attempt to introduce the principle of 'Circuit independency' has been successfully resisted. It is impossible here to describe minutely the organization of Wesleyan Methodism. It is the result not only of the work of Wesley, but of the continuance of his work done in his spirit, for more than a hundred years since his death. We may briefly note some of the changes which have taken place in the Conference since the Deed Poll was signed in 1784. The specific naming of the 100 preachers who composed the Conference produced excitement and ill-feeling, especially among preachers who were not nominated in the Deed. In 1791 the Conference, in accordance with Wesley's request conveyed in a letter, resolved that all preachers who were 'in full connexion' should enjoy every privilege that the members of the Conference enjoyed. That resolution almost completely allayed the ill-feeling that had been excited.

13. Lay-representation and the constitution of Conference.—The action of the Conference in 1876, however, is of still greater interest. Although no alteration can be made in the composition of the Conference created by Wesley's Deed Poll, save by process of civil law, it has been found possible to associate laymen, as well as ministers, with 'the Hundred.' The Conference, which assembles annually towards the end of July, now meets in two Sessions. Its representative Session is held first, and consists of 300 ministers and 300 laymen. The resolutions they pass are made valid by the confirming vote of the 'Legal Conference.' Some of the lay-representatives are chosen by the ministers and laymen present at the preceding Conference; but the greater number are elected by the separate vote of the laymen assembled in the representative Sessions of the District Synods held in May. Those Sessions have been much enlarged, not only by the inclusion of many laymen who are members of District sub-Committees, but also by the addition of the representatives of the Circuit Quarterly Meetings, which, in their turn, have been greatly enlarged through alterations made in the composition of the Leaders' Meetings. The most striking of the alterations in the Leaders' Meetings is the addition to them of persons elected by the Society Meeting in each place to represent the members of the Society. The votes for the laymen and the duly qualified women chosen to attend the Conference represent a wide constituency. As there is a permanent ministerial element in the Representative Session of the Conference consisting, for instance, of members of 'the Hundred,' there is also a permanent lay element. It is composed of the lay-treasurers of certain funds, along with 48 laymen elected by the votes of ministers and laymen present at the Conference. One-third of this number retire annually, and are not eligible for immediate re-election. In the Representative Session it is estimated that nearly 60 members of the Hundred will be present, a quorum of 40 being necessary for the transaction of business, according to the Deed Poll. To these are added several ministerial officials, such as chairmen of Districts who are not members of the Hundred, 8 representatives of foreign missionaries, and others. The rest of the 300 ministers are chosen by the votes of the ministers in the Pastoral Session of each Synod in Great Britain, the number of ministerial and lay-representatives being governed by the principle of proportion of members of Society in the several Districts. The Representative Session of the Conference deals with all questions in which the expenditure of money is involved, and reviews the work done by the committees of ministers and laymen that have managed the affairs of the several Church 'Departments' during the year. New legislation may also be proposed on subjects within the province of the Session, but such new legislation is not confirmed until it has been submitted to the Representative Sessions of the Districts for consideration and report.

At the close of the Representative Session the Pastoral Session is held. This consists of the 'Legal Hundred,' the ministers who have been members of the Representative Session that year, and other ministers who have received the permission of their Synods to attend. When the scheme of lay-representation was adopted, it was agreed that all questions of doctrine, discipline, and the stationing of ministers should be reserved to the Pastoral Session, as also the management of the Book Room, the great publishing department of Methodism. The Pastoral Session exercises strict discipline over the ministers of the Connexion, and also considers all appeals in cases of discipline affecting members. The Circuit Quarterly Meetings have a right to memorialize the Conference, in both its sessions, on Connexional subjects, and to propose alterations in Methodist rules and regulations. When 'provisional legislation' is passed by the Conference in its Pastoral Session, that legislation has to be submitted for the consideration of the ministers of the Districts when assembled in the Pastoral Session of the Synods.

14. Home and Foreign Missions.—The work of Methodism has always been deemed of greater importance than its machinery. The wide-spread character of that work may be judged from the *Minutes of Conference* annually published. The work of the Home and the Foreign Missionary departments is worthy of special consideration. In recent years the evangelistic campaign has been quickened by the erection of large Mission Halls in some of the principal towns of England. The example of renewed evangelistic enterprise in Wesleyan Methodism has made a deep impression on the Churches of Great Britain and other countries. The Foreign Missionary work of Methodism dates from 1769. The work gradually increased. In 1785 appointments in the United States, Nova Scotia, Newfoundland, and Antigua appear in the *Minutes of Conference.* Working in connexion with the Conference, Coke was the leading spirit of Methodist Foreign Missionary enterprise until his death in 1813. In that year the work became more completely organized, and the present Wesleyan Methodist Missionary Society was formed. In estimating the importance of the work done by that Society, it must be remembered that its present operations are carried on in a field that is only a fragment of the area once occupied. Independent and affiliated Conferences formed in the United States, Canada, France, S. Africa, and Australia have taken over almost all the work which was begun by the British Conference in the several countries mentioned.

Western Section	48,614	39,075	7,409,736	67,438	68,578	623,146	6,062,135
Total	55,808	98,121	8,768,616	99,497	90,124	898,722	8,273,809

15. Statistics of world Methodism.—It is only at the decennial meetings of the Ecumenical Conference, when representatives of the Methodist Churches in both hemispheres meet, that an idea of the wide-spread influence of Methodism can be gained. Those Conferences were instituted in 1881, the latest being held in Toronto in 1911. The carefully compiled statistics presented to that Conference speak for themselves.

It was estimated that the members and adherents of the Methodist Churches, in 1910, numbered, in the Eastern Section, 6,794,471, and, in the Western Section, 25,934,076, making a total of 32,728,547.

The statistical tables show that there are many separate Methodist Churches in the world. It must, however, be understood that the divisions that have occurred have not been caused by doctrinal differences; in almost all cases they have arisen from varying opinions concerning ecclesiastical constitution and administration. In the Western Section the 'colour question' has had an influence on the number of churches.

There is one Church, bearing the Methodist name, which is not represented in the Ecumenical Conference — the Welsh Calvinistic Methodist Church. Its history and organization should be studied in Williams's valuable book (*Welsh Calvinistic Methodism*). The Church is closely connected in origin with Whitefield's work in Wales. The doctrinal difference, indicated in its title, suggests a reason for its unique position among Methodist Churches.

16. Methodist Episcopal Churches.—The success of Methodism in the United States of America has been remarkable. We have mentioned some facts concerning its origin in 1769, and the action of Wesley in ordaining Coke as a Superintendent, and two other preachers as presbyters, in 1784. When Coke arrived in America, he ordained Francis Asbury as a Superintendent. Asbury's work and influence have left a deep mark on Methodism in the United States. Like Wesley, he was a man of high spiritual tone. He rivalled Wesley in evangelistic enterprise, and gathered around him men who possessed the courage and devotion of the pioneer preacher. The War of Independence had made the whole country the sphere of the most enterprising Evangelism. In settled towns, in clusters of huts, in lonely backwoods, the Methodist preacher became a familiar figure, as he preached and formed and visited his little Societies. The growth of the churches in the immense areas in which the pioneers worked necessitated the helpful supervision not only of the Superintendents but also of 'Presiding Elders,' who rode hither and thither, constantly giving inspiration and guidance to the scattered evangelists and churches. For a considerable time the work was carried on in close connexion with the British Conference, and on lines similar to those followed in England. A Conference was held in the States in 1773, at which time there were 6 Circuits, 10 preachers, and 160 members. From these small beginnings American Methodism has advanced to its present position.

The Methodist Episcopal Church and the Methodist Episcopal Church (South) occupy the chief positions among the Methodist Churches of the United States. They separated in 1844, in consequence of discussions which involved the question of slavery. We may refer to some of the constitutional arrangements of the Methodist Episcopal Church. The members of the Church are divided into local Societies, one or more of which constitute a 'pastoral charge.' A quarterly conference is organized in each 'pastoral charge.' The 'travelling preachers' throughout the States are members of their several Annual Conferences, the sessions of which they are obliged to attend. In addition to the ministerial Annual Conferences, a General Conference is held every four years composed of delegates from all the Annual Conferences in the States. It consists of pastors and lay-delegates, the admission of the latter into the General Conference dating from 1872. The ministerial delegates are elected by the Annual Conferences, each of which is entitled to one delegate at least. The General Conference fixes the ratio of representation and the manner of election. Every four years a Lay Electoral Conference is constituted within the bounds of each Annual Conference for the purpose of voting on constitutional changes to be submitted to the General Conference, which is the supreme legislative assembly. The Lay Electoral Conference is composed of lay-members, one from each pastoral charge, chosen by the lay-members of each charge over twenty-one years of age, in such manner as the General Conference has determined. Each Lay Electoral Conference is entitled to elect as many lay-delegates to the General Conference as there are ministerial delegates from the Annual Conference. In the General Conference the 'General Superintendents,' as the bishops are called in the *Discipline of the Methodist Episcopal Church*, preside in such order as they determine; but, if no General Superintendent is present, the Conference elects one of its other members to preside *pro tempore*. The presence of two-thirds of the whole number of delegates constitutes a quorum for the transaction of business. The General Conference elects by ballot as many General Superintendents as it may deem necessary from among the 'Travelling Elders,' as the former Presiding Elders are now called. The Conference has full power to make rules and regulations for the Church, under the limitations and restrictions laid down in the *Discipline*. The principal restrictions are that it cannot revoke, alter, or change the *Articles of Religion*, which were prepared by John Wesley, and which first appeared in *The Sunday Service of the Methodists in the United States of America*, published in 1784. Nor can the General Conference establish any new standards, or rules of doctrine, contrary to the present existing and established standards. In addition, it cannot change or alter any part or rule of government so as to do away with episcopacy or destroy the plan of General Superintendency. It is also unable to revoke or change the 'General Rules' of the Church. Those 'Rules' are, with slight variations, the 'Rules of the Society of the People called Methodists,' as drawn up by John Wesley in 1743. As to the procedure of the General Conference, the *Discipline* shows that, in voting, the ministers and laymen vote together; but it is provided that a separate vote 'by orders' may be taken on any question when it is requested by one-third of either order of delegates present and voting. In all cases of separate voting the concurrence of the two orders is required for the adoption of the proposed measure. If the proposal concerns a change of the constitution, a vote of two-thirds of the General Conference is required. Such, in bare outline, is a sketch of some of the outstanding features of the organization of the Methodist Episcopal Church, but it should be supplemented by a study of the book of *Doctrines and Discipline* (1912). In J. H. Rigg's *Comparative View of Church Organisations* there is a chapter on American Episcopal Methodism which contains important information enabling the student to compare the constitution of the Mother Church of Great Britain with that of the Methodist Churches in the United States. For many years the visits of fraternal delegates, representing the Conferences of Great Britain and Ireland and America, have served to strengthen the bond of union between the Methodists of the two countries. The American Methodists hold a conspicuous position among the Churches devoted to the work of Foreign Missions.

17. Early secessions.—We have mentioned the first important Methodist secession in England, taking place in 1797. As the Methodist New Connexion is now part of the United Methodist Church, it is not necessary to describe its original constitution. In 1810 a small Society, numbering 10 members, was formed by Hugh Bourne in Staffordshire, and became the germ of the Primitive Methodist Church. In 1815 a Society, consisting of 22 persons, was formed by William O'Bryan in Devonshire out of which arose the Bible Christian Church. The reasons for the institution of these two Societies were similar. In the former case Hugh Bourne and William Clowes, two earnest evangelists, were indisposed to submit to the restrictions of Methodist discipline and manner of work. They sought and found a sphere in which they could have a larger freedom. They made no attempt to agitate the Church from which they were separated. They gathered their members out of the neglected classes, and displayed in their work much of the spirit of ancient Methodism. The same may be said of William O'Bryan, the founder of the Bible Christian Church.

18. Primitive Methodist Church.—Next to the Wesleyan Methodists, the Primitive Methodists hold the strongest position in Great Britain. The constitution bears, in several points, a strong resemblance to that of the Wesleyan Methodist Church, but there is a marked difference in the composition of the Conference. H. B. Kendall, in his *Handbook of Primitive Methodist Church Principles and Polity* (London, 1913), says:

> 'The Deed Poll provides that members shall be formed into Classes, Societies, Circuits, and Districts, and that Societies shall have their Leaders' Meetings, and Circuits their Committees and Quarterly Meetings' (p. 61).

Dealing with the functions of the Annual Conference, he sets forth the provisions of the Primitive Methodist Deed Poll. First of all, the Conference is to be composed of 12 Permanent Members, irremovable from office except for incompetency or incapacity. Next, it is to be composed of other persons not exceeding 4, whose appointment is to be made by a by-law of the Conference. These may be ministers or laymen, official or unofficial members. Lastly, the Conference is also composed of delegates, who have been elected thereto by their District Meetings, one-third of whom must be travelling preachers and two-thirds laymen, and no layman is to be appointed who is not a local preacher, or a class leader, or a Circuit steward. After long consideration and much discussion it was decided by the Conference of 1876 that the number of delegates to be sent by each to the highest court should be determined by the number of members in the District, 3000 being made the unit for one minister and two laymen (p. 61 f.). Kendall is of opinion that the Primitive Methodist polity is a 'modified Presbyterianism,' one evidence of the fact being that the Churches are jointly governed by ministers and lay-officials, and that all ministers are in theory equal, the Superintendent differing from his colleagues only in function and responsibility (p. 62). Up to the present the Primitive Methodists have not shown any strong desire for corporate union with other Methodist Churches. Their Foreign Missionary work is confined to Africa.

19. United Methodist Church.—In 1827, 1835, and 1849 there were secessions from the Wesleyan Methodist Church resulting from serious controversies concerning questions of government and administration. The first was occasioned by the introduction of an organ into one of the chapels in Leeds. In its course constitutional questions were raised touching the power of the Conference, which re-emerged at a later stage. In 1835 the creation of the Theological Institution for the training of candidates for the ministry roused strong opposition. The first occasion of the disturbance was soon nearly forgotten, and the controversy turned into an attack on the constitution of the Wesleyan Methodist Church. The agitation was elaborately organized and vigorously conducted in all parts of the country, and brought about the secession of several thousands of members, who formed themselves into the Wesleyan Association. The Association held its first Annual Assembly in Manchester in 1836. The Leeds reformers of 1827 joined the new Church.

The largest of all the secessions from the Wesleyan Methodist Church took place in 1849. Its immediate cause was the action taken by the Conference in dealing with certain anonymous publications in which the personal character of ministers holding high official responsibility was attacked. But, as before, the controversy soon involved the question of the constitution and, especially, of the power of the Conference. It is difficult to state the number of persons lost to the Wesleyan Methodist Church through this agitation. The aggressive work of Methodism was paralyzed for several years. When the strife subsided, it was found that the number of members in the Wesleyan Methodist Church was nearly 100,000 less than when the agitation began. The 'Reformers' of 1849–52 formed themselves into a distinct community, which, by union with the Methodist Association, became 'the United Methodist Free Churches.'

In 1907 an Act was passed by Parliament authorizing the union of the Methodist New Connexion, the Bible Christians, and the United Methodist Free Churches, under the name of 'The United Methodist Church.' The constitution of the new Church shows the usual indications of compromise; but it retains the strong marks of original Methodism. The Conference, which is composed of ministers and laymen in equal numbers, meets once a year. It includes the President and Secretary, the President-designate, 12 ministers and 12 laymen, who form, in a sense, a permanent nucleus, the Connexional officers, the representatives of District Meetings, and such representatives of Connexional Funds and Institutions as the last preceding Conference has determined. The whole number of the Conference, exclusive of the Guardian Representatives and Connexional officers, is about 300. The Conference appoints a General Connexional Committee which exercises a 'general oversight over the affairs of the United Methodist Church during the intervals between the Conferences.' The authority of the Church Meeting, the Leaders' Meeting, and the Circuit Quarterly Meeting is great. These meetings are, to a considerable extent, independent of the Conference, but the Conference has certain rights which it can exercise in cases calling for its interference. The constitution of the United Methodist Church may be studied in the *General Rules*, approved by the Conference in September 1907, a new edition of which was published in 1911. Foreign Missionary work is being done by this Church in China, Africa, Central America, and the W. Indies.

20. Smaller Methodist Churches.—The Wesleyan Reform Union consists of those Churches and Circuits which held aloof from the amalgamation producing the United Methodist Free Churches. In 1859 a constitution was formed which is fully described in a pamphlet published by the Wesleyan Reform Union Conference, the latest edition being issued in 1896.

In 1805 several small Churches formed a union which held its first Annual Meeting in Manchester. The distinctive characteristics of the churches so united are an unpaid ministry, conjoined with the free church-life of the Quakers and the doctrines and methods of Wesleyan Methodism (J. Vickers, *Independent Methodism* [Wigan], 1910, p. 3). In 1898 this union assumed the name of the Independent Methodist Church. Its churches are situated chiefly in Lancashire, Yorkshire, and the northern counties, with some outlying churches in Nottinghamshire and Leicestershire, and a few besides in Bristol and the south-west. The Independent Methodists excel in Sunday School work.

Although sharply divided by constitutional distinctions, the Methodists of England have so much in common, especially in their practical work, that they are being drawn nearer together. The Ecumenical and other Conferences have done much to promote the spirit of fraternity among them. In Canada and other countries the Methodist Churches have united, and Methodist reunion in England is often sympathetically discussed.

JOHN S. SIMON.

II. *DOCTRINE.*—Let us look into the soul animating the body which has been described. Methodism was the offspring of the Evangelical Revival that took place in England during the 18th cent.; its doctrine was moulded under the religious conditions of that age.

1. **Methodism and deism.**—A rationalistic deism then largely prevailed amongst educated men—a system of thought which fenced God off from mankind behind the laws of nature and bounded human knowledge by the limits of sense-perception and logical reason. The Deity was treated as an absentee from His world; and men consequently became godless in practice as in thought. The Revival swept down these artificial barriers. God was realized in living contact with His children. The sense of the divine was recovered; the transcendent became again immanent to consciousness. Accordingly, 'the life of God in the souls of men' was Wesley's definition of religion; 'the work of God' was the habitual Methodist designation for the Revival, because in its phenomena God's immediate action upon human nature was discerned. Hence the emphasis laid in the teaching of the Wesleys on 'the witness of the Spirit' (Ro 8). The doctrine of assurance—the personal certainty of the forgiveness of sins and of restored sonship toward God — was the outstanding feature of original Methodism. To most Churchmen of the time professions of this kind appeared a strange 'enthusiasm' (see G. Lavington, *The Enthusiasm of Methodists and Papists considered*^{3}, London, 1833); that a man might know his sins forgiven was deemed a dangerous presumption. Along with the Fatherhood of God, the Deity of the atoning Saviour and of the witnessing and sanctifying Spirit came to be freshly recognized; an arrest was made of the Socinianism which by the middle of the 18th cent. was rife among both Anglicans and Dissenters.

2. **Methodism and Calvinism.**—The Methodist forces were soon divided on the question of predestination. Predestinarianism, like deism, magnifies the transcendence of God at the expense of His immanence, reducing finite will to an illusion and making man, even in his acceptance of divine grace, the passive creature instead of the consenting child of God. The Puritan theology, in its prevailing strain, was intensely Calvinistic; and to it Whitefield, with the Welsh Methodist leaders and the Evangelical clergy generally, adhered, while the Wesleys espoused Arminian views upon election and grace, in this respect inheriting the High Anglican tradition. But the spring of their universalism lay in the sense of God's mercy to mankind revealed within their own breast and interpreted in the broad light of the NT; they sang:

> 'The boundless grace that found out me
> For every soul of man is free!'

They could not preach that God 'willeth all men to be saved' under the reservation that He has doomed some, of His mere pleasure, to perdition; as Christ's ambassadors, they cried, without any misgiving, 'Ye all may come, *whoever will*!' The

Wesleyan teaching lifted a cloud from the character of God; it brought salvation to thousands who had deemed themselves predestined reprobates. Wesley vehemently contended against another tenet of Calvinism, maintained by contemporary Evangelicals—that of the necessary inherence of sin in the redeemed. The current orthodoxy limited the salvation of Christ in the degree of its attainability as well as in the persons by whom it is attainable. John Wesley arrived at the conviction that the man who is 'in Christ' may become even on earth a thoroughly 'new creature,' that it is possible to be actually 'cleansed from all sin' through 'the blood of Jesus' (1 Jn 1^7)—'freed' (as he would say) 'from the last remains of sin'; on the strength of God's promises and the warrant of experience, he taught his people to seek and expect the power to keep continually the Two Commandments of Jesus and so to become altogether holy and happy. To this effect he used to quote the Communion Prayer, 'that we may perfectly love thee, and worthily magnify thy holy Name,' insisting that this is to ask from God no boon beyond His giving. From the moment of conversion the Methodist was set at war with 'inbred sin,' inspired by the prospect of its extirpation. The Class Meeting, with this ideal before it, became a school of holiness. The 'glorious hope of perfect love' proved an abiding spring of spiritual ardour and a powerful spur to moral endeavour. Sometimes the extravagances and self-delusions of unbalanced minds discredited the doctrine of Perfect Love; to such abuse all earnest religious teaching is liable. But the sight of the goal of faith given to Methodism quickened and sustained the race for multitudes. The endurance of the Wesleyan Revival is due to the spiritual breadth and sanity of its programme. In this sense Wesley defined the object of Methodism as being 'to spread Scriptural Holiness throughout the land.' The hymns of Charles Wesley are the best exposition of Methodism in the fundamental respects which we have stated; they served as its keenest weapon in the arduous conflict which it waged with Calvinism. Along with the hymns, the doctrine which inspired them has leavened the whole Methodist Church.

3. **Methodism and Moravianism.**—Methodism owes a peculiar debt to the Moravian Brethren; their hand led the two Wesleys out of 'the legal wilderness' into the liberty of the sons of God. From this simple people, as well as from William Law and the mystics, John Wesley learned deep lessons respecting faith and inward religion. But there came here also a parting of the ways. Leading members of the Unitas Fratrum in England, and others of Wesley's early associates, were infected with the mystical tendency to despise the external duties of religion. Regarding the inner light and the Holy Spirit's witness as the sum of Christianity, men of this persuasion treated fellowship and Church order as superfluities; some of them verged in theory, if not in practice, upon Antinomianism. Among the latter the maxim was current, which Wesley denounces as an 'enthusiastic doctrine of devils,' that 'we are not to do good unless our hearts are free to it'—in other words, that we should leave disagreeable duties undone (this was a temporary, but widely operative, aberration in Moravianism). In this outbreak Wesley saw the peril of the Revival; he raised a barrier against it in the 'Rules of Society' (dated 1st May 1743), which bear strongly upon private and social duty, and by the mutual oversight secured through the Class Meeting. Thus the experimental in religion was balanced by the practical; inward holiness found in outward holiness its complement and safeguard. Methodism recognized that, while salvation is 'through faith' alone, a true faith 'works by love'; it enforced the teaching of St. James side by side with that of St. Paul, and found the two entirely consistent. Their home-training and Anglican schooling stood the Wesleys in good stead at this crisis.

4. **Methodism and the Church of England.**—John and Charles Wesley were sons and ministers of the Church of England, and taught (as they supposed) her true doctrine. John Wesley quoted the *Articles* and *Homilies* in vindication of his most oppugned tenets. For the guidance of his people he revised the Thirty-nine Articles, reducing their number by omission and abbreviation to 25 (so printed in the Wesleyan Methodist Service Book): the changes are in many instances significant. There disappear, with others, artt. viii. ('Of the Three Creeds'), xiii. ('Of Works before Justification'), xv. ('Of Christ alone without Sin'), xvii. ('Of Predestination and Election'), xx. and xxi. ('Of the Authority of the Church' and 'Of the Authority of General Councils'), xxiii. ('Of Ministering in the Congregation'), and xxxiii. ('Of Excommunicate Persons'). The title of art. xvi. becomes 'Sin after Justification' instead of 'Sin after Baptism,' and 'Ministers' is substituted for 'Priests' in xxxii.; 'Traditions' is paraphrased by 'Rites and Ceremonies' in xxxiv., the substance of the art. being preserved with notable alterations in detail. 'The Civil Magistrates' (xxxvii.) Wesley turns into 'the Rulers of the British Dominions,' adding 'his Parliament' to 'the King's Majesty,' merging 'Ecclesiastical and Civil' in 'all Estates,' and concluding with the first paragraph of the art.; he ignores the Royal Supremacy over the Church. The artt. on 'the Sacraments' and 'the Lord's Supper' are reproduced almost *verbatim*; but that 'Of Baptism' is curtailed, the definition ending with the words 'sign of . . . new Birth'; the statement that by baptism persons are 'grafted into the Church' is avoided, while the clause commending 'the Baptism of young Children' is retained. Art. ix., 'Of Original or Birth-Sin,' is also cut down materially: the Wesleyan teaching on Sanctification appeared to conflict with the assertion that 'this infection of nature doth remain, yea in them that are regenerated.' The reference to 'flesh' and 'bones' is dropped from the art. 'Of the Resurrection of Christ.' The general effect of the recasting is to emphasize the Protestant and Evangelical character of the formulary, to set aside the principle of State-establishment, and to eliminate Calvinism.

5. **Doctrinal standards.**—Neither the Articles of Religion nor any other Anglican document or dogmatic creed was laid down by Wesley as the ground of Christian fellowship. The revised Articles of Religion were, however, from the first incorporated, with certain necessary local adaptations, in the constitution of the Methodist Episcopal Church of America (see *Doctrine and Discipline*, etc., of this Church, pp. 21–26). 'There is only one condition previously required,' the Rules state, 'in those who desire to enter these [the Methodist] Societies, viz. a desire to flee from the wrath to come, to be saved from their sins.' This 'narrow gate' leads into the true way; the earnest seeker of salvation approves Christ and the gospel as the sick man his remedy; a deep repentance affords the best guarantee for orthodoxy. To his preachers, however, Wesley prescribed his *Notes on the NT* and the first four volumes of *Sermons* (ed. 1787–88, containing 44 Discourses) for the basis of a common understanding. These standards are introduced into the Model Deed regulating the trusts upon which Wesleyan Methodist church-fabrics are secured, and into the ordination vows of the ministers. Every Local Preacher also declares his assent to 'the general doctrine' contained in the above writings as being

'in accordance with the holy Scriptures.' While they present no formal confession or dogmatic scheme, the *Notes* and *Sermons* contain the full evangelical creed in solution; they are a working standard framed for a preaching ministry, and have proved a sufficient regulative canon for a Church that retains its Evangelical consciousness and is concerned above all things to preserve the life-conveying spirit of these authoritative documents. A Conference Resolution of 1807 forbade the tenure of office in the Societies to any person 'holding opinions contrary to the total depravity of human nature, the Divinity and Atonement of Christ, the influence and witness of the Holy Spirit, and Christian Holiness, as believed by the Methodists.'

6. Four salient points. — The characteristic features of Methodist teaching may be summed up as follows.

(1) *Universal redemption.* — Wesley and his preachers proffered in the name of Jesus Christ 'a free, full, and present salvation' to every sinner—a salvation based on the Sacrifice of the Cross, bestowed on condition of 'repentance toward God and faith toward our Lord Jesus Christ,' and certified inwardly by the witness of the Spirit of God bringing peace of heart and the sense of God's fatherly love, and outwardly by a life of holy obedience.

(2) *Entire sanctification.*—Methodism holds the gospel to be as large in its intension as in its extension, to be designed for the 'rooting out' from human nature of 'every plant which the Heavenly Father planted not'; it encourages the Christian man to look for the perfect cure, in himself and in his race, of sin's disease. The Rules of Society, illustrated by Wesley's social work, virtually include the community with the individual man in the scope of Christ's redemption.

(3) *The fellowship of believers.*—Methodism stands for Christian brotherhood. It honours the ministry and cherishes the two sacraments; but, in its view, the proof of Church-membership lies essentially not in observance of sacraments, nor in obedience to priests, nor in subscription to creeds, but in the fulfilling on the part of Christ's brethren of His law of love by their seeking one another's company and bearing one another's burdens.

(4) *Ordered Christian service.*—'This is the love of God, that we keep His commandments': the Wesleyan Rules of Society were conceived as an application of the commandments of Christ to the situation of the Methodist people in early days. Interpreted with good sense and according to the spirit in which they were framed, those rules are found applicable to later times and to the circumstances of Methodists all over the world. They signify that the Christian man is Christ's in body as in spirit, and is called in concert with his fellows to bend everything in life to the furtherance of God's kingdom upon earth.

The above sketch is a narrative, not a criticism—a narrative of the genesis of Methodism as a product of and a factor in the life of Christendom. The changes which the system has undergone in thought and spiritual character, due to its wide expansion and the reaction upon it of later religious movements, cannot here be traced. Suffice it to say that through its manifold divisions and diversities of government a striking identity of doctrine prevails. Ecumenical Methodism retains the stamp of its origin.

LITERATURE.[1]—John Wesley, *Works*^{3}, 14 vols., London, 1829–31 (chiefly important for doctrine are *Sermons*, *Doctrine of Original Sin*, *Appeals to Men of Reason and Religion*, *Plain Account of Christian Perfection*, and *Plain Account of the People called Methodists*); *The Methodist Hymn Book*, do. 1904, *A Collection of Hymns for the Use of the People called Methodists*^{4}, do. 1792; *Poetical Works of John and Charles Wesley*, ed. G. Osborn, 13 vols., do. 1868–72; John Fletcher, *Works*, 8 vols., do. 1844 (esp. *Checks to Antinomianism*, *A Rational Vindication of the Catholic Faith*, and *Socinianism Unscriptural*); J. GEORGE G. FINDLAY.

MEXICANS (Ancient).—The territory of what is now the Republic of Mexico was inhabited in ancient times—as in part it still is—by a great diversity of nations and tribes. The plains of Northern Mexico were the domain of tribes of a low culture stage, living mostly without fixed abode, relying chiefly on the produce of the chase, and to some extent on agriculture. These tribes, of whom we know very little, received from the Mexicans the general name of Chichimecs. The more cultivated nations were concentrated in the central highlands, and in the ravines, valleys, and coast-plains of Southern Mexico. Though belonging to different linguistic stocks, and differentiated as to their advancement in culture, art, science, and political power, they were, nevertheless, identical in the special traits of their civilization, forming, so to speak, one great geographical culture province.

The name Mexicans belongs properly to the inhabitants of the city of Mexico or Tenochtitlan, who were otherwise called Aztecs, but the designation was extended to all tribes and tribal fractions who spoke the same idiom, and were known to the citizens of Mexico by the name Naua or Nauatlaca, *i.e.*, 'speaking intelligibly.' Their abodes in historical times were the central highlands, the Federal District, the States of Mexico, Puebla, and Morelos, and the territory of Tlaxcala, where they lived intermingled with fractions of the Otomi nation, with Mazauas, Matlatzincas, Popolocas, and other primitive nations. From that central home parts of the Mexican nation emigrated, in pre-historic times, to the Atlantic coast, reaching as far as Guatemala, San Salvador, and the coasts and islands of the great lake of Nicaragua. Those were the tribes particularly connected with the mythical name of Toltecs. To the Maya-speaking people of Guatemala these emigrants were known by the name of Yaqui, which seems to be but another name of the Toltecs, who were commonly designated by the Mexicans as the Tonatiuh iixco Yaque, 'those who went to the rising sun.' For all these tribes, undoubtedly, a long succession of ages of cultural development must be taken into account, since their civilization, at the time of the Conquest, might have equalled, at least in many respects, that of the ancient nations of the other side of the globe. Their religion had reached a correspondingly advanced stage of development, and was very elaborate, while their pantheon was unusually rich.

---

[1] The letters A.M. attached to the name of authors signify American Methodist; G.M., German Methodist; M.N.C., Methodist of the New Connexion; P.M., Primitive Methodist; U.M., of the United Methodist Church; the undistinguished names are Wesleyan Methodist.

1. **Religious ideas.**—As with all the other nations of the world, the religious faith and the metaphysical ideas of the Mexicans had in part developed from attempts to grasp the connexion between the things of this world according to the principle of causality; in part they were the outcome of religious practice, and the crystallization of magic ceremonies, intended to produce certain effects by way of imitation. The great problems that presented themselves to the human mind because of the movement of the sun, the changes in the shape of the moon, and the varying location of the 'great star'—the morning star—have been treated by the Mexicans in a great number of mythical tales and mythical personifications.

The most prominent and the most widely worshipped Mexican god, of whom the largest number of tales and myths were reported, Quetzalcoatl, the 'feathered snake,' the creator of men, the wind-god of the later priestly school, was, in fact, nothing else than a mythical personification of the moon, who in her decrease travels to the east, *i.e.*, draws every day nearer to the sun, and finally dies away in the rays of the rising sun. It was believed that, when dying, this god, or his heart, was transformed into the morning star. The counterpart of this deity, Tezcatlipoca, the young warrior, who was regarded as the watching eye, the god who sees and punishes all kinds of sin, and the sorcerer who roams about in the night, is, in reality, the new, waxing moon who makes her appearance in the evening sky, and will travel on in the night, as the eye of the night. On the other hand, deities like Centeotl, the 'maize-god,' have developed from certain religious practices—*e.g.*, the placing of maize-stalks or young maize-ears in the houses, in order to get rich crops. Xipe Totec, the 'flayed,' the god who wears a human skin, the hide of a sacrificed man, has probably originated from well-known ceremonies celebrated in the beginning of the year in the time of sowing, in order to bring about the re-birth of vegetation. The two classes of deified beings met in the one great idea that the celestial powers, the sun, the moon, and the god of thunder and lightning, were at the same time the promoters of the growth and ripening of the fruit, and in the conviction that the new-born god (the rising sun) and the increasing agency (the waxing moon) were the causes of all birth and growth and of all that maintains and keeps up human life, and that they were the source of human life itself.

The spirits of the dead are to be added to these two classes—the ancestors, the founders of the tribe who had died in ancient times, and who had lived when the sun had not yet made its appearance in the sky. These deified ancestors were believed to awaken and to live in the night and, consequently, were identified with the stars. Xiuhtecutli, the god of fire, who had likewise existed in the 'time of darkness and night,' before the birth of the sun, and was, accordingly, named Ueueteotl, the 'old god,' became in some way the prototype of these ancestral gods.

2. **Origin of the world.**—The Mexicans believed that heaven, earth, and the sun had not been created at once, but that four ages of a somewhat imperfect creation had preceded the formation of the present world. The first of these pre-cosmic creations was named Ocelotonatiuh, 'jaguar-sun.' This was the sun of darkness, or sun of the earth, for the jaguar was considered to be the animal that swallowed the sun in time of eclipse, and, as the earth was the realm of darkness, the jaguar was identified with the earth. This first period came to an end by darkness, when the jaguars were eating men. The second period was called Ecatonatiuh, 'wind-sun.' This period came to an end by great revolving storms, and men were transformed into apes. The third period had the name Quiauhtonatiuh, 'rain-sun,' meaning 'fire-rain.' In this period fire rained from the sky, volcanic ashes and lapilli were strewn over the earth, and reddish lava-cliffs arose. Men were transformed into birds. The fourth period was called Atonatiuh, 'water-sun.' In this period a great deluge took place, men were transformed into fishes, and the sky fell down upon the earth. The fallen sky was raised by the joint action of the gods Quetzalcoatl and Tezcatlipoca, and the earth was revived. It was only then, in the year called *ce tochtli*, 'one rabbit,' that the present world was created. Its name is Olintonatiuh, or 'earthquake-sun,' because this present world is to be destroyed by earthquakes. One year after this creation, in the year *ome acatl*, 'two reed,' the god Mixcoatl, 'cloud-snake,' the god of the North—or Tezcatlipoca in the form of Mixcoatl—'drew fire out of the wooden sticks,' kindled fire by means of the fire-drill. Then men were created, and war was begun, in order that there might be human hearts at hand for nourishing the sun. The first who was killed in war, *i.e.*, was captured in war and offered on the sacrificial stone, was Xochiquetzal, the goddess of the moon, for it is the moon who dies every month in conjunction with the sun, and by her death gives life and strength to the rising sun.

Men being created, and war being commenced, there was opportunity for the creation of the sun. At the end of the first half of the first Mexican cycle of 52 years, in the year 'thirteen reed,' the sun was created.

The gods assembled in Teotiuacan, the ancient city of the sun, and took counsel, asking each other who should take charge of lighting the world. The first who offered himself was Tecciztecatl, the moon-god. Again the gods asked which other deity would take charge of lighting the world. As no one replied, the gods requested Nanauatzin, the 'bubonic,' the luetic god, to undertake it, and he consented. The gods kindled a great fire in the *teotexcalli*, the 'divine stove,' and Tecciztecatl tried first to throw himself into the fire, but he was afraid and drew back. Then Nanauatzin shut his eyes and threw himself at once into the fire, and after him Tecciztecatl did the same. This took place at midnight. Then the gods conjectured in what direction the sun was to rise. It was in the east, where the sun rose at day-break, followed by the moon. The chroniclers relate that originally the moon possessed the same splendour as the sun, but the gods struck her in the face with a rabbit, so that her splendour darkened, and now the figure of the rabbit is seen on the face of the moon. After having risen, the sun and the moon stood still for four days and four nights, whereupon the gods resolved to sacrifice themselves in order to give life to the sun. After the gods had killed themselves, the sun commenced to move, and ever since has made his regular courses, alternating with the moon.

3. **Origin of men.**—When heaven and earth were created, the gods took counsel and asked where to get beings to dwell on the earth. Then Xolotl, the dog who jumps down from the sky—the god who carries the setting sun to the under world—went to the kingdom of the dead to fetch a bone of the dead. When he had given his message to Mictlantecutli, the king of the dead, the latter asked him to move four times round the sepulchre in the stone-circle, blowing the conch. The god called upon the worms to make a hole in the shell, and thus he blew the conch. The king of the dead gave the bone to him, but ordered his vassals to follow him and to dig a pit in his way. There the god stumbled and fell, the bone slipped out of his hand, fell to the ground, and was broken in pieces. The god was much grieved, but he arose, picked up the fragments, and brought them to Tamoanchan, a region situated far in the west

There the goddess Ciuacoatl or Quilaztli ground down the fragments on the grinding-stone, and put the pulverized material into the *chalchiuhapaztli*, the bowl hollowed out of a precious stone, and set with gems. On this pulverized material Quetzalcoatl sprinkled blood drawn by piercing his penis with a knife. In this way men were generated, and food was found for them in the same region of the west. It was the maize, whose place the black ant and the red ant showed to the god.

4. Heaven, earth and under world, and the abode of the dead.—The Mexicans were of opinion that from the earth (*tlalticpac*) upwards there were thirteen regions or heavenly spheres (*ilhuicatl*), and from the earth downwards there were nine regions or under worlds (*mictlan*). The second, third, and fourth of the heavenly spheres were the regions where the moon and the clouds, the stars and the sun moved, while the uppermost or thirteenth region was the abode of Ometecutli, Omeciuatl, or Tonacatecutli, Tonacaciuatl, the gods of generation. The second of the under-world regions was the Chicunauhapan, the 'nine streams,' the water that encircled the realm of the dead and was in a way identified with the ocean of the western region. The third under-world region was the *tepetl imonamiquian*, the gateway by which the sun entered the under-world region. The undermost region was the abode of Mictlantecutli and Mictecaciuatl, the lords of the dead. To this under-world region there went, however, only the men and the women who had died in their homes from sickness, injury, or the infirmities of age. Men who were drowned, struck by lightning, or carried away by malignant fever or contagious disease were believed to be taken by Tlaloc, the rain-god. Their corpses were not burned, but buried, blue colour—the colour of water and rain—having been put on their foreheads. They went to Tlalocan, the home of the rain-god, situated on a great mountain in the east, a paradise of vegetation, in order to serve him there. Men killed in war or sacrificed on the sacrificial stone and women who had died in childbed belonged to a third order, and went to heaven, to the house of the sun. The warriors went to the east, to receive the rising sun and to accompany him up to the zenith. The women had their dwelling in the west, in the region of the setting sun. In the morning they climbed up to the zenith, where, at noon, they received the sun from the hands of the warriors, and accompanied him on his downward course. At sunset they delivered the sun to the dwellers in the under-world region, for at night the sun illumines the under world, and the dead awaken and live.

5. Principal deities.—A detailed study of Mexican mythology and the character of the Mexican gods leads to the conclusion that the forefathers of the Mexicans worshipped the sun, the moon, the morning star, the hearth-fire, the maize-god, and the other deities of vegetation, the god who pours down the beneficial rain, and a host of *numina* and spirits who were believed to dwell in particular places, as mountains, caves, water-holes, etc. In the course of time those cosmic potencies assumed very different shapes in the mythopoetic imagination of the people, coalescing in part with a deified ancestor, or being merged in certain regional festivals, thus giving rise to certain well-defined divine personages, who in the different tribes, towns, and villages were acknowledged as the *altepeyollotli*, the 'heart (or living principle) of the town.'

Thus Uitzilopochtli, the war-god, the particular protector of the citizens of Mexico (Tenochtitlan), must originally have been the rising sun, or the morning star. His mother conceived him from a feather-ball coming down from the sky. Her other children, the Centzon Uitznaua, the 'four hundred Southerns' (the stars), and their elder sister Coyolxauhqui (the moon), seeing their mother pregnant, wished to kill her, but just at this moment Uitzilopochtli was born. Armed with shield and spear, he came forth from his mother, decapitated his elder sister Coyolxauhqui, and drove the 'four hundred Southerns' from the 'Snake mountain' (the sky). The other war-god Camaxtli, or Mixcoatl, the god of the Tlaxcaltecs, the 'shooting god,' was probably a mythic conception of the morning star. Tlaloc was the rain- and thunder-god and the god of the mountains. He had his residence on the top of a mountain in the east, where he owned four chambers and four barrels, from which his servants, dwarf-gods, bailed out the water and poured it down on the earth. Stone images of this deity are to be found all over the country. Tezcatlipoca was the god of the Tezcocans and of the tribes dwelling on the slopes of the volcano. He was the sorcerer who roams about in the night, the god who sees and punishes sin, and the patron of the *telpochcalli*, the club-house of the young warriors; and certainly developed from the conception of the new, waxing moon. Xiuhtecutli, the 'lord of the turquoise,' or Ixcoçauhqui, the 'god with the yellow face,' the god of fire, was the tutelary deity of the citizens of Tlatelolco and their brethren on the western mountain slope, the Tepanecs of Tacuba and Coyouacan. Tonatiuh, the sun, and Metztli, or Tecciztecatl, the moon, had in ancient times been worshipped at Teotiuacan, north of the valley of Mexico, and two great pyramids dedicated to them are still to be seen in that place. The moon alone was the principal deity of the inhabitants of Xaltocan and of the province of Meztitlan, on the borders of the Huaxteca. Quetzalcoatl, the 'feathered snake,' the creator of human life, the wind-god, was another conception of the waning and resuscitating moon. He was the great god of the merchants of Cholula and all the Mexican commercial colonists, down to the provinces of Guatemala and San Salvador. Xipe Totec, 'our lord, the flayed,' the god of the sowing time, the god of vegetation, was generally worshipped in the whole country; but it seems that the Nauatl tribes on the borders of the State of Oaxaca, the inhabitants of Tehuacan, Cozcatlan, and Teotitlan del Camino were particularly addicted to his cult. He is also called god of the goldsmiths, because the goldsmiths, located in the town-quarter, or clan Yopico, regarded him as their tutelary deity. Xochipilli, the 'flower-prince,' the lord of the green maize, the god of food, had his worshippers all along the Atlantic slope. He was believed to be incorporated in the Quetzalcoxcoxtli, the wild fowl that chants in the morning. He had a brother called Macuilxochitl, 'Five flowers,' or Auiateotl, 'the god of voluptuousness,' who was the deity of pleasure, of music, dancing, gaming, and debauchery. Ome tochtli, 'two rabbits,' the pulque-god, the Mexican Bacchus, was the town-god of Tepoztlan, in the State of Morelos.

Female deities were Couatlicue, the mother of Uitzilopochtli, worshipped in Mexico City; Ciuacouatl, the female warrior, the goddess of Colhuacan; Itzpapalotl and Quilaztli, the earth-goddess and the fire-goddess of the towns of Quauhtitlan and Xochimilco; Teteo innan, the 'mother of the gods,' or Toci, 'our grandmother,' also called Tlazolteotl, the 'goddess of ordure,' or Tlaelquani, 'mire-eater' (*i.e.* sinner); she was generally worshipped as a harvest-goddess; Xochiquetzal, the goddess of flowers and of love, had her worshippers throughout the country, and a magnificent pyramid dedicated to her is still to be seen in Xochicalco, south of Cuernavaca. All these goddesses, without any doubt, were originally moon-goddesses, but developed into goddesses of fertility and generation, into earth-goddesses and patronesses of women's art. Chalchiuhtlicue, the 'goddess whose garments are precious stones,' was the impersonation of running water, brooks, and lakes; Uixtociuatl that of the salt water, and accordingly the patroness of the salt-makers. Centeotl, the maize-god, was represented either as a female or as a male deity, and was particularly related to the gods of generation, the authors of life.

6. Religious practices.—The Mexicans were penetrated by a feeling of absolute dependence on their gods. They regarded them as the givers of all things and as those who inflicted punishments upon them, and they were convinced that most of these punishments were brought down on them by their own sins. In order to obtain the favour of their gods or to appease their wrath, they used to address them with prayers, to present offerings to them, to humiliate themselves in their presence, and to torture themselves in their honour. In the work compiled by Bernardino de Sahagun, the original of which was written in Aztec, he has preserved many prayers directed to several gods, distinguished by a high and noble feeling, and by a wonderfully refined and poetic language, while another chapter of the same work contains twenty ancient and very curious songs, which they used to sing in honour of their gods at the different anniversary festivals (text, Germ. tr., and commentary in E. Seler, *Gesammelte Abhandlungen zur amerikan. Sprach- und Altertumskunde*, Berlin, 1902–08, ii. 959–1107).

The offerings which the Mexicans were accustomed to bring to their gods consisted of food and garments, flowers and green twigs (*acxoyatl*) to adorn their altars, copal, rubber, and different kinds of aromatic herbs to burn, and piles of wood to heap up and kindle on the top of their temple-pyramids. They humiliated themselves in the presence of their gods by eating earth (*tlalqualiztli*), *i.e.*, by touching the earth with the finger and putting it to the mouth. When they requested something from their gods, and before every festival dedicated to them, they fasted, eating only once in the day, avoided red pepper sauce and every kind of spices, abstained from sexual intercourse, and did not wash their heads. When the request which they had to make was a very earnest one, they tortured themselves by piercing their tongues, or the margin of their ears, sometimes drawing stalks or threads through the hole made in the tongue, and offering the blood issuing from their wounds, collecting it on agave leaves. If they had committed a sin such as intercourse with the wife of another man, and wished to atone for it, they went to the priests of the goddess Tlaçolteotl and made confession, and the priests, after having heard the confession, imposed some penance—*e.g.*, to go naked in the night to some shrines of the 'women-goddesses' (*ciuateteô*), there to deposit garments made of the common bark-paper. By performing this penance they were believed not only to have got rid of the sin committed, but also of the punishment for it enjoined by the law. A Mexican religious practice that excited the curiosity and even the amazement of the Christian priests was the so-called 'eating of the god' (*teoqualiztli*). At a certain festival a number of devotees assembled, and, after having made an image of the god from the paste obtained by grinding certain seeds, the high priest sacrificed the image and cut it into pieces. The assembled persons ate the pieces, and those who had partaken were obliged to pay for a year all expenses for the cult of the god in question.

Finally, the Mexicans felt compelled to bring living beings as an offering to their gods. They sacrificed to the fire-god by casting into the fire all kinds of animals that could be found in the fields, and they also offered human prisoners in the same way. The warriors who had captured them brought them, their limbs tied together, and hanging on a pole, like captured game, for the fire-god was the god of war and of the chase. The Mexicans killed quails by decapitating them, as an offering to the sun and other deities such as Uitzilopochtli, for the quail was the spotted bird, the image of the starry sky.

They fastened prisoners with extended arms and legs to a wooden frame, and shot them with arrows. This was a sacrifice for the earth-goddess, and was intended to fertilize the earth. There is no doubt that it was originally meant as an imitation of the sexual act. They decapitated a woman as an image of the 'mother of the gods'—the moon-goddess, the harvest-god—and flayed her, for the old moon, the waning moon, is cut into pieces, and her splendour is stripped off. Yet she would revive, and therefore the flayed skin of the victim was donned by a man who, in the following ceremonies of the feast, represented the goddess.

The Mexicans practised to a terrible extent the offering of human hearts, torn out of the bodies of living men. They used for that purpose a sacrificial stone of a rounded pyramidal shape. The victim was thrown backwards on the top of it, his extended arms and legs were held by four men, and the sacrificer, armed with a big stone knife, made a broad cut across the breast, under the ribs, and, putting in his hand, tore out the heart. The heart itself was presented to the sun, and with the blood they moistened the mouth of the idols, while the heads of the sacrificed were put in rows on poles. The body was delivered to the man who had captured the prisoner and had presented it as a sacrifice. He cooked the flesh with maize, and made a feast of it with his relatives and friends. With the thigh-bone of the dead man he made a bundle that was hung up on a high pole in the middle of the house-courtyard. This was a token of the valour of the owner, and probably, at the same time, a fetish for luck and protection.

7. Annual festivities.—The Mexicans divided the year into eighteen sections of twenty days each and five remaining days. On each of these twentieths they had a feast with many elaborate ceremonies, dedicated successively to various special deities, all these feasts being intimately connected with the exigencies of the different sections of the year with regard to the culture of the soil, sowing, and harvesting, and with the changing aspects that in the different years those important affairs presented to the anxious eye of the labourer. They commenced with the ceremonies early in the year—in the time of our February. At that time, in the houses and on sacred spots—mountains, caves, water-holes, and localities considered as the abodes of the rain-gods—they set up poles to which papers painted with the emblems of the *numina* of these localities were attached; and they carried children, who were bought from their parents, to the same localities and sacrificed them to the rain-gods, in order that these divinities might grant rain in sufficient quantity for the crops of the new year.

In the second twentieth they celebrated a great feast to Xipe Totec, the god of vegetation, a form of the ancient moon-god. This was just before sowing, and it seemed to those ancient philosophers to be necessary to fertilize the earth, that she might receive the germ and bring forth the crops. For this important business a sacrifice of value and a vigorous man were required.

They took a prisoner of war, the most gallant whom they had at hand, and with him performed a ceremony that was in a way a testing. He was fastened by a rope to the central hole of a stone of flat cylindrical shape, the so-called *temalacatl* (spinning wheel of stone). There he had to fight with four other men until he was exhausted, after which they bound him, with extended arms and legs (*mamaçouhticac*), to a wooden frame, where he was shot with arrows, so that the blood might drop on the earth and fertilize it. This was the original form of the ceremony, as it is seen in the pictographs, and as it was performed in certain ancient towns up to the time of the conquest. In Mexico City, however, when the prisoner was exhausted and no longer able to defend himself, he was sacrificed in the regular way, by cutting the breast and tearing out the heart; and many prisoners were sacrificed in the same way after him. The bodies of the sacrificed were skinned, and the skins donned by certain men who represented the god in the following ceremonies, to show by this garb that the earth-god had put on a new cloak. From this custom this second annual feast was called Tlacaxipeualiztli, 'flaying men.' The feast concluded with a great ceremonial dance, where priests disguised as maize-ears, maize-stalks, and other vegetables, or as beings connected with the fields, exhibited to the people the abundance of food which the new year was expected to bring.

In the third and fourth twentieths, called Toçoztli, 'awakening,' the temples and shrines were adorned with green stalks, and the ears destined for sowing were brought to the temple of the maize-goddess to be consecrated. The fifth feast, called Toxcatl, fell at the time when the sun, shifting to the north, came to the zenith. This was regarded as the real feast of the new year, and the present writer has shown, in his explanation of the Humboldt Codices, that the day-names by which the Mexicans designated the different years correspond to the days with which the feast Toxcatl began. In this feast a living image of the god Tezcatlipoca, *i.e.*, a prisoner of war who in the disguise of this god had represented him all the year round, was sacrificed, and immediately replaced by another prisoner, who, invested with the paraphernalia of the god, had to represent him in the new year. The sixth twentieth, the time when the rainy season set in, was celebrated by a general and severe fasting of all the priests of all the temples, including the little boys in the priestly schools. The Mexicans ate at this feast a certain meal prepared with maize in grain and beans, called *etzalli*, whence it bears the name Etzalqualiztli, the 'eating of the meal of maize and beans.' In the seventh and eighth twentieths the sprouting of the young maize-ears was celebrated by a ceremonial dance of the kings and rulers of the town, and a general feeding of the people, the feast being called Tecuilhuitl, the 'feast of the kings.' The ninth and tenth twentieths were called Tlaxochimaco and Xocotl uetzi, 'when the Xocotl comes down (or is born),' or Miccailhuitl, the 'feast of the dead.' At these festivals living prisoners were thrown into the fire as a sacrifice to the god of fire, and the image of Xocotl or Otontecutli, the 'god of the Otomi,' the 'soul of the dead warrior,' having the shape of a bird, a butterfly, or of a mummy packet, was placed on the top of a high pole, and brought down by the male youth, vying with each other in climbing to the top.

The eleventh twentieth, called Ochpaniztli, 'sweeping the roads,' was the harvest feast, and at the same time a great expiation ceremony, by which evil was taken out of the town.

A woman representing Teteo innan, the 'mother of the gods,' having been decapitated at midnight and flayed, a priest put on the skin and represented the goddess in the following ceremonies. From a portion of the skin of the thigh, a mask was made and worn by the son of the 'mother of the gods,' Centeotl-itztlacoliuhqui, the maize-god, the 'curved obsidian knife,' who is described as the god of cold and punishment, and is, in fact, only another form of the morning star, the son of the moon-goddess. The principal ceremony consisted in a ceremonial impregnation of the goddess by Uitzilopochtli, and, on the way to meet the god, Teteo innan was accompanied by warriors and by phallic deities called Cuexteca (men of the province of the Huaxteca). Ceremonial dances followed, where Teteo innan was replaced by the maize-goddess. At the end of the feast warriors, racing with each other, took the mask out of the town, and buried it somewhere in the territory of their enemies. The goddess herself, *i.e.*, the priest wearing the skin of the victim, was likewise driven out of the town, and the skin was hung up, beyond the boundaries of the town, on a frame-work dedicated to Teteo innan, being her sanctuary.

In the twelfth twentieth, called Teotleco, the Mexicans celebrated the return of their gods, *i.e.*, of the fire-gods, who were reputed to have gone out of the country during the rainy season. The feast may also be called the 'birthday of Uitzilopochtli.' It concluded with another fire-ceremony, in which living prisoners were thrown into the flames. The thirteenth feast, called Tepeilhuitl, the 'feast of the mountains,' was another harvest feast, when the pulque-gods—the gods of fecundity—were honoured by sacrifices, and offerings were brought to the rain-gods, *i.e.*, to the gods of the mountains. The fourteenth feast, called Quecholli, was dedicated to Mixcoatl, the god of hunting and war, and was celebrated by a great ceremonial hunting. Arrows and other weapons were made.

The fifteenth feast, called Panquetzaliztli, 'raising the banners,' was the great feast of the god Uitzilopochtli, when the myth of the birth of this god and the victory which he obtained over his brethren, the Centzon Uitznaua (the stars), were dramatically represented by a combat between the warriors and the prisoners designated for sacrifice. The fire-snake, the weapon with which Uitzilopochtli had killed his sister Coyolxauhqui, came down from the upper platform of the temple to burn the offerings heaped up on the great cylindrical stone at the foot of the staircase leading up to the platform. The sixteenth feast, Atemoztli, was dedicated to the rain-gods. The seventeenth, Tititl, was a commemoration feast of the dead, at which the *ciuateteô*, the 'women-goddesses,' *i.e.*, the deified women, the spirits of the women who died in child-bed, and their patroness Ilamatecutli, the old goddess, the goddess of fire, played an important part. The eighteenth and last feast was called Izcalli, 'increasing,' and was dedicated to Xiuhtecutli, the god of fire, who was honoured by offerings of all kinds of animals thrown into the flames. The god was represented in this feast by two different figures—at one time as a god of vegetation, clothed in green quetzal-feathers and wearing a mask of turquoises and green stones, and at another time as the god of the burning fire, clothed in feathers of the red macaw and wearing a mask of red and black stones. The five last days of the year, called *nemontemi*, were deemed unlucky. No feast was celebrated on them, nor any business of importance taken in hand.

Other ceremonies were performed to the deities who were believed to rule certain days, according to the name of the day in question, these names being composed of one of the numbers one to thirteen and of one of the twenty day-signs. As these names, in the different years, were not assigned to a fixed date—the initial days of the years bearing different names—the feasts of the rulers of the days were denominated 'movable feasts.'

8. Priests.—For the performance of all these ceremonies, filling out, in the true sense of the word, nearly the whole year, and for the regular service of the different gods, many priests were employed, called *tlamacazquê*, 'servants.' They were divided into different classes, such as the *tlenamacaque*, 'incense-burners,' the *teouaquê*, 'guardians of the idols,' the *quaquacuiltin*, 'old priests,' and the *ometochtzin*, 'pulque priests,' who were at the same time the musicians and the singers. At the head of all these priests there were in Mexico City two high priests, called Quetzalcoatl Totec tlamacazqui and Quetzalcoatl Tlaloc tlamacazqui, *i.e.*, the special priests of the two great gods, Uitzilopochtli and the rain-god

Tlaloc, whose sanctuaries were situated close to one another on the top of the principal pyramid.

9. General characteristics.—In spite of their adherence to bloody sacrificial rites, the Mexicans were sober, honest people, of tender susceptibility, governed by laws of a high moral standard, respecting the rights of property, detesting lying and falsehood, cheerful with their friends, brave in war, and unflinchingly obedient to their native kings. Their governors and princes exercised arbitrary power, but were restrained by unwritten laws, handed down from their forefathers, and by public opinion. Their punishments were severe, but never cruel. Vices such as drunkenness and untruthfulness arose with the misery and slavery of the Spanish times. In material culture, too, the Mexicans were nearly equal to their conquerors. Spanish government did not add very much to their cultural standard, and to-day the Indians are, if not the most refined, certainly the most honest, component of the population of the Mexican territory.

EDUARD SELER.

MEXICANS (Modern).—An intimate knowledge of the religion of the ancient peoples of Mexico is necessary in order to understand the religious life of the present native population of the country. On first acquaintance with the people an impression is given that the Roman Catholic religion is everywhere present, yet many of the pre-Columbian religious ideas remain. Too much cannot be said of the energies and the fervour of the Roman Catholic priesthood in their attempts to Christianize the natives. The originality of their methods and their enthusiasm for the work resulted in a marked success. They learned the native languages, and collected much data upon the customs and religion of the people, and to these early accounts we owe practically all our knowledge of the pre-Columbian life.

The clergy soon noted the ability of the people to read in pictures, and this was turned to account in their teaching of the Roman Catholic Catechism. Figures were drawn on large pieces of cloth representing most ingeniously, in a series of pictures, the various teachings of the Church. These pictures were also made in books, some of which, according to N. Leon (*Am. Anth.*, new ser., ii. [1900] 726), are still used among the Mazahuas of Michoacan. A more ambitious attempt was made by the priests to teach the natives the Latin words of the Lord's Prayer and other Articles of the Church. A native monosyllabic word was selected, the sound of which was similar to a syllable of the Latin word, and this word was represented by a picture. The first syllable, *pa*, of *pater*, was shown by a picture of a flag, which in Nahuatl was *pantli*, and the second syllable, *ter*, was represented by a drawing of a stone, *tetl* in Nahuatl. In this way, picture by picture, the native word was known, and each word recalled a similar word or syllable in the Latin.

J. de Torquemada tells us (*Monarquía Indiana*, Madrid, 1723, xv.) that the Christian priests illustrated the vicissitudes and the instability of life by pictures representing a great expanse of water on which were vessels manned by sailors. On one ship Indian men and women were praying, with garlands of roses in their hands, and they went to heaven accompanied by angels, while on another vessel the Indians were shown fighting with one another, ogling women, becoming intoxicated, and receiving glasses of wine from devils. According to J. de Acosta's statement (*The Natural and Moral Hist. of the Indies*, ed. C. R. Markham, London, 1880, bk. vi. ch. vii.), in illustrating the doctrine of the Trinity, God was pictured with three carved heads, and St. Peter and St. Paul were drawn as two carved heads with keys and sword. As Sapper remarks:

> 'It is easy to suppose that this sort of picture must have been absolutely incomprehensible to an Indian, but there is little doubt that the effect of these pictures was extremely favourable to the spread of Christianity' (*Globus*, lxxx. 126).

The Spanish *padres* were not content with these mnemonic and symbolic methods of teaching the Christian religion, but soon learned the languages of the country, translated the Catechism into the various dialects, and preached in the native tongues. Priests taught the Indians how to record their languages phonetically by the use of the Spanish characters, and from the early days of the Conquest there was a constantly increasing amount of printed and MS material in the languages of the different peoples of Spanish America.

With a knowledge of the native languages, together with the names and attributes of the various gods, the Spanish priests had a wonderful asset in their teaching, and they used their knowledge to good effect. Their explanation of the native pantheon was an earnest attempt to incorporate it, as much as possible, into their own religion, and, accordingly, we find many of the ancient myths turned into a new setting, with the saints now figuring as the actors in the ancient tales. It is difficult to determine how much of this transformation was due to the initiative of the priests of the new faith, and how much may be attributed to the Indians' own attempts to reconcile their old religion with the new. Knowing the tendency of primitive man to explain everything in terms of his own mental fabric, we may suppose that many of the strange metamorphoses which came about were the natural result of implanting ideas upon an older foundation, but a result not recognized or authorized by the Church. In many cases the gods of the ancient religion were incorporated into the new, as when the three most important gods were sometimes turned into the Trinity, while the lesser gods became the saints of the Church. The evil one already had a counterpart in the Mexican religion; among the Mayas he was Kisin, the earthquake.

The present population of Mexico may be divided, for the purposes of this article, into four classes as regards their religion: (1) those of Spanish descent who are true Roman Catholics; (2) those of mixed descent who are nominally Roman Catholics, but still retain some of the ancient pre-Columbian religious ideas; (3) those of mixed blood who are fundamentally pagans from the Christian point of view, with religious rites coloured by Roman Catholic teaching; and (4) those who show no trace of the Roman Catholic teaching, and still continue to practise the ancient religion. It is, of course, impossible to draw a hard and fast line between any two of these classes; the two middle divisions are differentiated only by the degree in which the Christian or the native religion predominates.

Class I.—In the large cities and towns there is a numerous population of Spanish-speaking people who have little or no Indian blood, and these carry out the rites and ceremonies of the Roman Catholic Church as practised in Spain. The festivals of the Church are celebrated with great pomp and ceremony. An interesting survival of the teaching of the early Franciscans is seen in the *Nacimientos* the *Pastorales*, and the Mystery Plays performed at Corpus Christi and at other times. Soon after the Conquest the sacred dramas, so popular in Spain at that time, were introduced into Mexico, and were regarded as an important means of propaganda.

Class 2.—The casual observer seldom sees any of the native element among the peoples who have been placed in this division, and he considers the population good Roman Catholics. It is only after close intimacy extended over a considerable period of time, together with a knowledge of the nature of the native practices, that one gradually finds that the underlying principles of the religion are based on the native ideas rather than upon the Christian faith. The veneer of Roman Catholicism is removed, and the native religion stands out clearly. The greater part of the population of Mexico are of mixed blood, with a strong preponderance of the Indian over the Spanish strain. This type of native is present even in the large cities and towns, where a great proportion of the people fall into Class 2, whose religion is Roman Catholic, with an undercurrent of the old ideas. The *gente* of Mexico City, *e.g.*, are of this class.

Holy Week throughout Mexico is a time of great religious enthusiasm. In addition to the Passion Plays which have already been mentioned, there is a constant round of festivals, many of which are strongly flavoured by the native elements. The season of prayer and fasting appeals to the natives, some of whom wear the crown of thorns and flagellate themselves. From Holy Thursday until the Gloria of Saturday the bells of the churches are silent, and the *matracas*, or rattles, take their place. Each child and adult has a rattle, and the streets are full of vendors, each selling some sort of noisy toys. On the *Sabado de Gloria* new fire is struck from the blessed flint. The burning of Judas is a common sight in every Mexican town; figures of Judas, representing him as a man or woman, a negro, a soldier or a knave, a devil or a gentleman, are burned in every village plaza. Many of these figures contain jars filled with various objects, and, when the container is broken, the contents fall into the struggling crowd. Firecrackers and rockets often form the hands and feet of these Judas figures. It is a time of much merriment.

In Mexico City on *Viérnes de Dolores*, the eve of Palm Sunday, there is a long procession of decorated boats in the Viga Canal; and flowers, small shrines, and altars are displayed everywhere, the native love of flowers and their varied use of them as decoration being seen at this time at its best. These religious festivals play a very important part in the life of the people.

The custom of erecting wooden crosses along the roads and trails is very common in Mexico. The traveller, in passing one of these crosses for the first time, usually deposits a stone or a flower before it.

It is on the magical side of the religion that we find the greatest number of survivals at the present time. Symbolic and contagious magic abounds among all strata of the population. Some of their ideas are, of course, derived from the Spanish element, but the greater number are purely native. Hypnotic suggestion is the important feature in all the ceremonies which deal with healing the sick. The air is full of evil spirits, which linger round the entrances of the villages, and precautions must be taken to placate or outwit them.

Class 3.—This class is represented in the small *pueblos* in the country districts, where the headman of the village performs the offices of the Church, except at infrequent intervals when the priest of the district makes his visit to celebrate Mass and to perform marriages and baptisms. The native religious ideas are much in evidence, for the visits of a priest of the Church are often too infrequent to make much headway against the presence of the strong native religious element. This cannot be stamped out among the people, and it remains a sturdy growth unless persistent and energetic efforts are made to counteract its influence by Christian teaching. It is among people of this class that the blending of pre-Columbian and Christian ideas may best be studied.

The native elements come to the front especially in connexion with agriculture and the burial of the dead. Incense is burned and offerings are made to the gods of fertility at the time of sowing; other gifts are presented to the gods of rain; in some cases offerings are given to the wind-gods when the burning of the brush of the maize-field is undertaken; and abstention from sexual intercourse before the planting is another of the survivals. Among the Otomi an idol is buried in the maize-field, another is kept in the domestic house, and a third in the granary. The hunter may burn incense for a successful hunt, the traveller for a prosperous journey. Every house has its *santo*, or saint, often the crudest kind of picture or image, and the firstfruits of the harvest are usually placed before this shrine; in time of sickness and death many offerings are made and incense is burned. It is the nature of the gifts and the spirit in which they are made, rather than the act itself, that show the pre-Christian ideas.

In many of the prayers the native element is seen. Sapper tells (*Das nördl. Mittel-Amerika*, p. 270) of the Kekchi praying, 'Thou art my mother, thou art my father,' a form common in the *Popol Vuh* (*q.v.*). The Indian origin of many of the prayers is seen in the poetical form, the parallelisms, the antitheses, and the repetitions of single words and phrases. Seler tells of a stone idol discovered in a cave in the State of Puebla before which offerings of flowers, eggs, and wax candles were found. In another case the visiting *padre* saw, to his indignation, a stone idol occupying the place of honour beside the crucifix, on the altar of the village church. In a cave in Oaxaca a pottery incense pan and two turkey feathers were discovered, the feathers having undoubtedly been used in connexion with the sacrifice of human blood, so common a part of the religious ritual of the ancient Mexicans. These definite examples will show the hold which the older ideas have upon the people, who are nominally good Roman Catholics.

Class 4.—The number of individuals who have been placed in this division is comparatively small, and, as might be expected, they are found only in the most unsettled and inaccessible portions of the country. They show practically no influence from the outside world in their customs, their languages, or their religion. Spanish is seldom understood, and the native languages show little change from those portions which were recorded by the early Spanish conquerors. It is among these people that one can obtain a clear picture of the pre-Columbian aborigines. The polytheistic ideas are still maintained, and many of the gods now worshipped may be identified with the ancient deities of the people —Sakaimoka of the Huichols, *e.g.*, is recognized as the old rain-god, Tlaloc. It is seldom that the ancient gods of the sun, the moon, the morning star, and other planets can be noted in the present pantheon, although among the Seri of Lower California the sun and moon find a place among the gods, and among the Tarahumare there is a 'father-sun' and 'mother-moon.' Among the present-day Mayas the sun and moon are servants of the gods.

Worship by means of prayer, divination, and sacrifice takes many different forms. Human sacrifice has been abolished, although there are a few sporadic cases where it has been reported within the last century. Blood sacrifice is not uncommon among people of this class, the ear and other parts of the body being cut with a stone knife, and the blood allowed to drop upon the idols. Offerings of food and drink now form the main portion of the religious practices of the population, although burning of copal or other incense to the gods is also very common. Compulsory intoxication—a common feature of the ancient religion—is still carried out by means of the *pulque* of the Mexicans, the *hikuli* of the Huichols, the *tesvino* of the Tarahumare, and the *balche* of the Lacandones. Divination is practised in many forms, and among many peoples there is a class of soothsayers who look into the future by means of the movements of sacrificed animals, the smoke of the incense, the crystal, the image on the surface of a basin of water, and many other ways. The prayers of the Cora, collected and translated by Preuss (*Die Nayarit-Expedition*), furnish an excellent criterion of the native point of view towards the gods and religion in general. The dances of the people are often held for magical purposes. Among the Tarahumare, *e.g.*, the dance is a prayer, a petition for prosperity for the harvest, or for health and freedom from ill-fortune.

The idea of renovation, the renewal of the incense-burners and the cleansing of the houses and of the places of worship at certain times of the year, is an ancient practice. Among the Lacandones, at the main ceremony of the year, when the firstfruits are offered, the entire collection of incense-burners is renewed. The old ones are 'dead,' and new ones are made to take their place. Priests no longer form a distinct class by themselves in Mexico, but the head-man of the village or the head of the family now performs the priestly functions, and among some of the tribes the class of *shamans* still remains. It is claimed that one-fourth of the Huichols (*q.v.*) of Northern Mexico are *shamans*; the name of the tribe signifies 'the doctors or healers.' It is they who have the power to look into the future and who understand and interpret the will of the gods. Religious temples, so common a feature of the pre-Columbian culture, no longer play a part in the religious life, though the Lacandones still make pilgrimages to the ruined structures where they believe their gods reside, carrying with them incense-burners and other offerings. The religious practices are usually carried on either in the domestic habitations or in a house set apart for the purpose, this house being called *topina*, 'the house of all,' among the Huichols. Women are usually excluded from these religious places, except at the termination of the worship, when general feasting takes place, and the offerings, previously made to the gods, are consumed by the worshippers. Perhaps the best example of a people who have had no contact with Spanish ideas are the Lacandones, who live in the State of Chiapas on a tributary of the Usumacinta River, which forms a portion of the boundary between Mexico and Guatemala. The early efforts of the Spanish to Christianize these people met with failure, and they have remained undisturbed for three hundred years. The customs, and especially the religion, of this people are important as an aid in understanding much of the life of the early Maya tribes, and many of the ceremonies are counterparts of those represented in the pre-Columbian MSS.

A geographical survey of the principal religions of the native Mexicans shows an interesting change from north to south. From the religious point of view, the ideas of the tribes of Sonora and Chihuahua are directly associated with those of the natives of the south-western portion of the United States: the religion of the Puebloan peoples and of the Navahos and Apaches shows a striking similarity to the religious ideas of the Huichols, the Cora, and other peoples of Northern Mexico. The rain and the importance of rain are the prime factors in the religion of all these peoples. The symbolism of the Huichols centres in the phenomena of nature. In Central and Southern Mexico the religious ideas of the present native population show a great number of survivals of the ancient religion of the formerly highly cultured peoples belonging to the Nahua, the Maya, and kindred civilizations.

MICHAELMAS.—I. The origin of the festival and the Michael churches in Italy.—The *Martiloge in Englysshe*, translated by Richard Whytford of Syon monastery and printed by Wynkyn de Worde in 1526, records the Roman and Sarum tradition of the origin of the festival:

> 'The xxix day of September. In the moūt of gargane the reuerend memory of saynt Mychaell the archaūgell where a chirche of hym is cōsecrate that is but of poore buyldyng yet notw^{t}standyng it is adourned w^{t} many grete vertues' (Henry Bradshaw Society, iii. [1891] 153).

The Sarum Missal in the calendar has: '3 kl. Oct. Michaelis archangeli,' and in the text: 'Michaelis archangeli' (*Miss. ad usum . . . Sarum*, Burntisland, 1861–83, pp. 25^{xx}, 918). The calendar of the Westminster Missal of 1362–86 has: 'iii kl. Oct. Sancti Michaelis archangeli' (H. Bradshaw Soc. i. [1891] p. xiii). The Missal of Robert of Jumièges, an English Service-Book written, probably at Winchester, between the years 1008 and 1023, has in the *Kalendarium*: 'iii. Kl. Oct. Sci. Michahelis archangeli.' The rubric in the text reads: 'iii Kal. Oct. Dedicatio Basilicae Sancti Michahelis Archangeli' (H. Bradshaw Soc. xi. [1896] 17, 215). This agrees with the title in the Leofric Missal (A), a French MS of the first half of the 10th cent.: 'iii. Kal. Oct. Dedicatio basilicae sancti Michahelis archangeli' (*Leofric Missal*, ed. F. E. Warren, Oxford, 1883, p. 162). The *Kalendarium* of the Leofric Missal (B), a Glastonbury MS of the latter part of the 10th cent., has: 'iii. Kl. Oct. Sci. Michahelis archangeli' (*ib.* p. 31). The Leofric Missal (A) is a Gregorian Sacramentary, and the title is based upon that in the Codex Vaticanus (ii.) published by Muratori: 'iii Kalendas Octobris id est xxix Die mensis Septembris. Dedicatio Basilicae Sancti Angeli' (L. A. Muratori, *Liturgia Romana Vetus*, Venice, 1748, vol. ii. col. 125). This is evidence of the 9th century.

The earlier Gelasian Sacramentaries carry the evidence back to the 7th century. The Vatican MS of the 7th or early 8th cent. has 'Orationes in Sancti Archangeli Michaelis.' The Rheinau MS and the S. Gall MS, of the 8th or early 9th cent., have the title: 'Dedicatio Basilicae Angeli Michaelis' (H. A. Wilson, *The Gelasian Sacramentary*, Oxford, 1894, p. 200).

The rubric in the Leonian Sacramentary throws still further light on the origin of the festival. It stands alone in assigning it to 30th Sept. and not 29th Sept., but it adds a note of locality which differs from that of the later Roman tradition: 'Prīd. Kāl. Oct. N̄ Basilicae Angeli in Salaria' (C. L. Feltoe, *Sacramentarium Leonianum*, Cambridge, 1896, p. 106). Feltoe refers to a 9th cent. MS at Padua, which reads: '29 Sept. Dedic. basil. S. angeli Michahelis via Salaria' (*ib.* p. 203). Martin Rule, in his 'Analytical Study of the Leonian Sacramentary' (*JThSt* ix. [1908] 515 ff., x. [1908] 54 ff.), traces the materials of this Verona MS of the 7th cent. to three collections made during the pontificates of Leo I. (440–461), Hilarus (461–468), and Simplicius (468–483). This carries the evidence of the rubric to the 5th century.

The festival is, therefore, in its origin the dedication festival of a church. The evidence is not confined to the liturgical books of the Roman rite. The early Mozarabic rite is represented in a MS of the 11th cent. at Paris (Bibl. Nat. nov. acq. lat. 2171). In a short treatise, *Adnuntiationes Festivitatum*, the festival is announced thus: 'Adveniente diae il. festivitas erit dedicatio sancti Micahelis archangeli vel sociorum eius' (MS 2171, p. 25). And in the *Martirum Legium*, a calendar in the same MS under Sept. 29, is: 'iii. (Kal. Oct.) dedicatio sancti Micahelis arcangeli' (G. Morin, 'Liber Comicus,' *Anecdota Maredsolana*, i. [1893] 392, 402). A contemporary MS from the same Spanish monastery of Silos in Old Castile (Brit. Mus. Add. MS 30851) has two hymns: 'in diem Sancti Micaeli Arcangeli,' where reference is made to the 'socii.' The first hymn has the line: 'ut glorietur in deo cum consortes socios'; and the second: 'Urielo Gabrielo Rafaelo socius' (*Mozarabic Psalter*, H. Bradshaw Soc. xxx. [1905] 254, 256). The Ambrosian rite in the 12th cent. refers to the 'dedicatio in monte Gargano.' The *Kalendarium* has: 'iii. k. Oct. s. Michaelis in monte Gargano,' and the *ordo pro denariorum divisione*: 'dedicatio s. Michaelis in monte Gargano' (Beroldus, ed. M. Magistretti, Milan, 1894, pp. 11, 17).

i. *The Castello S. Angelo at Rome.*—Quentin has sifted the further evidence of the Martyrologies. The earliest entry is that of the Martyrology of Bede: 'iii. Kl. Oct. Dedicatio ecclesiae sancti angeli Michaelis.' This is modified by the Mâcon MSS: 'Romae, dedicatio basilicae sancti angeli'; by the Clermont MS: 'Romae, dedicatio basilicae sancti Mikaelis archangeli'; and by the Bologna MS with the insertion of the words 'miliario sexto' between 'Romae' and 'dedicatio.' The earliest evidence supports that of the Leonian Sacramentary, and points to the dedication of a church at the sixth mile-stone on the Via Salaria. The MSS of Toul and Remiremont read: 'In Monte Gargano, dedicatio basilicae sancti Michaelis archangeli.' This is the source of the entry in the Martyrology of Ado, archbishop of Vienne, *c.* 870; but he adds:

> 'Sed non multo post, Romae, venerabilis etiam Bonifatius pontifex ecclesiam sancti Michaelis nomine constructam dedicavit, in summitate circi, criptatim miro opere altissime porrectam. Unde et isdem locus, in summitate sui continens ecclesiam, inter nubes situs vocatur' (Quentin, *Les Martyrologes historiques*, p. 561).

The entry in the Martyrology of Ado is the most ancient testimony to the consecration of the tomb of Hadrian to St. Michael. A century later Liutprand of Cremona witnesses to this church on the top of the Castel S. Angelo:

> 'Munitio vero ipsa . . . tantae altitudinis est, ut ecclesia quae in eius vertice videtur, in honore summi et caelestis miliciae principis archangeli Michaelis fabricata, dicatur sancti Angeli ecclesia usque ad caelos' (*ib.* p. 561).

Baronius also identified the Church of St. Michael 'inter nubes' with the Castle of S. Angelo, assigning its dedication to Boniface III. (606) or Boniface IV. (607–614), in memory of the staying of the plague under Gregory the Great (C. Baronius, *Martyrologium Romanum*, Venice, 1602, p. 544).

ii. *The church on the Via Salaria.*—The dedication festival of Sept. 29 would seem to have three steps in historical progress. The earliest has reference to the church on the Via Salaria, the second to the Apulian church on Monte Gargano, the third to the church on the Castel S. Angelo. The sixth mile-stone on the Via Salaria is north of the site of Fidenæ, somewhere between Castel Giubileo and Casale Marcigliano. The Casali Sette Bagni, which lies on the hill-side north of the little stream of the Allia, cannot be far from the old Basilica of St. Michael. The evidence from the Michael shrine near Spoleto, which was known for its healing springs, may explain the origin of the dedication.

iii. *The church on Monte Gargano.* — Monte Gargano juts out from the north end of Apulia into the Adriatic. The Michael shrine is on the Monte S. Angelo, about ten miles from Manfredonia, the ancient Sipuntum. The dedication is assigned to the last years of the 5th century. Baronius refers to it under the year 493 (*Annales Ecclesiastici*, ed. Mainz, 1601–05, sub anno xliii.; cf. his *Martyr. Rom.*, p. 261). The 'Apparitio S. Mich. Ang.' is kept on May 8. The *Liber Pontificalis* of Anastasius Bibliothecarius reads: 'Huius temporibus inventa est Ecclesia sancti Angeli in Monte Gargano' (*Liber Pont.* ch. 50, S. Gelasius). It was a great centre of pilgrimage in the 10th century. Otto III. visited the sanctuary in 998. The fact rests on the credible witness of the *Vita S. Romualdi* of Petrus Damianus (F. Gregorovius, *Storia della città di Roma*, Ital. ed., Venice, 1872–76, iii. 559). In the church was a spring of water which was held to be a cure for fever:

> 'Ex ipso autem saxo quo sacra contunditur aedes: ad aquilonem altaris dulcis et nimium lucida guttatim aqua dilabitur: quam incolae stillam vocant. Ad hoc et vitreum vas . . . argentea pendet catena suspensum . . . denique nonnulli post longas febrium flammas hac austa stilla celebri confestim refrigerio potiuntur salutis' (B. Mombritius, *Sanctuarium*, ed. duo Monachi Solesmenses, Paris, 1910, i. 391).

iv. *The Michael sanctuary in Umbria.* — The Antonine *Itinerary* thus notes two stations on the way from Rome to Milan by the Via Flaminia: 'civitas spolitio . . . mil. vii: mutatio Sacraria . . . mil. viii.' This 'mutatio' is placed at Le Vene, near Spoleto (*Itin. Ant. Aug.*, ed. G. Parthey and M. Pinder, Berlin, 1848, pp. 288, 378). Wesseling rejects the theory of P. Cluver that this referred to a sanctuary of Jupiter Clitumnus, and accepts that of L. Holstein that there was a Christian sanctuary on this site when the *Itinerary* was written (P. Wesseling, *Vet. Rom. Itineraria*, Amsterdam, 1735, p. 613). H. Leclercq states definitely that the sanctuary cannot have been dedicated to the 'God of Angels' before the epoch of Theodosius, or at the latest before the beginning of the 5th century. The inscriptions of the *Tempio di Clitunno* belong to this date. The inscription over the central door reads: 'S̄C̄S̄ DEUS ANGELORUM QUI FECIT RESURRECTIONEM.' Leclercq says:

> 'Cet édifice, dont la première destination n'était pas chrétienne, et qui portait primitivement le nom de sacrarium, n'a pu être transformé et dédié au Dieu des anges qu'à l'époque de Théodose' (*DACL*, art. 'Anges,' p. 2147).

And again, after examining the theory of H. Grisar that these buildings (*i.e.* the Tempio di Clitunno and the Church of S. Salvatore at Spoleto) are works of a school of the 12th cent., he concludes:

> 'Nous pensons donc, jusqu'à nouvelle démonstration, que contrairement à l'opinion de Luc Holstein, le *tempietto di Clitunno* a eu une destination primitivement païenne, il fut un de ces *sacraria* qui bordaient en assez grand nombre la rive du Clitunne pour avoir fait donner le nom de *Sacraria* au gîte d'étape situé entre Spolète et Trevi' (*ib.* p. 2149).

The consecration of the healing water of the Clitumnus to the God of Angels suggests a similar origin for the basilica on the Via Salaria, and may perhaps lie behind the dedication on Monte Gargano. The early Christian association of angelic agency with healing springs is recognized in Jn 5⁴. Leclercq states that there is evidence of the prevalence of the cult of angels in Umbria from the first half of the 5th century. The Church of S. Salvatore outside the walls of Spoleto is on the site of a small church originally dedicated to St. Michael in 429. There is another in the parish of Mandorleto near Perugia, of the same epoch, called in the inscription: 'basilicam sanctorum angelorum' (*ib.* p. 2148).

2. **The Michael churches in the East.**—i. *St. Michael of Khonai.*—The Church of St. Michael the Archistrategos was the centre of the angel cult of Asia. When the hill-station of Khonai took the place of Colossæ in the 7th cent., the Church of Colossæ became known as the Church of St. Michael of Khonai. The legend tells that St. Michael had saved the people of the Lycus valley from inundation by clearing the gorge outside Colossæ. The miracle of Khonai in its present forms is of the 9th cent., but it represents the foundation legend of the great Church of Colossæ. W. M. Ramsay has no doubt of the identity of the Church of St. Michael of Khonai with the Church of Colossæ. The raid of the Turks in 1189 swept along the Lycus valley. Khonai on the hill-side escaped them, but the threshing-floors along the valley were destroyed, and the great church was burnt (Nicetas Choniates, *Annales de Isaaco Angelo*, bk. ii. ch. 2 [*Hist. Byzant.*, Venice, 1729, xii. 210]). The legend also explains the origin of a spring of sweet water on the north of the city (Ramsay, *Cities and Bishoprics of Phrygia*, i. 214 ff.). St. Michael of Khonai in the later Christian legend takes the place of the Zeus of Colossæ of pagan tradition. The power associated with Zeus was in the Christian period attributed to St. Michael. Ramsay sums up the importance of the legend in its bearing on early Christian history:

> 'The worship of angels was strong in Phrygia. Paul warned the Colossians against it in the first century (Col. ii. 18). The Council held at Laodiceia on the Lycus, about A.D. 363, stigmatised it as idolatrous (Conc. Laod. Can. 35). Theodoret, about 420-50 A.D., mentions that this disease long continued to infect Phrygia and Pisidia (Interpr. Ep. Col. ii. 16). But that which was once counted idolatry, was afterwards reckoned as piety' (*Church in the Roman Empire*, London, 1893, p. 477).

ii. *Asia.*—Michael the Archangel was honoured throughout Asia. His name is preserved in Mikhayil near Prymnessos, in Mikhalitch on the Sangarios, and in other city names (Ramsay, *Phrygia*, i. 31 f.). He is connected with the introduction of Christianity into Isaura, and is associated with the cities of Akroinos-Nicopolis and Gordium-Eudokias. Sozomen speaks of the cures wrought at the Michaeleion, a shrine built by Constantine on the north shore of the Bosphorus (*HE* ii. 3). Its ancient name was Hestiæ, and was traditionally associated with a temple built by the Argonauts (Cedrenus, *Hist. Comp.* [*Hist. Byzant.* vii. 96]; Ramsay, *Church in Rom. Emp.*, p. 477, n.). It was 35 stadia from Constantinople, and is now represented by Arnautköi.

Procopius describes the rebuilding of this basilica by Constantine, and the building of another under the dedication of St. Michael at Proochthous on the Asiatic shore (Procopius, *de Ædificiis*, i. 8). He built another on the Asiatic coast at Mokadion (*ib.* i. 9). Procopius also mentions the Michael churches erected by Justinian at Antioch (*ib.* ii. 111) and at the healing springs of Pythia in Bithynia, with a house of rest for the sick (*ib.* iv. 3), while at Perga in Pamphylia stood a ptocheion of St. Michael (*ib.* v. 9).

iii. *Constantinople.*—There are important references to the Michael churches of Constantinople and the neighbourhood in the *Imperium Orientale* of Anselmo Banduri (*Hist. Byzant.*, xxiii. and xxiv.) and in the *Constantinopolis Christiana* of C. D. du Cange (*Hist. Byzant.* xxii.). The latter gives a list of fifteen churches (*Const Christ.* iv. 3) in the city and five monasteries in the suburbs (*ib.* iv. 15). The chief festival of St. Michael in the Eastern Church is kept on Nov. 8.

iv. *Alexandria.*—The *Annals* of Eutychius of Alexandria († 940) have a legend connected with a Michael church in Alexandria. It was on the site of a temple of Saturn, in which had been an image of brass named Michael. The image was broken up, and the pagan festival was transferred to St. Michael (R. Sinker, *DCA*, p. 1179).

3. **The Michael churches in the West.**—In Italy and the East, headland, hill-top, and spring sanctuaries now dedicated to St. Michael were formerly sacred sites of earlier religions. The associations rest frequently on folk-lore; the testimony is that of legend and tradition or place-name. The same associations are to be expected in the West. In some cases the legend may be traced; in others it may linger in folk-lore, and can be looked for only in local tradition. But, given an ancient dedication to St. Michael and a site associated with a headland, hill-top, or spring, on a road or track of early origin, it is reasonable to look for a pre-Christian sanctuary.

i. *Headland and coast churches.*—On the French coast are St. Michel near the mouth of the Loire, St. Michel on the Pointe du Raz in Brittany, St. Michel en Grève to the south of Lannion, the Île St. Michel near the Cap de Frehel, and, best-known of all, Mont St. Michel. The legend associated with Mont St. Michel suggests the tradition of an ancient sanctuary of Celtic heathendom. The giant slain by Arthur on the site is said to have come from Spain, the Hades of Celtic mythology (Rhŷs, *Celtic Heathendom*, p. 90 f.). He is said to have ravished Elen, who is equated with a goddess of Welsh mythology (*ib.* p. 161). Thus, by the overthrow of a giant by the champion of Christendom, the Celtic sanctuary becomes the sanctuary of St. Michael.

Among the coast and headland churches in England are St. Michael's Mount, the church of Lyme Regis, and that of Bere near Seaton, all of ancient origin. There are also St. Michael near the mouth of the Camel opposite Padstow, St. Michael, Mawnan, overlooking Falmouth Bay, and St. Michael-Caer-hayes. On the west coast there is a Michael church at Workington in Cumberland; on the east coast, Garton in the East Riding, Sidestrand and Ormesby St. Michael, in Norfolk; on the south coast, Newhaven in Sussex and East Teignmouth, Devon. With a few exceptions the majority are in Dorset, Devon, and Cornwall, where the old lore lingered longest.

ii. *Hill-top churches.*—These are to be found throughout the West, sometimes as hermitage chapels, sometimes as town and village churches. St. Michel is the central church of Limoges, the Augustoritum or metropolis of the Lemovices. St. Michel is also the central church of Castelnaudary on the old road between Carcassonne and Toulouse. These sites are frequently the high-places consecrated to early religious rites. The church of Penkridge in Staffordshire is dedicated to St. Michael. Penkridge is the Celtic site of the ancient city of Pennocrucium, 'a place-name which bears evidence to the worship of the heathen god in the centre of ancient Britain' (Rhŷs, *Celtic Heathendom*, p. 202 f.). It is the Brythonic equivalent of the Irish *Cenn Cruach*, 'the Chief of the Mound,' who bowed before the staff of St. Patrick.

Penkridge was formerly the sanctuary of the Celtic Zeus.

A Michael church may often witness to some pre-historic centre of religious worship.

The story of a bull is associated with the foundation-legend of the Church of St. Michael 'in Monte Gargano.' The legend rests on a 'libellus' which was kept in the church. Garganus, a rich citizen of Sipuntum, missed his bull from the herd:

> 'Quem dominus collecta servorum multitudine per devia queque requirens, invenit tandem in vertice montis foribus cuiusdam asistere speluncae. Itaque promotus cur solivagus incederet: statim corripit ira motus arcum, et appetit illum sagita tossicata que venti flamine retorta: eum a quo iacta est mox versa percussit' (Mombritius, *Sanctuarium*, i. 390; cf. Hereford Breviary in Chapter Library, Worcester, 15th cent., *ap.* H. Bradshaw Soc. xl. [1911] 339).

The sanctity of the bull-shrine is here vindicated. The terror is averted by the dedication of the site to St. Michael.

The life of St. Francis of Assisi alludes to the forty days' fast in honour of St. Michael. It was kept 'ad heremum Alvernae.' It was on the occasion of one of these fasts that the birds gathered round his cell. They are called his 'sorores aviculae' (Mombritius, *Sanct.* i. 512). The vision of the stigmata is assigned to the same sanctuary.

> 'Biennio itaque antequam spiritum rederet caelo . . . perductus est in montem excelsum seorsum: cui nomen Alvernae. Cum igitur iuxta solitum morem quadragessimam ibidem ad honorem archangeli Michaelis ieiunare coepisset . . . coepit immissionum cumulatius dona sentire' (*ib.* i. 524).

iii. *The spring churches.*—The dedication of wells and springs to St. Michael may be noted in the Michael churches of Askerswell, at the head of the Asker Valley in Dorset, at Barwell in Lincolnshire, and at Houghton-le-Spring in Durham. In Portugal near Leiria on the Monte de São Miguel a warm and a cold spring issue close together from the Olhos de São Pedro.

There is a remarkable example of a Michael church in association with a spring at Llanmihangel near Llantwit Major in Glamorganshire. The church is in a dell, and just outside the N.W. corner of its churchyard is a spring. The spring-head is ornamented with the bust of a woman, and the water used to issue from the breasts. It is now (April 1915) nearly filled up with mud.

iv. *The Llanfihangel churches in Wales.*—It has been noted by W. L. Bevan (*Dioc. Hist. of St. David's*, London, 1888, p. 36, *ap.* Willis Bund, *The Celtic Church of Wales*, p. 336) that the Michael churches in the diocese of St. David's, to the number of forty-five, with one exception, are in the country districts. It has been suggested by Willis Bund (p. 336) that they mark a second stage in the spread of Christianity in Wales:

> 'The group of Michael churches would therefore represent the villages of the lay tribe that had become Christian, but which still belonged to the lay tribe, and so could not be called by the name of the Saint, or the tribe of the Saint, or of his family. They thus form a group which marks the spread of Christianity. . . . The term selected was one that would celebrate the victory of the cross over the Pagan' (*ib.* p. 336).

The Michael churches of Anglesey bear out this suggestion. There are four of them; and they are all in the near neighbourhood of sites of great antiquity, associated with the legend and myth of Wales. Llanfihangel-ty'n Sylwg, on the coast north-west of Beaumaris, is within the pre-historic site of Bwrdd Arthur. Llanfihangel Tre'r Beirdd derives its name from the ancient Carneddau Tre'r Beirdd. It lies to the east of Llanerchymedd. Llanfihangel-yn-Nhowyn, south-east of Valley, is near the site of Cær-Ellen. Llanfihangel Esceifiog is parochially connected with the old site of Plas Berw. This association of the Michael churches of Anglesey, taken together with the evidence of the churches in Italy and the East, can hardly be accidental. It would seem to support the evidence that the Michael churches occupy the shrines and sites of Celtic heathendom.

v. *The Michael churchyards.*—The churchyard of St. Michael's at Lichfield is referred to in the MS *Historia Ecclesiæ Lichfeldensis* in the Cathedral Library at Lichfield. It was a venerated site even in the time of St. Augustine:

> 'Corporibus occisorum sepelliendis insolitae magnitudinis coemeterium quod fano Divi Michaelis adiacet, fertur inserviisse; quod ferunt Augustino, qui Anglorum Apostolus dicitur, cum illas insulae partes inviserat, religione venerabile fuisse' (MS *Hist. Eccl. Lichf.*, *ap.* H. E. Savage, *The Church Heritage of Lichfield*, Lichfield, 1914, p. 14).

A note 'de Cemeteriis' in the same MS speaks of certain national burial-places in the early ages of the Church:

> 'In primordiis nascentis Ecclesiae Anglicanae cemeteria erant rara, pauca sed amplissima et spaciosa: ut cemeterium Avelloniae sanctum in quo Rex Arthurius sepultus est; cemeterium Doroverni Cantiorum; Eboraci Brigantium; Lindisferne; atque adeo cemeterium Divo Michaeli sacrum Lichefeldiae ab Augustino Anglorum Apostolo, ut fama est, consecratum' (*ib.* p. 14).

There is a passage in Bede which probably refers to a similar burial-place in the neighbourhood of Hexham:

> 'Est mansio quaedam secretior, nemore raro et vallo circumdata, non longe ab Hagustaldensi ecclesia . . . habens clymeterium sancti Michahelis archangeli, in qua vir Dei saepius, . . . manere cum paucis, atque orationibus ac lectioni quietus operam dare consueverat' (*HE* v. 2).

The Church of St. Michel at Bordeaux is on the site of an ancient cemetery, the soil of which has the property of preserving the bodies.

vi. *The Angel Victor in Ireland.*—The *Genair Patraicc*, the hymn of St. Fiacc in honour of St. Patrick, has two references to St. Michael under the name of Victor. In v. 4 it is by his command that Patrick went across the seas:

> 'Asbert Victor fri gniad
> Mil con tessed for tonna,'

> 'Said Victor to Milchu's bondsman, that he should go over the waves' (*Irish Liber Hymnorum*, H. Bradshaw Soc. xiii. [1898] 98, xiv. [1898] 32).

In l. 47, an angel sends Patrick to Victor, who stopped him from going to Armagh at his death:

> 'Dofaith fa-des co Victor,
> ba he ar·id·ra·lastar,'

> 'He sent him south to Victor: it was he [Victor] that stopped him' (*ib.* xiii. 102, xiv. 34).

The gloss on v. 4 reads:

> 'Victor. i. angel communis Scotticae gentis sein: quia Michael angelus Ebreicae gentis, ita Victor Scottorum' (*ib.* xiii. 98).

The translation of the Irish gloss on v. 46 reads:

> 'i.e. to meet him, to summon him to go to Victor. He was his soul-friend, and he is the common angel of the Gaels [aingel coitcend na ńGoedel]; sicut est Michel Iudeorum ita Victor Scotorum' (*ib.* xiii. 102, xiv. 184).

The hymn seems based on notes written by Muirchu Maccu Mactheni in the 7th cent. and preserved in the Book of Armagh. The hymn itself belongs to the 8th century (*ib.* xiv. 176). The name Victor may be traceable to the *inlatio* of the Mozarabic Missal for Michaelmas:

> 'E celo missus: iniquum hostem perimens submittet in inferno: et ipse victor exultans victori plaudet: a quo victor manebit' (*Missale Mixtum dictum Mozarabes*, ed. A. Lesley, Rome, 1755, p. 392).

It is a point of affinity between the liturgical uses of Ireland and Spain.

But the name Michael is not sunk in the title Victor. J. H. Bernard, in his note on the Hymn of St. Colman Mac Murchon in honour of St. Michael, says:

> 'St. Michael was very popular in Ireland. In the Second Vision of Adamnan we read in section 19: "the three hostages that were taken on behalf of the Lord for warding off every disease from the Irish—are Peter the Apostle, and Mary the Virgin, and Michael the Archangel." There are a large number of fragmentary Irish poems in praise of St. Michael in the manuscript collection of the Royal Irish Academy. There were churches dedicated to him in many localities; the place-name *Temple-Michael* still exists in 6 or 7 counties' (H. Bradshaw Soc. xiv. 133).

4. The Michaelmas goose.—There is an old saying: 'If you eat goose on Michaelmas-day you will never want money all the year round' (Hone, *Every-Day Book*, i. 1339). In Herefordshire in 1470, 'one goose fit for the lord's dinner on the feast of St. Michael the archangel' was due as part of service or rent for land (*ib.*). G. Gascoigne, in his poems published in 1575, alludes to a similar custom ·

> ‘At Christmasse a capon,
> At Michaelmasse a goose,
> And somewhat else at New-yeres tide,
> For feare their lease flie loose’ (*ib.*).

Such customs lie deep in the folk-lore and religious ideas of a people. Geese have sacred associations. They saved Rome (‘anseres non fefellere: quibus sacris Junoni’ [Livy, v. 47]). The goose-pond, or ‘fuente de las ocas,’ is still preserved in the cloister court of the cathedral of Barcelona. The cathedral is built on the site of a Roman temple—a temple ascribed to Hercules. Some columns in an adjoining street still witness to the antiquity of the site. There were sacred geese in the Greek temples (*ERE* i. 518). Geese were tabu to the ancient Britons (‘leporem et gallinam et anserem gustare fas non putant’ [Cæs. *de Bell. Gall.* v. 12]). They also have a place in the story of St. Werburga (‘in Wedune mansione, quod est iuxta Hamptoniam . . . infinita aucarum silvestrium . . . multitudo’ [*Nova Legenda Anglie*, ed. C. Horstmann, Oxford, 1901, ii. 423]). The witness of East and West, the folk-lore and legend of Britain, alike point to the sacred associations of the Michaelmas goose. This established Michaelmas custom rests, together with the sites of so many of our Michael churches, on a foundation of primitive religion, and in Britain they are no less sacred to Christianity for thus keeping alive the deep-rooted religious convictions of Celtic heathendom.

5. The liturgical meaning of the festival: St. Michael and All Angels.—The festival of Michaelmas is specially in honour of St. Michael, but the words of the *officium* or *introit* to the mass in all Western uses are: ‘Benedicite Dominum omnes angeli.’ The festival thus includes All Angels. The English Prayer-Book entitles the festival ‘St. Michael and All Angels.’ The Colbertine Breviary of *c.* 1675 (H. Bradshaw Soc. xliii. [1912] p. xxxvi) agrees in this title: ‘S. Michaelis et omnium Angelorum.’ The Dedication of the Great Hall of the Baths of Diocletian in 1564 under the title *S. Maria degli Angeli* shows the same intention.

The Collect ‘Deus, qui miro ordine’—‘the services of Angels and men in a wonderful order’—is common to all the uses. Its subject is the ministry of angels. The gospel, offertorium, and postcommunio are also common to all. The Gospel—‘Quis putas maior’—refers to the guardianship of the angels, the Offertory—‘Stetit Angelus’—to the incense of prayer, the Postcommunio—‘Beati Archangeli tui Michaelis’—to the intercession of St. Michael. The Epistle common to the Roman and Sarum and most of the Western uses—‘significavit Deus quae oportet fieri cito’—commemorates the Angel of the Apocalypse (H. Bradshaw Soc. xii. [1897] 1595).

The Epistle in the English Prayer-Book, ‘There was war in heaven,’ represents a different strain of liturgical tradition, and celebrates the victory of St. Michael over the dragon, ‘that old serpent, called the devil and Satan, which deceiveth the whole world.’ The Westminster Missal of *c.* 1375 has this Epistle as a First Lection, followed by the usual Epistle, ‘Significavit Deus.’ It is a rare instance of two prophetical lessons before the gospel, which of itself shows the influence of Gallican use. This inference is strengthened by its use as the First Lection in the Mozarabic *Missale Mixtum* (ed. Lesley, p. 389). It also appears as a Matins lesson in the Milan Breviary (*Breviarium Ambrosianum*, Milan, 1896, Pars Aestiva, ii. Prop. de Tempore, p. 403). Wickham Legg traces it in the Missals of Durham, Abingdon, and Sherborne among old English uses; and in that of Rouen of 1499 and the Cistercian Missal of 1627 (H. Bradshaw Soc. xii. 1595).

The English Epistle is inspired by the thought of the triumph of Christianity over heathenism, and belongs to the same cycle of ideas as the Angel Victor in Ireland.

Thomas Barns.

MICIUS.—‘Micius’ is the latinized form of the words otherwise transliterated Mih Tsze, or Mo Tsze, meaning ‘the philosopher Mih.’ His personal name was Teih (or Ti). He was a native of the State of Sung, and is regarded by some as a younger contemporary of Confucius (E. Faber, E. H. Parker), and by others as ‘very little anterior to Mencius’ (J. Legge). His opinions are preserved in 71 chapters arranged in 15 books; but 18 of the chapters, in some cases along with their very titles, have been lost. Faber speaks of him as an ancient Chinese socialist, and Parker calls him ‘a Quixotic Diogenes,’ head of ‘the school of simplicity, socialism, and universal love’ (*China and Religion*, London, 1905, p. 67). It is this doctrine of universal love by which he is best known, largely because of the criticism of it by Mencius (*q.v.*). All social disorders in the empire, and between persons, families, or States, spring from selfishness, and would be impossible if men loved the persons, families, and States of others as they love what belongs to themselves. Such universal love may be difficult; but, if men can be induced to sacrifice their lives for the sake of pleasing their sovereign, how much less difficult should they find it to practise universal love, which, moreover, would be responded to by love. Others would follow if only rulers would lead the way by administering their government on this principle, taking pleasure in it, stimulating men to it by rewards and praise, and aweing them from opposition to it by punishment and fines. Micius adduces the ancient kings as examples, for equally with Confucius he builds on the ancient books. What gives rise to hate and all its evils is the principle of making distinctions. In spite of the brevity of life and the selfish desire to make the most of it for oneself, each man should be for the other as for himself. There is no one who would not prefer as his friend or his sovereign one who practises universal love rather than one who acts on the opposite principle. To the objection that universal love is injurious to filial piety Micius replies that the filial son is one who wishes to secure the happiness of his parents by inducing men to love and benefit them, and that to love and benefit the parents of others is precisely to secure for one's own the same treatment in return (bk. iv.). It is here that Mencius joins issue with the Mihist I Tsze. Taking Micius's doctrine as inculcating *equal* love to all, he argues from the actual facts of human nature, pointing out that a man's affection for his brother's child is not merely the same as his affection for the child of his neighbour, and that man is related in a special way to his own parents, heaven having made man to have this one root (Mencius, bk. iii. pt. i. ch. 5, pt. ii. ch. 9). Legge admits that Micius appears to lose sight of the other sentiments of the human mind in his exclusive contemplation of the power of love, but denies that Micius taught equal love to all. It is true that we do not find in Micius the phrase ‘without difference of degree,’ used by I Tsze, though it may be held that I Tsze represents the logic of his master's doctrine. I Tsze also exposed himself to Mencius's criticism by his exaggeration of his master's teaching on simplicity in funeral rites (Mencius, bk. iii. pt. i. ch. 5). Micius did no more than discourage extravagance on utilitarian grounds, as being of no profit to men or gods, while he allowed all that was necessary for a decent interment (Micius, bk. v. ch. 25). Among other points worthy of notice are these. In bk. iii., on the value of uniformity, Micius holds that men originally were hopelessly at sixes and sevens, each having his own view of right, and that order is based on submissive acceptance of the judgment of the supreme ruler, whose judgment, however, must conform to heaven if heaven-sent punishments are to be avoided. Hence the piety of the ancient kings. Micius is firmly convinced of the existence of spiritual beings, the instruments of heaven's righteous administration, and so far affirms the necessity of religious belief for social stability (bk. viii.). Of two chapters criticizing the Confucian school one survives, though Chinese editors are inclined to deny this reference of his remarks. On the whole Micius deserves Legge's praise of him as 'an original thinker,' who exercised a bolder judgment on things than Confucius or any of his followers.

MICMACS.—See ALGONQUINS (Eastern).

MIDRASH AND MIDRASHIC LITERATURE.—The term *midrāsh* (from the root *dārash*, 'to seek,' 'inquire') signifies 'research,' 'inquiry,' 'study.' Applied by the Chronicler to historical writings of didactic import,[1] as the Midrash of the Prophet Iddo (2 Ch 13^{22}) and the Midrash of the book of Kings (2 Ch 24^{27}), it assumed later, with the advent of the *sôf^{e}rîm*, or scribes, upon the stage of Jewish history, the connotation of free exposition or exegesis of Scripture, eventually becoming a general term for pure theoretic study as opposed to a practical pursuit of knowledge.[2] From the latter usage the Jewish academy received its name *bēth ham-midrāsh*, 'house of study.' In a narrower sense, *midrāsh* is employed to mean any specific exposition of a Scriptural passage differing essentially from the *p^{e}shāṭ*, the literal meaning (the plural form in such case being *midrāshôth*), and the name is then transferred to a collection of such free expositions, known collectively as *midrāshîm*, Midrashic works.[3]

The intellectual activity of the Rabbis with regard to this free exposition of the Bible was developed along two distinct lines, the Hălākhāh and the Haggādāh, and a few brief remarks on the basic differences between these two currents of Rabbinic thought, flowing in parallel streams, are of paramount importance. Reduced to their bare etymology, the terms signify: *hălākhāh*, 'way of acting,' 'habit,' 'rule of conduct'; *haggādāh* (also known in its Aramaic form *'aggādāh* or *'agādā*), 'narrative,' 'explanation.'[4] The Hălākhāh confines itself to the legalistic aspect of the Scriptures; the Haggādāh to their moralizing and edifying aspect. From the Rabbinic standpoint, the Bible is a microcosm in which is reflected every move and event of the great universe. One teacher comments: 'Turn it, and again turn it; for the all is therein, and thy all is therein' (*Sayings of the Jewish Fathers*, p. 96). It requires only the light of a great thinker to extract from its compact pages all this esoteric wisdom; like a hammer which strikes the inherent sparks from the rock, it is possible to unravel all the secrets which lie beneath the surface of the cold letter of the text (*Sanh.* 34*a*). The Hălākhāh takes up this work of rekindling the mystic spark of knowledge in the legal field; in all other fields of human activity that task is undertaken by the Haggādāh. The Hălākhāh relies, for its powers, mainly on the intellectual and logical faculties of man; the Haggādāh on the imaginative and emotional faculties. The Hălākhāh strives to preserve the letter of the law by insisting on the observance of all the details in the ritual; the Haggādāh, by a well-defined analysis of the relation of man to his environment, seeks to preserve its spirit.[1]

Midrashic study, therefore, assumes a twofold aspect. On the one hand, it is concerned with the evolution of legalism—the Hălākhāh; on the other, it centres about the problems of God, man, and the universe—the Haggādāh. The origin of Midrashic study is shrouded in the gloom of antiquity. The Rabbis themselves often assign Midrashic interpretations of Scripture to Biblical personages, but such statements are not to be taken literally. A noteworthy instance of this occurs in the Mishna (*Sh^{e}ḳālîm*, vi. 6): 'This is the midrash which Jehoiada, the high-priest, taught,' etc. By such assertions the Rabbis probably meant to emphasize the continuity and binding force of the traditional law. There can be no doubt, however, that this free method of inquiry into Scripture was well established during the period of the early scribes, the men of the Great Synagogue, who took up the reconstructive work initiated by Ezra.[2] The author of Daniel uses Midrashic exegesis quite liberally in interpreting the words of Jeremiah ($25^{11f.}$ 29^{10}) in his famous prophecy of the weeks (ch. 9). With the advent of the scribes Midrashic study becomes a permanent institution in the Jewish intellectual world and passes through its process of evolution during the succeeding ages. Three historical periods are generally distinguished: (*a*) the period of the *sôf^{e}rîm*, or scribes, 400 B.C.–A.D. 10; (*b*) the period of the *Tannāîm*, the early Rabbinical authorities, A.D. 10–220; (*c*) the period of the *Ămôrāîm*, later Rabbinic authorities, A.D. 220–500. The historical side of the development of Midrashic study has been ably dealt with in the works of L. Zunz, *Die gottesdienstlichen Vorträge der Juden*, Frankfort, 1892; Z. Fränkel, *Hodegetica in Mischnam*, Leipzig, 1859, and *Introductio in Talmud Hierosolymitanum*, Breslau, 1870; D. Hoffmann, 'Zur Einleitung in die halachischen Midraschim' (*Beilage des Rabbiner-Seminars zu Berlin*), 1887; and especially in the works of W. Bacher, *Die Agada der Tannaiten*, Strassburg, 1903, *Die Agada der babylonischen Amoräer*, do. 1878, and *Die Agada der palästinischen Amoräer*, do. 1892–99. Only few traces remain of the Midrashic exegesis of the early scribes (cf. *Mishnāh Sôṭāh*, viii.; *Ma'ăśēr Shēnî*, v. 10 f.). During the second period, the Tannāitic, Midrashic study must have developed to grand proportions, as is evident from the fact that the various schools of Rabbis, beginning with Hillel, laid down specific rules for exegesis to keep the study within definite bounds.[1] The period of the Ămôrâîm was most prolific in the field of Midrashic research, most of the collections, in fact, having their beginnings during that period.

---

[1] Cf. S. R. Driver, *Introduction to the Literature of the OT*^{9}, Edinburgh, 1913, p. 529.

[2] *e.g.*, Rabban Simeon, the son of Gamaliel, adds: 'Not the *midrāsh* (pure theoretic study) is the groundwork, but the deed' (*Sayings of the Jewish Fathers*, ed. C. Taylor^{2}, Cambridge, 1897, p. 5, Heb. text).

[3] Cf. W. Bacher, *Die exegetische Terminologie der jüdischen Traditionsliteratur*, Leipzig, 1899–1905, i. 103.

[4] Bacher (*JQR* iv. [1892] 406–429) derives this word from the formula *maggîd sh^{e}*, 'the text explains that,' in use in the earliest Midrashic works.

[1] Cf. I. H. Weiss, *Zur Geschichte der jüdischen Tradition*^{2}, Wilna, 1904, iii. 220.

[2] The following passage is of interest as confirming this position. Rabbi Levi says: 'We have received this midrash from the men of the Great Synagogue. Wherever Scripture uses the expression "and it came to pass," the phrase generally implies calamity' (*M^{e}gillāh*, 10*b*). Parallel passages on the authority of a number of different teachers are found in *B^{e}rēshîth Rabbā*, xlii. 3; *Wayiḳrā Rabbā*, xi. 7; *Rūth Rabbā*, i. 7 prooem.; *Estēr Rabbā*, i. 1 prooem.; *P^{e}siḳtā Rabbāthî*, 5. In these the period of the Babylonian Exile is assigned as the date for this midrash (cf. N. Krochmal, *Môreh Nebûkhê haz-Z^{e}mān*^{2}, Warsaw, 1894, p. 224).

1. **Halakhic Midrāshîm.**—The legalistic exegesis of Scripture did not proceed in an unsystematic manner. Each school of Rabbis would hand over the results of its work to the next in the form of rules of legal hermeneutics which were derived from a collation of similarly worded passages in the Pentateuch. Accordingly, the school of Hillel, at the beginning of the first century of our era, left seven such rules, which, in the school of Rabbi Ishmael, were later amplified into thirteen.[2] These are either based on some logical syllogism or of purely exegetical character. Thus the seven original rules laid down by the school of Hillel embrace the following: (1) the inference from minor and major (at the bottom of which is *a fortiori* reasoning); (2) the analogy of expressions; (3) the generalization of one special provision; (4) the generalization of two special provisions; (5) the effect of general and particular terms; (6) the analogy made from another passage; (7) the explanation derived from the context.[3]

From the school of Rabbi Ishmael a complete commentary on the legal portion of the Pentateuch was issued, the following parts of which have been preserved.

(*a*) The *Mᵉkhîltā* (Aramaic for 'rule' or 'measure'), which is the earliest Rabbinic work extant, is a running commentary to the legal portions of Exodus. It begins with the injunction concerning the Paschal lamb in $12^{1ff.}$, and ends with the injunction concerning the kindling of fires on the Sabbath (35^3). A large portion of Haggadic material has also been added. In the *Mᵉkhîltā*, as well as in all the other Halakhic Midrāshîm, the activity of the Rabbis in the legal field is analyzed; in the Mishna it is synthesized. The *Mᵉkhîltā* went through the hands of later redactors, whose work is still traceable. The *editio princeps* was Constantinople, 1515, and the two critical editions are *Mechilta . . . von I. H. Weiss* (Vienna, 1865) and *Mechilta de Rabbi Ismaël . . . von M. Friedmann* (do. 1870).[4]

(*b*) The existence of a commentary to Leviticus from the same school is posited by Hoffmann ('Einleitung,' pp. 72–76) from fragments preserved in various places in Rabbinic literature.

(*c*) The Halakhic Midrash to Numbers from the same school is the *Sifrē* to Numbers, forming a running commentary to $5–35^{34}$ with omissions. The work is generally bound together with the *Sifrē* to Deuteronomy, and both were, for a long time, considered of similar origin. The latter work, however, originated in the school of Rabbi Aḳiba. The name *Sifrē* probably means 'books.' The first edition was printed in Venice, 1545, and a critical edition was issued by M. Friedmann, *Sifre debê Rab* (Vienna, 1864).

(*d*) Fragments, from the same school, of a commentary to Deuteronomy were published by D. Hoffmann, in *Jubelschrift zum siebzigsten Geburtstag des Dr. Israel Hildesheimer*, Berlin, 1890, pp. 1–32.

Opposed to the methods pursued by the school of Rabbi Ishmael was the more rigoristic school of Rabbi Aḳiba. The latter, in expounding the law, followed a method known as 'extension and limitation' (*ribbūî ū-mî'ūṭ*), introduced by his teacher, Nahum of Gimzo. According to this system, it was necessary to consider the amplifying or limiting value of certain particles used in the Pentateuch when considering the legal question involved in the passage, in order to include the additions of tradition or to exclude what it no longer sanctions. Thus the particles 'even,' 'every,' 'also,' 'with' were considered as amplifying, the particles 'but,' 'only,' 'from' as limiting, the original law. Rabbi Aḳiba's disciples included the most distinguished teachers of the Law, such as Rabbi Me'îr, Judah ben 'Ilāi, Simeon ben Yôḥāi, and Yôsê bar Ḥălaftā. His disciple, Aquila, followed his methods of exegesis in his Greek version of the OT. From the school of Rabbi Aḳiba the following Halakhic Midrāshîm have been preserved: (i.) the *Mᵉkhîltā* of Rabbi Simeon ben Yôḥāi on Exodus, contained in the *Midrāsh hag-Gādhôl*, and published by D. Hoffmann (*Mechilta de Rabbi Simon b. Jochai*, Frankfort a. M., 1905);[1] (ii.) the *Sifrā* or *Tôrath Kôhănîm*, 'the Law of the Priesthood,' which is a most complete running Halakhic commentary to Leviticus, and was edited by Rabbi Ḥiyya (middle of 2nd cent.; cf. Hoffmann, 'Einleitung,' p. 22); the *editio princeps* was Venice, 1545, and the standard edition is *Sifra, Commentar zu Leviticus . . . nebst Erläuterung des R. Abraham ben David und I. H. Weiss . . . herausgegeben von Jakob Schlossberg*, Vienna, 1862; (iii.) the *Sifrē Zūṭā*, the Halakhic commentary to Numbers from the school of Rabbi Aḳiba, existing only in fragmentary form in various collections, foremost among which is the *Yalḳūṭ Shimᵉ'ônî*, the *editio princeps* of which uses the expression *Zūṭā*, 'smaller,' to distinguish this Midrash from the *Sifrē* to Numbers mentioned above (cf. Hoffmann, 'Einleitung,' pp. 59–66); and (iv.) the *Sifrē* to Deuteronomy, which is the legal commentary to this book issuing from the same school. It is usually bound with the *Sifrē* to Numbers emanating from the school of Rabbi Ishmael (cf. above).

These Midrashic collections are but small remnants of the great number of such works which the ravages of time have destroyed. They were compiled, for the most part, during the first two centuries of our era. While their scope is primarily Halakhic, the Haggadic content in each instance forms no mean proportion, for the Rabbis felt themselves bound by no rigorous division-line in arranging their material. The later Mishna and Talmud are similar extensive collections which comprise the greatest efforts of the Rabbis in the realm of Hălākhāh and Haggādāh.

To illustrate the methods of the Halakhic Midrash the following passage, in which the legal aspect of tort is discussed, will be of interest:

> '"Eye for eye" [Ex 21^{24}] means a money-compensation. This, however, is a mere assertion; perhaps we are actually to understand the passage in its literal sense. Says Rabbi Eleazar: "Scripture unites in one passage [Lv 24^{21}] the two injunctions, 'He that killeth a beast shall make it good: and he that killeth a man shall be put to death.' For what purpose is this collation?—in order to establish a like precedent for the laws of tort in the case of man and beast. Just as the damage inflicted on a beast is punishable by a fine, so the damage inflicted on a human being is punishable by a fine." Rabbi Isaac adds: "In the case where one's beast had repeatedly inflicted death on several human beings, Scripture specifically imposes a fine on the owner to escape a deserved death-penalty [Ex $21^{29f.}$]; in this case, where the Scriptural penalty is only the loss of an eye, there is all the more reason to believe that the text meant to allow a money compensation"' (cf. *Mᵉkhîltā of Rabbi Ishmael, Mishpāṭîm*, 8).

The binding force of the decisions of the Rabbis with regard to their interpretations of the Mosaic law is clearly expressed in the following:

> 'Concerning the authority of the words of the scribes, Scripture says [Dt 17^{11}]: "According to the tenor of the law which they shall teach thee." It does not say which the Torah

shall teach thee, but rather which *they* shall teach thee. . . . Furthermore, it enjoins, "Thou shalt not turn aside from the sentence which they shall shew thee, to the right hand, nor to the left," which means that thou shalt listen to their opinions in reference to what is right, if they tell thee that it is right, and in reference to what is left, if they tell thee that it is left; and even if they were to tell thee concerning the right that it is left, and concerning the left that it is right, thou must yield to their opinion' (*Shîr hash-Shîrîm Rabbā*, i. 2).

2. Haggadic Midrāshîm.—The Haggādāh is the expression of the philosophy of Jewish life, and, as a result, had a wider appeal than the more abstruse Hălākhāh. With a keen appreciation of the consoling powers of the Haggādāh, Rabbi Isaac informs us:

> 'Generations before, when the penny had a freer circulation, there was a desire to listen to lectures on Mishnah and Talmud: but to-day, however, when the penny is scarce, there is only a desire for Scripture and Haggādāh' (*Pᵉsiḳtā of Rav Kahana, Baḥôdesh hash-Shelîshî*).

The Haggadic Midrāshîm are of two kinds: (1) exegetical, and (2) homiletic. The first form running commentaries to the text of the various books of the OT, and in this respect follow the method of the Halakhic Midrāshîm. They are, however, frequently introduced by several proems—opening remarks generally based on some text in the Hagiographa—which is rather a characteristic of the homiletic Midrāshîm. The latter are collections of homilies or sermons which were delivered during the Sabbath and festival services in the synagogues, and which were based on the portion of the law read during such service. The homiletic Midrāshîm, therefore, differ essentially, in structure as well as in the treatment of their subject-matter, from all the other Midrashic works. They are regularly introduced by proems in which a passage from the Hagiographa or Prophets is explained and introduced into the context. Several homiletic works (notably the *Tanḥûmā*) also resort to a Halakhic exordium. The lesson of the day is then attached to the opening verses of the portion of the law read during the service, the text being often used merely as a basis for a lesson on morals quite fully developed. The homilies close, for the most part, with verses of encouragement, prophesying the redemption of Israel and the advent of the Messianic era. Two cycles of homiletic Midrāshîm are in existence: (*a*) those originating in the three-year-cycle of Scriptural Sabbath readings then in vogue in Palestine—the *Sᵉdhārîm* cycle[1]—and (*b*) those based on the readings during the special Sabbaths in the Jewish calendar (occurring before Purim and Passover) and on the festivals and fast-days—the *Pᵉsîḳtā* cycle.

3. Exegetical Midrāshîm.—Of these the oldest and most important is *Bᵉrēshîth Rabbā*, a Haggadic commentary to Genesis.[2] It is the first in the collection known as *Midrāsh Rabbā*, or *Midrāsh Rabbôth*, which comprises ten Midrashic works, one for each book of the Pentateuch, and one for each of the Five Scrolls (the books of Esther, Canticles, Ruth, Lamentations, and Ecclesiastes). The works included in this collection are of a miscellaneous character, and their time of composition extends from the 6th to the 12th cent.—the period in which the different Haggadic Midrāshîm were redacted. Of the Haggadic Midrāshîm *Bᵉrēshîth Rabbā* is, no doubt, the oldest as well as the richest from the point of view of subject-matter. Like most of the Midrāshîm, it had its origin in Palestine, and was put into its final form no later than the 6th century. Older authorities assign the work to Rabbi Hoshaiah, a Palestinian teacher of the 3rd cent. (with whose remarks the book opens), but he cannot be responsible for the work in its present form. The historical and legendary content of Genesis furnishes ample material for Haggadic exposition. The ten Midrashic works forming the collection *Midrāsh Rabbā* were printed for the first time in Venice, 1545. The standard edition is that of Wilna, 1878–87. The collection was translated into German by August Wünsche in *Bibliotheca Rabbinica, eine Sammlung alter Midraschim*, Leipzig, 1880–85, and L. Shapiro translated a part of *Bᵉrēshîth Rabbā* into English (*Midrash Rabba*, New York, 1906).

Ēkhā Rabbāthî, a Haggadic commentary to Lamentations, is also a very early exegetical Midrash, and is included in the *Midrāsh Rabbā*. This work (as well as *Bᵉrēshîth Rabbā*) is introduced by many elaborate proems followed by commentary to the text of Lamentations. The book is especially rich in anecdotes and legends of the pathetic events that transpired during the destruction of Jerusalem. A critical edition has been issued by S. Buber, *Echa Rabbati*, Wilna, 1899.

Shîr hash-Shîrîm Rabbā is an exegetical Midrash to Canticles, included in the *Midrāsh Rabbā*. The entire work is an elaborate allegorical rendition of the relation between God and Israel implied in the dialogues between the shepherd and his bride.

Rūth Rabbā (also included in the *Midrāsh Rabbā*) is an exegetical Midrash to Ruth. The book is introduced by a series of proems, and the conversion of Ruth furnishes many a beautiful lesson to the Rabbinical commentators.

Ḳôheleth Rabbā (also included in the above collection) is an almost complete exegetical commentary on Ecclesiastes. The author utilized much of the material found in the Talmud and in various earlier Midrashic works, and mentions several sources by name—a sign of the late origin of the Midrash.

Finally, *Estēr Rabbā* is an exegetical commentary on Esther included in the *Midrāsh Rabbā*. This is one of a number of extant Haggadic Midrāshîm to the book of Esther, very popular because of its use during the Purim festival. The others were published by S. Buber, *Sammlung agadischer Commentare zum Buche Esther*, Wilna, 1886, and *Agadische Abhandlungen zum Buche Esther*, Cracow, 1897.

Besides the above-mentioned Midrāshîm to the Five Scrolls, Buber published several other extant Midrāshîm to the books of Canticles, Ruth, Lamentations, and Ecclesiastes, in *Midrasch Suta*, Berlin, 1894.

There are still extant several Haggadic Midrāshîm dealing with the remaining books of Scripture. There can be no doubt that originally such exegetical works existed on all the books, but they have been lost. Foremost among them is *Midrāsh Tᵉhillîm*, a Haggadic commentary to the book of Psalms. It is also known as *Shôḥēr Ṭôbh*, 'He that seeketh good' (Pr 11^{27}), which are also the opening words of the book. This Midrash is especially rich in the rhetorical devices employed by the Haggadists—analogies, legends, fables, maxims, etc. A critical edition was issued by Buber (*Midrasch Tehillim*, Wilna, 1891). A Midrash to the book of Samuel has, likewise, been preserved, known as *Midrāsh Shᵉmū'ēl*. It is a collection of Haggadic comments on the book, gleaned from various parts of Rabbinic literature. The first edition of the work was Constantinople, 1517. A critical edition was issued by S. Buber (*Midrasch Samuel*, Cracow, 1893). *Midrāsh Mishlē* is an incomplete Haggadic Midrash to Proverbs. The comments in this Midrash are exceptionally brief, so that the work approaches the character of a Biblical commentary. A critical edition was issued by S. Buber (*Midrasch Mischle*, Wilna, 1893). The Midrāshîm to the books of Isaiah and Job are mentioned by older authorities, and, of the latter, extracts are found in the collection, *Yalķūt Mākhîrî* (to Is 61^{11}), and in a few other old works. Several fragments of a Midrash to the book of Jonah have been published by A. Jellinek (*Beth ham-Midrasch*, Leipzig, 1853–77, i. 96–105); and by C. M. Horowitz (*Sammlung kleiner Midraschim*, Berlin, 1881).

[2] For introductions to the various Midrashic works cf. *JE*, under each title; Winter and Wünsche, i. 411–601; and the introductions to the separate works.

Finally, there are in existence a number of works known as *Yalķūţîm*, 'collections,' which are in the nature of thesauri to all the books of Scripture, and which give (with their proper sources) a wealth of Haggadic material for each of the books. Three of these works are very important: the *Yalķūţ Shim^e'ônî*, frequently known merely as *Yalķūţ*, ascribed to Rabbi Simeon, the preacher (last edition, Wilna, 1898), the *Yalķūţ ham-Mākhîrî*, ascribed to Rabbi Machir ben Abba Mari, only portions of which have appeared (Buber, *Yalkut Machiri . . . zu den 150 Psalmen*, Berdyczew, 1899), and the *Midrāsh hag-Gādhôl*, of which the part to Genesis has been published by Schechter (*op. cit.*), and the part to Exodus by D. Hoffmann (Berlin, 1913–15).[1]

4. Homiletic Midrāshîm.—The purely homiletic Midrāshîm belonging to the *S^{e}dhārîm* cycle (based on the triennial readings of the Pentateuch in the synagogues of Palestine) are: (1) the *Tanḥūmā*, (2) *Aggādath B^{e}rēshîth*, and (3) the four remaining works in the *Midrāsh Rabbā* on the four last books of the Pentateuch. The *Tanḥūmā* (also known as *Y^{e}lamm^{e}dēnû*, 'Let him teach us,' because of the frequent use of this formula to introduce the Halakhic exordiums in the Midrash) is a complete homiletic commentary to the Pentateuch, extant in two versions, containing also special homilies for the days of the *P^{e}sîķtā* cycle. A third version is known to have existed. A critical edition was issued by Buber (*Midrasch Tanchuma*, Wilna, 1885). *Sh^{e}môth Rabbā* on Exodus, *Wayiķrā Rabbā* on Leviticus, *B^{e}midhbar Rabbā* on Numbers, and *D^{e}bhārîm Rabbā* on Deuteronomy are four homiletic works of different origin belonging to the same cycle. Of these the homilies to Leviticus are, no doubt, among the oldest, and are characterized by a frequent use of popular sayings and proverbs to illustrate the lesson of the day. The other three works include many homilies that are already found in the *Tanḥūmā* collection. *Aggādath B^{e}rēshîth* is a collection of homilies to portions of Genesis and to portions of the Prophets and Psalms, and was edited by Buber (*Agadath Bereshith*, Cracow, 1902).

Two collections of homilies of the *P^{e}sîķtā* cycle have been preserved: (1) *P^{e}sîķtā of Rav Kahana*, and (2) *P^{e}sîķtā Rabbāthî*. The first consists of thirty-four homilies on the lessons for the special Sabbaths and the feast days. It was edited by Buber (*Pesiķta . . . von Rav Kahana*, Lyck, 1868). The *P^{e}sîķtā Rabbāthî* is a later work, and also contains homilies for the special days of the *P^{e}sîķtā* cycle. It was edited critically by M. Friedmann (*Pesiķta Rabbathi*, Vienna, 1880).

5. Style and content of the Haggadic Midrash.—In order to make their teachings most effective, the Rabbis resort to well-known rhetorical devices.[1] Foremost among these is the use of the *māshāl*, 'analogy.' The analogy, or extended metaphor, is a well-known figure in literary composition; in the hands of the Rabbis it reached the zenith of its didactic powers. The analogies were drawn from two sources—first, from the events of every-day life, and, secondly, from the institutions of the Roman empire, during which period the Rabbis lived. On the subject of the political institutions of Rome as depicted in the *māshāl* an interesting volume of no mean size has been written (I. Ziegler, *Die Königsgleichnisse des Midrasch beleuchtet durch die römische Kaiserzeit*, Breslau, 1903). On the comparative side, Paul Fiebig has contributed an interesting volume on the differences between the Rabbinic and the NT use of the *māshāl* (*Altjüdische Gleichnisse und die Gleichnisse Jesu*, Tübingen and Leipzig, 1904). The analogy was most helpful in explaining difficulties in the textual narrative, and often in accounting for extraneous matter in Scripture not quite adaptable to preaching purposes. A few examples will suffice to illustrate the use of the *māshāl*.

> A *matrona* once asked Rabbi Yôsê bar Ḥălaftā, 'Why does Scripture say: "He giveth wisdom unto the wise, and knowledge to them that know understanding" [Dn 2^{21}]? It were meet that the passage should read, "He giveth wisdom unto the unwise, and knowledge to them that have no understanding."' This Rabbi Yôsê met with the following: 'Let me give you an analogy. If two men, one poor and one wealthy, were to approach thee to borrow a sum of money, to whom wouldst thou lend the money, to the poor man or to the rich?' 'Of course to the rich man,' she replied, 'for, in the event of its loss, he still has assets from which I might recover, whereas from the poor man I could not get a penny.' Thereupon Rabbi Yôsê replied: 'Would that thy ears would hear what thy mouth doth utter! If the Holy One, Blessed be He, were to grant wisdom to simpletons and fools, they would decant this wisdom from the public baths, the theatres, and at other unseemly moments; He therefore granted wisdom to the wise, who confine it to its proper place in the synagogue and the academy' (*Ķôheleth Rabbā*, i. 7).

In commenting upon the fact that the Pentateuch does not enumerate by name the participants in the sedition of Korah, the Rabbis use the following *māshāl*:

> Rabbi Judah, the son of Simon, explained, on the authority of Rabbi Levi ben Parta—'This may be compared to the son of a decurion who once committed a theft in the public bath, and the keeper of the bath does not desire, for tactful reasons, to reveal his name; but describes him as "a handsome youth dressed in white." Similarly the Pentateuch does not mention the names of all the participants in the sedition of Korah, but merely describes them in the following terms: "princes of the congregation, called to the assembly, men of renown"' (Nu 16^2; cf. *B^{e}midhbar Rabbā*, xiii. 5).

Another form of the *māshāl* was the fable or parable. Collections of parables are already associated in the Jewish world with the name of the wise king, Solomon, who is said to have spoken 'of beasts, and of fowl, and of creeping things, and of fishes' (1 K 4^{33}). In the Talmud two collections are mentioned on several occasions—a collection of fox-fables and a collection of date-tree parables (cf. *Sukkāh*, 28*a*; *Bābhā Bathrā*, 134*a*). The OT uses the parable in the speech of Jotham (Jg 9^{8-15}) and in that of Jehoash (2 K 14^9). A casual example will illustrate its use in the Midrash. In the following, the fable of the fox and the fishes is effectively employed by Rabbi Aķiba:

> During one of the persecutions, when the study of the Torah was forbidden under penalty of death, Pappus discovered Rabbi Aķiba busily engaged in its study. Pappus asked him, 'Rabbi, art thou not endangering thy life in transgressing the royal mandate?' Whereupon Rabbi Aķiba replied, 'Let me give thee an analogy in the following story: Once the fox rambled alongside the bank of a river and, beholding the fishes, exclaimed, "Come out to me, and I shall hide you from all harm in the crevices of the rock, where you will never fear capture." To which the fishes replied, "Thou, who art the most clever of beasts, art nothing more than a simpleton. Our whole life depends on the element of water, and thou wouldst have us leave it for the dry land." Similarly, the life of Israel is wrapped up

---

[1] Besides the collections already mentioned, there are special Haggadic works of didactic import based upon a large amount of material in previous works, but not arranged in the form of commentaries to the Scriptures. Such are the *Pirķê d^e Rabbî Elî'ezer*, Warsaw, 1879; *Tannâ d^{e}bhê Elîyāhū*, crit. ed., M. Friedmann, Vienna, 1907; and the whole collection known as *Smaller Midrāshîm*, dealing with Haggādāhs on special subjects, such as the Decalogue, the death of Moses and Aaron, etc., scattered in various collections, and especially in the works of Jellinek (*op. cit.*); C. M. Horowitz (*op. cit.*, and *Bêth 'Ēķedh Hā'agādôth*, Frankfort, 1881); S. A. Wertheimer (*Battê Midrāshôth*, Jerusalem, 1893); L. Grünhut (*Sammlung älterer Midraschim*, do. 1858–94); and J. D. Eisenstein (*Ôşar Midrāshîm*, New York, 1915). The Midrash known as *Leķaḥ Ţôbh* (ed. Buber, Wilna, 1880), of Tobiah ben Eliezer, is not a true Midrash, but rather a commentary on the Pentateuch.

[1] For the following, cf. Zunz, pp. 102–179; and Krochmal, pp. 222–230.

in one element—the study of the Torah, as it is written, "For he is thy life, and the length of thy days" [Dt 30^{20}], and thou wouldst have me leave it because of personal danger' (*Tanḥūmā Tābhô*, 4; *Berākhôth*, 61*b*).

Another means of impressing a lesson is the aphorism, maxim, or proverb. The OT already contains extensive gnomologies in proverbial form. The wisdom of the great Ben Sira later added to this original store, and the *Sayings of the Jewish Fathers* is a historically arranged gnomology written in the Tannāitic period, and comprising the most important maxims of the learned teachers from the time of Simon the Just to the period of the Ămôrāîm. A later author, Rabbi Nathan, is said to have made a large collection of such maxims; and in the *Ābhôth of Rabbi Nathan* (ed. Schechter, Vienna, 1887) a substratum of his original work remains. This work is characterized by the frequent use of the numerical proverb, in which a number of sayings are associated by means of a numerical key.[1] The material in these collections, as well as the sayings current among the masses (generally introduced by the formula 'as the people say'), was employed by the Rabbis in teaching their lessons. Many of these proverbs are also found in the Gospels.[2] For example, the well-known saying in the Sermon on the Mount, 'With what measure ye mete, it shall be measured unto you' (Mt 7^2), is very frequent in Haggadic literature (cf. *Tanḥūmā*, *Berēshîth*, 33; *Tehillîm*, xxii. 2; and *Mishnāh Sôṭāh*, i. 17). Similarly, 'Enough for the servant that he be as his lord' (Mt 10^{25}) is found in *Tanḥūmā*, *Lekh Lekhā*, 23; *Tehillîm*, xxvii. 5; and in the Talmud (*Berākhôth*, 58*b*). Only a few of these gems can be quoted here:

'A single coin in an empty jar makes a loud noise' (*Tehillîm*, i. 21, and, in the Talmud, *Bābhā Meṣî'ā*, 85*b*). 'Say to the bee, I want not thy honey and I crave not thy sting' (*Tehillîm*, i. 21; *Bemidhbar Rabbā*, xx. 10). 'Woe to the dough which the baker condemns as unfit' (*Tehillîm*, ciii. 14). 'Woe to the living who implores aid of the dead, woe to the hero who intercedes with the weakling, woe to the seeing who ask help from the blind, and woe to the generation whose leaders are women' (*ib.* xxii. 20).[3]

Another rhetorical device for impressing a lesson is the pun. This leads into the field of Rabbinic humour. Scripture has set the precedent for its usage in carefully executed word-plays and puns especially on the names of individuals.

'And she bare Cain, and said, I have gotten' (Heb. *ḳānîthî*) (Gn 4^1). 'God shall enlarge (*yaft*) Japheth' (*yefeth*) (Gn 9^{27}). The prophet Isaiah (5^7) very eloquently says, 'He looked for judgment (*mishpāṭ*), but behold oppression (*miśpāḥ*); for righteousness (*ṣedhāḳāh*), but behold a cry' (*ṣe'āḳāh*).

Similarly, the Rabbis take great liberties in punning on proper names.

'Wherefore was the prophet called Jeremiah? Because, during his life, Jerusalem was left in a state of ἐρημία' ('desolation') (*Ḳôheleth Rabbā*, i. 2). 'The name of the daughter-in-law of Naomi was Orpah because she turned her back (*'ôref*) to her mother-in-law. The name of the other was Ruth, because she apprehended (*rā'athāh*) the words of her mother-in-law' (*Rūth Rabbā*, ii. 9).

The Rabbis decide from a pun that the language of the creation was Hebrew.

'"She shall be called Woman [*'ishshāh*], because she was taken out of Man [*'îsh*]" [Gn 2^{23}], from this it is evident that the Torah was given in the holy tongue.' Rabbi Phinehas and Rabbi Ḥilkiah claim the following on the authority of Rabbi Simon: 'Just as the Torah was given in the holy tongue, so was the world created with the holy tongue. For, hast thou ever heard anyone derive a form *gynia* from the word *gyne* (Gr. γυνή, 'woman')? Or does one derive *anthropia* from the word *anthropos* (Gr. ἄνθρωπος, 'man'), or *gebhartā* from *gabhra* (Syr. for 'man')? But one does say *'ishshāh* [Heb. for 'woman'] from *'îsh* [Heb. for 'man']"' (*Berēshîth Rabbā*, xviii. 4).

The Massoretic variations of the Heb. text of the Bible open up new channels for Haggadic exegesis. The Midrash often assigns explanations for the defective writing in the text or for the marginal variations (*ḳerî* and *kethîb*). The following is an example:

'"When it giveth its colour (lit 'eye') in the cup" (Pr. 23^{31}) is rendered "the script reads 'in the purse' (Heb. *bakkîs*), not 'in the cup' (Heb. *bakkôs*), referring, on the one hand, to the drunkard, who giveth his eye in the cup; and, on the other hand, to the merchant who fixeth his eye on his purse"' (*Tanḥūmā Shemînî*, 7).

The Midrash also employs the well-known kabbalistic method of exposition, *gemaṭriā*, which consists in deducing hidden meanings from the numerical value of the letters in the Heb. words.[1]

Finally, the Midrash employs the anecdote to advantage. The value of the anecdote as a didactic force is generally recognized. But, more than this, we are to seek in the anecdote for historical events witnessed by contemporaries, for folk-lore, for primitive conceptions of natural science, etc. Only a few examples can be given here. The following pathetic tale is one of a series of anecdotes depicting the events that transpired during the destruction of the Holy City:

'The story is told of Miriam, the daughter of Naḳdîmôn [Nicodemus], whom the sages had granted an allowance of 500 (*sic*) gold denarii for her daily ointment expenditures, and who maligned them for it in the words "Thus mistreat your own daughters!" . . . Says Rabbi Eleazar: "So sure may I be of seeing [Zion's] consolation as I am that I saw her [some time after the destruction] in Acco, picking barley-grains from beneath the stalls of horses, and I applied the Biblical verse to her case, 'If thou know not, O thou fairest among women, go thy way forth by the footsteps of the flock, and feed thy kids beside the shepherds' tent'" (Ca 1^8)' (*Ēkhā Rabbāthî*, 1, 48).

The superstitions of the day were shared alike by Rabbi and priest. Many are the stories told of demons infesting wells and desert places (cf. *Tanḥūmā*, *Berēshîth*, 27; *ib.* *Ḳedhôshîm*, 9), often driven out through the opportune intervention of the Rabbi who called magical formulæ to his aid. Very often the heathen practices of antiquity are recorded. Thus, in *Ēkhā Rabbāthî* (proem 23), it is said, 'The Arab slays a lamb and inspects the liver for the purpose of auguring future events.' This practice is well known to students of *Kulturgeschichte*. Philosophy, primitive conceptions of science, natural history—all cater to the one end of teaching a lesson in ethics or morals, which is ever the ultimate aim of the Haggadic Midrash.

LITERATURE.—This is given throughout the article.

SOLOMON T. H. HURWITZ.

MIGRATION.—See RACE.

MIKIRS.—1. Name and history.—The people known to the Assamese by the name Mikir are one of the numerous Tibeto-Burman races of Assam. Their own name for themselves is Ārlèng, which (like many other tribal names in this region and elsewhere) means 'man' in general. Their numbers, according to the Census of 1911, were 106,259—a large total for a homogeneous Tibeto-Burman group in Assam; of these 736 were classed in the returns as Hindus, 1182 as converts to Christianity, and the remainder as animists. The race occupies the central portion of the Assam range, looking north to the Brahmaputra, and the isolated mountainous block south of that river between Nowgong and Sibsāgar called the Mikir Hills; a few have settled in the plains of Nowgong and Kāmrūp, and north of the river in the Darrang district, and follow plough cultivation, but the main strength of the tribe is found in the hilly region of the Kāmrūp (about 11,000), Khāsi and Jaintia Hills (15,600), Nowgong (45,000) and Sibsāgar (25,000) districts. They are essentially a hill race, practising the form of cultivation by axe, fire, and hoe known as *jhūm*. Their remembered history, like that of most tribes of the kind, goes back a very short distance in time. There is reason to believe, from the local names of places and streams, that they once occupied the southern portion of the hill tract north of the Kachar valley, where they are not found at the present day; it is certain that they afterwards resided in mass in the eastern portion of the Jaintia Hills, as subjects of the Jaintia Raja; and a still clearer tradition relates that, being harassed by warfare between Khāsi (or Jaintia) chiefs, they resolved to move into territory governed by the Āhoms, and thereupon migrated into the tracts which they now hold in the Nowgong and Sibsāgar districts. This migration probably took place, as can be gathered from the Āhom annals, about A.D. 1765. As the figures just given show, large numbers continued to live in the Khāsi and Jaintia Hills and along the Kāmrūp border, which tract they call Nihàng, the territory into which they migrated in the east being called Nilīp. They are a peaceful and unwarlike race, and are said to have given up the use of arms when they placed themselves under the protection of the Āhom kings. Their traditions tell of fights with the Hill Kachāris, or Dīmāsā, but these were anterior to the migration into Jaintia territory, or at any rate to that into the Āhom dominions.

---

[1] A. Wünsche has collected all the numerical proverbs in the Talmud and the Midrash in *Die Zahlensprüche im Talmud und Midrasch*, Leipzig, 1912 (reprinted from *ZDMG* lxv.–lxvi.).

[2] For the Haggādāh, as used by the Church Fathers, the work of L. Ginzberg is important (*Die Haggada bei den Kirchenvätern*, i., Amsterdam, 1899, ii., Berlin, 1900).

[3] Among the great number of collections of Rabbinic proverbs the work of M. Schul (*Sentences et proverbes du Thalmud et du Midrasch*, Paris, 1878) deserves mention.

[1] In Heb. the letters have numerical values.

2. Physical characteristics.—Physically they present the ordinary features of the Tibeto-Burman hill races of Assam: a light yellowish-brown complexion, an average height of about 5 feet 3 inches, cephalic index 77·9. The nose is broad at the base, and often (but not always) flat, with a nasal index of 85·1 and an orbito-nasal of 107·7. The facial hair is scanty, and only a thin moustache is worn. The front of the head is sometimes shorn; the hair is gathered into a knot behind, which hangs over the nape of the neck. The body is muscular, and the men are capable of prolonged exertion. They have been largely employed (like the Khāsis) as porters in frontier expeditions in Assam, and carry heavy loads, the burden being borne upon the back and secured by a plaited bamboo or cane strap passing round the forehead; this, however, is the general method of carriage from Nepāl eastwards along the whole sub-Himālayan region, and not peculiar to the Mikirs. The staple food is rice, fish, and the flesh of pigs, goats, and fowls, but meat is chiefly eaten at sacrifices. The flesh of cows is not eaten, nor is milk drunk. Large quantities of rice-beer are made and consumed, being prepared by each household, and spirit is also distilled. Opium is used to a large extent, as by other races in Assam. Tobacco and betel-nut are also commonly used.

3. Marriage and inheritance.—The Mikir people are divided into three sections, called Chintòng, Rònghàng, and Āmrī. These, however, are only local names, the first representing that portion of the tribe inhabiting the Mikir Hills, the second the central portion, in the hilly parts of Nowgong and N. Kachar, and the third those in the Khāsi and Jaintia and Kāmrūp Hills. The whole tribe, wherever settled, is divided into five large exogamous groups, and these into sub-groups. The five main groups are called Ingtī, Teràng, Lèkthē or Inghī, Teròn, and Timung. Within each of these groups intermarriage cannot take place. The scheme of society is patriarchal, the children being counted to the father's group. The most usual marriage, however, is between first cousins on the mother's side, and the maternal uncle occupies a privileged position at the funeral ceremonies; this may be a custom adopted from the Khāsis, among whom the strictly matriarchal system prevails. Ordinarily the son on marriage brings his wife home to his parents' house; but, if he has to make a payment to his father-in-law, he may stay a year, two years, or even for life, according to agreement, giving his work to the family in return for his bride. There are traces of a former condition of things analogous to that which obtains among the Nāga tribes, in which the boys of a village lived together in the *teràng*, or bachelors' house, and the unmarried girls are said also either to have had their own *teràng* or to have lived in that of the boys, when promiscuous intercourse and illegitimate births were common. This practice, however, no longer obtains anywhere. The marriage-tie is said to be ordinarily observed with strictness, but divorce is permissible. Polygamy has been adopted sporadically from the Assamese, but generally monogamy prevails. The sons inherit; if there are none, the brothers; after them the deceased's nearest agnate of his own exogamous group. The wife and daughters get nothing, but retain their personal property, ornaments, clothes, etc.

4. Gods.—The religion of the Mikirs has been to some extent affected by ideas borrowed from the Khāsis, and in a larger degree by Hinduism. One of their gods, Pirthàt Rēchō (the god of thunder), bears a Khāsi name; but borrowings here are chiefly noticeable in the funeral ceremonies and the methods of divination. Hinduism has contributed the name of Jòm, or Yama, as the god of the dead, and the abode of spirits is called Jòm-āròng, or 'Yama's town.' Possibly Mahādeva may be the original of Ārnàm-kethē (='the great god'), who is a house-god worshipped by a triennial sacrifice; and one of the gods, called Ārnàm-pārō (='the hundred-god'), includes under this name Kāmākhyā, the Hindu goddess of Nīlāchal above Gauhāti. The original Mikir conception of deity is, like that of the rural population of India generally, open to the adoption into the pantheon of any divine agency venerated or propitiated by their neighbours. The word *ārnàm* ('god') may be generally defined as 'anything felt to be mighty or terrible.' All natural objects of a striking or imposing character have their divinity. The sun and moon are regarded as divine, but are not specially propitiated. Localities of an impressive kind, such as mountains, waterfalls, deep pools in rivers, great boulders, places where a river disappears underground, have each their *ārnàm*, who is concerned in the affairs of men and has to be placated by sacrifice. Such local divinities of the jungle are propitiated chiefly to avert mischief from tigers, which are a terrible plague in some parts of the Mikir country.

Besides these divinities of flood or forest, there are other deities of a more specific character. These may be classified into house-gods, concerned in the welfare of the household, and gods concerned in the prosperity of the village generally, while a third class preside over various kinds of disease or trouble. The most important of the house-gods is Hèmphū ('head of the house,' or 'householder'), who owns all the Mikir people. With him is associated Mukràng, who is slightly lower in dignity. These two gods, the preservers of men, are approached by the sacrifice of a fowl or goat. Everybody can sacrifice to them at any time, and Hèmphū must be invoked first in every sacrifice, being the peculiar owner of men. Pèng, another house-god, lives in the house, and gets the offering of a goat, sacrificed once a year in the space before the house; maize, rice, and a gourd of rice-beer are placed for him above the verandah of the house, and the first-fruits of the harvest are offered to him. Ārnàm-kethē, already mentioned, is another house-god, but lives in heaven, not, like Pèng, in the house itself. He is propitiated by the sacrifice of a castrated pig once in three years. Both Pèng and Ārnàm-kethē have to be specially invoked to take up their abode in the house, and their introduction to it is generally due to the action of a diviner (*uchē*), called in on the occurrence of a case of sickness, who declares (after the appropriate incantations) that Ārnàm-kethē or Pèng wishes to join the household. If it were not for this, Mikir families would generally be satisfied with Hèmphū and Mukràng.

The village or communal gods are called Rèk-ànglòng (= 'mountain of the community') or Inglòng-pī (= 'great mountain'), and Ārnàm-pārō, already mentioned. The Mikir villages are nomadic, moving from place to place as the soil in the neighbourhood becomes exhausted. Rèk-ànglòng is the god of the hill on which the village stands, the *deus loci*, with whom they have to be at peace. He is worshipped in the field, and only men eat the sacrifice, which is a fowl or goat per house once a year. Ārnàm-pārō is the name of a god who takes a hundred shares of rice, rice-flour, betel-nut, and the red spathe of the plantain-tree cut up; the name seems to be a collective, and to indicate all the divine powers in the neighbourhood. He is worshipped with a white goat and a white fowl. These two gods figure particularly at the *Ròng-kēr*, or great annual festival, celebrated for the most part in June at the beginning of the year's rainy-season cultivation, or in some villages during the cold weather. The sacrifice is eaten in common by the men only of the village, and they keep apart from their wives on the night of the festival. The observances correspond with the custom of *genna* (village tabu), which is common among the neighbouring Nāga tribes.

The gods named above are all invoked and propitiated to grant prosperity and avert misfortune, both generally and specially. There are, besides, numerous gods who take their titles from the special diseases over which they preside or which they are asked to avert; such gods are called after rheumatism, cholera, barrenness among women, goitre, phthisis, stone, diarrhœa, dysentery, smallpox, black and white leprosy, elephantiasis, etc. Each worship has its appropriate ritual, often of a complicated character. Among these deities perhaps a trace of Hinduism may be discovered in the name for smallpox, *pī-āmīr*, 'the mother's flowers': in Assamese and Hindī the goddess of smallpox is known as 'the mother' (Mātā, or Sītalā Māī). It is difficult to draw the line which divides the gods, *ārnàm-ātum*, who preside over these plagues from the demons or devils, *hī-ī*, who are also said to cause continued sickness. They too are propitiated with sacrificial offerings in the same manner as the gods.

An interesting name in the list of gods is Lāmāphū, 'the head or master of words,' a power probably of modern origin. He is the deity sacrificed to by a man who has a case in court; the sacrifice is a young cock, which should be offered at night, secretly, by the sacrificer alone, in a secret place.

There is no worship of trees or animals, and the gods have no visible shape, temples, or shrines. Idols are not in use. At the time of the sacrifice the gods to whom it is offered are addressed in set forms of words by the worshipper, but there does not appear to be any separate class of priests charged with the sacrificial ritual. The animal sacrificed is beheaded, as in Hindu sacrifices, by a stroke delivered from above with a heavy knife.

5. Diviners.—The most important person with reference to the worship is the diviner (*uchē*, fem. *uchē-pī*), who decides on the deity to be invoked. Here, again, there does not appear to be any caste or hereditary function: any one may be an *uchē*. The diviners are of two kinds—the inferior, generally a man, called *sàng-kelàng-ābàng*, 'he who inspects grains of rice,' whose art is acquired by instruction and practice; and the superior, called *lodèt* or *lodètpi*, invariably a woman, who works under the inspiration or *afflatus* of divine powers. The services of these persons are generally sought in cases of sickness, the *lodèt* being inquired of in the more serious cases.

The humbler practitioner proceeds by arranging grains of rice, taken at random from those left in the pot, in particular fashion in small heaps; the grains in the heaps are then counted, and, if the odd numbers predominate, the omen is good. Cowries are sometimes used instead of grains of rice. Another way, apparently borrowed from the Khāsis, is to arrange in a circle, equidistant from a point marked on a board, as many little heaps of clay as there are gods suspected in the case, each heap being called by the name of a god. An egg is then sharply thrown at the point marked in the middle of the board; when it breaks and the yolk is scattered, that heap which receives the largest splash of yolk, or towards which the largest and longest splash points, indicates the god responsible for the affliction. Another mode is to hold upright in the hand a long iron knife of special form, called the *nòkjīr*, which is invoked by a spell to become inspired and to speak the truth. The holder then asks questions of the *nòkjīr* as to the probability of the sufferer's recovery and the god responsible for his sickness, and the *nòkjīr* shakes at the correct answer and name.

The *lodèt* is an ordinary woman (not belonging to any particular family or group) who feels the divine *afflatus*, and, when it is upon her, yawns continually and calls out the names and will of the gods. Her assistance is invoked when witchcraft (*mājā*) is suspected.

She bathes her hands, feet, and face in water in which the sacred basil (*ocymum sanctum*, the *tulsī* of Indian languages) has been steeped, and begins to shake and yawn. A gourd of rice-beer is brought, of which she drinks some, and begins to call out the names of gods, and they descend upon her. She is now inspired, and, when questioned, indicates, by indirect and riddling answers, the enemy who has bewitched the sufferer, or the gods to whom sacrifices must be offered.

Charms are much used for the treatment of disease, as they are everywhere else in India, and do not present any special features. Oaths and imprecations take the place of ordeals, the speaker inviting evil on himself if he swears falsely or fails to perform a promise.

6. Funeral ceremony.—The most elaborate celebration is the funeral ceremony, of which a long account, full of detail, is given in Stack and Lyall's monograph on *The Mikirs* cited at the end of this article. Much money is spent upon it, and it is spread over several days. It is the only occasion on which dances are performed by the young men of the village or music used, except (to a much less extent) at the harvest-home. The ceremony is considered obligatory in all cases except that of a child who has been born dead, or who has died before the after-birth has left the mother; in such cases the body is buried without any ceremony. Victims of smallpox or cholera are buried shortly after death; but the funeral service is performed for them later on, the bones being dug up and duly cremated. When a person is killed by a tiger, if the body or clothes are found, they are buried at a distance from the village, because the tiger is supposed to visit the burial-place. Such persons cannot gain admittance to Jòm-āròng unless elaborate funeral and expiatory ceremonies are performed for them. Being killed by a tiger is generally imputed to the victim's sin; his spirit is believed to dwell in the most dreary of the places where dead men's spirits go. Except in such cases, the dead are disposed of by cremation, the burnt bones being afterwards buried.

What is chiefly noticeable about the ceremony, as described in the work referred to, is the confident assumption of the continued existence of the dead person's spirit, for whom food, specially prepared by the *uchē-pī*, or divining woman, is set apart; the insistence upon the due performance of the rites in order to get admission to Jòm-āròng; and the use of dancing, which is marked by its name (*chomàng-kàn*) as adopted from the Khāsis, in the ceremony. If the deceased is a person of unusual importance, a still more elaborate ceremony is required, and monumental stones, upon the model of those erected by the Khāsis, are set up.

7. Ideas of future life.—Apart from the ritual of the funeral, the Mikirs seem to have a strong conviction of the survival of the dead. They speak of having seen the 'shade' or 'image' (*ārjàn*) of a dead man; a sickly or neurotic person catches such glimpses in the house, on the road, etc. *Phārlō*, 'spirit,' is used both of living persons and dead. They say of one deceased, 'Last night in my spirit I saw him,' where *phārlō* is the spirit of the sleeping man. When such glimpses are experienced, betel and food are set aside in the house, and after a time thrown away. After a death a chant is composed, setting forth the parentage and life of the dead, and ending: 'You will now meet your grandparents, father, deceased brother, etc., and will stay with them and eat with them.' As already mentioned, food is regularly provided for the spirit until the completion of the funeral; after that there are no regular offerings, but occasionally a man or woman puts aside from his or her own share of food a portion for the dead, as, *e.g.*, when another funeral reminds them of those who have died before. There is said to be no fear of the dead coming back to trouble the living. The Mikirs' conception of 'Jòm's town' is that everything there is different from the earth-life. An idea, perhaps borrowed from Hinduism, is said to prevail that the spirits of the dead do not stay for ever in Jòm-āròng, but are born again as children, and this goes on indefinitely. On the other hand, Stack records, in the words of his informant, the following:

> 'The Mikirs give the names of their dead relations to children born afterwards, and say that the dead have come back; but they believe that the spirit is with Jòm all the same' (*Mikirs*, p. 29).

8. Conclusion.—The unwarlike character of the Mikirs has prevented them from becoming, like their neighbours, the Nāgas and Kukis, split up into different units, with hostile feelings towards all outside the community, and with languages gradually diverging more and more from the common standard. Their speech is very uniform wherever they are found, and a large amount of co-operation and friendly intercourse exists among them. On the other hand, the group differs very much, in habits, institutions, and particularly in language, from the other tribes by whom they are surrounded. A study of their speech and social institutions has led to the conclusion that they should be classed with those tribes which form the connecting link between the Nāgas and the Kuki-Chins, and that the preponderance of their affinities lies with the latter race, especially with those dwelling in the south of the Arakan Roma range, where the Chin tends to merge into the Burman of the Irawadi valley.

LITERATURE.—All that has as yet been put on record about the Mikirs is summarized in the volume in the series of Assam Ethnographical Monographs entitled *The Mikirs*, from the papers of E. Stack, edited, arranged, and supplemented by C. J. Lyall, London, 1908.

C. J. LYALL.

MILINDA.—Milinda is the Indian name for the Greek king of Bactria called in Greek Menander. When Alexander's empire broke up on his death, Greek soldiers on the east of India founded separate States, and the names of about thirty of them and their successors are known by their coins. Of these the most powerful and successful was Menander, who must have reigned for at least thirty years at the end of the 2nd and the beginning of the 1st cent. B.C. He died probably about 95 B.C., but we know neither the boundaries of his kingdom nor how far he was merely over-lord, rather than the actual administrative sovereign over the various portions of his vast domain. He is the only one of those Greek or half-Greek potentates whose memory has survived in India; and he is there remembered, characteristically enough, not as a political ruler, nor as a victor in war, but as an intelligent and sympathetic inquirer into the religious beliefs of his subjects.[1]

This has found expression in a very remarkable book, the *Milinda Pañha* ('Questions of Milinda'). Just as in one of the most popular of the Dialogues of the Buddha Sakka, the king of the gods, is represented as coming to the Buddha to have his doubts resolved, so in this work the Greek king is represented as putting puzzles in religion to Nāgasena, a wise teacher among the Buddhists of his time. In all probability it was with the *Sakka Pañha Suttanta* in his mind that the author of the *Milinda Pañha*, whoever he was, framed his work.

The *Milinda Pañha* is divided into seven books. The first is introductory, and is very cleverly so drawn up as gradually to raise the expectations of the reader regarding the great interest of the encounter of wit and wisdom which he will find in the following books. Bk. ii., 'On ethical Qualities,' and bk. iii., 'On the Removal of Difficulties,' contain a number of questions, put by the king and answered by Nāgasena, on the elementary doctrines of Buddhism. On the conclusion of this book the king is converted, and devotes himself to a long and careful study of the text of the Pāli canon. In bk. iv., the *Meṇḍaka-pañha*, or 'Dilemmas,' the king submits to Nāgasena the difficulties which he has met in the course of his studies. The discussion of these difficulties leads up to and culminates in the meaning of *nirvāṇa*, and closes with an eloquent peroration on that subject.

Having thus brought his reader up to the bracing plateau of emancipation, the author proceeds in the next book, the *Anumāna Pañha*, 'Problem of Inference,' to describe what is to be found there. In an elaborate allegory of the City of Righteousness he sets out the various mental and moral treasures enjoyed by the *arahant* who has reached in this life the ideal state. The next book, the *Dhutaṅgas*, 'Extra Vows,' is devoted to an exaltation of those who have adopted the ascetic practices so called. The last book, incomplete in our existing MSS, consists of a long list of types of the *arahant*, showing how he has, *e.g.*, five qualities in common with the ocean, five with the earth, five with water, and five with fire. The details of sixty-seven such similes are given. Of the remaining thirty-eight only the list is given, the detailed explanations being lost.

There are peculiarities both of merit and of defect in this book. The author, or authors, have an unusual command of language, both in the number of words used and in the fitness of the words chosen in each case. There is great charm in the style, which rises occasionally throughout the book to real eloquence; and there is considerable grasp of the difficult and important questions involved. On the other hand, there is a great weakness in logic. The favourite method is to invent an analogy to explain some position, and then to take for granted that the analogy proves the position taken to be true; and quite often, when the right answer to a dilemma would be a simple matter of historical criticism, the answer given savours of casuistry, or is a mere play on the ambiguity of words. Then the author, though he naturally avoids the blunders so often repeated in European books against Buddhism—that *nirvāṇa*, *e.g.*, is a state to be reached by a 'soul' after it has left the body, or a state not attainable except by a 'priest' or a 'monk'—does not stand on the ancient Path. His description of the *arahant*, whom he calls a *yogī* (a term not found in the older books), lays more stress on those qualities afterwards ascribed to the *bodhisattva* (*q.v.*) than on those belonging to the Path, or mentioned (of the

---

[1] See the authorities quoted in Rhys Davids, *Questions of King Milinda*, i. (*SBE* xxxv.) pp. xviii–xxiii.

arahant) in the *Nikāyas.* His Buddhology has advanced beyond that of the *Nikāyas.* The ethics of the Aryan Path are barely referred to; the doctrine of causation, the necessity of seeing things as they really are (*yathābhūtaṁ pi jānanaṁ*), is not even mentioned, notwithstanding its cardinal importance in the earlier teaching. The author devotes a whole book to the *dhutaṅgas*, a term not occurring in the *Nikāyas*, and in that book manifests a spirit entirely opposed to the early teaching.[1] All these peculiarities of style and mental attitude are uniform throughout the work. It would seem, therefore, most probable that it was the work either of one author or of one school within a limited period of the history of that school. Probably the latter will eventually be found to be the right explanation.

The work is four times quoted as an authority by the great Buddhist commentator, Buddhaghoṣa.[2] It is the only work outside the Pāli canon which he thus quotes. It is also quoted as an authority in the *Dhammapada* commentary (i. 127).[3] All these references may be dated in the 5th cent. A.D. They are taken from the second, third, and fourth books, which at least must be considerably older than the works in which the *Milinda* is quoted as an authority. None of the quotations is exactly word for word the same as the corresponding passage in Trenckner's edition of the text,[4] and the present writer has pointed out elsewhere the various interpretations possible of these interesting, though slight, discrepancies.[5] In one passage (p. 102 of the text) Buddhaghoṣa seems to have the better reading. Nāgasena is also quoted in the *Abhidharma-kośavyākhyā*, a Sanskrit Buddhist work which may be dated in the 6th cent. A.D.[6] There are also several incidental references in Chinese 'translations' of Indian books. When we know the dates of the latter, and can be sure that the references really occur in them, those references may have importance.

At the beginning of the work (p. 2 of the text) there is a table of contents giving the titles of the subdivisions of the book. The editor, V. Trenckner, also gives us titles, which differ, however, from those in the table of contents given in the text. Hīnaṭikumburē's translation into Siṁhalese[7] likewise gives titles, presumably from the much older Pāli MSS which he used. These titles differ from both the other lists. Trenckner, who has certainly made one glaring mistake (p. 362), gives no *apparatus criticus* for his titles; and, as he used only three of the seven MSS of the work known to exist in Europe,[8] one would like to be informed also as to what readings are given by the other four. Even for the canonical books the discrepancies in the subsidiary titles are very frequent, and it is often probable that such titles are later than the text to which they refer. It is clear that, pending further information, Trenckner's titles to the divisions of the *Milinda* cannot be relied on as original.

B. Nanjio, in his most useful catalogue of Chinese Buddhist books,[9] gives under no. 1358 the title of one called *Nāsien Bikhiu King*, 'Nāgasena the Bhikkhu's Book.' The attempt to reproduce the sound of the words of this title suggests that the words before the translator must have been, not Sanskrit (*bhikṣu*), but Pāli (*bhikkhu*) or some other Indian dialect akin to Pāli. J. Takakusu has discussed the date of this work, which purports to be a translation of some Indian book with the same title.[1] It is first mentioned in a catalogue dated A.D. 785–804, and subsequently in others. But, though the compilers of all these catalogues are usually careful to give the name or names and the date of the translators or authors of the books which they mention, they do not do so in this case. They add, however, a remark:

> 'The translator's name is lost, and we register it as belonging to the Eastern Tsin dynasty (A.D. 317–429).'

So we have a book known to have existed at the end of the 8th cent., and then believed, on grounds not recorded, to have existed in the 4th cent. A.D. There is no evidence that the original was in Sanskrit.

There are two recensions of this book in Chinese, the longer one about half as long again as the shorter one. The difference arises mainly from the omission in the shorter of two long passages found in the longer. In other matters the two are much the same. These omissions are probably due to a mere mistake, perhaps of the translator, perhaps of the printer, and the two recensions may be considered as really one. This bears to the Pāli text the following relation.

The translation into English by the present writer consists of 580 pages. The Chinese corresponds more or less to 90 of these pages (one recension omitting about 34 of those 90). The paragraphs corresponding in Chinese and Pāli are those on pp. 40–135 of the English version. But there are seven or eight omissions, and three additions of whole paragraphs, and quite a number of smaller variations or discrepancies.[2] It is clear that there is some connexion between the Chinese and Pāli books. It is possible that the Indian original (for there was only one) of the Chinese book may be the original out of which the Pāli was developed, mainly by the addition of the last three books. It is equally possible that the Indian work translated into Chinese was itself derived from an older work in seven books, and that its author or authors omitted the last three books as dealing with *arahant*-ship, in which he (or they) took no interest. This would be precisely in accord with the general feeling in the north-west of India at the period in question—the end of the 3rd cent. B.C. The doctrine of an emancipation to be reached in this life by strenuous mental exertion was, not unnaturally, yielding place to a doctrine of salvation in the next life through *bhākti*, personal devotion to a deity. The psychological details of the old system of self-control rather bored people. So the *Milinda* may, quite possibly, have been reduced to a short and easy book, with the sting of *arahant*-ship taken out of it.

A solution of this *Milinda* problem would be of the utmost importance for the elucidation of the darkest period in the history of Indian literature. Unfortunately, each of the alternatives suggested above involves great difficulties, and none of the scholars who have written on the subject has so far been able to persuade any other to accept his conclusions. The evidence at present available is insufficient. When the Tibetan translation has been properly examined, when all the quotations from the *Milinda* in the Pāli commentaries are edited, when all the references elsewhere (and especially those in the numerous Buddhist Sanskrit works still buried in MSS) have been collected, we shall be better able to estimate the value of the external evidence as to the history of the *Milinda* literature in India. When an adequate comparison has been made between the words used and the ideas expressed in the Pāli *Milinda* and those found in the canon on the one hand and the commentaries on the other, we shall have more valuable internal evidence than is yet available. The lists of about a hundred words peculiar to the *Milinda* published by the present writer in 1890[1] was necessarily inadequate, and has not since then been improved upon.

T. W. RHYS DAVIDS.

MILITARISM.—See WAR.

MILK (Primitive Religions).—That milk should have become an object of sacred importance in the mind of early man was inevitable. All food was sacred, and milk, so beneficial in every way, has been accorded a special place among the objects of religious veneration by mankind at nearly all stages of his development. Anthropologists have not specifically dealt with the first stages in the domestication of animals, except as a part of the larger question of totemism. There are people who have practically no tamable animals, and these are in the lowest stages of savage culture. An observation of O. T. Mason is clearly indicative of where these first stages must be looked for.

> 'Women were always associated especially with the milk- and fleece-yielding species. Before the domestication of milk-yielding animals and in the two continents where they were not known in aboriginal times, the human mother had to suckle her young two or three years until they were able to walk at her side and partially take care of themselves. The effect of this upon her nature and all social life was on one side in her favour, but on the other dreadfully increased her burdens and retarded the growth of population' (*Women's Share in Primitive Culture*, London, 1895, p. 151).

The two continents here referred to are America and Australia, and E. J. Payne has succinctly summarized the economical and social results of the absence of milk-producing animals (*Hist. of America*, Oxford, 1892, i. 287–292).

These results may be contrasted with the corresponding condition of the people inhabiting the European, Asiatic, and African continents, who have, as far as observation goes, always possessed milk-producing animals. Milk takes an important part in their religious belief and ceremonial. It is not clear, however, whether the diverse practices obtaining among the varied races of these continents have any relationship as stages in the evolution of man's religious attitude towards milk. Consideration of the subject from this point of view can be conducted only by the widest survey of the evidence, and it will be well to approach it from the highest form to which religious belief concerning milk has attained and proceed thence to some of the lower forms of the cult.

The use of milk in religion has reached its climax among the Toda tribes of India. The sanctity of the dairy among these people is the chief element in their religion. The gods take part in the churning, and the dairy organization marks off two great clan divisions: 'The most important dairy institutions of the Todas belong to the Tartharol, but their dairymen are Teivaliol' (W. H. R. Rivers, *The Todas*, London, 1906, p. 680). The milk of the buffaloes is sacred. The ritual connected with the buffalo and with the dairy is 'certainly of a religious character,' and there can be little doubt that the dairy formulæ 'are intercessory and that they bring the dairy operations into definite relations with the Toda deities' (*ib.* p. 231). The dying are given milk to drink when on the point of death (W. E. Marshall, *A Phrenologist amongst the Todas*, London, 1873, p. 171), and the dead body is taken into the dairy (Rivers, 339 ff.). From these facts, carefully marshalled by Rivers, it is clear that these people have developed the sanctity of milk to its highest point. With them it is an essential feature of organized worship.

There is nothing like this in any other part of the world. It is the highest specialized use of milk in religious observance. The sacred character of milk in other parts of the primitive world is shown by its use in various ceremonies of a religious character, but not in connexion with an organized religious cult, as among the Todas. Both in Africa and in India these ceremonies reach a high grade in places, but do not attain the Toda level. Perhaps the royal milk-drinking observances of the king of the Unyoro, a section of the Bantu people in Africa, affords the nearest parallel (J. G. Frazer, *Totemism*, London, 1910, ii. 526–528) to the Toda practice. An interesting Kaffir folktale, 'The Story of the Bird that made Milk' (G. M. Theal, *Kaffir Folk-lore*, London, 1882, pp. 1–46), appears to be founded on the first use of milk and refers to events which preceded the use of milk, but it contains details which bring it within the general condition of the African beliefs. 'They used to get milk from a tree. This was got by squeezing, and the people who drank it were always thin.' The Kaffirs now drink a kind of fermented milk, and it is noticeable that, 'when poured out for use by the master of the household, who is the only one permitted to touch the milk sack, a portion is always left behind to act as leaven' (*ib.* p. 195). These are clearly religious practices which require further investigation, but in the meantime it is permissible to classify them as less developed in form than the Toda example.

Every one knows the reverence paid to the cow in India; but, in spite of the attempt of the early mythologists to identify the cow with the higher forms of Hindu religion (A. de Gubernatis, *Zoological Mythology*, London, 1872, i. 1–41), the fact remains that the cow is not a god. The reverence for the cow is quite human in its character, and the 4th book of the *Laws of Manu* contains the clearest evidence of this.

Crooke points out that respect for the cow in India is of comparatively modern date, and gives some interesting data to show the lines along which it has developed (*PR* ii. 226–236). This view is confirmed by the uses to which the products of the cow were put. According to Viṣṇu, a house is purified by plastering the ground with cow-dung, and land is cleansed by the same process; cows alone make sacrificial oblations possible by producing sacrificial butter, and among six excellent productions of a cow which are always propitious milk and sour milk are included (*Institutes of Vishnu* [*SBE* vii. (1900)], xxiii. [1883] 56–61).

On the other hand, the evidence from the Panjāb is that, when a cow or buffalo first gives milk after calving, the first five streams of milk drawn from her are allowed to fall on the ground in honour of the goddess (D. C. J. Ibbetson, *Punjāb Ethnology*, Calcutta, 1883, p. 114). It is also a protective from the evil eye, and has various uses in magic and divination. This suggests that in the Panjāb milk is on its way towards a definitely religious position.

In Europe the once sacred character of milk is indicated by the evidence of folk-lore, which records the protective measures which have to be taken to secure it against harm from witches and other malevolent powers (*GB*³, pt. i., *The Magic Art*, London, 1911, ii. 52 f.).

---

[1] *Questions of King Milinda*, i. p. xlii ff.

The best examples are found in Russia, where the people on Midsummer eve drive the cattle through the fire to protect the animals against 'wizards and witches, who are then ravenous after milk' (W. R. S. Ralston, *Songs of the Russian People*², London, 1872, p. 391). This rite affords the explanation of a curious story told of an Irish prince, Bress, son of the Fomorian Elatha. It is related of him 'that he arrogated to himself the milk of all the hairless dun cows in the land,' and he 'caused a great fire of ferns to be made, and all the cows in Munster to pass through it, so that they might fulfil the necessary conditions, and their milk become the royal property' (H. d'Arbois de Jubainville, *Irish Mythological Cycle*, Eng. tr., Dublin, 1903, p. 95). Included in this tradition are the following ritual observances—the restriction to cows of a single colour, the passing through fire to secure protection, and the right of the king to a royal supply of milk. The restriction as to colour also appears elsewhere in Irish folklore (C. Plummer, *Vitæ Sanctorum Hiberniæ*, Oxford, 1910, vol. i. p. cxlvi, and K. Meyer and A. Nutt, *Voyage of Bran*, London, 1895–97, ii. 186). The legend of the Dun Cow of Whittingham near Preston is of the same order, the attacking witch being successful in this case (J. Harland and T. T. Wilkinson, *Lancashire Legends*, London, 1882, pp. 16–19).

Ritual in custom and ritual in myth are parallels, and it would be well to inquire whether in folklore there is more than this suspicion of sanctity in the attitude of popular belief as to milk. The milkmaid is almost everywhere an important personage in the social fabric of the village, and her utensils share her importance. The present writer differs from Lady Gomme in her explanation of the famous game of 'Milking Pails' as a mere teasing of the mother (*Dict. of Traditional Games*, London, 1894–98, *s.v.*) in that it appears to be a cumulative estimate of the superior value of the milking-pail as an article of domestic use, and it is pertinent to note in this connexion that the Irish chieftain had 'in his house constantly a cask of milk' (*Anc. Laws of Ireland*, Dublin, 1865–1901, iv. 311). That milk was poured on the ground is attested by J. G. Dalyell (*Darker Superstitions of Scotland*, Glasgow, 1835, p. 193), and W. Gregor states that at death all the milk in the house was poured out on the ground (*Folklore of N.E. of Scotland*, London, 1881, p. 206). This must have originally been an offering to the earth-god as in the Panjāb. In Ireland it is called an oblation to the fairies (W. G. Wood-Martin, *Traces of the Elder Faiths of Ireland*, London, 1902, ii. 7), and the fairies are the successors of the gods. It was offered every Sunday on Brownie's stone in the island of Valay and other islands (M. Martin, *Western Islands*, London, 1716, pp. 67, 110).

This brings us very close to the stage when milk was a sacred object in the cult of the gods. In the Christian Church it was substituted for wine in the elements of the communion. This was afterwards prohibited by canon law (Dalyell, p. 193, quoting Gratian, *Decretalia*, p. 111), but it may be surmised that it originated as one of the surviving rites of ancient pagan religion. St. Bridget was in some degree regarded as the special patron of milking, as appears in the beautiful milking-songs of Scotland (A. Carmichael, *Carmina Gadelica*, Edinburgh, 1900, i. 261–275), and she was at her birth bathed in milk (*Lives of Saints from the Book of Lismore*, ed. Whitley Stokes, Oxford, 1890, pp. 184, 318). St. Bridget is in many of her attributes a pre-Christian goddess, and her association with milk in the surviving forms once more takes us back to ancient pagan religion.

That bathing in milk was also a death rite is shown both in traditional ballad lore and in traditional games. In the beautiful ballad of 'Burd Ellen,' preserved by R. Jamieson (*Popular Ballads and Songs from Tradition*, etc., Edinburgh, 1806, p. 125), is the verse:

> 'Tak up, tak up my bonny young son,
> Gar wash him wi' the milk.
> Tak up, tak up my fair lady,
> Gar row her in the silk.'

Lady Gomme has analyzed the different versions of the children's game of 'Green Gravel,' and has shown from the general movements of the game that it is derived from a funeral rite. This view is confirmed by the fact that the most constant formulæ in the game rhymes include the line,

> 'Wash them in milk and clothe them in silk' (i. 172).

There seems little doubt that these words are survivals of an ancient burial rite.

In the religions of antiquity there is more definite evidence. J. E. Harrison, in her discussion of primitive baptism (*Prolegomena to the Study of Greek Religion*, Cambridge, 1903, p. 596 f.), asks 'what was the exact ritual of the falling into milk? . . . Did the neophyte actually fall into a bath of milk, or . . . is the ritual act of drinking milk from the beginning metaphorically described?' and, in spite of a useful parallel from Egyptian ritual, comes to the conclusion that 'of a rite of immersion in milk we have no evidence.' This, however, cannot be quite true if St. Bridget represents, as there is strong evidence to prove, an early Celtic goddess who has brought into her Christian attributes traditions and rites of pre-Christian origin. There is the further example of the Picts in Ireland saving themselves from the poisoned arrows of their Fir-Fidga enemies by taking a bath filled with the milk of one hundred and twenty white hornless cows, where the single colour condition is again repeated. The rite of bathing in milk attributed to St. Bridget was certainly not of Christian origin any more than the offering of milk and honey in early baptismal rites was Christian (*ib.* p. 597 f.), and we must take it that these rites come from early Celtic religion. The offerings of milk and honey were made to the nymphs and to Pan (Theocr. *Id.* v. 53 f. and 58 f.), and to this day in modern Greece they are made to the Nereids (J. C. Lawson, *Modern Greek Folklore*, Cambridge, 1910, p. 150 f.).

To sum up the evidence—it would appear that in primitive religions there are three stages in the sacred characteristics attributed to milk: (1) where it is a definite part of the dominant religious cult; (2) where it is extensively used in religious ceremonial, but is not an exclusive or predominant element in the ceremonial; (3) where it is looked upon as a religious object, and is, consequently, subject to danger from outside forces, from which it demands various forms of protection. The survey seems to make it clear that the unique example of the Todas is a highly specialized development of the religious conception of milk, and not a normal condition, while the evidence of folklore and of the religion of antiquity leads us to conclude that the endowment of milk with sacred properties arose from its enormous social influences, which led to specialization of its use on solemn and important occasions. This would be the normal position of milk in religious thought. A last stage is represented by the necessity of protecting it from malignant influences. This is survival from the normal stage, and arises only when it was no longer a protective force itself.

LITERATURE.—This is given fully in the article.

L. GOMME.

MILK (Civilized Religions).

1. As food and sacrifice.—Since man is a mammal, milk is universally known; and, as man early learned to use the milk of goats, cows, and camels, milk became a natural symbol of nourishment. The ancient Egyptians sometimes pictured the heavens as a woman with hanging breasts, and sometimes as a cow with full udder,[1] thus suggesting that the heavens nourished men. The Babylonians suggested, similarly, that milk is the divinely given nourishment of man by picturing the mother-goddess with breasts so full that she must support them with her hands.[2] Since milk is so universal an element of human diet, it is but natural that it should have been offered at times in sacrifice to deities, as meat, meal, and firstfruits were. Thus in *Yašt* xv. of the Avesta there is frequent mention of a sacrificial gift of boiled milk, and it was mingled with *haoma* (*q.v.*) in sacrifice.[3] Among the Arabs flesh seethed in milk is still a common dish,[4] yet the Hebrews were prohibited from boiling a kid in its mother's milk. W. R. Smith thought that this was because milk for boiling is usually sour, so that such boiling would involve the offering of a fermented sacrifice, or that possibly milk was here regarded as a substitute for blood.[5]

2. In a supposed Semitic myth.—In the OT 'flowing with milk and honey' is a phrase frequently used to designate the fertility of Palestine. It occurs in Ex $3^{8.17}$ 13^5 33^3, Lv 20^{24}, Jer 11^5 33^{22}, and Ezk $20^{6.15}$. Curdled milk (the modern *laban*) and honey are also mentioned in Is 7^{15} as the food of the child that is to be named 'Immanuel.' It occurs again in the same chapter (7^{22}), where it is more difficult to interpret, and where its occurrence may be due to editorial redaction. The phrase 'flowing with milk and honey' occurs in the J document (*c.* 850 B.C.), and continued to be used till the time of Ezekiel. T. K. Cheyne[6] in 1901 noted that the phrase is more poetical than the context seems to justify, and suggested that it might be a survival of a description of Israel's idealized past. Since ancient poetry is always tinged with mythology, he thought it not improbable that this phrase was of mythological origin. Usener[7] in 1902 held that the phrase was of mythological origin, and that it was borrowed by the Hebrews from Iranian mythology, where, according to him, we hear of heavenly honey and holy cows. The phrase had, he thought, descended by one line to the Hebrews and by another to the Greeks, who described the food of the infant Zeus on Crete as curds and honey. Stade,[8] in commenting on Usener's article, claimed that the phrase 'flowing with milk and honey' was not used earlier than the time of Ezekiel, that in the J document and Jeremiah it was a later addition, and that Usener was right in claiming that in Jl 3^{18} the use of the figure was due to Greek influence. Whether 'curd and honey' could have been a mythological phrase introduced from Assyria, he thought, was a problem for Assyriologists. H. Zimmern[9] in the next year, 1903, claimed from the Assyriological side that honey and curd played a great rôle in the Babylonian cult, and that it was of mythological origin, though he offered little proof for the statement. Finally, Gressmann[10] in 1905 endeavoured to work this view into an elaborate scheme of Hebrew mythology, which formed, he believed, the basis of the prophetic eschatology.

Before accepting this view, it should be noted just what part milk and curdled milk, or *laban*, played in the life of the Hebrews. Milk, like wine, was in early Israel a symbol of prosperity and plenty. An old poet sang of Judah:

> 'His eyes shall be red with wine
> And his teeth white with milk' (Gn 49^{12}).

Laban was a dish so relished as an article of diet that Abraham is said to have offered it to his guests (Gn 18^8), and Jael to the tired Sisera (Jg 5^{25}); honey and *laban* along with wheat, barley-meal, beans, and lentils were furnished as food to David and his men (2 S 17^{27-29}). It is natural, therefore, that *laban* and honey, the two most delicious viands known to them, should enter into poetical descriptions of abundance, fertility, or prosperity (see Dt $32^{13f.}$, Job 20^{17} 29^6, Sir 39^{26}). The natural uses of these articles of food are sufficient to account for these poetic allusions.

The strongest arguments of the mythological school rest, however, on the highly-coloured language of Joel and later apocalyptic writers, and upon supposed Assyrian parallels. In Jl 4^{18} (EV 3^{18}) we read:

> 'And it shall come to pass in that day that
> The mountains shall drop sweet wine,
> And the hills shall flow with milk
> And all the water-courses of Judah
> Shall flow with water.
> And a spring shall come forth from the house of Yahweh
> And water the valley of Shiṭṭim';[1]

in the *Sibylline Oracles*, iii. 744 ff.:

> 'For Earth the universal mother shall give to mortals her best
> Fruit in countless store of corn, wine and oil.
> Yea, from heaven shall come a sweet draught of luscious honey,
> The trees shall yield their proper fruits, and rich flocks,
> And kine and lambs of sheep and kids of goats.
> He will cause sweet fountains of white milk to burst forth';

and again, *ib.* v. 281 f.:

> 'But the holy land of the godly alone shall bear all these things.
> An ambrosial stream distilling honey and milk shall flow from rock and fountain for all the righteous.'[2]

In view of the aridity of the desert, it would seem to need no mythology, but only a little poetic exaggeration, to lead to the designation of Palestine by the nomads as a 'land flowing with milk and honey.' The use of these viands in the life of the Hebrew nation easily accounts for the poetic use in Deut. and Job, and these in turn furnish the point of departure for the later more hyperbolic language in Joel and the *Sib. Or.* Unless we can find some outside parallels, there is, then, no need for the mythological hypothesis.

Most of the Assyrian parallels hitherto cited turn out to be unreal. Thus a passage cited by Zimmern simply enumerates honey and *laban* along with oil, wool, gold, and silver as desirable things.[3] Another passage deserves more attention. It is part of an incantation for driving the demon of sickness from a man's body. It runs:

> '*Laban* from a pure stable they shall bring,
> Milk from a pure corral they shall bring,
> Over the pure *laban* from the pure stable utter an incantation:
> May the man, son of his god, become pure!
> May that man become pure as *laban*!
> Like that milk may he become pure!'[4]

It is clear that no mythological meaning can be involved in this passage. It is the purity of the *laban* and the milk that is emphasized. A mythological quality is as much out of place as it would be in the Avesta, when milk is enumerated among the foods which may be given to a woman who has brought forth a still-born child, in order to effect her purification (see *Vendīdād*, v. 52, vii. 67). Milk is here only one of several ingredients—meat, bread, wine, water. As she had first to drink ox-urine, the milk can hardly have been chosen for mythological reasons. Another fragmentary text which has been frequently cited on the basis of an indefinite reference by Friedrich Delitzsch[1] runs as follows:[2]

> 'Crown of . . .
> For the shepherd of the black-headed [people] . . .
> I pray a prayer . . .
> A sceptre of lapis lazuli may his hand [grasp] . . .
> For the shepherd of the black-headed [people] . . .
> Honey and *laban* abundantly . . .
> The mountain bearing produce . . .
> The steppe, the field bearing fruit . . .
> The orchards bearing fruit . . .
> On his left hand may the god Sin . . .
> To the king in person may they do homage!

This is clearly a prayer for a Babylonian ruler. The petitioner asks that great fertility and prosperity may come in his time. The language resembles that of Joel and the Sibyl, but the imagery is capable of as natural an explanation as is that of the Hebrew seers.

The other passage which has been thought to show that the Babylonians and Assyrians held mythological views of milk and honey occurs in an incantation. The part in question reads:

> 'Pure water bring into its midst.
> The exalted lord, the great serpent of heaven,
> By his pure hands shall establish thee;
> Ea to a place of purity shall bring thee,
> To a place of purity shall bring thee,
> With his pure hands shall bring thee,
> Into honey and *laban* shall bring thee.
> Water of an incantation he shall put to thy lips,
> Thy mouth with an incantation he shall open.'[3]

Here at last we have a passage that moves in such a realm of heavenly unreality that it may fairly be regarded as based on a myth, but the mythical part does not centre at all in the honey and *laban*, but in the action of the god. Honey and *laban* are used to denote a place of fertility and plenty, and it may fairly be claimed that they were introduced here from such usage as that of the preceding passage, and are no necessary part of the myth.

The Semites probably had their origin as a separate people in Arabia,[4] which was a land of deserts and oases. It was thus that the oasis and its palm-tree became one of the symbols of paradise and an emblem of the Golden Age, and finally entered as one of the elements into the Christian symbolism of the New Jerusalem.[5] It seems probable that in the primitive language of the desert an oasis or a fertile land like Babylonia and Palestine may have been designated as a 'land flowing with milk and honey.' The occurrence of the phrase among both Babylonians and Hebrews points in this direction; it probably had an origin in their common ancestry. As the phrase is lacking, however, in the description of paradise both in Gn 2, 3 and in Ezk 28, it can hardly have formed an integral part of the traditions of the Golden Age, or have entered as an important element into the mythology of the Semites.

Indeed, in the paradise story of Gn 3 the food which makes man like God is not milk and honey, but the fruit of a tree. So in the corresponding Babylonian story, the Adapa myth, it was not milk and honey, but 'food and water,' that might have gained immortality for Adapa.[6] As these accounts are doubtless both variants of the same primitive paradise myth, it is impossible to resist the conviction that milk and honey formed no part of that myth among the Semites, but was simply a descriptive phrase employed by the dwellers in the desert to describe fertile lands—a phrase which survived both in Babylonia and in Palestine, and which came only in post-Exilic times among the Hebrews to designate a Golden Age that was still future.

3. In the Avesta.—Among the Persians these ideas apparently did not in the early time play a prominent rôle. Milk was offered in sacrifice and was used in certain incantations, as noted above. Homage was rendered to it,[1] and it was regarded as a divinely purified provision in the breasts of females, as was the seed in males;[2] a prosperous woman was 'rich in children and rich in milk.'[3] The cow was regarded as a beneficent animal guarded by Ahura Mazda as he guarded all other things on which the prosperity of people depends,[4] but in no sense a heavenly animal. So far from Jews having borrowed a myth from Persians, as Usener thought, the elements of the supposed myth appear only in the later syncretistic Mithra cult, and would seem to have been borrowed from the Semites.

4. In the Vedas.—In India milk was viewed as a symbol of nourishment. The Atharvaveda regards a house full of nurture as one full of milk,[5] and the earth is a mother who can pour forth milk for her suppliants.[6] Nevertheless in the Rigveda both milk and honey were employed in the ritual, though they were both subordinate to the all-prevailing *soma*. When milk was used as an offering, it was sometimes sweet and sometimes sour, both kinds of offerings being recognized.[7] As in Iranian ritual, the milk was often mixed with *soma*, the lacteal element sometimes being sour.[8] Honey was in the same way used as an offering; sometimes it was mixed with *soma*,[9] but sometimes with milk. Thus Rigveda, VIII. iv. 8, addresses Indra:[10]

> 'With honey of the bees is the milk mixed;
> Come quick, run and drink!'

Milk was created in kine by Varuna, even as he gave cool breezes to the forests, swiftness to horses, wisdom to the heart of man, lightning to the clouds, the sun to the sky, and *soma* to the mountains (Rigveda, v. lxxxv. 2). This reveals a high estimate placed upon milk and honey as foods, but lacks any mythical element,[11] as does the passage (x. lxiii. 3) in which the sky (*dyau*) gives milk to the All-Gods.

The Sanskrit poets often allude to the ability of the swan to separate milk from water; but this, as C. R. Lanman has shown, has no mythological significance. It is a reference rather to the fact that these birds fed on the milk-like juice of the lotus stalks, which grew beneath the water.[12] Similarly the religious teachers of India often use as an illustration of a changing existence the relationship between sweet milk, sour cream, and butter, not because they saw anything mythological in them, but because they illustrated change in forms of existence.[13]

In India, then, it can only be said that milk and honey were so highly valued as food that they naturally formed a part of the most valued offerings to the gods. Perhaps the proper mixture of these viands was supposed to have some magic significance, for one passage (Rigveda, IX. xi. 2) says that they were mixed by the *atharvans* ;[1] but there is no trace of such a myth as some have supposed for the Semites.

5. In Egypt.—In Egypt, as already noted, the sky-goddess was pictured as either a woman or a cow with full breasts; but this was only to symbolize her nurture of her earthly children. If milk had in early Egyptian thought any mythological significance, we should expect to find it prominent among the foods promised to the deified kings to whom the pyramid-texts of the Old Kingdom promised a place among the gods. True, the departed king is frequently represented as suckled by the sky-goddess or some other divinity connected with Re. The goddess is once thus addressed: 'O mother of this king Pepi . . . give thy breast to this king Pepi, suckle this king Pepi therewith.' The goddess replies: 'O my son Pepi, my king, my breast is extended to thee, that thou mayest suck it, my king, and live, my king, as long as thou art little.'[2] Milk was, then, the food of the celestials only during their heavenly childhood. When Pepi was grown, he was promised 'bread which cannot dry up' and 'beer which cannot grow stale.'[3] Later he is given a 'snared fowl.'[4] Bread is called 'the bread of the god.' Pepi is invited to 'sit down to thy thousand of bread, thy thousand of beer, thy thousand of oxen, thy thousand of geese, thy thousand of everything whereon the god liveth.'[5] Another source of food for the deified king is the tree of life situated in a mysterious isle at a distance, and this king Pepi sought and attained.[6] This tree of life is probably a survival from a desert and oasis life similar to that of the Semites.[7] Milk plays very little part in these Egyptian myths.[8] It is only the food of the deified kings during that part of their celestial life which corresponds to childhood on earth.

6. In Græco-Roman literature.—Among the Greeks and Romans, as among the Semites and people of India, milk and honey were delicacies that were much appreciated, and their use goes back to an early time. Libations of milk and honey were, according to the *Iliad*,[9] poured out for the dead, and such libations appear to have continued down to the Christian era.[10] In case of pestilence milk and honey were among the offerings presented at the sacred mountains of Pelion and Ida ;[11] and, before eating, milk, honey, and bread were offered to Hestia.[12] Milk and honey were also symbols of plenty and prosperity. Thus Pindar († 442 B.C.) says:

> 'Rejoice, my friend! Lo, I send you, though at late hour, this honey mixed with white milk, fringed with the froth of blending, a draught of song conveyed in the breathings of Aeolian flutes.'[13]

Though here metaphorical for sweet poetry, the metaphor attests the use of milk and honey as delicacies. In course of time both milk and honey became symbols of plenty. Thus Tibullus († 18 B.C.) says:

> 'The oaks themselves give honey, and beyond the sheep
> Bring udders of milk ready to the hand of the care-free.'[14]

Similarly Ovid:

> 'Now rivers of milk, now rivers of nectar run,
> And yellow honey distils from the green ilex.'[1]

With these poets milk and honey have become emblems of the Golden Age, but with many others they are simply symbols of plenty.[2]

Latin writers are, of course, dependent on Greek models for their imagery, and it is possible that Tibullus and Ovid were influenced directly or indirectly by Semitic ideas. A usage of milk and honey, however, which goes back to Homeric times cannot have been borrowed from the Persians. Possibly it may have come from Semitic Mesopotamia through the Hittites, since Hittites appear to be mentioned in the *Odyssey*,[3] but we know as yet too little of Hittite ritual to regard this as more than a remote possibility. Possibly, too, it may have been carried to the Ægean lands by Phœnicians, but it is quite as probable that the uses of milk and honey developed in the Ægean lands independently of Semitic ideas.

7. Among Christians.—The many references to milk and honey in Patristic literature collected by Usener[4] are clearly echoes of Joel and the Sibyl. Some curious Christian myths connected with the milk of the Virgin Mary are, however, still current in Bethlehem and its vicinity. There is at Bethlehem a cave called the 'Milk Grotto.'[5] A legend has it that the Holy Family once took refuge there, and that, as the Virgin nursed the Child, a drop of her milk fell on the floor. Because of this it is still believed that a sojourn in the grotto not only increases the milk of women and animals, but cures them of barrenness. In reality this legend arose to Christianize a grotto that was originally a shrine of Ashtoreth.[6]

All about Bethlehem the limestone crumbles and forms little white pebbles about the size of peas. These are accounted for by the story that a drop of the Virgin's milk fell on the rock, and that these pebbles are the miraculous result. Similarly it is said that, as the Virgin nursed the Child by the wayside, a drop of her milk fell on a thistle, which on this account became flecked with white and is called 'Mary's thistle.'[7] These myths are the outgrowth of the transfer to the Virgin of the old grotto of the mother-goddess, and are really much more exotic to Christianity than the quotation in the Patristic writers about the Golden Age.

In the early Church the newly baptized were given milk and honey to taste (or, in some Western churches, milk and wine) as symbolizing their regeneration through baptism (cf. 1 Co 3^2, He 5^{12}, 1 P 2^2). By the twenty-fourth canon of the Third Council of Carthage (397) this milk and honey was to be consecrated at the altar on Easter Even, the most solemn day for baptism; but the use has been forbidden since the Trullan Council of 692.[8]

MILL, JAMES AND JOHN STUART.—The two Mills, father and son, occupy a unique position in the history of British thought. They were, after Bentham, the greatest figures in the utilitarian school and the leaders of the philosophical radicals in politics.

1. **James Mill.**—Next to Bentham, James Mill was the force that moulded the early expression of utilitarian doctrine. He was a Scotsman by birth, the son of humble parents (his father a country shoemaker and his mother a farmer's daughter), born at North Water Bridge, on the North Esk, in the parish of Logie-Pert, Forfarshire, on 6th April 1773. By his intellectual ability and his indomitable power of work, he raised himself to the commanding position that he ultimately attained. His early education was received at the parish school of his native place, and afterwards at Montrose Academy, where he had as schoolfellow Joseph Hume. From Montrose Academy he went to Edinburgh University (in the palmy days of Dugald Stewart), where he graduated M.A. in 1794, and forthwith proceeded to the study of Divinity, and was licensed as a preacher of the gospel in the Church of Scotland in 1798. The ministry, however, was not destined to keep him long. Being appointed tutor to the only daughter of Sir John Stuart of Fettercairn (Member of Parliament for Kincardineshire), he came under the special notice of Sir John, and went with him to settle in London in 1802. He was not long in London before he made his presence felt. In 1803 we find him active in originating *The Literary Journal* and making many contributions to it. In 1804 he produced his pamphlet on the *Corn Trade*. Thenceforth he contributed articles, in an unceasing flow, to innumerable periodicals and magazines—*The Philanthropist, The Annual Review, The Westminster Review, The London Review, The Edinburgh Review.* But his most outstanding essays were written for the Supplement to the fifth edition of the *Encyclopædia Britannica*, the chief of them being on 'Government,' 'Education,' 'Jurisprudence,' and 'Laws of Nations.' A reprint of the *Encyclopædia* articles was made in book form and had a wide influence. For about eleven years (from 1806 to the end of 1817) he worked strenuously at his *History of British India*, which, on its publication, produced a great impression. The immediate result was his appointment to a post in the India House, in the department of Examiner of India Correspondence, where he became head of the office in 1830. Besides a little book on the *Elements of Political Economy* (1821), largely reproducing Adam Smith, but embodying also the distinctive principles of Ricardo, he produced his great psychological work, the *Analysis of the Phenomena of the Human Mind*, which was brought out in 1829. This at once raised him to the position of psychologist in chief of the utilitarian school, filling the gap that had been left in the elaborate and multifarious teaching of Bentham. With Bentham himself Mill was on terms of the most intimate friendship, and the master regarded him as his most stalwart disciple. So staunch a Benthamite, indeed, was Mill that it has been doubted whether he was anything more than a brilliant reproducer of Bentham's opinions. That, however, does Mill an injustice. He was no mere echo, but a voice. His psychology alone proves it; and he was potent as a political force to an extent that even Bentham hardly equalled. When he died (his death took place in London, on 23rd June 1836), he was generally admitted to be the great inspiring spirit of radicalism and the one man who could have made the radical propaganda the success that it had become. In the year before his death (1835) appeared his *Fragment on Mackintosh.* This is really a vigorous defence of empiricism against intuitionism, though it assumes the form of a vehement criticism of Mackintosh, and is chiefly valuable as presenting Mill's philosophical positions in a clear and condensed light, rendered all the more effective by the polemic setting.

Mill's fame as a psychologist rests on his consistent experientialism, his thoroughgoing application of association to the phenomena of the mind, and his uncompromising insistence on the power of associationism to explain the mind and all its processes. But this has already been brought out in the art. ASSOCIATION, and need not be further dwelt on. A word, however, may be said on his psychological ethics. Mill's ethics is essentially hedonistic: the human will is moved by pleasure (or the avoidance of pain) and by this alone; and with a view to the attainment of pleasure (or to the getting rid of pain) men habitually act. But there is such a thing as disinterested conduct; and by the utilitarian himself benevolence is regarded as the supreme virtue. How, then, explain this? In the first place, Mill has recourse to the distinction (of which Bentham had made so much) between motive and intention, and maintains that, while our intention in benevolence is disinterested, our motive is interested; in other words, a benevolent action pleases the individual, gives him satisfaction, else he would not do it, but it also promotes the happiness of others. Now, this being pleased with acting benevolently towards another—what else is it than the individual identifying another's happiness with his own? And what more could be demanded of him? 'Can any greater degree of social love be required,' asks Mill, 'than that the good of others should cause us pleasure; in other words, that their good should be ours?' (*Frag. on Mackintosh*, p. 294). Then, again, there is the ethical principle of transformation (the phrase is not Mill's) to be considered—the principle that we see at work in the miser, whose nature is so changed by his traffic with money that the original desire of money for the pleasure that it can procure him becomes ultimately the desire of money for its own sake. What happens in the case of the miser happens in the case of disinterestedness and benevolence. Although individual pleasure lies at the root of a man's benevolent action, he has come, through continued intercourse with men and the experience of mutual help, to submerge the thought of his own pleasure and make benevolence itself his end.

What, then, of conscience, with its intuitions and its vaticinations? Conscience to Mill is not a simple and elementary faculty in human nature, but the product of association. That gives to it its power, and explains its peculiarities, and indeed constitutes its value. The ultimate test of morality is utility: right and wrong are qualities of conduct and are to be gauged by the tendency of actions to produce pleasure or pain.

Education occupied a large share of Mill's attention. As a utilitarian radical, he was eager that the people should be educated—educated so as to develop and improve their intelligence, and render them fit to be worthy citizens. Hence, he took a practical interest in the educational movement of the time, and entered as a keen polemic into the controversy between the Lancasterian and the Bell systems of education; he tried to establish a school (but failed) on the principles of Bentham laid down in his *Chrestomathia* ('Study of useful things'); and he was one of the small band of ardent educationists who originated the University of London. But his claim to honour as an educationist rests on his broad-minded theory of education, as developed in his *Encyclopædia* article, where education is shown to be the work of a man's life-time, where the roots of it are laid in associationist psychology, and where the principles of Helvetius regarding the almost unlimited power of education in transforming the individual are vigorously enforced.

In the realm of jurisprudence Mill made for himself a great name in the sphere of international law. His *Encyclopædia* article on that subject is, within its limits, almost perfect. It might be elaborated at points and more fully illustrated, but it is everywhere wise and suggestive. Particularly striking are its handling of the rights of nations in the time of war, and its treatment of the possibility of an effective court of arbitration in international quarrels.

As a philosophical politician Mill achieved fame by his theory of government. It is not a theory that is invulnerable. It lays itself open to objection as to the adequacy of its analysis of human nature; it was attacked by Macaulay on the ground of its deductive method and disregard of the inductive mode of procedure; and Sir James Mackintosh attacked it on the side of its extreme advocacy of popular representation, which seemed to ignore the danger of democratic tyranny, or the abuse of power on the part of the 'masses' in defiance of the interests of the 'classes.' The foundation of the theory is that the individual man is by nature self-centred, that he aims at pleasure for self and as much of it as he can obtain, and that, in his pursuit of personal interest, he is ready to lay hold of everything that ministers to his gratification, regardless of the pleasures and desires of others. Hence the need of government, and its meaning: government just signifies keeping one man from grasping at and mercilessly pursuing what belongs to another. But the members of a government are themselves men, with men's selfish passions and readiness to tyrannize over others, and, consequently, need themselves to be restrained. The restraint comes and only can come from the people; and the only tolerable form of government is a representative government — a government where the people's representatives act as a check on legislative abuse. It is only when the people are governed by men elected by themselves and representing them that the interests of governors and governed can be identified. Yet this identification of interest is liable to be broken through, if the representatives are not themselves watched. A body of representative men, if left entirely to their own actions, will have 'sinister' interests and may become as selfish and oppressive as an individual may be. The safeguard lies in frequent parliamentary elections: thus only (so it appeared to Mill) could the people retain a proper hold on their own representatives.

Into social reform Mill threw himself with much energy. Reforming zeal was the great characteristic of the utilitarians. This was but the practical side of their all-controlling principle, the general welfare, or the greatest happiness of the greatest number. Prisons and prison discipline, mendicancy, the Poor Laws, and such like engaged his pen; and it was through the influence of his views, to no small extent, that subsequent reforms were effected.

2. **John Stuart Mill.**—The eldest child of James Mill was John Stuart Mill (born in London on 20th May 1806; died at Avignon, in France, on 8th May 1873). His early education was conducted solely by his father, who, although constantly occupied in literary and exacting work, did not grudge to act as schoolmaster to his son. His method of teaching was altogether of an exceptional kind; and, although the result of it was also exceptional, the method has not been imitated by others or regarded as generally practicable. At three years of age the boy was set to learn Greek, which was his chief study for the next five years, English and arithmetic being added as secondary subjects. This created in the youthful learner a love for Greek—not only for the language, but for the literature and the thought of Greece—that lasted throughout his life. There is nothing more noticeable in his writings than his genuine appreciation of the dialectic method of Plato and his constant use of the Socratic mode of inductive defining, in order to secure clear concepts and exact verbal expression of them, with a view to truth. At the age of eight, the boy had Latin added to his Greek; and, by the time that he was fourteen years of age, he was indoctrinated into the principles of logic, psychology, and political economy. These were stiff subjects for a boy of that age; but they were the subjects in which he afterwards excelled.

All the time that these subjects were being set as tasks, the father was making the boy his constant companion, sharer in his daily walks, and, through his conversation and judicious cross-questioning, was gradually developing the boy's mind and imparting to him clearness and exactness of thought and confidence in thinking. This Socratic procedure was supplemented at the earliest moment by making the boy himself a teacher. He was set to superintend the education of the younger members of the family, thereby enabling him to gain further clearness of ideas and to strengthen his intellectual faculty. No wonder that the precocity of young Mill became proverbial.

A further stage in his education was a year's sojourn in France, as the guest of Sir Samuel Bentham, at the age of fourteen. This introduced him to the French language and to French literature and politics; and, through excursions in the Pyrenees and elsewhere, aroused in him an enthusiasm for natural scenery and a love for botany and zoology. These things all influenced him in later life.

On his return from France, he was further taken in hand by his father. He was now directly introduced to Bentham's teaching, in the French translation and exposition of it in P. E. L. Dumont's *Traités de législation* (London, 1802). 'The reading of this book,' he says (*Autobiography*, p. 64), 'was an epoch in my life; one of the turning points in my mental history.' At this time also he studied Roman law under John Austin, the jurist.

At the age of sixteen, the youth was beginning to feel his intellectual independence. Burning with enthusiasm for Bentham, he started a Bentham Club of young men, which he designated 'The Utilitarian Society.' Somewhat later he became a member of 'The Speculative Society,' and was also a prominent figure among the youths who met, at stated times, in George Grote's house for discussion of philosophical and economic questions. Later he took an active share in 'The Political Economy Club.' Thus was the development of young Mill's thought and mind further aided by a variety of powerful intellectual agencies.

In 1823, at the age of seventeen, came his appointment, by the East India Company, to the post of Assistant Examiner, under his father, in the Office of the Examiner of India Correspondence. This continued till he reached the position of Chief of the office in 1856—two years before the abolition of the East India Company.

A turning-point in his life was his break-down in health in 1826. There is little doubt that hard work, long-continued and unintermitted, and the over-strain of early education under his father's tuition were largely the cause of this. But there was something more. There was the emotional nature of the young man, which had been cramped but not destroyed by his father's one-sided training, craving for satisfaction. The end of the crisis was what he himself regards as analogous to a 'conversion.' It came in large measure through study of the poetry of Wordsworth and the philosophy of Coleridge, and showed itself in a revolution both in his intellectual opinions and in his character. He was no longer the undiscriminating follower of Bentham that he had been; he was no longer neglectful of the emotional side of human nature. He emerged from the ordeal a new man, with wider mental outlook and deeper and intenser sympathies. The extent of the change may be seen by reference to his two remarkable essays on Bentham and Coleridge, republished in vol. i. of his *Dissertations and Discussions* (London, 1859–67).

Another important factor in his life was the influence over him of Mrs. Taylor, who became his wife in 1851.

His work in connexion with literary journals was enormous. He wrote articles almost without number and on an exhaustless variety of subjects (philosophical, political, economic, social). They began with *The Westminster Review* and extended to other magazines—especially *The London Review* and, afterwards, *The London and Westminster Review*. They are valuable as enabling us to trace the development of his opinions, the growth of his views in philosophy, and the gradual modification of his radicalism in politics.

His first great intellectual work was his *System of Logic, Ratiocinative and Inductive*, which appeared in 1843. This was followed, in due course, by his *Essays on some Unsettled Questions of Political Economy* (1844), and *Principles of Political Economy* (1848). In 1859 appeared his little treatise on *Liberty*, and his *Thoughts on Parliamentary Reform*. His *Considerations on Representative Government* belongs to the year 1860; and in 1863 (after first appearing in magazine form) came his *Utilitarianism*. In 1865 came his *Examination of Sir William Hamilton's Philosophy*; in 1867 his Rectorial *Inaugural Address* at St. Andrews University, on the value of culture; in 1868 his pamphlet on *England and Ireland*; and in 1869 his treatise on *The Subjection of Women*. In 1869 also was published his edition of his father's *Analysis of the Phenomena of the Human Mind*, with many valuable notes illustrative and critical by J. S. Mill himself, by Bain and Grote, and by Andrew Findlater. His two posthumous works are his *Autobiography* (1873) and his *Three Essays on Religion* (1874). To these have to be added the two large volumes of *Letters* (ed. Hugh S. R. Elliot) published in 1910.

A phase of Mill's life has still to be noted—his parliamentary career. In the Parliament of 1865–68 he sat as Radical member for Westminster. Three things in chief did he advocate in the House of Commons—women suffrage, the interests of the labouring classes, and land reform in Ireland.

In philosophy J. S. Mill's fame rests chiefly on his *Logic*, his *Political Economy*, and his *Examination of Sir William Hamilton*, to be taken in connexion with his notes in his edition of his father's *Analysis*.

As a logician he stands out as the great empiricist who formulated and elaborated inductive logic, who re-stated and in part revolutionized deductive logic, who made systematic application of logical principles to the moral sciences (including politics), and who enforced, in polemic form, the power of experience to be the criterion or ultimate test of truth. The brilliancy of his thought and the clearness of his style (including an unwonted aptitude for felicitous illustration, ranging over a wide field of knowledge) cannot be too highly praised. The stimulus to the student derivable from a study of his *Logic* is undoubted. The epoch-making character of his great work must be acknowledged without reserve. But how far he has succeeded in bridging the gulf between inductive and syllogistic logic may be disputed—even Bain, his intimate friend and associate, has his doubts (see his *Dissertations on Leading Philosophical Topics*, London, 1903, pp. 21–26); and empirical logic has made great advances since his day. On the other hand, it must be allowed that these advances were rendered possible only through Mill's work.

In psychology Mill upheld the associationism of his father, but gave a more attractive expression of it as 'mental chemistry.' He carried forward his psychology into theory of knowledge and formulated his doctrine of psychological idealism (founding on Berkeley), which, resting on the empirical genesis of knowledge through the various senses operated by association, issues in the conception of matter or objective reality as 'the permanent possibility of sensations' and of mind as 'the permanent possibility of feeling.' In the case of mind, however, there is a peculiarity: it is *conscious* of its states. This we must accept, as it is given in our experience, but we must accept it as inexplicable—no further account of it is possible. He was unbending in his opposition to those who base truth on intuition. Not that he denied the fact of intuition, but he demanded that it should be tested by experience, so that it may not become (as it had become to a school of philosophers at the time) the bulwark of prejudice and irrationality and the hindrance to intellectual, political, and social progress.

Mill's great work on *Political Economy* (equal in originality of thought and in importance to his *Logic*) is a clear exposition of the various branches of the science—wealth, distribution, consumption, and exchange, and all the various topics that arise out of these. It shows him also as a keen, but fair, critic. But his chief merit lies in his widening the scope of political economy and removing from it the reproach of being 'the dismal science.' This he did (partly under the influence of Auguste Comte) by infusing into it human feeling and associating it with the philosophy of society. Economic principles were now conjoined with their practical applications, and a transformation took place. Not only do we have a minute and scientific handling of such things as labour, capital, rate of interest, money, international trade, and all the other points that the ordinary political economy dealt with, but also a stimulating discussion and wise treatment of such deeply interesting problems as the future of the labouring classes, the land question, socialism, etc. In explanation of the exceptional popularity of the treatise he himself says:

> 'It was, from the first, continually cited and referred to as an authority, because it was not a book merely of abstract science, but also of application, and treated Political Economy not as a thing by itself, but as a fragment of a greater whole; a branch of Social Philosophy, so interlinked with all the other branches, that its conclusions, even in its own peculiar province, are only true conditionally, subject to interference and counteraction from causes not directly within its scope: while to the character of a practical guide it has no pretension, apart from other classes of considerations' (*Autobiog.*, p. 236).

That is, doubtless, absolutely correct.

Mill's utilitarian ethics, as expounded in his *Utilitarianism*, is extraordinarily significant; both the matter and the style fascinate, not less than the glow of conviction that permeates the whole. Justice has rarely been done to it by opponents, because they have failed to see (*a*) that it is not a treatise of pure abstract reasoning, but one written out of the living conviction of a man who loved his fellow-men; (*b*) that it is practical in its object, and not merely theoretical; and (*c*) that, although it sets forth pleasure or happiness as the standard and test of human conduct, it makes supreme the conception of man as a social being and conditions all by the conception of the general welfare. His view of the human will as determined by character, and of character as formed *by* a man, and not *for* him, is his contribution to the solution of the free will problem, and his defence of the position that there can be such a thing as a *science* of ethics—and, if of ethics, then also of economics.

Mill as a political thinker is a great subject. As a radical democrat, he loved the people and worked hard for them in parliament and out of it. But he would not submit in any degree or for a moment to their irrational desires and expectations. They had to be led and not followed. He was acutely conscious of their tendency to tyrannize and their selfish disregard of justice. He was exceptionally alive to their readiness to domineer over minorities; hence, he powerfully advocated the principle of parliamentary proportional representation. Thus alone, he thought, could minorities of electors get their rights. He saw the people's jealousy and suspicion of the educated and refined classes of society; hence, he stood fast by the principle of plurality of votes, as determined by culture and social position. He was very sensitive to the tendency in the masses to act unscrupulously and in an underhand fashion; therefore he opposed vote by ballot.

On the other hand, he was a strong upholder of the liberty of the individual; and he gave a powerful defence of individualism in his treatise *Liberty*—a defence of the right of the individual to hold his own opinions and to give free expression to them, and his right to live in such a way as seemed fit to himself, so long as his mode of living did not interfere with the rights and liberties of others. In the same spirit, though he was quite alive to the necessity of the government dictating and controlling within limits, and, therefore, restricting the liberty of the individual to that extent, he thought that the less government interfered the better: his legislative principle, with necessary qualifications, was *laissez-faire*.

Another object that lay near to Mill's heart was that of women suffrage. His book on the subject has exhausted the handling of the theme from that point of view. But he added active support to theory by consistently advocating universal franchise in parliament, and by pushing on and personally guiding the Women Movement in London and the provinces.

The problems of the universe were constantly in Mill's thoughts. He puzzled himself long and anxiously over the question of the freedom of the will, and ultimately reached the deterministic solution that has just been referred to. The nature of the external world and of the human ego also exercised his mind; and his doctrine of 'psychological idealism' was the result. But there still remained the problem of God. With the conception of the Deity as 'the Absolute,' unknown and unknowable, to whom no attributes (such as knowledge, mercy, and love) could be applied, he had no sympathy. His criticism of H. L. Mansel's view, as set forth in his Bampton Lectures on *The Limits of Religious Thought* (^{5} London, 1870), is scathing and effective. But Mill's thought on the great theme is best given in his supremely interesting posthumous *Essays*. His honesty of character and his 'indifferency to truth' (as Locke would express it) here come out in a very striking fashion. Discouraged from theistic thinking by his father in his early training, and not encouraged to it by his utilitarian friends and fellow-thinkers in after life, he yet had that openness of mind that would willingly receive truth to whatever extent it might reveal itself. He fain would have been optimistic in his view of the universe, but he could not; and the most that he could do was to allow a conception of God that conserved His goodness but limited His power. In face of our harrowing experience of Nature 'red in tooth and claw with ravin' and of the unutterably hard and harsh experiences of life in general, he could not rise to the idea of a Great Power who was All-loving, Omniscient, and Omnipotent. But he was willing, or, at any rate, not unwilling, to believe in a Power of Goodness or of Love who would, if He could, subdue evil and put an end to suffering and misery and was only hindered by the recalcitrant circumstances of the world. This admission, combined with his admiration of Jesus of Nazareth as the highest of ethical teachers, shows his power of detachment from early upbringing and from immediate social environment, and his readiness to respond to the light whenever it came. This was the noblest trait of his character.

Mill's nature was, in many ways, an attractive one, characterized by high and sterling qualities. He was generous in his outlook and sympathetic with men in their struggles, aspirations, and doubts. He was eager to be fair in his estimate of others and of their opinions, and always ready to admit that there is likely to be some truth in every doctrine and belief that has been sincerely held; there was nothing of the persecutor in him. His disinterested regard for truth was unbounded; and he took little care to cloak or hide unpalatable opinions, but expressed himself freely without regard to personal consequences. He delighted in championing persons and causes that he conceived to be unjustly treated by society or by the law of the land. His public spirit was intense; and he never feared to attack legislative or other injustices, and to uphold unpopular views, in the interest of the working classes or of the down-trodden. His life was consistently devoted to one end—furtherance of the good and welfare of his fellow-men.

WILLIAM L. DAVIDSON.

MILLENNIUM.—See ESCHATOLOGY.

MILTON.—1. Life.—John Milton was born in London at the Spread Eagle in Bread Street, Cheapside, on 9th Dec. 1608. He was the eldest son of John Milton, a London scrivener, whose conversion to the faith of the Anglican Church had led to his being disinherited by his father, a yeoman of Shotover Forest and a staunch Roman Catholic. The poet inherited the stubborn self-will of his grandfather and the more sensitive and cultured spirit of his father, from whom he also derived his taste for music. From the first he boy was studious, and his father supplied him with the best teachers. When in 1625 (Feb. 12) he entered Christ's College, Cambridge, at the age of sixteen, he had already acquired, under his first tutor, Thomas Young (a graduate of

St. Andrews), and at St. Paul's School, under the older and the younger Alexander Gill, a mastery of Latin, a competent knowledge of Greek, and even some acquaintance with Hebrew. 'From the twelfth year of my age I scarce ever forsook my nightly studies for bed before midnight' (*Defensio Secunda*, 1654). In English poetry he was familiar with Joshua Sylvester's translation of Du Bartas (1605), Fairfax's *Tasso* (1600), and probably Spenser, Drummond, and others. The older Gill was a reader of English literature, but probably Shakespeare and play-books were not welcomed in a religious family like that of the scrivener's, where 'last of all, not in time, but as perfection is last, that care was ever had of me, with my earliest capacity, not to be negligently trained in the precepts of Christian religion' (*Apology for Smectymnuus*, 1642). Milton was not attracted by the dialectical and theological studies of Cambridge. The lines *At a Vacation Exercise* and some Latin pieces show that he took his part in the prescribed work, but his favourite studies were literary and classical, 'grave orators and historians,' the 'smooth elegiac poets,' from whom he passed in 'riper years' to 'the shady spaces of philosophy; but chiefly to the divine volumes of Plato and his equal [*i.e.* contemporary] Xenophon.' To a knowledge of the classical poets he added now the Italians, 'the two famous renowners of Beatrice and Laura,' the 'lofty fables and romances' of Boiardo and Ariosto (*Apology for Smectymnuus*, Introd.). On the world of mediæval romance Milton looked out through Italian windows, but he was familiar (later, at any rate) with Geoffrey of Monmouth and probably with Malory. The poems of this period, both English and Latin, bear witness to the double source of Milton's poetic inspiration—classical literature and the Biblical Christianity of Puritan England. The finest expression of these, not always entirely compatible, tastes is the tender (an epithet so rarely applicable to Milton's poetry) and beautiful ode, *On the Morning of Christ's Nativity* (1629); while some lines of the *At a Vacation Exercise* and the short odes, *On Time* and *At a Solemn Music*, show the poet of *Paradise Lost* 'mewing his mighty youth' and meditating the sublimest flights of religious song:

> 'Yet I had rather, if I were to choose,
> Thy service in some graver subject use,
> Such as may make thee search thy coffers round,
> Before thou clothe my fancy in fit sound:
> Such where the deep transported mind may soar
> Above the wheeling poles, and at Heaven's door
> Look in, and see each blissful deity,' etc.
> (*At a Vacation Exercise*, 29 ff.).

Milton left the University in 1632 without taking orders, and the next six years of his life were spent at Horton in the quiet prosecution of his studies in classical literature, history, mathematics, and music, with occasional visits to London to purchase books, to visit the theatre, to be an onlooker perhaps at Court ceremonials,

> 'Where throngs of knights and barons bold
> In weeds of peace high triumphs hold' (*L'Allegro*, 119 f.),

and to enjoy the company of friends, among whom the first place was held by Charles Diodati. A young Italian girl, too, of whom we know only that her first name was Emilia, seems to have touched his fancy and occasioned the writing of his earliest Italian verses. The experience is perhaps referred to in the seventh of his Latin elegies. During these years he also extended his knowledge of English poetry from Chaucer and *Piers Plowman* to Shakespeare (at Cambridge he had already written his famous lines for the second folio), Jonson, and the later Elizabethans. All the poems written at this period bear witness to this native and Elizabethan influence, and some of them, as *L'Allegro* and *Il Penseroso*, are composed in a lighter, more secular and Epicurean vein than any English pieces (some of the Latin elegies are very much in this vein) had been or were ever again to be written by Milton. But in *Comus, or A Maske Presented at Ludlow Castle* (1634), which he composed at the invitation of Henry Lawes, all the resources of Milton's learning and art were employed to set forth his deepest ethical and religious convictions, his passionate love of purity, his sense of the dependence of all human virtue on the protecting grace of God. The theme of the second book of the *Faerie Queene* is rehandled by a poet of a higher moral temper and a no less, though more controlled and classically educated, sense of beauty.

Milton had gone to Cambridge with a view to taking orders, and, though he left without doing so, there is no evidence that he had ceased to be, when he settled at Horton, an orthodox Anglican. He was a communicant; he had signed the Articles; nothing had yet betrayed that he was by conviction a Presbyterian in his views on Church government; while on the doctrine of predestination in its relation to the human will his position was always closer to that of the Arminians than to that of the Calvinists. What alienated Milton from the Church of England was less its dogma than its practice, the rigour of Laud and the identification of Episcopacy with the Court and its arbitrary policy. His intense and ideal love of liberty was awakened, and the first notes of the coming storm were heard in *Lycidas* (1638), the most passionate, plangent, and musical poem which Milton had yet written. In the same year he went abroad, still intent rather on self-culture and the preparation for the task of writing a great poem than on controversy and theology. In Paris he met the Dutch *savant* Hugo Grotius, whose *Adamus Exul* was one of the sources of *Paradise Lost*. He spent two months in Florence, conversing and interchanging Latin and Italian verses with young Academicians. He proceeded to Rome, where he visited the Vatican Library and the English College, and heard Leonora Baroni sing at the palace of Cardinal Barberini. The elevated strain of compliment in the Latin verses addressed to her betrays the influence of Italian preciosity. At Naples he met Manso, Marquis of Villa, Tasso's patron and Marino's, and in a Latin poem addressed to him prays that he may find a like patron when he undertakes to sing of

> 'reges,
> Arturumque etiam sub terris bella moventem,
> Aut dicam invictae sociali foedere mensae
> Magnanimos Heroas, et (O modo spiritus adsit!)
> Frangam Saxonicas Britonum sub Marte phalanges!'
> (*Sylvæ*, 'Mansus, 80 ff.)

But Milton was not destined to sing of kings or the knights of the Round Table. The meeting of the Long Parliament determined him to return home, and he made his way back to England by Venice and Geneva to plunge soon into that long course of controversy, ecclesiastical and political, which determined the choice of themes, the doctrinal framework, and the temper and spirit of *Paradise Lost*, *Paradise Regained*, and *Samson Agonistes*.

The first of the controversies into which Milton plunged with ardour and vehemence was that concerning Church government, and the rival claims of a Presbyterian and Prelatical organization. In the first pamphlet, *Of Reformation in England* (May–June 1641), he raises the question why the English Reformation had lagged behind that on the Continent and attacks Episcopacy and English bishops and their 'policy' from Cranmer and Ridley to the promoters of the war with Scotland, closing with an amazing denunciatory prayer. *Of Prelatical Episcopacy* (June–July 1641) is an examination of the origin of Episcopacy in reply to a tract by Archbishop Ussher. Of the other pamphlets two, *Animadversions upon the Remonstrant's Defence against Smectymnuus* (July 1641) and *An Apology against a Pamphlet called a Modest Confutation of the Animadversions of the Remonstrant against Smectymnuus* (March–April 1642), were contributions to a controversy on Episcopacy between Hall and certain now little-known Puritan divines, of whom Thomas Young was one. The most fully reasoned and interesting statement of Milton's ideal Presbyterianism is contained in *The Reason of Church Government urged against Prelaty* (Jan.–March 1641–42). Two undercurrents of thought run through the main stream of controversy, rising to the surface from time to time, the one with unmistakable and eloquent distinctness, the other with less obtrusive yet sufficient clearness. The first of these concerns the great poem which he was meditating; the other shows him full of high thoughts concerning the mysteries of love and marriage. The Puritan movement had heightened men's ideals both of purity and of marriage, and Milton was as impassioned a champion of chastity as he was an enemy of asceticism. Love had touched his fancy in youth, but, when in May 1643 he married, it was clearly the act of one whose choice of the individual was too hastily determined by an ideal regard for the wedded estate; and the result was, what, as Milton himself complains, is more often the fate of the chaste and unworldly student than of the libertine, the discovery that in the wife whom he had chosen was to be found none of the qualities that he had so fondly anticipated, no intellectual help-meet, but an 'unconversing inability of mind,' 'a mute and spiritless mate,' begetting 'that melancholy despair which we see in many wedded persons' (*Doctrine and Discipline of Divorce*, i. 4). Others have experienced the same misfortune and in the end have managed to work along; but Milton was no average man, and he turned passionately round to discover an escape, and that one which should enjoy the approval of his own conscience and the Christian Church. *The Doctrine and Discipline of Divorce Restored* (Aug. 1643) was written and published (anonymously and without licence) before his wife had given any definite ground for separation. An enlarged and improved edition appeared in February 1644 with a signed introductory letter to 'the Parliament of England with the Assembly.' A second tract, *The Judgment of Martin Bucer concerning Divorce*, followed in July of the same year, vindicating Milton's position against critics; and to the same end he issued in March 1645 *Tetrachordon*, a discussion of four passages in Scripture, and *Colasterion*, a savage onslaught upon a certain Joseph Caryl, one of the licencers. Incidentally the divorce controversy called forth the most famous of Milton's pamphlets, *Areopagitica, A Speech . . . for the Liberty of Unlicens'd Printing* (Nov. 1644).

The outcry which the divorce pamphlets evoked opened Milton's eyes to the interval that separated his ideal Church from the Presbyterian Church which its votaries were seeking to invest with all the divine right and intolerant authority of the overthrown Episcopal Church of England, and helped him to formulate his own conception of Christianity as independent of any visible and authoritative Church. He never, therefore, identified himself with the Independents, but from this time to the close of the Commonwealth his sympathies were with that party in politics; and, when the death of the king completed the rupture between them and the Presbyterians, Milton came forward as the champion of regicide and the impugner of all connexion, whether of authority or endowment, between Church and State.

On 13th February 1649—a fortnight after the execution of Charles—appeared *The Tenure of Kings and Magistrates*, 'proving that it is lawfull, and hath been held so through all Ages, for any who have the Power, to call to account a Tyrant or wicked King, and after due conviction to depose and put him to death, if the ordinary Magistrate have neglected, or deny'd to do it. And that they who, of late, so much blame deposing are Men that did it themselves.' The sting in the tail of this bold title is intended for the Presbyterians, who are roughly handled throughout as hypocrites and revolters from their own principles. The *Eikonoklastes*, of the same year, follows chapter by chapter the *Eikon Basilike* in Milton's most scornful style. To Salmasius and other impugners of the King's execution Milton replied in his first and second *Defensio pro populo Anglicano* (1651, 1654). The *Defensio contra Morum* (1655) was a savage onslaught on one who, he believed, had slandered himself. His last purely political pamphlet, the *Ready and Easy Way to Establish a Free Commonwealth* (March 1660), was published on the eve of the Restoration.

That conception of the Church's influence and authority as purely spiritual which is evident in Milton's first sketch of an ideal Presbyterianism, and had been intensified by his rupture with the Presbyterians, led him to disapprove of Cromwell's attempt to combine religious endowment with a wide though still limited toleration; and his own position was expounded in the *Defensio Secunda* (in the middle of a eulogy of the Protector and his associates) and, after Cromwell's death, in *A Treatise of Civil Power in Ecclesiastical Cases* (Feb.–March 1659). When the Rump superseded Richard Cromwell and the question of tithes was raised, Milton published his *Considerations touching the likeliest Means to remove Hirelings out of the Church* (Aug. 1659), a bitter onslaught on the clergy, Presbyterian or Independent, who claimed tithes or fees instead of trusting to the 'benevolence and free gratitude' of their flocks. Milton's last religious works were the short pamphlet *Of True Religion, Heresy, Schism, and what best Means may be used against the Growth of Popery* (1673) and the body of divinity *De Doctrina Christiana*, on which he had been busy for many years, but which was not printed till 1825.

Throughout the rule of the Commonwealth Milton's life had been the twofold one of a private student and tutor (to children living in or coming to his house) and of a servant of the State as Latin secretary to the Council of State (1649–59). The incidents of his private life are few. In 1653 his wife died, and in 1656 he married Catharine Woodcock, whose early death in 1658 is referred to in the most touching of his sonnets. His marriage with Elizabeth Minshull in 1663 was a convenient arrangement.

During all these years Milton had written very little poetry. From 1640 to 1642 his mind had been full of his great projected work, and the commonplace-book preserved at Trinity College, Cambridge, shows the steady trend of his thoughts towards a drama on the subject of the Fall. Two sketches of the drama are set down, and his nephew, Edward Phillips, reports that the speech of Satan at the opening of the fourth book of *Paradise Lost* is part of the original scheme. The interest of controversy and the shock of his unhappy marriage interrupted the work and it was not resumed till 1658. In the interval the only English poems which Milton wrote were some sonnets on public events or persons and private incidents in the dignified manner of his Italian predecessors in similar poems, and in Italian form, for even the device of running the sense on from octave to sestet (which has been thought a device peculiar to himself) had been practised by Italian poets known to Milton. In 1658 *Paradise Lost* was resumed in epic, not dramatic, form; was composed to dictation, corrected, and completed by 1665; and published in 1667. It was followed in 1670 by *Paradise Regained*, an epic on 'the brief model' of the book of Job, and *Samson Agonistes*, Milton's sole experiment in those 'dramatic constitutions wherein Sophocles and Euripides reign.'

2. Thought and works.—Of Milton's early poems no more need be said here. Apart from their rare poetic beauty they bear delightful witness to the delicate purity and profound piety of the poet's childhood and youth, combining in an effect of unique and too transitory loveliness literary and classical culture with the finer spirit of a Puritanism which was not yet heated and hardened by the fires of religious and political controversy. The purpose of the present article is to outline the creed of Milton as it took shape in the years of storm and stress which followed his return to England and to consider the reflexion of this creed, and the temper which it at once expressed and intensified, in his longer poems.

In his earliest pamphlets Milton ranges himself on the side of the Presbyterian reformers of the Anglican Church. The Scriptures are the sole authority for the right government of the Church, which is not a matter that has been left to human discretion and experience to devise. God, who shaped to its minutest detail the government and worship of the Jewish temple, 'should he not rather now by his own prescribed discipline have cast his line and level upon the soul of man which is his rational temple, and, by the divine square and compass thereof, form and regenerate in us the lovely shapes of virtues and graces, the sooner to edify and accomplish that immortal stature of Christ's body which is his church, in all her glorious lineaments and proportions?' (*Reason of Church Government*, i. 2). But the NT recognizes only two orders, bishops or presbyters (they are the same thing) and deacons—so Paul writes to Timothy ('not once naming any other order in the Church'). Prelacy is an addition of man's devising and ambition ('Lucifer . . . was the first prelate angel') opposed to 'the reason and end of the gospel' (*ib.* i. 3 ff.).

But, when Milton came to state the respect in which Episcopal jurisdiction opposes the reason and end of the gospel, he parted company at once (how far consciously it is hard to say) with his Scottish and English sympathizers, and with the actual practice of dominant Presbyterianism. For his objection to Episcopal jurisdiction is the, for Milton, fundamental principle 'that jurisdictive power in the Church there ought to be none at all.' His objection is to the archidiaconal courts with their penalties and fines, and the Star Chamber. Over the outward man, person, and property, authority belongs to the State, which is not concerned with inner motives but with 'the outward peace and welfare of the commonwealth, and civil happiness in life' (*ib.* ii. 3). The authority of the Church is over the inward and spiritual man, and her sole weapons are instruction, admonition, reproof, and, finally, excommunication, the last to be so used as always to keep open the door of reconciliation to repentance. The motive to which the Church appeals is not terror, but shame, 'the reverence and due esteem' in which a man holds himself 'both for the dignity of God's image upon him and for the price of his redemption which, he thinks, is visibly marked upon his forehead,' making him account 'himself a fit person to do the noblest and godliest deeds, and much better worth than to deject and defile, with such a debasement, and such a pollution as sin is, himself so highly ransomed and ennobled to a new friendship and filial relation with God' (*ib.*). Such a conception of Christian conduct as springing from a man's sense of his own worth, a worth conferred by God from the beginning and renewed by redemption, is as characteristic of Milton, nurtured on the Bible but nurtured also upon the classics, as it is alien to the general trend of Protestant thought in Milton's England, which laid more stress on man's worthlessness than on his worth, and appealed less to shame as a motive than to fear of death and the judgment to come. Bunyan and Milton are separated by a wide gulf; and the noble temper of Milton's early lines *On Time* shows as little of Ronsard's or Shakespeare's regretful sense of the ravages of 'Time's fell hand' as of such a preacher as Donne's awed apprehension of the terror and the ecstasy of the Christian's death. And the idea of a Church whose authority is purely spiritual is even more remote from the thought and practice of Presbyterianism in power whether in Geneva, Holland, or Scotland. It was not to promote general toleration that the Scottish Presbyterians signed the Solemn League and Covenant.

Milton was quickly made aware of the interval that separated him from the Presbyterians by the publication of his pamphlets on divorce. The opposition which they excited seems to have taken him by surprise, but the anger which followed was intense and coloured all his subsequent thought. Repelled by Protestant orthodoxy—though he maintained strenuously that some of the greatest Protestant divines were on his side—he was driven to reconsider the whole question of orthodoxy; and he set out, with all the confidence of Satan voyaging across the 'wild abyss' of chaos, to articulate a creed for himself in the dogmatic manner of Trent and Westminster. The record of this progress is to be found in the controversial pamphlets, the elaborate *De Doctrina Christiana*, and, finally, in *Paradise Lost* and *Paradise Regained*.

Two principles control all Milton's findings. The first is that the ultimate arbiter of every question is the individual reason and conscience 'than which God only is greater.' The mind of each man is absolutely free to try all things and hold fast by his own conclusions uncontrolled by State or Church. This liberty is 'the fundamental privilege of the Gospel, the new birthright of every true believer, Christian liberty' (*A Treatise of Civil Power*, etc., also *De Doctrina Christiana*, Dedicatory Epistle). No one could assert more absolutely the fundamental principle of the Renaissance—the emancipation of the individual; and Milton approaches the solution of each question in the spirit of the later age of reason, with this difference that he accepts as a fundamental experience not to be reasoned upon—more than one can reason upon the fact of an external world—the Christian consciousness of sin and of redemption and regeneration through Christ as set forth in the Scriptures. This directs us to the second of the principles on which Milton's conclusions rest. The final source of all saving religious knowledge is the Bible. It is on this that the emancipated mind must exercise itself, from this its conclusions must be drawn. Milton's method, therefore, in discussing every question which he takes up, from the divinity of Christ to the liberty of the press, is twofold when the subject admits of both lines of argument: firstly, what does reason declare?—and Milton is as confident of the competence of *a priori* reasoning on political and social questions as any later theorist of revolution; secondly, what has Scripture declared, to what conclusion does it lead us when different passages are duly compared and when all are interpreted in the light of the Christian law of charity, in the spirit of the words 'the sabbath was made for man, and not man for the sabbath'? The one consideration to which Milton never condescends is expedience, the difficulties and the practical means of obviating these revealed by experience; he has none of Burke's reverence for 'prudence constituted as the god of this lower world.'

Milton's polemical pamphlets are, accordingly, a bewildering blend of ideal reasonings, high *a priori* principles set forth in glowing and harmonious but elaborately Latinized periods; a pedantic, at times captious and wrong-headed, citation and cross-examination of Biblical texts; truculent polemic, condescending not infrequently to coarse personal abuse; and withal a general absence of the mellower wisdom that proceeds from experience and charity. There is much to inspire and delight in these pages burning with fires that are perhaps not yet altogether extinct but in general have died down; there is little to interest the statesman. If Milton's pamphlets yet live, it is as eloquent statements of high and abstract ideals, to ignore which altogether is to reduce political expedience to sheer opportunism.

The divorce pamphlets have nothing to say upon the difficult problems of children and the mutual relations of the family and the State. They combine elevated reflexions on the ideal significance of marriage as a spiritual rather than a carnal union (regarded solely from the point of view of the man) with a tedious, passionate, wrong-headed attempt to reconcile Christ's prohibition of divorce 'but for adultery' with Moses' permission. God cannot have at any time permitted sin. The later command cannot have been intended, therefore, to annul the earlier, but merely to check certain prevalent abuses. Milton was not without apprehension of the fact of moral and religious progress. He went beyond the English Protestantism of his day in asserting that under the new dispensation the Mosaic moral as well as ceremonial law had been abolished. But the new law was, he maintained, a law of liberty, of greater responsibility because of greater freedom. Such a rigid law of marriage as the Churches asserted was a curtailment of the liberty which even the Law had granted, a fresh enslavement of the spirit to the letter. Looking at the question exclusively from the man's point of view, he advanced to an assertion of divorce as the private concern of the individual and to a defence of polygamy (*De Doctr. Christ.* i. 10).

The *Areopagitica* was an overflow from the divorce controversy, and is a magnificent *a priori* vindication of freedom of thought and speech as the fundamental condition of the successful quest of truth. The practical difficulties which have beset the attempt to find a solution, other than a compromise varying in different countries, lay outside Milton's ken; nor could he foresee all the evils that have attended the freedom allowed to a Chauvinist or a commercial press to deceive and to pervert.

The same lofty but *a priori* idealism combined with exposition of texts and interchange of personalities characterizes the pamphlets, Latin and English, written to vindicate the execution of Charles I., and those on, what became his favourite themes, an unendowed clergy and a universal toleration of all religious bodies, the Roman Catholic Church alone excluded. Of the original and inalienable rights of subjects and the duties and responsibilities of kings Milton writes with all the passion of a mind nurtured upon classical republicanism and OT history, and heated by the fires of civil war:

> 'There can be slain
> No sacrifice to God more acceptable
> Than an unjust and wicked king'
> (Seneca, *Herc. Fur.* 992, tr. in ***The Tenure of Kings and Magistrates***).

The doctrine of the civil contract is buttressed by precedents from the turbulent annals of Israel, the early history of the Britons, the rebellions in Scotland and Holland. Of the real difficulties of the problem, as Hobbes saw them, of the fact that somewhere in every society there is and must be an authority against which no rights can be pleaded, Milton shows no suspicion. He was at work recasting with the utmost confidence the government of England at the moment of the Restoration. His sympathies were aristocratic: the best should rule. Of the difficulty of securing this he knows nothing. Hooker's claim for a divine sanction attaching to usage and expedience is spurned by Milton's contempt for tradition, confidence in *a priori* reasoning, and conception of the Bible as the sole oracle of God, of authority in *all* fields of thought and experience. His Latin orations and English pamphlets on the issue between parliament and king made no enduring contribution to the political thought of the 17th century.

Milton's denunciation of an endowed clergy—a subject on which he found himself at variance with his hero Cromwell—and his claim for complete tolerance of all religious differences of opinion were the natural outcome of that conception of the purely spiritual character of ecclesiastical authority with which he set out, of his growing dislike of the Presbyterian clergy and their claim to usurp the privileges and intolerance of their Anglican predecessors, and of the purely individualistic character of his philosophical Christianity. From rejecting ecclesiastical discipline and authority Milton was driven onward by a ruthless logic to the denial that any regard is due, in religion or ethics, to the collective consciousness of Church or society. Yet without such collective consciousness, however imperfectly developed, is either religion or morality possible? For Milton every man is his own Church; his creed the product of his own study of the inspired text. The true heretics are those who follow a Church against their conscience and their convictions based on Scripture. Congregations of like-minded men, meeting to worship together, Milton seems to assume there will always be; but for the service of a clergy, except to teach the young and to exhort the careless, there is no need.

> 'If men be not all their life-time under a teacher to learn logic, natural philosophy, ethics or mathematics, which are more difficult—certainly it is not necessary to the attainment of Christian knowledge that men should sit all their life long at the feet of a pulpited divine' (*The likeliest Means to remove Hirelings*).

Let there be a voluntary, simple, itinerant clergy living by the labour of their hands and the free-will offerings of the richer congregations.

This conception of Christian doctrine as something as definable and demonstrable as mathematics (but easier of comprehension) is crucial for a right apprehension of what Milton was in quest of throughout these years of theological and political polemic—that justification of God's ways to men which was to be the theme of his great poem. For a study of that thought as finally articulated we must go to the *De Doctrina Christiana*. 'Joannes Milton Anglus Universis Christi Ecclesiis Necnon Omnibus Fidem Christianam Ubicunque Gentium Profitentibus' are the dedicatory words of the MS in which was set down the creed of the Church of John Milton, the final result of his resolve to have done with traditions and definitions, councils and assemblies, and to formulate for himself, from a study of the text of Scripture, a complete and articulate body of divinity and morality.

The creed so formulated is, as might have been anticipated, at variance in essential respects with the creed both of orthodox Protestantism and of historical Christianity. Milton's faith might be described as Protestant Christianity accommodated to the spirit of the classical Renaissance, for the points on which Milton stands most resolutely aloof from orthodox Calvinist Protestantism are just those in which the latter seemed to compromise the dignity and liberty of the human mind which the Renaissance had re-asserted.

In this respect Milton's Arianism, though the most startling, is not the most important of the dogmas which he formulates. Yet it reflects the poet's temperament, and is in harmony with the religious tone of the two epics. The doctrine of the divinity of Christ regarded on its psychological side is the expression of the transcendent worth ascribed by the Christian consciousness to the personality and life of Jesus; it is the intellectual expression of a passionate devotion. Milton's reverence for the 'author and finisher' of the Christian faith is sincere and profound, but it is not animated with the ardent flame of love which throbs in Dante's *Divina Commedia* or Bunyan's *Pilgrim's Progress* or Thomas à Kempis' *Musica Ecclesiastica*, or many others of the great distinctively Christian works of feeling and imagination. A high and austere monotheism is of the innermost texture of Milton's soul.

The same high, not to say proud, soul is revealed in Milton's refusal to accept the Calvinist doctrine of predestination and the complete corruption of man's soul after the Fall—his refusal to sacrifice the reality of human freedom, the intrinsic worth of human nature. Predestination, he declares, extends to election only, not to reprobation. It did not determine man's fall, but the means of his redemption, since God foresaw that of his own free will man would fall:

> 'For man will hearken to his glozing lies,
> And easily transgress the sole command,
> Sole pledge of his obedience: so will fall
> He and his faithless progeny. Whose fault?
> Whose but his own? Ingrate, he had of me
> All he could have; I made him just and right,
> Sufficient to have stood, though free to fall'
> (*Paradise Lost*, iii. 93 ff.).

The redemption purchased by Christ is in the same way freely offered to all, not to an elect, predestined number. To all, God gives grace, 'though not in equal measure yet sufficient for attaining knowledge of the truth and final salvation':

> 'for I will clear their senses dark
> What may suffice, and soften stony hearts
> To pray, repent, and bring obedience due.
> To prayer, repentance, and obedience due,
> Though but endeavoured with sincere intent,
> Mine ear shall not be slow, mine eye not shut' (*ib.* 188 ff.).

Nor — and here again Milton diverged from orthodox Protestantism—is all apprehension of and aspiration after good extinguished in man as a result of the Fall. The result, indeed, of Adam's sin is not only guilt but spiritual death, which is 'the obscuration to a great extent of that right reason which enabled man to discern the chief good,' 'that slavish subjection to sin and the devil which constitutes, as it were, the death of the will.' Yet the divine image in man's soul is not wholly extinguished.

'This is evident, not only from the wisdom and holiness of many of the heathen, manifested both in words and deeds, but also from what is said Gen. ix. 2 *the dread of you shall be upon every beast of the earth*, v. 6. *whoso sheddeth man's blood by man shall his blood be shed; for in the image of God made He man.* These vestiges of original excellence are visible, first, in the understanding. Ps. xix. 1 *the heavens declare the glory of God*; which could not be if man were incapable of hearing their voice. . . . Nor, secondly, is the liberty of the will entirely destroyed' (*De Doctr. Christ.* i. 12 [Sumner's tr.]).

Man retains sufficient liberty at least to endeavour after righteousness, at least to make him responsible for his sins, though its power is so small as to afford him no subject for boasting.

In accordance with the same high regard for the will, for conduct as the test of a living religion, Milton refuses to accept the orthodox distinction of faith and works and the ascription of justification to the former alone. In the text 'A man is justified by faith without the deeds of the law' (Ro 3^{28}), he insists that stress must be laid on the words 'of the law.'

'For Paul does not say simply that a man is justified without works, but without the works of the law; nor yet by faith alone, but "by faith which worketh by love," Gal. v. 6. Faith has its own works which may be different from the works of the law. We are justified therefore by faith, but by a living not a dead faith; and that faith alone which acts is accounted living. James ii. 17. 20. 26' (*ib.* i. 22).

The same spirit makes Milton assert more completely than the Westminster Confession the liberty of the Christian under the new dispensation. It is not the ceremonial law alone that is abolished, but the entire Mosaic law, including the Decalogue (*ib.* i. 26 f.), the place of which is taken by a higher law 'written not in tables of stone, but in fleshy tables of the heart,' the law of love given in our Lord's words, 'Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbour as thyself' (Lk 10^{27}). In the Decalogue is included the Fourth Commandment (*ib.* i. 10, ii. 7), on which English Puritanism laid so much stress. In his first pamphlet Milton had joined in the general condemnation of the Book of Sports and its instigation to 'gaming, jigging, wassailing and mixed dancing' on 'that day which God's law, and even our reason, hath consecrated.' But in *The likeliest Means to remove Hirelings*, 'the seventh day is not moral, but a convenient recourse of worship in fit season, whether seventh or other number.' Our rigid observance is an unnecessary cause of separation from the Reformed Churches of the Continent. The argument (*e.g.*, of the Westminster Confession) that the Jewish law of the Sabbath had been transferred intact to the first day of the week is invalid (*De Doctr. Christ.* ii. 7).

'Under the gospel no one day is appointed for divine worship in preference to another, except such as the church may set apart of its own authority for the *voluntary* assembling of its members, wherein, relinquishing all worldly affairs, we may dedicate ourselves wholly to religious services as far as is consistent with the duties of charity' (*ib.*).

Such are some of the most important divergences of Milton's creed from the creed of the Protestant Churches around him. Of this creed *Paradise Lost* and *Paradise Regained* are the poetical setting forth. Like the *Divina Commedia*, the *Paradise Lost* is not primarily an epic, but a didactic exposition of a theological creed; and, as all the details of Dante's creed may be discovered in the *Summa* of Thomas Aquinas, so Milton's conception of God, of Christ, and of the angels and devils is that which he has set down more drily in the *De Doctrina*; and the purpose which Milton declares he has in view—

> 'To justify the ways of God to men'—

is theologically conceived. His poem is not an attempt to reconcile the heart and the imagination to truths already accepted. It is a restatement in poetic form of these doctrines in such a way as will finally justify God and indict man. 'Therefore thou art inexcusable, O man, whosoever thou art that judgest' (Ro 2^1).

Looked at steadily from this point of view, it cannot justly be said that *Paradise Lost* will bear comparison with the *Divina Commedia* or the *De Natura* of Lucretius. Take away from either of these poems the high purpose that shines through them, and half their beauty is gone. It is its symbolic, mystic character that gives sublimity to every detail of Dante's heaven and hell. Few to-day read *Paradise Lost* with any desire to discover Milton's creed, or, if they do, will accept with any conviction, any such willing suspension of criticism as it is the function of poetry to beget, his justification of God's way to men, this stern and harsh rendering of Paul's 'as in Adam all died.' The time is past in which Milton's poem was read almost as if it were the Bible itself, the poetic presentation of those momentous events as if they actually occurred, to judge of the justice or injustice of which was forbidden. Now we can see that the epic form and the spiritual intention of the poem are not capable of being harmonized. The poem is held together from the first line to the last by the miracle of Milton's style—a veritable 'cloth of gold' encrusted with all the barbaric spoil of his multifarious learning—and by the miracle of his verse harmonies. But, when we look beneath this dazzling surface, we see that the unity is not so complete as we imagined, that a magnificent epic story is troubled and rendered abortive by the cramping theological purpose. All that is greatest in *Paradise Lost* is the product of Milton's creative, mythopœic faculty working as freely on the scanty material of Biblical record and ecclesiastical tradition as did Homer or any primitive poet when shaping and embroidering popular myths. But the result has nothing in it that is essentially Christian. The splendid scenes of the opening books—Satan and his companions debating in hell, Satan voyaging through chaos or descending through the heavenly bodies in the first freshness of their creation, the scenes in Eden, the wars in heaven—these might be fragments from the primitive myths of some forgotten religion, and perhaps nowadays we should read them with greater and less troubled interest if we might do so without the necessity of a reference to our own religious traditions and feelings, without having to ask ourselves 'Is this our God? Is this the Second Person of the Trinity?' For, as Milton approaches his proper theme, in the theological disquisition in heaven, in the story of the Temptation and what follows, we cannot but feel, despite frequent beauties, a steady subsidence of the creative power of the opening; the didactic displaces the epic poem. The magnificent promise of the opening books seems to be unfulfilled. The great characters there brought upon the stage achieve nothing. Even the Satan of the Temptation strikes us as not quite the Satan of the first and second books, of whose dauntless, passionate soul we should have expected some action larger, more magnificent, than this rather over-elaborately treated temptation of a not too wise woman. The simple Bible story will not adapt itself to the classical epic treatment. The large, creative movement of the earlier episodes is lost as the poet feels himself confined by the original story and the didactic purpose.

The harmonizing of story and didactic is better achieved in *Paradise Regained*, Milton's epic on the 'brief model' of the book of Job; but it is so because the didactic and argumentative strain is, as in Job, dominant throughout. The poem is a finely wrought presentation of Milton's ideal Christian virtues, obedience, temperance, and the scorn of worldly glory. But, beautiful poem as it is, austere in spirit and chaste yet rich in texture, there is none of the wonderful creative power of the great episodes and characters in the longer poem; and its austerity of tone marks its limits as a religious poem, for obedience, temperance, and unworldliness are Christian virtues only as they flow from or lead to charity, and but little of the radiance of Christian love illumines and warms this severe and stately poem.

The passion which sleeps under Milton's austerest lines flowed forth like a flood of lava in the work which closed his career. *Samson Agonistes* has the rare interest and beauty of the personal passages in *Lycidas* and *Paradise Lost*. Unfettered by Scriptural details or didactic purpose, Milton pours into the artificial mould of classical tragedy all the passionate feeling with which he reviewed the course of his own life and the history of the cause with which he had identified himself so wholeheartedly. The never-closed wound of his first marriage, the loss of his sight, the defeat of the high hopes which he had conceived for his country as a chosen people, a Kingdom of God on earth, the triumph of the hated prelates and the despised

'sons
Of Belial flown with insolence and wine'—

all found utterance in the severely moulded lines and choruses of this tragedy, not a lament, as Treitschke called it, but the last utterance of Milton's indomitable will, that unshakable self-confidence which he called faith in God—a fitting close to the career of the loftiest soul among English poets:

'Samson hath quit himself
Like Samson, and heroicly hath finish'd
A life heroic' (*Samson Agonistes*, 1709 ff.).

Of Milton's supreme greatness as a poet there is no question. In sustained loftiness of soul, elaborate magnificence of language, and mastery of varied cadences he has no superior. His works have become the touchstone of poetic taste, for, unless a reader has an ear and taste for the technique and music of poetry, he may not find much to attract him in Milton; if he does, he will find endless delight. To the question whether he is also to be considered a great Christian poet a more modified answer must be given. A study of his articulated creed bears out the impression communicated by his poetry that Milton's was not an *anima naturaliter Christiana*. His was rather the soul of an ancient Stoic, blended with that of a Jewish prophet, which had accepted with conviction the Christian doctrine of sin and redemption. The spirit of his poetry wants two of the most distinctively Christian notes—humility and love. Milton's soul was as proud as Dante's; he was less conscious of the failing (*Purg*. xiii. 186 ff.). It is the absence in all his poetry of the note of passionate self-surrender to the love of Christ that separates him, not only from Dante, but from a Puritan like Bunyan, an Anglican like Herbert, a Roman like Crashaw and Vondel, among his contemporaries. It was on another side that Christianity claimed Milton. His work begins and ends in the idea of liberty and its correlative duty, human freedom and the responsibility that it carries with it of living

'As ever in the great Taskmaster's eye.'

God is, for Milton, indeed the great Taskmaster, but he rejoices in the tasks; 'the victories of the conscience are gained by the commanding charm which all the severe and restrictive virtues have for him' (Emerson, in *North Amer. Review*, xlvii. [1838] 65); for Milton freedom is obedience in the highest and hardest tasks. To restore this freedom is the great service of Christianity, the fruit of Christ's perfect obedience and the regenerating work of the Holy Spirit. Christianity alone is perfect liberty, a liberty that no human authority, Church or State, may limit. Milton, with all his defects, is an ethical and religious poet because of the conviction which his poetry imparts that, in the words of a recent French writer,

> 'God is for Milton the all in all of life. There is no more terrible evil than sin which separates us from God; there is no more sublime mystery than the Redemption which reconciles us to God' (P. Chauvet, *La Religion de Milton*, Paris, 1909, p. 241).

All his acts and writings were inspired by his desire that the Kingdom of God might come on earth, be it that his conception of that Kingdom was in some way maimed and incomplete, that it was not always given him to distinguish between his own will and God's:

> 'O, may we soon again renew that song,
> And keep in tune with Heaven, till God ere long
> To His celestial consort us unite,
> To live with Him, and sing in endless morn of light!'
> (*At a Solemn Music*, 25 ff.).

LITERATURE.—i. *EDITIONS.*—Edd. of Milton's poems are numerous, but a really good annotated ed. has yet to be made. T. Newton's ed. (London, 1749–52) is still valuable because of its collection of classical sources. Of later edd. mention may be made of D. Masson's (London, 1874) and W. Aldis Wright's (Cambridge, 1903). Collected edd. of the prose works are J. Toland's (Amsterdam, 1698), T. Birch's (London, 1738, 1753), and J. A. St. John's (Bohn's Libraries, 1836). Some of the pamphlets—*e.g.*, *Areopagitica*—have been edited separately.

ii. *CRITICISM.*—The criticism of Milton begins with Dryden's epigram and includes J. Addison, *The Spectator*, Dec. 1711–May 1712; S. Johnson, *Lives of the Poets*, London, 1778–81; S. T. Coleridge, *Literary Remains*, do. 1836–39, *Seven Lectures*, do. 1856; T. B. Macaulay, *Critical and Historical Essays*, do. 1854 (the essays on 'Milton' appeared in the *Edinburgh Review*, 1825, on the occasion of the publication by C. R. Sumner of the newly-discovered *De Doctrina Christiana*, Cambridge, 1825); R. W. Emerson, 'Milton,' *North Amer. Rev* xlvii. [1838] 56 ff.; W. S. Landor, *Imaginary Conversations*, London, 1846; T. De Quincey, *Collected Works*, do. 1853, vols. vi., x.; E. H. A. Scherer, *Études critiques de littérature*, Paris, 1876; H. von Treitschke, *Historische und politische Aufsätze*^{2}, Leipzig, 1865; J. R. Lowell, *Among my Books*, Boston, 1876; Matthew Arnold, *Mixed Essays*, do. 1879, *Essays in Criticism*, 2nd ser., do. 1888; Mark Pattison, *Milton* (*English Men of Letters*), London, 1879; T. H. Ward, *English Poets*, do. 1880; E. Dowden, *Transcripts and Studies*, do. 1888; R. Garnett, *Life of John Milton*, do. 1890; W. Raleigh, *Milton*, do. 1900.

H. J. C. GRIERSON.

MĪMĀṀSĀ.—*Mīmāṁsā* in Sanskrit signifies 'investigation,' 'explanation.' The word is usually employed as the title of one of the six systems of philosophy recognized as orthodox by the Brāhmans. The Mīmāṁsā system is most closely related to the Vedānta (see art. VEDĀNTA); for in them both the subjects of ancient Indian speculation which meet us in the Brāhmaṇas and Upaniṣads are methodically developed.

The two systems form a connected whole in the sense that the Mīmāṁsā comprises the ritualistic doctrine of works, the Vedānta the doctrine of salvation by knowledge. Each, while limited to its own sphere, makes reference also to the other, so that it is impossible to doubt that they received a literary form at the same time. It is due chiefly to this close connexion with the Vedānta doctrine, and in the second place probably to the form into which it has been cast, that the Mīmāṁsā has found a place in India among the philosophical systems; for with philosophy its particular subject-matter has nothing to do.

Mīmāṁsā as a name of the ritualistic system is an abbreviation of *Pūrva-* or *Karma-mīmāṁsā*, 'first explanation,' or 'explanation of the function of work.' These names are explained by the connexion of the system with the Vedānta, which on its side is termed *Uttara-* or *Brahma-mīmāṁsā*, 'second explanation' or 'explanation of the All-Soul,' also *Śārīraka-mīmāṁsā*, 'explanation of the incarnation' (of Brahma). The oldest and most important text-book of the Mīmāṁsā is the *Mīmāṁsādarśana* of Jaimini. H. Jacobi places the composition of this work (and the contemporary completion of the Vedānta- or Brahma-sūtras) between *c.* A.D. 200 and 450 (*JAOS* xxxi. [1911] 1 ff.).

The aim of the Mīmāṁsā is to give rules for the correct interpretation of those Vedic texts whose subject is the Brāhmanical ritual. Since these texts contain in great parts an imperfect and obscure description of the ceremonies, and, besides, are interspersed at every step with speculations on the mystical meaning of the separate acts and implements, the assistance of rules was, in fact, absolutely necessary for the sacrificer, who believed that he had to dread the most serious consequences from the least mistake in ceremonial observance. The Mīmāṁsā offers a solution of all doubts which might present themselves with regard to the details of the sacrifice, and also professes to remove the discrepancies which are actually found in the Vedic texts. These last, however, according to the view of the Mīmāṁsā, are in every instance only apparent. The system, moreover, discusses at the same time the rewards which are offered for the correct performance of the sacrifice; so that the Mīmāṁsā is a compendium of the special theology of the Brāhmans.

The Mīmāṁsā does not recognize the existence of God. Nevertheless this fact interferes as little here as in the Sāṅkhya and the other systems with belief in the supernatural beings of the popular Indian faith. If we ask on what authority the instruction given with regard to the sacrifice and its consequences rests, the Mīmāṁsā answers that the Veda needs no authority, but is eternal and uncreated; and that its revelation concerns only things existing from eternity, and self-evident. This conviction is in India maintained with remarkable tenacity, and is strangely opposed to the entirely personal wishes, for the most part quite worldly, which were continually presented to the gods by the authors of the ancient Vedic hymns. In reality the teachers of the Mīmāṁsā associate the word *Veda* less with these ancient hymns than with the ritualistic texts of the second period of Vedic literature, in which the individuality of the authors is not so prominent.

It has been already remarked that the form in which the Mīmāṁsā is presented may have contributed towards its being regarded, in spite of its essentially unphilosophical character, as a system on a level with the other five systems of Indian philosophy. For the contents of the Veda are here classified under definite categories, and every subject of investigation is explained according to a method which represents already a high degree of logical skill in arrangement. This methodical and established scheme, which the other schools also adopt as their standard, contains the following five divisions: (1) the proposition, (2) the doubt as to its correctness, (3) the erroneous method of treating the question, (4) the refutation of the erroneous method by the true argument, (5) the result of the investigation. Occasionally also, for the purpose of establishing the special doctrines of the Mīmāṁsā, questions of philosophical import are discussed. This is true especially of the proposition that sounds and therefore words are eternal, and likewise the connexion of words with their meaning. On the basis of this theory the Mīmāṁsā teaches that the relation of word and meaning is not dependent on general agreement, but that the meaning is naturally inherent in the word. The Mīmāṁsā was compelled to propound this theory in order to protect the Veda from the suspicion of fallibility which attaches to all human works. If the Veda were to be regarded not as a collection of books composed or inspired, but as something uncreated, existing independently from eternity, then the connexion of the words of which the Veda is composed, with their meaning, could not be the result of human activity; but the words, and in the last resort the sounds that form the words, must have existed from all eternity—a view which could have held sway only within the narrow horizon of a school to which one language alone was known.

LITERATURE.—*Mīmāṁsādarśaṇa*, ed. Maheśachandra Nyāyaratna, Calcutta, 1873–89; *Arthasaṅgraha*, ed. G. Thibaut, Benares, 1882, Introductory Remarks; A. Barth, *Religions of India*^{3}, London, 1891; F. Max Müller, *Six Systems of Indian Philosophy*, do. 1899, ch. v.; *Sarva-darśana-saṅgraha*, tr. E. B. Cowell and A. E. Gough, 2nd ed., do. 1894, ch. xii.

MINÆANS. — See **Arabs (Ancient)**, **Sabæans**.

MIND.—Questions of empirical psychology and of the relations between body and mind are discussed in other articles (see Body, Body and Mind, Brain and Mind). The present article must be limited to a discussion of the metaphysical theories of mind. Owing to the peculiar position which these problems occupy in philosophy, as well as in the study of ethical and religious problems, it is advisable, first of all, to make explicit some of the epistemological problems which especially confront the student of the nature of mind; and, in order to do this, we must, in view of numerous traditional complications which beset the theory of the knowledge of mind, open our discussion with some general statements concerning the nature of problems of knowledge.

The history of epistemology has been dominated by a well-known contrast between two kinds of knowledge, namely, perceptual knowledge and conceptual knowledge. This dual contrast seems insufficient to supply us with a basis for a really adequate classification of the fundamental types of knowledge. It is proposed in the present article to base the whole discussion upon a threefold classification of knowledge. Having begun with this threefold classification and briefly illustrated it, we shall go on to apply it to the special problems which we have to face in dealing with mind. We shall then consider in some detail what kinds of mental facts correspond to the three different kinds of knowledge thus defined. In conclusion, we shall deal with some problems of the philosophy of mind in the light of the previous discussion.

1. Perception and conception as fundamental cognitive processes.—A careful study of the processes of knowledge, whether these occur in the work of science or in the efforts of common sense to obtain knowledge, shows us three, and only three, fundamental processes which are present in every developed cognitive activity and interwoven in more or less complicated fashion. Of these two have been recognized throughout the history of science and philosophy, and their familiar contrast has dominated epistemology. The third, although familiar and often more or less explicitly mentioned, was first distinguished with sharpness, for epistemological purposes, by the American logician, Charles Peirce. We shall speak first of the two well-known types of cognitive process, perception and conception.

The name 'perception' is used in psychology with special reference to the perceptions of the various senses. We are here interested only in the most general characteristics of perception. William James has used, for what is here called perception, the term 'knowledge of acquaintance.' He distinguishes 'knowledge of acquaintance' from 'knowledge about.' In the simplest possible case one who listens to music has 'knowledge of acquaintance' with the music; the musician who listens in the light of his professional knowledge has not only 'knowledge of acquaintance,' but also 'knowledge about'; he recognizes what changes of key take place and what rules of harmony are illustrated. A deaf man who has learned about the nature of music through other people, in so far as they can tell him about it, but who has never heard music, has no 'knowledge of acquaintance,' but is limited to 'knowledge about.' 'Knowledge of acquaintance' is also sometimes called 'immediate knowledge.' In the actual cognitive process of the individual human being it never occurs quite alone, since, when we know something perceptually or by acquaintance, we also always have more or less 'mediate' knowledge, *i.e.*, one who listens to music, but who also considers the person of the artist, the relation of the music to the programme, the name of the composer, or the place of this experience in his own life, has in his knowledge that which is more than the immediate hearing of the music.

'Knowledge about' includes, on occasion, mental processes which may vary very widely and which may be mingled with 'knowledge of acquaintance' in ways which are far too complex to analyze here. But 'knowledge about' is especially opposed to 'knowledge of acquaintance' in one class of cases which need to be emphasized through the use of a special name. We may name that class by calling the kind of knowledge involved in it by the name already used, 'conceptual knowledge.' Conceptual knowledge is knowledge of universals, of relations, or of other such 'abstract' objects. The Socratic-Platonic theory of knowledge called attention from its very beginning to universals and relations, and consequently made this type of knowledge specially prominent.

No doubt, even if one is disposed to cling to this merely dual classification of knowledge, one may well question whether all knowledge which is not merely 'knowledge of acquaintance' is of the grade of conceptual knowledge. For there is much 'knowledge about' concerning which we should all hesitate to say that it is knowledge of universals. Socrates himself, in his effort to define the knowledge of universals, met at the start with the fact that much of our knowledge of universals is confused and inarticulate. But if, for the moment, we neglect the intermediate cognitive states in which we more or less mingle 'knowledge of acquaintance' and conceptual knowledge, or possess conceptual knowledge in imperfect degrees of development, we may readily admit that this traditional dual classification of cognitive states is sufficient to call attention to a distinction which is of the utmost importance, both for empirical science and for metaphysics.

While the distinction between perceptual and conceptual knowledge is of great importance in determining the distinction between the deductive and the inductive methods in the sciences, the classification of these two modes of cognition does not of itself suffice to determine what constitutes the difference between inductive and deductive science. When we have clear and accurate conceptual knowledge, we are in general prepared to undertake scientific processes that in the case of further development will involve deductive methods. Thus, in particular, a conceptual knowledge of universals leads, in the mathematical sciences, to the assertion of propositions. Some of these propositions may appear at the outset of a science as axioms (*q.v.*). Whether accepted as necessarily true or used merely as hypotheses, these propositions, either alone or in combination, may, and in the mathematical sciences do, form the starting-point for a system of rational deductions. The type of knowledge involved in this deductive process will be, in the main, the conceptual type. In what sense and to what degree a 'knowledge of acquaintance' enters into a process of mathematical reasoning we have not here to consider. All will admit that the sort of knowledge which dominates such a deductive process is 'abstract,' is concerned in reaching results which are true about the propositions that themselves form the premisses of the deduction. And so our knowledge concerning numbers, the operations of a mathematical science, and similar cases form exceptionally good instances of what characterizes conceptual knowledge in its exact and developed form.

In the inductive use of scientific methods we find a more complicated union of the perceptual and the conceptual types of knowledge. When a hypothesis, such as Newton's formula for gravitation, or Galileo's hypothesis concerning the laws of falling bodies, is stated, the type of knowledge involved in formulating and in understanding the hypothesis is prevailingly conceptual. When the hypothesis is tested by comparing the predictions based upon it with experience, the test involves appealing at some point to perceptual knowledge, or 'knowledge of acquaintance.' The processes of experiment used in an inductive science might seem to be typical cases of processes involving perceptual knowledge. And experiments unquestionably do involve such knowledge. But an experiment reveals a truth, because it brings concepts and percepts into some sort of active synthesis. Upon such active synthesis depends the process of validation which is used as the basis for the definition of truth used by recent pragmatists (see ERROR AND TRUTH).

In so far as we insist upon this dual classification of fundamental processes of cognition, the questions which most come to our notice, regarding both knowledge and its objects, concern (1) the relative value of these two cognitive processes, and (2) the degree to which, in our actual cognitive processes, or in ideal cognitive processes (such as we may ascribe to beings of some higher order than ours), the two can ever be separated. These two questions have proved especially momentous for the theory both of knowledge and of reality.

(1) Regarding the relative value of the two fundamental types of cognition, Plato, as is well known, held that conceptual knowledge is the ideal type, the right result an expression of reason. Conceptual knowledge gives truth; perceptual knowledge gives illusion or appearance—such is, on the whole, the Platonic doctrine. In recent discussion the pragmatists—and still more emphatically Bergson—have insisted upon the relative superiority of the perceptual type of knowledge. The familiar expression of this view is the thesis of recent pragmatism that conceptual knowledge has only a sort of 'credit value'; perceptual knowledge furnishes the 'cash of experience'; conceptions are 'bank notes'; perceptions, and perceptions only, are 'cash.' The statement of Bergson goes further, and declares that, if we had unlimited perceptual knowledge, *i.e.* 'knowledge of acquaintance' whose limits and imperfections we had no occasion to feel, because it had no limits and no imperfections, then conceptions could have no possible interest for us as cognitive beings. In other words, we use concepts, *i.e.*, we seek for a knowledge of universals, only when our perceptions in some way fail us. Conceptual knowledge is in its very essence a substitute for failing perceptual knowledge. The opposition between Plato and Bergson regarding this estimate of the relative significance and truthfulness of the two kinds of cognitive processes is thus characteristic of the contrast which is here in question. Of course all the philosophers admit that, in practice, our knowledge makes use of, and from moment to moment consists in, a union which involves both conceptual and perceptual processes.

(2) On the question whether the two foregoing types of knowledge, however closely linked in our normal human experience, can, at least in ideal, be separated—*i.e.*, whether a knowledge by 'pure reason' is possible on the one hand, or a knowledge of 'pure experience' is ever attainable on the other hand —the historical differences of opinion are closely related to well-known metaphysical controversies. For Plato, as (in another age, and in a largely different metaphysical context) for Spinoza, it is at least in ideal possible for philosophy, or for the individual philosopher, to attain a purely intellectual insight into the realm of 'ideas' or into the nature of the 'substance.' For various forms of mysticism, as well as for theories such as the one set forth in the *Kritik der reinen Erfahrung* (Leipzig, 1888–90) of R. H. L. Avenarius, a mental transformation may be brought about through a process which involves either a practical or a scientific correction and gradual suppression of erroneous intellectual illusion; and, at the limit of this process, reality becomes immediately and perceptually known, without confusion through abstractions.

The 'radical empiricism' of James's later essays makes use of a theory of knowledge which attempts, as far as possible, to report, apart from conceptual constructions, the data of pure experience.

2. Interpretation through comparison of ideas as a third fundamental cognitive process.—It is an extraordinary example of a failure to reflect in a thoroughgoing way upon the process of knowledge that until recently the third type of cognitive process to which we must next refer has been neglected, although every one is constantly engaged in using and in exemplifying it.

When a man understands a spoken or written word or sentence, what he perceives is some sign, or expression of an idea or meaning, which in general belongs to the mind of some fellow-man. When this sign or expression is understood by the one who hears or who reads, what is made present to the consciousness of the reader or hearer may be any combination of perceptual or conceptual knowledge that chances to be in question. But, if any one cries 'Fire!', the sort of knowledge which takes place in my mind when I hear and understand this cry essentially depends upon this fact: I regard my fellow's cry as a sign or expression of the fact either that he himself sees a fire or that he believes that there is a fire, or that, at the very least, he intends me to understand him as asserting that there is a fire, or as taking an interest of his own in what he calls a fire. Thus, while I cannot understand my fellow's cry unless I hear it, unless I have at least some perceptual knowledge, and while I equally shall not have a 'knowledge about' the nature of fire, and so a 'knowledge about' the object to which the cry refers, unless I am possessed of something which tends to be conceptual knowledge of his object, my knowledge of my fellow's meaning, my 'grasping of his idea,' consists neither in the percept of the sign nor in a concept of its object which the sign arouses, but in my *interpretation* of the sign as an indication of an idea which is distinct from any idea of mine, and which I refer to a mind not my own, or in some wise distinct from mine.

It is to be noted that, however we reach the belief in the existence of minds distinct from our own, we do not regard these minds, at least in ordinary conditions, as objects of our own perceptual knowledge. For the very motives, whatever they are, which lead me to regard my perceptions as my own even thereby lead me to regard my fellows' perceptions as never present within my own field of awareness. My knowledge of my own physical pains, of the colours that I see, or of the sounds that I hear is knowledge that may be called, in general terms, perceptual. That is, these are objects with which I am, or upon occasion could be, acquainted. But with my fellow's pains I am not acquainted. To say this is merely to say that, whatever I mean by 'myself' and by 'the Alter,' the very distinction between the two is so bound up with the type of cognition that is in question that whatever I am acquainted with through my own perception is *ipso facto* my own object of acquaintance. Thus, then, in general, perceptual knowledge has not as its object what is at the same time regarded as the state of another mind than my own.

But, if the mind of my fellow, in particular his ideas, his feelings, his intentions, are never objects of perceptual knowledge for me, so that I am not directly acquainted with any of these states, must we regard our knowledge of the mind, of the ideas, of the intents, purposes, feelings, interests of our fellow-man as a conceptual knowledge? Is our fellow-man's mind the object of a concept of our own? Is the fellow-man a universal, or a relation, or a Platonic idea? Wherein does he differ from a mathematical entity or a law of nature? Unquestionably we regard him as possessing conceptual knowledge of his own, and also as engaged in processes of knowledge which may be conceptual, or which may involve any union of percept and concept. But the fact remains that neither by our own perceptions can we become acquainted with his states of mind, nor yet by our own conceptions can we become able to know the objects which constitute his mental process. In fact, we come to know that there are in the world minds not our own by interpreting the signs that these minds give us of their presence. This interpretation is a third type of knowledge which is closely interwoven with perceptual and conceptual knowledge, very much as they in turn are bound up with it, but which is not reducible to any complex or combination consisting of elements which are merely perceptual or merely conceptual.

Every case of social intercourse between man and man, or (what is still more important) every process of inner self-comprehension carried on when a man endeavours to 'make up his own mind' or 'to understand what he is about,' involves this third type of cognition, which cannot be reduced to perception or to conception. It is to this third cognitive process that, following the terminology which Peirce proposed, we here apply the name 'interpretation.'

In order to distinguish more clearly the three types of cognition, we may say that the natural object of perception is some inner or outer datum of sense or of feeling, such as a musical tone, a colour, an emotional state, or the continual flow of the inner life upon which Bergson so much insists. For these are typical objects of perceptual knowledge, *i.e.* of 'knowledge of acquaintance.' The typical objects of conceptual knowledge are such objects as numbers, and relations such as identity and difference, equality, and so on. But typical objects of interpretation are signs which express the meaning of some mind. These signs may be expressions of the meaning of the very mind which also interprets them. This is actually the case whenever in memory we review our own past, when we reflect upon our own meaning, when we form a plan, or when we ask ourselves what we mean or engage in any of the inner conversation which forms the commonest expression of the activity whereby an individual man attains some sort of explicit knowledge of himself.

The form of cognitive process involved in the social relations between man and man is essentially the same as that involved in the cognitive process by which a man makes clear to himself his own intent and meaning. For, despite well-known assertions to the contrary on the part of Bergson, nobody has any adequate intuitive 'knowledge of acquaintance' with himself. If such perceptual or intuitive knowledge of the self by the self were possible, we should not be obliged to acknowledge that the world of human beings is dominated by such colossal and often disastrous ignorance of every man regarding himself, his true interests, his real happiness, his moral and personal value, his intents, and his powers, as we actually find characterizing our human world. In brief, man's knowledge, both of himself and of his neighbour, is a knowledge which involves an interpretation of signs. This thesis, very ably maintained by Peirce in some of his early essays, involves consequences which are at once familiar and momentous for the theory of knowledge.

That the type of knowledge involved whenever signs are interpreted is a fundamental type of knowledge which cannot be represented either to perception or to conception can be exemplified in most manifold ways, and will appear somewhat more clearly through the illustrations given below. It may be useful to point out here that, while all our interpretations, like all our perceptual and conceptual knowledge, are subject to the most manifold illusions in detail, it still remains the case that, whenever one is led to attempt, propose, or believe an interpretation of a sign, he has actually become aware, at the moment of his interpretation, that there is present in his world some meaning, some significant idea, plan, purpose, undertaking, or intent, which, at the moment when he discovers its presence, is from his point of view not identical with whatever idea or meaning is then his own.

If somebody speaking to me uses words which I had not intended to use, I may misunderstand the words, or I may not understand them at all. But, in so far as I take these words to be the expression of a meaning, this meaning is one that just then I cannot find to be my own—*i.e.*, these words do not express my ideas, in so far as these ideas are by me interpreted as my own. The cognitive process here in question divides, or at least distinguishes, that part of the objects, ideas, or meanings in question into two distinct regions, provinces, or modes of mental activity. One of these regions is interpreted at the moment as 'my own present idea,' 'my own purpose,' 'my own meaning'; the other is interpreted as 'some meaning not just now my own,' or as 'some idea or meaning that was once my own'—*i.e.*, as 'my own past idea,' or as 'my neighbour's meaning,' or perhaps as 'a meaning that belongs to my social order,' or 'to the world,' or, if I am religiously minded, 'to God.' In each case the interpretation that is asserted may prove to be a wrong one. Interpretation is fallible. So, too, is conception, when viewed as a cognitive process, and so is perception, whose character as 'acquaintance with' is no guarantee of its accuracy, whether mystical apprehension or ordinary observation is in question. The fact for our present purpose is not that our human knowledge is at any point infallible, but that there is the mode or type of cognition here defined as interpretation. Interpretation is the knowledge of the meaning of a sign. Such a knowledge is not a merely immediate apprehension, nor yet a merely conceptual process; it is the essentially social process whereby the knower at once distinguishes himself, with his own meanings, ideas, and expressions, from some other self, and at the same time knows that these selves have their contrasted meanings, while one of them at the moment is expressing its meaning to the other. Knowledge by interpretation is, therefore, in its essence neither mere 'acquaintance' nor yet 'knowledge about.'

There is another way of expressing the distinction of these three kinds of knowledge which proves useful for many purposes. Knowledge of the first kind, 'knowledge of acquaintance,' may for certain purposes be characterized as 'appreciation.' Conceptual knowledge, owing to the means often employed in making a concept explicit, may be for many purposes called 'description.' In each case, as will be noted, the main character of the type of knowledge in question can be designated by a single term, namely, appreciation or description, just as in the foregoing these two types of knowledge have been designated each by a single term, acquaintance in one case and conception in the other.

In designating the instances of interpretation it is well to note that every interpretation has three aspects. For the one who interprets it is an expression of his own meaning. With reference to the object, *i.e.* to the sign, or to the mind whose sign this is, the interpretation is the reading or rendering of the meaning of this mind by another mind. In other words, every interpretation has so far a dual aspect: it at once brings two minds into quasi-social contact and distinguishes between them or contrasts them. In the light of this contrast and with reference to the direction in which it is read, the two minds are known each in the light of the other. As has already been said, the two minds in question may be related as a man's own past self is related to his present or future self. And in fact, as Peirce has pointed out, every act of interpretation has also a triadic character. For the cognitive process in question has not only a social character, but what one may call a directed 'sense.' In general, when an interpretation takes place, there is an act B wherein a mental process A is interpreted, read, or rendered *to* a third mind. That the whole process can take place within what, from some larger point of view, is also a single mind with a threefold process going on within it has already been pointed out. Thus, when a man reflects on his plans, purposes, intents, and meanings, his present self, using the signs which memory offers as guides, interprets his past self to his future self, the cognitive process being well exemplified when a man reminds himself of his own intents and purposes by consulting a memorandum made yesterday for the sake of guiding his acts to-day. Every explicit process involving self-consciousness, involving a definite sequence of plans of action, and dealing with long stretches of time, has this threefold character. The present self interprets the past self to the future self; or some generally still more explicit social process takes place whereby one self or quasi-self has its meanings stated by an interpreter for the sake of some third self.

Thus, in brief, knowledge by interpretation is (1) an expression (by an 'interpreter') of (2) the idea or meaning whereof some other mind gives a sign, and (3) such an expression as is addressed to some third mind, to which the interpreter thus reads or construes the sign.

3. Self-interpretation, comparison of one's own ideas, and knowledge of time.—When such interpretation goes on within the mind of an individual man, it constitutes the very process whereby, as is sometimes said, he 'finds himself,' 'comes to himself,' 'directs himself,' or 'gets his bearings,' especially with reference to time, present, past, and future. In the inner life of an individual man this third mode of cognition, therefore, appears at once in its most fundamental and simplest form as the cognitive process whose being consists in a *comparison of ideas.* The ideas compared here belong in one sense to the 'same self'; but they differ as the ideas of 'past self' and 'future self'; or, in various other ways, they belong to different 'quasi-minds.'

That such a process is, indeed, irreducible to pure perception, to pure conception, or to that active synthesis of the two which James has in mind when he uses the term 'idea,' readily becomes manifest if we consider what takes place when two 'ideas' are 'compared,' whether these two belong to men who are 'different individuals' or to the past, present, or future selves of one who is, from another point of view, the same man.

An 'idea,' when the term is used in the sense which recent pragmatism[1] has made familiar and prominent, is not a mere perception, nor a mere collection or synthesis of various perceptions, images, and other immediate data; nor yet is it a mere conception, whether simple or complex. It is, for James and his allies, a 'leading,' an 'active tendency,' a 'fulfilment of purpose,' or an effort towards such fulfilment, an 'adjustment to a situation,' a seeking for the 'cash,' in the form of sense-data, such as may, when found, meet the requirements, or 'calls,' made by the conceptual aspect of the very idea which is in question. This concept has, in Bergson's phrase, its 'credit value.' Eventual sense-data may furnish the corresponding 'cash.' The idea is the seeking for this 'cash.' When the wanderer in the woods decides to adopt the idea that 'yonder path leads me home,' he makes an active synthesis of his concept of home and of his present sense-data. This active synthesis, expressed in his idea, 'I am homeward bound,' is a 'leading,' which, if he is successful, will result in furnishing to him, when his wanderings cease, the perceptions of home which constitute the goal of his quest. This, then, is what is meant by the term 'idea' in that one of its senses which pragmatism has recently most emphasized.

In this way we may also illustrate how the cognitive process possesses the two forms or aspects which have usually been regarded as the only fundamentally distinct aspects of knowledge: perception and conception. We meanwhile illustrate that active *union* of these two which constitutes the 'idea' as defined by recent pragmatism. But we do not thus illustrate an aspect of cognition which is equally pervasive and significant, and which consists in the *comparison of ideas.* It is just this aspect of cognition upon which our present theory most insists. For by what process does the wanderer, when he reaches home, recognize that this home which he finds is the very home that he had sought? Not by the mere presence of a 'home-feeling,' not by a perception which, merely at the moment of home-coming, pays the 'cash' then required by some then present conception of home, but by a process involving a comparison of his ideas about his home, at the moment when he reaches home, with his memories of what his ideas were while he was lost in the woods and while he still inquired or sought the way home.

In order to consider what such a comparison essentially involves, it is not necessary to suppose that the act of comparison must take place in a form involving any high grade of self-consciousness, or depending upon a previous formation of an elaborate system of ideas about the self, the past, and similar objects. The essentially important fact is that whoever begins, even in the most rudimentary way, to take account of what seems to him as if it were his own past, whoever is even vaguely aware that what he has been seeking is the very object which now he finds, is not merely perceiving the present, and is not conceiving the past, and is not simply becoming aware of his present successes and disappointments as present facts—he is comparing his ideas of present success or failure with his ideas of his past efforts. This comparison is essentially an interpretation of some portion of his own past life, as he remembers that life, in the light of his present successes or disappointments, as he now experiences them. A third cognitive process is then involved. This interpretation compares at least two ideas: (1) the past idea or 'leading' (*e.g.*, the past search for home by the path through the woods); (2) the present success or failure (*e.g.*, the reaching home itself, or getting to the close of some stage of the wandering); and, in making this comparison, this interpretation estimates the result, perhaps in the light of one's idea of one's own future ('and henceforth I need search no more'), or perhaps in the light of one's idea of one's entire self ('I have succeeded,' or 'I am a knower of the truth,' or 'So much of the world of reality is mine'). In any case two comments may be made upon every such act of comparing two ideas and interpreting one in the light of the other.

---

[1] See W. James, *Pragmatism*, London, 1907.

(1) Unless such processes of comparing ideas were possible, and unless, in at least some rudimentary form, it took place, we could never make even a beginning in forming a coherent view of our own past and future, of our own selves as individuals, or of selves not our own. Our ideas both of the Ego and of the Alter depend upon an explicit process of comparing ideas. The simplest comparison of ideas—such as the case upon which recent pragmatism lays so much stress—the comparison upon which the very idea 'my success' also depends, the comparison, namely, which is expressed by saying, 'What I sought at a past moment is the very same as what, at the present moment, I now find,' is an instance of an act of interpretation, and is not reducible to the two other types of knowledge.

(2) All such processes of comparison are equally characteristic of the cognitive activity which goes on during our explicitly and literally social life and of the cognitive activity which is needed when we think about our relations to our own individual past and future. In brief, neither the individual Ego nor the Alter of the literal social life, neither past nor future time can be known to us through a cognitive process which may be defined exclusively in terms of perception, of conception, and of the ideal 'leadings' of the pragmatists. The self, the neighbour, the past, the future, and the temporal order in general become known to us through a third type of cognition which consists of a comparison of ideas—a process wherein some self, or quasi-self, or idea interprets another idea, by means of a comparison which, in general, has reference to, and is more or less explicitly addressed to, some third self or idea.

4. The relation of the three cognitive processes to our knowledge that various minds exist and to our views about what sorts of beings minds are.—The use of the foregoing classification of the types of cognitive processes appears of special importance as soon as we turn to a brief outline of some of the principal theories about the nature of mind which have played a part in the history of philosophy. Nowhere does the theory of knowledge show itself of more importance in preparing the way for an understanding of metaphysical problems than in the case of the metaphysics of mind. No attentive student of the problem of mind can easily fail at least to feel, even if he does not very explicitly define his feeling, that in dealing with the philosophy of mind both common sense and the philosophers are accustomed to combine, sometimes in a very confused way, a reference to different more or less hypothetical beings, while the ideas that are proposed with regard to the nature of these beings are of profoundly different types.

Thus it may be a question for common sense or for a given metaphysical doctrine as to whether or not there exists a so-called soul. Now it makes a great difference for the theory of the soul whether the kind of soul which is in question is viewed as in its essence an object of a possible immediate acquaintance or perception, as an object of a possible adequate conception, or as an object whose being consists in the fact that it is to be interpreted thus or so. Unless the three kinds of cognition are clearly distinguished, the one who advances or tests a given theory of the soul does so without observing whether he himself is speaking of the soul as a possible perception, or is treating it as if it were, in its inmost nature, an object which can be known only through some adequate conception. If one has called to his attention the fact that he is speaking now in perceptual and now in conceptual terms of the mind or soul which his theory asserts to be real, he may then attempt to solve his difficulties in the way which recent pragmatism has emphasized, *i.e.*, he may declare that his doctrine is of necessity a 'working hypothesis' about the nature of the soul, that it is, of course, in part stated in conceptual terms, but that the concepts are true only in so far as they prove to be somewhere directly verifiable in terms of immediate percepts.

Yet nowhere does recent pragmatism, in the form in which William James left it, more display its inadequacy as a theory of knowledge than in the case where it is applied to an effort to define the truth of hypotheses concerning mind, or to test such truth. For, as a fact, nobody who clearly distinguishes his neighbour's individual mind from his own expects, or can consistently anticipate, that his neighbour's mental states, or that anything which essentially belongs to the inner life or to the distinct mind of his neighbour, can ever become, under any circumstances, a direct perception of his own. For, if my neighbour's physical pains ever became mine, I should know them by immediate acquaintance only in so far as they were mine and not my neighbour's. And the same holds true of anything else which is supposed to be a fact essentially belonging to the individual mind of my neighbour. At best I can hope, with greater or less probability, to *interpret* correctly the meaning, the plan, or some other inner idea of the mind of my neighbour; but I cannot hope to go beyond such correct interpretation so far as to perceive my neighbour's mental states. For, if my neighbour's states became the immediate objects of my own acquaintance, my neighbour and I would so far simply melt together, like drops in the ocean or small pools in a greater pool. The immediate acquaintance with my neighbour's states of mind would be a knowledge neither of himself as he is in distinction from me nor of myself as I am in distinction from him. For this general reason 'working hypotheses' about the interior reality which belongs to the mind of my neighbour can never be 'converted into the cash of experience.' My neighbour's mind is never a verifiable object of immediate acquaintance, precisely as it is never an abstract and universal idea. The one sort of knowledge for which recent pragmatism has no kind of place whatever is a knowledge, statable in pragmatistic terms, concerning my neighbour's mind.

James himself follows a well-known and ancient philosophical tradition by declaring that our assertion of the existence of our neighbour's mind depends upon the argument from analogy. Because of similar behaviours of our organism we regard it as by analogy probable that both our neighbour's organism and our own are vivified by more or less similar mental lives, so that we have similar experiences. But to regard or to believe in the mind of our neighbour as an object whose existence is to be proved through an argument from analogy raises a question whose answer is simply fatal to the whole pragmatistic theory of knowledge. Surely an argument from analogy is not its own verification. For pragmatism the truth of a hypothesis depends upon the fact that its conceptual constructions are capable of immediate verification in terms of certain facts of immediate experience. But my neighbour's inner states of mind can never become for me objects of immediate acquaintance, unless they become my states of mind and not his, precisely in so far as he and I are distinct selves.

The hypothesis that our mental lives are similar may thus be suggested by analogy or may be stated in terms of analogy; but the analogy in question is essentially unverifiable in the required terms, *i.e.*, in terms of immediate perceptions. For my neighbour can immediately perceive only his own states, while I, in so far as I am not my neighbour, can verify only my own states. From the point of view, then, of the argument from analogy, my neighbour, in observing his own states, does *not* verify my hypothesis in the sense in which my hypothesis about him demands verification, namely, in terms of the experience of the self who makes the hypothesis. From this point of view, the problem of the mind of my neighbour remains hopeless.

It is possible, of course, to say of the foregoing argument from analogy what is also said both by common sense and by science, on the basis of a theory of truth which is in its essence conceptual and realistic. One can, of course, assert that in actual fact the mental states of my neighbour really exist and are in a certain relation which makes it true to say that they are analogous to mine. This real relation may be asserted to be as much a fact as any other fact in the universe. If this fact of the real analogy is granted, then it may be declared that my hypothesis to the effect that my neighbour's mind is a reality is actually true. This, however, is precisely the type of truth which William James's pragmatism undertakes to reject.

A very different appearance is assumed by the whole matter if we recognize that there is a third kind of knowledge, which is neither conceptual nor perceptual, and which is also not the sort of union of conception and perception which is completely expressible in terms of the favourite metaphor of Bergson and the pragmatists, namely, the metaphor of the conversion of conceptual credits or bank-notes into perceptual cash, *i.e.*, into immediate data of experience. For interpretations are never verified merely through immediate data, nor through the analysis of conceptions. This is true whether I myself am the object of my own interpretation or my neighbour is in question. If we seek for metaphors, the metaphor of the conversation, already used, furnishes the best means of indicating wherein consists the relative, but never immediate, verifiability of the truth of an interpretation.

When I interpret (whether my own purposes or intents or the ideas of another man are the objects which I seek to interpret), what I first meet in experience is neither a matter of acquaintance nor a mere 'knowledge about.' What I meet is the fact that, in so far as I now understand or interpret what I call myself, I have also become aware, not immediately but in the temporal process of my mental life, that ideas have come to me which are not now my own, and which need further expression and interpretation, but which are already partially expressed through signs. Under these circumstances, what happens is that, as interpreter of these signs, I offer a further expression of what to me they seem to mean, and I make the further hypothesis that this expression makes more manifest to me both the meaning of this sign and the idea of the mind or self whereof this sign gave partial expression. It is of the essence of an expression which undertakes to interpret a sign that it occurs because the sign already expresses a meaning which is not just at the present moment our own, and which, therefore, needs for us some interpretation, while the interpretation which at the moment we offer is itself not complete, but requires further interpretation.

In literal conversation our neighbour utters words which already express to us ideas. These ideas so contrast with our own present ideas that, while we find the new ideas intelligible, and, therefore, view them as expressions of a mind, we do not fully know what they mean. Hence, in general, our neighbour having addressed us, we in reply ask him, more or less incidentally or persistently, whether or not this is what he means—*i.e.*, we give him back our interpretation of his meaning, in order to see whether this interpretation elicits a new expression which is in substantial agreement with the expression which we expected from him. Our method in a conversation is, therefore, unquestionably the method of a 'working hypothesis.' But since this 'working hypothesis' refers to our neighbour's state of mind, it is never conceivably capable of direct verification.

Nor does what the pragmatists are accustomed to call the successful 'working' of this hypothesis consist in the discovery of any perceptible fact with which we get into merely immediate relation. Our interpretation of our neighbour satisfies our demands, precisely in so far as our interpretations, which are never complete, and which always call for new expressions and for further interpretations, lead to a conversation which remains, as a whole, essentially 'coherent,' despite its endless novelties and unexpected incidents.

Our whole knowledge of mind, in so far as by this term we mean intelligent mind, not only depends upon, but consists in, this experience of a consistent series of interpretations, which we obtain, not merely by turning conceptual 'credits' into the 'cash of immediate acquaintance,' but by seeking and finding endlessly new series of ideas, endlessly new experiences and interpretations. This never-ended series of ideas, in so far as we can hold them before our minds, tends to constitute a connected, a reasonable, a comprehensible system of ideal activities and meanings. The essence of mental intercourse—we may at once say the essence of intelligent mental life and of all spiritual relations—not only depends upon, but consists in, this coherent process of interpretation.

Or, again, an interpretation is not a conceptual hypothesis which can be converted into 'perceptual knowledge'; it is a hypothesis which leads us to anticipate further interpretations, further expressions of ideas, novel bits of information, further ideas not our own, which shall simply stand in a coherent connexion with one another and with what the original interpretation, as a hypothesis, had led us to expect. When I deal with inanimate nature, I may anticipate facts of perception, and then my hypotheses about these facts 'work,' in so far as the expected perceptions come to pass. But, when I deal with another mind, I do not merely expect to get definable perceptions from that mind; I expect that mind to give me new ideas, new meanings, new plans, which by contrast are known at each new stage of social experience to be not my own, and which may be opposed to my own and in many respects repellent to me.

But it is essential to the social intercourse between minds that these endlessly novel ideas and meanings should, through all conflicts and novelties and surprises, retain genuine coherence. Thus, in dealing with other minds, I am constantly enlarging my own mind by getting new interpretations, both of myself and of my neighbour's life. The contrasts, surprises, conflicts, and puzzles which these new ideas present to me show me that in dealing with them I am dealing with what in some respects is not my own mind. The coherence of the whole system of interpretations, ideas, plans, and purposes shows me just as positively that I am dealing with a mind, *i.e.*, with something which through these expressions constantly interprets itself, while, as I deal with it, I in turn constantly interpret it, and even in and through this very process interpret myself. It will and must be observed that this Alter, with which I have to deal, both in reflecting on my own mind and in seeking for new light from my neighbour, is never a merely single or separable or merely detached or isolated individual, but is always a being which is of the nature of a community, a 'many in one' and a 'one in many.' A mind knowable through interpretation is never merely a 'monad,' a single detached self; its unity, in so far as it possesses genuine and coherent unity, tends, in the most significant cases, to become essentially such as the unity which the apostle Paul attributes to the ideal Church: many members, but one body; many gifts, but one spirit (Ro $12^{4\mathrm{ff.}}$)—an essentially social unity, never to be adequately conceived or felt, but properly the object of what the Apostle viewed, in its practical and religious aspect, as the spiritual gift of charity, in its cognitive aspect as interpretation: pray rather that ye may interpret (1 Co 14^{13}).

5. Metaphysical theories of the nature of mind.—(*a*) *Predominantly perceptual theories.*—The nature of mind may be defined by a given metaphysical theory mainly in terms which regard mind as best or most known through possible 'perceptions' or through possible 'acquaintance' with its nature. Such theories have been prominent throughout the whole history of human thought. They depend, first, upon ignoring the fact that what is most essential to the mind is known through the cognitive process of interpretation. They depend, further, upon making comparatively light of the effort to give any abstract conceptual description of what constitutes the essence of mind. They depend upon turning to what is sometimes called 'introspection,' or, again, 'intuition,' to bring about an immediate acquaintance with mind.

Since, in general, any one who forms a predominantly perceptual idea of what mind is very naturally is not depending solely upon his own personal experience, but upon the experiences which he supposes other minds to possess, these perceptual theories of the nature of mind actually make a wide use of the reports of other people and so, more or less consciously, of arguments from analogy.

The simplest and vaguest, but in some respects the most persistent, of all theories of mental life appears, upon a largely perceptual basis, and also upon a basis of an argument from analogy, in countless forms of so-called 'animism.' Leaving aside all the historical complications, we may sum up the animistic theory of mind thus. We perceive, within ourselves, certain interesting processes which include many of our feelings, embody many of our interests, and characterize many of our activities. These activities, which in ourselves we more or less directly observe, are closely connected with the whole process of the life of the organism, *i.e.*, of the body in whose fortunes each one of us is so interested. That which produces all these feelings, awakens in us all these interests, vitalizes our own body, and forms for each of us a centre of his own apparent world—this is the mind. The mind, then, strives and longs. It feels pain and pleasure. It prospers as the body prospers, and suffers as the body suffers.

Analogy shows that other people have such minds. These minds are as numerous as the organisms in question. They resemble one another and differ from one another, much as the organisms resemble and differ from each other. An extension of this analogy, on the basis of many motives, leads us to regard the world about us as containing many minds which are not connected with human bodies—at least in precisely the same way in which our minds are connected with our bodies. When the vast mass of superstitious beliefs which have made use of such analogies and such experiences can be more effectively controlled through the advances of the human intelligence, this primitive animism tends to pass over into theories of which we find some well-known examples in early Greek philosophies. These early Greek theories of mind appear, on a somewhat primitive and already philosophical level, as 'hylozoistic.' The world, or, at all events, the organic world, has life principles in it which vary as the organisms vary, and which are also of a nature that feeling and desire reveal to ourrelatively immediate 'knowledge of acquaintance' with our own minds.

The theories of mind of this type have played a great part in the life both of philosophy and of religion. As a general theory, animism has proved very persistent, and that for obvious reasons.

One of the Hindu *Upaniṣads*[1] well suggests both the origin and the logical basis—such as it is—of these theories when, in an allegory, it represents the question arising within the body as to where and what the soul most is. The question is disputed amongst the various bodily organs, each asserting itself to be the principal seat of life and also of mind. To discover which view is true, the members of the body take turns in leaving the organism. When the eyes go, blindness ensues, but life and mind continue, and so on with various other members. But, when the breath starts to leave the body, all the other members together cry, 'Stay with us! You are the life, you are the soul, you are the self or Ātman.'

This allegory sufficiently indicates how primitive, how vague, and how stubborn is such a perceptual theory of mind when defined in terms of immediate intuition, and of a more or less pragmatic testing of various views about the physical organism.

Later in its origin, but continuing in its influence to the present day, is another perceptual theory of mind, which the later *Upaniṣads* present at length, and which, in another form, is exemplified by a notable assertion of H. Bergson in his *Introduction to Metaphysics*[2]—namely, that of one object at least we all have intuitive knowledge, this object being the self. The entire history of mysticism, the history also of the efforts to discover the nature of mind through introspection, can be summarized by means of these instances in the Hindu *Upaniṣads* that discover the true self through the experiment with breathing, and of the latest vision of Bergson, who defines the nature of mind, and also its contrast with body, in terms of the *élan vital*; for all these views emphasize, in various more or less primitive, or in more or less modern, forms, essentially the same theory of mind: the essence of the mind is to be known through immediate acquaintance. That which Schopenhauer calls the will to live, that which Bergson characterizes in the terms just mentioned, that which the shamans and medicine-men of all the more intelligent tribes have sought to know, is, in every case, mind viewed as an object of possible perception.

In the history of thought such perceptual theories of mind have become more highly developed and diversified, and have assumed other and very widely influential forms, by virtue of an insistence that we have an immediate perception of what is variously called 'mental activity,' 'the active soul,' or 'the principle of individual selfhood.'

[1] *Bṛhadāraṇyaka Upaniṣad*, VI. 1. 7–14, tr. in P. Deussen, *Sechzig Upanishad's des Veda*, Leipzig, 1897, p. 503.

[2] Eng. tr., London, 1913.

Motives which as a fact are not statable in purely perceptual terms have joined with this fondness for defining mind in perceptual terms to make emphatic the assertion that this theory of mind ought to be stated in expressly 'pluralistic' terms. It has, consequently, been freely asserted that we 'immediately know' our own self to be independent, to be distinct from all other selves, and thus to be unique. Since it is also sometimes asserted that we know, or that we 'know intuitively,' upon occasion, the fact that we can never be directly acquainted with the conditions of our neighbour's mind, such perceptual theories have given rise to the so-called problem of 'Solipsism.' For, if we know mind by perception only, and if we are sure of it only when we perceive it, and if each of us can perceive only his own mind, then what proves for any one of us that there is any mind but his own? The analogy which primitive animism so freely and so vaguely used becomes, for the critical consciousness, questionable. In consequence, the problem of Solipsism has remained in modern times a sort of scandal of the philosophy of mind.

The solution of the problem of Solipsism lies in the fact, upon which Peirce so well insisted,[1] that no one of us has any purely perceptual knowledge of his own mind. The knowledge of mind is not statable, in the case either of the self or of the neighbour, in terms of merely immediate acquaintance. If the truth of this proposition is once understood, the entire theory of mind, whether for metaphysics or for empirical psychology, is profoundly altered. Until this inadequacy of knowledge through acquaintance to meet the real end of human knowledge is fully grasped, it is impossible to define with success either the mind or the world, either the individual self or the neighbour.

(*b*) ***Predominantly conceptual theories.***—As is the case with every highly developed doctrine, the conceptual form is very naturally assumed by any philosophical theory of mind which seeks for theoretical completeness. The conceptual theories of mind have been in history of two general types: (1) the purely conceptual, *i.e.* 'the abstractly rational' metaphysical theories; and (2) the more inductive conceptual theories based upon the more or less highly developed 'empirical psychologies' of the period in which these theories have flourished. We need not enumerate these theories or give their history.

Of principal importance in their history have been (1) that type of vitalism whose most classical representative is the Aristotelian theory of mind; (2) the monistic theory of mind, which often depends not so much upon the general metaphysical tendency to define the whole universe as One, but rather upon the effort to conceive mind and matter by regarding them both as the same in substance; and (3) the various types of monadology, which are characterized by the assertion of the existence of many real and more or less completely independent minds or selves, whose nature it is either to be themselves persons or to be beings which under certain conditions can assume the form of persons.

Of those various important theories which are expressed in the predominantly conceptual form that of Aristotle is very deeply and interestingly related to primitive animism on the one hand, while, on the other hand, it looks towards that development of the idea of the distinct individual self upon which more modern forms of monadology have depended.

Whatever special forms the conceptual theories of mind may assume, the well-known problem remains: How are these conceptions of the various mental substances, or principles, or monads, which are each time in question related to the sorts of experience which the psychologists, the students of the natural history of mind, have at any stage of knowledge discovered or may yet hope to discover? From the point of view of modern pragmatism, conceptual theories of mind might be entertained as 'working hypotheses' if they led to verification in perceptual terms.

In fact, the modern physical sciences, in conceiving the nature of matter, deal with manifold problems, but use conceptual hypotheses regarding the nature of matter which are, in a large measure, subject to pragmatic tests. Molecules and atoms and, of late, various other types of conceptual physical entities, which were formerly supposed to be incapable of becoming objects of physical experience, now appear to come within the range of the experimenter's verifications. Therefore the processes of the experimental verification of physical hypotheses have, on the whole, a direct relation to the sort of knowledge upon which the pragmatists so much insist. The 'conceptual credits' of physical hypotheses are, on the whole, verifiable in terms of the 'perceptual cash' of laboratory experience. When this is not the case, there is a tendency towards such direct verification. Hence physical hypotheses, at least regarding what is generally called the phenomenal nature of matter, have generally proved to be topics for an inquiry within the strict realm of inductive science.

But it has been, in the past, the reproach of the conceptual theories about the nature of mind that no pragmatic test can be discovered by which one might learn what difference it would make to an observer of mental processes and, in particular, of his own mental processes whether minds are 'soul substances,' or Leibnizean monads, or not, or whether the introspective observer of his own sensations or feelings is or is not himself a Leibnizean monad or Aristotelian 'entelechy'; or, again, whether he is essentially persistent and indestructible. Thus, from the pragmatic point of view, the majority of these conceptual hypotheses regarding the nature of mind show little sign of promising to prove more verifiable than they thus far have been. In consequence, the outcome of conceptual views regarding the real nature of mind has been, for many reasons, on the whole sceptical. In fact, the whole nature of mind cannot be adequately conceived, and could not be so conceived even if one's power to perceive mental processes were increased indefinitely, unless another type of cognitive processes were concerned in such an enlargement. For a mind is essentially a being that manifests itself through signs. The very being of signs consists in their demanding interpretation. The relations of minds are essentially social; so that a world without at least three minds in it—one to be interpreted, one the interpreter, and the third the one for whom or to whom the first is interpreted—would be a world without any real mind in it at all. This being the case, it might well be expected that a conceptual theory of mind would fail precisely as a perceptual theory fails. Such theories would fail because they do not view the cognitive process as it is and do not take account of that which is most of all needed in order even in the most rudimentary fashion to grasp the nature of an intelligent mind.

(*c*) *Theories making use of the cognitive process of the interpretation.*—Despite the inadequate development of the doctrine of interpretation thus far in the history of epistemology, there have not been lacking theories regarding the nature of mind according to which mind is an object to be known through interpretation, while its manifestations lie not merely in the fact that it possesses or controls an organism, but in the fact that, whether through or apart from an organism, it expresses its purposes to other minds, so that it not merely has or is a will, but manifests or makes comprehensible its will, and not merely lives in and through itself, as a monad or a substance, but is in essence a mode of self-expression which progressively makes itself known either to its fellows or to minds above or below its own grade.

---

[1] See Royce, *Problem of Christianity*, ii.

That theories of mind which are based upon such a view have existed, even from very primitive times, is manifest wherever in the history of religion a consultation of oracles, discovery of the future or of the will of the gods through divination, or, in fact, any such more or less superstitious appeals to other minds, and readings or interpretations of these appeals, have taken place. Primitive belief in magic arts has apparently, on the whole, a conceptual type of formulation. Therefore magic has been called the physics of primitive man. It depends upon the view that man is subject to laws which, if he could discover them, he could use for his purposes, just as we now make use of the known laws of physics for industrial purposes. The supposed realm of magic arts is thus analogous to our present realm of industrial arts. The view of pragmatism—that primitive magic is not true merely because its hypotheses regarding how to cause rain or how to cure diseases do not 'work'—is in this case fairly adequate to express the situation both epistemologically and metaphysically.

Moreover, as we have seen, animism, in its more primitive forms, expresses a predominantly perceptual theory of mind, and whether such a theory, either of mind or of the relations between mind and the physical world, is held in some simple form by the medicine-man of an obscure tribe or is impressively reiterated in a Hindu *Upaniṣad*, or is fascinatingly placed in the setting of a modern evolutionary theory by Bergson, makes comparatively little difference to the essential views of the philosophy of mind which are in question. But that view of the nature of mind which gained, apparently, its earliest type of expression when men first consulted, and hereupon more or less cautiously interpreted, the oracles of their gods has (as befits a theory of mind which is founded upon a fundamental cognitive process) persisted throughout the history of human thought. This way of viewing mind has, in fact, persisted in a fashion which enables us to distinguish its expressions with sufficient clearness from those which have had their origin either in the conceptions of primitive magic or in the perceptions which guided primitive animism.

From the point of view of the cognitive process of interpretation mind is, in all cases where it reaches a relatively full and explicit expression, equally definable in terms of two ideas—the idea of the self, and the idea of a community of selves. To an explicit recognition of what these two ideas involve a great part of the history of the philosophy of mind has been devoted. Both ideas have been subject to the misfortune of being too often viewed as reducible either to purely conceptual terms or to purely perceptual terms. If the self was defined in predominantly conceptual terms, it tended to degenerate into a substance, a monad, or a mere thing of some sort. Under the influence of a too abstract epistemology (such as the Kantian) the self also appeared as the 'logical ego,' or else as the 'pure subject.'

The fortunes of the idea of the community have been analogous. In religion this idea has proved one of the most inspiring of the ideas which have gradually transformed tribal cults into the two greatest religions which humanity possesses—Buddhism and Christianity. In ancient philosophy the community, viewed as the soul 'writ large,' inspired some of the most fruitful philosophical interpretations of Plato, Aristotle, and the Stoics. In the general history of civilization loyalty, which is identical with the practically effective love of communities as persons that represent mind on a level higher than that of the individual, is, like the Pauline charity (which is explicitly a love for the Church universal and for its spirit), the chief and the soul of the humanizing virtues—that virtue without which all the others are but 'sounding brass or a tinkling cymbal.' Yet, in the history of thought the idea of the community has greatly suffered, less frequently from the attempt to view it as the proper object of a direct mystical perception than from the tendency to reduce it to a purely conceptual form. As a conceptual object the 'mind of the community,' the 'corporate mind,' has tended to be thought of as an entity possibly significant in a legal or in a sociological sense, but difficult, and perhaps unreal, in a metaphysical sense.

Experience shows, however, that the two ideas —the idea of the individual self and that of the community—are peculiarly adapted to interpret each the other, both to itself and to the other, when such interpretation is carried on in the spirit which the religion of Israel first made central in what undertook to be a world religion, and which the apostle Paul laid at the basis both of his philosophy of human history and of his Christology.

Modern idealism, both in the more vital and less formal expressions of Hegel's doctrine and in its recent efforts at a social interpretation of the self, of the course of human evolution, and of the problems of metaphysics, has already given a partial expression to a theory of which we tend to become clearly aware in proportion as we recognize what the cognitive process of interpretation is, and how it contrasts with, and is auxiliary to, the processes of conception and perception. Only in terms of a theory of the threefold process of knowledge can we hope fully to express what is meant by that form of idealism which views the world as the 'process of the spirit' and as containing its own interpretation and its own interpreter.

LITERATURE.—The epistemology of Charles Peirce is discussed at length by the present writer in *The Problem of Christianity*, London, 1913, ii. (in Index, *s.v.* 'Peirce,' references will be found which will serve as a guide to the understanding of Peirce's theory of knowledge, and its relation to the metaphysical theories of the nature of mind).

MÎNÎM.—Certain persons of Jewish origin mentioned in the Talmud and contemporary Rabbinical literature, usually with severe disapproval, are called Mînîm. Considerable difference of opinion has existed upon the question who the Mînîm were; but the view is now generally, though not universally, held that they were mainly Jewish-Christians. This theory has the support of Graetz, Jost, Weiss, Bacher, and Lévi; the chief opponent is Moritz Friedländer. The writer of this article, from an independent study of the evidence, decides for the Jewish-Christian interpretation, while admitting a wider denotation in a few passages. The evidence, consisting of the whole of the passages (so far as they are known to him) where mention is made of the Mînîm, is presented in full in the writer's work

Christianity in Talmud and Midrash, to which the reader is referred for details which cannot be given in the short space of this article.

The book *Siphrē*, § 115, p. 35^{a}, quoting Nu 15^{39} 'And ye shall not walk after your heart,' says, 'This is Mînûth'—meaning that this is the state of mind, or principle of conduct, characteristic of the Mînîm. This is the earliest attempt at a definition of the term, though the word itself was in use earlier. It amounts to saying that a 'Mîn' (singular of Mînîm) was one who followed the dictates of his own selfish nature as against those of the lawful authority. The result of doing so is, indirectly, the rejection of beliefs and practices enjoined on those who hold the true religion. A Mîn, accordingly, disregards the authority of the Rabbis, as teachers of religion and expounders of the Torah both written and unwritten, and also maintains doctrines and practices which are not those of the true religion. Tos. *Sanh.* xiii. 4 f. has the following censure on the Mînîm:

> 'The sinners of Israel, and the sinners of the nations of the world, descend into Gehenna, and are judged there twelve months. . . But the Mînîm, and the Apostates, and the betrayers, and the Apîqôrôsîn. . . . Gehenna is shut in their faces, and they are judged there for generations of generations.'

If the term Mînîm denoted all unfaithful Jews, there would be no need of four descriptive names. The distinction between the four is as follows. The betrayers (M^{e}sôrôth) are political informers, 'delators.' Apostates are those who wilfully and openly transgress some part of the ceremonial law, thereby proclaiming their disloyalty. Apîqôrôsîn are 'Epicureans,' free-thinkers, whether Jewish or Gentile. The Mînîm are those who are false at heart, but who do not necessarily proclaim their apostasy. They are the more dangerous because more secret; they are not an open enemy, but the foe within the camp; and it is in accordance with this that the Talmud refers to the Mînîm more frequently and with more hostility than to the other classes of unfaithful Jews. The Mîn might be an apostate or a delator, and could hardly fail to be a free-thinker; but the real nature of his offence was moral rather than intellectual.

Why was the name Mîn given to such persons? Various derivations of the word have been given, some of them mere fanciful guesses. The best explanation seems to be that proposed by Bacher (in *REJ* xxxviii. 45) and accepted by I. Lévi (*ib.* p. 205), according to which *mîn* (מִין) is at first the ordinary word for 'sort,' 'kind,' and is translated in the LXX, Gn 1^{12}, by *γένος*. Figuratively the word is used to denote a 'sect' (*αἵρεσις*), and more particularly the sect of the Sadducees (*τὸ Σαδδουκαίων γένος*, Jos. *Ant.* XIII. x. 6, where *ἡ Σαδδουκαίων αἵρεσις* is also used). Gradually the term lost the meaning of 'sect' and took on that of 'sectary,' the Jew who separated himself from the community and adopted false doctrines. If this explanation is correct, it throws light on the fact that in the Rabbinical texts the reading sometimes varies between Mîn and Ṣaddûkî (Sadducee). It is usually said that the latter word is due to the Christian censor, who objected to the word Mîn, but in some cases the reference is certainly to the Sadducees, while yet the word Mîn, or possibly both words, may have been read. The writer of this article proposed another derivation of the word Mîn (*op. cit.* p. 362), but now surrenders it in favour of the one just set forth.

The Mînîm, then, were Jewish heretics of some kind. The question is, Of what kind? The answer resolves itself into a choice between Jewish-Christians and Jewish-Gnostics. That they were Jews is beyond dispute, for a Gentile is never called a Mîn, unless in one or two instances through ignorance or inadvertence. The only conspicuous advocate of the Gnostic interpretation is Friedländer (*Der vorchristliche jüdische Gnosticismus*; cf. also a defence in reply to criticism in *REJ* xxxviii. 194 ff.), but it is a serious defect of Friedländer's book that the argument is based on Rabbinical texts from which he strikes out, as interpolations, passages of crucial importance, without mentioning the fact. By this method any hypothesis could be proved. Bacher and Lévi, in articles in *REJ* (xxxviii. 38, 204) have severely handled Friedländer's hypothesis as well as his peculiar method of proof, and Lévi elsewhere refers to it as 'cet échafaudage de propositions puériles' (*RHR* li. [1905] 412). The evidence for the view that the Mînîm were Jewish-Christians may be briefly summed up as follows. In many of the passages where they are mentioned there is nothing distinctive, certainly nothing definitely Christian; but in a few passages a connexion between Mînûth and Christianity is so definitely stated that it cannot be excluded from neutral passages except on the ground of equally definite statements to the contrary. Such contrary evidence is not to be found, and even Friedländer does not produce any. (1) In a famous passage, Bab. *'Ăbhôdhāh Zārāh*, 16*b* (and in three other places), it is told how a certain Rabbi Eliezer (end of 1st cent.) was arrested for Mînûth. He accounted for this afterwards by saying that he had once met 'one of the disciples of Jesus the Nazarene, by name Jacob of K^{e}phar S^{e}khanyā,' who told him the exposition of a text and added, 'Thus hath Jesus the Nazarene taught me.' Also, in the same treatise, p. 27*a*, the same Jacob is called 'Jacob the Mîn,' and it is said that he offered to cure a sick man, while in Tos. *Ḥull.* ii. 22 f. the same Jacob proposed to work his cure 'in the name of Yeshūa' ben Pandîrā,' *i.e.* Jesus. (2) In Bab. *Shabb.* 116*a* there are mentioned, in close connexion, the books of the Mînîm and the Evangelion, *i.e.* the Gospels. (3) The characteristic doctrine of the Mînîm—that of Two Powers in Heaven—is closely allied to, if not identical with, the teaching of the Ep. to the Hebrews, and is not the Gnostic doctrine of the Demiurgus. The connexion of this doctrine with Christianity is shown by a passage in P^{e}sîḳtā *Rab.* xxi. 100*b*: 'If the son of the harlot saith to thee, "There are two Gods,"' etc., where 'the son of the harlot' denotes Jesus.

The combined force of these arguments, which could be supported in great detail if space allowed, seems conclusive in favour of the Jewish-Christian interpretation; and this view is strongly confirmed by a passage in Jerome:

> 'Usque hodie per totas Orientis synagogas inter Iudaeos haeresis est, quae dicitur *Minaeorum*, et a Pharisaeis nunc usque damnatur; quos vulgo Nazaraeos nuncupant, qui credunt in Christum, filium Dei, natum de virgine Maria, et eum dicunt esse qui sub Pontio Pilato passus est et resurrexit, in quem et nos credimus; sed dum volunt et Iudaei esse et Christiani, nec Judaei sunt nec Christiani' (*Ep.* cxii. [lxxxix.] 13 [*PL* xxii. 924]).

The general conclusion to be drawn from the evidence, of which the foregoing is the most important, is that, wherever in the Talmud and Midrash mention is made of the Mînîm, the author of the statement intended to refer to Jewish-Christians. At the same time it is possible that the Rabbis attributed to Mînîm actions or opinions which, in fact, were not those of Christians; and, further, that the Rabbis occasionally applied the term Mîn to Gentiles as being enemies of Judaism.

The references to the Mînîm in the Rabbinical literature are few and fragmentary. The passages where they are mentioned amount to about 120, most of which contain either polemical dialogues between a Mîn and a Rabbi or allusions to heretical interpretations of texts, although a few are anecdotes of events in connexion with the Mînîm. It is not possible to construct a history of the Mînîm; the material is sufficient only to give a few glimpses of them, and to throw some little light upon their relations with orthodox Jews.

The Mînîm, as stated above, were apostates who concealed their apostasy, and it was necessary, therefore, to have some means of detecting them. This was the object with which the Formula against the Mînîm was introduced. It is stated (Bab. *Ber.* 28*b*, 29*a*) that R. Gamaliel II. (president of the Sanhedrin at Jabneh) said to the Rabbis: 'Is there any one who knows how to compose a Benediction of the Mînîm?' Samuel the Little stood up and composed it. The following year he forgot it, and sought to recall it for two and even three hours, and they did not call him up (from the lectern). The 'Benediction' of the Mînîm was an addition made to the Eighteen Benedictions (*Sh^{e}môneh ʿEsrēh B^{e}rākhōth*), which are short prayers, some of them very ancient, forming the nucleus of the Jewish liturgy. The twelfth in order, as composed or adapted by Samuel the Little, runs: 'May there be no hope for the Mînîm.' Those who were Mînîm could not, of course, join in this prayer, and would be detected. The introduction of this formula marks the official condemnation of the Mînîm by the Rabbis; and the date may be placed at A.D. 80, or thereabout. This does not imply the separation of the Mînîm from the strict Jews at and after that time; they were still to be found, as Jerome says, in all the synagogues of the East in his time; but it is true, nevertheless, that the Mînîm did to some extent possess a separate organization, with synagogues of their own.

The reason why a formula of detection against the Mînîm became necessary about A.D. 80, was, in part, that the Temple had been destroyed ten years before. As long as the Temple stood, Jewish-Christians in Jerusalem appear to have taken part in the ritual observances equally with non-Christian Jews. After the destruction of the Temple, however, it was possible to argue that the ceremonial law was not merely *de facto* suspended (as the Jews admitted), but *de jure* abrogated; and this is the link which connects the original Jewish-Christians with the Mînîm. The latter appear, from the notices of their doctrines, to have held a theology closely akin to that set forth in the Ep. to the Hebrews; and, if so, the inference is ready to hand that it was the symbolic interpretation of the ceremonial law that opened the way for a Christology more highly developed than that of the original Jewish-Christians.

The hostility towards, and dread of, the Mînîm were at their height in the 2nd cent.; afterwards they declined, till in the 4th cent. we find comparatively friendly relations with them. The Mînîm of Cæsarea applied to R. Abahu to find them a teacher, and he sent them R. Saphra, a Babylonian Jew of unquestioned orthodoxy (Bab. *Ăbhôdhāh Zārāh*, 4*a*). The meaning of this gradual change is that at first it was not evident to the Rabbis that the Christian Church would not develop on Jewish-Christian lines. When, in course of time, it appeared that the Mînîm did not represent the strength of the Christian movement, there was the less reason to dread it; there was less danger to Judaism from a Gentile Christianity than from a Jewish form of it. Of Gentile Christianity the Rabbinical literature takes scarcely any notice. Space does not allow of illustrations of the polemics between Mînîm and Jews, or of the anecdotes which represent the former as being not only apostates but licentious. It must suffice to say that they appear to have been a dwindling sect, in Judaism but not of it, spurned alike by Jews and by Christians. In their theology they departed from the strict monotheism of Judaism, and held a doctrine—called the Doctrine of the Two Powers in Heaven—which corresponds with the relation between God and Christ set forth in the Ep. to the Hebrews. No mention is made in any of their polemical discussions of the Messiahship of Jesus, nor is there more than one very slight trace of the doctrine of the Trinity (Jerus. *Ber.* 12*d*, 13*a*). Jerome identifies them with the Nazarenes, and the corresponding name, *Nôṣrîm*, is found in two passages (Bab. *Ăbhôdhāh Zārāh*, 6*a*; Bab. *Taʿan.* 27*b*). The name Ebionite does not occur in the Rabbinical literature.

MINISTRY (Early Christian).—An attempt will be made in this article to collect the more important facts in connexion with the ministry as far as the first five or six centuries of our era are concerned. About the facts themselves there is general agreement; but the interpretation of the facts has been disputed. A summary will be made, as briefly as possible, of the theories that have been deduced from the facts as to the institution of a ministry by our Lord, and its development in subsequent ages. But a discussion of these theories is not part of the design of the article.

1. The Apostolic Age.—In Acts and in the Epistles of the NT we find in active operation a ministry of two kinds, itinerant and local.

i. THE ITINERANT MINISTRY.—We read of apostles, prophets, and evangelists, all of whom come under this heading. The first of these terms includes at least a few (even in the early ages) who were not of the Twelve (see below, § 2). The qualification of an apostle seems originally to have been that he should have seen our Lord, and have been His 'witness' (Lk 24^{48}, Ac 1^{8}). Thus, when the vacancy in the number of the Twelve has to be filled up, the qualification mentioned by St. Peter is that the person chosen should have 'companied with [the Eleven] all the time that the Lord Jesus went in and went out among' (or 'over,' ἐπί) them, 'beginning from the baptism of John, unto the day that he was received up from' them; so that he might become a witness with them of Jesus' resurrection (Ac $1^{21f.}$). St. Paul received his qualification, though in a different way, at his conversion (cf. Gal 1^{1}, 'An apostle, not from men, neither through man, but through Jesus Christ, and God the Father'). That St. Barnabas and the others mentioned below (§ 2) had seen Christ is not stated, but is quite probable. Hegesippus says (Eus. *HE* ii. 1) that Barnabas was one of the Seventy. This qualification may have been waived in the sub-apostolic period.

Hort (*Christian Ecclesia*, p. 28) thinks that the word 'apostle,' which is of comparatively rare occurrence in the Gospels, referred originally only to the mission to the villages, though such passages as that about judging the twelve tribes (Mt 19^{28}, Lk 22^{30}) were indications of the extended signification of the name which we find in Acts.[1] It is clear, however, from Lk 6^{13} (the reading in ‖ Mk 3^{14} is doubtful) that our Lord gave them the title; and that He intended more than a mere mission to the villages by the designation appears almost certain from such passages as Lk 12^{41-48}, where He speaks of a commission for future ages (see below, § 9). St. Luke certainly uses the name without reference to the mission to the villages.

Christian prophets are frequently mentioned in the NT—Agabus and others (Ac $11^{27f.}$ 21^{10}); those at Antioch, 'prophets and teachers,' including

---

[1] The name 'apostles' for the Twelve is found, according to Westcott and Hort's text, only in Mt 10^{2}, Mk 3^{14} 6^{30}, Lk 6^{13} 9^{10} 17^{5} 22^{14} 24^{10}, and not at all in Jn, though 13^{16} seems to be an allusion to the title.

Barnabas and Saul, also Symeon Niger, Lucius of Cyrene, and Manaen (Ac 13^{1}); Judas and Silas (15^{32}); and an unstated number in 1 Co 12$^{28f.}$ (see § 2) 14$^{29-33}$. Prophets are mentioned as a class in Eph 2^{20} 3^{5} 4^{11} (see § 2), possibly in 1 Th 2^{15}; also in Rev 18^{20} 22^{9}. They are coupled in Eph. and Rev. with apostles.[1] They are described as receiving revelations (1 Co 14$^{29ff.}$). Christian prophetesses are also mentioned (Ac 21^{9}, Philip's daughters). But it may be doubted if 'prophets' ought to be described as a class of the ordinary Christian ministry. Their office was purely charismatic (see below, § 3).

It is otherwise with 'evangelists.' These are mentioned in Ac 21^{8} (Philip), Eph 4^{11} (see below, § 2), 2 Ti 4^{5} (Timothy). This name would seem to be that given to those who, though not apostles, because they had not the qualification stated above, yet were itinerant officials and not of the local ministry. Eusebius (*HE* iii. 37) gives the name to those who 'occupied the first place among the successors (διαδοχῆς) of the apostles' and were itinerant preachers of the gospel. He says that, when they had only laid the foundations of the faith in foreign places, they appointed others as pastors (ποιμένας) and then went on to other countries and nations. A few lines later he talks of 'pastors or evangelists,' and seems to mean by the former the local, by the latter the itinerant, ministry.

Apostles and prophets are also mentioned in the *Didache* (§§ 10–13), a manual probably of the beginning of the 2nd century. These were normally itinerant officials, and were perhaps identical (see *Did.* § 11). The value of this evidence is discounted by J. A. Robinson (*JThSt* xiii. [1912] 339), who thinks that the writer does not describe the conditions of his own day, but those which he thought had been in force at an earlier time. This theory, however, is very doubtful (for Robinson's earlier view see his *Com. on Ephesians*^{2}, London, 1904, p. 98, n.).

The function of the itinerant ministry was evangelistic (cf. 1 Th 2$^{8f.}$, 1 Ti 2^{7}). The itinerants might settle for a time at a place, as Timothy settled at Ephesus, Titus in Crete, and St. Paul himself at various places where he founded churches; but this was not their normal work. In the *Didache* it is recognized that a prophet may settle in a place (§ 12 f.).

ii. THE LOCAL MINISTRY. — Under this heading are included in the NT 'bishops,' 'presbyters,' and 'deacons.' For other names of these officials see § 2. The functions of the local ministry were administrative and pastoral. Thus baptism seems to have been specially entrusted to it (cf. 1 Co 1^{14}, and perhaps Ac 19^{5}; ct. v.^{6}). In the beautiful story of St. John and the young robber related by Clement of Alexandria (*Quis dives*, 42), the apostle does not himself baptize the young man, but gives him over to the local bishop-presbyter to baptize (see below).

(*a*) *Bishops.*—During the period covered by the NT, we read of this name being given to Christian ministers only in Gentile churches — at Philippi (Ph 1^{1}), at Ephesus (Ac 20^{28}, 1 Ti 3$^{1ff.}$), in Crete (Tit 1$^{7ff.}$). So St. Peter, writing to the churches in most of the provinces of Asia Minor, uses the participle ἐπισκοποῦντες, 'exercising the bishop's office' (1 P 5^{2}). That the 'bishops' are the same as 'presbyters' in the Apostolic Age seems to follow from a comparison of Ac 20^{17} with 20^{28}, where the same individuals are called by both titles; and of 1 Ti 3$^{1-7}$ with 5$^{17-19}$, the first of which passages describes the qualifications of 'bishops,' the second of which gives regulations for 'presbyters' as for those who have already been mentioned in the Epistle; and of Tit 1^{5} with v.^{7} ('appoint presbyters in every city . . . for the bishop must be blameless'); also from the use by St. Peter of ἐπισκοποῦντες when speaking of presbyters (see above, and 1 P 5^{1}). The same thing is apparently found in Clement of Rome (*Cor.* 42, 44), where the local ministers are called 'bishops and deacons,' and yet 'presbyters' are spoken of, and their 'episcopate' (ἐπισκοπή). He says that the apostles knew through our Lord Jesus Christ that there would be strife over the name of the episcopate. In the *Didache* also (§ 15) the local ministry consists of 'bishops and deacons.' Perhaps 'presbyter' expressed the rank, and 'bishop' the function.

Hort (pp. 98 f., 189–212) takes a different view. He holds that the words 'bishops' and 'deacons' are used in a non-technical sense in the NT as meaning 'those who have oversight' and 'those who minister.' He thus interprets the words in Ac 20^{28}, 1 Ti 3$^{1ff.}$, and deduces the conclusion that the same holds good in Ph 1^{1}, where ἐπισκόποις and διακόνοις have no article. He does not deny that 'deacons' may have become the name of the officials before the Pastoral Epistles were written, but he thinks that St. Paul uses the word in a non-technical sense.

(*b*) *Presbyters.*—The name was perhaps taken over by the Christians from the Jews, who gave it to the members of the Sanhedrin and others. But inscriptions show that the heathen Greeks used it for members of a corporation, and the same thing appears from the papyri. A. Deissmann thinks (*Bible Studies*, Eng. tr., Edinburgh, 1901, p. 154 ff.) that the Christians of Asia Minor may have adopted the term, not from the Jews, but from the Greeks. In Egypt, as Deissmann shows (p. 233), pagan priests were called 'presbyters.' [It may be added that inscriptions also prove that the title ἐπίσκοπος was used for certain officials in Greek-speaking countries in pre-Christian times (Deissmann, p. 230 f.).] In the early Church the name 'presbyter' was specially used, as it would seem, at Jerusalem (Ac 11^{30} 15^{2} etc. 16^{4} 21^{18}), but it was also used by the Christian Jews of the Dispersion (Ja 5^{14}), and in the Gentile communities, for Paul and Barnabas appointed 'elders in every church' on a journey in Asia Minor (Ac 14^{23}).

The identity in the NT of 'bishops' and 'presbyters' was completely forgotten before the end of the 2nd century. Thus Irenæus (*Hær.* III. xiv. 2), referring to Ac 20$^{17ff.}$, speaks of St. Paul meeting at Miletus bishops and presbyters from Ephesus *and the other cities*; the last four words are no doubt due to the plural 'bishops,' as to Irenæus the idea of more than one bishop (in the sense in which the word was used in his day) in any city would be quite foreign. Clement of Alexandria, at the end of the century, was also ignorant of the identity; he speaks (*Pæd.* III. xii. 97) of commands in Holy Scripture given to presbyters, bishops, deacons, widows (in that order), as to distinct persons. In *Quis dives*, 42, he speaks of a single 'bishop' in one of the cities of Asia in St. John's time; this is doubtless historically correct, yet we may notice that a few lines later he calls the bishop 'the presbyter.' This is an instance of that fluidity of phraseology which we shall have occasion to notice below (§ 2). In the 4th cent. Jerome and other Fathers had learnt that the bishops and presbyters of the NT were the same persons (see references in Lightfoot, *Philippians*, p. 98 f.).

(*c*) *Deacons.*—These ministers are mentioned in the NT in Ph 1^{1}, 1 Ti 3$^{8.\,10.\,12f.}$ only. They are not found in the Epistle to Titus. They are also mentioned, together with 'bishops,' in Clement of Rome and the *Didache* (as above). The usual view has been that they represent the Seven whose appointment is recorded in Ac 6. Others think that the Seven were the prototypes both of the diaconate and of the presbyterate, and that at some time after St. Stephen's death the office was divided into those two branches. Another view is that the appointment of the Seventy (or Seventy-two) in Lk 10^1 was the foundation of the presbyterate. The Seven of Ac 6 were appointed in the first instance for the administration of relief (v.^{3}), but that they were also preachers of the gospel is seen from the history of Stephen and Philip, and might be inferred from their solemn ordination with prayer and laying on of hands.

---

[1] In Eph 2^{20} the Church is said to be built upon the foundation of the apostles and prophets (no article before 'prophets'). Both here and in 3^{5} prophets come after apostles, and Christian prophets must therefore be meant. Hort (p. 165) gives good reasons for thinking that here (not in 4^{11}) the same persons are meant by both designations. All the apostles were probably prophets, though all the Christian prophets were not apostles.

iii. THE POSITION OF JAMES THE LORD'S BROTHER AT JERUSALEM.—Christian antiquity agrees in giving St. James a local ministry at Jerusalem, and yet in making him, in a real sense, equal to the Twelve, and in ascribing to him rule or presidency over the presbyters, though nothing is said of any autocratic powers possessed by him. This account of his position is borne out by the NT writers. In Ac 12^{17} Peter bids those who are assembled in Mary's house tell of his escape 'unto James and to the brethren.' In $15^{13ff.}$ James presides over, or at least takes a leading part in, the apostolic council, and gives the decision, *i.e.* interprets the evident sense of the assembly. In 21^{18} Paul and his companions visit him assembled with the presbyters in a formal meeting. In Gal 1^{19} he is, perhaps, called an apostle (see § 2); he and Cephas are visited by Paul at Jerusalem. In 2^9 he is named before Cephas and John, and the three are 'reputed to be pillars.' In 2^{12} the Jewish Christians who come from Jerusalem to Antioch are said to come 'from James.' Of the Fathers the earliest to bear witness to St. James's position in Jerusalem is Hegesippus, known as the father of Church history (*c.* A.D. 160). He says that 'James, the brother of the Lord, succeeded to the government of the Church in conjunction with the apostles' (Eus. *HE* ii. 23); he describes the appointment of Symeon, a cousin of the Lord, as 'the next bishop' (iv. 22). So Eusebius, who depends on Hegesippus, says (iii. 11) that they pronounced Symeon to be worthy of the throne of that diocese (παροικία), and (iii. 32) that Symeon was the second bishop of the Church of Jerusalem; in the former passage he says that there was a second Apostolic Council on the occasion of Symeon's election. The last statement is very doubtful; but the tradition probably gave rise to the detailed pseudepigraphy of the Church Orders, which assign all sorts of directions to the apostles. The same supposed council has been thought by some to have decreed the establishment of diocesan episcopacy; but the latter was probably of gradual growth rather than the result of an enactment of a formal council (see below, § 4). The position of James is also spoken of by Clement of Alexandria (*Hypotyposes*, bk. vi., quoted by Eus. *HE* ii. 1):

> 'Peter, James, and John, after the ascension of our Saviour, as if also preferred by our Lord, strove not after honour, but chose James the Just bishop of Jerusalem. . . . The Lord after His resurrection imparted knowledge to James the Just and to John and Peter, and they imparted it to the rest of the apostles, and the rest of the apostles to the Seventy, of whom Barnabas was one.'

The phrase about imparting knowledge to James may probably be a reference to 1 Co 15^7. The description of him as 'bishop of Jerusalem' is an anachronism of nomenclature, but it roughly describes his position. His office at Jerusalem is a favourite theme in the 'Clementine' literature, but the date of these works is uncertain.

iv. ANGELS IN THE APOCALYPSE.—The 'angels' in Rev 1^{20}–3^{22} have been taken by some to be the chief ministers of the Church in the province of Asia. But this interpretation is so doubtful that no argument can be built upon it.

v. There is no certain trace of any local officials in the NT inferior to the 'bishops and deacons.' Interpreters are mentioned in 1 Co 14^{28}, for those who speak with tongues (cf. 12^{10}). But there is no indication that an ecclesiastical office is intended.

2. **Fluidity of phraseology.**—It is important to remember that the names of Christian ministerial offices were not stereotyped in the Apostolic Age. Many theories have been erroneously built on the supposed identity of offices in different centuries, because of the identity of names. In the earliest age the names of the orders of the ministry were in a fluid condition, even if the functions and duties of the offices were fixed, which is doubtful.

(*a*) *The name 'apostle.'*—This is used in the NT of the Twelve (see above, § 1). It is also used of certain other persons who had equal authority with the Twelve in the early Church—Paul, Barnabas, probably James the Lord's brother (see Lightfoot, *Galatians*^{5}, pp. 84, 95; cf. 1 Co 15^7), probably also Andronicus and Junias, who were 'of note among the apostles' (Ro 16^7; but some think that the latter was the name of a woman), perhaps Silvanus, who was associated with St. Paul in writing to the Thessalonians (1 Th 2^6; cf. 1^1). Timothy might have been included under the same designation but that he is excluded from it by 2 Co 1^1, Col 1^1, doubtless because he had not seen Christ (see § 1). The name is also used in the NT of messengers simply (2 Co 8^{23}, Ph 2^{25}), and of our Lord Himself (He 3^1; cf. Jn 20^{21}). In the Syriac-speaking churches it was given to any missionary; and so the Greek-speaking Irenæus says (*Hær.* II. xxi. 1): 'After the twelve apostles, our Lord is found to have sent forth seventy others.' Tertullian (*adv. Marc.* iv. 24) gives the name to the Seventy as well as to the Twelve ('he chose also seventy other apostles besides the twelve'). Note that St. Luke (10^1), in describing the appointment of the Seventy, says that Jesus 'sent them forth' (ἀπέστειλεν), whence the name ἀπόστολος comes at once. It means 'one commissioned.' Certain persons, called 'false apostles,' arrogated the name to themselves (2 Co 11^{13}, Rev 2^2).

(*b*) *The names 'bishop' and 'presbyter.'*—We have already seen that the name 'bishop' was used in the 1st cent. in a sense different from that which it afterwards acquired. And we may notice how fluid was the phraseology with regard to both 'bishop' and 'presbyter.' Our Lord is called a 'bishop' in 1 P 2^{25}; St. Peter a 'presbyter' in 1 P 5^1 (συμπρεσβύτερος), St. John in 2 Jn ^{1}, 3 Jn ^{1}. In the 2nd cent. the term 'presbyters' came to be used somewhat as we use the term 'the Fathers.' We may also notice how easy was the change from 'presbyter' to 'old man'; so much so that it is not always easy to determine in any given passage which translation ought to be taken. In 1 P 5^5 St. Peter, who has been addressing the presbyters, suddenly says: 'Likewise, ye younger [men], be subject to the elder' (πρεσβυτέροις). Clement of Rome (*Cor.* 1) says: 'Submitting yourselves to your rulers (ἡγουμένοις), and rendering to the presbyters [Lightfoot: 'older men'] among you honour,' etc.; and so in § 21. A little later Polycarp, after saying that 'the young men must be blameless,' goes on to exhort the Philippians to submit themselves 'to the presbyters and deacons' (*Phil.* 5). The association of the presbyterate and old age survived for a long time. It is found in the *Apostolic Church Order* (Bohairic version), where it is said that presbyters should live 'after the manner of old men' (§ 18; H. Tattam, *Apost. Const. in Coptic*, London, 1848, p. 20). The ordination prayer of a presbyter in the *Testament of our Lord* (*c.* A.D. 350?) speaks by a paronomasia of 'the Spirit [masc.] of the presbyterate who doth not grow old' (i. 30). Pseudo-Pionius (4th cent.) in the *Life of Polycarp* (§ 17; Lightfoot, *Apost.*

Fathers, pt. ii., 'Ignatius and Polycarp,' iii. 447 f.) unhistorically makes Polycarp to be an old man before he is ordained presbyter. So perhaps Hermas, *Vis.* ii. 4 (2nd cent.), where the presbyters are the officials of the *πρεσβυτέρα* ('aged woman'), who is interpreted as the Church. Gregory of Nazianzus (*Orat.* xlii. 11, 4th cent.) speaks of the presbyters being 'honoured for years and wisdom.'

(*c*) *The name 'deacon.'*—In addition to the use of the word *διάκονος* in the non-ecclesiastical sense of a 'servant,' as in Mt 22^{13}, Jn 2$^{5.9}$, and elsewhere in the Gospels, and (metaphorically of a ruler as God's servant) in Ro 13^{4}, or of a 'follower' (of Christ) in Jn 12^{26}, we have it used frequently of others than the ordinary 'deacons.' Our Lord is called a 'deacon' in Ro 15^{8} ('deacon of the circumcision'); St. Paul in Col 1$^{23.25}$, 2 Co 3^{6} 6^{4} (pl.), Eph 3^{7}, 1 Co 3^{5} (also Apollos); Timothy in 1 Th 3^{2} (Westcott-Hort's text), 1 Ti 4^{6} (cf. the technical use of *διάκονος* in 3$^{8ff.}$); Epaphras in Col 1^{7}; Jewish Christians in 2 Co 11^{23}. Satan's 'deacons' are mentioned in 2 Co 11^{15}. This fluidity of expression would be realized by the English reader if the translation 'deacon' (instead of 'minister') were adopted throughout, and if it were borne in mind how often *διακονία* and *διακονέω* are used in the NT, always in the non-technical sense of 'service' and 'to do service.'

(*d*) *St. Paul's lists of the ministry* show a great fluidity of nomenclature. But they do not give technical names to the various classes of the ministry. In 1 Co 12^{28} we have: apostles, prophets, teachers, powers, charismata of healings, helps, governments, kinds of tongues. These cannot all be offices; some are (as we see from v.^{29}) purely charismatic, namely powers (working of miracles), healings, tongues. Probably no orders of the ministry are here explicitly enumerated, but only the different kinds of work done in the Christian Church. On the other hand, officials of the ministry are enumerated in Eph 4^{11}, where we have apostles, prophets, evangelists, pastors[1] and teachers (the last two are one class). These offices are said to be 'for the perfecting of the saints unto the work of ministering,' *i.e.*, to equip the members of the body for the function of service to the whole (Robinson, *Ephesians*^{2}, p. 98 f.; the RV inserts a comma after 'saints,' but the two clauses probably go together). In this list we have no 'bishops,' 'presbyters,' or 'deacons,' and yet these officials existed at Ephesus (Ac 20$^{17.28}$, 1 Ti 5$^{17ff.}$). Hence in this Pauline list we cannot look for technical designations, but rather for a description of the work done by different officials. The 'pastors and teachers' appear to be the local ministry. In Ro 12$^{6f.}$ we have the abstract charismata or gifts: prophecy, ministering (*διακονία*), teaching, exhortation, giving [alms], ruling, showing mercy. In 1 Th 5^{12} we have leaders (*προιστάμενοι*); cf. 1 Ti 3$^{4f.12}$ 5^{17}, where this word is used of 'bishops' and 'deacons.'

(*e*) *Fluidity of 'hieratic' language.*—In the NT and the sub-apostolic writers the word *ἱερεύς* is not used of a Christian minister, though Christians as a body are called 'priests' and 'a priesthood' (*ἱεράτευμα*) in 1 P 2$^{5.9}$, Rev 1^{6} (cf. Rev 5^{10} 20^{6}), just as all Israel had been 'priests' (Ex 19^{6}). Our Lord Himself is called a 'priest' or 'high priest' (*ἀρχιερεύς*) in He 3^{1} 5$^{5f.}$ 7$^{17.26}$ 10^{21}, etc. Clement of Rome, Ignatius, and Irenæus do not use 'hieratic' language of the Christian ministry, but the *Didache* says of the Christian prophets: 'they are your high priests' (§ 13). Polycrates, bishop of Ephesus, *c.* A.D. 190, says (quoted by Eus. *HE* v. 24) that St. John was a priest, wearing the mitre (or 'golden plate,' *πέταλον*); but the meaning is not clear.[1] Justin Martyr (*c.* A.D. 150) calls the Christian body 'the true high-priestly race of God' (*Dial.* 116). Tertullian at the end of the century speaks of the bishop as 'high-priest' ('summus sacerdos,' *de Bapt.* 17), and, in reference to the Christian ministry, speaks of 'functions of priesthood' ('sacerdotalia munera,' *de Præscr.* 41). Hippolytus, early in the 3rd cent., uses similar language (*Hær.* i. pref.): 'We being their [the apostles'] successors and participators in this grace of high-priesthood,' etc. In Cyprian the bishop is frequently called 'sacerdos,' and his office 'sacerdotium.' The *Older Didascalia* (3rd cent.) calls the bishops 'high-priests' (Funk, *Didasc. et Const. Apost.*, Paderborn, 1905, i. 102), and says that the Jewish priests and levites now correspond to the deacons, presbyters, widows, and orphans. The names 'high-priest' for the bishop, and 'priests' and 'levites' for the presbyters and deacons respectively, were frequently used in the 4th cent. and onwards, and are often found in the Church Orders (for references see Maclean, *Ancient Church Orders*, p. 67, n.). In the ordination prayer for a presbyter in the *Apost. Const.* viii. 16 (*c.* A.D. 375) and in the Epitome known as *Constitutions through Hippolytus*, § 6 (Funk, ii. 80), his functions are called *ἱερουργίαι*, 'priestly duties.' Of other 4th cent. writers we may take as an example Epiphanius, who uses *ἱερεύς* for a Christian priest (*Exp. Fid.* 21), and whose 'priesthood' (*ἱερωσύνη*) includes subdeacons, but not readers (*ib.*). Jerome calls his famous treatise on the ministry 'Concerning priesthood' (*Περὶ ἱερωσύνης*). At the Council of Laodicea (*c.* A.D. 380, can. 27, 30), 'hieratics' (*ἱερατικοί*) are the bishops, priests, and deacons, as opposed to the 'clerics' (*κληρικοί*), who include the minor orders. In *Apost. Const.* iii. 15, and in the *Apost. Canons*, 63 (*c.* A.D. 400), the minor orders are included among the 'hieratics.' In the Syriac-speaking Churches the word *kāhnūthā* (which is the translation of *ἱερωσύνη*) is used for all orders of the ministry.

The use of this language does not mean that a new conception of the ministry was entertained by those in whose writings it is first found. It was not likely to be used as long as any Jewish priests or levites were in the ranks of the Christian ministry. For example, Barnabas was a levite (Ac 4^{36}), and could not well have been called a 'priest' without considerable confusion. When 'hieratic' language was first used in the Christian Church, it was a new nomenclature, but did not imply any new functions. It is a fallacy to describe some 2nd cent. Christian writers as unsacerdotal, and some as sacerdotal. The use of 'hieratic' language meant that the writers who employed it ascribed to Christian officials the ministry delivered by the Great, and in the strictest sense the Only, High Priest, our Lord Himself. The writers like Ignatius who do not use 'hieratic' language are even more emphatic about the authority of the ministry than those who do.

3. Charismatic ministry.—This term properly indicates those who are endowed with any spiritual gifts, called *χαρίσματα* ('gifts') in 1 Co 12^{4} or simply *πνευματικά* ('spiritual [things']) in 12^{1} 14^{1}; but it is conveniently used for those who had 'extraordinary' charismata. We must distinguish between the 'charismatic' and the official ministry. As long as extraordinary charismata continued, the two went on side by side. Yet the same person might be of both ministries; thus St. Paul was an apostle, and yet spoke with tongues more than all (1 Co 14^{18}). The charismata enumerated in 1 Co 12^{8-10} include wisdom, knowledge, faith, healings, miracles, prophecy, discerning of spirits, tongues, interpretation of tongues. Of these probably the most prominent was prophecy. For the passages in which Christian prophets are mentioned see § **1**, above; these, however, do not imply that Agabus, Judas, Silas, and others held office in the Church as prophets, though they may have done so in another capacity. It is recognized that any one might receive a revelation, and so be a 'prophet' (cf. 1 Co 14^{30}). Thus those whom we should call 'laymen,' as not being of the official ministry, spoke in the Christian assemblies (*ib.*). But women were not allowed to do so (v.^{34}), though they might be prophetesses (Ac 21^{9}). In 1 Co 14 the charisma of tongues is somewhat disparaged as compared with prophecy.

---

[1] The word 'pastor' or 'shepherd' (*ποιμήν*) is used of our Lord in He 13^{20}, 1 P 2^{25} (cf. 1 P 5^{4}, Jn 10$^{11.14}$). It was often applied to bishops by later writers (e.g., *Apost. Const.* ii. 1). The verb *ποιμαίνειν* is used of the Christian ministry in Jn 21^{16}, Ac 20^{28}, 1 P 5^{2} (cf. Jude^{12}). In Ac 13^{1} 'prophets' and 'teachers' are joined together (cf. 1 Co 12^{28}).

[1] H. Delff's theory is that the 'beloved disciple' (whom he distinguishes from the apostle John) was a native of Jerusalem and belonged to one of the high-priestly families (W. Sanday, *Criticism of the Fourth Gospel*, Oxford, 1905, p. 99 f.).

Prophecy long continued. For the prophets in the *Didache* see above, § **1**. Quadratus, early in the 2nd cent., was renowned for his prophetical gifts (Eus. *HE* iii. 37). Polycarp is called in the letter written by the Smyrnæans 'an apostolic and prophetic teacher' (*Mart. Pol.* 16; A.D. 155 or 156). Hermas received revelations, and his *Shepherd* (*c.* A.D. 150?) was widely received as a prophetic writing. Even in the 4th cent. the Church Orders speak of charismata, and in particular of revelations, being expected; *e.g.*, the *Test. of our Lord* speaks of those expected by the bishops, presbyters, widows, and by any Christians (i. 21, 23, 29, 31 f., 40); gifts of healing or of knowledge or of tongues are referred to as being a possible endowment of any Christian (i. 47). Such a one was not to be ordained ('a hand is not laid on him'), but to be had in honour (*ib.*). See also below, §§ 6–8.

The term 'charismatic ministry' is capable of being misunderstood, as if the official ministry was considered a purely mechanical one, and only of human appointment. But St. Paul clearly recognizes the official ministry as charismatic in another sense. Timothy had the charisma in virtue of his ordination (1 Ti 4^{14}). The official ministry had the 'spiritual gift,' though it was not of the same nature as that of those who had extraordinary endowments; and the two ministries, as we have seen, might overlap.

4. Bishops, presbyters, and deacons from the 2nd cent. onwards.—(*a*) *Bishops.*—In the Epistles of Ignatius (*c.* A.D. 110) we find bishops in the later sense of the word fully established. We may here make an endeavour to collect the facts with regard to the diocesan episcopate, postponing a statement of the theories that have been advanced as to its origin. The phrase 'diocesan episcopate' is perhaps the best that we can use, as it begs no question as to the relation of the bishop to the presbyter; the phrase 'monarchical episcopate,' which is used by many writers, is open to this objection.

The establishment of bishops in the later sense in the Churches of the province of Asia and elsewhere is ascribed by a steady tradition to John the Apostle. Clement of Alexandria (*Quis dives*, 42) says that 'after the tyrant's death' John 'returned to Ephesus from the isle of Patmos,' and 'went away, being invited, to the contiguous territories of the nations, here to appoint bishops, there to set in order whole Churches, there to ordain such as were marked out by the Spirit.' Tertullian similarly says (*adv. Marc.* iv. 5) that 'the order of the bishops' [of the Seven Churches of Asia, or of all the Churches of the province] 'when traced up to their origin' rests 'on John as their author.' And the *Muratorian Fragment* (*c.* A.D. 180?) says that John was exhorted by 'his fellow disciples and bishops' to write his Gospel. Ignatius speaks of bishops being established all over the world (*Eph.* 3). But we do not find the diocesan episcopate established in all places at an equally early date. Thus Ignatius writes to the Philippians, but makes no mention of their bishop. Clement of Rome (*c.* A.D. 95) likewise omits all reference to a bishop at Corinth when writing to the Corinthians. It is, of course, possible that the office at Philippi and Corinth was vacant at the dates of these letters; but this hypothesis cannot be proved, and the deduction has usually been made that the diocesan episcopate was not established in these two places so soon as elsewhere. The position at Rome at the end of the 1st cent. has been considered doubtful. Clement writes in the name of his Church (not of the presbyters), but he does not call himself its bishop, nor does he name himself at all; we have to gather information about the authorship of this Epistle from subsequent writers. Clement obviously held a prominent position in the Roman Church; and, though nomenclature and organization matured themselves more slowly at Rome than elsewhere, the testimony of all antiquity must be taken as showing that he held the first place in it. Thus Irenæus makes Clement the third bishop of Rome in the list which he gives of bishops of that city up to his own time (*Hær.* III. iii. 3). He says that Linus, the first bishop, received the office from the apostles Peter and Paul, and that Anacletus succeeded him, and was in turn succeeded by Clement. Before Irenæus, Hegesippus had already made a list of the bishops of Rome, as all the Greek MSS and the Syriac versions of Eus. *HE* iv. 22 assert (see Lightfoot, *Apost. Fathers*, pt. i., 'Clement,' i. 154). The alternative (rejected by Lightfoot but accepted by Harnack) of *διατριβήν* for *διαδοχήν* is a conjecture based on the loose paraphrase of Rufinus. But, as Hegesippus's list is not extant, we cannot tell where it began. We notice that Ignatius, in writing to Rome, mentions no bishop there, and that, as G. Salmon remarks (*Introd. to the NT*^{6}, London, 1892, p. 519, n.), all through the first two centuries the importance of the bishop of Rome is merged in the importance of his Church. Dionysius of Corinth (*c.* A.D. 170) writes to the Church of Rome, not to Soter its bishop, though he mentions him in the third person.

Long before the end of the 2nd cent. the diocesan episcopate was universal, so much so that writers like Clement of Alexandria, as we have seen, did not know that the 'bishops' of the NT were the same as the presbyters. It is therefore unnecessary to carry further an investigation into the spread of the system in the 2nd century (for detailed information reference may be made to Lightfoot, 'Dissertation,' in his *Philippians*). But it is desirable to refer to the conception of the episcopate which we find in the works of Cyprian, bishop of Carthage in the middle of the 3rd century. Ignatius and Irenæus had described the bishop as a centre of unity, and Cyprian emphasizes this still more in his treatise *de Unitate Ecclesiæ* and in his *Epistles.* In this connexion he dwells strongly on the sin of schism from the visible unity symbolized and guarded by the bishop. It has been said that he 'magnified his office,' and extended its claims to autocracy; yet no one emphasizes more than he the necessity of constitutional action on the part of the bishop, and his obligation to carry his clergy and laity with him (see below (*b*)). He also dwells on the election of the bishops by the people (see art. LAITY, § 4). There is no real foundation for Hatch's view, from which his German translator Harnack dissents, that the rule that there should be only one bishop in each community was not fully established before Cyprian's time, and was due to his dispute with Novatian (*Organization of the Early Christian Church*, p. 103; for an account of Cyprian's view of the ministry reference may be made to Gore, *The Church and the Ministry*⁵, pp. 151–156, with his quotations in the footnotes).

It would seem that at the first the primary object of a local ministry was liturgical. Thus the *Didache*, immediately after mentioning the Sunday worship (§ 14), continues: 'Appoint (*χειροτονήσατε*) for yourselves *therefore* bishops and deacons' (§ 15). And so in the succeeding ages one of the principal functions of the diocesan bishop was to celebrate the Eucharist. In the Church Orders of the 4th and 5th centuries the newly-consecrated bishop himself begins to exercise his functions by doing so, rather than the principal consecrator, as in modern times. The same idea underlies the ancient practice, still preserved in some parts of Christendom, of 'concelebration,' that is, of the newly-ordained presbyters joining aloud with the bishop who has just ordained them, in consecrating the Eucharist. (In the early ages concelebration was not confined to ordinations.) We may compare the custom, which also survives, of a newly-ordained deacon reading the liturgical gospel, that being one of his functions which he immediately begins to discharge. In this connexion we may notice that the bishop and the presbyter were the only persons allowed to celebrate the Eucharist (see art. LAITY, § 5 (*a*)).

The Council of Nicæa enacted that bishops were not to be translated from one see to another (can. 15; A.D. 325). But this rule was almost immediately disregarded (see Athanasius, *Apol. c. Arian.* 25). The Nicene Council applied it also to presbyters and deacons.

(*b*) *Presbyters.*—In early Christian literature the presbyters are frequently recognized as the councillors of the bishop. Ignatius, who says that the presbytery is attuned to the bishop as strings to a lyre (*Eph.* 4), bids the people submit to the bishop and presbyters (*Eph.* 2, 20, *Trall.* 13), and do nothing without them (*Magn.* 7, *Trall.* 2 f., 7); he speaks of 'the bishop presiding (*προκαθημένου*) after the likeness of God, and the presbyters after the likeness of the council (*συνεδρίου*) of the apostles' (*Magn.* 6); in *Smyrn.* 8, the bishop is compared to our Lord, and the presbyters to the apostles (cf. *Magn.* 13: 'with your revered bishop and with the fitly-wreathed spiritual circlet of your presbytery, and with the deacons who walk after God'). In the same way, more than a century later, Cyprian says (*Ep.* xiv. [v.] 4, 'To the presbyters and deacons') that he had determined from the beginning of his episcopate to do nothing without the advice (*consilium*) of the presbyters, and the concurring feeling (*consensus*; see arts. LAITY, § 8) of the people. The presbyters are here recognized as councillors of the bishop in a higher sense than the laity. This is not quite the same position as in *Ep.* xxxviii. (xxxii.) 1 ('To the presbyters, deacons, and people'), where Cyprian speaks of consulting them all before he ordained clergy. This is the equivalent of the more modern *Si quis* or public intimation of a proposed ordination. Origen likewise compares the 'councillors' and 'rulers' of the Church with those of the city, clearly meaning the presbyters and the bishop (*c. Cels.* iii. 30). A similar state of things is seen in the *Older Didasc.* (ii. 28, 3rd cent.; Funk, i. 108), where it is said that the presbyters are 'honoured as apostles and councillors of the bishop, and the crown of the Church, for they are the council and curia of the Church.' The derived *Apost. Const.* (ii. 28) use nearly the same language.

It is for this reason that the bishop had his throne in the church with the presbyters sitting round him on either side. Thus in the *Apost. Ch. Ord.* (*c.* A.D. 300; for the Syriac text and tr. see *JThSt* iii. [1901] 59) the presbyters are appointed by the bishop, and sit on either side of him, those on the right being the regulators of the service of the altar, those on the left the regulators of the people; and the presbyters are 'sharers in the mysteries' with the 'shepherd' (the bishop; see above, § 2). In the *Older Didasc.* (ii. 57; Funk, i. 158), the *Apost. Const.* (ii. 57), and the *Test. of our Lord* (i. 19) the same arrangement is found. In the last-mentioned manual the more exalted and honoured presbyters, who 'labour in the word,' sit on the right, and 'those of middle age' (*i.e.* the younger ones; see above, § 2 (*b*) for the association of the presbyterate and old age) sit on the left. For an ambiguity as to the position of the bishop and presbyters when ministering at the altar, see Maclean, *Ancient Church Orders*, p. 37.

The presbyters were charged with celebrating the Eucharist, at least when the bishop was absent (see above), and with pastoral duties to the flock. In the 4th cent. the *Apost. Const.* thus sum up the functions of bishops and presbyters (viii. 28):

> 'The bishop blesses, but does not receive the blessing; he lays on hands (*χειροθετεῖ*), ordains (*χειροτονεῖ*),[1] offers (the Eucharist), receives a blessing from bishops, but not at all from presbyters; the bishop exercises discipline (*καθαιρεῖ*) over every cleric who deserves discipline, except over a bishop, for alone he cannot (do this). The presbyter blesses, but does not receive the blessing except from a bishop or fellow-presbyter, and so he gives it to a fellow-presbyter; he lays on hands but does not ordain; he does not exercise discipline, but he separates those inferior to him,' etc.

An interesting feature is that the presbyter is allowed to confirm, for this seems here to be the meaning of *χειροθετεῖν*,[2] blessing and ordaining being mentioned as different actions. Ordinarily the presbyter baptized, and brought the neophyte to the bishop for confirmation; this is the regular practice in the Church Orders and was the earlier custom in both East and West. In the East the presbyter has for many centuries confirmed, both in the Orthodox and in the Separated communions, but he uses chrism consecrated by the bishop. The same thing is also found in the West, but only in exceptional cases. Innocent I. in his *Epistle to Decentius* (§ 3; A.D. 416) shows that Western presbyters had the power by custom, though he did not approve of their exercising it. The Council of Orange (A.D. 441) says (can. 1, 2) that in the absence of a bishop a presbyter may receive penitent heretics, marking them with the chrism and benediction, *i.e.* (apparently) confirming them. Still earlier the first Council of Toledo (A.D. 400) shows the same thing by implication. It forbids (can. 20) a presbyter to consecrate the chrism, and allows only a bishop to do so, but says that deacons or subdeacons shall fetch the chrism from the bishop before Easter. The Council of Carthage, A.D. 390 (can. 3), also forbids presbyters to consecrate the chrism. This implies a regular practice of confirming by presbyters (for further references see Duchesne, *Christian Worship*, p. 338, n.). For Egypt we have the evidence of the writer known as Ambrosiaster (*in Eph.* iv. 12), who says that in that country the presbyter 'signs' (*consignat*) if the bishop be not present; and we read the same in *Quæst. Vet. et Nov. Test.* § 101, printed as an appendix to vol. iii. of the Benedictine ed. of Augustine (another reading there has 'consecrate,' *i.e.* consecrate the Eucharist). Lightfoot ('Dissertation,' p. 231) makes the surely strange error of supposing that this 'consignatio' means 'ordination.'[1]

---

[1] One good MS reads: 'ordains, does not lay on hands.'

[2] It has, however, been interpreted of the absolution of penitents. C. H. Turner (*JThSt* xvi. [1915] 61), who adopts the alternative reading, interprets this 'laying on of hands' of the custom of the presbyters laying on hands at the ordination of a presbyter. Against this, however, is the fact that in the *Apost. Const.* that custom is not mentioned, and is perhaps negatived (see below, § 8 (*a*)).

There are traces in our period of a very close connexion between presbyter and bishop. Thus in the *Canons of Hippolytus*, which in their present form are perhaps of the 4th cent., but which adhere very closely to their 3rd cent. source, we read that a bishop and a presbyter are ordained with the same prayer except for the name of the office, and except that in the case of the presbyter enthronization is omitted. 'The bishop is in all things put on an equality with the presbyter, except the name of the throne and ordination, for the power of ordination is not given to him,' *i.e.* to the presbyter (can. iv.; ed. H. Achelis, Leipzig, 1891, §§ 30–32). So in the *Egyptian Church Order* (§ 32) there is only one ordination prayer for bishop and presbyter. The later Church Orders have separate prayers.

A bishop is still called a 'presbyter' in the 2nd and later centuries (see, *e.g.*, Iren. *Hær.* III. ii. 2, 'successions of presbyters,' which in iii. 2 he explains as 'successions of bishops'). In his letter to Victor Irenæus speaks of 'the presbyters before Soter who presided over the Church which thou rulest' (Eus. *HE* v. 24). Dionysius, bishop of Alexandria (*c.* A.D. 258), speaks of 'my fellow-presbyter Maximus' (Eus. vii. 11). For Clement of Alexandria see above, § 1 (*b*), and for Firmilian see below, § 8 (*a*).

(*c*) *Deacons.*—This was a numerous and important order in all the early ages. The deacon's functions are summarized by the author of the *Apost. Const.* (viii. 28), by saying that he does not bless or baptize or offer [the Eucharist], but that, when a bishop or presbyter has offered, he gives [the sacrament] to the people, not as a priest (*ἱερεύς*) but as one who ministers to the priests. He is described in the oldest as well as in the later liturgies as assisting at the Eucharist, and especially as saying the short exhortations and the ectene, or litany (see, *e.g.*, the liturgies in the *Test. of our Lord* and in the *Apost. Const.* viii.); he keeps order in service time (*Test.* i. 34; *Older Didasc.* ii. 57, etc.); he assists at baptism in all the Church Orders which describe the rite; in some authorities he is allowed to baptize in the absence of bishop and presbyter (see art. LAITY, § 5); he often reads the liturgical gospel at the Eucharist (Sozomen, *HE* vii. 19; *Test.* i. 27), as at this day in the West; he administers the eucharistic gifts in Justin Martyr (*Apol.* i. 65), and often in the Church Orders (for details see J. Cooper and A. J. Maclean, *Test. of our Lord*, Edinburgh, 1902, p. 223; for *Apost. Const.* see above); he has many pastoral duties, such as visiting the sick (*Test.* i. 34, *Apost. Const.* ii. 32, 44, iii. 19, *Egyp. Ch. Ord.* 33), entertaining strangers (*Test.* i. 34), arranging for burials[2] (*ib.* and Eus. *HE* vii. 11). The deacon also attends to the eucharistic offerings and is often the almoner of the Church (*Older Didasc.* ii. 57; *Apost. Const.* iii. 19). In some authorities the bishop and presbyters exercise the discipline of the laity through the deacons (*Test.* i. 36 f.; *Apost. Const.* ii. 16; *Ethiopic Didasc.* § 4). As time went on, deacons pressed their claims and relegated several of their lesser functions to the minor orders. We find several writers repressing deacons for this reason—*e.g.*, Cyprian (*Ep.* iii. [lxiv.] 13, 'ad Rogatianum'), the Council of Arles (can. 15; A.D. 314), which says that many deacons attempted to celebrate the Eucharist, that of Nicæa (can. 18; A.D. 325), and almost all the Church Orders, the *Test. of our Lord* being a solitary exception, for in that manual the position both of deacons and of 'widows who preside' is greatly extolled.

(*d*) *Number of the clergy.*—Cornelius, bishop of Rome, writing to Fabian or Fabius, bishop of Antioch, A.D. 251 (the letter is given by Eus. *HE* vi. 43), enumerates the various orders and classes at Rome as follows: one bishop (about this he is emphatic), 46 (*var. lect.* 36) presbyters, 7 deacons, 7 subdeacons, 42 acolytes, 52 exorcists, readers, and doorkeepers, and more than 1500 widows and persons in distress (for the minor orders see below, § 6). But in unimportant places the clergy were much fewer. In the *Apost. Ch. Ord.* (*c.* A.D. 300) there were: one bishop, 3 presbyters, 3 deacons (so the Syriac), one (?) reader, 3 widows. In the *Test. of our Lord* (*c.* A.D. 350?) we have (i. 34), besides the bishop, 12 presbyters, 7 deacons, 14 subdeacons, 13 'widows who preside' (the Greek original no doubt had *προκαθήμεναι*). Seven was a very ordinary number for the deacons, because of the Seven in Ac 6. Sozomen says (*HE* vii. 19) that even in his day (5th cent.) there were only 7 deacons in Rome, though 'in other Churches the number of deacons is a matter of indifference.' The Council of Neo-Cæsarea, appealing to Acts, says that even in the largest towns there are not to be more than 7 deacons (can. 15; *c.* A.D. 314, or perhaps a little later). The number twelve for the presbyters in the *Test. of our Lord* may be due to the comparison of their order to the apostles. Eutychius (10th cent.) describes Alexandria in old days as having had twelve presbyters; but his evidence is quite untrustworthy (see below, § 8 (*d*)).

(*e*) *Age of ordination.*—At Neo-Cæsarea it was enacted (can. 11) that no one was to be ordained presbyter before he was thirty years of age, because our Lord then began to teach. This became the general rule for many centuries. There was no similar rule about bishops, but the 2nd can. of Nicæa says that no novice in the faith is to be ordained presbyter or bishop. The minimum age for deacons seems to have been twenty-five. The Council of Hippo (A.D. 393) says that no one is to be ordained at all under that age (can. 1); but this rule can hardly have applied to the minor orders, for the same Council (can. 18) speaks of readers who are appointed as quite young boys. So Cyprian (*Ep.* xxxviii. [xxxii.] 1) and Socrates (*HE* vii. 41) speak of very young readers. The *Gallican Statutes* (*c.* A.D. 500; see below, § 6 (*c*)) say that a bishop must be of the 'prescribed age,' but does not say what that is (§ 1).

It may be convenient to note here some later rules as to age of ordination. The Maronite rule is that a presbyter must be over 30, for the reason stated above (H. Denzinger, *Ritus Orientalium*, Würzburg, 1863–64, ii. 148), and a deacon must be over 21 (*ib.* p. 128). The East Syrian or Nestorian *Sunhādhūs*, or 'Book of Canon Law' (VI. iv. 2; Maclean and W. H. Browne, *Catholicos of the East*, London, 1892, p. 201), says that readers must not be ordained till past boyhood, subdeacons when nearly grown up, deacons a little later, presbyters about 18, though (it adds) the ancient age was 30. The Anglican minimum age for deacons is 23, for presbyters 24, for bishops 30, and this is the usual Western custom; some relaxation of the rule has rarely been made in the case of deacons.

5. Development of the supervisory offices.—(*a*)

---

[1] The present writer can find no good instance of 'consignare' or its Greek equivalent *σφραγίζειν*, or their substantives, being applied to ordination. The Greek *σφραγίς* and its Oriental equivalents usually refer to baptism or confirmation, or both, or to the sign of the cross; by analogy Tertullian (*adv. Valent.* 1) uses 'consignare' of admission to the Eleusinian mysteries (see also Lightfoot, *Apost. Fathers*, pt. i., 'Clement,' ii. 226, n.; Maclean, *Ancient Church Orders*, p. 109). In the *Verona Latin Fragments* (ed. Hauler, p. 110) 'consignare' is used in contradistinction to ordination, for the part played by the presbyters at a presbyter's ordination (see below, § 8 (*a*)): 'The presbyter at the ordination (*ordinatione*) of a presbyter signs (*consignat*) when the bishop ordains (*episcopo ordinante*).' Ducange (*Glossarium Mediæ et Infimæ Latinitatis*, Paris, 1840–50, Niort, 1883–87) gives no instance of *consignatio* meaning 'ordination,' though he gives instances of its meaning 'confirmation.' Suicer (*Thesaurus*, 3199) gives one instance from pseudo-Dionysius Areopagita (*Eccl. Hier.* v. p. 312 [*PG* iii. 509]) of *σφραγίς* meaning 'ordination,' but this instance is very doubtful.

[2] It has been suggested that 'the young men' of Ac $5^{6.10}$ (note the definite article) who buried Ananias and Sapphira were prototypes of the deacons in this respect. For the *copiatæ*, or 'grave-diggers' (mentioned by Epiphanius, *Exp. Fid.* 21), and the *parabolani* (visitors of the sick) see J. Wordsworth, *Ministry of Grace*, p. 195 f.

Metropolitans.—The name is first found in the 4th cent., before which there is no certain trace of provincial organization, the 'eparchy' in the *Apost. Ch. Ord.* being apparently the civil province. At Nicæa metropolitans are mentioned by that name (can. 4, 6), and the word 'eparchy' is apparently used of an ecclesiastical province, though, as the civil and ecclesiastical provinces normally coincided, this is not quite certain. At the Council of Antioch *in Encæniis* (A.D. 341) metropolitans are recognized in effect, though the name is not given to them (can. 9, 19); 'the bishop presiding in the metropolis' (*i.e.* in the civil capital) is the phrase used, and the corresponding verb is employed in can. 19. The word 'metropolitan' is used at Laodicea (can. 12; *c.* A.D. 380). On the other hand, there is no mention of a metropolitan in the Church Orders, and this is a cogent argument against their being dated later than the 4th cent., and for their not being assigned to any of the great centres like Alexandria or Antioch. In these manuals the neighbouring bishops come together for the election of a bishop, and the whole assembly of bishops, clergy, and laity elect, just as they do in Cyprian (*Ep.* lxvii. 5, 'To the clergy and people in Spain'); but there is no metropolitan. There is perhaps just a faint trace of a primacy in *Apost. Const.* viii. 4, which speaks of 'one of the first bishops' saying the ordination prayer of a bishop; and so in the *Arabic Didasc.* (*c.* A.D. 400?; § 36, 'the first bishop among them'). But this is all. A rather stronger trace is to be seen in the *Apost. Canons* (can. 35 [also numbered 34 or 33]; *c.* A.D. 400). After the 4th cent. metropolitans became practically universal.

Although there was no regular organization of provinces before the 4th cent., yet bishops of certain important cities, like Rome, Carthage, Alexandria, Antioch, wielded great influence over the neighbouring bishops. We see this in the case of Cyprian. At Nicæa the authority of the bishops of Alexandria and Rome is spoken of as an ancient custom, and no one is made bishop without the metropolitan (can. 6). Alexandria is to have, as before, authority over Egypt, Libya, and Pentapolis, *i.e.* over more than one civil province (*ib.*). The growth of this influence was promoted by the holding of synods, when external circumstances permitted. Synods would ordinarily be held in the 'metropolis' (chief town) of the civil province or eparchy, and the bishop of that city would naturally preside. So the civil metropolis tended to become the ecclesiastical metropolis. But this was not always the case with synods. At that of the bishops of Pontus held to consider the Paschal question, Palmas as the oldest [bishop] presided (Eus. *HE* v. 23). Palmas was bishop of Amastris (iv. 23). At the end of the 4th cent. the Council of Hippo decreed that a bishop of a principal see (*prima sedes*) was not to be called 'princeps sacerdotum' or 'summus sacerdos,' but simply 'primæ sedis episcopus' (can. 25). Thus the name 'metropolitan' was apparently not in use in the province 'Africa'; and Hefele thinks that, except at Carthage, the metropolitan rights went to the oldest bishop of the province, and that the same thing held good in Spain before Constantine's time (*Hist. of the Councils*^{2}, Eng. tr., Edinburgh, 1872, i. 162).

In spite of his position at Carthage, Cyprian affirms that all bishops are equal. Thus in *de Unitate*, 5, he says that the episcopate is one and that all bishops are full partners in it with joint and several responsibility; for this is the meaning of his phrase 'cuius a singulis in solidum pars tenetur.' So in *Ep.* lv. (li.) 21, 'ad Antonianum,' he says that every bishop disposes and directs his own acts, and will have to give an account of his purposes to the Lord. Cf. also *Epp.* lvii. (liii.) 5, lix. (liv.) 14, both to Cornelius; Cyprian says that appeals are not to be carried outside the province in which the cause began.

The custom of giving the pallium to metropolitans hardly falls within the limits of this article (see *DCA* ii. 1174).

(*b*) *Patriarchs.*—The name 'patriarch' was probably borrowed from the Jews. In the LXX of 1 Ch 27^{22} it is used for the head of a tribe, and in 24^{31} and some MSS of 9^{9} 23^{20} for the head of a πατριά, or subdivision of a tribe. In the NT it is used of David (Ac 2^{29}), the sons of Jacob (7$^{8f.}$), and Abraham (He 7^{4}). In 4 Mac 7^{17} 16^{22} (ed. W. R. Churton, *Uncanonical and Apocryphal Scriptures*, London, 1884) it is used of Abraham, Isaac, Jacob, and others. In the early centuries of our era a Jewish 'patriarch,' or representative of the nation, is several times mentioned—*e.g.*, by Cyril of Jerusalem (*Cat.* xii. 17; A.D. 348), who speaks of the Jews' 'recent measures relative to their patriarchs as they now call them.' The Emperor Hadrian (A.D. 134?) refers to the Jewish patriarch in his letter to the consul Servianus about religion in Alexandria (see Lightfoot, 'Dissertation,' p. 225). Hadrian visited Egypt A.D. 130. In Christian literature we find the term first applied to Christians non-officially. Basil seems to use it as equivalent to 'bishop' when he says (*Ep.* clxix. 'ad Greg.') that the deacon Glycerius assumed the style and title of patriarch. An example in Gregory of Nyssa's *Funeral Oration on Meletius, bishop of Antioch* († A.D. 381), when he exclaims 'Behold these your patriarchs,' is perhaps purely oratorical; he is referring to the bishops who attended the second Ecumenical Council at Constantinople. Gregory of Nazianzus explicitly uses the term of senior bishops (*Orat.* xlii. 23): 'aged bishops or, to speak more accurately, patriarchs.' But it came to be used of the bishops of Rome, Constantinople, Alexandria, Antioch, and Jerusalem, though not by canons of councils till long after our period—not before the 9th cent.; the whole subject is treated in detail by Hatch in *DCA* ii. 1573 (art. 'Patriarch'). The growth of the authority of these sees is shown by the 6th can. of Nicæa, and the 28th of Chalcedon; the latter was rejected by the bishop of Rome. The ultimate result was the joining together of several provinces or eparchies, each of which was governed by its own metropolitan, under a single patriarch, whose jurisdiction was somewhat loosely defined, just in the same way as in civil affairs several 'eparchies' were grouped together into one *diœcesis*, which was a very different thing from our 'diocese.'

(*c*) *Archbishops.*—This term, which in the West became the customary title of metropolitans, was not so used in the East. It was a title of honour conferred on bishops of some of the greatest sees, though its application was not always uniform. In the 4th cent. Epiphanius uses the term (*Hær.* lxix. 3) of Meletius, bishop of the Thebais, and (lxviii. 1) of the bishop of Alexandria. At Chalcedon (A.D. 451) it is applied to the bishops of Constantinople, Alexandria, and Rome (can. 28, 30; the last is not considered to be a canon proper; see Hefele, iii. 422).

(*d*) *Chorepiscopi.*—These 'country-bishops' were assistants to the diocesan bishops for the work of the rural districts. In the Greek-speaking Churches and in the West they were, at least normally, bishops—such is the trend of the evidence, though Morinus denies it—but in the Syriac-speaking Churches, at a later date, they were often confused with the περιοδευταί, or 'visitors,' and were presbyters. They somewhat resembled the assistant ('suffragan') and coadjutor bishops of the present day, in that they worked under the direction of the diocesan bishop, though their functions were not entirely the same. They are first mentioned at Ancyra (can. 13 [see below, § 8 (*b*)]; A.D. 314), Neo-Cæsarea (can. 14; A.D. 314 or a little later), Nicæa (can. 8; A.D. 325). From the 10th can. of the Council of Antioch *in Encæniis* (A.D. 341) we may perhaps gather that not all chorepiscopi were bishops, for it uses the expression 'even if they have received consecration as bishops.' They are also mentioned by Athanasius (*Apol. c. Arian.* 85), Basil (*Ep.* xxiv. etc.), and other 4th cent. writers. But they are not referred to in the Church Orders, and it is probable that they were to be found only in the busy centres, from which, as we have seen above (*a*), these manuals did not come. In the *Edessene Canons*, *i.e.* the Syriac *Teaching of the Apostles* (see *Ante-Nic. Chr. Lib.*, 'Syriac Documents,' p. 42 f.), a 'ruler' is to be appointed as head over the village presbyters; and these 'rulers' must have been itinerant visitors, for a reference is made to Samuel also making visits from place to place and ruling (can. 24; *c.* A.D. 350). The Council of Sardica in Illyricum (*c.* A.D. 347, or earlier) does not appear to recognize the existence of chorepiscopi. The 6th can. says that a bishop is not to be ordained in a village or small town for which one presbyter suffices, for it is not necessary there that a bishop should be made, lest the name of a bishop and his authority become cheap (the authenticity of these canons is disputed).

Among the functions of the chorepiscopus were the appointment and ordination of minor orders, but not as a rule of deacons and presbyters. To ordain these he must have the explicit consent of the diocesan bishop who had appointed him (Antioch *in Encæniis*, can. 10). He could also confirm; see the 3rd can. of the Council of Riez or Regium in Provence (Hefele, iii. 157; A.D. 439). Schismatic bishops when reconciled were sometimes made chorepiscopi, as there could not be more than one diocesan bishop in each see (Nicæa, can. 8; Socrates, *HE* i. 9; Riez, can. 3). Lightfoot ('Dissertation,' p. 233, n.) looks upon chorepiscopi as a survival of the 'presbyter-bishops' which his theory of the origin of the diocesan episcopate postulates (see below, § 10); but there is absolutely no evidence for this survival, and indeed it is very unlikely that chorepiscopi existed before the 4th century.

An attempt was made towards the end of that century to abolish the office. The Council of Laodicea (can. 57; *c.* A.D. 380) forbids their appointment for the future, and says that there are to be only periodeutæ (apparently presbyters), while chorepiscopi who had already been appointed were to act only with the consent of the diocesan bishop (this points to a certain self-assertiveness on the part of the chorepiscopi). But this canon did not put an end to the office. Chorepiscopi are found frequently in the Far East (see below), and were revived in the West for a time (Hefele, i. 18). There were some of this order present at the Council of Ephesus, A.D. 431, but not at that of Chalcedon, A.D. 451.

In the East Syrian *Sunhādhūs* (vi. 1) there are three orders of the ministry, each with three subdivisions. In the second order (the presbyterate), chorepiscopi or periodeutæ (both these names are transliterated into Syriac) form the first subdivision, and seem to be identical. Their duties were to visit the villages and monasteries as representatives of the bishop (Maclean-Browne, *Catholicos of the East*, p. 182). They were not specially ordained, for the *Sunhādhūs* says that bishops 'ordain all readers, subdeacons, deacons, and presbyters, give a blessing to periodeutæ, and say a prayer over archdeacons' (*ib.*).

(*e*) *Archdeacons.* — Neither the name nor the office of an archdeacon is found before the end of the 4th century. The name is found in the *Pilgrimage of 'Silvia'* (*'Etheria'*), which has usually been assigned to that date, though some place it later; but even there it is not the name of a distinct office. Neither the name nor the distinct office is found in the Church Orders, though in the *Test. of our Lord* the principal deacon has certain duties assigned to him. Some writers at the end of, or later than, the 4th cent. give to certain famous deacons the name 'archdeacon,' as when Augustine calls Laurence by that title (*Serm. de diversis*, cxi. [ed. Ben. ccci.] 8); so Theodoret (*HE* i. 25) calls Athanasius the 'leader of the chorus of deacons, though a young man.' There is no archdeacon in Cornelius's list of Roman officials (above, § 4 (*d*)). Jerome (*Ep.* cxlvi., 'ad Evangelum'), mentions archdeacons as an order, and after his time they were common in both East and West. In the *Ordo Romanus Primus* the archdeacon plays a very important part in the eucharistic liturgy at Rome (*e.g.*, §§ 18, 20, ed. E. G. C. F. Atchley, London, 1905). But this work is probably of the 8th cent., though founded on a similar document of the 6th (Atchley, p. 7). The archdeacon was at first a deacon, and in some cases the senior deacon succeeded automatically to the office; but Sozomen (*HE* viii. 9) speaks of Chrysostom appointing Sarapion as archdeacon, and therefore he could not have succeeded automatically. There was only one in each diocese in the time of Jerome (*loc. cit.*). For the later development of this office see *DCA* i. 136.

In the East Syrian Church the archidiaconate is the middle subdivision of the second order, *i.e.* of the presbyterate (see above). The office is still used in that Church as an honorary one, and an influential presbyter is appointed 'arkān,' or archdeacon. In the West the office is in frequent use, and in most Western countries each bishop has at least one archdeacon, called the 'eye of the bishop.' The archdeacon is a senior presbyter, deputed to relieve the bishop of some of his minor functions.

6. Development of the lesser offices.—At an early date we find the existence of some orders of the ministry lower than those of bishops, presbyters, and deacons. We read at various times of subdeacons, readers, singers, interpreters, doorkeepers, acolytes, exorcists. There was also a ministry of women — widows, presbyteresses, deaconesses. It must be noted, however, that some of these offices were not always and in all places reckoned as orders; *e.g.*, exorcists were long considered to exercise a charismatic ministry, and were reckoned as being outside the ordinary roll of the clergy.

(*a*) *Readers* (*ἀναγνῶσται, lectores*).—This is probably the oldest of the minor orders. In Justin Martyr's description of the Eucharist (*Apol.* i. 67; *c.* A.D. 150) the reader of the lections plays an important part, though Justin may not mean that he was of a separate order in the ministry. In the *Apost. Ch. Ord.* (§ 19; *c.* A.D. 300) he comes before the deacon, and Harnack thinks (*Sources of the Apost. Canons*, Eng. tr., London, 1895, p. 71 f.) that his office was at first a charismatic one, and that he was not originally included among the clergy. Stress is laid in the manual just named on the necessity of the reader being learned. He must be 'able to instruct' or 'narrate' (*διηγητικός*), and he 'fills the place of an evangelist.' This qualification is not always insisted on in the case of a bishop; this Church Order says (§ 16) that, if a bishop does not know letters, at least he is to be meek. The *Test. of our Lord* also insists that the reader must be learned, and have had much experience (i. 45). Probably he had, at first, the duty of expounding what he read; but, when he was limited to the mere reading of the lections, his position fell, as it did at Rome in the middle of the 3rd century (see above, § 4 (*d*), where the readers are classed with the exorcists and doorkeepers, below the acolytes). In the other Church Orders the reader comes, sometimes before, and sometimes after, the subdeacon. In *Sarapion's Sacramentary* (§ 25; *c.* A.D. 350) the minor orders are 'subdeacons, readers, and interpreters.' There are indications in some of the authorities that readers were not numerous. The *Older Didasc.* and the *Apost. Const.* (ii. 28; Funk, i. 108 f.) suggest that it is probable that a church may not have a reader at all; and in several Church Orders there is an indirect indication that there was only one in each place (Maclean, *Ancient Church Orders*, pp. 14 f., 87). Readers come below deacons in Tertullian (*de Præscr.* 41). They are frequently mentioned in Cyprian; and they often had the important duty of reading the liturgical gospel at the Eucharist: this they did from a desk, or *ambo* (*Ep.* xxxix. [xxxiii.] 4, 'About Celerinus'). In the Diocletian persecution they had the custody of the Scriptures (J. Wordsworth, *Ministry of Grace*, p. 189).

(*b*) *Subdeacons* (*ὑποδιάκονοι*, *ὑπηρέται*, *subdiaconi*, *ministri*).—These officials, whose chief duty was to assist the deacons at the Eucharist and in their other functions, are mentioned in the 3rd cent. by Cornelius at Rome (above, § 4; he speaks of seven) and Cyprian in Africa (*Ep.* xxxiv. [xxvii.] 3, 'To the presbyters and deacons': he speaks of two subdeacons by name and a certain acolyte), and in the *Older Didasc.* (E. Hauler, *Verona Latin Fragments*, Leipzig, 1900, p. 40; Funk, i. 116; see below). In the 4th cent. we find them in Spain at Elvira (can. 30; *c.* A.D. 305; no other minor order is mentioned in these canons), in Egypt in *Sarapion's Sacramentary* (§ 25), in the Church Orders (but not in the *Apost. Ch. Ord.*), at Neo-Cæsarea in Cappadocia (can. 10; A.D. 314 or later), at Antioch *in Encœniis* (can. 10; A.D. 341), at Laodicea (can. 20–22, 25; *c.* A.D. 380), and in Athanasius (*Hist. Arian. ad Monachos*, 60; A.D. 358). At Neo-Cæsarea and Laodicea, and in *Apost. Const.* iii. 11, and elsewhere the subdeacon is called *ὑπηρέτης*, or 'minister.' The existence of subdeacons in the East before the 4th cent. has been disputed, and it has been thought that the passage in the *Didascalia* where they are mentioned is an interpolation; yet it occurs both in the Latin and in the Syriac versions. Eusebius (*HE* viii. 6) makes their existence in most parts of the East during the Diocletian persecution uncertain. He says that a royal edict directed that the presidents (*προεστῶτες*) of the Church everywhere should be imprisoned, and that the prisons were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the *Canons of Hippolytus* (can. xxi. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent. ?) form of the *Canons*; the omission of deacons may be a mere clerical error.

(*c*) *Acolytes, or collets* (*ἀκόλουθοι*, *acolythi*, *acoliti*).—These are first mentioned by Cornelius (above, § 4), and by Cyprian (*loc. cit.*). They are also mentioned in the *Gallican Statutes* (as J. Wordsworth has conveniently named them [*Ministry of Grace*, p. 58]) or *Statuta Ecclesiæ antiqua*, a collection of canons which used to be ascribed to the so-called 'Fourth Council of Carthage' (can. 6; Hefele, ii. 410; their real date is *c.* A.D. 500). Acolytes assisted at the Eucharist, and performed various minor functions in the services. They are found only in the West, where they became very numerous. Cornelius says that there were 42 at Rome in the 3rd century. As there were 14 regions in that city, there would be one deacon or subdeacon and three acolytes for each region (Harnack, *Sources of the Apost. Can.*, p. 95). An acolyte was sent by Cornelius as a messenger (Cyprian, *Ep.* xlix. [xlv.] 3).

(*d*) *Singers* (*ψάλται*, *ᾠδοί*, *ψαλτῳδοί*, *cantores*, *psaltæ*, etc.).—In the earlier Church Orders singers are mentioned, but not as a separate order. They had, however, already become such in the *Apost. Const.* (iii. 11, vi. 17; *c.* A.D. 375), at Laodicea (can. 23), in the *Apost. Canons* (can. 43 [42], 69 [68]; *c.* A.D. 400), and in the Arabic translation of the *Test. of our Lord* (i. 45), which adds a chapter to that manual about their appointment, and reduces the lesser orders in the *Test.* (see above, § 4) to 'four subdeacons and readers, three widows and singers'; the date of this Arabic translation is unknown. Singers are a separate order also in the *Gallican Statutes* (can. 10).

(*e*) *Interpreters* (*ἑρμηνεῖς*, *ἑρμηνευταί*, *interpretes*).—These are not mentioned in the Church Orders They naturally are found only in bilingual countries. Eusebius mentions them in Palestine (*Mart. Palest.*, longer version, § 1, tr. A. C. McGiffert, p. 342 [*Nic. and Post-Nic. Fathers*]); he says that Procopius was a reader, interpreter, and exorcist. Sarapion (§ 25) mentions them in Egypt, Epiphanius (*Exp. Fid.* 21) in Syria and Palestine. In the *Pilgrimage of 'Silvia'* (*'Etheria'*) we read (vii. 5) that at Jerusalem some spoke Greek only, and some Syriac only, and that, as the bishop, though he knew Syriac, yet spoke only in Greek, a presbyter stood by to translate the bishop's Greek into Syriac. For 1 Co 14^{28} see above, § 1 (*e*).

(*f*) *Doorkeepers* (*πυλωροί*, *ostiarii*).—These are mentioned in Cornelius's list, and in the *Apost Const.* (ii. 57, iii. 11), and the *Ethiopic Didasc.* (§ 10), but not in the other Church Orders, which retain (as indeed do also the *Apost. Const.*, rather inconsistently) the old direction that deacons are to guard the doors. For the devolution of the deacon's functions see above, § 4 (*c*).

(*g*) *Exorcists* (*ἐξορκισταί* in the NT, Josephus, and elsewhere, but *ἐπορκισταί* in *Apost. Const.* viii. 26, and Epiphanius, *Exp. Fid.* 21, *exorcistæ*).—Jewish exorcists are mentioned in Lk 11^{19} (where 'your sons' can hardly mean the disciples, but must be the Jews), Ac 19^{13}, and Jos. *Ant.* VIII. ii. 5 (he is speaking of the time of Solomon). Christian exorcists are mentioned by Cornelius, as above, and by Firmilian, who in his letter to Cyprian speaks of exorcists in Cappadocia twenty-two years before his time (Cyprian, *Ep.* lxxv. [lxxiv.] 10). But the Christian exorcizing of demons is mentioned by Justin (*Dial.* 85, *Apol.* ii. 6), Tertullian (*de Idol.* 11, *de Præscr.* 41), Origen (*c. Cels.* vii. 4). On the other hand, candidates for baptism were exorcized by the bishop before Easter (Maclean, *Ancient Church Orders*, p. 97; T. Thompson, *Offices of Baptism and Confirmation*, Cambridge, 1914, p. 28). The Council of Laodicea (can. 26) says that no one may exorcize in churches or houses unless authorized by the bishop. The office of an exorcist was at first entirely charismatic, and he was not originally one of the clergy (see below, § 8 (*g*)). We can well understand that unrestrained exorcism became an abuse, and that exorcists needed stringent regulations.

(*h*) *Ministry of women.*—It is not very easy to distinguish between the 'widows' who were on the Church roll for relief and those who were, in some sort, in the ministry. The widows in Ac 6^{1} come under the former category; those of 1 Ti 5$^{3-16}$ perhaps under both, for v.$^{11ff.}$ seem to imply ministering. A deaconess, Phœbe, is mentioned in Ro 16^{1}, though Hort (*Christian Ecclesia*, p. 208) thinks that *διάκονος* (fem.) is here used in a non-technical sense, and merely means that Phœbe ministered to the needs of the Church. Many think that 'women' in 1 Ti 3^{11} (*γυναῖκας* without article) means deaconesses; note the qualifications for deacons which precede and follow.[1] We also read of Prisca (Priscilla) joining with Aquila in his evangelistic work (Ac 18^{26}); this was no doubt in private teaching, as St. Paul forbids a woman to speak in church (1 Co 14$^{34f.}$, 1 Ti 2$^{11f.}$). In the Christian literature after the NT we find frequent mention of a ministry by women. In the *Apost. Ch. Ord.* one of the 'widows' is to visit the sick, while the other two are to pray and receive spiritual revelations (see above, § 3). In the *Test. of our Lord* the 'widows who preside' (*προκαθήμεναι*) are an important order; they are also called 'presbyteresses,' as corresponding to presbyters, while deaconesses are mentioned as corresponding to deacons; deaconesses carry the Eucharist to a sick woman (ii. 20), just as a deacon does to a sick man (cf. Justin Martyr, *Apol.* i. 65). At Laodicea presbyteresses (*πρεσβύτιδες*) are identified with 'those who preside' (can. 11); and their appointment for the future seems to be forbidden, though the interpretation is not quite clear. In early times widows or deaconesses were employed especially in the baptism of women. The deaconess is sometimes called *ἡ διάκονος* (Ro 16^{1}), but usually *ἡ διακόνισσα* (Nicæa, can. 19; *Apost. Const.* viii. 19; Epiphanius, *Exp. Fid.* 21). For further details see Maclean, *Ancient Church Orders*, p. 83 f.; J. Wordsworth, *Ministry of Grace*, ch. v.

It may be interesting to give here Epiphanius's list of clergy and other classes of Christians in *Exp. Fid.* 21. He mentions bishops, presbyters, deacons, subdeacons, readers, virgins, monks, ascetics, widows, 'those who marry honestly,' deaconesses (especially for baptism), exorcists, interpreters, grave-diggers (or *copiatæ*, see above, § 4 (*c*)), doorkeepers; and he adds: *καὶ ἡ πᾶσα εὐταξία.*

(*i*) *Promotion.*—It is a common, and in the West the usual, thing for a deacon and the lower officials to be in due course promoted; but it is doubtful if this was often the case in the first three centuries. The 'good step' (*βαθμὸν καλόν*; see § 8 (*g*)) of 1 Ti 3^{13} has been interpreted by Ambrose, Jerome, and some moderns, of promotion, though this is not very probable, and does not well suit the rest of the verse. The only instance of such a course in the 1st cent. is perhaps Philip, who in Ac 8 is one of the Seven, without authority to lay on hands, but in Ac 21^{8} is called 'the Evangelist,' that is (probably) one of the 'apostolic men' like Timothy and Titus who, though not apostles, yet shared the apostolic office (above, § 1 (*a*)). But, at any rate from the 4th cent., perhaps earlier, promotion from the lower to the higher offices became common. Those of readers and subdeacons are referred to in the *Test. of our Lord* (i. 44 f.), *Apost. Const.* (viii. 22, readers), and are implied by Basil (*Ep. canon. tert.* ccxvii. 69). Cyprian (*Ep.* xxxix. [xxxiii.] 5, 'To the clergy and people') speaks of promoting readers to the presbyterate—this was because they had been confessors (cf. § 7 below). The promotion of deacons is mentioned in the *Apost. Ch. Ord.* 22 (to the episcopate), *Apost. Const.* viii. 17 f., *Ethiop. Ch. Ord.* 24, and probably in the *Test.* i. 38; explicitly also in the *Codex Canonum Ecclesiæ Africanæ* (can. 31; Hefele, ii. 470). Polycarp is said by the 4th cent. pseudo-Pionius (see above, § 2 (*b*)) to have been successively deacon, presbyter, and bishop (§§ 11, 17, 23); and the Council of Sardica (can. 10, if genuine) says that a bishop must have been a reader, deacon, and presbyter, some time before becoming bishop.

7. **Honorary offices.**—It appears from the Church Orders that confessors, *i.e.* those who had been apprehended in the persecutions and had confessed their religion, but had escaped martyrdom, enjoyed an honorary presbyterate. A confessor (*ὁμολογητής*) had 'the honour of the presbyterate by his confession' (*Egyp. Ch. Ord.* 34; *Ethiop. Ch. Ord.* 25; *Canons of Hippolytus*, vi. [ed. Achelis, 43–47], *Test. of our Lord*, i. 39). It is, however, enacted in these manuals that, if a confessor is wanted for a bishop, he must receive the laying on of hands, or ordination. There is no evidence that confessors were ever allowed to minister, or to celebrate the Eucharist, without ordination. Indeed the *Canons of Hippolytus* (*loc. cit.*) say that a confessor has not got the form of the presbyterate, but he has obtained its spirit. An honorary presbyterate was possible, as there were many presbyters in each place; but an honorary episcopate was not possible, both because there was only one bishop in each see and because the bishop had the duty of ordaining others, which an unordained person could not do. It is noteworthy, and a sign of the earlier date of the Church Orders above mentioned, that the *Apost. Const.* (viii. 23; *c.* A.D. 375), while giving honour to confessors, yet repress their undue claims. This work says that a self-asserting confessor is to be cast out; confessors are not to be ordained unless wanted as bishops, priests, or deacons, in which case they are to be ordained. It says nothing about the honorary presbyterate.

That confessors were in some cases entitled to an honorary office is not the same thing as saying that confessors were preferred to others for the higher offices of the Church when they became vacant. Tertullian (*adv. Valent.* 4) tells us that Valentinus was indignant, when he expected to become a bishop, because another was preferred before him by reason of a claim which confessorship (*martyrium*) had given him. It is not said that the confessor who was preferred was made bishop without being ordained. Eusebius (*HE* v. 28), quoting an unnamed writer about the heresy of Artemon, mentions a confessor Natalius who was chosen by the heretics as their bishop, apparently because of his confessorship (early 3rd cent.). Hippolytus (*Hær.* ix. 7) relates how Callistus, having been imprisoned in Sardinia, succeeded Zephyrinus at Rome as bishop. Asclepiades, a confessor, became bishop of Antioch (Eus. *HE* vi. 11). But these and other instances prove nothing as to confessors becoming bishops without ordination.

8. **Transmission of the ministry.**—In this section we enter on the consideration of a series of facts whose significance is much disputed. An endeavour will be made to state the whole of the facts as far as they are relevant to the early period with which this article deals. For a description of rites used in transmitting the ministry see art. ORDINATION.

(*a*) In the NT we find, in the case of the Seven (Ac 6$^{1-6}$), that the people 'elect' (v.^{5} *ἐξελέξαντο*), while the apostles 'appoint' (v.^{3} *καταστήσομεν*) and set apart by prayer and imposition of hands (v.^{6}). In 14^{23} Paul and Barnabas 'ordain' (*χειροτονήσαντες*) presbyters 'for' the people of Pisidian Antioch, Iconium, etc. The word used is a general one, and does not necessarily imply laying on of hands. It is used for election by a show of hands, or (as here) simply for appointing. In the case of the elders (presbyters) at Ephesus, Hort (*Christian Ecclesia*, p. 99) remarks that there is no indication that St. Paul appointed them. Yet the phrase 'the Holy Ghost hath made you bishops' (Ac 20^{28}) cannot be pressed to mean a direct authority of the presbyters received from God without human intervention, such as St. Paul himself had (Gal 1^{1}). God works through human means; and the analogy of 6$^{3f.}$ 14^{23} will lead us to suppose that, though the people probably elected their presbyters, St. Paul appointed them. St. Luke is not accustomed to repeat details of this nature. In 1 Ti 4^{14} the presbytery are said to have laid hands on Timothy, and in 2 Ti 1^{6} St. Paul is said to have done so; probably here we have the counterpart of the custom which is found in later ages of the presbyters and bishop joining in the ordination of a presbyter (see below). In 1 Ti 5^{22} Timothy lays on hands, though it is doubtful if ordination is here referred to. In Tit 1^{5} Titus 'appoints' (*καταστήσῃς*) presbyters in every city in Crete. We may notice, by way of analogy, another laying on of hands in Ac 8^{17} 19^{6}, which is not ordination; this is reserved for the apostles in those passages, though ordinarily they did not baptize (8^{13} 10^{48} 19^{5}, 1 Co 1^{14-17}).

---

[1] Another interpretation makes these 'women' the wives of the deacons; but then we should have expected the article.

For the sub-apostolic period we have very little evidence on the point which we are now considering. But Clement of Rome describes in general terms how the ministry was appointed.

> '[The apostles] preaching everywhere in country and town, appointed their first-fruits, when they had proved them by the Spirit, to be bishops and deacons. . . . They appointed (*κατέστησαν*) the aforesaid persons [the bishops and deacons], and afterwards they provided a continuance,[1] that if these should fall asleep, other approved men should succeed to their ministration. Those therefore who were appointed by them (the apostles), or afterward by other distinguished (*ἐλλογίμων*) men with the consent of the whole Church . . . these men we consider to be unjustly thrust out from their ministration' (*Cor.* 42, 44).

Here we have popular election, and 'appointment' (*κατάστασις*; for this word see art. ORDINATION) by 'distinguished men,' *i.e.*, not by the 'bishops and deacons,' but by such *viri apostolici* as Timothy and Titus.

For the 3rd cent. we have evidence that only bishops (in the later sense) could then ordain; for Novatian had to get, by a disreputable trick, three bishops to ordain him (see below (*e*) and (*f*)). Firmilian of Cappadocia, writing to Cyprian about the re-baptism of heretics (Cyprian, *Ep.* lxxv. [lxxiv.] 7 f.), denies that heretics can baptize, and says that 'all powers and graces are established in the Church where the presbyters preside who possess the powers both of baptizing and of imposition of hands and of ordaining.' Then, referring to St. Paul's having baptized (*sic*) John Baptist's disciples again, and having laid hands on them that they might receive the Holy Ghost, Firmilian goes on to say that the 'bishops of these times' can by imposition of hands alone give the Holy Spirit (*i.e.* by confirmation). His argument is against admitting heretics without re-baptism, because of St. Paul's action in Ac 19; but his words necessarily mean that none in his day but bishops could receive heretics by confirmation. With regard to the words which he uses in the earlier part of the paragraph, we may remark that by 'presiding presbyters' he must, being himself a bishop in the later sense of the word, mean bishops, even if he alludes to the custom of the presbyters joining in the ordination of a presbyter (see below); and it is significant that Cyprian translates Firmilian's *πρεσβύτεροι* by 'maiores natu' and 'seniores,' not by 'presbyteri'; cf. also § 4 in the same Epistle: 'we the presbyters and prelates.' We notice here another instance, besides those mentioned above in § 4 (*b*), of bishops being still called *πρεσβύτεροι*.

At least from the 4th cent. onwards we find explicitly stated the rule that only a bishop can ordain; possible exceptions will be noted below. As the *Canons of Hippolytus*, though not in their present form of the 3rd cent., reproduce very faithfully the language of their source, which probably goes back to Hippolytus's time, and may even have been written by him, it seems likely that this explicit rule also goes back to Hippolytus's time at least (see iv. [ed. Achelis, § 32]: 'the power of ordaining is not given to [a presbyter]').

In and after the 4th cent. (we have no earlier evidence on the point) we find a custom which is still prevalent in the West, that at the ordination of a presbyter the presbyters should lay on hands together with the bishop, though he alone says the prayer of ordination. This is found in the *Egyp. Ch. Ord.* (§ 32), the *Ethiop. Ch. Ord.* (§ 22), the *Test. of our Lord* (i. 30), the *Gallican Statutes* (§ 3; Hefele, ii. 411), and the *Verona Latin Fragments* (Hauler, pp. 108–110). These manuals emphasize the fact that the bishop acts alone in ordaining a deacon. This (as the last manual says) is because the deacon is ordained for the service of the bishop, and does not take part in council with the clergy, while 'on a presbyter the presbyters also lay (their) hands, because of the common and like spirit of the clergy (*cleri*); for a presbyter can only receive, he cannot give [this spirit], and therefore he does not ordain the clergy, but at the ordination of a presbyter he signs when the bishop ordains' (see above, § 4 (*b*)).

The custom of presbyters joining in the laying on of hands when a presbyter is ordained was apparently not known to the writer of the *Apost. Const.* He says (viii. 16): 'When thou ordainest a presbyter, O bishop, lay thy hand upon his head in the presence of the presbyters and deacons, and pray,' etc. He uses almost exactly the same words about the ordination of a deacon, while he does not, as the other Church Orders do, emphasize the fact that a bishop acts alone in ordaining a deacon. So in iii. 20 we read, according to the best MSS: 'A presbyter and a deacon [are to be ordained] by one bishop and [so are] the other clerks.' Three MSS here read 'by one bishop and the other clerks'; but this cannot in any case be the right reading, for deacons were never ordained by the bishop and presbyters jointly, and moreover 'clerks' must here mean the minor orders. See also above, § 4 (*b*).

The limitation of the power of ordaining to bishops is found in a large number of writers. For the *Canons of Hippolytus* see above. The *Apost. Const.* say that a presbyter cannot ordain even the minor orders (iii. 11, 20, viii. 28). So also the *Ethiopic Didasc.* (§ 14) limits ordination to bishops. Jerome, who energetically enunciates the closeness of relation between bishop and presbyter, yet denies that the latter can ordain: 'What does a bishop,' he writes, 'that a presbyter does not *except ordination?*' (*Ep.* cxlvi. 1, 'ad Evangelum'). The case of Ischyras, which happened early in the 4th cent., is important in this connexion, and is related by Athanasius (*Apol. c. Arian.* 11 f., 76). Ischyras had been ordained presbyter by Colluthus, who was, Athanasius tells us, never other than a presbyter. When after the Meletian schism in Egypt at the beginning of the 4th cent. Alexander (bishop of Alexandria, A.D. 313–326) admitted the presbyters who had been ordained by Meletius (bishop of Lycopolis), Ischyras was not even numbered among them, and therefore he did not receive ordination in that quarter (§ 11); but he was ordained presbyter by Colluthus, and all ordained by that man were, after the schism, reduced to the rank of laymen; and, Athanasius adds, no one doubts it (§ 12). The same writer quotes (§ 76) a letter of the clergy of Mareotis (in Egypt) saying that Ischyras was no presbyter; that he had been ordained by Colluthus who *pretended to the episcopate* [this is significant for the point of view of the clergy of Mareotis]; and that all ordained by Colluthus resumed (at the end of the schism) the same rank that they had before, and so Ischyras proved to be a layman. Alexander himself, in a letter quoted by Theodoret (*HE* i. 3), accused Colluthus of 'making a trade of Christ for lucre,' and says that he set up his sect before Arius's separation. Colluthus was declared by the Council of Alexandria (A.D. 324) to be only a presbyter. We must notice that the refusal to recognize Ischyras' ordination was not due to the fact that Colluthus was in schism (as also Meletius was), but to the fact that he was only a presbyter, and therefore could not ordain (on Colluthus see also Epiphanius, *Hær.* lxix. 2).

---

[1] *ἐπιμονήν*. This is a conjecture; the MSS have *ἐπινομήν*, *ἐπιδομήν*, and the Syriac versions apparently read *ἐπὶ δοκιμήν* or *ἐπὶ δοκιμῇ* (see Lightfoot, *Apost. Fathers*, pt. i., 'Clement,' ii. 132). Gore (*Church and the Ministry*, p. 288, n.) renders 'gave an additional injunction,' retaining *ἐπινομήν* on the strength of a recently discovered Latin version, which has 'legem dederunt.'

We may now consider certain possible exceptions to the above-named rule.

(*b*) *The 13th canon of Ancyra* (A.D. 314).—This canon, according to one reading, seems to say that under certain circumstances a presbyter was allowed in Galatia to ordain. It runs thus:

> 'It is not permitted to chorepiscopi to ordain presbyters and deacons, ἀλλὰ [μὴν] μηδὲ πρεσβυτέρους (*var. lect.* πρεσβυτέροις) πόλεως, unless permission be given by the bishops in writing in every (*var. lect.* another) parish' [*i.e.* diocese].

The words left untranslated are uncertain both as to the reading and as to their signification. The dative πρεσβυτέροις is adopted by Lightfoot, who translates 'nor even to city presbyters, except permission be given in each parish by the bishop in writing.' This would recognize that city presbyters might, if allowed by the bishop, ordain. On the other hand, Routh, Gore, and Rackham read the accusative, and the last writer has gone into the readings with great care (in *Studia Bibl. et Eccles.*, iii. [Oxford, 1891] 139, 194). This would forbid chorepiscopi to ordain city-presbyters without leave. If so, there is still a doubt as to the meaning of ἀλλὰ μὴν μηδέ. Routh renders 'much less'; Gore 'no, nor'; while Rackham follows Lightfoot here and translates 'not even'—he takes the middle clause as a parenthesis, and understands the canon to say that chorepiscopi may not ordain presbyters and deacons in another parish, not even may they ordain town-presbyters (in their own parish) without the bishop's permission. On the whole, the readings of this canon are so uncertain that no argument can safely be built upon it. It is a decided objection to Lightfoot's general interpretation that, if it were the true one, this canon would stand absolutely alone in 4th cent. literature; the Alexandrian case (see below) is quite different. Another objection is that it would place the city-presbyters on a higher level as to powers of ordination (cf. 'not *even*') than the chorepiscopi, who at any rate were normally bishops. For detailed discussions on this canon see Lightfoot, 'Dissertation,' p. 232 f.; Gore, *Church and Ministry*^{5}, note D, p. 338.

(*c*) *The Canons of Hippolytus* say (ii. [ed. Achelis, § 10]) with regard to the ordination of a new bishop that 'one of the bishops and presbyters, who lays his hand on his head,' is to say the ordination prayer. This canon has sometimes been quoted as if it said that 'one of the bishops *or* presbyters' is to do so. As we have seen, the *Canons* say that a presbyter cannot ordain, and therefore this is clearly not a permissible interpretation. But what does the canon mean? Gore (p. 132, n. 5) supposes that in the original (we have the *Canons* only in a translation of a translation) the direction was that one bishop and one presbyter were to lay on hands and to say the prayer. This would be in accordance with the close relation between these orders elsewhere hinted at in the *Canons* (see above, § 4 (*b*)). Yet this explanation does violence to the grammar of the text as we have it; for all the verbs are in the singular. Another explanation may therefore be preferred, that 'unus ex episcopis et presbyteris' means 'one who has both the episcopate and the presbyterate,' for we have already seen (in § 4 (*b*)) that a bishop was not considered to cease to be a presbyter when he became bishop. The facts of the transmission of the *Canons* make it precarious to fix certainly on any one translation of the words; but they cannot be adduced as an exception to the rule which we are considering.

(*d*) *The succession at Alexandria.*—Much more important than the above is a peculiarity said to have existed at Alexandria in the earliest ages. (The matter is full of difficulties and may be studied in detail in Lightfoot, 'Dissertation,' p. 230 f., and in *JThSt* ii. [1901] 612 f. [E. W. Brooks, Turner], iii. [1902] 278 [Gore].) Jerome says (*Ep.* cxlvi., 'ad Evangelum') that at Alexandria till the middle of the 3rd cent. the presbyters nominated (*nominabant*) as bishop one of their own number, and placed him in a higher grade, as if an army were to appoint (*faciat*) a general, or deacons were to choose from their own body one whom they knew to be diligent, and to call him archdeacon. He then goes on to deny that a presbyter can ordain, in the words cited above (*a*). Somewhat similarly, Severus, Monophysite patriarch of Antioch in the 6th cent. (we have his letter only in a Syriac translation), says that the bishop of Alexandria used in former days to be appointed (the Greek verb was doubtless καθίστασθαι) by presbyters, but 'afterwards the solemn (or mystical?) institution of their bishops has come to be performed by bishops.' The word rendered 'institution,' *mettasrḥānūthā*, may mean either 'election' or 'ordination' (R. Payne-Smith, *Thesaurus Syriacus*, Oxford, 1879–1901, ii. 2737). Jerome may mean, as some later writers understood him to mean, that the Alexandrian presbyters elected their bishop from their own number, and that no further ordination was necessary; we should thus have, as an exceptional custom, a body of what we may call presbyter-bishops, who had been entrusted when they were ordained with the full powers of the ministry, including the ordination of others, though they delegated the function of ruling to one of their number. Or the meaning may be that, unlike other presbyters, the presbyters of Alexandria had the right of electing their own bishop without the intervention of the neighbouring bishops.

Confirmation of Jerome's statement has been found in three writers besides Severus. Ambrosiaster's testimony, however, as we have already seen in § 4 (*b*), is irrelevant. In the apophthegms of the Egyptian monk Poemen (*JThSt* ii. [1901] 613) it is said that certain heretics accused the archbishop of Alexandria [probably Athanasius or his successor] of having his ordination (χειροτονία) from presbyters. This was in the latter half of the 4th cent., and Jerome distinctly states that the custom which he mentions had ceased a hundred years before. Certainly Athanasius was elected by the people and the bishops, and ordained by the latter (cf. art. LAITY, § 4). Poemen, in his meekness, made no reply; but, though the accusation was doubtless a pure calumny, it may probably be an echo of some former peculiarity at Alexandria. The third writer is Eutychius, an Arab patriarch of Alexandria in the 10th cent., who says that the twelve presbyters of Alexandria, when the patriarchate was vacant, chose one of their number, and the remaining eleven laid their hands on him, and blessed him, and created him patriarch, and that this lasted till the time of Bishop Alexander (A.D. 313–326). Those who are familiar with the late ecclesiastical histories of the Eastern Churches, which are full of fables and of impossible statements, will hesitate to accept Eutychius's testimony as an independent confirmation of Jerome. He probably depends on Jerome at third or fourth hand, and it is not surprising that he flatly contradicts him.

We are, then, met with a perplexing series of contradictory statements. But they can hardly be all dismissed as entirely devoid of truth. Probably there was at Alexandria in very early times some peculiarity in the appointment or in the ordination of bishops, whether it took the form of the presbyters electing him or of their ordaining him. A great difficulty in the way of the latter supposition is the fact that Jerome makes the change to have taken place in the time of Origen. Yet Origen, who suffered much from the autocratic authority of the bishops of Egypt, and especially of the bishop of Alexandria, and who was prompt to castigate bishops for going beyond their powers, gives no hint that in his own day a great change was taking place by which the Alexandrian presbyters were being deprived of their rights (on this point see, further, Gore, *Church and Ministry*^{5}, p. 127 f.). On the whole, the remark of C. H. Turner (*JThSt* ii. 613) seems just, that 'it becomes harder than ever to discover the history and character of this exceptional system in detail.'

(*e*) *Some other exceptions* which have been alleged are due to a misapprehension. Thus Paphnutius, a presbyter and hermit in the Scetic desert in Egypt in the 4th cent., is said by his younger contemporary Cassian, the historian of Oriental hermits (*Conferences*, iv. 1), to have 'promoted' a certain Daniel to the diaconate and presbyterate. The meaning here must certainly be 'to nominate,' as is often the case even with the words 'constituere,' 'ordinare,' and the like. We read, *e.g.*, of kings 'ordaining' bishops and popes (see Gore, p. 341). To suppose that at the end of the 4th cent. a presbyter in Egypt laid on hands to ordain, and that Cassian, writing at Marseilles in the 5th cent., mentioned it without surprise, would indeed be an anachronism. Another instance is the statement by Cyprian that Novatus, a schismatical presbyter in Africa in the 3rd cent., appointed (*constituit*) Felicissimus deacon (*Ep.* lii. [xlviii.] 2, 'ad Cornel.'). The meaning here is capable of being tested. A few lines later on Cyprian says that Novatus, who had 'made' (*fecerat*) a deacon, 'made' [Novatian] a bishop. But Cornelius tells us (Eus. *HE* vi. 43) that Novatian got three rustic bishops from a remote part of Italy to come to Rome, and when they were drunk to ordain him 'through a counterfeit and vain imposition of hands.' Thus 'making' a deacon or bishop here means 'getting him ordained.' [Eusebius calls Novatian 'Novatus'; on this see *DCB* iv. 58.] The story of Aidan lies outside our period, but it may be here briefly referred to. Bede says (*HE* iii. 5) that the seniors of Iona, A.D. 634 or 635, 'ordaining' (*ordinantes*) [Aidan] bishop, sent him to their friend King Oswald to preach the gospel. Here 'ordaining' can only mean 'procuring the ordination of.' We know that the Irish and Columban monks had a bishop with them for episcopal acts, though they had no system of diocesan episcopacy. But in any case it is impossible to believe that Bede, the ardent upholder of the customs of Rome, would have accepted (as in fact he did accept) Aidan as a true bishop if he had been ordained by presbyters only.

(*f*) *Bishops ordained by not fewer than three bishops.*—The earliest example of this rule, as a definite enactment, is at the Council of Arles in Gaul (A.D. 314), which says that ordinarily seven, but at any rate not fewer than three, bishops are to take part in the ordination of a bishop (can. 20). The 4th canon of Nicæa says that a bishop is to be appointed (*καθίστασθαι*) by all the bishops of the eparchy (province); at any rate at least three shall meet and ordain, the other bishops giving their assent in writing. The *Apost. Const.* (iii. 20) say that a bishop is to be ordained (*χειροτονεῖσθαι*) by three bishops, or at least by two, and is not to be appointed (*καθίστασθαι*) by one; so *Apost. Canons*, 1, *Ethiopic Didasc.* § 16. But this rule must have been in force long before the 4th century. Cornelius was ordained by 16 bishops (Cyprian, *Ep.* lv. [li.] 8, 24, 'ad Antonianum'). Novatian was ordained, as we have seen (*e*), by three; had the rule not been then in force, he would have been content with getting a single bishop to ordain him. Much stress is laid by Athanasius on the number of bishops who took part in his own election (see art. LAITY, § 4). At the third Council of Carthage (A.D. 397) it was proposed that twelve bishops should be the minimum; but this proposal was not carried (Hefele, ii. 408).

An exception to the rule is found at Rome, where, at least from the 6th cent. onwards, the pope acted alone in consecrating bishops (Duchesne, p. 361). And in the Celtic Church it was common for a bishop to be consecrated by a single bishop.

The object of the rule seems to have been to secure the assent of the comprovincial bishops to the election. But in the ordination itself there is a variety of usage as to what part the bishops took (see art. ORDINATION).

(*g*) *Appointment of the minor orders.*—In the 4th cent., when minor orders were developed, there was a certain discrepancy of usage as to whether certain classes of persons were 'ordained' at all, *i.e.* set apart by some solemn ceremony; and also a distinction was frequently made between ordination with, and ordination without, laying on of hands. Basil distinguishes the ministers who were ordained without it from those 'in orders' (*ἐν βαθμῷ*, *Ep. can. tert.* ccxvii. 51). So the *Apost. Canons* (82 [81]) speak of the *χειροτονία βαθμοῦ*, meaning 'ordination to the higher ministry.'[1]

In the *Test. of our Lord* (i. 44 f.), *Canons of Hippolytus* (vii. [ed. Achelis, § 48 f.]), *Egyp. Ch. Ord.* (35 f.), *Ethiop. Ch. Ord.* (27), subdeacons and readers are ordained without imposition of hands; so the reader in the *Const. through Hippolytus* (13); and the subdeacon in the *Gallican Statutes* (§ 5), which take the same thing for granted in the case of the ordination of an acolyte, exorcist, reader, doorkeeper (§§ 6–9). On the other hand, the *Apost. Const.* (viii. 21 f.) press the laying on of hands, and appoint it for the ordination of both subdeacon and reader. The *Const. through Hippolytus* appoint it for a subdeacon (11), but not for a reader.

In many of these manuals persons holding charismatic offices are not ordained at all. Such are confessors, virgins and ascetics, widows, exorcists. But there are exceptions, in which some of these classes receive an ordination of some sort, though without imposition of hands. In the *Test.* widows 'who preside' are ordained (i. 41); in the *Canons of Hippolytus* (viii. [ed. Achelis, § 53 f.]) one who wishes to be ordained because he has the gift of healing is not to be ordained until it is made clear that the gift is of God (other manuals say that one who has a charisma is not to be ordained, *i.e.* merely for that reason); in the *Gallican Statutes* (§ 7) an exorcist is ordained, and a book is given him in which the exorcisms are written. Virgins (ascetics) receive a blessing on their profession, not from presbyters, but only from the bishop, in *Gallican Statutes* (§ 11) and the 3rd canon of the Council of Carthage, A.D. 390 (Hefele, ii. 390).

9. The institution of a ministry by our Lord.—We now enter upon the consideration of theories as to the origin and development of the ministry. There are two main trends of opinion, and an attempt will be made to summarize them, without going into questions of detail, and without going beyond general principles.

(*a*) It is held that our Lord founded a ministry to be a means of bestowing grace on the Church and for its government. For this purpose He founded an apostolate, and gave to it a commission apart from the Church at large. It is clear from Acts, and to a certain extent from the Epistles, that the apostles exercised an authority over the Church, and it is difficult to conceive that that authority was due to delegation from the people themselves. Of such a delegation there is no trace in the NT, and the position of the apostles after Pentecost appears to presuppose a distinct commission from our Lord Himself. The ministerial commission, whether given to the apostles or to the Church as a whole, was not bestowed till after the Resurrection; but our Lord foretells the gift in more than one passage. Whatever be the true exegesis of the promise to St. Peter after his confession of the Christ (Mt $16^{18\text{f.}}$), and of the phrase, 'Upon this rock I will build my Church,' the passage about giving the keys of the kingdom of heaven carries a commission of binding and loosing, *i.e.* of government. It is not a commission then given, but a promise that it will be given; and the promise was fulfilled after the Resurrection. The commission is, however, not here promised to the Church as a whole. On the other hand, in Mt $18^{17f.}$ the Church (ἐκκλησία) is spoken of as exercising discipline, and our Lord then gives (apparently to the Twelve, but this is disputed) that promise of binding and loosing which had already been given to St. Peter. 'The supernatural authority does inhere in the Church as a body, but the Church has (not by her own but by Christ's authority) executive officers, and it is through them that her judicial power is put into effect' (Gore, *Church and Ministry*^{5}, p. 207). A distinct stewardship, however, apart from the powers promised to the whole flock, is foretold in the parable of Lk 12^{41-48}. This parable, as F. Godet remarks (*Com.*^{4}, Eng. tr., Edinburgh, 1887, ii. 108), assumes that the apostolate will be perpetuated till Christ returns, a ministry of the word established by Christ. The same writer adds that the theory which makes the pastorate emanate from the Church as its representative is not Biblical; this office is rather an emanation from the apostolate, and therefore mediately an institution of Jesus Himself. It may be added that in the parable the stewardship is appointed by the Lord (note the future: 'shall set over his household'), in order that the household may be fed, and that it will last until the Lord comes.

---

[1] For *βαθμός* in 1 Ti 3^{13} see above, § 6 (*i*). The word is used in Eus. *HE* iii. 21 and at the Council of Ephesus (can. 1, A.D. 431) in the sense of the 'position' or 'order' of bishops.

The ministerial commission was given after the Resurrection, but it is disputed whether it was given to the apostles or to the Church at large. The commission in Jn 20^{21-23}, with the gift of the Holy Ghost (*i.e.* πνεῦμα ἅγιον without the article) and the power of binding and loosing, was given on the evening of Easter Day, when only ten of the apostles were present, Thomas being absent (v.^{24}). It was distinctly a 'mission': 'As the Father hath commissioned (ἀπέσταλκε) me, I also send (πέμπω[1]) you.' But it is uncertain whether others were present on this occasion besides the Ten. 'The disciples' are mentioned (v.^{19}), but this often means the apostles. In the description in Lk $24^{33ff.}$, which seems to refer to the same appearance of our Lord, we read of 'the Eleven and them that were with them.' The number 'eleven' is only a general way of speaking, for Thomas was not present; in this passage there is no word of any commission. Putting the passages together, we may conclude that it is probable that others besides the Ten were present, but the indications point to the commission having been given only to the apostles. That Thomas had the commission given to him at another time can only be conjectured. In the First Gospel the commission is given when the 'eleven disciples' are assembled on the mountain in Galilee: 'All authority hath been given unto me in heaven and on earth. Go ye therefore,' etc. It has been suggested by H. Alford (*Com. in loc.*) that others besides the Eleven were then present, because 'some doubted.' But this is against the grammar. The 'some' must have been certain of the Eleven; nor is it at all improbable that the apostles, or some of them, though they believed on Easter Day, yet allowed doubts to assail them afterwards. This hesitating faith was characteristic; it was finally confirmed only by the Pentecostal gift. We do not know what account St. Mark gave of the ministerial commission; but the author of the Appendix certainly conceived the commission as having been given to the Eleven ('Mk' $16^{14ff.}$). The more probable conclusion seems to be that the special ministerial commission was given to the apostles to hand on in perpetuity to succeeding generations, although the Church at large was given a supernatural authority to be exercised by divinely appointed ministers. For a fuller exposition of this view see Gore, *op. cit.*, ch. iv. and (in the later editions) note M.

(*b*) A very different view is taken by Hatch (*Organization of the Early Christian Church*) and Hort (*The Christian Ecclesia*). Hort holds that the commission was given to the Church as a whole, and that the Church as a whole appointed the apostles, whose authority was due to the spontaneous homage of the Christians in Judæa. He thinks that the apostles were not commissioned by our Lord to govern the Church, but only to be witnesses of His resurrection; that they were not, strictly speaking, officers of the Church as the Seven were (p. 231). He doubts if they had any authority outside Judæa. An indefinite authority grew up round them because they were personal witnesses. 'The Ecclesia itself, *i.e.* apparently the sum of all its male adult members, is the primary body, and, it would seem, even the primary authority' (p. 229). With regard to the commission in Jn 20, Hort thinks that others besides the apostles were probably present, and that, though perhaps the charge was 'directly and principally' spoken to the apostles, yet it was spoken to them as representing the whole community (p. 32 f.). [There is no scriptural authority for Hort's addition of 'adult male' to the narrative.]

On these various views it may be remarked that it is common ground that the apostles were given the commission as representing the Church. The point in dispute is whether they received a commission from our Lord direct, distinct from the Church, *i.e.*, whether they derived their authority from Him immediately or from the people to whom they were to minister.

10. The origin of the diocesan episcopate.—We may in conclusion state very briefly the main theories which have been advanced to account for the universal existence of the diocesan episcopate from the 2nd cent. onwards.

(*a*) The first view is that the diocesan episcopate is the successor to the apostolate, but localized. The old local ministry was represented by the presbyters and deacons of the later period; and the supervisory ministry of the apostles, which was formerly itinerant, by the bishops who were now settled in one place. In this view the complete commission, which was held at first by the apostles, was given to certain *viri apostolici* and then to bishops (in the later sense) only, and presbyters and deacons never from the first possessed the commission to hand on the ministry to others. This was the more usual patristic view. For an able statement of it reference may be made to Gore, *The Church and the Ministry.*

(*b*) The second view is that the diocesan episcopate was evolved, by apostolic direction, from the presbyterate; or, to speak more accurately, from the body of presbyter-bishops. This evolution was effected by one of the members of this body being given certain sole powers, notably that of ordaining. In this view the old presbyter-bishops had the complete ministerial commission, even as the apostles had it, but the complete commission was restricted at an early date to one of their number. This is the view of Jerome, Ambrosiaster, and some other Fathers. It may be studied in J. B. Lightfoot's 'Dissertation,' which upholds it.

It is clear that either of these views is compatible with either of those described in § 9. On the one hand, the second view is compatible with the highest doctrine of apostolic succession, such as Jerome himself held. And, on the other hand, the first view is compatible with the belief that the apostles derived all their authority from the people.

---

[1] This word 'marks nothing more than the immediate relation of the sender to the sent,' while the other verb denotes a delegated authority (see B. F. Westcott, *Com. in loc.*).

Whatever view be taken of the matters touched on in this and the preceding section, it is important to notice a point on which all are agreed. The Christian ministry is not vicarious, but representative. The members of it do not form a class having a closer relationship to God than the laity, for every Christian holds personal communion with the divine Head of the Church (Lightfoot, pp. 181, 268; Gore, p. 76). All have direct access to God, and the minister does not perform the people's religion instead of them. He represents the people to God by acting as their mouthpiece, but the worship which he offers is the people's and not merely his own. The sacrifice of prayer and praise is offered by all, though the minister may be the only one who gives audible utterance to it. He represents God to the people, as the human instrument by whom the word is preached and the sacraments are administered. But he is not a barrier between God and the people.

Literature.—The following works represent very various opinions, Anglican, Presbyterian, Roman Catholic, and others: J. Morinus, *de Sacris Ordinationibus*, Paris, 1665, 2nd ed., Antwerp, 1695; C. Gore, *The Church and the Ministry*⁵, London, 1902 (1st ed., 1889); J. B. Lightfoot, 'Dissertation on the Christian Ministry' (in his Commentary on *Philippians*), 1st ed., 1868 (quotations from edition of 1903); see also his appended note on 'bishop' and 'presbyter,' p. 95 ff.; T. M. Lindsay, *The Church and the Ministry in the Early Centuries*, London, 1902; E. Hatch, in *DCA*, artt. 'Archdeacon,' 'Orders, Holy,' 'Ordinal,' 'Ordination,' 'Priest,' 'Patriarch' (a large fund of antiquarian information will be found in these articles), also *Organization of the Early Christian Church*, London, 1881; A. W. Haddan, in *DCA*, art. 'Bishop'; B. Shaw, in *DCA*, art. 'Metropolitan'; A. J. Maclean, *The Ancient Church Orders*, Cambridge, 1910; L. Pullan, *The Christian Tradition*, London, 1902, chs. 3, 4; R. C. Moberley, *Ministerial Priesthood*, do. 1897; F. J. A. Hort, *The Christian Ecclesia*, do. 1897 (posthumous); J. Wordsworth, *The Ministry of Grace*, do. 1901; L. Duchesne, *Christian Worship: its Origin and Evolution*⁴, Eng. tr., do. 1912.

MINOTAUR.—I. **The myth.**—Minotaur (ὁ *Μινώταυρος, ὁ Ταῦρος ὁ Μίνω καλούμενος*,[1] 'the Minos-bull' or 'bull of Minos') is in Greek myth the offspring of Queen Pasiphae's union with a bull, and is represented as a man with a bull's head and tail. As Apollodorus tells the story,[2] her husband, Minos, had become king of Crete through the goodwill of Poseidon; after telling the people that the gods had chosen him and would grant whatever he asked, he prayed Poseidon to send a bull from the sea that he might sacrifice it. But he broke his vow, for, when the splendid creature came forth from the deep, he added it to his herd and offered a substitute on Poseidon's altar. To punish him the god inspired Pasiphae with an unnatural passion, gratified through the artifice of Daidalos, who concealed her in a wooden cow. She bore a child, Asterios, surnamed 'the bull of Minos,' who had a bull's head, but was otherwise like a man. Warned by an oracle, Minos imprisoned the monster in the labyrinth built by Daidalos. Moreover, the bull from the sea was made savage by Poseidon, and it was one of the labours of Herakles to capture it and carry it to the Peloponnese; thence it wandered to Marathon in Attica, and ravaged the country. Androgeos, son of Minos, having come to Athens and beaten all opponents at the games, King Ægeus challenged him to go forth against the bull, which killed him.[3] Minos, to avenge his son, made war on Athens, and exacted as a condition of peace that every year (every ninth year, according to Plutarch, *Theseus*, 14) the Athenians should send seven youths and seven maidens to be devoured by the Minotaur. On the third occasion Theseus, who had overcome many robbers and, last of all, had captured the Marathonian bull, was chosen or offered himself as one of the victims. When he landed in Crete, Ariadne, daughter of Minos, fell in love with him, and, on his promising to take her to Athens as his wife, contrived with Daidalos that he should escape from the labyrinth, giving him a clew of thread which he was to make fast at the entrance. Holding the thread, he penetrated to the Minotaur's lair and slew him with his fists. Then he made his way out and escaped by night with Ariadne and his companions.

Apollodorus omits the incident of Minos' ring and Poseidon's recognition of Theseus as his son.[1] The story is further rounded off by Pherekydes;[2] Theseus sacrifices the Minotaur to Poseidon, and the injured god at last gets his due.

In this form the story owes much to Attic dramatists, who depicted Minos as a cruel tyrant, while the general tradition saw in him a wise lawgiver and founder of Hellenic civilization.[3] The Attic version became an intricate romance in which Daidalos was almost as much the hero as Theseus. It credits Athens through him with the miracles of Minoan craftsmanship. It emphasizes Minos' fraud on Poseidon, because the god's son, the Attic prince Theseus, is to be the instrument of his vengeance. When, outwitted by Theseus, Minos imprisons the other Athenian hero, Daidalos makes himself wings, and his escape is the motive for Minos' futile campaign and ignominious death in Sicily.

The genuine Cretan elements in the rambling composite tale are the sea-born bull, so closely resembling the divine lover of Europa, the Minotaur and the labyrinth, both figured on coins of Knossos, and the fall of the Minoan Empire in a Sicilian expedition (cf. Herod. vii. 170). The break between pre-historic and Hellenic Crete was in many respects complete, but the coins make it probable that the legend of a bull-monster clung to the pre-historic palace at Knossos, and was adopted by the Dorian settlers. A. J. Evans, the excavator of the site, has shown how the complex of ruined walls, adorned with frescoes of bull-fights, in which boys and girls took part, and processions of tribute-bearers, must have helped to shape the story.[4] The name of the labyrinth is explained with the help of λάβρυς, the Lydian word for 'double-axe,'[5] as meaning 'house (or place) of the axe,' a sacred emblem which stood in shrines within the palace and was often engraved on its walls and pillars. This may have been the ancient name of the palace, placed under the protection of a deity with whom both axe and bull were closely associated (hence the frequent juxtaposition of double-axe and horns; see art. Ægean Religion, vol. i. p. 145, fig. 5). The remarkable preservation of the ruins proves that they were respected by the Greek and Roman inhabitants, perhaps as the remains of the labyrinth, which the ancients located at Knossos. Diodorus mentions 'the foundations of Rhea's house and a cypress-grove which has been hallowed since ancient times'[1] as existing there in his day; the tabus attached to such a precinct go far to account for the survival of the pre-historic walls in the midst of a classical city. He denies that any trace of the labyrinth remained,[2] but seems to be combating an accepted belief; Philostratus,[3] writing early in the 3rd cent. after Christ, mentions the labyrinth as the chief 'sight' of Knossos. Late writers[4] transfer the tradition to the subterranean passages of a quarry above Gortyna, described by P. Belon[5] and other travellers.

[2] Frag. 106 (*FHG* i. 97)=schol. to *Od.* xi. 320 (Theseus is told how to surprise the Minotaur as he sleeps in the *μυχός*, evidently the central point of a conventional maze; cf. § 3 below).

[3] This conflict of views is discussed in the Platonic dialogue *Minos*, 318D and 320E, and in Plut. *Thes.* 15. Both writers remark that Minos made a mistake when he quarrelled with a city like Athens, whose tragic poets could make or mar a reputation.

[5] Plut. *Quæst. Græc.* 302A. A cognate form would be the name of Labraunda, the Carian town where an axe-wielding Zeus was worshipped.

2. The Minotaur in ancient art.—In the Cretan art of the bronze age we meet with a series of hybrid monsters, combining a human body with various animal-heads, which seem to represent demons (cf. ÆGEAN RELIGION, vol. i. p. 145); the types may have been influenced by the animal-headed deities of Egypt or have been generated locally by ritual dances in which animal-masks were worn. Among them is a Minotaur-like figure, the most significant instance being a clay seal-impression from Knossos which shows a seated monster with calf's head and forelegs and a bearded man standing before it.[6] Bull-headed men appear in the archaic art of Greece and Etruria, and until the reforms of Marius a figure of this kind was one of the standards of the Roman army.[7] The earliest representation of Theseus and the Minotaur is a small gold plaque from Corinth (Berlin Museum,[8] a work of *c.* 600 B.C.). In the second half of the 6th cent. the slaying of the Minotaur appears on black-figure vases, and, according to Pausanias, the Minotaur was twice figured among the mythological groups on the Amyclæan throne: (*a*) bound and led captive by Theseus (cf. the sacrifice to Poseidon mentioned by Pherekydes), (*b*) being slain by him.[9] At first isolated, the killing of the Minotaur is associated on later black-figure and red-figure vases with other deeds of Theseus, a cycle which took shape at the beginning of the 5th cent., when the Attic hero was exalted into a second Herakles. The Minotaur is drawn as a man with a bull's head and tail; his body is often spotted or brindled, and once sprinkled with stars (in allusion to his name Asterios), once with eyes, like that of Argos.[10] He is naked and unarmed, but sometimes clutches one or more stones. Theseus usually attacks him with a sword, but an interesting group of vase-paintings shows him dragging the dead monster out from a building with columns; here we may suspect the influence of stage-representations. Athene, Ariadne, and even Minos are sometimes present as spectators. Later designs treat the combat as a wrestling-match, the finest example being a bronze relief from Pergamon now in the Berlin Museum.[11] In sculpture we have a metope of the Theseion at Athens, fragments of a group found on the Acropolis (where Pausanias saw and described it), and fragments of two other groups in Rome, all representing the combat.[12] Campanian wall-paintings show Theseus standing over the dead Minotaur, while the rescued boys and girls press round, and some mutilated marble groups seem to have represented the same scene.[1]

Evans traces the origin of the Cretan type to certain Egyptian cylinders found in the Delta, which influenced Cretan sealstones from about the VIth dynasty onwards. These in their turn borrowed types from early Babylonian cylinders.[2]

3. The labyrinth in art.—On coins of Knossos the labyrinth is represented by a pattern of increasing complexity, advancing from a simple fret-pattern, through a more or less elaborate swastika, to a developed maze.[3] On several vases of the 5th cent. the scene of Theseus's combat with the Minotaur is indicated by a panel of mæanders and similar patterns, evidently a conventional representation of the supposed ground-plan.[4] The labyrinth, in fact, became assimilated to the mazes which have been familiar in most parts of Europe from antiquity to the present day—a large subject which cannot be fully discussed here.[5] In Italy, where the maze had been known as the Game of Troy (*Truia* inscribed upon a maze on an early Etruscan vase), the name 'labyrinth' took its place, and the Minotaur is figured in the centre of several Roman mosaic mazes. Similar pavements were constructed in Christian churches; they are especially common in the cathedrals of N. France—Chartres, Amiens, and others; they were known as *Domus Dedali* or *Chemin de Jerusalem*, and to tread their windings was a recognized form of penance. It seems that the original use of the maze, wherever found, was to serve as the track of a ritual dance. Plutarch tells a story which was evidently intended to establish a connexion between Greek dances of this type and the Minotaur legend; Theseus had landed at Delos on his voyage home, and with his companions danced a dance 'which is still kept up by the Delians' in imitation of the windings of the labyrinth.[6]

4. Explanations of the myth.—(*a*) ***Rationalistic.***—According to Philochorus,[7] the Cretans said that the Minotaur was a general named Taurus whom Theseus defeated at an athletic meeting; the tribute-children were kept prisoners in the labyrinth and given as prizes to the victors; or else he was a captain whom the Athenians beat in a sea-fight. A modern writer, E. Fabricius,[8] who assumed that the quarry near Gortyna was the labyrinth, explained its narrow entrances as a device for the guarding of prisoners made to work in its galleries, and supposed that this gave rise to the story of the tribute-children.

(*b*) *The Minotaur as an old bull-god.*—W. H. Roscher[9] equated Minotaur = Cretan bull = Minos. E. Bethe[10] has argued that Minos, son of the bull-Zeus and husband of Pasiphae, who bears a bull-son, was originally the bull-god himself. The story of Theseus and the Minotaur is a doublet of the stories of Herakles vanquishing the Cretan bull and Theseus capturing the bull of Marathon; in each case the story is allegorical and represents the overthrow of Cretan rule. Herakles, who goes to Crete to capture the bull, stands for the Dorian colonists; Theseus, who overcomes the same bull in Attica, delivers the country from a Cretan conqueror.[1] On somewhat different lines J. E. Harrison argued in a paper read before the Hellenic Society in 1914 that the slaying of the Minotaur, son of the sea-born bull, expresses the downfall of Cretan sea-power; 'the Minotaur was the primitive "point de repère" round which ultimately crystallised the complex figure of Poseidon.'

(*c*) *The solar interpretation.*—Pasiphae's name connects her with the moon;[2] her bull is often held to be the sun. Two recent writers have seen in the Minotaur a human actor impersonating the sun-god. J. G. Frazer maintains 'that Cnossus was the seat of a great worship of the sun, and that the Minotaur was a representation or embodiment of the sun-god,' and suggests that Ariadne's dance, the track of which was the labyrinth, may have been an imitation of the sun's course in the sky.[3] A. B. Cook, after showing that in Cretan myth the sun was conceived as a bull and that the labyrinth was 'an *orchestra* of solar pattern presumably made for a mimetic dance,' goes on to suggest that the dancer who imitated the sun masqueraded in the labyrinth as a bull—the Minotaur, in fact, was the Knossian Crown Prince wearing a bull-mask, a piece of ritual borrowed perhaps from Egypt.[4]

(*d*) *The suspicion of human sacrifice.*—The Minotaur, like the horses of Diomede, is a man-eater; the myth implies that it was necessary for Minos to gratify this appetite. W. Helbig[5] saw in the story another version of Kronos devouring his children; Kronos was banished by Zeus to the under world, the Minotaur by Minos to the labyrinth. There was a tradition that in old days in Crete the Kouretes had offered human sacrifices to Kronos,[6] and the 'feast of raw flesh'[7] which Euripides mentions in the famous chorus from his tragedy *The Cretans*, as part of the initiation to the service of Idaian Zeus, was open to a similar suspicion; in a recently discovered fragment of this play Pasiphae taunts her husband in terms which leave no doubt as to the charge.[8] Euripides probably had in mind the Cretan mysteries in which the votaries tore with their teeth a living bull in commemoration of the eating of the boy Zagreus by the Titans.[9] But these mysteries stand in no direct relation, so far as can be seen, to the substratum of Minoan religion; they explain the cannibal element in the Euripidean story, but not the bull-form of the man-eating demon. Frazer has conjectured that in Crete, as in other parts of the Mediterranean, children were sacrificed to a Moloch-like image with the head of a bull.[10]

Phœnicians and Carthaginians sacrificed children to a bronze image of Kronos (= El?), so contrived that victims laid on its outstretched hands fell into a furnace beneath.[11] Rabbinic writers describe Moloch's image in similar terms, and add that it had the head of a calf.[12] Now Talos, the brazen coast-guard of Crete, who killed strangers by hugging them to his red-hot breast, was by some called Tauros (Apollod. I. ix. 26), and a gloss of Hesychius makes him a by-form of the sun-god. A tradition as old as Simonides connects him with Sardinia and with human sacrifices there;[1] recent excavations have shown that the Sardinians of the bronze age worshipped a bull-god in subterranean temples.[2] Suggestive as these combinations are, however, we have no real evidence of any cult of the Minotaur, nor of human sacrifice to a Cretan bull-god;[3] at most they prove that the Greeks were familiar with the rites of adjoining countries and used them to add a touch of horror to the local legends of Knossos.

LITERATURE.—This is sufficiently cited throughout the article.

R. C. BOSANQUET.

MIRACLES.—1. Introductory.—Miracles have often been studied *in vacuo*—a method which does not tend to belief in them. It is better to have a standard of comparison, to study them in the light of those alleged of their chief worker, who, if any one can work miracles, is most likely to have done so. This is the point of view that will be taken in this article. Christ's miracles suggest unusual and striking power, presumably divine, used for beneficent ends, not to cause wonder, and this points to the essence of miracle. We therefore define miracle as an occasional evidence of direct divine power in an action striking and unusual, yet by its beneficence pointing to the goodness of God. Mere wonders, by whomsoever wrought, would have a thaumaturgic aspect and would not reveal character—*e.g.*, spiritualistic marvels. Christ calls His miracles ἔργα, 'works,' or σημεῖα, 'signs.' Σημεῖα may be combined with τέρατα, 'wonders,' in describing what the Jews seek or the work of false Christs. His own miracles are not called by Him τέρατα, though He calls them δυνάμεις, 'powers.' But the stress is on that of which they are signs—the love of God.

All three words—'works,' 'signs,' 'powers'—are used by Christ in describing His disciples' miracles, by the Evangelists, and by friends and critics. The first two are favoured in the Fourth Gospel.[4] In Acts and Epp. τέρατα and δυνάμεις are combined with σημεῖα in speaking of Christ's and the apostles' miracles. In Rev 13^{14} the beast, in 16^{14} devils, in 19^{20} the false prophet, work σημεῖα; cf. 2 Th 2^9 and Mt $7^{22f.}$[5] Rev $12^{1.3}$, σημεῖον ἐν τῷ οὐρανῷ, throws light on the sign expected by the Pharisees (Mk 8^{11}, Lk 11^{16}).

2. Miracles in the lower culture.—Whether the savage does or does not believe in a cosmic order is uncertain. Some savage mythologies certainly seem to suggest that he does. But he believes that the medicine-man, or shaman, has power to alter certain concrete events—*e.g.*, to produce rain in time of drought, to allay storms, etc. In so far as he recognizes any order in nature, this action is really supposed to be *contra naturam* and thus corresponds to the popular view of miracles. Hence it is not only a religious view of the universe which suggests to the savage mind an elasticity in the order of nature, as Frazer insists.[6] It is elastic to the magician, as it is elastic to the divinity. This power of altering events is the power of magic in which every savage believes. He himself may practise it to some extent by means of fetishes obtained in various ways, but in that case the power is in the fetish. But more usually he attributes magical power to the medicine-man, to traditional culture-heroes,[1] to the gods ('white' or beneficent magic), or to sorcerers (those who practise 'black' or anti-social magic). Magic is a sort of thaumaturgic miracle, and is looked upon as something abnormal. If it were a normal thing, it would have no aspect of mystery, as it has, and the magician would not be regarded as he is by his fellows. For the savage magic is mysterious, and everything mysterious is more or less abnormal, magical, miraculous. Magic or thaumaturgic miracle, as believed in by the savage, includes power over nature—producing or stopping rain, sunshine, and wind; curing sickness, exorcizing spirits and demons, and removing barrenness; producing fertility or increasing the food-supply; causing success at hunting or fishing; causing sickness, injury, or death. Other powers are shape-shifting, invisibility, and raising the dead. Generally the power by which these things are supposed to be done comes from an exterior entity of which some persons possess a large share —the Melanesian *mana*, the Annamese *tinh*, the Siouan *wakan*, etc.[2] It is that which 'works to effect everything beyond the ordinary powers of man, outside the common processes of nature.' It is a miraculous power, a theoretical force by which the savage accounts for magic in all its forms. Why magic should have come to be believed in, why some men should have been thought to possess magical power, is not clear, though various causes might be suggested. One of these is the unexplained phenomena of the x region—telepathy, hypnotism, cure by suggestion, clairvoyance, inspirational possession.[3] These exist among savages, and would be regarded as magical, as to us they are supernormal. They would suggest other powers still more fantastic. Magic or thaumaturgic miracle belongs to a quite primitive stage of thought, but many of the actions attributed to the shaman are reproduced in the miracles ascribed to Lao-tse, Buddha, Muhammad, or to ethnic and Christian saints.

3. The miraculous in the ethnic religions.—Miracles occur plentifully in religions at a higher level than those of savagery, and are freely ascribed to the great ethnic teachers and to saintly persons or ascetics in those religions. Asceticism and austerity are, in fact, sometimes a necessity as well as a guarantee of miracle, as they are also in the case of Christian saints.

As for the great religious founders, it should be clearly noted that they themselves made no claim to work miracles. This statement is supported by their own sayings in most cases, or it may be proved from the early writings describing the origins of these religions. In the *Gāthās*, the earliest part of the Avesta, there are no miracles, and no very high place is ascribed to Zoroaster.[4] Confucius was largely indifferent to spiritual matters and avoided anything dealing with the supernatural. He is most unlikely to have made any claim to miracles, and in fact he said:

> 'To search for what is mysterious, and practise marvellous [arts], in order to be mentioned with honour in future ages:—this is what I do not do.'[5]

Lao-tse was opposed to all magic, and was a man of humble mind. Buddha himself protested against miracles, and, though he knew of miraculous acts, he was indifferent to them. When a disciple gained an almsbowl by a display of miracles, he caused it to be broken and forbade these.[1] Some sayings of his point to his dislike of miracles:

> 'There is no path through the air, a man is not a Samaṇa by outward acts'—perhaps a reference to the supposed gift of walking on air. When an *arhat* flew through the air, Buddha is represented as rebuking him: 'This will not conduce either to the conversion of the unconverted, or to the increase of the converted, but rather to those who have not been converted remaining unconverted, and to the turning back of those who have been converted.' He also said: 'I command my disciples not to work miracles.'[2]

Muhammad also knew of miracles, but he disliked them and wrought none himself. The people demanded signs, but he disclaimed these, usually on the ground that they are powerless to convince. In earlier ages they had been regarded as lies or sorcery, not as divine acts. God's revelation to the Prophet was the true miracle, and the Qur'ān contained it.[3]

Nor did any one of the great ethnic teachers lay claim to divinity. Yet, in spite of this and of their own utterances about miracles, miracles are freely ascribed to them, sometimes even in the actual works which contain such disclaimers. How soon this process began it is difficult to say, yet probably no very long time was necessary for the growth of miraculous legend. In many cases, however, as in similar instances in Christian hagiography, it is possible to trace the growth of a miraculous story in successive versions of the same incident.[4] The miracles and supernatural events associated with the lives of these men are either connected with their conception and birth or acts alleged to have been performed by themselves. The miracles of the former class are invariably lacking in lives contemporary, or nearly so, where these exist. There is sometimes a semi-miraculous origin (Lao-tse, Zoroaster, Buddha), but not a virgin-birth, for both parents are concerned in the act of conception.[5] The moment of birth is hailed by a great variety of portents on earth, in the sky, or in the lower regions. Unearthly lights are seen, mysterious music is heard. Prophecies of future greatness are made. The child himself speaks, laughs, stands, walks, or announces his intention of saving the world. Or, again, the child is miraculously saved from persecution and danger of death. There are also wonderful signs at the death of some ethnic teachers, especially at Buddha's death.[6]

> For wonders associated with the birth of a *bodhisattva* or with the Dalai Lāma in Tibet, see *SBE* xi. 46; L. A. Waddell, *The Buddhism of Tibet*, London, 1895, pp. 247, 249; and for those connected with future beings in Zoroastrian belief, *SBE* xlvii. 105 f., 111 f., 115 f.

In the case of miracles of the second group beneficent actions are extremely rare, *i.e.* miracles performed to benefit others. As a rule, the miracles merely exalt their worker, and sometimes they are of a kind to force belief in him. Lao-tse is said to have raised the dead, and Buddha to have healed wounds; but these are occasional, and are in a minority compared with the great number of thaumaturgic acts.[7] These largely consist of power over nature and complete control over its processes, and are often of a most grotesque and obviously improbable kind. Buddha made floods recede, or passed miraculously from one side of the river to another. Levitation, flying through the air, and ascent to heaven are frequent miracles, or, as in the case of Buddha, treading on water, entering earth as if it were water, and passing through a wall.[1] Understanding or influencing the thoughts of others *à distance*, change of form, and invisibility occur. Frequently the miracle-worker saves himself from accident or death.

Some of these miracles are simply repetitions of the magical acts attributed to medicine-men. They are traditional stock incidents easily fitted on to the life of any person. Others are sheer inventions. Others may be exaggerations of actual events, perhaps in some cases of real supernormal powers possessed by this or that teacher, or of great shrewdness or spiritual insight. But they are generally of a most unlikely character, and have seldom a beneficent purpose, nor is there any historic evidence for them, even if they were of such a kind as would require it.

In most of these religions miracles are commonly attributed to saints, sages, and ascetics. They bear a similar character in widely distant regions and under different creeds, and often run on parallel lines. Here again these miracles bear a curious likeness to many which are ascribed to Christian saints. Taoist, Zoroastrian, Buddhist, Hindu, and Muhammadan all believe in the possibility of the miraculous in the case of gifted persons. In Taoism those who through asceticism and saintliness 'rise to the Tao' become like gods and are superior to the laws of nature.[2] In Buddhism the cause is profound meditation. By this the *arhat* gains transcendent faculties—the five *abhijñās* ('magical powers') and *iddhi*, saintship, but also the power of working miracles.[3] Holy men in Islām possess similar powers as a result of their faith, piety, and self-denial. They are also helped to them by the *jinn* and by knowledge of the divine name.[4] The range of these wonders in the different religions is very wide. It includes a great variety of powers over nature—the production or cessation of storms or sunshine, causing the sun to stand still, drinking up rivers, superiority to fire or water (*e.g.*, not being wet in heavy showers, or walking or passing through water); superiority to the limitations of matter and space (a common Buddhist attribute), the power of invisibility, change of form or of sex, invulnerability, levitation and swift passage through space, penetrating walls, mountains, earth, lengthening beams of wood, opening doors without keys, swift transference from one place to another. Again, light is made to stream from the fingers or hands, or miraculous supplies of food are provided. Inanimate objects are made to act as if alive. Supernormal knowledge of distant events or of men's thoughts is asserted. The power of exorcizing and dispelling demons commonly occurs. Less rarely the cure of disease and the removal of barrenness and even the raising of the dead are found.[5] One method of curing disease used by Muhammadan wonder-workers is to pass the hand over the part affected — perhaps a species of mesmerism.[1] As to these miracles as a whole, there is no evidence that they ever occurred, and, as Burton says of the incredible miracles of Islām, collateral or contemporary evidence is never sought for.[2] The question of supernormal powers will be discussed later.

Occasionally, especially in Buddhism, Hinduism, and Islām, miracles are wrought by relics or at the graves of saints. As far as Buddhism is concerned, these are of a very dazzling kind. In Islām they are mainly, though not wholly, works of healing or the removal of barrenness.[3] In the case of the latter the spirit of the dead saint begets the child —a form of primitive belief (see FAIRY, § 9, vol. v. p. 687).

Such miracles are occasionally said to cause belief. Those to be wrought in future ages on behalf of Zoroastrianism will make all mankind believe in the good religion (*e.g.*, causing the sun to stand still). Those wrought by Buddhists also cause conversion, especially incredible marvels in the world of nature.[4]

4. Classical miracles.—This group, as it includes so largely miracles of healing, may be considered by itself. These were mainly the result of divine rather than human agency and they cluster around the practice of incubation (*q.v.*), or 'temple-sleep.' The patient, after ritual and sacrifice, slept in the temple; in the course of his sleep he dreamed that the god touched and healed, or opened his body and cured him (? an operation under hypnotic influences), or indicated a remedy either directly or by symbolic means. The actual healing was speedy or more gradual, and in some instances—*e.g.*, that of Aristides in his *Sacred Orations*—it was prolonged over many years, yet the god was always supposed to intervene. The *stelæ* recording miraculous cures found at Epidauros are obviously fictitious—a kind of advertisement of the shrine.[5] There is no reason, however, to doubt that cures of a more or less miraculous aspect did take place—the result of faith-healing or of a strong mental suggestion, aided by all the adjuncts of the place (the ritual, the dream, the medicaments).[6] It is not impossible that in sleep the subconscious self may cause dreams about diseases, of the early indications of which it has become aware, or might even suggest a cure. The dream-cures may have been based on phenomena of this kind. The hero-god mainly concerned was Asklepios, who was thought once to have been a human healer and to have raised the dead, while wonderful events—*e.g.*, brilliant light—were associated with his birth.[7]

Healing miracles were also wrought by images of gods, heroes, or famous persons. Other miracles were wrought by such images—they moved, wept, spoke, and gave advice—and there are numerous parallels to this in all religions, even in Christianity.[8] Mythology and popular belief also ascribed great wonders to relics of gods or heroes. Some of these were multiplied exactly as mediæval relics. They were miraculously found, and various places disputed their possession.[1] Healing also took place at tombs of heroes. Less common are miracles by human wonder-workers. Tacitus speaks of Vespasian curing blindness and lameness,[2] and the fictitious life of Apollonius of Tyana by Philostratus contains miracles at his birth and death, healings, and exorcizing of demons. He may have had supernormal healing gifts, but some of the stories are modelled on the NT miracles. Others are told by none but Philostratus.[3] The emissaries of the impostor Alexander of Abonoteichos (*q.v.*), according to Lucian's life of him, credited him with healing and with raising the dead.

5. On the whole the miracles of ethnic religions do not possess an air of truth. They are incidents ascribed to this or that person, some of whose doings, on account of his greater insight or skill, may have seemed miraculous. Some, however, may be supernormal phenomena. As to the cases of healing, they are seldom asserted of individual teachers, but rather in connexion with shrines and relics. Suggestion or hypnotism may explain such as are genuine. Whether any influx of life or healing power from another sphere was also present is a question which must always be an open one (see § 12).

6. **Miracles in the OT.**—Roughly speaking, the miracles of the OT fall into two groups, those connected with Moses and Joshua, and those connected with Elijah and Elisha. The documents describing these are of a date far removed from the events described, and their evidential value is thus small. Some of the miraculous events are doublets of each other, and in those of Elijah and Elisha a kind of artificial parallelism is to be observed. The narratives are in some cases composite, and a more or less non-miraculous substratum may be traced. Many of the miracles have a strong thaumaturgic aspect, and they suggest that, as in the case of ethnic religious teachers and the Christian saints, it was not enough that the outstanding character, insight, and leadership of Moses or Elijah should be recorded, but miracles should also be ascribed to them. While, in the case of Elijah and Elisha, it is not impossible that they had some gift of healing—which might then be the *point d'appui* of the miraculous legend attached to their history—it is remarkable that in the case of the greater prophets, save once with Isaiah (2 K $20^{8ff.}$), there is no thaumaturgic element. The idea of God which the miracle stories reflect is not of the loftiest kind, but rather that of men at a lower spiritual level. The spirit animating some of the miracles resembles that which animates barbarous men. There is aggressiveness, ruthlessness in dealing with human life where men do not know or worship God, and intolerance. Few of the miracles have that beneficent aspect which we find in the majority of the NT miracles. Again, there is a certain materialism in the method of describing the miracles—*e.g.*, in the idea of speaking face to face with God. Some of the miracles are magical, and are alleged to have been copied by pagan magicians (Ex $7^{11f. 22}$ 8^{7}). Others seem to reflect the traditional beliefs of the Semites—*e.g.*, that of God's manifestation in fire—or are traditional stories rather than true histories. Some, no doubt, have a symbolic value, as when a record of spiritual revelation is told in material terms (the burning bush, the revelation to Elijah—the latter a reminder that miracles as outward phenomena parallel to thunder, fire, etc., are a lower kind of testimony to God). Some of the miracles—*e.g.*, the ten plagues—are regarded as direct divine interpositions. It is possible, doubtless, to suppose that God made use of existing phenomena to effect His purposes. It is equally possible that phenomena coincidental with a crisis in the nation's history may have been regarded as direct Providential interpositions. Especially would this be the case if prayer for deliverance had preceded them. Such answers to prayer must not be ruled out, and all such answers have a miraculous aspect. They show the superiority of spirit to matter (see below, § 16). This is also true of the event on Carmel, when Jahweh's superiority to Baal was clearly seen in answer to Elijah's prayer. There was some divine intervention, even if that is explained thaumaturgically or associated with rather ruthless methods. Again, we need not doubt that God led His people 'with a mighty hand, and with an outstretched arm, . . . and with signs, and with wonders' (Dt 26^{8}). We need not doubt that in the movements of history He does 'make a way to His indignation' (Ps 78^{50}) against the unrighteous. But whether the leading and interpositions were in the manner depicted is open to question. A strong belief in divine deliverance might easily lead to the formation of legendary accounts of it. The real miracle in the OT is the growth of the idea of God, the strong sense of the divine presence in the world, divine guidance in the affairs of the universe and of men. The real religion of the OT lies elsewhere than in the accounts of separate miracles. It is found in the growth of a spiritual religion, in such documents as that which tells of creation, in the records of spiritual experience and aspiration, in the phenomenon of prophetism.

7. **The miracles of Christ.**—(*a*) When the documents composing the Gospels are examined, it is found that even in the earliest there is no non-miraculous substratum; all alike contain miracles. By every one Christ's teaching is admitted to be marvellous, yet authentic. This raises a presumption that the marvellous deeds are also authentic. The date of the documents is sufficiently near to the events recorded to admit of authenticity, and the evidence is as good as anything short of signed scientific evidence is likely to be. The writers were men who knew themselves to be witnesses, and had regard for truth.

(*b*) Christ ascribes His miraculous power to God, as He does His teaching (Jn 14^{10}). There is a real divine work being done (Lk 11^{20}, Mk 5^{19}, Lk 8^{39}; cf. Jn 9^{3} $11^{4. 40. 42}$ 14^{10}). So also the witnesses of the miracles regard them (Mk 2^{12}, Mt 9^{8} 15^{31}, Lk 7^{16} 9^{43} 18^{43}). Yet power is inherent in Christ, as the method of the miracles shows, or the definite 'I will' (Mk 1^{41}). Here also the people recognize this inherent power (Mk 7^{37}). All power is delegated from God, as Christ taught. Hence the power to work miracles is not necessarily confined to Christ (Mt 12^{27}), though He has that power in a supreme degree.

(*c*) Christ as sinless is a moral miracle without *a priori* likelihood, therefore there need be no *a priori* objection to His miracles, which generally tend to rectify an unnatural, disordered state in the world. Unlike Buddha, Christ had not to grope His way to perfection—an instructive contrast. The sinless Christ was in unison with the forces of the divine will. Hence power to cure disease flowed from Him who was untouched by disease.[1] So, also, in whatever way He was divine

He was certainly more than man. His powers would thus be greater than those of ordinary men, and might therefore be miraculous.

(*d*) Christ's miracles are in harmony with His personality and teaching. There is an air of naturalness and ease about the miracles not found elsewhere. He never doubts His own power to work them, never falters in exercising it. His method, unlike that of other healers or exorcists, causes amazement, showing that it was not similar to theirs. He casts out demons with a word, or *à distance*, and no mere faith-healing or magical exorcism accounts for these cures. Yet there is an economy in the use of miracles which we do not find in ethnic narratives, while, again, Christ never works miracles for Himself.

(*e*) But, if miracles are so easily ascribed to great ethnic teachers, why should they not have been ascribed to Christ? This is certainly a possibility, nor need we deny that there was time enough for a miraculous legend to grow. But all the facts must be faced. The greater part of the Gospels is from eye-witnesses who had no wish to deceive. No miracles are recorded of John the Baptist. The basis of the narrative is true, and it contains miracles as well as the wonderful teaching. In several cases the teaching is intimately connected with the miracles, indeed springs out of them.[1] If Christ wrought miracles at all, it is not impossible that there would be a tendency in a biographer to exaggerate the miraculous. But, again, the miracles as a whole are very different from those ascribed to ethnic teachers, as may be seen by comparison. We have every reason to believe that Christ wrought miracles, even if the truth of any given miracle cannot be asserted or demands investigation. The miracles are in keeping with Christ's personality, and *vice versa*, and the impression made by them on the people, on inquirers (Jn 3^{2}), and on hostile critics who admitted their truth is of great importance.

(*f*) Comparing Christ with ethnic teachers or Christian saints, we find that they never claimed to work miracles, and disliked them, while Christ made such a claim. If He refused to work a sign from heaven (Mk 8^{11}), this is really a proof of His power to work signs of a kind,[2] but not of the kind so liberally allowed to ethnic teachers. Christ's miracles are beneficent, never egotistical like Buddha's or even those of Christian saints; their setting is different from those of the ethnic religions; they are harmonious with the character of the worker; they have invariably a moral and spiritual quality not found elsewhere.

(*g*) Miracles, properly regarded, assist faith. But was this the primary purpose of Christ's miracles? Were they mere credentials of His mission? This is doubtful. Beneficence was primary, and often forestalled the faith of the person concerned (Mk 3^{1}, Lk 7^{11}, Jn $5^{2f.}$), as it did in the case of demoniacs. Crowds of people were doubtless influenced by the miracles, especially by their unique character, for they produced fear or amazement even if that was followed by praise to God (Lk 7^{16}, Mt 15^{31}). The result was that crowds of people flocked to Christ and forced on Him a popularity which He disliked and from which He sometimes withdrew (Mk 1^{45}, Lk $5^{15f.}$). One whose credentials were miracles would have acted otherwise. The multitude connected the miracles with Christ's Messiahship (Mt 12^{23}, Jn $16^{14f.}$)—a belief which He did not at first encourage (cf. Lk 4^{41}, Mk 1^{25} $3^{11f.}$). When John sends to know if He is Messiah, He points to His works of mercy (Mt $11^{2ff.}$); the stress is on these, rather than on Messiahship. Miracles are not wrought to cause belief in it; miracles are works of mercy, and their merciful rather than their miraculous character is important. They are part of a spiritual mission rather than proofs of it. Disbelief in the worker's power shows hardness of heart, for the mercy and love displayed, rather than the miraculous power, are spurned (cf. Mk $3^{21f.}$ 5^{17} 6^{43}, Mt 11^{21-23}, Lk 10^{13-15}). Mere popularity was distasteful, and silence about a cure is often enjoined.

The exception in Mk 5^{19} is explainable because Christ was unknown in Gadara and was leaving it. What the man was to tell of was the divine mercy.

True, Christ's compassion often overcame His dislike of mere popularity, while this popularity might sometimes indicate a genuine faith and love. But, if Christ works miracles at all to evince faith, it is not the faith of a fickle crowd, but the faith of the individual. Such an individual or those who intervened for him would already have faith, and that faith would be augmented (Jn 4^{53}, Lk $17^{15f.}$). Yet even here it is an existing confidence that is rewarded rather than a divine mission that is proved.

Christ does not appear to rank His 'works' very high, as the phrasing of Jn 5^{36} shows. Works are of less importance than the personal appeal of Christ (Jn $10^{37ff.}$; cf. $14^{10f.}$). Christ's personality and His words are witnesses far more than His works (Jn $5^{40f.}$ $6^{33f.}$; cf. 8^{51}). This lower position corresponds to the refusal to work a sign to sceptics; cf. also Jn 20^{29}.

The disciples followed Christ first as a result of the impression which His personality had made on them. Later the effect of His miracles—those only of the non-healing group—on them is sometimes noted. In spite of the comment in Jn 2^{11}, the disciples must already have believed. In other cases new thoughts are suggested to them, or a confession of belief is made (Mk 4^{41} 6^{51}; cf. Mt 14^{33}). The miracles, however, were not wrought primarily for these purposes, but to quell fears or to confirm existing confidence. Even the lesson of the withered fig-tree is not that of the power of Christ, but of faith in God and of what faith can do (Mt 21^{20}). The true attitude is seen in Jn 21^{7}, when recognition follows the miracle. The act is consonant with a personality already known and loved. The cumulative effect of miracles was no doubt to quicken understanding of Christ, and we remember that the great miracle of the Resurrection was what finally convinced the disciples of Christ's true nature.[1] Still, on the whole, the miracles were not meant to force belief or to act as credentials. They were part of a divine mission, and had their value, but it was rather that of contributing to a better understanding of a personality, not as a proof of it, and that because they were signs (σημεῖα) of a divine compassion. As for the people, their amazement was at the authority, ease, and naturalness of Christ's method, seen also in His teaching (Mk $1^{22. 27}$; cf. Mt $7^{28f.}$). Signs are part of a revelation which confirms itself, for, when as thaumaturgic displays they are sought,[2] refusal follows, or a symbolic answer, or some piece of spiritual teaching.[3]

There is no real contradiction in Jn 15^{24}, for elsewhere the works are a witness to divine love (3^{2} 7^{31} 9^{33} 10^{32-37}), not as a mere proof of it, but because they are done out of love. Men who do not see such love are spiritually blind, and to that degree in sin (cf. Mt 11^{20}, Mk 10^{20}). In the miracle on the paralytic, which is said to witness to divine authority, Christ's authority had been derided, and proof was necessary (Mk $2^{10f.}$). In the case of the raising of Lazarus, this is done that 'they [disciples and bystanders] may believe' (Jn $11^{15. 42}$). Many bystanders did believe; others did not. Yet Martha's existing faith is the condition of this miracle (cf. v.$^{25ff.}$ with v.^{40}).

[1] Even by the apostles miracles are seldom referred to as having an evidential character. Cf. A. T. Lyttleton, *The Place of Miracles in Religion*, London, 1899, p. 53 f.

[2] Lk 11^{16} 16^{31}, Mk 8^{11}. Such a sign from heaven is seen in Rev $12^{1. 3}$.

[3] Mk $8^{11f.}$, Mt 12^{38} $16^{1f.}$; cf. Jn 2^{18} 4^{48} 6^{30}, Lk $11^{16. 29}$.

Here and elsewhere in this Gospel a theory of its author that miracles cause belief is at work (2^{11} 9^{3} 11^{4}). In this miracle belief of a specific kind—in Christ's power over death—is to be taught to those who believed in Him already.

Generally healing is the reward of faith, Christ's power working with the person's faith. There is thus more than subjective faith-healing, for with Christ there is 'power to heal,' obvious enough where the faith of the person healed is not in question. Where there was no faith, but *conscious* opposition, miracle was naturally impossible (Mk 6^{5}). Christ could have forced a miracle, but this was against His method, though even here He did heal 'a few' who believed. A writer who recorded this was not one who was likely to invent or imagine miracles. Christ also Himself had faith in God, as His words show (Mk $9^{23.\ 29}$ $11^{22f.}$; cf. Mt 14^{21}).

The miracle in Mk $5^{28ff.}$ shows in a crude way that power to heal was in Christ, and was made effective by the patient's faith. In Mt $9^{20f.}$ the woman thought that by merely touching His garment healing would follow (cf. Mk 3^{10} 6^{56}, Mt 14^{36}, Lk 6^{19}). Christ was somehow aware of this, and, rewarding her faith, healed her. Mark and Luke suggest that He was aware of the woman's touch by power going out of Him. This would seem to reduce the miracle to magic.

(*h*) *Possession.*—Not all but only certain kinds of sickness were regarded by the Jews scientifically or colloquially as possession. Only once does Mark connect bodily disease with possession ($9^{17f.}$); Matthew and Luke do so on three occasions. In Mk 9^{17} a dumb spirit is mentioned; Luke (8^{36}) makes it a case of possession, Matthew (17^{15}) of epilepsy (σεληνιάζεται, 'epileptic'), though later the demon is said to be cast out. Epilepsy was a kind of intermittent possession (cf. Mt 4^{24}), as also was lunacy (Mk $5^{1f.}$; cf. Jn 10^{20}), or any apparent eccentricity.[1] The recorded cases are eight in number, with a few general instances. Whatever be the explanation of possession, the fact of the cure is not in question. Christ's healing of it was thorough, masterly, immediate, probably permanent,[2] and sometimes *à distance*. His method was not that of mere exorcism, as has been insisted.[3] Both the manner of the cure and its result show that it differed in degree, if not in kind, from that of the exorcist. Yet Christ taught that others might or did use it, if they had faith (Mt $17^{17f.}$, Mk 11^{23}). Serious cases are healed by a word, and the superlative nature of the cure is recognized even by hostile witnesses (Mk 3^{22}; cf. 6^{16}).[4] It had thus a miraculous quality: here was the 'finger' or the 'spirit' of God (Lk 11^{20}, Mt 12^{28}).

Possession by a demon is a world-wide savage explanation of sickness, and, as a survival at higher levels, of certain diseases, where the symptoms seemed to suggest the demon's movements or his speech in a voice different from that of the patient. But was the disease more than epilepsy, lunacy, hysteria, *clounisme*, or such a psycho-pathological state as that of alternating personality, 'temporary control of the organism by a widely divergent fragment of the personality, self-suggested in some dream-like manner into hostility to the main mass of the personality'?[5] In such cases the person may believe himself possessed by the devil, or he may speak in another voice, simulate another personality, or develop automatic writing.[6] As to epilepsy,

> 'No demon could by possibility produce more fearful results by entering into a man than I have often seen resulting from epilepsy.'[1]

Supernormal knowledge is often a characteristic of those believed to be possessed, knowledge of which the ordinary self could not be aware. This is ascribed to the demon; rightly it should be ascribed to the subconscious self or the fragmentary personality. In the NT the demoniacs show knowledge of Christ which He wishes to be kept secret, or they assume that He has power over them.[2] The fragmentary or subconscious self, identifying itself with a demon, speaks in accordance with the belief that Messiah would destroy demoniac power and asserts that Jesus is Messiah. Yet these men, in lucid intervals, may have heard that He was so regarded. Thus their knowledge would not be supernormal. Lunatics often dread one particular person.

A man's belief in his possession by a demon is paralleled by the belief that he is a wolf. Both are pathological states, and where the belief in transformation disappears lycanthropy is apt also to disappear. This is more or less true of the belief in demons and the supposition of possession (see LYCANTHROPY).[3]

Demon-possession as a belief continued long after, as it had existed long before, Christ's time. It is not explained, therefore, by saying that demons were allowed to torment men while He lived, so that His power might be seen. If Christ then accommodated Himself to an existing belief, yet He did not accept it in all its current forms, and some at least of what is ascribed to Him may be the thoughts of His reporters.[4] Christ could hardly have cured the patients save by sympathetically accepting their point of view. So also for the sake of refuting an argument He accepts the point of view of the Pharisees, without categorically saying that He actually casts out demons (Mt $12^{27f.}$, Lk 11^{19}; cf. Mt 12^{43}, Lk $10^{17ff.}$). An accurate explanation would not have been understood, and might even have gone beyond present-day science. Or, with power to heal, was Christ's knowledge here limited? Did He believe in possession? In any case there is no doubt about His healing this strange disease instantly and permanently, and differently from exorcists, or from modern physicians in the cases of apparent possession. Of course it is a large assumption to say that there are no existences which might not take possession of a human personality and act through it.[5] Psychical research tends to admit that there are such existences in the case of discarnate human spirits, but has no evidence of diabolical or hostile possession.[6] This, of course, does not exclude such possession—*e.g.*, by some alien power at the centre of man's being where consciousness and will reside. Yet an unexplained mental disease is not necessarily possession. In a sense, it is true, there was possession if disease was caused by sin or vice, disease being objectively regarded as evil. But there is no clear proof that the cases cured were directly the result of sin.

For alleged demon-possession in modern China and elsewhere see J. L. Nevius, *Demon Possession and Allied Themes* (London, 1897), though it is doubtful whether the cases are not explainable on other grounds. Much of the evidence comes from Christian natives, whose earlier belief in demons was still strong. Healthful and life-giving influences of Christianity may explain the cures where pagan methods failed, as Justin long before asserted (*Apol.* ii. 6) and also H. A. Junod, of Thonga cases (*The Life of a South African Tribe*, Neuchâtel, 1912–13, ii. 460). On Nevius's theory see W. R. Newbold, *Proc. of Soc. for Psychical Research*, xiii. [1897] 602.

(*i*) *Healing.*—Christ's miracles of healing are not explainable by M. Arnold's 'moral therapeutics,' *i.e.* the cure of neurotic diseases by mental influences. Many of these diseases were not neurotic, and were such as do not yield to mental treatment, while the evidence for their cure is as good as that for neurotic cases.[1] Occasional miracles at Lourdes are also wrought on more than neurotic diseases, and they suggest an influx of healing power from without. But Christ's miracles of this kind are more than occasional. Here surely some healing power—'the power of the Lord' (Lk 5^{17})—wrought through Him. It was neither variable nor uncertain, and it enabled the patient to throw off disease immediately. It was communicated to the sick by an act of will, a word, a touch, or sometimes *à distance*, perhaps by telepathy. To this use of such a power there is no authentic parallel. If it be said that Christ had merely superior access to an x region, to which others might have access, yet His access was so superior as to be miraculous. His faith in the power awakened faith in the patient, so that in a sense there was suggestion both from without and from within. There was more than mere 'faith-healing,' a word which is apt to be used loosely. If it is used as mere auto-suggestion, there was obviously more than that. Diseases which apart from scientific diagnosis were plainly most serious were cured without difficulty. If Christ merely did what one day may be more generally possible,[2] at least He did act perfectly in a way as yet undiscovered.

[4] John does not appear to accept the theory of demon-possession, though he refers to the Jewish belief.

[5] The demons, if they existed, were not necessarily like the horrible figures of later imagination.

[6] Myers, ii. 198.

(*j*) *Raising the dead.*—The instances of this are so few in number as to raise a presumption of their truth, for here is exactly where miracles would probably be exaggerated in a fictitious narrative.[3] The possibility of catalepsy or trance cannot be excluded, yet we may assume that Christ would know the truth. To Him, indeed, death was no more than a sleep (Mk 5^{39}, Jn 11^{11-14}), from which the sleeper might be roused in the presence of the Lord of life, who could command the return of the principle of life to the lifeless body, whenever He was beside the dead.[4]

(*k*) *The nature group.*—The evidence for these miracles is as good as for those of healing. Here again their small number—six (or, admitting duplicates, five)—suggests genuineness, as do also generally the narratives which relate them, as well as the manner of the relation. The attempts to interpret them as symbolic teaching related as miraculous action do not command respect any more than the various rationalistic methods of explaining them away. The real questions are concerned with their adequacy to the occasion, with the power involved—was it one accessible to others?—with the method of its use—to excite wonder or to minister beneficence. Was there again a real breach of the order of nature?—a statement which no one is competent to assert (§ 15). For, though it is easy to assume a 'reversal of the natural physical order,'[5] some of the miracles of healing are just as contrary to our experience. If Christ's was a unique personality, we must take account of what may be proper to Him either in or out of nature. Such a one on occasion may as easily walk on the sea as on dry land. These miracles suggest the superiority of the spiritual and moral order to the material. They, with one possible exception, are in keeping with the personality and character of the worker. The question of adequacy[6] to the occasion may be safely answered in the affirmative as regards stilling the tempest, walking on the sea, and feeding the multitudes. In the first two, lessons of faith were immediately taught, but they also have a permanent value in this direction as well as in showing the supremacy of spirit to matter. In the third the adequacy is seen in the beneficence of the action involved. It is more difficult to prove adequacy in the case of the change of water to wine. Was it probable that such a great miracle would be wrought to enhance the joy of a wedding-feast? Yet the narrative has an air of genuineness, though, if it were performed for symbolic reasons also, these are not hinted at. As to the power involved, it is certainly beyond that of men in the cases of stilling the tempest, changing water to wine, and multiplying food. Yet, in a universe ruled by divine will, was it impossible for one in whom that will was supreme to use it to still a storm, or to perform such probably creative acts as the other miracles involve? No breach of the order of nature is involved, for in the first two there is but a quickening of natural processes—the storm would sooner or later have ceased; a change is slowly effected in the moisture taken up by the growing vine. In the third, though the act is incomprehensible to us, can it be said that there was any breach of nature involved? While it is not impossible that a miraculous aspect has been here given to a non-miraculous action, the narratives have a genuine air, and the numerous different rationalistic explanations suggest that there is an inexplicable fact. In the case of walking on the sea a supernormal power which might be open to others might be suggested, if the story of D. D. Home's[1] floating in the air be accepted, or if there is genuine fact behind the numerous stories of levitation. The difference, however, is that Christ used such a power consciously and purposively; this is not observable in the other cases.[2]

The withering of the fig-tree presents difficulties as to adequacy, and because it is contrary to the principle that Christ never wrought miracles for Himself. The tree was destroyed because it had no fruit for Him. Is He likely to have acted thus? There is no hint in the story or its context that it is an acted parable. While we need not question Christ's power, it is open to us to seek explanations of the origin of such a story, and these are much easier to find, and have much more verisimilitude, than those offered for the other nature miracles.

(*l*) The story of the stater and those of the draught of fishes need not be interpreted miraculously. The first appears to involve supernormal knowledge and directive purpose in bringing the fish to the spot, and this is again contrary to the principle of economy in the miraculous observed elsewhere, for the money might easily have been obtained otherwise. Probably an ordinary incident has been given a miraculous aspect. As to the others, there is no note pointing to the miraculous (as, *e.g.*, in Mk 4^{41} $6^{51f.}$, Jn 2^{11}), and it is perhaps not necessary to assert it here.

(*m*) *Incarnation and virgin-birth.*—The idea of incarnation involves no breach of an order of nature, for we have no evidence that such an event was necessarily contrary to any existing order. It begins a new order, and it is a superlative instance of what all are familiar with already—the influence of spirit on matter. To such an event virgin-birth may have been necessary and consonant, since no ordinary child was concerned. Sinlessness is as much a miracle in the moral as virgin-birth in the physical sphere, but it need not be said that the latter was necessary to the former. This is a theological speculation, not found in early writers who speak of the Virgin-birth,[3] nor in the NT itself.

[2] See a suggestive passage in Stewart, p. 182 ff.

[3] Contrast the large number of raisings from death by the relics of St. Stephen alleged by St. Augustine, *de Civ. Dei*, xxii. 8.

[4] Little touches of exaggeration in the story of Lazarus need not detract from the essential fact.

[5] W. Sanday, *Bishop Gore's Challenge to Criticism*, pp. 19, 23 f.

[6] There is no question of working these miracles in answer to any demand for a sign.

[1] H. H. L. Carrington, *The Physical Basis of Spiritualism*, London, n.d., p. 378.

[2] Evidential value is also found in the fact that this is the sole instance of such a miracle in Christ's life, unlike those of miraculously crossing a river so often told of Buddha.

[3] *E.g.*, Ignatius, *ad Ephes.* 19; cf. *Asc. of Isaiah* x. 8–xi. 19

Parallels to incarnation and virgin-birth have been alleged from pagan sources, but there is no real analogy. The idea of divinity becoming really incarnate in human flesh was alien to Jewish thought, and probably also to pagan. Hence it is really impossible to assert that the story was invented in Jewish-Christian circles at the early date involved. That it is an early story is undoubted, and the evidence for the two versions of it in Matthew and Luke must go back to Joseph and Mary.[1] There is some evidence that it was known even in Christ's lifetime that He was not Joseph's son—a knowledge apt to be perverted by hostile critics. As to the story itself, it has only to be compared with the versions of it in the Apocryphal Gospels to see how an existing story could be exaggerated without being recast. The lack of such exaggeration in Matthew and Luke points to genuineness. Comparative mythology is often relied on to show that virgin-birth is a universal myth, but examination of the instances shows no real parallel. A human or divine father regarded in a material sense, or some material means, is always involved. This is true even of the late miraculous stories of the birth of Buddha, whose human father appears all through, and also of the birth of the future saviour Saoshyant in Zoroastrianism.[2] Yet, even if such stories were more nearly parallel, the question should be faced—Do myths never come true?

(*n*) *The Resurrection.*—Arguments against the Resurrection usually make much of the discrepancies in the narratives. Are these more than may be looked for regarding such an event? Or do they really discredit the central fact to which all bear witness? Without discussing them in detail, it may be said that they offer evidence as good as that for the Crucifixion, and, if they do not prove a real resurrection, do they prove anything at all about Christ? Certain facts are important: the empty tomb, the definite date never varied from, as well as the personality involved—no ordinary man whose resuscitation to a normal human life might be rejected, as Huxley would have rejected that of the hypothetical ordinary man[3]—and the vast change effected in the apostles' characters and methods of action. We may here consider the main modern explanations.

(1) Visions, subjective or objective, or telepathic impressions are really inadequate to account for the story. No such experiences have ever produced such a result, and they could not have given rise to the story of the Resurrection or of the empty tomb, or have so changed the disciples. A phantom would only have made them afraid (Lk $24^{37f.}$). The disciples already knew of the existence of Christ's spirit, for this was the common Jewish belief, and as Jews they also looked forward to a future resurrection. How then could such alleged communications from such a spirit have so altered them or originated such a belief in the Resurrection with the definite meaning which the word had to any Jew? If it be said that it was precisely this Jewish belief in a future resurrection that made the disciples imagine that their experience of a phantasm was really that of a Risen Christ, this is in effect to make them the most credulous and untrustworthy of men—which no one really believes of them.

(2) Equally inadequate is the theory which would derive the story from myths and cults of slain and risen gods. It is claiming too much to assert that the apostles were influenced by these, supposing they knew of them, which is unlikely. Was there anywhere a myth of a god who had died and risen again on earth? The revival even of Osiris took place in the Other-world. No such myth had ever been applied to the history of any man, as the theory supposes it to have been to that of Jesus. Such myths were sensuous, and had sprung out of nature-cults. How could they originate a whole new world of ethical and spiritual ideas? The theory produces the greater out of the less with a vengeance, and sets aside every shred of historical evidence, while it has never explained why Christianity supplanted such myths and cults as it is alleged to have sprung from.[1]

On neither theory is the Resurrection or its vast results explainable, and each postulates a miracle as great as the miracle of the Resurrection itself. The change involved in the Resurrection is beyond our ken; yet there was a change, not merely the resuscitation of a dead body. We know too little of the laws of the universe to assert that such a change is impossible, or that there is no law of resurrection of whose working Christ's resurrection is the first instance. The new theories of matter seem to make the change conceivable, if the 'basis' of matter is to be found in a strain in the ether giving rise to the electrons of which the atom is composed. Ether is described as sub-material, while electrons might conceivably be resolved into ether again. Matter would thus be destroyed.[2] Others regard matter as a complex of energies.[3] If these theories be true, might not Christ's body be resolvable without corruption into the ultimate constituents of matter and then re-formed as a new etherial body, since ether is sub-material, the indwelling spirit moulding it as if it were a material body, yet not subject to the limitations of such a body? At all events these new theories lessen the difficulties in the way of accepting the Resurrection.

(*o*) *The Ascension* was probably a final vanishing (Lk 24^{31}) from the sight of the apostles, interpreted conventionally and symbolically as ascension, and, as far as the vision of angels is concerned, objectively. Heaven being regarded as a place above, this was inevitable, and was in keeping with the symbolism of up and down, high and low. Christ vanished out of space conditions into a higher state, and this is the essential truth behind the descriptions, while it is the natural corollary of the Resurrection.

8. Miracle in the Apostolic Age.—The miraculous powers included in the apostolic commission may have received additions—*e.g.*, raising the dead (Mt 10^8)—while some are allegorical (Lk 10^{19}). Mk $16^{17f.}$ probably is an addition mingling the authority with the record in Acts and this passage in Luke. Certain it is that some miraculous power was transmitted to the apostles or made accessible by their faith. In Acts we see it at work. Faith on the part of the recipients of cure is also clearly in evidence, sometimes of a superstitious kind (5^{15} 9^{11}) perhaps resulting in cures by auto-suggestion. St. Paul both appeals to these powers of healing and refers to them (Ro 15^{19}, 1 Co $12^{9f.\ 28f.}$, Gal 3^5). They are regarded as credentials of the apostolic mission—perhaps not a sound theory. Those who believed because they saw signs and wonders had not the highest faith, unless the signs were accepted as tokens of divine love. It is obvious that St. Paul meant more than mere faith-healing, some actual miraculous gift, by his *χαρίσματα ἰαμάτων* or *ἐνεργήματα δυνάμεων* (1 Co $12^{9\text{f.}}$). There was, in some cases at least, the influx of divine power into the diseased. In the case of Eutychus it is doubtful if a miraculous return to life is intended. In that of Dorcas it is so, though some unusual recovery from apparent death may have been locally exaggerated into a miracle.

The account of Pentecost and its marvels describes an incursion of the spiritual audibly and visibly into the material world. Such an incursion would be difficult to describe, but it is no more than what might be expected on such an occasion. A distant analogy may be found in the phenomenon of light or of a cold breeze accompanying phantasmal appearances.[1] As to speaking with tongues, the phenomenon is perhaps no more than ecstatic utterance, and it is one which is apt to be degraded. The kindred phenomena of trance-utterance and inspirational address studied in our day have little value. Whatever might be the value of the tongues at Pentecost or at other times, St. Paul came to have a low opinion of the gift. The effect of a spiritual invasion would vary with the nature of the person invaded. The real miracle of Pentecost was the power shown by St. Peter and his fellows, and the spiritual results following.

The stories of release by means of an angel have been regarded as symbolic accounts of connivance or friendly interposition interpreted as divine aid. Yet, if other orders of beings exist, they might so intervene, and might have power over matter. The real question is one of adequacy to the occasion, and we find no such intervention in the case of James (Ac 12^2).

St. Paul's experience on the way to Damascus is really similar to that of the Resurrection appearances, though there is more splendour, so that he is blind for a season. If these appearances are accepted, St. Paul's 'vision' at once falls into place, even if the accounts vary. That he himself should cause blindness is perhaps no more wonderful than that he should heal. Did his words cause a temporary auto-suggestion of blindness to Elymas? The incident of the viper ($28^{3\text{ff.}}$), though viewed as miraculous, is not necessarily so. This is also true of the death of Ananias and Sapphira. Emotional shock might account for the deaths, and this would lend itself to a miraculous interpretation.

9. Ecclesiastical miracles.—The question as to the time when miracles ceased, if at all, used to be much debated. Some supposed that they continued down to the 3rd, 4th, or 5th cent.; others, like Middleton, made them end with the age of the apostles and characterized all later records of them as stupid and untrue.[2] The evidence alleged for miracles is continuous to the present time; how far it is based on fact is an open question if miracles are possible at all. The miracles of some individuals in the early Church are far more amazing and numerous than those of Christ. They were wrought not only on the sick or the dead, but on nature. Miracles of the last class are of a most stupendous character, incredible on the face of them and quite beyond all adequacy to the occasion. The age was doubtless one of considerable credulity, when miracles had to be forthcoming to rival those of paganism, in which the ecclesiastical writers believed, though attributing them to demons. Many accounts of miracles are too rhetorical to be taken seriously—*e.g.*, the Benedictine editors of Chrysostom's account of the miracles of St. Babylas say that it is rhetorical and for the most part destitute of truth.[3] In some cases, again, natural or perhaps supernormal events have been interpreted miraculously. Many are wrought to support some doctrine or practice not always of the essence of Christianity—*e.g.*, the use of relics, *at bottom* a species of fetishism. Some concern the Eucharist, but many of these are magical rather than miraculous.

Some miracles copy those of the Bible. Others are such as are found in ethnic sources—*e.g.*, changing the course of a river, drying up a lake, causing a staff to become a tree.[1]

The healing of the sick and the possessed is referred to from the time of Justin[2] onwards. The evidence for many of these miracles is of a very slender kind; credulity accepted them, sometimes pious fraud suggested them; but their possibility need not be denied. Gifts of healing may have existed with certain persons who had faith to use spiritual power or to aid the faith of others. In 'an age of spiritual exaltation and spaciousness, of enlarged consciousness and deepened faith and more buoyant hope'[3] such miracles might be expected. On the other hand, there are few instances of such cures as our Lord performed. Most are wrought in connexion with relics or the Eucharist. That cures should thus occur need not be doubted. Where the power of these was believed in or the patient's faith was strong, suggestion might heal, even if there was no power to heal in these media themselves.[4] There may also have been an influx of power from another sphere, as a reward of faith or an answer to prayer, and this would be a miraculous cure (§ 12). So in the case of exorcism, while, here again, the use of relics or the Eucharist is found quite as much as prayer, it need not be doubted that the patient might respond to the treatment, which was really a form of suggestion. Indeed, where the resources of a spiritual religion were called upon, why should not these have brought calm and order to the disturbed mind? (see § 7 (*h*)). There is, however, no such evidence for cures as exists for Christ's healing method. Patients continued to be afflicted at intervals in many cases. Exorcism tended to become a business, and the 'cure' was often of a very drastic kind.[5]

The most circumstantial accounts of raising the dead come from St. Augustine.[6] These are all connected with the shrine or relics of St. Stephen. The evidence is perhaps no more than hearsay, and there is no real proof that the persons were really dead. Elsewhere Augustine describes what was really a case of trance as the return from death.

10. Mediæval miracles. — During the Middle Ages nothing seemed too incredible to be related or believed. Every saint was expected to work miracles, and miracles freely adorned the popular Lives of the saints. It was said of St. Vincent Ferrer that it was a miracle when he performed no miracle. Any saint in whom a particular district, monastery, or church was interested was apt to have many miracles attributed to him. The people seemed incapable of being content with his spiritual victories; these had to take material form, to be symbolized as miracles. As in the earlier period, many miracles were alleged in support of particular doctrines or practices—the cult of the Virgin and saints, of relics, the Eucharist, the use of images. Protests were made from time to time by theologians, but in vain.[7]

The folk expected miracles, and miracles were freely provided for them. Many of the miracle stories are repeated in countless Lives of saints; one biographer plagiarized freely from another, and later Lives are often more full of miracles than the earlier Lives of the same saint. Biblical miracles were freely imitated; only in any given case they were multiplied a hundredfold. Other miracles belong to a floating tradition, and repeat those already found in ethnic sources or in classical writings. Some are versions of folk-tale incidents. Frequently the quite ordinary or the particular gifts of a saint were exaggerated into miracles. Others can be traced to a misunderstanding of Christian artistic *motifs*—*e.g.*, the stories of saints carrying their heads in their hands can be traced to pictures where they were thus represented to symbolize their death by decapitation—or to the visions or hallucinations of hysterical devotees, though these were supposed to belong to the highest state of ecstasy, in which reason played no part. All these miracles may be divided into four classes: (*a*) miracles wrought on nature, often of a most extravagant type—arresting the sun's course, hanging a cloak on a sunbeam; (*b*) miracles wrought by or upon inanimate objects—the numerous moving, talking, smiling images, already met with in paganism, or the opening of locked doors at the touch of a saint's finger; (*c*) miracles occurring to a saint—*e.g.*, light streaming from his fingers, talking at birth, carrying fire, bilocation, levitation; and (*d*) miracles of healing, exorcism, and raising the dead.

The practice of incubation passed over to the Christian Church and was mainly associated with St. Cosmas and St. Damian, but the cures were often of a prolonged character. The methods were much the same as in pagan temples, *mutatis mutandis.*[1] As to healing miracles in general, what has already been said of these applies here also (cf. also § 12).[2]

Possibly some miracles were actual instances of supernormal phenomena of the x region, so long scoffed at, but now more or less investigated by science. There are incidents corresponding to cases of hypnotism, telepathy, clairvoyance and clairaudience, telekinesis—the movement of objects without being touched—appearances of phantasms of the living or dying (perhaps that which underlies cases of bilocation), and the occasional superiority of the senses to outward effects (carrying fire). Of these as well as of levitation there has been a constant tradition through the ages, and in the mass of alleged occurrences there may have been some genuine instances. Such phenomena are not necessarily miraculous or even evidence of saintliness. On the other hand, if mind can communicate with mind, communications from another sphere may be made to minds on this earth, and these would have a miraculous quality—*e.g.*, the voices and visions of Jeanne d'Arc or those which prefaced the healing of Dorothy Kerin.[3] The communication may be coloured by the preconceptions of the percipient—a divine message may appear as a voice or vision of Virgin or saint, or a case of real spiritual healing may be associated with belief in a relic. Divine power might also be manifested from time to time through the supernormal phenomena referred to, making them miraculous. There should, in fact, be no cleavage between normal and supernormal and supernatural in our appreciation of the divine working.

11. Modern miracles.—These are mainly connected with healing, though supernormal phenomena in connexion with spiritualism have been claimed as miraculous.[1] Typical cases are associated with shrines and relics—*e.g.*, the cures at the tomb of the Abbé Paris or by the Holy Thorn related by Pascal[2]—or are accomplished by various personages representing every form of Christianity, or by mind-cures, faith-healing (*q.v.*), and Christian Science (*q.v.*).

The cures at Lourdes (*q.v.*) are associated with the vision of the Virgin seen by Bernadette Soubirous in 1858, though nothing was said to her about these. The number of pilgrims amounts to some 600,000 yearly, but no more than 2 per cent of the cures are regarded as 'miraculous.' Some vouched for are of an almost instantaneous nature.[3] Christian Science is associated with a theory of the unreality of matter and of pain. Disease is the result of false thinking. The Divine Spirit heals by casting out 'mortal-mind.'[4]

All these various methods of healing are traced to the spiritual value and truth of the creed or theory or practice with which they are associated. Yet some of them flatly contradict each other. They are rather means by which a cure is mediated, quite apart from their truth or value. A key to the problem is perhaps found in 'spontaneous cures' occurring in medical practice, which may be traced to suggestion. This is probably the main factor behind the cures effected by these various methods. It is the power of the unconscious as well as of the conscious self over the body, when once an idea has been accepted.[5] Existing beliefs are strengthened; new hopes are initiated; fears and inhibitions are removed; and the physical processes by which pathological conditions are removed begin to be affected. Thus in all the various methods 'the differences are subjective rather than objective, differences in the mind of the sufferers, rather than in any scientific evidence as to the nature of the healing agency.'[6] Susceptibility to suggestion may vary, and it should not be forgotten that there may be evil as well as healthful suggestions. But that it is a real psychic process is undoubted.[7] The suggestion may come from belief in a relic, a saint, or from the 'mystic theism' of Christian Science. The main fact is that it often works, even if the cures are seldom instantaneous, though they may occur in a quicker manner than in ordinary physical therapeutics. We are still left to inquire, however, whether any other exterior force works in connexion with the vital healing force inherent in the organism, and set in motion by suggestion. If so, we should be in presence of the miraculous. This possibility must now be considered.

12. Mental and spiritual healing in relation to Christ's miracles of healing.—Psychic forces affect the body in normal life, and of these suggestion is one. But is there also at times, with the healing suggestion or as an answer to prayer, an influx of exterior, divine, spiritual power to heal? This would correspond to the exaltation of mind by spiritual influences in inspiration. It would be a particular and outstanding instance of what we find everywhere, if all life is dependent for its energy on some all-environing Life. It might not be regarded as miraculous or supernatural, for, if miracle is part of the process of the universe, in a sense it is natural. But in so far as the result testifies clearly to processes outside our ken, to the power of a divine person thus making Himself known, the current of whose energy is entering our life for a particular purpose, this is a sign, or miracle. The spirit has let loose 'life-giving forces which sweep before them the evils of sickness and disease.'[1] There is more than mind-cure; faith has tapped a divine source, and it has aided the unconscious mind. That this has never taken place cannot be affirmed, though a leader of the movement for applying the spiritual powers of the Church to disease[2] in conjunction with medical treatment is still seeking for an authentic instance. The appeal to spirit in one form or another has been made in all religions where healing was practised, and doubtless the divine spirit has not confined His work to any one of them, if thus He works at all. But, while uncertainty attaches to all mental therapeutics, our Lord's healing methods were never uncertain. He always set free the healing power, the divine life which healed, whether His own or acting through Him as a perfect channel, unsusceptible to disease. This is seen by His words, 'I will, be thou clean.' The result was swift and certain cure. Thus Christ as healer differs in degree and kind from all media of occasional cures. That He cannot effect such cures where perfect faith exists is not credible.[3]

13. Hostile criticism of miracles.—Though the Schoolmen were probably refuting current objections to miracles, no serious criticism appeared until the 17th cent. with *Spinoza's* attack. The laws of nature are the decrees of God. Miracles cannot happen because they violate the order of nature, and thus God would be contradicting Himself, for nature is fixed and changeless. Miracles could tell us nothing of God, since they surpass our powers of comprehension.[4]

Spinoza's view is mechanical and takes no account of the interaction of existing 'laws,' their interference with each other without violating the order of nature. This may also be true of miraculous action. The material universe may be subject to the spiritual order. God may bring in new forces from time to time, or combine existing forces for a definite end, and His guidance exists through all. Moreover, even if miracles are incomprehensible, they do tell us certain definite things about God, as Christ's miracles did. Spinoza's pantheistic doctrine of God deprived God of all real freedom.

The *Deists* opposed miracles on the ground of a fixed order of nature. God, having made the world, never interfered with it, and to assert miracle was a kind of treason to Him. Hence the Gospel miracles were explained away or allegorized. Miracle was a possibility, but it never occurred. This also was the position of *David Hume*, whose argument, aimed at Roman Catholic miracles primarily, was regarded by him as invulnerable. Miracle was a violation of the laws of nature by a particular volition of deity, of whose attributes or actions, however, we could know nothing otherwise than from our experience of them in the ordinary course of nature. No testimony could establish a miracle, unless its falsehood would be more miraculous than the alleged miracle itself. The belief in miracles arises from the pleasing sensations which they arouse, and they are common adjuncts of religious enthusiasm. A miracle could never be proved so as to be the foundation of a system of religion.[5]

Huxley criticizes Hume's argument on the ground that every event is a part of nature and proof to the contrary is impossible. 'Calling our often verified experience a law of nature adds nothing to its value,' since we cannot affirm that the experience will be verified again. Any seeming violation of the laws of nature would be investigated by science, and its existence would simply extend our view of nature. Miracle is conceivable, and involves no contradiction, yet evidence for it must be complete.[1] It may be added that Hume's 'experience' is such as he only would admit. His own criterion of evidence, even when fulfilled, is at once rejected by him,[2] and some of his admissions—*e.g.*, as to the hypothetical eight days' darkness—tell against his own argument. A particular volition of deity may reveal a world transcending ours without violating laws of nature, which are also volitions of deity. Christ's signs are part of our experience of the working of God. As to miracles establishing a doctrine, the argument has little force now. Miracles of healing, *e.g.*, need not prove the truth of the system in which they are found (§ 11), and it is questionable whether any ethnic system was founded on a miraculous basis. Christ, not His miracles, established Christianity, but His miracles are inherent in His religion in a way that those alleged of ethnic teachers are not.

German rationalism, represented by *H. S. Reimarus*, opposed miracles as impostures effected by Christ. *H. E. G. Paulus*, however, regarded them as ordinary or perhaps unusual events interpreted by readers as miracles—a thing which the authors of the Gospels never intended, though they sometimes had mistaken ordinary action for miracle. *D. F. Strauss* started, like Paulus, from the Spinozan principle, and regarded miracles as legendary accretions—a halo of wonder placed round Christ's head by the early Church, because the Messiah had been expected to work miracles. Yet, mythical as they are, the miracles are symbols of metaphysical ideas.

Literary criticism in the persons of *E. Renan*, *M. Arnold*, and *W. E. H. Lecky* set aside miracle altogether. 'Miracles do not happen,' was Arnold's catchword. Renan maintained that Jesus had to either renounce His mission or become a thaumaturgist. Miracles were a violence done to Him by His age—a statement incompatible with Lk 13^{32}—and yet He believed in miracles, and had no idea of an order of nature. Arnold, while opposed to explaining miracles in detail, thought it a mistake to rest Christianity on miracle, for, when that was discredited, as he believed it had been, Christianity was apt to go with it. Both Renan and he admitted some truth in the miracles of healing, but Renan's description of these comes short of what is said of their thoroughness and ease, and is, in fact, grotesque.[3] Arnold's idea of 'moral therapeutics' assumes that illness was due to sin, while Christ, as bringer of happiness and calm, addressed the moral cause of disease. Such a method might be used extensively in the healing art.[4]

The assumption that illness was due to sin is not proved, and some healing miracles are not explainable by moral therapeutics. In any case Christ had a power which has not been imitated, and the other miracles are quite as well attested as those of healing.

The literary pantheism favoured by *R. W. Emerson* (*q.v.*) saw miracle everywhere, therefore definite miracles nowhere. Miracle as taught by the churches was a monster.[5] Christ's miracles are explained by saying that He felt man's life and doings to be a miracle—an insufficient account of *σημεῖα*.[6] There is some truth, however, in the saying that 'to aim to convert a man by miracles, is a profanation of the soul.'[7] Not dissimilar is *Carlyle's* 'natural supernaturalism,' though he admitted that such an event as the raising of one from the dead would violate no law, but prove the entrance of some deeper law.[8]

Materialism rejects miracle altogether and refuses to investigate individual miracles — too often the attitude of science. Agnosticism, as represented by *Huxley*, admitted the possibility of miracle, but, in the event of such 'wonderful events' happening, would widen its view of nature. All that would thus be shown would be that all experience, however long or uniform, is apt to be incomplete. There would be no necessary divine power behind such a wonderful event.

But, while science might investigate any 'wonderful event,' has it yet explained even an ordinary event? Christianity regards all events as expressions of divine will, direct or indirect, and such as are miraculous are more striking evidence of that, not just because they arouse wonder, but because of their appeal to what is ethical or spiritual in us. They witness to the supremacy of spirit over matter (§ 15).

On the whole, the scientific attitude to miracle is less hostile now than it once was. Many scientific men are also religious men, and the new vistas open to science have made a spiritual interpretation of the universe more possible.

14. The defence of miracles.—The *Apologists* generally connected miracles with prophecy, and showed that they fulfilled predictions of such deeds made long ago. They are by no means the sole evidence for Christianity, though, as the Greek Fathers maintained, they might help those who through sin could not see God in His works. Origen pointed out that Christ's miracles were not done for show, like a juggler's wonders, and that, unlike a juggler, He demanded a new way of life.[1] The Fathers commonly appealed to the miracles done in their day, and *Arnobius* devotes much attention to miracles as proving Christ's divinity. *Augustine* first gives a philosophy of the miraculous. God's will is the ultimate source of all things, and nothing can be *contra naturam* which happens by God's will. Everything is natural, not to us, but to God. Miracles are part of an established order. They are not *contra naturam*, but may be contrary to what is known to us of nature.[2] The *Schoolmen* start from this idea of uniformity, forestalling the ideas of science, but not on experimental grounds. There is a higher and a lower order of nature, the former at once natural and supernatural, God's ideal plan. In it are *causales rationes et primordiales* of miracles. In the actual order, known to us, with its chain of causes and effects, miracles could not originate, but these have the capacity for higher powers being inserted in them—all parts of God's original plan. Miracles are not such to God, who can interfere with the *ordo secundarum causarum* which is subject to Him. Miracles are *præter hanc ordinem*—the order known to us—but not *contra naturam*.[3] Again, as the course of things can be changed by creaturely power, so God's power may bring an event to pass otherwise than in the usual course, so that men may know His power. This is equivalent to the view that there may be guidance of forces in nature to a particular result which may appear miraculous to us (§ 15). Later the idea came generally to be held that miracles were a real suspension or violation of the laws of nature, the view attacked by Spinoza and Hume, both sides arguing as if all nature's 'laws' were known to them. *Bishop Butler* wisely points out that, while we see nature carried on by general laws, God's miraculous interpositions may have also been by general laws of wisdom. Nature is plastic to Him, and these laws are unknown to us. There may be beings to whom the miraculous is as natural as ordinary nature is to us. Butler was arguing against the Deists, but he sometimes forestalls Hume's objections, as when he says that miracles should be compared not with ordinary but with extraordinary events in nature. With the Schoolmen he tends to regard miracles as part of the original plan of things. He again forestalls Hume when he argues that fraudulent miracles do not disprove those of Christianity, but he is on less sure ground when he says that Christianity was offered and received on the ground of miracles publicly wrought to attest its truth. *J. B. Mozley* continued Butler's position that miracles are necessary to a revelation,[1] but argued, with him, that no miracle could make us accept anything contrary to moral or true religion. There is order, cosmos, in nature, but the mechanical expectation of recurrence which would keep out miracle cannot be proved true. Anything contradictory to experience might be either some event in accordance with an order of nature or a direct divine interposition, spirit prevailing over matter. Such a miraculous event, as the act of a Personal Being, would show moral will and intention and be evidence of a higher world. The order of nature might be suspended, if there was use in suspending it. But the laws of nature would be suspended, not the laws of the universe, which would be a contradiction. Suspension of the laws of nature is possible, and it happens—*e.g.*, where the laws of matter are suspended by the laws of life. If spirit be regarded as above matter and capable of moving it, miracle becomes possible.

In opposition to German rationalism *Schleiermacher*, in his *Der christliche Glaube* (Amsterdam, 1830–31), maintained that nature admitted of new elements, consonant as it was to God's will and work, even if conditioned by it. Nature may contain the cause of the miracle, but it appears only when God calls it forth. Christ had a supernatural origin and, as sinless, was a moral miracle. Yet the Virgin-birth, Resurrection, and Ascension were set aside along with many of the miracles, though miracle was admitted, since God has complete power over nature. Our belief in Christ, according to him, does not depend on miracles. Thus, though Schleiermacher still opposes certain miracles, he offers a constructive theory of miracle. Later *A. Ritschl* refused to regard miracles as contrary to natural law, and held that they were akin to Providential action. *J. Kaftan* argues from the same side that 'laws of nature' are unreal, a mere formula allowing us to grasp the course of nature. Miracle is such an unusual event as will awaken us in a special manner to God's living government of the world. He works in all things, but can use special means to enable faith to trace His presence.[2] *Hermann Lotze* also refuses to regard miracle as setting aside laws of nature. The miracle-working power, by virtue of its internal connexion with the inner states of things, can alter these and so modify the result of the laws. Law is thus turned to account. Even if there be mechanical necessity, this change in the internal state of things subject to it causes it to produce an external miraculous phenomenon. The elements of the universe are not 'selfless and void points of attachment for unalterable forces,' but living parts of the living One. No law is altered when miracle occurs, but the bearers of the forces obedient to these laws are altered. The conditioning cause of miracles is in God and nature both, hence there is no arbitrariness in miracles. Yet Lotze sets aside Christ's miracles, partly because the change in man's conceptions of nature has made them dubious.[3]

On the whole, modern theology tends to regard the universe as plastic to God and miracles as the evidence of will. Even man can produce effects in nature not producible by nature itself. Such a view is elaborated by *H. Bushnell*.[4] Again, as by

J. R. Illingworth, divine immanence is made the ground of miracle. There is unity rather than uniformity in nature; it is due to spirit which uses matter for its purposes. The moral aspect of miracles is also emphasized by him and by other writers. Christ's miracles do not interfere with law, but restore laws which were broken. Disease is here regarded as due to sin. As to the Resurrection, there is no reason why a sinless soul should not resume at will a sinless body.[1] The supremacy to an extraordinary degree of spiritual force over the mere material is also emphasized by *A. C. Headlam* in his recent book on miracles.[2]

From a spiritualistic point of view *A. R. Wallace* argues for miracles on the ground that intelligent beings, unperceived by us, have power over matter, producing supernormal phenomena, the occurrence of which has been noted in all ages. By this view he claims that Christ's miracles as well as answer to prayer find new support.[3]

15. The question of the miraculous.—Miracles are not fortuitous events, breaking in upon a fixed order of nature. Both they and that order are evidences of divine will. The more the nature of the universe is revealed to us, the more impossible is it to believe that it all merely happened, that there was no guidance or control to produce such a vast and complex result. This impossibility is only the more increased by recent discoveries in science. If there is an infinite number of ultimate elements all of precisely the same form, it is most unlikely that all these should have happened upon the same form. Neither matter nor energy possesses the power of automatic guidance and control. Hence some form of guidance is essential, some directing mind and will. Life is outside the categories of matter and energy, yet it can use both, guiding and controlling them in accordance with the laws which govern them. Such guidance should not be denied to a supreme will and source of all life. But, if such guidance is granted, then miracles—particular instances of that guidance—become possible. A fixed order of nature does not necessarily mean that nature is self-contained and self-sufficing or subject to unalterable mechanical necessity. We do not know all of that order, nor is it likely that it is the only possible order. We cannot assert that a limit has been set to every combination of matter and energy, to every method of guiding these, to every possible result. If so, a miracle is not a breach of the order of nature, which, modifying St. Augustine's formula of known and unknown, may be regarded as one of which we do not know everything. As to the 'laws of the universe,' all that this means is governance of the universe according to law. If things always happen in an unvarying sequence, this does not exclude guidance, nor does it mean that the ultimate cause of the sequence has been discovered. Nor, if some phenomenon happened but once, would it be outside law or happen apart from guidance. Man can interfere with nature, utilizing its forces to produce new results, without breaking any single law of nature. What man can do is possible for the mind and will behind the universe. Law, again, if it exist in the material, must also exist in the super-material universe which interacts with the former. By its laws those of the material universe may be suspended, and in so far as any such action is purposive and beneficent it reveals a law of love, a universe governed all through according to law by a competent and good will. A miracle would thus be a beneficent and intelligent control and guidance of existing forces in accordance with law by a supreme spiritual power, and this is precisely what we find in the miracles of Christ. They were natural actions to Him, either because of what He was or because He was in perfect harmony with that supreme spiritual power.

It is easy to hold a wrong idea of the uniformity of nature or, rather, its unity, to adopt Illingworth's *dictum.* Theology has been apt to insist upon miracle as a sort of catastrophic gap in an existing uniformity. Science has tended to forget the possibility or, rather, the fact of endless variety in that uniformity. Such variety is only the more in evidence with the new discoveries of science, which now postulates either an energy as the only physical reality or a sub-material basis of matter with a psychical significance. But, apart from that, how endless is the diversity even in a uniform nature, not even two blades of grass precisely the same! Nor is life explainable in terms of mechanical uniformity. It uses and controls matter and energy, and may exist apart from them.[1] Unity, with endless variety, is a better description of the universe than mere mechanical uniformity. In the interaction of the forces of the universe a slight increase of one force will produce a different result. And, if the forces, the interaction, the result, are guided and controlled, this would not detract from, but only augment, the theory of science that this is an orderly universe. Such guidance and control are not occasional but continuous, for a true theology can never postulate a God outside the universe, interfering with it on occasion. He always does what is best for it, and all that the universe contains—not merely its physical contents—is utilized for definite ends. Thus, if a slight increase of one force in any combination of forces—a re-arrangement of forces—will produce a different result from what is generally produced, miracle becomes possible. The result would show more definitely will and beneficence in the guiding process. Science might investigate this result, might even conceivably reproduce it. Could it explain the process? Could it tell how Christ could do such things in a pre-scientific age? There must have been some influence working with Him or in Him to produce such purposive, intelligent results. Science might create life, say, out of certain chemical combinations of dead matter. But could it explain why precisely that combination, that arrangement of forces or conditions, produced life? There would not be an act of creation, but the setting in motion of certain forces already possessing the potency of life. Why or how they possessed this would remain unexplained.

As there are physical so there are moral and spiritual facts, not explainable in terms of the former, though they interpenetrate. Miracles, as such, are not isolated physical phenomena or prodigies. They are not unrelated to any moral or spiritual sequence. They have a moral and spiritual purpose, a clear relation to surrounding circumstances. Unlike the vast majority of ethnic miracles, Christ's miracles have that moral and spiritual quality which differentiates them from physical prodigies. They are distinct revelations of God or of God's nature in relation to the universe and man. As in a less degree in all His miracles, so in a higher degree in the Resurrection, there is a union of physical and spiritual, such as is seen also wherever mind and life control matter and energy. Matter is here completely controlled, spiritualized, and such an event could scarcely have been imagined or invented. All miracles imagined or invented would have been little else than wonders. But Christ's miracles, with their spiritual and moral quality, are continuous with the system of the universe as a whole. So again many alleged supernormal phenomena are not miracles; they do not show a direct moral, purposive action on the part of a divine power, but reveal unsuspected and unexplained human powers. If God directs the whole universe, miracles are in no sense a rectifying of His own mistakes. They are instances of the overcoming of evil and disorder in a universe where these exist and where evil may have been necessary to the world-process, a stage on the way to perfection. Yet that perfection is being brought about, and miracles are an instance of this, since they clearly show God's purpose, more clearly perhaps than the more quietly-working process. They show, as Lotze says, that God is so related to matter that it cannot resist Him at all. So Christ's healing miracles show that spirit and will are superior to the causes which produce disease. Thus in no sense is miracle *contra naturam*; rather is it an expression of divine action in ways which may contradict our ordinary experience, *i.e.* our real ignorance of the universe.

The unchanging nature of radium might have been regarded as an unalterable law; yet the lapse of time (it takes 2500 years for an atom of radium to change) would show that this was a mistaken view, a parable of our knowledge of the laws of the universe.

The divine will, acting normally in certain ways, may act in different ways, perhaps in our limited view contrary to these. One set of laws is put aside for the moment, just as man can transcend the physical order by his will. Yet order is not interrupted, for the whole order of nature—all that happens—is just the divine will to which, *e.g.*, a swift 'miraculous' process of healing may be as natural as a slower process, or the turning of water to wine as natural as the slower growth of the vine. In either case there is a quickening of a natural process, and yet to God that quickening may be perfectly normal. Does this take away the miraculous from what we call 'miracle'? In a sense it does, for we tend to draw too straight a line between natural and supernatural. All events, inasmuch as they express the divine will, are natural, yet they are supernatural in so far as they all end for us in mystery. What constitutes a miracle is its quality, its instant suggestion of divine power and goodness. Man's spiritual vision is clouded, and he does not always see these in the ordinary event, nor is that always the fullest revelation of God. All things speak of God, but some speak more clearly. Yet these are by no means abnormal; they do not occur on inadequate occasions, nor do they contradict the fundamental laws of experience. The reign of law is not set aside, for the ways in which miracle is brought about are still in accordance with law, even if the miracle happen but once.

Certain persons, for no very obvious reason, seem to possess supernormal powers, or these are manifested through them; others have genius; others, men of God, have spiritual gifts. What powers may not be open to one like Christ, in whom divine power existed and whose sinless will was in perfect harmony with God's? He claimed to possess divine power, and He said that He came to do the Father's will. Things were therefore natural to Him which might have been unnatural to another. Yet His miracles were in subordination to the moral miracle of His sinless personality, and therefore in harmony with it. Divine power and goodness overflowed, as it were, from Him upon nature and man. His miracles are perfect examples of the control of the material by the spiritual, and they prove that all force, all guidance, are in the last resort spiritual. Yet the real reason for following Him was Himself, not His signs. The power by which He wrought these was in Him because of what He was. It might be open to all who live upon the same plane, as He pointed out.

As has already been said, there is no evidence in Christ's miracles of the lawless breaking of a 'law of nature.' Rather is it as if existing forces were being directly influenced, whether neutralized or quickened, or as if a new force was working with a natural force to produce a result different from what the latter could produce. In the case of healing disease a slow process gives place to a swifter process. So in the calming of the sea a natural process is heightened. In either case there is the power of will. When walking on the sea, Christ must have exerted a power which witnessed to some law quite as much as the law which for the moment it displaced. When water was changed into wine, was this more marvellous *for Christ* than the transmutation of one element into another as proved possible by science?

In the case of feeding the multitudes analogy is more difficult to find. Were bodily needs forgotten through a miraculous mental exaltation, so that a sacramental partaking of a small portion of food sufficed? This does not account for the fragments that remained. We cannot trace the method, but our limited vision need not detract from its miraculous aspect. Those most concerned believed that a miracle had occurred, unless the texts are wholly fictitious.

In Christ it is not a question of divinity breaking through a humanity in acts which are superhuman, but of a constant superiority to humanity in one who is its perfect type. It is therefore no stranger that His actions should be more wonderful than those of other men than that His teaching or His sinless life should surpass theirs.

Apart from the general control or guidance of the universe, divine will may work through normal or supernormal actions, or may act directly in specific cases, for what are to us miraculous purposes. Speaking is a normal action, but where a man speaks under the influence of the Spirit there is inspiration. Healing by suggestion is supernormal, but, if the suggestion is aided by spiritual influences, there is a miraculous cure. Again, as in some of Christ's miracles, we trace more direct action upon material things. Such action may be regarded as supernatural because mysterious; yet to God it is natural. All action, human or divine, is part of an ascending series; we cannot say where the natural ends and the supernatural begins; what we can assert is that Christ's confidence in His power or in God's power working through Him never faltered. He intimates that, if men had faith enough, they could do even greater works. Have we yet sounded 'the abysmal depths of personality,' or used to the full the power of the divine spirit working with us?

16. **Prayer.**—The relation of miracle to prayer may be briefly touched on. If miracle is a special instance of divine control, then answer to prayer has a miraculous aspect. Human mind and will can control existing physical forces or overcome the laws which govern them. There is readjustment without catastrophe. To every single fact there are countless antecedents, and a little of less or more will produce a new result, as is seen, *e.g.*, by the different chemical products obtainable by even the slightest increase in the number of similar atoms combining with others to produce these. Man himself can produce new effects in the physical world. Must we deny this power to God? He can surely guide, deflect, or neutralize one force by another, or act directly upon matter and energy so that a new result will follow, subject, of course, to every limitation of reason and order. How little exercise of power on God's part would be necessary to cause rain in answer to prayer! Since man and man's actions and thoughts, hence also his prayers, are a part of the forces of the universe, when we do not pray, the result, even in

the physical world, may be different from what it would have been had we prayed. Prayer is energy, and earnest prayer cannot be useless, even if its result is not just what man wants. If God's plan for the universe is so far conditioned by man's misuse of free will, how speedily will that plan be accomplished when man's will is at one with God's! It is His will that we pray, and every answer to prayer, as a direct manifestation of His will, is so far miraculous, and yet, like all miracle, quite natural. God foresees all that will happen in the universe; therefore He foresees whether we shall pray, and whether any particular prayer will be answered in one way or another. If the occurrence of certain things in God's plan depends on prayer, then we must pray. Are we then not free? Still we have the feeling of acting as free agents, and feeling is perhaps here truer than reason.

J. A. MACCULLOCH.

MIRACLE-PLAYS, MYSTERIES, MORALITIES.—1. Introduction.—As was indicated in the introduction to the art. DRAMA, the origin of the mediæval drama, like that of the Greek, is to be found in religious observances. It is true that from the earliest reigns of Norman kings in England secular pageants were common features of any day of special rejoicing; but these were not strictly dramatic in their nature, nor did they contribute to the essential development of the form. The true beginning of the long course which leads up to Shakespeare and Racine is found in the Churches; the most striking fact in the history of the mediæval drama is its evolution from the simplest germs in the responses of the liturgy into an elaborate new form without the influence of either antecedent or contemporary dramatic material. Though many steps and many dates in the history of the Miracles and Moralities are still to be discovered, and their due place to be assigned to many influences, it is possible to write a clear history of the drama in the Middle Ages from its origin in the antiphonal tropes of the liturgy to its final expression in the great Passion-plays, 'Mystères,' and 'Miracle-cycles.'

The probability of some survival of classical influence in the mediæval drama has led some writers to trace all possible ancient dramatic and mimetic traditions in the period between the closing of the theatres and circuses in the 6th cent. to the establishment of a developed liturgical drama in the 10th and 11th; but, notwithstanding the efforts of the modern Greek scholar K. N. Sathas (*Ἱστορικὸν δοκίμιον περὶ τοῦ θεάτρου καὶ τῆς μουσικῆς τῶν Βυζαντινῶν*, Venice, 1878) and his followers to found the mediæval religious drama on the ruins of the ancient Greek, preserved in Byzantium and carried to the west by the returning crusaders, it is the opinion of most scholars that no more can be said than that there was possibly a continuance of the mimetic tradition, kept alive by wandering, outlawed entertainers—a tradition that may have helped the development of the drama by aiding the survival of some feeling for dramatic form, and may later have had a part in the secularization of the religious drama. (For the Byzantine stage see K. Krumbacher, *Geschichte der byzantinischen Litteratur*^{2}, Munich, 1897, pp. 644–648, 746–749; for the views of Sathas, J. S. Tunison, *Dramatic Traditions of the Dark Ages*, Chicago, 1907; for the subject in general, Chambers, *The Mediæval Stage*, i. ch. i.)

2. The liturgical drama.—The antiphon, of Eastern origin, introduced into Italy by St. Ambrose, was the germ from which the mediæval drama developed. Certain antiphonal services had many dramatic possibilities, which more or less unconsciously began to take form in the tropes, or interpolations in the liturgical text for certain feast-days. The most important from the standpoint of dramatic history were the tropes of the Easter mass, the earliest dramatized form of which is the 'Quem quæritis.' This, assigned to about the year 900 and ascribed to the trope-writer Tutilo of St. Gall (Karl Young, 'The Origin of the Easter-Play,' in *Publications of the Modern Language Assoc. of America*, March 1914), seems to have developed into a considerable play as a trope of the introit for the day, and to have sent out branches which, combining with other ceremonies, such as the 'Visitatio sepulchri,' and other dramatic forms, such as the 'Prophetæ,' grew into the great Passion-plays and Miracle-cycles.

This earliest form is:

> 'Interrogatio.
>   Quem quaeritis in sepulchro, Christicolae?
> Responsio.
>   Jesum Nazarenum crucifixum, o caelicolae.
>   Non est hic, surrexit sicut praedixerat;
>   ite, nuntiate quia surrexit de sepulchro.
>   Resurrexi.'

The last word, 'Resurrexi,' is the first word of the Easter introit. By textual accretions, partly by additions from the Vulgate, but more often by 'free composition,' and by the development of a dramatic setting (the 'sepulchrum') and truly dramatic personalities (the three Marys, the angel at the tomb, etc.), this trope grew into a well-developed though brief liturgical play (MS Brescia, 15th cent., quoted by Young), and attained a much larger development as a 'Visitatio sepulchri' at the end of Easter matins.

The altar served as the setting for the 'Quem quæritis' plays, as was natural, for it symbolized the tomb of Christ (Young, p. 45). This made easy the transition to the use of the 'Quem quæritis' as part of the 'Sepulchrum' ceremony at Easter matins (the 'Elevatio crucis' following the 'Adoratio crucis' and 'Depositio crucis' on Good Friday; the ceremonies were symbolical of the burial and resurrection of Christ). This second and dramatically more fruitful use of the 'Quem quæritis' grew by textual additions, such as the sequence 'Victimæ paschali,' and by additions of incident—first, details of the Biblical story (*e.g.*, the visit of the three Marys to the tomb, and of Peter and John); secondly, secular imaginative details (*e.g.*, the visit of the Marys to the 'unguentarius,' or dealer from whom they bought the necessary spices, a character who later became popular in the vernacular Passion-plays).

Though there was a considerable dramatic development of the 'Quem quæritis,' it remained strictly a liturgical drama; it was chanted, the parts were taken by churchmen, there was little real dialogue, and the setting was of the simplest. In certain late forms there are introduced motives that do not belong to the events of Easter morning, such as the kiss of peace accompanying the greeting 'Surrexit Christus,' or the 'Tollite portas' ceremony prescribed by the ritual for the dedication of a church. These point to the possibility of a development of the Easter play which, however, was not to take place in the 'Quem quæritis' proper. This matter will be considered in speaking of the Passion-play.

But the 'Quem quæritis' was not the only drama of Easter-week. The 'Peregrini,' attached to the vespers of Easter Monday, established in the 12th cent., was known in England, France, and Germany. The simplest form tells of the journey to Emmaus and the supper there (Petit de Julleville, *Les Mystères*, i. 67; Chambers, ii. 37). In others Mary Magdalene appears, or the Virgin and the other Marys greet the risen Christ; or a new scene is added of the incredulity of Thomas; or there is even a merging of a developed form of the 'Quem quæritis,' the 'Peregrini,' and the Easter morning ceremony of the 'Elevatio crucis.'

Parallel with the plays of the Resurrection, other liturgical plays developed as parts of the office of other feasts. The Christmas season was the most productive; but there were plays for Epiphany and certain saints' days, particularly that of St. Nicholas. Though evidence of their existence has been found, the plays for many occasions have entirely disappeared. A Christmas drama, the 'Pastores,' commemorating the visit of the shepherds, grew out of a Christmas introit-trope, modelled on the Easter 'Quem quæritis.' It begins 'Quem quaeritis in praesepe, pastores, dicite.' It is purely liturgical, very simple in form, and of infrequent occurrence in the MSS, but is of interest for its connexion with the ancient and still popular representations of the crib, or *crèche*, of the infant Christ (see BAMBINO), and for its influence on the more fruitful dramatic forms into which it was absorbed. The essence of the play is the visit of the shepherds, a crib with images of the Virgin and Child, the announcement of the birth of Christ by a boy 'in similitudine angeli,' the singing of the 'Gloria in excelsis' by the angels and a hymn by the shepherds, a dialogue between the shepherds and two priests 'quasi obstetrices,' the adoration of the shepherds, and a final hymn.

A more common form of Christmas drama was the 'Stella,' a play of the visit of the Magi, originally consisting of antiphons and simple prose dialogue, representing the following of the star, the visit to the Infant, the offering of gifts, and the warning to the Magi (Creizenach, *Geschichte des neueren Dramas*, i. 60; Chambers, ii. 45; Petit de Julleville, i. 51; texts in du Méril, *Origines latines*, and in Coussemaker, *Drames liturgiques*). The simplest and probably the earliest examples are from Rouen and Limoges. This form of liturgical play developed early. Dates are uncertain, but MSS of the late 11th cent. have the play in a well-developed form. As the Easter 'Quem quæritis' centred about the 'Sepulchrum' and that of Christmas about the 'Præsepe,' the 'Stella' had as its starting-point the star. A gilt star, the points sometimes holding candles, was lowered from a hole in the ceiling or held up by an assistant. Like the Nativity plays, the 'Stella' developed partly from dumb show, and the simpler forms continued parallel with the expanded forms and outlived them.

The dozen or so complete extant versions of the play vary considerably. The drama developed by the representation, in action instead of narrative, of the visit to Jerusalem, by the addition of various scenes in which Herod plays a part, as, *e.g.*, his anger at the escape of the Magi and his order for the massacre of the innocents, and even the actual representation of the massacre, and finally the lament of Rachel, which had received independent dramatic treatment. As Chambers puts it, 'the absorption of the motives proper to other feasts of the Twelve Nights into the Epiphany play has clearly begun' (ii. 48). This absorption was to result in certain larger and more complex plays made up by the joining of the 'Pastores,' the 'Stella,' and the 'Rachel.' It is only in view of the result from this fusion and of the expansion of certain parts that the 'Stella' is of great importance for the later history of the drama. The part of Herod grew by expansion and emphasis even to take the first place in the English Corpus Christi cycles.

More important for the future of the mediæval drama than any of the forms thus far considered was the 'Prophetæ,' which had a curious origin, first studied by Sepet (*Les Prophètes du Christ*). It was based on the apocryphal *Sermo contra Judæos* attributed in the Middle Ages to St. Augustine, but really of later origin, and used in many churches as a lesson in the Christmas offices. In the passage so employed, the author invokes thirteen witnesses to the divine mission of Christ and calls upon them to predict His coming. The prophets invoked are Isaiah, Jeremiah, Daniel, Moses, David, Habakkuk, Simeon, Zacharias, Elisabeth, John the Baptist, Vergil, Nebuchadrezzar, and the Sibyl. The dramatic growth of this sermon had certainly begun by the 11th century. In the earliest forms the play follows the sermon closely, but is written in verse. Classical language and even direct quotations from the *Eclogues* appear in the prophecies of Vergil and the Sibyl. In later examples from Laon and Rouen the dialogue is expanded, the 'precentor' is replaced by two 'appellatores' or 'vocatores,' and Balaam is added to the prophets. More remarkable is the little added drama of Balaam and his ass, which has been considered by many writers the origin of the notorious Feast of the Ass, but which is perhaps more probably a reaction from the disturbing festival. In the Rouen text the part of Nebuchadrezzar is also expanded into a miniature play: Shadrach, Meshach, and Abed-nego refuse to worship the image, are cast into the fiery furnace, and escape all harm, whereupon the king testifies to the might of the coming Saviour.

It will be seen that at this stage of development the 'Prophetæ' necessitated a much more complex setting than was usual with liturgical drama—the throne of the precentor, the fiery furnace, distinct costumes (described in the rubrics), Balaam's ass. This was a beginning of the complexity that was to characterize the great Miracles.

This complexity and the fusion alluded to above may be seen in a Latin play preserved in a 13th cent. MS (Royal Library, Munich; text in du Méril). It is a combination of most of the Christmas dramatic forms. St. Augustine sits with the prophets at his right, the chief of the synagogue and the Jews at his left. The prophets foretell the Messiah; the head of the synagogue is angered at their blasphemies. A new character, the 'bishop of the children,' interposes the suggestion that St. Augustine shall be questioned. The Rabbi in anachronistic and pedantic words argues the impossibility of the Virgin-birth, and St. Augustine answers. The argument is taken up by the choirs of prophets and Jews, the one singing 'Res miranda,' the other 'Res neganda.' So far the play is an expanded 'Prophetæ,' still mostly liturgical in feeling and form. The prophets take their places in the church, and a play of the Annunciation begins abruptly. This part is brief. The Scriptural dialogue between the Virgin and the angel is followed by the visit of Elisabeth. The next direction is that Mary 'vadat in lectum suum . . . et pariat filium.' The choir hails His coming, and immediately the 'Stella' begins. A star shines forth, the three kings follow it, and appear before Herod; an angel announces the coming of Christ to the shepherds (the 'Pastores' element). The devil hints that the angel has deceived them, but they are convinced by the chanting of the 'Gloria in excelsis' by a heavenly choir; they seek the cradle and worship Christ; they meet the Magi bearing gifts. The Magi are warned not to return to Herod, who orders the killing of the innocents. The mothers lament their lost children (the 'Rachel' element); Herod falls dead, and is seized by demons. An angel sends Joseph into Egypt. The king of Egypt advances, accompanied by a choir singing 'choses fort profanes.' The Holy Family arrives in Egypt; the idols fall, and the priests, unable to restore them, are converted. Finally the choir chants a malediction against Herod and the Jews. The last part is free and individual in composition. Petit de Julleville thinks it unlikely that it was played in church (because of the 'episcopus puerorum'), and that more likely it was given in a monastery school.

As this play well represents the form attained by the liturgical drama through the combination of types and free composition, certain plays founded on the stories of Daniel and Lazarus represent another development—the expansion of single scenes in the older plays into independent dramas. Most interesting, because the first liturgical play attributed to a definite author, is the 'Daniel' of Hilarius, a cosmopolitan Goliardic scholar, disciple of Abelard, who flourished in the first half of the 12th cent. (text in J. J. Champollion-Figeac, *Hilarii versus et ludi*, Paris, 1838, and in du Méril). The 'Historia de Daniel representanda' opens with the feast of Belshazzar; the mystic words appear, and Daniel interprets them; Darius enters Babylon with his army and kills Belshazzar; Daniel appears at court, refuses to worship the king, and is thrown to the lions; the angel brings Habakkuk to him; Daniel is again in favour. The play is expanded by choruses in honour of the various personages, 'conductus Danielis,' 'conductus regine,' etc. The chant to Daniel (as also in the similar play from Beauvais) is a hymn in honour of the birth of Christ. This, as well as the rubrics, indicates the connexion of the play with the liturgy; but the note at the end, 'This done, if the play has been given at matins, let Daniel sing the Te Deum, if at vespers the Magnificat,' indicates that it was not a regular part of the office. In this partial detachment from the liturgy we see the beginnings of that development which was to take the drama entirely out of the hands of the clergy.

3. The secularization of the drama.—The indications of a tendency to make the liturgical drama more popular that we have seen in the expansion of certain themes in the 'Prophetæ,' in the freer and more poetical composition of many of the later liturgical plays, in their comparatively independent position in relation to the Church offices, are emphasized by the gradual change in the language, spirit, and setting of the plays, as they progressed towards that final and almost complete secularization which should take them out of the Church and out of the control of the clergy, and make them great popular spectacles rather than expositions of Christian faith. The degrees of popularization were innumerable. In the 15th cent., even when the purpose was edification, whole scenes were often frankly amusing and vulgar, with no religious significance whatever—*e.g.*, in the scene or playlet of Mak and the shepherds in the Towneley cycle, and in the comic scenes of the German Passion-plays.

The vernacular came by slow degrees to replace Latin. At first the two languages appear side by side; in the earliest examples the local speech appears only in refrains or in the lines of a few minor characters, or in the less impressive passages. But there is no discoverable rule; the same character may speak Latin in one passage, French in another. One of the earliest cases of the two languages used together is the 'Sponsus,' a 12th cent. play of the wise and foolish virgins from Limoges (text in *Romania*, xxii. [1893]; du Méril). Here a considerable part is in the 'langue d'oc'; the angel who announces the coming of the bridegroom speaks only French, the virgins both languages. The refrains are in French. The final words in which Christ condemns the foolish virgins are first Latin and then French, ending thus, perhaps to make the lesson clear and impressive to the congregation:

'Amen dico
Vos ignosco,
Nam caretis lumine;
Quod qui perdunt [MS pergunt]
Procul pergunt
Hujus aulae limine.
Alet, chaitivas! alet, malaureas!
A tot jors mais vos penas livreas;
En efern ora seret meneias.'

Occasionally, as in the 'St. Nicholas' of Hilarius, the vernacular is found only in the refrains. In other plays it is a translation of the preceding Latin lines—an indication of the reason for the use of the common tongue—as in the 12th cent. 'Adam' (text from Tours, first ed. by V. Luzarche, Tours, 1854; K. Bartsch, *Chrestomathie de l'ancien français*⁴, Leipzig, 1880), and in many German plays. Latin and the vernacular were even mingled in the lines, as in the Beauvais 'Daniel' (text in Coussemaker, no. iv.):

'Vir propheta Dei, Daniel, vien al Roi,
Veni, desiderat parler à toi,' etc.

Some late dramas are wholly in the vernacular, except for refrains or certain impressive passages.

In France particularly the development of the drama was marked by the adoption of a more varied versification. The earliest liturgical plays were entirely in prose, the later ones mostly in verse.

In these later forms 'the versification is rather complicated, very varied; almost all are written in stanzas. But these stanzas differ in the number of lines and in metre; the lines are syllabic, but vary in length from four syllables to ten' (Petit de Julleville, i. 23).

Dactylic hexameters also are used, sometimes leonine, as in the lament of Rachel in the Fleury 'Interfectio puerorum' (cf. Petit de Julleville, i. 49; text in du Méril; MS in Orléans Library):

'O dolor! O patrum mutataque gaudia matrum!'

Occasionally lines are quoted or imitated from the classics; *e.g.*,

'Quae rerum novitas aut quae vos causa subegit
Ignotas temptare vias? Quo tenditis ergo?
Quod genus? Unde domo? Pacemne huc fertis, an arma?'
(cf. *Æn.* viii. 112–114).

As important as this change in language is the gradual secularization of the spirit of the plays. The last part of the composite Munich play referred to above will illustrate this point. Though written in Latin, one part is an original secular poem in praise of spring, filled with pagan allusions and with no liturgical or Biblical connotation. The introduction of the comic element and of the melodramatic in the passages relating to Balaam's ass and Herod points to an equally strong secular influence, one that was to lead to some of the most striking and unfortunate developments of the great Miracles and even of the Passion-plays of the 15th century. We must not make the mistake of ascribing all the crude humour and vulgarity of Miracles to a naive and simple taste for such things; as Petit de Julleville points out, even in plays as early as those of Hilarius a conscious vulgarization has begun, a conscious appeal to an audience rather than a congregation, and the author's intention is even satirical.

The secular tendency which perhaps had most to do with the final almost complete secularization of the mediæval drama was the elaboration of the setting required by the constantly increasing length and complexity of the plays; for this development brought about the transference of the plays to the open (first the churchyard or square in front of the church, then the main square of the town, or several places at once), and, still more important, gradually brought the plays under the control of the laity. It is a long way from the simple 'sepulchrum' or 'præsepe,' the two chanted parts, the lack of appropriate costume, of the 'Quem quæritis' to the varied setting, the many characters, the costumes of the 'Conversio Pauli' (Petit de Julleville, i. 69; text from Fleury MS, mentioned above, in du Méril, and in Coussemaker, no. xiii.) with its several 'sedes' for Saul, Judas, etc., its two scenes, Jerusalem and Damascus, its armed men, and its 'lectus' for Ananias, or the Munich 'Prophetæ' described above, with its 'sedes' for the prophets, its 'lectus' for the Virgin, its shining star, its mouth of hell, its many characters. Henceforth the change in setting was one of degree rather than of kind; the elaboration merely followed the increasing complexity of the plays as they added one incident after another. Within the church, the crucifix, the altar, the 'sepulchrum,' the rood-loft (representing heaven), and the crypt furnished the chief accessaries of the play. To these, which were in the sanctuary and choir, were probably added in the more elaborate plays 'sedes,' 'domus,' and 'loca' extending down the nave. This natural arrangement was apparently followed when the drama left the church, as in the 12th cent. Norman 'Resurrectio.' Chambers (ii. 83) suggests such an arrangement of the 'lius,' 'mansions,' and 'estals' required by the prologue, following the analogy of a Donaueschingen Passion-play of the 16th cent., the plan of which is extant (given in Froning, *Das Drama des Mittelalters*, p. 277). The prologue gives the order of the required sets: the crucifix, the monument ('sepulchrum'), the gaol, heaven, hell, Emmaus, Galilee, and six 'estals' or 'sedes.' The only other extant French religious play of the same period, the 'Adam,' shows even better how far the drama had outgrown the simplicity of the 'Quem quæritis.' The Latin rubrics indicate not only a complex setting, but great care in stage management, even extending to the gestures and voice of the actors.

> For instance: 'Let there be built a paradise in a higher place; around it let there be draperies of silk. . . . There shall be sweet flowers and foliage; various trees from which shall hang fruits. . . . Then the Saviour shall arrive, clothed in a dalmatic; before him shall be placed Adam and Eve, Adam in a red tunic, Eve in a woman's white robe and a veil of white silk' (Chambers, ii. 80).

The rubrics mention not only the costumes for all the characters, and the localities—paradise, hell, a cultivated field—but also 'properties'—a spade, a rake, chains for the devils to use, cauldrons for them to beat upon, flames.

The development of the liturgical drama was practically complete by the 13th century. Thereafter the growth was mainly outside the church, secular and more vernacular, much more rapid and national. The liturgical drama was much the same in different countries, but the vernacular religious plays took on national characteristics in the 14th cent.; so that thenceforth, to be understood with any clearness, the special literary types that developed must be studied by countries. Furthermore, the influence of particular authors and of particular methods of representation makes itself felt.

4. England.—The early dramatic history of England is difficult to trace, for much the larger number of plays have been destroyed. The development of the liturgical drama in England must be partly guessed at from that of France. Only the slightest indications of what it originally was are extant. The earliest dramatic piece is the 'Quem quæritis' from the Winchester troper dating probably from about 979 (text in W. H. Frere, *The Winchester Troper*, London, 1894). This is not nearly so simple as the St. Gall 'Quem quæritis' mentioned above. More interesting is the very full account of the 'Quem quæritis' ceremony in Bishop Ethelwold of Winchester's *Concordia regularis*, which probably dates from 965 to 975 (Chambers, ii. 14, 306; text in *Anglia*, xiii. [1891] 365). This includes a simple trope not much more elaborate than the St. Gall one. Of it, however, Chambers (ii. 15) says:

> 'The liberal scenario of the *Concordia regularis* makes plain the change which has come about in the "Quem quæritis" since it was first sung by alternating half-choirs as an introit-trope. Dialogued chant and mimetic action have come together, and the first liturgical drama is, in all its essentials, complete.'

The only other extant English text of the liturgical period is a 14th cent. 'Quem quæritis' from Dublin. But church inventories, account-books, and statutes indicate the existence of the 'Pastores,' 'Peregrini,' 'Resurrectio,' 'Stella,' 'Prophetæ,' etc., at a number of places, including York, Lichfield, Salisbury, and Lincoln; and William Fitzstephen, writing of the late 12th cent. in London, records

> 'repraesentationes miraculorum quae sancti confessores operati sunt, seu repraesentationes passionum quibus claruit constantia martyrum' (*Vita S. Thomæ*, quoted by J. P. Collier, *History of English Dramatic Poetry* ^{2}, London, 1879, i. 11).

Of a Beverley 'Resurrectio' (*c.* 1220) the (bilingual) text of only one actor's part remains. So little do we know of this early period that it cannot be decided whether the liturgical drama passed directly from Latin to English, or whether there intervened a Norman-French period.

The full development of the English Miracle-play came in the 14th cent., and during the next two centuries and more it can be studied more clearly from extant texts. Whether or not the English drama received a special impulse from the establishment of the Corpus Christi festival in 1311, the most characteristic English dramatic form, the Corpus Christi processional cycles, were founded soon after that date. The Chester plays were probably given first in 1328. The dates of the establishment of the other cycles are not known, but references to them are found as follows: Beverley, 1377; York, 1378; Coventry, 1392. In 1350 there is a reference to a 'ludus filiorum Israelis' at Cambridge. From this time on there was the greatest activity throughout the country.

It will be impossible to analyze at all adequately even the chief monuments of the period under consideration; the four great Corpus Christi cycles and the minor instances of dramatic activity can hardly be mentioned. Generally the English Miracle-plays were represented in separate scenes, each by a different trade-gild, on its own 'pageant'—

> 'a high scafolde with two rowmes, a higher and a lower, upon four wheeles. In the lower they apparelled them selves, and in the higher rowme they played. . . . They begane first at the abay gates, and when the firste pagiante was played it was wheeled to the highe crosse before the mayor, and so to every streete . . . to se which playes was greate resorte, and also scafoldes and stages made in the streetes in those places where they determined to playe theire pagiantes' (Archdeacon Rogers' description of a play at Chester, 1594, quoted by Pollard, *English Miracle Plays*, p. xxv).

Though the plays were given by the gilds, they were under the direction of the town council, which made the strictest rules concerning the manner, thoroughness, and promptness of the performance—*e.g.*, at York (1415):

> 'And all maner of craftsmen yat bringeth furthe ther pageantez in order and course by good players, well arrayed and openly spekyng, upon payn of lesyng of C.*s*, to be paide to the chambre without any pardon' (*York Plays*, ed. Lucy Toulmin Smith, p. xxxiv).

The plays of the cycle were not the work of one author, but an 'organic growth.' The number of gilds acting varied; hence there was also a variety in the number of plays or scenes. The play for each gild was often slight in subject—*e.g.*, 'Adam and Eve, an angel with a spade and a distaff assigning them to work,' played by the armourers at York. An outline of the subjects of the York cycle (probably composed towards the middle of the 14th cent.) will give an idea of the wide range of the plays:

> the Creation, the Temptation, the Fall, Noah and the Ark, the Sacrifice of Isaac, Moses in the Wilderness, the Prophecies of Christ, the Annunciation, the Birth of Christ, the Shepherds, the Magi, the Slaughter of the Innocents, Christ in the Temple, the Temptation, the Woman taken in Adultery, the Raising of Lazarus, Judas, the Last Supper, the Crucifixion, the Harrowing of Hell, the Resurrection.

Although this list is incomplete, we can see in it all the elements that we have found in the Continental liturgical plays, and may be permitted to suppose that the Miracle-cycles developed by the extension and amalgamation of liturgical forms such as the 'Prophetæ,' the 'Stella,' the 'Pastores.' Though, like their French and German contemporaries, the authors allowed themselves considerable freedom in expanding the Biblical text (as, *e.g.*, in the part of Herod), yet the characters most freely drawn are almost exclusively those of persons to whom neither Scripture nor legend ascribes either name or individuality. Such personages as Cain's 'garcio,' or servant, Noah's wife, the shepherds, are introduced for the sake of relief—often inappropriately, it seems to us, as in the Crucifixion scene.

> 'It is to this desire for dramatic relief that we owe the story of Mak and his sheep-stealing in the Coventry cycle—our first English comedy' (Pollard, p. xli).

In the Coventry cycle there are various characters that link the Miracle with the Morality, the dramatic form more characteristic of the later years of the pre-Elizabethan drama. Such characters appear as Death, Veritas, Misericordia, Pax. The earliest known English Morality is lost. It was a 14th cent. play,

> 'setting forth the goodness of the Lord's Prayer . . . in which play all manner of vices and sins were held up to scorn, and the virtues were held up to praise' (J. Toulmin Smith, *English Gilds*, London, 1870, p. 137).

The earliest Morality that has survived is 'The Castle of Perseverance.'

> Its purpose was 'to trace the spiritual history of *Humanum Genus* . . . from the day of his birth to his appearance at the Judgment Seat of God, to personify the foes by whom his pathway is beset, the Guardian Angel by whose help he resists them, and the ordinances of Confession and Penance by which he is strengthened in his conflict' (Pollard, p. xlvi).

The play is wordy but impressive; it has logical development and unity of purpose. The stage directions show that it was elaborately presented. The most famous morality is 'Everyman,' composed in the 15th cent.; it is thoroughly dramatic in language and treatment.

The great Moralities were followed by shorter ones dealing with narrower subjects—'didactic interludes,' Pollard calls them. From these are derived most of the common notions regarding Moralities. One of the earliest is 'Hycke Scorner.' Some are written in praise of religion, others in praise of learning (*e.g.*, the 'Interlude of the Four Elements'). Some of the later interludes are real plays, in the modern sense—*e.g.*, 'A New and Pleasant Enterlude; intituled the Marriage of Witte and Science,' licensed 1569–70. The amusing lines, the act-division, and the characterization make the play modern rather than mediæval. John Heywood's plays illustrate still better the change that was taking place in dramatic art—a change which was to lead rapidly to the splendid Elizabethan drama.

5. France.—The development of the liturgical drama outlined above carried us into the 12th century. In France there are few plays known of the 12th and 13th centuries, the period when the drama became thoroughly secularized. Of the 12th cent. two plays are known, Jean Bodel's 'Jeu de Saint Nicolas' and Rutebeuf's 'Miracle de Théophile.' In the 14th cent. the French drama first acquired its national character. Petit de Julleville says that forty-three plays of the period are extant, all except one being 'Miracles de Notre Dame.' Here we have a form not found generally in other countries. That there must have been other forms of plays in this century is certain; the derivation of the dramas of the 15th cent. from those of the 12th and 13th makes this clear. Forty of the plays of the Virgin are in one MS in the Bibliothèque Nationale. These plays, however they vary in story and in source, all have as a central theme a miraculous event brought about by the intervention of the Virgin—always a mechanical and unexpected intervention. In other respects—in style, stage-management, songs—the plays are so similar as to make them seem, if not the work of one author, at least the répertoire of one company; and this is the more likely as such plays were performed by societies, called 'Puys,' formed for the purpose.

In the 15th cent. for the first time the word 'Mystère' appears as a dramatic term, and in this century it meant a representation of either Biblical story or the lives of saints. The NT was more used than the OT, for, as we have seen, the interest of the Middle Ages in the OT was chiefly in the foreshadowing of the redemption of mankind. This view accounts for the inequality and lack of dramatic feeling in the use of OT story. Furthermore, the mediæval drama was not original; it did not build up a play from a situation as did Corneille or Racine, but transcribed Scriptural narrative regardless of dramatic effect.

Though the French 'Mystères' seldom approach the completeness of the English cycles, they are often cyclical in form and extremely long. The famous 'Passion' of Arnoud Gretan is about 65,000 lines, a length attained not merely by prolixity but by following the career of each of the apostles after the Crucifixion. The French Passion-plays, the most notable of the 'Mystères,' centred, of course, around the Passion, which they developed in a painfully realistic manner; but they were extended at the pleasure of the author by the addition of any scenes preceding or following the main event. The Mysteries based on the legends of the saints, also popular in this period, had often a local interest.

> 'Many were composed for a certain province, city, or brotherhood, in order to celebrate a patron saint, to commend a relic, or to give sanction to a pilgrimage' (Petit de Julleville, i. 230).

6. Germany.—The early texts are scarce in Germany, but from those that are extant it appears that the liturgical play had much the same history as in other countries, and that the transition from the Latin to the vernacular took place in the same manner. As early as the 12th cent. the Tegernsee 'Anti-christus' (text in Froning, p. 206), though written in Latin, has several secular characteristics: an ambitious plan, allegorical figures, and particularly a political motive, for it is 'a subtle vindication, on the one hand, of the Empire against the Papacy, on the other of the "rex Teutonicorum" against the "rex Francorum"' (Chambers, ii. 64). In the 14th and 15th centuries the religious drama flourished in Germany, its most characteristic form being the Passion-play, of which numerous texts survive. There were also some cycles, such as those for Corpus Christi from Swabia (15th cent.). The Passion, which came in the 14th and 15th centuries to be the chief theme of the religious drama in France and Germany, had seldom been represented in the liturgical drama. The nearest approach to a Passion-play was found in the dialogued versions of the 'Planctus Mariæ.' The earliest Passions seem to have been in Italy (Siena, *c.* 1200; Padua, 1244). The earliest text is German from Benediktbeuern. Like other mediæval dramatic forms, the Passion-play grew by additions and by amalgamation with other forms, either 'prefigurations' of Christ or events following His Passion. By the 14th cent. the form was well developed, but its main period in Germany was from 1400 to 1515. Great 'Passions' were played at Frankfort, Alsfeld, Friedberg, and other towns. Some, as at Eger and Donaueschingen, were cyclical in extent.

7. Modern survivals.—Traces of mediæval dramatic custom can be found here and there in Europe to the present day. In general the survivals are no more than dumb show like the popular *crèche*, or representation of the infant Christ at Christmas, which is, however, rather a reversion to the ceremony from which the Christmas play was derived than a survival of the play. Most notable in this way are the representations of the Passion-play that have been either kept alive in out-of-the-way places or revived, most famous among them being that of Oberammergau. The first mention of it is in 1633, and the oldest text, dating from about 1600, contains traces of two earlier texts (K. Trautmann, *Oberammergau und sein Passionsspiel*, Bamberg, 1890). In 1662 the text was altered by the weaving into it of the version of Sebastian Wild, the Augsburg Meistersinger, and parts of that of Johann Aelbel. In the middle of the 18th cent. it was further remodelled by the Benedictine Rosner after the model of the Jesuit drama, and in 1780 Rosner's bombastic version was simplified by Knipfelberger. Its present simple and dignified form is the work of two authors, P. O. Weiss and M. Daisenberger. The play is given every ten years, in pursuance of the original vow on deliverance from pestilence. Other versions of the Passion-play have been performed in recent times at Brixlegg and Vorderthiersee in the Tyrol and at Höritz in southern Bohemia (A. Hauffen, *Ueber das Höritzer Passionsspiel*, Prague, 1894). Representations of this kind occur to this day in southern Italy (T. Trede, *Das geistliche Schauspiel in Süditalien*, Berlin, 1885).

LITERATURE.—i. GENERAL.—W. Creizenach, *Geschichte des neueren Dramas*, Halle, 1893 ff.; E. K. Chambers, *The Mediæval Stage*, 2 vols., Oxford, 1903; bibliography in Chambers, ii. p. xiii ff., and in F. H. Stoddard, *References for Students of Miracle Plays and Mysteries*, New York, 1887; lists of texts in Chambers, ii. 407–461, and Petit de Julleville, *op. cit. infra*, ii.

A. I. DU P. COLEMAN and A. D. COMPTON.

MIRROR.—The invention of the mirror[1] seems to coincide with the beginnings of the higher civilization, following upon the institution of metallurgy. It is clearly an instance of adaptation of the polished reflecting surface of metals. The Egyptian mirror apparently set the mode for all subsequent developments of the instrument, at least in the Western world.

1. Mirrors of the ancients.—These were almost invariably hand-mirrors for ladies' toilette purposes. The Egyptian were made of bronze (not brass, as often stated), or similar mixed metal. From six to eight inches in diameter, they were elliptical in shape, with the long axis at right angles to the handle, which also served as a stand. The polish was extraordinarily fine, and in some cases still remains.[2]

Mirrors are not mentioned in Homer, but were used in classical Greek times, and borrowed by Rome. Few Greek mirrors are extant, but their shape suggests derivation from Egypt, as does that of the Roman mirror from Greece. Both Greek and Roman artificers preferred the absolutely circular form, with the handle as in the Egyptian original. They were usually made of bronze, with 20 to 30 per cent of tin; some specimens are silver or silver-plated. The Romans developed the box-mirror, consisting of two circular disks joined by a hinge. At the back of Greek and Roman mirrors embossed work was usual.[3] The most numerous collections are from Etruria. The Etruscans were sedulous imitators of Greek art, and much of their work on mirror-backs is interesting and intelligent, though lacking the fineness of Greek technique. Pliny notes the manufacture of glass mirrors backed with tinfoil at Sidon,[4] but the invention did not succeed, and had to be repeated in the Middle Ages. The Romans made large mirrors also, similar to the modern cheval-glasses, but fixed in the walls of rooms, and working up and down like a window-sash.[5] The mirror-case was especially developed by artists. Metal mirrors were known in northern India by the Christian era,[1] and they were used to some extent by the Central American peoples,[2] while the Hebrews were familiar with them at an early period for women's use.[3] In Greek art Aphrodite is sometimes represented as holding a mirror; and in the Indian marriage ritual a mirror is placed in the left hand of the bride to enable her to dress her hair.[4] A mirror and a comb are not infrequently found on Scottish sepulchral monuments of the early mediæval period, but their precise signification is still uncertain.[5]

---

[1] The word is derived from Lat. *miratorium* (*mirari*) (*OED*, *s.v.*). Similar formations are found in Skr. *darpaṇa*, 'mirror'; Gr. *δρωπάζω*, *δρώπτω*, 'see'; Pers. *āyīnah*, Baluchi *ādēnk*, 'mirror'; Av. *dī*, 'see'; O.H. Germ. *spiagal*, Germ. *Spiegel*, 'mirror'; Lat. *speculum*; O. Ch. Slav. *zrŭcalo*, 'mirror,' *pozrŭcati*, 'see.' The mirror is also connected with the shadow—O.H. Germ. *scûkar*, 'mirror,' *scû*, 'shadow'; O. Ir. *scathán*, 'mirror,' *scáth*, 'shadow'; O. Ir. *scaterc*, 'mirror,' for **scáth-derc*, 'shadow-seeing' (C. C. Uhlenbeck, *Kurzgefasstes etymol. Wörterb. der altind. Sprache*, Amsterdam, 1899, p. 122; W. Geiger, *ABAW*, 1 Cl. xix. i. [1890] 113; O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, p. 784). Here also belong Heb. מַרְאָה, 'mirror,' רָאָה, 'see.'

2. Mediæval mirrors.—The mirror-case continued to be popular among the rich, but the mirror itself became smaller, and was usually carried on the person.

> 'Probably the largest mirror known in the Middle Ages did not exceed the size of a plate.'[6]

The circular shape was retained.

> 'The reflecting surface was usually of polished steel or other metal, and steel mirrors were still in use in the sixteenth century.' There is a reference to a 'round "looking-glass" of Catherine of Aragon, which was probably a polished metal surface with a sheet of glass over it. An arrangement of this sort had been employed since the thirteenth century, and in the inventories of the Dukes of Burgundy, dating from the fifteenth century, we hear of the *Verre à mirer*, evidently a looking-glass.'[7]

This method is a noteworthy, but futile, attempt at a combination of metal and glass.

> 'Considering the great quantity of glass manufactured for windows from the thirteenth century onward, it would have been curious if the idea of employing a substance admitting of so high a polish had not suggested itself to the mirror-makers of the day. But until a really satisfactory metallic backing was discovered, the advantage of a looking-glass over a steel mirror would be slight, and this fact may account for the persistence of the latter for domestic use down to so late a period. The amalgam of mercury and tin which gives the modern looking-glass its efficiency was not known before the sixteenth century.'[8]

A final improvement was effected in the middle of the 19th cent. by the French invention of plate-glass. Backing for glass was known in the 13th cent., and in the 14th there was a gild of glass-mirror-makers in Nüremberg, but it was first in Venice that mirror-making acquired commercial importance.[9]

The mirror naturally has lent itself to the production of curiosities, mostly the result of experimentation. The effects of concave and convex surfaces seem to have been known at an early time in both the East and the West. The 'magic mirror' of China and Japan reflects on a screen an image of its back.[10] In mediæval Europe small spherical glass mirrors were known as *Ochsenaugen*. The use of reflectors to produce light and heat was early discovered, as by the Greeks and Central Americans.[11] Mirror-writing is often practised by ambidextrous persons, as by Leonardo, and it also occurs pathologically in forms of aphasia.

3. Superstitions connected with the mirror.—The property of reflecting images naturally inspires wonder, and thus tends to produce superstitious beliefs and practices. Most of these are connected with the common idea that the reflexion of a person is his soul.

> 'A savage who had been made to look into a mirror exclaimed, "I gaze into the world of spirits!" One of Darwin's children, at nine months old, turned to the looking-glass on hearing his name called.'[12]

These two cases illustrate the connexion between soul, self, and consciousness. The philosophy of Hinduism was fond of mirror-analogies when discussing this connexion.

> 'The person . . . that is seen in the eye, that is the Self. . . . This is *Brahman*.'[1] 'The person that is in the mirror, on him I meditate.' 'I meditate on him as the likeness. Whoso meditates on him thus, to him a son is born in his family who is his likeness, not one who is not his likeness.'[2]

In the simpler thought of uncultured peoples, however, the reflexion is a spiritually real soul.

> The Andamanese 'do not regard their shadows, but their *reflections* (in any mirror) as their souls,'[3] and in one account of the Fijians a man's likeness 'in water or a looking-glass' was regarded as his soul.[4] Savages of New Guinea when first looking into a mirror thought their reflexions were their souls,[5] while the New Caledonians believed that their reflexions in mirrors or water were their souls,[6] and the Macusis of Guiana held the same belief about the reflexion in the eye of another.[7] Many terms for the soul point to the same notion. The Melanesian *atai* ('soul') means 'reflexion,'[8] and the same meaning belongs to many terms among the Indonesians.[9]

Hence the frequent notion that there is something uncanny about a mirror, a belief which culminates in the idea that the reflecting surface has abstracted and retains the soul.

> There is a pool in a Saddle Island river (Melanesia) into which any one who looks dies; the malignant spirit takes hold of his life by means of his reflexion in the water.[10] The Zulus have a similar terror of looking into any dark pool; a beast therein will take away their reflexions.[11] The Aztecs supposed that to see one's reflexion in water wherein a knife had been placed meant a stab to the soul,[12] and the Galelarese forbid their children to look in mirrors, which will take away their beauty.[13] Manu said (in rules for a *snātaka*): 'Let him not look at his own image in water.'[14] The old Greeks had the same maxim; to dream of seeing one's self reflected foreboded death, and Frazer explains the story of Narcissus on these lines.[15] The Rabbis laid it down that one must not look into a mirror on the Sabbath, unless it were fixed on a wall. Later they forbade men generally to use mirrors, as being effeminate, reserving, however, the privilege to their own relatives, as being 'close to the government.'[16] The Rabbinical idea was doubtless merely puritanical.

With these notions is connected the custom of covering mirrors or turning them to the wall after a death.

> 'It is feared that the soul, projected out of the person in the shape of his reflection in the mirror, may be carried off by the ghost of the departed, which is commonly supposed to linger about the house till the burial.'[17]

This practice is widely spread over Europe, and occurs in Islām.[18] Similarly, sick persons should avoid looking into a mirror, and it is advisable for a bride to refrain from using a mirror in modern Greece.[19] Since the mirror holds the soul, it is said to be extremely unlucky to break a looking-glass.[20]

> 'A mirror,' say the sectarian Russian Raskolniks generally, 'is an accursed thing.'[21]

On the other hand, a mirror, as when set in a ring, may be used to repel demons.[1]

Divination by means of a reflecting surface is an ancient and world-wide practice, its principle being that figures representing the souls of persons at the moment or in future actions may be seen. A pool of ink is a common substitute for the mirror (cf. art. CRYSTAL-GAZING), and a combination of mirror and pool of water was used at Demeter's sanctuary at Patræ, where was a sacred spring, but its use was permitted only in cases of sickness.

> 'They tie a mirror to a fine cord, and let it down so far that it shall not plunge into the spring, but merely graze the surface of the water with its rim . . . they look into the mirror, and it shows them the sick person either living or dead.'[2]

It is also used, especially in German and Slavic lands, to discover one's future husband or wife.[3]

Divination by mirrors is a variety of a widespread method of 'seeing,' the most frequent instrument being the crystal ball.[4] A magic mirror possessed of the power of speech is not uncommon in folk-tales;[5] and in Shintoism actual worship is rendered to mirrors which, originally presented to deities, have come to stand for the divine beings themselves.[6]

The supernatural associations of mirrors are chiefly the foregoing, but one or two of a miscellaneous order may be noted, as illustrating the general subject.

Pausanias describes a temple near Megalopolis, within which was a mirror fixed on the wall. 'Any one who looks into this mirror will see himself either very dimly or not at all, but the images of the gods and the throne are clearly visible.'[7] The Greeks kindled sacred fires by means of the mirror or crystal, and the same was the case in China and Siam, while in the Inca kingdom the new fire was kindled at the summer solstice by means of a concave mirror turned to the sun.[8]

4. The mirror in metaphor.—The optical properties of the mirror are so important and impressive that all civilized thought is permeated by ideas derived thence. One or two only can be cited. The Hebrew parœmiographer says: 'As in water face answereth to face, so the heart of man to man,'[9] while the Buddhist *suttas* speak of 'a way of truth, called the Mirror of Truth.'[10] Mirror was a favourite component of titles of books in Elizabethan literature, in its meaning of 'true description,' and its meaning of 'pattern, exemplar, model' is similar. Shakespeare writes 'the mirror of all Christian kings.' 'To hold as 'twere the mirror up to Nature' uses the simplest connotation of the term. An interesting metaphor is used of psychic processes; 'the mirror of the mind' occurs both in Chaucer and in Shakespeare. Among new sources of metaphor are the two remarkable biological and chemico-physical analogies to the optical fact of mirror-image (in which right becomes left and *vice versa*). All vertebrate animals, many invertebrate, and the leaf and other systems of plants are bilateral, one side being the mirror-image of the other, while the formation of right-handed and left-handed crystals is connected with the division of acids into right and left according to the effect produced in relation to polarized light.

LITERATURE.—With the exception of the well-known archæological works on antique mirrors and popular folklore collections, the relevant literature is included in the article.

A. E. CRAWLEY.

MISHMIS.—The Mishmis are a tribe who inhabit the Mishmi hills, a section of the mountain ranges on the northern frontier of Assam, which shut in the eastern end of the Brahmāputra valley, between that river and the Dihāng, a region practically unexplored, consisting of steep ridges, covered as a rule with tree forest, and including some peaks 15,000 ft. in height (*IGI* xvii. [1908] 377 f.). They are divided into four tribes, speaking three distinct but probably connected languages. The most western tribe is known as Midu, Midhi, Nedu, or Chūlīkaṭā, 'hair-cropped'; they inhabit the Dihāng valley with the adjoining hills. To their east are the Mithun, or Bebijiyā, 'outcasts,' who speak practically the same language. East of the Bebijiyās are the Taying or Digāru Mishmis, beyond the Digāru river. The Mijus are still further east, towards the Lama valley of Dzayul, a sub-prefecture of Lhāsa. Most of these live beyond the British frontier. The numbers counted at the last three Censuses in Assam were 217, 98, and 271 (*Census Rep. Assam*, 1891, i. 203; 1901, i. 139; 1911, i. 134).

1. Ethnology.—The Mishmis have been identified by some authorities with the Miaotzu or Hmeng, the aborigines of Yunnan, whose name has been interpreted to mean 'children of the soil,' 'roots,' or as a contemptuous reference to their 'simple dirt' (J. G. Scott and J. P. Hardiman, *Gaz. Upper Burma*, pt. i. vol. i. [Rangoon, 1900] p. 597 ff.).

> 'So far as the means at our disposal permit us to draw conclusions, it seems most probable that these four tribes belong neither to the Tibeto-Himalayan nor to the Assam-Burmese branch of the Tibeto-Burman languages. They seem to be descendants of clans which, when the parting of the ways between the two branches took place, accompanied neither, but made their own way at different periods into the hills overlooking the Assam valley from the north' (G. A. Grierson, *Census Rep. India*, 1901, i. 263).

2. Relations with the British Government.—The British first came in contact with the Mishmis in 1825, when Lieut. Burlton reported that the 'Mishmah' were inhabited by tribes 'who were very averse to receive strangers.' Other officers visited them between that time and 1851, when M. Krick, a French missionary, was murdered by them. Then followed a succession of outrages. In 1885 one of their headmen was taken to visit the Calcutta Exhibition. Soon after his return he died, and the tribe, holding the British Government responsible for his loss, decided that the head of a British subject should be buried with him, in order to propitiate his spirit. So they slew a British subject and carried off his head. An expedition in 1899–1900 reduced them to submission, and since that time they have given little trouble. But they are keen tappers of rubber, and it has been found expedient to prevent them from crossing the Brahmāputra into British territory for that purpose (B. C. Allen, *Gaz. Lakhimpur*, 1905, p. 55 ff.).

3. Religious beliefs.—The best account of their religious beliefs is that by E. T. Dalton, *Descriptive Ethnology of Bengal*, Calcutta, 1872, p. 16 f.:

> 'The religion of the Mishmis is confined to the propitiation of demons whenever illness or misfortune visits them. On these occasions the sprig of a plant is placed at the door to intimate to strangers that the house is for the time under *tabu*. They appear to have no notion of a supreme or benevolent deity. They worship Mujidagrah as a god of destruction, Damipaon as god of the chase and knowledge, and Tabla as a god of wealth and disease, and a great many others without name. It appears both from Lieutenant Rowlatt and the Abbé Krick's notes that the Mishmis have priests, but they are few in number and have to be brought from a distance when required. M. Krick describes one that he saw at a funeral ceremony. . . . For several days previous to the arrival of a priest, an attendant was employed in singing a devotional chant to the accompaniment of a small bell. There was also a preliminary sacrifice of a red cock and hen, the blood of which was received in a vessel containing some other fluid, and the mixture carefully examined, as it is supposed to indicate if the result will be fortunate or otherwise. At last the priest arrived, dressed like an ordinary chief, but he wore a rosary of shells, and, attached

> to the front of his headdress, two appendages like horns. For two days, at intervals, the priest and his son employed themselves in singing chants, marking the time by waving a fan and ringing a bell; on the third day he put on his chief's Tibetan robe, and assumed what may be regarded as his pontifical dress—a tight-fitting coat of colored cotton, a small apron, a deer skin as a mantle; from his right shoulder descended a fringe of long goats' hair dyed bright red, and over his left shoulder he wore a broad belt embossed with four rows of tigers' teeth, and having attached to it fourteen small bells. On his head he placed a bandeau ornamented with shells, and round the knot of hair at the top of his head a movable plume which turned like a weathercock. This was followed by a wild demoniacal dance; but whether a *pas seul* by the priest, or one in which the people generally joined, we are not informed. The object was, however, to make as much noise as possible to frighten the devils. After this, lights were all extinguished, till a man suspended from the roof obtained a fresh light from a flint. He was to be careful not to touch the ground as he produced it, as the light thus obtained was supposed to be fresh from heaven [cf. *GB^3*, pt. i., *The Magic Art*, London, 1911, ii. 234 ff.; pt. vii., *Balder the Beautiful*, do. 1913, i. 2 ff.]. When the burial is of a person of note, animals are slain, and the skulls arranged round the tomb [cf. *ERE* i. 499; *PR* ii. 225; L. A. Waddell, *The Buddhism of Tibet*, London, 1895, p. 484 n. 1], and under the shed built over the grave, raw and cooked flesh with grain and spirits are placed (the share of the dead), and all the arms, clothes, and implements he was in the habit of using when living. The poor, it is said, bury the dead without much ceremony, or throw the bodies into the river.'

About 1872—the writer gives no clear dates—T. T. Cooper (*The Mishmee Hills*, London, 1873) visited the tribe, and gives some account of their appearance, dress, manners, and customs (p. 180 ff.).

> An earthquake occurred, and they told the chief, Chowsam, 'that the devil residing in a neighbouring mountain had been angry, and rent the side of the mountain' (p. 193).
>
> 'The Mishmees being polytheists, though of the lowest order, it was not difficult to make Poso [another chief] understand the existence of one Great Spirit above all' (p. 197). 'The Mishmees,' he said, 'are very unfortunate. We are everywhere surrounded by demons; they live in the rivers, mountains, and trees; they walk about in the dark and live in the winds; we are constantly suffering from them. . . . In answer to a question as to which demon he thought the strongest, after some hesitation he said that the demon of fire was the strongest and most dangerous, as he dried up the water and burnt the mountains; he was also good-natured, as he warmed them and cooked their food' (p. 198).
>
> 'As to religion, their notions are very vague. Polytheism, encumbered with all the rites and ceremonies of fetishism, is their true creed. The yearly sacrifice and feast in honour of their deceased parents shows that they have some idea of a future state, but I could not find out their particular ideas, as death is a disagreeable subject of conversation among them, and Chowsam always declined to interpret questions relating to it' (p. 238). 'The two most important ceremonies of the Mishmees are undoubtedly those attending deaths and marriages. In the case of sickness a soothsayer is called in, and he generally prescribes the sacrifice of fowls or pigs, according to the state of the patient. These sacrifices he orders as a propitiation of the demon who is supposed to be instrumental in causing sickness. When death ensues, particularly in the case of a chief, mhittons [*mithan*, also called *gayāl*, *bos frontalis* (W. T. Blanford, *Fauna of British India*, *Mammalia*, London, 1890–91, p. 487 ff.)], pigs and fowls are killed without stint, and all the old men and women feast to their heart's content, hospitality being considered a great virtue. They eat in honour of the departed, talking the while of his great and good qualities. The body is burnt after two days, and the ashes are collected and placed in a miniature house, erected close to the family residence. This unique tomb is then surrounded by some of the skulls collected by the chief during his lifetime, which serve as a monument of his past hospitality, while the rest of his treasures are divided amongst his sons, the son-and-heir taking the lion's share. When there are no sons the skulls go to the nearest male relations. The eldest son takes the title of gam, or chief, and holds a yearly feast in honour of his deceased father, which is considered one of the most sacred observances among them' (p. 237).

When Cooper suffered from an abscess in his ankle, a soothsayer or exorcist was called in. He was dressed like the other Mishmis, but allowed his hair to fall in long, unkempt masses over his shoulders. After inspecting the patient's foot, he stripped himself naked except for a small loincloth, and produced a handful of rushes from his waistbelt. These he began to plait and unplait, accompanying the operation with a buzzing noise, as though he were counting. Occasionally he would place his hand on the painful spot, and then shake the rushes over it, keeping his eyes shut the whole time. After nearly an hour he announced that two fowls must be killed, which would ensure recovery. He declined to answer what devil had been at work, and what effect the rushes had on him (p. 252).

LITERATURE.—The chief authorities are quoted in the article.

W. CROOKE.

MISHNA.—See TALMUD.

MISSALS.—See RITUAL.

MISSION (Inner).—*Die innere Mission* is the name used in Germany to describe the sum-total of those efforts which are made by the Protestant Churches to ameliorate the conditions of the suffering of the poor and to bring the institutions and usages of society into harmony with the will of God. It is to be distinguished from *Die äussere Mission* ('foreign missions') in that it confines its activities to Germany and Germans resident or sojourning in foreign lands. It is an endeavour to overcome the heathenism found within the borders of a country professedly Christian. It is to be distinguished from mere humanitarian effort in that it definitely makes temporal and material aid a means to spiritual redemption, and from the official activity of the pastors and paid officers of the Church in that it works through the voluntary agency of individual Christians or groups of Christians, the pastor's office being to arouse the spirit of willingness and marshal its powers for the purpose of redeeming love. It aims at realizing in sacrificial service the universal priesthood of believers.

The movement originated after the close of the Napoleonic Wars when orphan homes were established for children whose parents had lost their lives in the war (Johannes Falk, Graf Adalbert von der Ricke, C. Heinrich Zeller). A number of societies and institutions arose organized on a large scale for the care of the poor, the nursing of the sick, and the saving of destitute children. This grew out of the pietistic movement (see PIETISM), and was largely inspired by the efforts of Great Britain in the foreign missionary field, the foundation of the Bible Society, the work of Mrs. Elizabeth Fry, and the City Missions. Conspicuous among the leaders were Johann Hinrich Wichern (1808–81), who in 1833 founded at Hamburg the *Rauhe Haus* (a reformatory institution built upon the household system with a training home for lay-workers), and Theodor Fliedner (1800–64), who in 1826 founded at Kaiserwerth the first society for prison-visiting in Germany, in 1833 the first refuge for discharged female prisoners, and in 1836 the famous *Diakonisseninstitut* for the training of nurses and infant teachers.

The name 'Innere Mission' was first employed in a narrower sense by Friedrich Lücke, of Göttingen, in *Die zweifache, innere und äussere Mission der evangelischen Kirche* (Hamburg, 1843), to mean work among the lapsed members of the different Christian communities and the fortifying of a weak church with the help of a strong, while Wichern broadened out the meaning of the term to include all practical Christian work in the homeland and among Germans in foreign lands (*Diaspora*).

It was Wichern who first organized the movement on a comprehensive scale in 1848. The revolution of that year roused the Church from its apathy, and opened its eyes to the glaring evils of heathendom which had grown up in the midst of the nation. A Church Diet was summoned at Wittenberg, where 500 representatives of Protestant German Churches assembled. Standing on Luther's grave, Wichern delivered a memorable address, picturing the wide-spread power of the paganism which had arisen in their midst and the fruits which it had produced, and calling upon the

Churches to join hands in remedying these evils. He sketched on large and statesmanlike lines the programme of the remedial activities needed, and proposed the formation of a central committee (*Centralausschuss*), consisting of ministers and laymen, to make a survey of the fields of work, place the various societies already at work in touch with one another so as to save overlapping, point out the need of new effort and help such effort to succeed, guide the movement as a whole, and, above all, make it clear that all the several ministries, of whatever kind, were animated by the one divine spirit of redeeming love in Christ. Thus was established a free confederation of all the activities of the Protestant Churches, so far as these were extra-official. The object of the Innere Mission, as defined in the first report of the *Centralausschuss*, is 'that the Christian Church with all its resources, and through all its agencies, may fill and quicken the whole life of the people in all ranks of society, inspire all social arrangements and institutions with the might of a love energizing heart and life—and through all its living members labour to save the neglected and the poor.' The Innere Mission was to be 'the practising doctor in the great hospital of the people.' Its programme and policy are set forth in full in *Die innere Mission der deutschen evangelischen Kirche, eine Denkschrift an die deutsche Nation*, written by Wichern at the instance of the Central Committee and published in April 1849. This book sets out the scope of the work and the relations of that work to the activities of the State on the one hand, and of the Church on the other. For twenty years Wichern remained practically the directing spirit. Pamphlets (*Fliegende Blätter*) were published annually at the *Rauhe Haus* giving reports of the various agencies carried on.

The most comprehensive survey of the work is given in two Jubilee publications of the *Centralausschuss* in 1899 (*Statistik, Fünfzig Jahre*). These contain reports by different authoritative writers on the work done in each of the following departments:

(1) The care of children, crèches, infant schools, care of cripples, Sunday schools and children's services, refuges and orphanages, country holidays for city children.
(2) The care of adolescents, associations and homes for apprentices and journeymen, schools of domestic economy, Rescue homes, *Jugendbund für entschiedenes Christentum* (analogous to Christian Endeavour Societies).
(3) The care of tramps and the homeless, colonies for unemployed, homes for girls, railway-station missions, Girls' Friendly Societies and Lodges, missions to soldiers and sailors, river and canal boat population, railwaymen, navvies, brickyard-workers, waiters.
(4) The quickening of the Christian spirit, city missions, men's brotherhoods, support of weaker Churches, Christian art associations, lectures.
(5) Work among emigrants and Germans in foreign lands (*Diaspora*), pastorates at holiday resorts.
(6) Care of the poor, sick, and infirm, district nursing associations, Red-cross work in war, homes for imbeciles, epileptics, inebriates, blind, deaf and dumb.
(7) Combating of social evils, Sunday observance, housing reform, prison missions, temperance work, savings banks, anti-gambling work, friendly societies, building societies, Christian education.
(8) Christian literature, dissemination of Bibles, tracts, and sermons, periodicals, libraries, colportage.
(9) Organization of Inner Mission according to province and district, conferences.
(10) Training of workers for prisons, asylums, unemployed colonies, nursing, etc., courses of instruction for social workers.

As the result of the Innere Mission the whole of Germany has been covered with a network of philanthropic agencies, imbued with the Christian spirit; the social conscience has been quickened and enlightened, and the efforts of the Churches have been co-ordinated and wisely directed. The State has co-operated. In 1852 the brothers of the *Rauhe Haus* were allowed to act as warders in Prussian prisons, and Wichern was commissioned to visit the prisons, investigate their conditions, and suggest reforms. Later, Wichern was appointed Councillor of the Ministry of the Interior and made a member of the *Evangelischer Oberkirchenrat*. The work of the Innere Mission paved the way for the social legislation which followed the Franco-German War. The most notable results of the Innere Mission are the mobilization of women for Christian work, especially in sick-nursing, the Elberfeld system of poor-relief and its extension to other German towns, and the work of Pastor F. v. Bodelschwingh (b. 1831), who founded at Bielefeld a colony for epileptics and unemployed, and organized, with the help of the Government, the national scheme of relief-stations for tramps.

In the Church the Innere Mission has given the laity, and especially women, their sphere of service; it led to the official institution of the diaconate in the Evangelical Church in 1856, and gives material expression to the universal priesthood of believers. It has filled a place in the educational system by caring for orphans and infants, and counteracting the movement for the secularization of schools.

The movement has affected other countries, especially Switzerland (J. A. Bost), Denmark (Wilhelm Beck), Norway (P. Harem), and Holland (O. G. Heldring). Florence Nightingale received her first training at Kaiserwerth. The work of Thomas Guthrie (Ragged Schools), William Pennefather (Mildmay Conference), and John Brown Paton (Lingfield Homes for epileptics, training colony for unemployed at Wallingford, National Home Reading Union, Social Institutes, Boys' Life Brigade, Girls' Life Brigade, Civic Leagues of Help) was consciously influenced by the Innere Mission. In 1873 J. B. Paton and Francis Morse summoned a conference at Nottingham 'to consider the practical relations of Christianity to the social wants and evils of our time,' at which Paton expounded the Innere Mission of Germany, and a union of all existing Christian charities and societies working for social ends was formed at Nottingham. W. T. Stead took up the same idea in his agitation for a Civic Church. The nearest approach in England has been the organization of Civic Leagues (or Gilds) of Help (beginning 1906), which represent an attempt to adapt the Elberfeld system to the conditions of English city life and bring all the social activities of the civic community into touch with each other.

MISSIONS (Buddhist).—**1. In China.**—Buddhist missionary enterprises outside of India were started by King Aśoka in the latter half of the 3rd cent. B.C. On the other hand, a later Chinese record informs us that in 217 B.C. (in the reign of Shih-Huangti of the Tsin dynasty) eighteen Buddhist monks were brought to the capital of the empire. The authenticity of the information may be questioned, but, when we take into account the facts that Chinese Buddhists used to ascribe the 7th cent. B.C. to Aśoka's reign, and that, in spite of that, the date of the story almost agrees with the historical date of Aśoka, the tradition seems not to be a mere forgery. About one hundred years after that event, as stated in an official record, another contact of Buddhism with the Chinese took place. An expedition sent to the Western regions by the Emperor Wu, the most ambitious sovereign of the former Hān dynasty, in 121 B.C. brought a golden statue and prisoners; and in 2 B.C. the Yuechi ambassadors are said to have brought some Buddhist scriptures. These stories point to the spread of the Buddhist missions in Central Asia in the centuries immediately after Aśoka's missionary enterprises.

Historical records agree in assigning to A.D. 67 the first official introduction of Buddhism into China. The Emperor Ming, stimulated by a dream, sent an expedition in search of the golden man of whom he had dreamt (A.D. 64), and, when the expedition returned in 67, it brought not only Buddhist statues and scriptures, but also two monks, both Indians, Kāśyapa Mātaṅga and Dharmarakṣa by name. The first Chinese Buddhist book, containing the forty-two sayings of Buddha, was written by Kāśyapa, and translations of several texts are said to have followed it. The Pai-ma, or White Horse Temple, was built in Loyāng, the capital, and soon after the emperor's brother built another temple. Conversions *en masse* are said to have taken place in 71, many nobles and Taoist priests being among the converts. The new religion was received with open arms and heart; the way must have long been prepared for it.

There is a gap of about eighty years between the mention of the first missionaries and the advent of two other monks, one of whom was Shih-kāo of Parthia, who came to China in 148 and worked till 170. He is said to have been of royal blood and to have left his country because of the fall or decline of his own royal family. This is one of the evidences that Buddhism had a strong foothold in Parthia and Central Asia. It is quite conceivable that Chinese Buddhism had its source close to China's western borders at that time. Shih-kāo's works are mostly texts from *Āgamas*,[1] the counterparts of the Pāli *Nikāyas*, and some of them treat of hygienic matters, connected with the practice of counting the respirations, or *ānāpāna*. Perhaps we may see here the first of the medical works of the missionaries.

For a century after the great Parthian translator we have only scanty records of missionaries, yet we have reason to suppose that missions were going on slowly. The Buddhist propaganda in this period consisted chiefly in translations of the scriptures and in miracle-working. Certainly the works of art and architecture in a new style, aided by elaborate rituals and music, were great attractions; the Pai-ma temple is said to have been decorated with mural paintings representing Buddha and his saints; but the worship of Buddha's relics and the miracles worked by them are mentioned oftener than the works of art. The relics (*śarīra*, Chin. *shöli*) were represented by pearls of mysterious origin, and the miracles ascribed to them were mostly the rising of variegated mists from them. Little is heard of works of charity, though they are sometimes mentioned later than the 4th century. That the translations played a great part in the Buddhist missions is proved by the work done during the five centuries after the first undertaking. This was quite natural, because the Chinese already had rich literatures, both Confucianist and Taoist, when Buddhism came to China, and the new religion found it urgent to confront them with scriptures of its own.

Besides the translations, the first apologetic writing is ascribed to A.D. 195, and a series of apologetics and polemics followed.[1] This literature continued throughout the whole history of Chinese Buddhism. Its most flourishing period was in the 4th and the 5th centuries, during which Taoism was a powerful rival of Buddhism. These polemics were mostly carried on by native teachers, while foreign missionaries were occupied with translations.

Though polemics do not belong properly to missionary works, we may here consider one instance, in order to throw a side-light on our subject. In 195 Mou-tzu, a Confucianist convert, wrote 37 sets of questions and answers in defence of his new faith. These questions may be divided into two groups: (1) those from the Confucianist side, asserting that Buddha's ascetic religion was against humanity, and (2) those from the Taoist side, asserting that immortality (or, rather, physical longevity) was attainable only by Taoist practices, not by Buddhist teaching. Mou-tzu defended his religion with abundant quotations from Confucius and Lao-tse, but the doctrines with which he confronted the attacks were really Buddhist. The transcendental idealism of supreme enlightenment was the position which he assumed against Confucianist positivism, and the teaching of impermanency of physical life was his standing-ground against Taoist mysticism.[2] This may be taken as a typical example of the apologetic writings of the period.

The fall of the Hān dynasty in 220 and the subsequent division of the country into the Three Kingdoms were of great significance for the history of the nation, both politically and religiously. From this time down to the close of the 6th cent. the country was divided into many contending dynasties and kingdoms, and in a country like China, where the ruler's will determines everything, the fate of the Buddhist mission was always influenced by the vicissitudes of the ruling dynasties. Centres of missions were identical with the residences of dynasties, and the missionaries worked under their patronage, or were expelled by rulers who preferred Taoism to Buddhism. Under these circumstances three important centres of the mission grew up:

---

[1] Cf. B. Nanjio, *Catalogue*, p. 382; Anesaki, 'The Four Buddhist Agamas in Chinese,' in *TASJ* xxxv. 3 [1908], pp. 17 f., 28–34.

[1] There are collections of these writings; see Nanjio, nos. 1471, 1472, 1479, 1480, 1481.

[2] The question begins with 'Who is Buddha?' The answer to it shows that the author was acquainted with Buddha's life through information which is very similar to the *Lalitavistara*. Some critics doubt even the existence of this person, on the ground that the polemic literature flourished not earlier than the 4th cent., but we omit discussion of the question and follow the legend.

(1) Chāng-ān (the modern Sing-ān), (2) Lo-yāng (on the Hoang-ho) in the north, and (3) Chien-yeh (the modern Nanking) in the south. During the first half of the 3rd cent. the last two were the respective capitals of two of the Three Kingdoms, while the third was situated far in the west, beyond the reach of Buddhist influence. After a short interval of unity (280–302) these three places remained as the three centres of China in all the vicissitudes of rulers and States. Thus the missionaries who came to China by land routes worked mostly in the north, deriving their sources from Central Asia or the north-west of India, though some went further to the south.

The 4th cent. was a period of confusion in China, caused by a hopeless division of the country and by intrusion of invaders from the north. Yet Buddhist missions proceeded to cover the greater part of the land, and many of the contending rulers welcomed missionaries from Central Asia. One of these men, Fo-t'u-cheng, who came in 310 to Lo-yāng from a 'western country,' laboured not as a translator but as a social worker. It is said that he was 'well versed in magic formulæ and saved many people from diseases and sufferings by his supernatural attainment.' No fewer than 893 monasteries and sanctuaries were established by him, and his 'disciples' numbered 10,000. But his significance in Chinese Buddhism lay perhaps more in his having educated one of the most powerful thinkers, Tao-ān, than in his actual works; though he laboured mostly in the north, his influence was later propagated to the south by his disciples.

The demarcation between north and south became more conspicuous when, at the beginning of the 5th cent., two comparatively powerful dynasties divided the country into two. While the northern, the Wei dynasty, patronized those who came from or through Central Asia, the southern, the Sung dynasty, invited missionaries from S. India, who came by the sea route. Moreover, the repeated persecutions of Buddhists by Taoist rulers of the northern dynasties drove many missionaries and Chinese monks to the south, and it was through them that a start was made in establishing groups of men of similar tendencies, which became the origin of sectarian division in Chinese Buddhism.

Among those who worked in the north the most prominent was Kumārajīva, a native of Karachar. He came to Chāng-ān in 401, having been invited by the prince of the Tsin dynasty, and, being highly patronized by the latter, he worked there with great success for more than ten years. His lectures were attended by crowds from various classes of people, and his work of translation was assisted by the best scholars and men of letters. It is no wonder that the translations ascribed to him are ranked as classical Chinese, and that his translation of the *Lotus of the True Law* ([*q.v.*] *Saddharmapuṇḍarīka*) remains the most valued and revered of the Chinese Buddhist scriptures.[1] Kumārajīva was apparently a monk, but his conduct was very irregular, for he lived with many concubines; yet his talent was so appreciated and his fame so high that his patron and the people honoured him, despite his neglect of Buddhist discipline and in spite of attacks heaped upon him.

A powerful rival, however, appeared in the person of Buddhabhadra, who was invited to Chāng-ān in 398. He is believed to have arrived at the coast of Shantung by the sea route, having once failed to come by land. In contrast to Kumārajīva, he observed austere rules of monastic life, and instructed his followers in discipline and in meditation. At last a critical rupture between the two great men broke out, and Buddhabhadra took refuge in the south, where Tao-ān's disciples were living secluded in a monastery on Mount Lu-shan, in the modern province of Chiang-hsi. The leader of the group was Hui-yüan († 416), and its members were monks, poets, and philosophers who were disgusted with the troubles of the world and devoted themselves to meditation and conversation with one another. Here Buddhabhadra found men more congenial than the Buddhists of the north, and instructed them further in the secrets of Buddhist mental training. In this group of thinkers we see Chinese Buddhism quite acclimatized to the native soil, especially to the poetic and transcendental mood of the southern Chinese, and preparing for further union of Buddhist meditation with Chinese quietism. It was on this ground that a definite school of meditation, known as Shan-no (Skr. *dhyāna*), later established itself and further impressed Buddhism with the poetry of the valley of the Yang-tzu. Although the followers of the Shan-no school trace their origin to Bodhidharma, who is believed to have come to China by sea in 520, the further source is to be found in the group of recluses at Lu-shan who welcomed Buddhabhadra. After all, we can assign the foundation of Chinese Buddhism, relatively apart from foreign missionaries, to Tao-ān and Hui-yüan. Yet, parallel with this native movement, missionary work was proceeding, both in the north and in the south.

As we have mentioned, the south welcomed Indian missionaries, many of whom came by sea, and we find a sudden growth of sea-communication with India from the dawn of the 5th century. The pioneer of the sea-voyage from Ceylon to China was the famous pilgrim Fa-hian, who arrived at Shantung in 414, and who was followed by a series of Buddhists who sailed to China and worked mostly under the patronage of the southern dynasties. The most eminent of these was Guṇavarman, who came to Canton from Ceylon, *via* Java, in 424. He laid the foundations of two monasteries called Chao-t'i (Chetiya) and Ch'i-yuan (Jetavana) in Nanking. Here he instructed his followers in the strict discipline of the Vinaya and instituted the system of ordination, as an initiation into Buddhist mysteries, by establishing a special centre for the purpose, after the model of the Sīmā of Nālandā (*q.v.*). The arrival of a number of Siṁhalese nuns in 434 under the leadership of a certain Tissara (?) was probably connected with his institutions and intended for starting nunneries after the model of Sinhalese Buddhism. Another group of nuns came from Ceylon in 438. Among those who followed the footsteps of Guṇavarman are to be mentioned Kālayasas and Dharmamitra, both translators of Mahāyāna texts; Guṇabhadra, the translator of the *Saṁyukta-āgama*; and Saṅghabhadra, the translator of the Pāli *Samanta-pāsādikā*, a commentary on the Vinaya written by the famous Buddhaghoṣa. The last of these is said to have come together with his master, a Tripiṭaka-āchārya.[1]

In the 6th cent. we have two notable instances of sea-journeys. One was the journey of Bodhidharma, mentioned above, who is said to have remained silent for nine years after his arrival in China, but who yet succeeded in impressing his spiritual influence and in opening a powerful stream of meditative naturalism in China and Japan.

---

[1] Later in the 6th cent., the Indians Bodhiruchi and Jñānagupta, the famous translators of many Mahāyāna texts, worked in the north.

[1] See J. Takakusu, *Pali Chrestomathy*, Tokyo, 1900, pp. lxxiv–lxxvi, and *JRAS*, 1896, pp. 416–439. Takakusu's conjecture that this 'master of the Three Baskets' might have been Buddhaghoṣa himself is plausible, but requires further confirmation. The translation of the *Samanta-pāsādikā* is dated 489.

The next instance was the voyage of Paramārtha, who arrived in China in 546 and was invited to Nanking in 548. To him we owe the translations of many of Asaṅga's and Vasubandhu's works and some other books. He was the first propagator of the Yogāchāra Buddhism in China, even before Yuan-chwang, the great translator of the 7th century.

Thus the Buddhist missionaries came to the Middle Kingdom from two sides by two routes, one *via* Central Asia and the other *via* Ceylon.[1] Their works of translation laid the foundation for the further development of their religion in the East, and have given us a rich store of information. On the other hand, we must not forget the pious zeal of the Chinese pilgrims who went to the West in search of truth and scriptures, the most prominent of whom was Fa-hian. It is related that the missionaries coming eastward and the pilgrims going westward met one another everywhere in the 5th and 6th centuries. By the conjoint labour of these men were completed the translations of the four *Āgamas*, together with several of their single parts; the Vinaya texts in various versions, belonging to different schools;[2] and the important Mahāyāna texts, such as the *Lotus*, the *Flower-garland* (*Avataṁsaka*), etc. From these works we can see how Buddhist ideas and expressions were naturalized in the Chinese language, which is totally of different structure from the originals. These books and expressions now form an integral part of the Chinese language and literature.

Up to the 5th cent. Buddhist missions in China consisted chiefly in the work of translation, though we may suppose that popular propaganda was not neglected. Besides these, the monastic institutions were an integral part of the Buddhist religion. The first translation of the *Pratimokṣa* (Pāli *Pātimokkha*) and the regular monastic discipline based on it were carried out by Dharmakāla, an Indian, who came to Lo-yāng in 250. In the 5th cent. we see a further establishment of the regular method of ordination under the government's patronage and supervision, carried out by Guṇavarman in the south, as mentioned above. The sustenance of these ordained monks and nuns was eagerly patronized as a deed of great merit by rulers as well as private persons. We hear that, when, in 446, Emperor Tā-wu of the northern Wei dynasty persecuted Buddhists, there were 3,000,000 of these monks and nuns in his territory alone. This may be an exaggeration; but it is quite conceivable that there were 83,000 ordained patronized by the Emperor Wu (reigned 502–549) of the Liāng (southern) dynasty, the great protector of Buddhism, and himself an ordained monk. Besides these regular monks many ascetics were revered as saints by the people, and they contributed much to the propagation of the religion, but as much to the dissemination of superstitions. They formed an eclectic element in Buddhism by adopting Taoistic and Indian ways of living and practices, but there were some who were really saintly, or at least beyond the world. Their lives are described in the *Book of Saints and Miracles* (Nanjio, no. 1484), and many of them are hardly to be distinguished from the Taoist 'men of mountains.' The people accustomed to look upon the Taoist miracle-workers as holy men were also attracted to these Buddhist 'saints.'

We can mention only one instance of a definite record of charitable work. That was a method of famine relief, called *Seng-chi-su*, or 'Church grain' (*Seng-chi* = Pāli *Saṅghika*), which was inaugurated by Thān-yao, a man of unknown origin, in the southern kingdom in 469; a certain percentage of the crops was stored in monasteries and distributed in cases of famine.

While missionary work was advancing, the foundations of doctrinal division, based on the schools prevalent in India, began to arise. The man who stood foremost in systematic treatises on doctrines was Tao-ān, mentioned above, who wrote commentaries and essays and emphasized the vacuity of the phenomenal world. In his time a translation of an *Abhidharma* text (Nanjio, no. 1273) was produced, and prepared for the promulgation of Vasubandhu's philosophy by Paramārtha sixty years later. The group of Lu-shan, already mentioned, was another sign of sectarian division, and these men opened the way for the later growth of the meditative Shan-no school and of the pietistic religion of the Buddha Amitābha. These were, however, only precursory movements for real sectarian division and dogmatic systematization; a really independent growth of Chinese Buddhism and formation of branches date from the latter half of the 6th cent., and then we pass from the missionary stage.

The unity of China achieved by 580 and the rise of the glorious Tʻāng dynasty in the beginning of the 7th cent. mark a new era of Chinese history, political as well as religious; and we may close our survey of the Buddhist missions with this time. It remains to be added that, in the 8th cent., the mystic Buddhism, known as the Mantra sect, was introduced by two foreign missionaries, Śubhakarasiṁha and Amoghavajra. This form of Buddhism became influential in Japan after the 9th century. Towards the close of the 10th cent. there was again an influx of Indian missionaries, but they are of no great significance.

2. In Tibet.—As in the case of China, the early history of Buddhism in Tibet is shrouded in nebulous legends. The missionaries dispatched by King Aśoka touched the Tibetan borders, probably along the western parts of the Himālayas; but it is more than a hundred years after his time that legend tells us of the establishment of a Buddhist temple on the Tibetan side of the mountain range. This legend and the story of the miraculous descent of four caskets containing Buddhist treasures, in the 4th cent. A.D., may be taken as indications of Tibet's contact with Buddhist missions. Dismissing these legends, the first date that can be assigned with certainty for Buddhism in Tibet is the 7th century. The reigning king was Srong-btsan Gam-po († 698), and Buddhism was introduced into Tibet by his marriage with a Chinese princess and also with a Nepālese princess. The former marriage is confirmed by Chinese history; the name of the princess was Wen-ch'eng, and the marriage took place in A.D. 641. She brought with her Buddhist statues and books, and probably some priests, and established a firm footing for Buddhism in that country, which had gradually been coming into contact with the religion through its eastern and southern borders. The Nepālese princess was the agent in introducing the occult worship of the Buddhico-Hindu goddess Tārā, the event which determined to a great degree the nature of Buddhism destined to prevail in Tibet.

The legends concerning this introduction of Buddhism into Tibet and the succeeding events throw little light on the nature of the missionary labours undertaken by the Buddhists; we are told only of the actions taken by the rulers and their ministers. Certainly the propaganda proceeded among the people by supplying them with new objects of worship and new methods of cult, but the most important factor in determining the fate of the new religion was in the hands of the rulers. The stimuli given by the Buddhist consorts of Srong-btsan Gam-po caused him to send his able minister Thummi Sambhota to India, where he performed a great service for Buddhism and for Tibet by inaugurating a Tibetan alphabet after the model of the Skr. Devanāgarī. Translation of Buddhist books, partly from Chinese, but much more from Sanskrit, was made possible by this system of Tibetan letters. A decisive step in the work of translating Buddhist books into Tibetan was taken more than a century later, in the reign of Khri-Srong De-btsan (reigned 740–786), who was a successful conqueror of borderlands. It was he who invited learned Buddhists from India and gave a decided turn to the nature of Tibetan Buddhism, because those Indians mostly advocated occult mysticism based on the belief in the efficacy of *dhāraṇī*, or mystic formulæ, and magic practices. Among these agents of mystic Buddhism we mention two names: Padmasambhava (or 'Lotus Growth,' with an allusion to the lotus as the womb of the cosmos), who introduced many writings, and his disciple, Pagur Vairochana, the 'Great Translator.'

---

[1] According to Nanjio, App. ii., among 72 translators who worked between 67 and 420, there were 15 Indians, 7 Yuechis, 5 Parthians, 7 Kubhans, 21 from the western countries and 17 Chinese; among them 22 worked in the south, of whom 5 were Chinese. Among 43 workers who worked between 420 and 550, 14 were Indians, 10 from Kubha and other western countries, 4 Siṁhalese and Indo-Chinese, and 4 uncertain. Among them 27 worked in the south.

[2] For the whole extent of the work done up to 520 see Nanjio, pp. xiii-xvii; for the *Āgama* texts see Anesaki, *op. cit.*

The 9th cent. was a period of confusion in Tibet, and the fate of Buddhism passed through various vicissitudes in association with the inclination of the rulers and with their rise and fall. From the latter part of the 10th cent. we see fresh streams of N. Indian Buddhists and a firmer establishment of mystic Buddhism. Besides the translations, many original writings, historical and doctrinal, were composed in Tibetan; and the missionary stage may thus be closed in this period. After all, accessible material concerning Buddhist missions in Tibet is scarce, and what is known relates only to political support by the government, and to translations produced by foreigners and Tibetans.

The 13th cent. was an epoch-making period in the history of Tibetan Buddhism, in connexion with the conquest of Asia by the Mongol Kublai Khān. Buddhist missions seem to have been active before this time in Mongolia, and the Mongol conquerors were partly converted to Tibetan Buddhism, though all of them were eclectics of promiscuous nature. Tibetan Buddhism was definitely established as a theocracy by the energy and ability of Phagspa, the ally of Kublai Khān, and its influence was extended to the northern countries and even to China. The definitely independent, and totally isolated, growth of Tibetan Buddhism is to be dated from the latter part of the 14th cent., when the Mongol dynasty in China fell and the Tibetan reformer Tsong-Kha-pa arose.

3. **In Korea.**—When, in the 4th cent., Buddhism was being naturalized in Chinese culture, its propagation further eastwards began. At that time Korea was divided into three kingdoms and several minor States. Of these three Koryŏ (or Kokuryŏ) was situated in the north, and first came into contact with Buddhism. In 374 two monks, Atao and Shuntao, both of whom are said to have been foreigners, were invited from N. China to the capital of Koryŏ (the modern Pien-yang), and in the next year two temples [1] were built for them, while in 384 a certain Mālānanda was welcomed by the court of Păikchyŏi, which was situated in the middle of the country. Historical records tell of the construction of temples and of the arrival of missionaries, both Indian and Chinese, from China, but little information is given of how they worked in their propaganda, this fact being partly due to the circumstance that these records were compiled by the Confucianists of the anti-Buddhist dynasty of the 15th century.

The Buddhist propaganda advanced to the southern extremity of the peninsula in the middle of the 5th century. An ascetic, nicknamed the 'Black Foreigner,' preached the Three Jewels in the south and is said to have cured a princess of the Silla kingdom by means of incense and spells. He was followed by some missionaries who came to the south and gained hold of the people's minds. The worship of Buddha was received officially by the king of Silla in 528, and this monarch and his successors were not less zealous in the Buddhist cause than the rulers of the north. The construction of temples and organization of Buddhist rites came into vogue. A king who ruled in 540–576 became a monk, and his consort became a nun; and the propaganda advanced so far in his reign that a Korean priest was appointed archbishop of the realm of Silla.

4. **In Japan.**—In nearly a century and a half Buddhism had converted the whole of Korea, and it was quite natural that the tide of the mission should also reach Japan, which had a close communication with the peninsular States and had introduced Chinese learning in the beginning of the 5th century. The religion was first advocated by the Korean immigrants, and then by some natives. After these preparations, it was presented officially by the king of Păikchyŏi to the Japanese court as a sign of homage and friendship in 538 (the date is usually, but erroneously, given as 552). The presents consisted of a gilt statue of Buddha, scriptures, banners, and other ritual instruments,[1] and the message which accompanied these presents said:

> 'This teaching (*dharma*) is the most excellent of all teachings It brings infinite and immeasurable fruits to its believers, even to the final enlightenment (*bodhi*). Just as the *Chintāmaṇi* [2] jewel is said to give inexhaustible wealth to its possessor, so the jewel of this glorious Law never ceases to give response to those who seek for it. Moreover, it has come to Korea from India, far distant, and the peoples of the countries lying between these two are now all adherents of it,' etc.

These words, accompanied with a fine image and works of art, were a marvellous revelation to a people who knew only how to invoke spirits supposed to be little superior to men. The court, on the other hand, was divided into two parties, one favourable to the new worship, and the other hostile, the point of their dispute being whether the newly-offered deity was more powerful than the national deities or not. The hidden motive of the difference, however, was the political clan strife, intermingled with the difference of progressive and conservative policies. During fifty years of strife the fate of the new religion seemed always wavering. But the presents were followed by an incessant influx of priests, monks, artisans, and physicians, as the rearguards of the religion. It was natural that elaborate rites and the practice of medicine should be most effectual means in the conversion of a rather primitive people like the Japanese at that time. Though the religion was not yet accepted officially by the court, some sovereigns cherished it as their faith, and the Soga family, the head of the progressionists, became its zealous advocates. They built topes and temples, and we hear of a nunnery founded by the family in 584. The fall of the conservative party in 587 marked a decisive step in the progress of Buddhism, and to commemorate this event a temple was built, for the first time at State expense. The erection of these and other Buddhist buildings caused constant importations of Buddhist statues, utensils, etc., accompanied by missionaries and artisans, and these displays of art were associated with works of charity. Three institutions—an asylum, a hospital, and a dispensary—were attached to a temple built in 593, and similar institutions were founded here and there in the subsequent centuries.

---

[1] The names of these temples, Syo-mun and I-pul-lan, sound neither Chinese nor Korean.

[1] Cf. W. G. Aston, *Nihongi*, ii. 65 f.

[2] The *chintāmaṇi* is a mythical jewel; Aston's translation, 'to his heart's content,' is not accurate.

In the regency of Prince Shōtoku, the Constantine of Japan (reigned 593-622), the new religion became the State Church. Not only were missionaries and learned monks invited from Korea, but direct communication with Chinese Buddhism was opened (605), and Japanese monks were sent to China for study. The number of the Korean missionaries who worked in this period was considerable, and their achievements in preaching religion, in teaching science, especially astronomy, and in other matters, were a great credit to them; but the new religion found native teachers in less than a hundred years after its introduction. The prince himself gave lectures on Buddhist scriptures and organized various institutions. In short, the Buddhist propaganda in this century consisted first in the display of forms, then in works of charity, chiefly medical practices, and lastly in teaching. The mission, however, did not extend very far from the capital in Yamato. The acceptance of Buddhism was closely connected with the diplomatic relations with the Korean States and China, on the one side, and with the efforts to centralize the government and to unite the divided clans by religion, on the other. The development of religious institutions and the management of State affairs assisted each other.

After the decisive step of the adoption of the Buddhist faith had been once taken, the progress of the religion was sure and steady. Its influence was propagated gradually from the capital to the provinces. Many Korean immigrants, some of whom were usually monks and nuns, were offered homes in various provinces, and the number of native workers increased, some of whom studied in China or Korea. The donations given not only to large monasteries and to clergy of higher ranks, but also to the poor and aged monks and nuns, show how numerous were the ordained natives and immigrants. Besides these Korean and Japanese priests, a certain number of Chinese, Indians, and other foreigners carried on the Buddhist propaganda, the most famous of whom were Kanjin, a Chinese, and Bodhisena, an Indian. The former founded the central institution for ordination and monastic discipline, and was appointed archbishop (754–763 in Japan).[1] He was also an organizer of medical practice and founded a botanical garden. The Indian was of the Brāhman family Bhāradvāja. He came to Japan in 736 with his Annamese and Chinese followers, some of whom were musicians, and worked as a bishop till his death in 760, being known as the 'Brāhman bishop.' These missionaries brought many useful arts and things Indian, which contributed to the influence of the religion, such as musical instruments, Indian harps, and the bas-relief in the Græco-Bactrian style, preserved in the Imperial treasury, dating from the 8th century. Among the native workers there were some learned men, who laboured mostly in the capital as teachers and bishops; others were practical men who worked in the provinces in bridging rivers, constructing roads, canals, harbours, and ponds, opening mountain passages, planting avenues, etc. We do not know how or where these men learned their arts and crafts, but their works were so wonderful to the people that many miraculous stories are told of them even to this day. The mention of some Ainu monks, whom the court favoured with gifts in 689, shows the advance of the propaganda to the far north-east.

The elaborate system of ritual, medical work, etc., which had been the chief means of the propaganda, remained in vogue for a long time. The distribution of medical stores and the dispatch of combined bands of monks and physicians into the provinces are constantly mentioned in the 8th century. In addition to these methods, religious ceremonies for the welfare of the ruling families and for the tranquillity of the country became the order of the day in the court as well as in the temples, and were patronized by the government and by the nobles. These pious deeds were extended to the provinces, and scriptures were distributed wherever there were any priests. The founding of provincial cathedrals (*kokubun-ji*) was followed by the founding, near the capital, of the central cathedral, which was dedicated to the great statue of Lochana Buddha, now known as the Daibutsu in Nara, and was completed in 754. These works and dedications converted the whole of Japan into a Buddhadom before the close of the 8th century. There are many remains of these works to this day, and Japan owes the sculptures, which have never been excelled by later works, to the same period.

It is obvious that the methods of the religious mission contributed to the unification of the country. Charitable works were regarded in the provinces as the boons not only of the Church but also of the State; splendid religious buildings were held to be signs of the power of the court. It was not merely by the mysterious efficacy of the worship and ceremonies that the security of the throne and the tranquillity of the country were maintained and increased; the Buddhist mission in the provinces during these two centuries was at the same time a political mission.

By the 9th cent. the unity and centralization of the national government were complete. From that time Japanese Buddhism began to stand on its own feet, even though the Japanese Buddhists were still indebted to their co-religionists on the continent. The two brightest stars of the Buddhist history of Japan, Dengyō († 822) and Kōbō († 835), were once students in China, but these two men opened the way for the development of Japan's own Buddhism. Thus the beginning of the 9th cent. may be taken as the end of the Buddhist mission in Japan.

One thing remains to be added, viz. a new influx of Chinese influence in the latter half of the 13th century. The introduction of the Zen (*dhyāna*) Buddhism, which was produced by Bodhidharma in China, as mentioned above, necessitated a fresh influx of monks and artists, whose great influence upon Japanese art, literature, and social life in the 14th and 15th centuries must be recognized. Tea, fans, kakemono, and similar things, now known in the West as 'things Japanese,' Japan owes to these communications with Chinese Buddhism.

Taking a general survey, we see a remarkable contrast between the Buddhist missions in China and those in Japan. In China works of charity seem to have played rather an insignificant part and translations of scriptures an important part; the opposite was the case in Japan; no Japanese translation of the Buddhist scriptures was made till quite recent times. Chinese has remained the sacred language of Japanese Buddhism almost throughout, though there have been some original writings in Japanese. This antithesis is due to the different levels of civilization on which China and Japan stood at the time of the introduction of Buddhism.

MISSIONS (Christian, Early and Mediæval). —**1. From the close of the Apostolic Age to the conversion of the Empire (c. A.D. 100-323).**—Missions were the main external activity of the Christian community in the earliest time. Before the middle of the 2nd cent. (*c.* 140) Justin Martyr claims for them a very wide field of operations—not merely over the Helleno-Roman world, but beyond.

> 'There exists not a people, whether Greek or barbarian, or any other race, by whatsoever title or manners they may be marked out, however ignorant of arts or of agriculture, whether they dwell under tents or wander in covered waggons, among whom prayers are not offered in the name of a crucified Jesus to the Father of all things' (*Dial. c. Tryph.* 117).

Much to the same effect, but more guardedly, Irenæus tells us (*c.* 180) that even then many barbarous nations held the Christian faith, written not with pen and ink, in books or papers, but by the Holy Spirit in their hearts (*adv. Hær.* III. iv. 2). Tertullian likewise (*c.* 200) boasts of the rapid spread of the Church:

> 'We are a people of yesterday, and yet we have filled every place belonging to you . . . your very camp, palace, . . . forum . . . we leave you your temples only. We can count your armies; our number in a single province will be greater' (*Apol.* 37).

Britons beyond the Roman pale, Sarmatians, Germans, and Scythians are among the more distant races that he reckons as already touched by Christianity (*adv. Judæos*, 7). Origen (*c.* 230-240) declares the gospel not merely to have won myriads of converts among 'all nations,' but, more precisely, to have penetrated into many parts of the barbarian world (*c. Cels.* i. 27, ii. 13); while Arnobius (*c.* 304) denies that any nation of the barbarians was then without some Christian influence (*adv. Gentes*, i. 16, ii. 5). From Eusebius (*c.* 320-330) we hear of the ex-Stoic Pantænus of Alexandria undertaking a missionary journey to India about 180 (*HE* v. 10); here Pantænus is said to have found a Gospel of St. Matthew in Hebrew which had been left there by the apostle Bartholomew. Even if by this 'India' is understood the 'Lesser' or 'Third India' of some early geographers, including parts of the S. Arabian shore-lands and of Abyssinia, this is a noteworthy journey. Origen again, about 215, was invited to teach the Gospel in Arabia, and accepted the invitation (Eus. *HE* vi. 19). From Edessa in N. Mesopotamia, where the Church was firmly settled by 150, Christianity was propagated in the Persian kingdom, even to Bactria. Bishop John, 'of Persia and Great India,' attended the Nicene Council in 325. Armenia, which may, however, be reckoned as usually within the Roman Empire, or at least within its sphere of influence, till the disasters of the later 4th cent., was won by the Church, shortly before the winning of the Empire, at the end of the 3rd century. Gregory the Illuminator was the leading person of this mission (*c.* 302), and Armenia was the first country in which Christianity was adopted as the national religion. In the early days of Constantine (*c.* 311) Bishop Hermon of Jerusalem sent missionaries (Ephraim and Basil) to 'Scythia' and to the Crimea, part of which at least may be considered Roman. About A.D. 100 St. Clement, the fourth bishop of Rome, had been martyred at Kherson, representing the modern Sevastopol.

2. From the conversion of the Empire to the rise of Islām (c. 323-632).—Important extensions of Christianity followed the conversion of Constantine.

(*a*) *Africa.*—Among these one is African. The Abyssinian Church was founded, or at least Christianity became the religion of the nation, from about 330, through the work of missionaries from Alexandria. Frumentius, a follower of Athanasius, who consecrated him as bishop of Ethiopia, or Nearer India, was the leader of this mission. From 356, again, the Arian emperor Constantius entered on a far-reaching scheme of Arian proselytism in Abyssinia, Southern and South-Western Arabia, and the coast lands of Persia and India, as far as the Indus, and perhaps beyond. Even before 250, perhaps by 200, Christianity had begun to spread among the native African tribes, on the fringe of the Roman Empire, in modern Tunis and Tripoli. In the 6th cent., in the reign of Justinian, and largely through the influence of the empress Theodora, Christianity was planted among the Nubians (from *c.* 548). Till the 14th cent. a Nubian Church maintained itself, though cut short by Muhammadan conquest, when, less fortunate, if not less heroic, than the Abyssinian (protected by its highlands, and saved, at a critical moment, by Portuguese aid), it succumbed to Islām.

(*b*) *Asia.*—In Asia, beyond the limits of the Empire, Christianity, Orthodox or Nestorian, went far afield, before the outbreak of Muhammadan conquest in the 7th century. Bishop John, 'of Persia and Great India,' as we saw, attended the Nicene Council in 325; in 334 we hear of a bishop of Merv; the line of the metropolitans of 'Babylon' (*i.e.* Ktesiphon and Seleukeia [Σελεύκεια ἡ ἐν Βαβυλῶνι]) likewise began in the 4th cent.; and in the same period the Persian Christians suffered fierce persecutions from the government, largely at Magian instigation. In the 4th cent. a Syrian mission went to Malabar. Arnobius even speaks vaguely of Christianity having been preached among the 'Seres,' or Chinese of the interior—'China as approached by land'—before the conversion of Constantine, but this is unsupported and in itself doubtful.

In the 5th cent. Nestorius and his followers were cast out of the Church (431); a Nestorian communion was rapidly organized; and a wonderful missionary energy was shown by this 'Protestantism of the East.' In 498 the Nestorian patriarchate of Babylon or Ktesiphon was set up; this in 762 followed the 'Abbāsid khalīfs to their new capital of Baghdād. About 505 Christianity reached China in Nestorian form. In 551 Nestorian monks brought the eggs of the mulberry silkworm from China to Constantinople. Before 540 Nestorian bishops appeared at Samarqand and Herat, and from the same time we have sepulchral evidences of Nestorian Christianity as far as the Semiryechensk, or 'Seven Rivers,' district of the Balkhash basin, close to the Russo-Chinese frontier of to-day. These funeral monuments extend from A.D. 547 to 1027, but are mostly of the 10th and early 11th centuries; they commemorate clergy, laymen, and women. One refers to a priest 'sent round to visit the churches,' perhaps something of a missionary. Gregory of Tours in the 6th cent. collected some information about Indian Christianity, partly from an Indian Christian who had come to Western Europe from the 'Thomas Country' near Madras. Nestorian missions had now penetrated to India, and were transforming the native Christianity.

Cosmas Indicopleustes of Alexandria, the author of the *Christian Topography*, who in his earlier life was probably a Nestorian himself, describes the vast extent of an Eastern Christianity, beyond the Imperial limits, which must have been largely Nestorian, about 550. Churches were then to be found, he declares, in Ceylon, Malabar, and Socotra, with 'a bishop and clergy ordained and sent from Persia'; in Bactria and among the Huns; in Mesopotamia, Scythia, Hyrcania, and other lands east of the Euxine (see bks. iii. and xi., esp. p. 178 f. of B. de Montfaucon's ed. [*Coll. nova Patr. et Script. Græc.*, Paris, 1706, ii. 113 ff.]=*PG* lxxxviii. 168 f.). At no time, perhaps, till the Russian colonization of North Asia was Christianity more strongly supported in Eastern lands than at this time.

(*c*) *Europe.*—St. Patrick's conversion of Ireland (from *c.* 430) opened to Christendom a land that had never been Roman, and was practically unknown to Continental Europe, after Honorius withdrew the legions from Britain. The full discovery of Ireland was the work of Christian missionaries. Within a century of St. Patrick's death the Irish took up a great mission-work of their own. From about 550 to 800 the Irish Church showed its greatest energy abroad, and perhaps reached its highest prosperity at home. Its followers preached with remarkable success among the English who had overrun Eastern Britain. They carried the gospel further into Caledonia than Agricola had ever carried Roman conquest. Some of their pioneers reached the Orkneys, the Faroes, the outermost Hebrides, and even Iceland (of the last Irish monks were the first discoverers, in 795).

Despite the fictions with which the early history of Scotland is overlaid, it need not be questioned that some progress was made by Christian missions beyond the Firth of Forth even in the 5th century. St. Ninian, the founder of 'Candida Casa' in Galloway, who was apparently working in the south-west and centre of modern Scotland about 390–430, is specially associated with these enterprises.

The Roman mission dispatched by Pope Gregory I. to England in 597 was concerned with a country lying within the Old Empire, and so outside the proper field of this article. It was, however, the commencement of a movement which in course of time penetrated to non-Roman lands—Scotland, Ireland, Central Germany, the Scandinavian kingdoms—and played a great part in winning them to Christianity, or in turning them from their native Church to Roman allegiance.

3. From the rise of Islām to the Crusades (632–1096).—The vigour, or at least the extent, of Nestorian missions in South Asia in the first age of Islām is evident from a letter of bitter complaint from the Nestorian patriarch to the bishop of Fārs (or 'Persia' proper) about 650. It was owing to his neglect, the patriarch declares, that the people of Khorāsān had lapsed from the faith, and that India, 'from Fārs to Colon' (Kulam, or Quilon, near Cape Comorin), was now being deprived of a regular ministry. We find the same patriarch writing to the Christians of Socotra and of Balkh, and undertaking to provide a fresh supply of bishops for his spiritual subjects of the Upper Oxus. His successor, in order to appease an old quarrel between the Christians of Bactria and the metropolitan of Persia, visited Balkh about 661.

But the crowning achievements of early Nestorian enterprises were in China, and of these we have an account in the famous monument of Si-gan Fu. In 635–636 a missionary, who appears in the Chinese Record as 'Olopan' (Rabban), entered the 'Flowery Land,' and reached Si-gan Fu, the capital of the Tang dynasty. He had come, we are told, from 'Great China' (the Roman Empire); he was received with favour; his teaching was examined and approved; his Scriptures were translated for the Imperial library; and within three years an Imperial edict declared Christianity a tolerated religion. With the speculative fairness of his race (and of one of the greatest of Chinese rulers) T'ait-sung welcomed any religion whose spirit was 'virtuous, mysterious, and pacific.'

> The radical principle of the new faith, he thought, 'gave birth to perfection and fixed the will.' It 'was exempt from verbosity, and considered only good results.' Therefore it was 'useful to man, and should be published under the whole extent of the Heavens. . . . And I command the magistrates to erect a temple of this religion in the Imperial city, and twenty-one religious men shall be installed therein.'

T'ait-sung's successor was no less friendly.

> 'He fertilized the truth, and raised luminous temples [Christian Churches] in all the provinces,' till they 'filled a hundred cities. . . . The households were enriched with marvellous joy.'

'Olopan' himself became a 'Guardian of the Empire,' and 'lord of the Great Law.'

Then followed, from about A.D. 683, a time of disfavour and oppression. Chinese conservatism rallied against the new worship.

> 'The children of Che [Buddhists] resorted to violence, and spread their calumnies; low-class men of letters put forth jests. . . .'

But after a time the Nestorian Church in China, as in India (and about the same time), revived. Fresh missionary enterprise was one cause of this, in both fields.

> In A.D. 744 'there was a religious man of Great China named Kiho, who travelled for the conversion of men'; on his arrival in the Middle Kingdom, illustrious persons united 'to restore the fallen Law.' In 747 the emperor brought back 'the venerable images' to the Temple of Felicity, and firmly raised its altars; with his own hand he 'wrote a tablet' (probably for the great church of the capital). His three successors all 'honoured the luminous multitude.' One observed Christmas by burning incense; another 'instituted nine rules for the propagation of the doctrine'; various high officials of the court, a member of the council of war, and several governors of provinces 'rendered perpetual service to the luminous gate.' The inscription closes with words of thankfulness; never had the mission been more prosperous than when 'in the year of the Greeks 1092 (A.D. 781), in the days of the Father of Fathers, the Patriarch Hanan-Yeshuah, this marble tablet was set up with the history of the . . . preaching of our fathers before the kings of the Chinese.' Hanan-Yeshuah died in 778, but news of his death would naturally take a considerable time to travel from Baghdād to Si-gan Fu.

The general truthfulness of this record (the most remarkable witness that we possess of Christian activity in the Further East before the 13th cent.) is supported by what we know of the Chinese mission from other sources.

Between 714 and 728 the Nestorian patriarch appointed the first metropolitan for China; in 745 the Chinese emperor decreed the name of 'Roman temples' to the Christian churches of his empire; about 790 the patriarch of Baghdād sent a new metropolitan to Si-gan Fu, and after his murder at the hands of robbers a successor was dispatched, with six other bishops and a party of monks.

Like the Chinese mission, the Indian was revived in the middle of the 8th century. About 745 a party from Baghdād, Nineveh, and Jerusalem, under orders from the arch-priest at Edessa, arrived in India, with the merchant Thomas — the 'Armenian merchant' of Gibbon (*Decline and Fall of the Roman Empire*, ed. J. B. Bury, London, 1896–1900, v. 150).

In 774 the Hindu ruler of the Malabar coast granted a charter, graven on copper, to the Christians of his dominions. A famous inscription discovered in 1547, on St. Thomas Mount near Madras, probably of the 8th cent., but perhaps even earlier, another charter of 824, to the Malabar Christians, the journey of Bishop Abraham about 800 from Basra to China, and the Arab references to the strength of Christianity at this time and down to the Far Eastern revolution of 878, may also be cited. Finally, the continuance of the lines of metropolitans in China, India, and the Merv region, and the permission granted them, about 850, to be absent from the central councils of the Nestorian Church (at or near Baghdād, every four years), are other fragments of evidence to the vigour of Nestorian missions at a time (*c.* 750–850) which perhaps marked the close of their greatest development.

From the end of the 9th cent., however, this Nestorian expansion began to be seriously checked. The Nestorians had been in high favour, not only with the Chinese emperors, but also with the Muhammadan khalīfs, as guides to the Greek treasures of letters, science, and medicine. But, as Arabic learning progressed, the Nestorian position became less important and privileged; the spread of Islām tended more and more to contract the area still left open for Nestorian activity in many regions; and in China the old conservatism revived. The disorders of 878 and the years following produced another Chinese reaction against alien importations. The baleful effects of civil war were attributed to foreign devilry, and in the next century Chinese Christianity much declined. Thus a Muslim writer of the later 10th cent. (*c.* A.D. 987) reports a conversation in Baghdād with a monk who had been sent to China seven years before, and had returned in despair on finding but one person of his faith still extant there. This was probably pessimism. Nestorianism, even to the 14th cent., maintained a certain position in the Far East; it was the only form of Christianity that the Polos found (and in many a city they found it) scattered, however thinly, throughout the Chinese Orient; in the 11th cent. it had won fresh triumphs in Central Asia. About 1007–08 the Khān of the Keraits (one of the four main branches of the Mongol Tatars, living in the basin of Lake Baikal) was converted to Nestorian Christianity. With him doubtless went many, perhaps the bulk, of his tribe; and in this event is apparently the ultimate source of the tradition of 'Prester,' Presbyter, or Priest, 'John.' In all its earliest forms this tradition is not African, but Asiatic; it refers to a Christian potentate in the 'extremity of the East' or the heart of Asia, supposed to unite in himself royal and sacerdotal power and office, to have great military and political importance, to rule extensive dominions, and to uphold the faith of the Cross, though surrounded by unbelievers, and cut off by vast distance from the main body of the Church. This is the story, as it takes shape in the 12th cent., and as it is referred to by the great European travellers of the 13th; not till the 14th (from *c.* 1330) do we find it transferred to Africa and associated with the 'Emperor of the Ethiopians' or Negush of Abyssinia.

In Northern Europe, beyond the limits of the Old Empire, the Roman missions advanced rapidly in the 8th cent., after success in England had once been achieved, and largely as a result of the reflex action of that English mission. The movement that Gregory had started flowed back upon the Continent with new force from the converted island. In Frisia, Thuringia, and Bavaria the tribes beyond the Rhine were gradually converted by Frankish, Irish, and English missionaries in the obedience of Rome; chief among these was the church-statesman and martyr St. Boniface or Winfrith of Crediton (680–755), who became the 'apostle of the Germans,' the first bishop of Mainz and primate of Germany, the reformer of the Frankish Church.

Charles the Great's very forcible conversion of the Old Saxons, between the Ems and the Elbe, again advanced the borders of Christendom on the North (772–804). The same emperor compelled the prince of the Slav Czechs of Moravia to receive baptism (801); but the real conversion of this people, as well as of the neighbouring sister-race of Bohemia, was begun by the Byzantines Cyril and Methodius of Thessalonica, the 'apostles of the Slavs,' from about 863. Cyril had already worked with great success among the (Turkish ?) Khazars of S. Russia. Like Ulfilas with the Gothic script, Cyril and his brother formed a Slav alphabet still prevailing in Russia, Serbia, and Bulgaria, and in Moravia down to the 16th century. Greek formed the basis of the 'Cyrillic' letters in most cases; but some were entirely new—either invented by the missionaries or adapted from various Oriental writings. By the diplomacy of Pope Nicholas I. Cyril and Methodius were brought into close relations with, and obedience to, Rome, and all their Central European work was turned to the profit of the Roman Church. By the end of the 9th cent. the victory of Latin Christianity among most branches of the Czechs may be accepted as complete.

The conquests of Charles the Great brought Frankish Christendom into close proximity to the Scandinavian peoples and the Slavs of the North European plains, and soon after the death of Charles the conversion of these races was seriously commenced. Ansgar or Anskar, the 'apostle of the North,' was born about 801, and about 826 left the monastery of Corbie for the 'Northern mission.' First he worked (with his helpers) in Nordalbingia (or Holstein) on the Danish border, and in Schleswig; obliged to quit this field by a pagan reaction, he made his way even to Sweden in 829, preached before the king, won a great measure of success, and in 831 was consecrated the first archbishop of Hamburg. He was driven hence by a Scandinavian invasion about 845; but in 848 he was appointed to the vacant see of Bremen, with which the missionary diocese of Hamburg was now united. He resumed his work in Denmark (848–853), won the favour of the Danish king, converted a large part of the people, and again opened his campaign in Sweden (*c.* 853). At his death in 865 Danish, Swedish, and perhaps even Norse Christianity had been securely founded, though complete triumph was not reached for more than a century.

The Bulgarians of the Balkans, settled within the limits of the Old Empire, received Christianity from Constantinople about 845–865, largely by means of the patriarch Photius. This gain was fiercely disputed between Rome and the East, for the Bulgarian Czar, instructed and probably baptized by Photius, also turned his inquiring mind to Pope Nicholas I., and received from him a further supply of Christian teaching and practical advice. The struggle over Bulgaria was one of the chief surface-causes for that schism of Eastern and Western Christianity which now became decisive, and was never really healed again. But the Orthodox Church remained in possession of her Bulgarian gains—in spite of the appeal of Nicholas to listen first to Rome amidst the claims of conflicting teachers, and to cleave to that Church 'which had always been without spot, or wrinkle, or any such thing.'

In the 9th cent., after the sack of Iona by the Northmen (806), the relics of St. Columba seem to have been translated to Dunkeld, which became for a time the centre of Scottish Christianity—till St. Andrews, from about 905, took its place.

Poland perhaps received its first knowledge of Christianity from Bohemia and Moravia. From about 967 the court and ruling classes accepted the new faith in its Roman form, and before 1000 the establishment of Latin Christianity was completed, under the great conqueror Boleslav, who first raised Poland to the position of an important European State.

The earliest mission among the heathen Prussians was probably undertaken by Adalbert (or Voytyech), second bishop of Prague, who travelled into Prussia in 996, and was martyred on the shores of the Frische Haff in April 997. Boleslav 'the Great' of Poland, who had encouraged this mission, placed the martyr's relics at the court-town of Gnesen, which now became an Archbishopric.

The Hungarians, whose attacks on Germanic and Italian Europe were finally ended by the defeat on the Lechfeld in 955, at the hands of Otto the Great, were rapidly won to the Western Church by mission enterprise. By about 975 considerable progress had been made; the reigning Hungarian prince Geisa (972–997) was a nominal, if semi-pagan, Christian; but the complete victory of Christianity was gained by the first king, Stephen 'the Saint,' baptized by Adalbert of Prague about 983. Stephen was called to succeed his father Geisa in 997; he took the royal title in 1000; he put down the pagan opposition; and before his death in 1038 he had completed the establishment of the Latin Church in his kingdom, had organized that kingdom with remarkable success, and had given it a first impression of civilization. He founded colleges, hospitals, and monasteries for Hungarians in Rome, Ravenna, Constantinople, and Jerusalem, and his hospitality to pilgrims was so generous that the overland route through the Hungarian plain came to be generally preferred by the mass of those travelling from Western Europe to Constantinople and Syria.

Roman Christianity, as introduced by Ansgar, won the allegiance of the king, court, and ruling classes of Denmark in the days of Harold Blaatand, or 'Blue Tooth,' a century after Ansgar, from about 966. Yet even after this there was a pagan reaction, accompanied by some persecution (1000–04), under Svend, or Swegen, 'Forkbeard,' the conqueror of England, who vacillated between the old heathendom and the new faith, but finally embraced the latter, after his triumph in the West. Cnut the Great, Svend's son and successor (1014–35), was almost a Danish Clovis, and identified his policy with the work of the Christian Church in all ways.

Christianity in Sweden, likewise founded by Ansgar, did not become the faith of the court and the governing classes till the end of the first millennium, under Olaf the 'Lap-King' (955–1022). Pagan reactions still occurred till far on in the 11th cent., a final one on the eve of the First Crusade—but the battle was really won by 1020.

The first faint beginnings of (Latin) Christianity in Norway may also be traced back to Ansgar's time. Under Haakon I. (935–961) it began to struggle for predominance; the king for a long time endeavoured to promote it, but in his later years, for political and other reasons, he yielded much to the wishes of the pagan party. Heathen and Christian struggled for ascendancy till the short and brilliant reign of Olaf Tryggvason (995–1000), who forced the gospel on the bulk of his subjects with every kind of violence and every art of persuasion. The work was completed by Olaf the Saint, the godchild and third successor of Tryggvason (1015–30).

From Norway Christianity was carried to the Norse colonies of Iceland and Greenland. The German priest Thangbrand, a truly militant missionary, who killed opponents in single combat, was sent to Iceland by Olaf Tryggvason in 997; in 1000 the new faith was accepted (with some important concessions to heathenism) in a National Assembly; and at the same time the gospel reached Greenland, where it soon won the allegiance of the colonists.

Leif Ericson, probably the first discoverer of America, was commissioned by Olaf Tryggvason in 1000 to proselytize his countrymen, on his return from the court of Norway to his home in Eric's Fiord, but the missionary journey was interrupted by storms, which drove Leif to Vinland (Nova Scotia?).

Russia was not really won till the time of Vladimir the Great ('St. Vladimir,' 986–1015). The patriarch Photius, it is true, claims (*c.* 867) that the fierce and barbarous Russians had already been converted by the missions of the Eastern Church, but even a century later the mass of the people were thoroughly heathen. Decisive Christian success began with the conversion of Olga, the princess-regent of Kieff, and widow of the grand-prince Igor, who visited Constantinople in 955, and was there baptized into the Greek Church. The full triumph of the faith was delayed for a generation by the refusal of Olga's son Svyatoslav to abandon his heathenism. The work was finished by Vladimir, son and successor of Svyatoslav, and the most effective and powerful head of the Russian people that had yet appeared, under whom Russia gave premature and deceptive promise of playing a first-class part in the world, in the 10th and 11th centuries. After his capture of the Imperial (Byzantine) dependency of Kherson in the Crimea (on the site of the later Sevastopol), and his marriage with an Imperial princess in 988, he accepted the Christianity of the Eastern Church; and his court and the mass of his people followed the example of the grand-prince of Kieff. The progress of the faith was both rapid and deep; no part of Europe became more intensely attached to its Christianity, and no nation perhaps has done more to spread the Christian faith, as it has understood the same. Vladimir died in 1015, but under Yaroslav the Lawgiver (1019–54), who with his father must rank as the chief Russian statesman of the earlier and freer age—before the Tatars—the establishment of the Church was completed.

4. From the First Crusade to the end of the mediæval time (1096–1453).—Thus, before the close of the 11th cent., nearly all Europe had been won to Christianity of the Roman or the Greek allegiance, and the borders of Christendom had been extended, to North and East, far beyond the limits of the Old Empire—to Greenland and Iceland, to Norway, Sweden, and Denmark, to the shores of the Baltic, the plains of Poland, the Carpathian highlands, and the western regions of Modern Russia—Kieff, Smolensk, Novgorod. Novgorod enterprise, it is probable, had by 1096 carried the religion as well as the trade of that great Republic into some of the regions and among some of the tribes of the furthest North and North-East—in the White Sea basin and in the valleys of the Dvina and Pechora.

A little later, in 1121, the bishop of Greenland undertook what was probably a missionary journey to America—he 'seeks Vinland'—but we hear no more of him.

Christendom, as thus constituted, included some pagan *enclaves*, mainly along the South and East of the Baltic, such as the countries of the Lithuanians, the Finns of Finland (and N. Russia), the Old Prussians, and the Wends and other Slavs of Pomerania and other lands afterwards included in Eastern Germany. In the 12th cent. much of this land began to be won. The Finns of Finland were conquered by the Swedes in a war which had something of a crusading character (*c.* 1157–58), and the profession of the Roman Catholic faith was gradually enforced. Russian Christianity meanwhile appears expanding in the far North and East by its foundation of the St. Michael's monastery, on the site of Archangel (in the 12th cent.), and of the important Novgorod colony of Vyatka, north of Kazan (1174). Latin Christianity accompanied the early victories of Germanism beyond the Elbe in the 10th century. The pagan and anti-German reaction which set in about 983 was equally injurious to Teutonic Christendom and Empire, and much of the new mission ground was lost. Polish and German attempts to convert the Pomeranians led to small result till well on in the

12th cent., when Otto of Bamberg (in 1124–28) became the 'apostle' of this country. From the time when the main German advance beyond the Elbe was permanently resumed, about 1130, the progress of Christianity was rapid between the Elbe and the Oder; and the extension of the bishoprics of Magdeburg, Oldenburg, and Ratzeburg witnessed to this. German colonization followed German conquest, and, as the colonists were at least nominal Christians, the Church grew steadily stronger.

German Christianity (accompanying German colonization) was planted as far east as the Düna or Western Dvina (the river of Riga) in the later 12th cent.; some Bremen merchants formed a settlement on or near the site of Riga about 1158, and about 1168 Meinhard, an Augustinian canon of Holstein, headed a mission to Livonia. The work was difficult, for the Livonians were a faithless race who professed the proper sentiments when advantage was to be gained from them, but turned upon the mission with mockery and insult when they no longer needed its help (Meinhard built them not only churches, but fortifications). An eclipse brought the missionaries into peril—they were accused of swallowing the sun. Their danger was hardly less when they were justly suspected of a more successful cultivation of the land than was then usual in Livonia. Baptisms were constantly 'washed off' in the Dvina by lapsed converts. Meinhard, consecrated bishop of Livonia in 1170, died in 1196, without having achieved much success. His second successor, Albert of Apeldern and Riga, had superior fortune, tact, and abilities. He organized a Livonian Crusade (permitted by Innocent III. to rank as a fulfilment of the vow for the Holy War in Syria); he enlisted considerable forces of warriors and missionaries; in 1200 he founded, or re-founded, the city of Riga as a new base for conquest and proselytism, and as the seat of the bishopric; and in 1202 he started the *Fratres Militiæ Christi*, the 'Knights' or 'Brethren of Christ,' or 'of the Sword,' the *Schwertträger* or *Port-glaives* of German and French historians, an important element in the Teutonic Order and a main source of its dominion on the Baltic. Pope Innocent gave the 'Sword-Brethren' the statutes of the Templars. Albert's mission-crusade had rapid success, and most of Livonia was baptized before the close of 1206.

A mission in Esthonia was commenced a little earlier than this by Bishop Fulk, formerly a monk of La Celle; and Dietrich, Meinhard's chief lieutenant in Livonia, became bishop of Esthonia in 1213. He was killed in 1218, and the next bishop transferred the headquarters of the mission (now thoroughly German) to Yuryev, Derpt, or Dorpat, in 1224. A Danish mission in Esthonia, at this time largely in Danish hands, was organized from Reval, which became a bishopric in 1218. Even in Lithuania a Roman mission appears to have started in the first half of the 13th cent., but its progress was slow, and general or definite success was not attained till the first Union of Poland and 'Litva' in 1386.

In 1236–37 the 'Sword-Brethren' united with the Teutonic Knights, founded at Acre in 1190, and summoned to help in the conquest and conversion of Old Prussia in 1226. They had much in common—an origin from Bremen, a constitution on the model of the Templars, the patronage of the Virgin, the protection of the emperors, the 'duty of fighting for the Cross,' the championship of the German race and German interests against all other.

This brings us to the Prussian crusade and mission. The early unsuccessful attempts at proselytism in Old Prussia, mainly under Polish patronage, have been noticed. In 1207 the Poles began again, with better appearance of success. In 1215 a Prussian bishop was consecrated. But a violent heathen reaction soon followed, accompanied by massacre, and by the destruction, it is said, of 250 churches. The supporters of the mission now fell back on the idea of a holy war, and in 1218 Pope Honorius III. allowed a Prussian Crusade as a substitute for the Syrian. In 1226 the Teutonic Order, already despairing of much permanent effect in the Levant, though its nominal headquarters remained at Acre till 1291, was invited to help, and terms were made between the grandmaster, Hermann of Salza, and the Poles, mainly represented by duke Conrad of Mazovia. The emperor Frederic II., the intimate friend and patron of Hermann, gave the fullest support in his power, bestowing on the Order the sovereignty of all such territories as they had acquired by gift or should win by conquest. A long, bloody, and desperate struggle of over fifty years brought about (by 1283) the complete submission of the Prussians, the partial extermination of the race, the enforced conversion of the remainder, and the German colonization of a great province which was to become one of the most Teutonic of lands, and to give name, by union with Brandenburg, to the chief German State of modern times, the creator and core of the present German Empire.

The opening of intercourse in 1245 between Western Europe and the new Mongol masters of Asia, through the embassies sent by Pope Innocent IV. to the Tatar courts, proved to be the beginning of an important and romantic chapter of mission history. Among the distant enterprises of the Christian Church, or the forgotten incidents of past intercourse between remote civilizations, there are few more interesting than the early Roman missions in Further and Central Asia, and in the border-lands of Eastern Europe. We have seen how, in the earlier Middle Ages, Nestorian missionaries carried the gospel to China, Turkestan, and the Indies. Almost to the close of the crusading period, their creed was practically the sole representative of the Nazarene faith in Asia, outside the narrow limits of the shrunken Byzantine Empire and the crusading principalities. But in the 13th cent. the Church of Rome began to be heard of in the depths of 'Tartary,' and between 1245 and 1255 the great overland travellers of the first generation, the Friars John de Plano Carpini, William de Rubruquis or Rubrouck, and Andrew of Longumeau, appeared in the Mongol courts, on the Volga, or in the Baikal or Balkhash basins. Yet their work was primarily that of diplomatists, of envoys from the pope or the king of France, in their capacity as Christian leaders; the missionary was not prominent in their work; Rubruquis alone, of this famous group, seems to have spent time or energy in doctrinal discussions or proselytizing efforts, and even he does not claim in any way to have founded a mission church in Asia or in Russia.

The Polos, again, who represented Roman Christendom among the Mongols from 1260 to 1295, and gave us our first good account of the Chinese and Indian worlds and of so much of Central Asia, cannot be considered active propagandists. Kublai Khān expressed a desire for official Christian instructors; but his wish remained unfulfilled. Marco Polo and his relatives were primarily merchants, adventurers, men of the world. No mission work can be credited to them.

But, while the Polos were still in China, the founder of the Latin churches both in Cathay and in India started on his way. Friar John de Monte Corvino, a Franciscan like Carpini and Rubruquis, and a man of untiring energy, courage, and patience, began his life-work in Asia about 1275, and in 1289 was sent by Pope Nicolas IV. with letters to the great men of the Tatar empire and of neighbouring lands—the supreme Khān in Cathay, the Īlkhān in Persia, the 'emperor of Ethiopia,' and others. Corvino reached Cathay in 1292 or 1293, apparently by the South Asiatic sea-route from Ormuz, making a long halt upon the way in the Madras region (or 'St. Thomas's country'). He achieved conspicuous success in the Far East; he was repeatedly reinforced from home; and his work led to the creation of a regular Roman hierarchy, with at least two bishoprics, in the 'Middle Kingdom.' He was even credited, by one tradition, with the conversion of a Mongol-Chinese emperor. To him is due not only the first planting of Western Christianity in China and in the Indies, but the earliest noteworthy Christian account of South Indian climate, people, manners, and customs, and some valuable evidence upon the overland and oversea routes which connected the Levant and the Far East, as well as upon the association of Western traders and Western missionaries in the European penetration of Asia.

Corvino seems to have made his way into Persia by much the same route—through Sīvās, Erzerum, and Kars—as merchants then took between the Gulf of Scanderoon and Tabrīz. At Tabrīz, however, he was joined by a 'great merchant and faithful Christian,' Peter of Lucolongo, and with this companion he turned aside from the continental main track and made his way south into India, with the view of there taking ship for Cathay (1291). Some time, however, was yet to elapse before the friar committed himself to the frail barks of the Indian seas—'flimsy and uncouth, without nails or iron of any sort, sewn together with twine like clothes, without caulking, having but one mast, one sail of matting, and some ropes of husk' (cf. *Münchner gelehrte Anzeigen*, xxii. [1855] 175).

In the sacred region of St. Thomas's shrine, near Madras, he remained eighteen months, and here died his comrade, Nicolas of Pistoia, 'on his way to the Court of the Lord of all India.' He was buried in the Church of St. Thomas, while Corvino transmitted to Europe (22nd Dec. 1292) a quaint and memorable sketch of the Deccan and its people from his own observation—one of the earliest pictures of Indian life drawn by a Roman Christian or Western European — which seems to have awakened the papacy to the possibilities of Hindu conversion. Meantime, while Friar John was writing, the Polos were off the Coromandel coast —on their return to Europe—and here Messer Marco Millione may have met the man who was to represent Christendom in the 'Middle Kingdom' during the next thirty years, as the Venetian merchants had done for the past thirty.

We next meet with Corvino in China itself—at the Imperial city. His second letter (of 8th Jan. 1305) is dated from Peking, or 'Cambalec,' and tells how for eleven years, from 1293, he had laboured in Cathay; how he had struggled against prejudice and calumny; how brilliant successes had followed dismal failures; and how, in 1304, he had at last been joined by a colleague, Friar Arnold of Cologne. Probably he landed at the great port of 'Zayton,' or Amoy, in Fo-kien; apparently he made his way immediately to Peking. In any case, he failed to convert the emperor, Tīmūr Oljāitū, son and successor of Kublai, and a great favourer of the Buddhist lamas—'nimis inveteratus in idolatria,' as Corvino puts it. But he was not long without a triumph. In his first year at Cambalec he won the Nestorian Prince George, 'of the family of the great King Prester John of India' (Wadding, *Annales Minorum*, vi. 69). George died in 1299, but before his death he found time to build a fine church for his new allegiance, 'called the Roman Church,' at a place twenty days' journey from Peking—perhaps at Tatung in Shan-si, just east of the great Ho-ang-ho elbow, where Friar Odoric seems also to fix 'the capital of Prester John' (*ib.* vi. 70). The 'Prester John' and Prince George here referred to are probably of the royal house of the Kerait Tatars, of the Baikal basin, apparently converted to Nestorian Christianity in the 11th century (cf. above, p. 707ᵃ). Nor was this all. Prince George's heir was named after the missionary; a translation of all the Roman service-books was ordered and begun; many Nestorians embraced Corvino's faith.

With the death of King George, however, the sky was again overcast; apostasy succeeded conversion; there was no more translation of the Latin ritual; and Corvino was left alone to endure the slanders of the Nestorians—a community 'professing the Christian name, but deviating from the Christian faith,' and now so powerful in Cathay that they would tolerate no Christian rivals (*ib.* vi. 69).

At last the prospect brightened; a leading enemy confessed; in 1303 the friar was at last permitted to live at court; in 1304 Brother Arnold joined him; with a little more aid the emperor himself, 'Imperator Cham,' might be gained. The writer was now old and grey, more with toil than with years, for he was but fifty-eight; yet he was now building a second church in Peking; New Testament and Psalms he had just done into the 'language most used among the Tatars.' For one thing he still yearned—news of Europe, of the Church, of his Order. Twelve years had passed in silence; and now a farrago of incredible blasphemies about the court of Rome, the Order of St. Francis, and other matters of the Western world had been spread abroad by a Lombard surgeon newly come to Cathay—'ante duos annos,' otherwise in 1302 or 1303. Brother John, therefore, on every account was anxious for fresh help; but, warned by his own troublous sea-voyage, he laid down the best route for subsequent travellers—by the Crimea, the Volga, and the Steppes. By this overland path, travelling along with the Imperial messengers, a man might get through to Peking in six months.

Corvino's third letter is also from Peking, and was written on Quinquagesima Sunday, 13th Feb. 1306. Its tone is hopeful; its record is one of steady progress. In 1305 a new church and adjoining mission buildings had been commenced in 'Cambalec'; the emperor honoured the friar above all other 'prelates' at his court; and, like Kublai, his great ancestor, he desired earnestly to see envoys from the see of Rome and the nations of Western Christendom. With such a soil to work upon, the writer joyfully anticipated the harvest that might reward the friars who had lately arrived in Persia and the Crimea.

In a postscript Corvino tells of yet another triumph. Some time previously, either during his stay in India or after his arrival in the Flowery Land, an embassy from Ethiopia had waited on him with entreaties to come over and help them, to visit their country himself, or to send good preachers there. Since the days of St. Matthew and his disciples, they declared, they had never seen a Christian teacher. It is with Nubian Christianity that tradition especially associated St. Matthew; the local Church, though long doomed, was not everywhere extinct; and the earlier 14th cent. saw more than one effort of the Roman see to win this difficult and dangerous country.

Corvino addressed these letters to the Brethren of the Franciscan and Dominican missions in Persia and the Steppe lands of Southern Russia. His appeal was not unheeded; and the authorities of the Church, fired with his own enthusiasm, took up the mission that he had begun with something of the spirit that he desired.

New conquests seemed now to open before the Church of Rome. Friar John was created archbishop of Cambalec (with exceptional powers) in the spring of 1307, and seven bishops (of whom three only persevered) were dispatched to consecrate and help the new primate of Cathay. In 1308 these three suffragans—Gerard, Peregrine, and Andrew—reached China, and carried out the consecration of Corvino. Each of them appears successively in the history of the mission as bishop of 'Zayton' in Fo-kien, where a powerful Latin mission was gradually established, and where some Genoese traders appear to have settled in the early years of the 14th century. A Franciscan tradition maintained that the emperor Khaishan Kuluk (1307–11), third of the Yuen, or Mongol, dynasty in China, and grandson of the great Kublai, was converted by Monte Corvino; and it may have been the news or legend of this success that led Clement V. in 1312 to send three more suffragans to the aid of Archbishop John; in any case, we find one of these later bishops, Peter of Florence, becoming head of a monastery in this harbour-town of 'Zayton.'

The remaining fragments of our knowledge of Corvino are soon told. In 1322 he appoints Andrew of Perugia, one of his first group of suffragans, to the see of 'Zayton'; in 1326 Andrew, writing home, refers to the Archbishop, without naming him; and about 1350 the Franciscan chronicler, John of Winterthur, makes a confused allusion to what is evidently Corvino's first Peking letter, supposed by the annalist to be the work of a nameless Franciscan of Lower Germany, possibly the very Arnold of Cologne who joined the mission in 1304. Lastly, in 1328, we hear of the death of that aged missionary who first carried Roman Christianity as an active faith to India and China, who perhaps converted the 'Emperor of Emperors,' and who was the first and last effective European bishop in the Peking of the Middle Ages.

The best days and brightest hopes of the Chinese mission really closed with the life of its founder; but the Church at home showed no consciousness of failing energy. A certain Brother Nicolas, apparently a Franciscan like Corvino, was nominated to succeed him, and, with twenty friars and six laymen, set out for Cathay. We are not sure, however, that he ever reached the Middle Kingdom. All that we do know of his journey is that he arrived at Almalig, the modern Kulja, now on the Central Asian frontier of China and Russia, that he received good treatment there, and that in 1338 Pope Benedict XII. wrote to the Chagatai Khān (June 13), thanking him for his kindness to Nicolas.

Meanwhile, a little earlier (in 1338), an embassy from the Great Khān then reigning—Tīmūr Ukhagatu—had appeared before Benedict XII.; and with this embassy letters had arrived from certain Christian princes of the Alan nation in the Khān's service, begging for a bishop and legate worthy to replace Corvino. In reply to these communications, four Franciscan envoys and a large company of less important representatives carried the papal briefs from Avignon, by way of Naples, Constantinople, Kaffa in the Crimea, and Almalig-Kulja, to Peking, which they reached in 1342. After four years in China they returned, like the Polos, by the southern waterway from Amoy to Ormuz, making a lengthy stay in Southern India, and finally re-appearing at Avignon in 1353. The historian of this embassy, John de Marignolli, draws a glowing picture of the prosperity of the Roman Catholic mission in the Far East; but of the mission history after this time we know almost nothing. Of one thing we may be certain: the Chinese national reaction which broke out in 1368 set the Ming dynasty upon the throne, and expelled the Mongol Yuen, put an end for centuries to Western Christianity and to European trade within the Middle Kingdom. When this calamity befell, it is said that the friars, flying across Asia from Peking to Sarai and the Volga, carried with them the relics of the Grand Khān converted by Corvino.

In Persian, Mesopotamian, Armenian, and Caucasian lands the religious explorations of the Western Church began about the middle of the 13th century. The Dominicans penetrated to Tiflis about 1240; in 1255 Rubruquis found several friar-preachers in Armenian towns, and tells us of their travels to Tabrīz as well as to Tiflis. Yet it was only with the Tatar conquest of Baghdād, and with the overthrow of the khalīfate, in 1258, that Roman Catholic influence assumed real importance in Persia. From this time to the early years of the 14th cent., Latin missions and Latin trade played an important part in the empire of the Īlkhāns; several of Hulagu's successors seem to have been 'almost persuaded' to accept some form of Nazarene faith; not till about 1304 did they definitely end their religious hesitation by embracing Islām. Even then, for more than half a century, Rome struggled bravely against the current; though her cause might be declining, she continued to maintain the airs of a conqueror—founding bishoprics, creating provinces, vaunting the submission of heretical patriarchs. In 1318 we hear of the inauguration of a complete Persian hierarchy, with a metropolitan at the Īlkhāns' capital of Sulṭāniyah (a little south of the Caspian), whose jurisdiction included not merely Persia, but also Central Asia, India, and 'Ethiopia.'

Yet after the death of Abū Sa'īd, the last true Īlkhān, in 1336, Roman proselytism seems to have completely lost touch of the governing classes among the Mongols of South-West Asia; in the age of Tīmūr (1380–1405) the Islāmizing of the latter was fairly complete. The Middle, like the Farther East, though less completely, shut its door on Christian enterprise before the age of Henry the Navigator.

The first trace of a Roman Catholic mission in India is the visit of Monte Corvino to the Madras region in 1291–92, an incident of deep significance in the history of mankind, not only as evidencing a fresh opening of intercourse between India and Europe, but also as bearing upon the Persian and Chinese enterprises of the Roman Church, and as representing the first joint effort of the Franciscan and Dominican Orders, under papal direction, upon the remoter heathendom of Southern and Eastern Asia. The chief incident in this chapter of European enterprise is the foundation of a Roman mission in the Bombay region and in Malabar, and the establishment of a Roman bishopric near Cape Comorin a generation later (1321–30). In the *Letters* and *Marvels* of Bishop Jordanus, the first and apparently the only occupant of this see in the Middle Ages, in the *Recollections* of John de Marignolli, in the Travel Record of Friar Odoric, and in the official *Annals* of the Franciscan Order and of the Roman Church, we learn a little about this remarkable undertaking. Its history cannot be traced below the middle of the 14th cent. (*c.* 1349–50); but its leader's references to Latin intercourse with Nubia and Abyssinia, and plans for a European fleet upon the Indian Ocean —like his repetition of Indian prophecies of a coming European domination, and his personal conviction of the ease with which such domination could be established—are among the curious things of mediæval literature.

We have seen something of the vigour with which the Latin missions and Western commerce of this time fought to win and maintain a position in China, in India, and in Persia. During the same period (*c.* 1245–1370) the fates of Christianity and of Islām were decided in Higher Asia, and Latin missionaries and traders fought no less keenly, no less vainly, than in Cathay and Persia for the victory of their creed and commerce in Turkestan, in the Volga basin, and in the Crimea. But of the latter enterprises we have a slenderer record, and what we know of them is frequently incidental to the larger story of Roman Catholic proselytism in the Celestial empire or in Irān.

Before the great Tatar invasion of Eastern Europe, in 1237–43, Dominican missionaries had penetrated into the countries lying east of the Middle Volga, even if the expeditions of Carpini and Rubruquis in 1245–55 had not to any large extent the character of proselytizing ventures. It was apparently in the early part of the 14th cent., and especially under Uzbeg Khān (1321–40), that Rome exerted herself most strenuously for the winning of the North-Western Mongols, and that the mission stations at Astrakhan on the Lower, and at Kazan on the Upper, Volga, at Torki, and other places on the west shore of the Caspian, at Khiva, near the Lower Oxus, at Samarqand, and at Kulja in the Balkhash basin, by the Russo-Chinese frontier of to-day, came into being. Even more, perhaps, than in China or India, these Latin outposts, from the Caspian to the Kama, from the Caucasus to the Altai, represent the exploring spirit of the European at this time in its most daring form. For where could the enmity of nature and men be defied more recklessly? Where in all the known world could distance, barbarism, sterility, and fanaticism present a more formidable combination of obstacles?

Even as late as 1362 we find traces of Roman Catholic effort in Northern Tartary. But about this year the Latin missions in Central Asia may be supposed to have ended in a final storm of persecution; and before Tīmūr's death, in 1405, European missionary activity had really withered away in other Western Mongol lands.

In Europe the later 14th cent. witnessed the conversion of the last considerable people which still professed heathenism. The 'Litva,' or Lithuanians, whose central region is the Vilna country, had become an important power by conquest from the Russian nation, now lying, for the most part, helpless and crushed beneath the heel of the Mongol Tatars. Most of Western Russia had fallen into their hands (some valuable districts had become Polish), and the Lithuanian dukes aspired to a great position in the world. In 1382 the Polish throne was left to a woman, the daughter of Lewis 'the Great'; and Yagielo (or 'Jagellon'), the 'Litva' prince, hoped that by marriage with this heiress (in spite of her strong distaste for his person) he might become one of the chief European sovereigns. His hopes were realized; and a Roman Catholic Polish-Lithuanian State was thus founded by the marriage- and conversion-treaties of 1386. This State gradually became a Polish empire under one faith and one sovereign, with one (terribly defective) constitution and administration (1501; 1569). With Vitovt, or Vitold, the last great 'Litva' conqueror, ended the brief hope that Lithuanian conversion might after all turn to the profit of the Eastern Church.

For 'Prince Vitovt,' the Russian annalist laments, 'had previously been a Christian . . . but he renounced the Orthodox faith, and adopted the Polish, and perverted the holy churches to service hateful to God' (*Chronicle of Novgorod*, A.D. 1399).

In the 14th cent. we also hear of the progress of Russian missions, the pioneer or attendant of Russian colonization, in the most distant regions of North-Eastern Europe. About 1376 the monk Stephen, afterwards canonized as the apostle of Perm ('Stephan Permsky'), founded the earliest Christian church on the Upper Kama. It was a venture of some risk, for a former missionary in this country had been flayed by the natives, 'while they were yet but infants in the faith.' Before his death (in 1396), however, Stephen had confounded the heathen priests and sorcerers of the Kama, overthrown the idols of the *Voipel* and the 'Golden Old Woman,' stopped the sacrifice of reindeer, secured the triumph of Christianity, and founded Moscovite influence in a region from which, two centuries later, Moscow overthrew the Siberian Khānate. Under Stephen's successors, Andrew, Isaac, and Pitirim (1397–1445), the Russian Church took root in the Pechora country, just as it did on the White Sea during the same period, through the foundation of the most famous monastery of the Far North in the island of Solovki, or Solovetsky (1429). The Solovetsky monastery began with the hermitage of the monk Savvaty, or Savvatii, in 1429; after this, Zosima, with the sanction of Archbishop Jonas of Novgorod, joined in founding the community which became so celebrated. On the neighbouring mainland Christian enterprise appears much earlier: the St. Michael monastery, the germ of Archangel city, was established in the 12th cent. by Archbishop Ivan of Novgorod. In Lapland, again, religious enterprise accompanied political and commercial. Like Stephen in the Kama, and Isaac in the Pechora, Iliya of Novgorod and Theodorite of Solovetsky appear as apostles of faith and culture to Kola and the Lapps.

The Portuguese, in their great oversea expansion of the 15th cent., especially from 1445, undertook mission-work with enthusiasm, perseverance, and at least considerable temporary success. Even from the beginning of his enterprise (*c.* 1415) Prince Henry 'the Navigator' did not entirely forget the duty of proselytism, though at first more absorbed by the idea of Crusade. His biographers, even in his earlier years, emphasize his purpose of 'extending the Catholic religion,' of 'showing the natives the way of the holy faith,' of 'making increase in the faith of Christ.' The new slave-trade was used to help to create a native African Church. From 1445 a policy of friendly intercourse with the Negroes of the Sūdan and the Moors of the Sahara was adopted, as leading to conversion, as well as trade, in place of the raiding and kidnapping of earlier time. For the prince's purpose was 'to make Christians of them.' Professed missionaries were soon (before 1453) sent out to Negroland. But the history of this development, and most of the Portuguese success in the mission-field, belong to times after the close of the mediæval period.

C. RAYMOND BEAZLEY.

MISSIONS (Christian, Roman Catholic).—When Jesus Christ, the Son of God and the Redeemer of mankind, had fulfilled His divine mission in the world, had sealed it with His death, and endorsed it by His resurrection, He empowered His apostles, and through them His Church, to continue the same in His name and by His authority. That apostolate of salvation was to be catholic, or universal in space, doctrine, and time, to teach all nations all things at all times (Mt 28^{18-20}). Mindful of the Last Will and Testament of Christ, the Church has always looked upon missionary work as an essential and solemn obligation, and upon its progress as an unfailing gauge of her vitality. Since the day of Pentecost, when she received her baptism by the Holy Spirit, the Church has carried on the apostolate with more or less success in the midst of constant persecutions from within and from without, and in spite of unfavourable political conditions and anti-Christian legislation. The missionary character which she displayed in apostolic and sub-apostolic times equally manifested itself in the Celtic, Germanic, and Frankish missionaries, till the Benedictine missionaries SS. Gregory, Augustine, Wilfrid, Boniface, Ansgar, and Adalbert gave to the missionary movement its definite shape. When in subsequent ages new countries were discovered or opened up, the Orders of St. Francis and St. Dominic became important factors in the missions among the followers of Islām and the Mongols, in Morocco and Egypt, in Syria and Palestine, India and China. In 1252 a special missionary congregation was formed out of members of the two orders known as *Societas peregrinantium propter Christum*. A new impetus to the Roman Catholic apostolate was given when, in the 14th, 15th, and 16th centuries, Spain and Portugal took the lead in exploration, conquest, and commerce in the East and the West. They gave freely of the wealth that they had won in their respective colonies to found missions, schools, and colleges for the propagation of the faith, and their fleets never set forth without having on board missionaries—Augustinians, Dominicans, Franciscans, or Jesuits—destined for the peaceful conquest of souls. To avoid political troubles and to further the cause of Christianity, Pope Alexander VI. in 1496, by the famous line of demarcation, assigned the East to the Portuguese and the West to the Spaniards, and with a remarkable zeal they devoted their protection for nearly three centuries to the spread of the gospel, though this Protectorate had its serious disadvantages for a healthy development. Franciscan missionaries accompanied Columbus in 1493, and they were followed by others to the Antilles (1500), Mexico or New Spain (1519), Yucatan, Guatemala, and Honduras, Nicaragua and Costa Rica. In S. America the Franciscans had missions in Colombia and Venezuela, in Peru and Ecuador. At the request of the king of Spain Franciscans went to Chile and Bolivia, to the Indians in the Pampas of Argentine and in Gran Chaco, and in 1538 they landed in Southern Brazil. When in 1664 Narváez undertook an expedition into Florida, five Franciscans went with him, and from there they extended their work to New Biscaya, New Mexico, Arizona, Texas, and California. French Franciscans were the first missionaries in Canada (1615) and Nova Scotia, while in Africa they continued their work in Morocco, Tunis, Tripoli, Egypt, and Abyssinia.

The Society of Jesus, founded by St. Ignatius Loyola (†1556) in 1534, placed itself from the very beginning at the disposal of the Church for missionary work. St. Francis Xavier inaugurated in 1542 the Roman Catholic apostolate in India, Ceylon, Malacca, and Japan. Under Francis Borgia (1565–72) Jesuit missionaries were sent to Florida, Mexico, Peru; under Acquaviva (1581–1615) to Canada, Chile, Paraguay, the Philippines, and China; under Vitelleschi (1615–40) to Tibet, Tongking, Maranhão, etc. What the suppression of the Society of Jesus (1773) meant for the Roman Catholic apostolate may be best realized by the fact that by one stroke of the pen the Church was deprived of 3300 Jesuit missionaries alone in that year.

Besides the Franciscans and Jesuits, other missionaries belonging to various religious orders were engaged in the mission field of the Roman Catholic Church, although not to so large an extent. Among these may be mentioned the Theatines (1524), Capuchins (1528), Barnabites (1533), Oratorians (1575), Carmelites (1565), Augustinians (1588), Lazarists (1624), the missionary seminaries of Rome (1608) and of St. Sulpice (1642), and, lastly, La Société des Missions Étrangères of Paris (1663). For the sake of unity and conformity all these various missionary organizations were finally centralized from Pope Gregory XIII. (1572–85) to Gregory XV. (1621–23). By the brief of 22nd June 1622 (*Inscrutabili*) the latter, with the help of the Carmelite Thomas a Jesu and the Capuchin Girolamo da Narni, instituted the Congregatio de propaganda fide, or Propaganda, whose sphere of jurisdiction has recently been circumscribed by Pius X. (29th June 1908). The Congregation consists of 25 cardinals with a cardinal-prefect, 4 secretaries, 10 minutanti, and some 50 consultors. Their chief work is to establish and circumscribe the boundaries of the missionary jurisdictions or districts, *i.e.* mission, prefecture, vicariate, diocese, etc., to entrust the particular field to the various missionary societies, to appoint the missionary superiors, etc.

Thus from the beginning of the 16th cent. the Roman Catholic Church carried on her apostolate throughout the world in N. and S. America, in Africa and the adjacent islands, in Asia, China, India, etc. On the other hand, the struggles and the storms which she had to endure in the 18th cent. from the tyrannical absolutism of European rulers, from the crippling tutelage of the State, from a false philosophy, the Encyclopædists (*q.v.*), and finally from the French Revolution and the subsequent suppression of almost all the religious orders and missionary societies, brought her apostolate to a temporary standstill, till it was revived between 1820 and 1830.

The 19th and so far the 20th centuries are witnesses of the unswerving fidelity of the Church to the command of Christ and a pledge of her vitality and energy in the mission field. Unsupported by emperors and kings as her protectors and promoters, nay, hampered in her efforts by Roman Catholic governments and anti-Christian legislation, she has carried on the work of reconstruction and reorganization, has recovered her ground, and, finally, has carried her propaganda into every corner of heathen lands. The ancient orders have taken up their work in the field, new missionary societies have been founded during the course of the century, training colleges have been established, and religious orders of women, formerly almost excluded from the missions, are now to be found everywhere, about 20,000 taking their share in the educational, charitable, and industrial work. To support the missionaries and the missions materially, the Association for the Propagation of the Faith (1822) and the Society of the Holy Childhood have done good work, while Popes Gregory XVI., Pius IX., Leo XIII., and Pius X., as well as the Roman Catholic hierarchy throughout the world, have given their support to promote the revival of missionary work among the heathen.

According to H. A. Krose (*Katholische Missionsstatistik*, Freiburg, 1908), the total result of missionary work on the part of the Roman Catholic Church in the 19th cent. amounted to 8,321,963 converts from paganism. This flock is attended by 12,305 missionary priests, of whom 5369 are natives, 4863 brothers, and 17,284 sisters, with 30,414 stations, 22,736 churches, 17,834 schools with 791,878 pupils. When we add the results of the Roman Catholic missions since the time of the Reformation, we have in the Roman Catholic mission field 30,000,000 native converts.

According to Karl Streit (*Katholischer Missionsatlas*, Leipzig, 1906) there were: 7933 European and 5837 native priests, 5270 brothers, 21,320 sisters, 24,524 catechists, 42,968 stations, 28,470 churches, 7,441,215 native members, 1,517,000 catechumens, 24,033 schools with 840,974 pupils, etc. The *Atlas Hierarchicus*, by the same author, published at Paderborn in 1913, does not give a summary of the apostolate.

The review of missionary societies and their respective missions given on the opposite page will help the reader to understand the position of the Roman Catholic missions in our own days.

I. *ASIA.*—As far as missionary work in its strictest sense is concerned, Asia may be divided into: (1) India Proper, or the British Empire of India with Ceylon, Burma, and Malay Peninsula, (2) the Chinese Empire, including Mongolia, Manchuria, and Tibet, (3) Indo-China, with Siam and Laos, and (4) the Japanese Empire, with Korea. The early history of missions in this continent has been outlined in the 'Early and Mediæval' section, above.

1. British India.—British India and Ceylon, with an area of 1,800,000 sq. miles and a population of some 300,000,000 souls, is one of the most important and probably one of the most difficult mission fields of the Roman Catholic Church owing to the babel-tongued tribes (120), the many non-Christian religions (Hindu, Brāhman, Buddhist, Muhammadan, pagan) and Christian denominations (40), and the prejudices of the highly developed caste system.

In 1498 Vasco de Gama landed in Calicut, the capital of Malabar, accompanied by the Trinitarian Pedro de Covilham, who in 1500 became the protomartyr of the missions in India. In the same year eight secular priests and eight Franciscans arrived with Pedro Alvarez Cabral, three of whom were put to death by the Muhammadans. Yet, in spite of persecution and death, the Franciscans, and after 1503 the Dominicans, went forth to India as the pioneer missionaries, to sow the seed of Christianity in Cochin (1503) and Goa (1510), and gradually extended their work to Bombay, Madras, Damão, Bengal, Agra, Ceylon, Mailapur, etc., under Fathers Antonio do Lazal (1530), do Porto, and Padrão. To establish the Church on a firm footing Pope Paul III. erected the bishopric of Goa (1534) with Bishop John of Albuquerque as its first occupant; the see was raised to an archbishopric by Paul IV. (1557) with three suffragans at Cochin (1557), Cranganore (1600; archbishopric 1605), and Mailapur (1606). Two Franciscans, James of Borbas and Vincent of Lagos, founded the college of St. Paul at Goa for the purpose of training a native clergy.

In 1541 the Jesuits entered the mission field of India and, at the request of John III. of Portugal, St. Francis Xavier, accompanied by Paul of Camerino and Francis Mansilhaes, set out to inaugurate a new period of missionary labours. From Goa he extended the faith to the Fishery Coast, Travancore (1544), Cochin, Quilon, and Ceylon. His Jesuit successors took up and carried on his work: de Nobili among the Brāhmans of Madura (1605–48), Tanjore, and Mysore (30–100,000 converts), Criminalis on the Fishery Coast (90–130,000 converts) (1602), de Britto among the Maravas (1693), Acquaviva at the court of Akbar the Great; Father Goes penetrated from India into China, and Andrada crossed the Himalayas and went to Tibet. They were followed by other members of the Society such as da Costa, Martinez, Laynez, Bouchet, Martin, Calmette, Cœurdoux, and Constantine Breschi (1700–40). Franciscans in Agra and Delhi, Capuchins in Madras (1642), Barnabites and Augustinians (Archbishop Menezes of Goa [1594–1610]) in Hyderabad and Bengal, Theatines and Oratorians (Father Vaz, apostle of Ceylon [† 1711]) shared with them in this new harvest of souls in India, whilst, after 1656, the Carmelites worked for the return of the Syrian Christians of Malabar to Roman Catholic unity.

With so many missionary labourers in the Indian mission field, hopes of a speedy conversion of India were entertained, and, no doubt, would have been realized to some extent, had Portugal remained faithful to the duties and sacred obligations that she had promised in connexion with the Padroado—the right of patronage—which the Holy See from Leo X. to Paul V. (1514–1616) had granted to her kings. When, however, the power and the influence of Portugal began to decline and the Dutch and the English took her field in the East, the supply of missionaries became limited, the missionaries themselves were put to death or expelled, the churches were destroyed, and the native Christians were cruelly persecuted. The Sultan Tippu Sahib of Mysore between 1782 and 1799 put 100,000 Christians to death, forced 40,000 into apostasy, and sold 30,000 as slaves to Muhammadan dealers. The dispute regarding concessions to Hindu usages or Malabar rites, commencing with de' Nobili in 1606 and ending in 1744 with the bull of Benedict XIV., *Omnium sollicitudinum*, greatly divided the missionaries to the disadvantage of their work, which suffered a heavy blow by the suppression of the Society of Jesus in the Portuguese dominions in 1755, in the French possessions in 1762, and throughout the world in 1773. There were at this time 150 Jesuits in Goa, 47 in Malabar, and 22 in Pondicherry. True, their places were partly filled by Capuchins, by the Missionary Seminary of Paris (1776), and by some native priests, who were ordained without a vocation or an adequate education. Thus the missions in India, which in 1700 numbered some 1,500,000 or even 2,500,000 Roman Catholics, were only ruins and wreckage (500,000 or even less) in 1800. The archbishopric of Goa, with its three suffragans of Cranganore, Cochin, and Mailapur, numbered 340,000 members with 400 priests, and outside the Goanese jurisdiction there were four missions—Agra, with 5000 converts under the care of 10 Capuchins, Pondicherry, with 42,000 and 6 priests, the Carmelite missions of Malabar, with 88,000 converts and 5 priests, and Ceylon, with 1 missionary and 20 native priests for 50,000 members. All this was due to the anti-Christian policy of Pombal and the neglected obligations of Portugal's right of the Padroado. The Holy See,

ROMAN CATHOLIC RELIGIOUS ORDERS AND MISSIONARY SOCIETIES, AND THEIR FIELDS OF WORK.

recognizing the inadequacy and the unwillingness of Portugal, began to provide for the neglected field of India. Hitherto only missionaries of Portuguese origin had been admitted, and this by way of Lisbon and Goa. For years Portugal left the bishoprics vacant and in 1827 withdrew all material subvention. The misery was too evident, and Gregory XVI. took matters into his own hands without consulting the interests of Portugal. India was opened to all Roman Catholic missionaries irrespective of nationality or religious orders. In 1837 the French Jesuits entered Madura, and they were followed by the Germans (Bombay and Poona 1854, 1857), the Belgians (Calcutta 1859, Galle 1895), and the Italians (Mangalore 1878). The Missionaries of Paris took up their work in Malacca (1840) and Burma (1857), those of Milan in Krishnagar (1855), Hyderabad (1863), and E. Burma (1866), the Oblates in Jaffna (1847) and Colombo (1883), etc. In 1832 the Propaganda asked Portugal either to fill the vacant sees or to renounce the Padroado. As no answer arrived for two years, Gregory XVI. began to institute vicars-apostolic in Bengal and Madras (1834), in Ceylon and Pondicherry (1836), etc. But new trials and difficulties commenced. The Portuguese Government protested against sending missionaries into India and against the establishment of new vicariates without the consent and the co-operation of the kings of Portugal, and the patriarch of Goa placed himself at the head of a schism in India—the Goanese schism—which was maintained under the patriarchs of Goa, Joseph de Silva y Torres and Joseph de Matta. Pius IX. tried in 1857 to come to a settlement, but this was accomplished only by Leo XIII. on 23rd June 1886. A million and a half of native Christians were again under the allegiance of the Holy See when on 1st Sept. 1886 Leo XIII. established the hierarchy in India—8 archbishoprics: Goa, Verapoly, Colombo, Pondicherry, Madras, Calcutta, Agra, and Bombay, to which Simla was added in 1910, the patriarch of Goa holding the dignity of primate, and twenty-five dioceses, etc. For the furthering of the mission work Leo XIII. also established a papal delegation for India in 1884, which since then has been administered by the titular archbishops Agliardi (1884–87), Ajuti (1887–92), and Zaleski.

The first thirty years of the Indian missions after the reorganization under Gregory XVI. was a period of reconstruction in gathering together and strengthening in the faith the remnants of the old Roman Catholic congregations. With the decline of the Goanese schism and establishment of the hierarchy a steady flow of conversions began, and since then remarkable progress has been made, more conspicuously among the Tamil races in S. India and Ceylon, less so in the Aryan lands of the north. In 1887 the numbers of Roman Catholics in India were:

India	989,381	1,224,427
Ceylon	207,692	
Three vicariates of Burma	27,354	

According to the Census of 1911 (including Burma):

Native Roman Catholics of the Latin Rite	1,394,000
Native Roman Catholics of the Syrian Rite	413,142
Eurasian and European Roman Catholics	97,144
Total	1,904,286
Ceylon (native Roman Catholics)	322,163
Total for India and Ceylon	2,226,449

To complete the survey of the Roman Catholic missions in British India, we subjoin the general statistics taken from the *Atlas Hierarchicus* (1913): the hierarchy consists of 9 archbishoprics, 22 dioceses, 3 vicariates, and 4 prefectures, with 1268 foreign and 1230 native priests, 638 brothers, 3592 sisters, 2776 catechists, 4920 native teachers, 2,215,682 Catholics, 1108 principal and 7208 secondary stations, 5891 churches, 27 theological seminaries with 1121 students of theology, 2843 elementary schools with 163,696 pupils, 519 higher schools with 32,616 boys and 15,273 girls, 290 orphanages with 14,706 orphans, 48 hospitals, 175 dispensaries, 18 printing presses, etc.

2. China.—The revival of Roman Catholic missionary activity in China after the close of the mediæval period dates from the time when the Jesuit Father Ricci was allowed to settle there (1583). Science was to pave the way for religion and missionary work. In 1600 Ricci went to Peking and with the help of his Jesuit brethren started missions at Canton, Nanking, and Kian-si, receiving converts from the highest to the lowest classes of the population, till his death in 1610. The persecution which broke out in 1617 was brought to a speedy end by the invasion of the Manchu Tatars. In 1628 the Jesuit Adam Schall arrived in Peking, gained great influence by his learning, and turned it to the advantage of religion. In the meantime the Dominicans, who in 1625 had established themselves on the island of Formosa, had also opened missions in Fu-kien. One of these Dominican missionaries, the native priest Gregory Lopez, or A-Lo, known as the Chinese Bishop, the first and the only Chinaman who has been raised to the episcopate, rendered the greatest services to the Roman Catholic Church in his native land (1654).

At the request of Bishop Pallu, Clement X. divided China, which had hitherto been under the jurisdiction of the bishop of Macao, into two vicariates and entrusted the northern part to Gregory Lopez, consecrated bishop at Canton in 1685.

About this time the emperor K'ang-hi, a pupil of Father Schall, repealed all the edicts against the Christians, and the missionaries who had been imprisoned were released and resumed their work. Like Fathers Ricci and Schall, Father Verbiest, another learned Jesuit, who arrived in China in 1660, became the favourite of the Mandarins, and K'ang-hi appointed him president of the faculty of mathematics and gave the missionaries permission to preach the gospel throughout China.

Through the influence of Verbiest and his learned successors Christianity made great progress within a century, and when he died the Roman Catholic Church was in a flourishing condition, honoured at Court, professed by the highest mandarins, and numbering about 300,000 members. Since, however, the Roman Catholic religion was not officially recognized, and the natives were forbidden by law to embrace the faith, the local mandarins put many obstacles in the way and caused many a local persecution, till Father Gerbillon, in 1692, obtained an edict from the emperor giving full liberty to all his subjects to embrace and practise the Roman Catholic religion.

But, whilst the Church was enjoying peace from without, she was sadly disturbed from within by a controversy about the Chinese rites, *i.e.* the lawfulness of taking part in the Chinese ceremonies in honour of Confucius and of using the word *Tien* ('heaven') to express the idea of God, and whether the prostrations and sacrifices in honour of Confucius and of the ancestors were merely civil ceremonies or connected with idolatry and superstition. Instead of preaching the gospel, converting the infidels, and applying their abilities to other clamant duties, missionaries of the first class wasted their talents, time, and work in useless and fruitless discussions, for Jesuits and Dominicans were divided in their opinions. Father Ricci, as well as the Chinese bishop, Gregory Lopez, and most of the Jesuit missionaries, considered the Chinese rites as merely civil ceremonies, while the Dominicans strongly objected to this view. In 1693, however, the controversy became acute by the action of Bishop Maigrot, vicar-apostolic of Fu-kien, who condemned the rites and threatened with interdict all the missionaries who refused to conform to his command. To settle the dispute, a papal legate was sent to China in 1705, who, owing to lack of tact, only offended the emperor.

In 1706 K'ang-hi made all the priests in China promise that they would teach nothing contrary to the received usages in China, and in the following year issued an edict threatening death to all who should preach against the rites. Alarmed lest the Government should be provoked to harsher measures, the Jesuits appealed to Rome, asking for instructions. A new papal legate arrived in China in 1721 with letters to K'ang-hi, assuring him that the Holy See would ask nothing more than that the Christians should be allowed to pay their respects to the dead in a manner not prejudicial to their religion. In spite of this decision the controversy continued till 1742, when Benedict XIV. condemned the rites and forbade the Christians to take part in them. After peace was restored, Jesuits and Dominicans, Franciscans and Augustinians, priests of the Society for Foreign Missions of Paris and Lazarists worked hand in hand for the evangelization of China. Some shed their blood, while others, such as Gerbillon, Bouvet, and Parenin, became the scientific advisers to the Court or wrote learned books and treatises or published works of piety for their converts. The emperor K'ang-hi, during his long reign of sixty years, treated the Christians with justice, revoked all the edicts against them, raised them to the highest offices in the empire, and made the ministers of the Christian religion his companions, friends, and advisers. He died in 1721 without embracing Christianity, although he desired to be baptized in his last illness.

After the death of K'ang-hi, a reaction took place. His son and successor, Yung-chin (1722–35), drove the missionaries from the Court, and ordered them to leave the country, with the exception of Father Parenin and three of his colleagues. A general edict of persecution was issued in 1724, the missionaries were seized and banished, and 300 churches were destroyed or turned into pagan temples, while 37 Manchu princes who had become Christians, with 300 of their servants, were sent into exile (1724). The accession of K'ien-lung (1735) to the throne of China mitigated for a time the severity of the anti-Christian laws, but in 1745 a new persecution broke out in Fu-kien, where, in the following year, Bishop Sanz and four Dominicans were tortured and beheaded, and soon the flame spread to other provinces. All the hatred was turned against the priests, who were obliged to seek refuge in flight.

Scarcely had the Church recovered from her trials when a new misfortune overtook her. The Jesuits, who from 1583 to 1773 had worked in China as elsewhere, were suppressed. At the request of the Propaganda, the Lazarists took charge of the Jesuit missions in China—*i.e.* four large churches in Peking and the missions in 13 out of 18 provinces—in 1783. For many years, however, the Lazarists were unable to send a sufficient number of missionaries to continue the work of the Jesuits; seven missionaries seem to be all that were sent from 1773 to 1793. Finally the French Revolution cut off the supply of missionaries from France, and for over thirty years the Lazarists were unable to send a single priest to China. The Roman Catholic Church in China, which in the reign of the emperor K'ang-hi is said to have numbered 800,000 members, was reduced at the beginning of the 19th cent. to 220,000, divided among the Lazarists at Peking and Nanking, the Franciscans in Shan-si, the Dominicans in Fu-kien, the Missionaries of Paris in Sze-ch'uen, and the Portuguese secular priests at Macao and Canton.

Yet, in spite of bloodshed and persecution, of cruel edicts issued by the emperors, and the anti-Christian hatred of provincial and local mandarins, and notwithstanding anti-foreign policy fostered by the literati and carried into effect by members of secret societies, the Taiping and Boxers, the Roman Catholic Church has made good progress during the course of the 19th and specially since the beginning of the 20th century. The Franciscans and Dominicans, the Jesuits and Augustinians, the Lazarists and the Missionaries of Paris who had been in the Chinese missions for the last two centuries, have strengthened their ranks and extended their work, while new missionary societies founded in the 19th cent., such as the Scheutveld and the Steyl missionaries, and the missionary seminaries of Milan, Rome, and Parma, have opened up new fields, and all the European missionaries engaged in China have strengthened their ranks with a large number of native priests.

True, the opening of the 19th cent. did not promise a bright future, for Kia-k'ing (1795–1820) proved to be one of the greatest persecutors, having revived the old anti-Christian laws. Bishop Dufresse was beheaded in 1825, Father Clet in 1820, and Father Perboyre in 1840. But China was shaken to her very foundations when in 1842 Britain declared war on her and compelled her to open certain ports, while France demanded religious liberty for the Roman Catholic missionaries in 1844. The Chinese Government acceded, and in 1844–45 two edicts were issued by which Christianity received legal recognition in the empire, and in 1846 a third ordered the restoration to Roman Catholics of all the churches which they had lost since the reign of the emperor K'ang-hi. The eighty missionaries who at this period were at work in China were strengthened in 1841 by the arrival of the first missionaries of the Society of Jesus, who were once more entrusted with one of their former fields of labour, the vicariate of Kiang-nan.

Though religious liberty was granted by the edicts of 1844, 1845, and 1846, they remained a dead letter in many of the provinces in the interior. In 1851 the emperor Hien-fêng revoked them, and renewed those against the Christians. The murder of Father Chapdelaine (1856) brought matters to a crisis. France joined Britain in a war against China, and the result was the Treaty of Tientsin (1858) and the Convention of Peking (1860); the churches were restored as well as the religious and charitable institutions, the missionaries obtained free passports throughout the empire, the faithful were guaranteed unrestricted exercise of their religion, and all the edicts against the Christians were abrogated. Yet the Christians were not safeguarded from local persecutions, which broke out in Kiang-si, Kwang-tung, Sze-ch'uan, Hu-nan, and finally in Tientsin in 1870. After the accession of Kwang-su in 1875 the Roman Catholic Church enjoyed a long period of peace, and, though the empress Tsz'e Hsi was not favourable to Christianity, yet she did nothing against its progress and development. In 1895 and 1899 the French minister in Peking obtained new concessions for the Christians, among them the privilege that the Roman Catholic missionaries were put on an equality with the Chinese local authorities—a privilege which was cancelled a few years later.

The political plunders of Europe in China, by taking Kiaochow (Germany, 1897), Talienwan (Russia, 1898), Wei-hai-wei (Britain, 1898), and Kwang-chou-wan (France, 1898), resulted in the Boxer riots, which brought sad days for the missions. Bishops, priests, and sisters lost their lives; churches, schools, and hospitals were levelled to the ground; and native Christians were slaughtered. Peace was restored only when a strong international army entered Peking on 14th Aug. 1900 and ten foreign Powers dictated their terms in the Chinese Capital on 7th Sept. 1901. A movement towards the Roman Catholic Church then began, a great number of Chinese entering the list of the catechumens, and it has steadily advanced since the Boxer rising. The overthrow of the Manchu dynasty in China and the proclamation of a Chinese republic have not interfered with missionary work. Yuan-Shi-Kai, the first president of the new republic, promised absolute religious liberty, mandarins and governors eulogized the tact of the Roman Catholic missionaries, and Christian and non-Christian sects look up with admiration to the spiritual power of the Church whose missionaries are living examples of the poverty, zeal, and heroism of apostolic times.

During the flourishing period of the Roman Catholic Church in China, from 1583 to 1773, the hierarchy was not developed, though the Propaganda had resolved in 1651 to appoint a patriarch, two or three archbishops, and twelve bishops. In 1577 Gregory XIII. created the diocese of Macao for China and Japan, which was divided into two, viz. Macao and Funay (Japan) in 1587. In 1659 Alexander VII. erected within the diocese of Macao two vicariates for China, and to satisfy Portugal Alexander VIII. created the dioceses of Peking and Nanking under the jurisdiction of Goa, to which were added three vicariates, viz. Shan-si, Fu-kien, and Sze-ch'uan. In 1800 there were in China five missionary districts divided between the Franciscans (Shan-si), the Dominicans (Fu-kien), the Missionary Society of Paris (Sze-ch'uan), the Lazarists (Peking, Nanking, Hu-nan, Hu-peh, Kiang-si), and the secular priests (Macao) with 200,000 members. Fifty years later the number had increased to 18 districts with 330,000 members, in 1890 to 40 ecclesiastical jurisdictions with 601,000 members; in 1905 we find 43 vicariates with 931,000 members, and in 1911-12, 48 vicariates and prefectures with 1,345,376 members (1913=1,431,000; 1914=1,605,107) and 496,912 catechumens.

According to the *Atlas Hierarchicus*, we find for China and her dependencies, Mongolia and Manchuria, the following statistics: 49 missionary dioceses or vicariates and prefectures, 1365 European and 721 native priests, 247 European and 86 native brothers, 743 European and 1429 native sisters, 4327 male and 2752 female catechists, 7191 native teachers, 1,406,659 native Christians and 613,002 catechumens, 1442 principal and 13,806 secondary stations, 9214 churches and chapels, 54 theological seminaries with 1638 students, 6974 elementary schools with 129,320 (?) pupils, 157 higher schools with 4439 (?) boys and 906 (?) girls, 392 orphanages with 29,198 inmates, 97 hospitals, 427 dispensaries, and 21 printing presses.

3. Indo-China.—Indo-China, the bridge between India and China, the most easterly of the three peninsulas of S. Asia, is politically divided into Upper and Lower Burma (British), the Malay Peninsula (British and Siamese), Siam (independent), French Indo-China, which consists of Cochin China, Annam and Tongking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsula are—ecclesiastically—included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

The area of French Indo-China has been estimated at 262,000 or 309,000 sq. miles with a population of 16,000,000 or 21,000,000 inhabitants. The first attempts to preach the gospel in French Indo-China were made in the 16th cent. by a French Franciscan, Bonfer (1554), and two Portuguese Dominicans, Gaspard of the Cross, who penetrated into Cambodia, and Sebastian de Cantu; both were put to death in Siam in 1569. These were followed by Lopez Cordoso, Sylvester Azevedo, and John Madeira, who preached in Siam and Cambodia, while Louis Fonseca and Diego Advarte (martyred in 1600) went to Cochin China in 1596. These early missionaries, however, had little success. When the Jesuits engaged in the missions of Japan were expelled in 1614, they made their way to Indo-China; such were Francis Buzoni, Diego Carvalho, and Francis del Pina, who in 1615 entered Cochin-China and Cambodia in 1617, and they were followed by Alexander of Rhodes, the pioneer missionary of Indo-China, in 1624. From Cochin-China Father Julian Baldinoti extended the work to Tongking in 1626. In a short period of time the Church made such rapid progress that, in spite of repeated persecutions, the number of Christians amounted to 108,000 in 1641, while Father Tissanier on his arrival in 1658 found 300,000 converts under the charge of only 6 Jesuit priests and 30 lay catechists. To plead the cause of the Church in Indo-China and the insufficient number of workers, Father Rhodes returned to Europe to appeal for help. In the meantime persecutions raged against the native Christians in 1644, 1645, and 1647; but, on the other hand, a new missionary society was founded in Paris (Les Missions Étrangères), whose members were to become the instruments for a rich harvest in the East. Among the first missionaries of the Society of Paris we find Fathers Chevreuil, Haingues, Brindeau, Mahot, and Vachet. To strengthen the work Pope Alexander VII. appointed in 1659 two members—the actual founders of Les Missions Étrangères—viz. Francis Pallu and Pierre de la Motte Lambert, as vicars-apostolic of Tongking and Cochin China. Under their administration parishes were established, schools and seminaries were opened for the training of a native clergy, and de la Motte founded a congregation of native sisters called 'Les Amantes de la Croix.' A persecution which broke out in 1664, during which the Jesuits were temporarily expelled till 1669, greatly reduced the number of native Christians, partly by martyrdom, partly by apostasy, so that on the arrival of the Missionaries of Paris there were only 100,000 Christians left, but this number was increased to 200,000 in 1681. To strengthen the position of the missionaries Pallu in 1672 urged Colbert, the French minister, to establish commercial relations between France and Indo-China, and persuaded Louis XIV. to use his influence on King Le-hi-tong to allow the freedom of Christian worship. In 1678 the vicariate of Tongking was divided into Eastern and Western Tongking; the former, since then divided into Northern and Central, was entrusted to Spanish Dominicans, and the latter to the 'Missions Étrangères' of Paris.

The rapidly growing religious influence exercised by both bishops and priests led to renewed persecutions, which have scarcely been interrupted till our own day. Yet in 1737 we find there 250,000 Christians, *i.e.* 120,000 under the care of the Jesuits, 80,000 under the Missionaries of Paris, 30,000 under the Augustinians, who in 1676 had entered the field, and 20,000 under the Dominicans. This number was not only maintained but increased in spite of civil wars and uninterrupted persecutions during the 18th cent., and notwithstanding the suppression of the Society of Jesus and the consequent decrease of European missionaries. In 1800 we find the following table of statistics:

Cochin China: 1 vicar-apostolic, 5 missionary and 15 native priests, 50,000 native Christians (Missionaries of Paris).
Tongking W.: 1 vicar-apostolic, 6 missionary and 63 native priests, 120,000 native Christians (Missionaries of Paris).
Tongking E.: 1 vicar-apostolic, 4 missionary and 41 native priests, 140,000 native Christians (Dominicans).

3 bishops, 15 missionary and 119 native priests, 310,000 Christians.

In the meantime a political movement had taken place in Indo-China which at first seemed very favourable to the spread of Christianity, but which in reality became the cause of serious hindrances, obstacles, and persecutions. During the civil war which commenced in 1777, Nguyen-anh, the ruler of Cochin China, implored the help of the European

Powers against the rebellious Tai-Shans. Britain, Holland, and Portugal willingly offered their help, but Pierre-Joseph Pigneaux de Béhaine, since 1771 vicar-apostolic of Cochin China, offered to enlist the help of France, and Nguyen-anh accepted the proposal. Accompanied by Prince Canh, the king's son, Pigneaux set out for France, and, as plenipotentiary of the Annamese king, signed a convention on 28th Nov. 1787, according to which France was to assist Nguyen-anh to recover his throne. But to his dismay the bishop, on his return to the East, found that France had abandoned the project, and, therefore, he persuaded 20 officers and 500 men of Pondicherry to come to the rescue of the king, who defeated his enemies and in 1802 proclaimed himself as emperor of Indo-China and Annam under the name of Gialong.

Owing to this success Gialong was favourable to Christianity, which made splendid progress throughout the Annamese empire. This period of peace (1802–20), however, was only a preparation for future trials. In 1819 the Christian community included 4 bishops, 25 European and 180 native priests, 1000 catechists, and 1500 sisters. Gialong was succeeded by his son, Minh-mang (1821–41), a cruel and profligate tyrant and a bitter enemy of Christianity and foreigners. He dismissed his father's trusted friends, summoned all the missionaries to appear at court, and resolved to obliterate the very name of Christianity within his realm. Though his object was defeated for a time, he issued a new edict in Jan. 1833, ordering all Christians to renounce their faith, to trample the crucifix under foot, to raze all churches and religious houses to the ground, and to punish all the missionaries with the utmost rigour. Hundreds of Christians, 20 native and 9 European priests, and 4 bishops fell as victims to this tyrant—Fathers Gagalin (1833), Marchand (1835), Cornay (1837), de la Motte (1840), Mgr. Borie (1838), and Mgr. Delgado (1838), 84 years old. The persecution abated under Minh-mang's successor, Thieu-tri (1841–47), who did not possess the energy of his predecessor, and was afraid of Britain's successes in China and of a threatened interference of France. Instead of being annihilated, the Church's missionaries and converts increased year after year in spite of all the edicts and tortures of Minh-mang. In 1840 we find:

Cochin China: 1 vicar-apostolic, 1 coadjutor, 10 missionary and 27 native priests, 80,000 Roman Catholics.
Tongking W.: 1 vicar-apostolic, 8 missionary and 76 native priests, 180,000 Roman Catholics.
Tongking E.: 1 vicar-apostolic, 1 coadjutor, 6 missionary and 41 native priests, 160,000 Roman Catholics.

3 bishops, 2 coadjutors, 24 missionary and 144 native priests, 420,000 Roman Catholics.

To facilitate the work of the missions in the Annamese empire, Gregory XVI. in 1844 divided Cochin China into two vicariates, Eastern and Western, and W. Tongking into Western and Southern in 1848, while in 1850 Cambodia and N. Cochin China were also raised to vicariates.

Though King Thieu-tri did not shed the blood of the priests, yet they did not escape imprisonment; such were Fathers Gali, Berneux, Charrier, Miche, and Duclos, who were set free by Captain Levêque of the *Héroine* in 1843. This and similar interferences by the French in 1847 and 1856 provoked the resentment of King Tu-duc (1847–83), whose reign of 36 years is one uninterrupted period of persecution of the bishops, priests, and Christians. In 1848 he issued an edict setting a price on the heads of the missionaries, and in 1851 he ordered the European priests to be cast into the sea and the native priests to be cut in two; Fathers Schäffler (1851), Bonnard, and Minh (1852) were martyred. In 1855 a universal proscription of Christians followed, and in 1857 Bishop Pellerin, vicar-apostolic of N. Cochin China, appealed to Napoleon III. to intervene. In August 1858 France and Spain, roused by the slaughter of their countrymen, took joint action, and seized Touran (1858) and Saigon (1859). The persecution meanwhile raged with unabated vigour. Bishops Diaz, Hermosilla, Garcia, Cuenot, etc.—altogether 5 bishops, 28 Dominicans, 3 Missionaries of Paris, 116 native priests, over 100 native sisters, and 5000 Christians—were put to death, 100 towns, all centres of Christian communities, were razed to the ground, 40,000 Christians died of ill-treatment, and all the possessions of the remainder were confiscated. Peace was restored in 1862, when Annam ceded to France the southern provinces of Cochin China and guaranteed freedom of religious worship. That peace, however, did not last long; it was broken by the interference of the French freebooters Dupuis, Dupré-Garnier, and Philastre, and Mgr. Puginier, vicar-apostolic of W. Tongking, became involved to the detriment of the missions. A new treaty was signed between France and Annam on 15th March 1874, which again guaranteed religious freedom and the safety of the missionaries, and from 1874 to 1882 the Christians enjoyed a period of relative peace, till the Annamese mandarins disregarded the treaty and compelled France to interfere. Hue was captured on 25th Aug. 1883, the Annamese were defeated, and on the same day the new treaty was signed, and on its ratification, 23rd Feb. 1886, Annam became a French protectorate. Yet, before this was accomplished, the Christians, who were considered as friends of France and enemies of Annam, had to suffer severely. At the close of the year 1886 Tongking, Cochin China, and Laos had to mourn the loss of 20 European and 30 native priests, and 50,000 Christians; E. Cochin-China alone lost 8 European and 7 native priests, 60 catechists, 270 sisters, 24,000 Christians, 17 orphanages, 10 convents, and 225 chapels, etc. Yet the blood of the martyrs has been here as elsewhere the seed of Christianity, and surely during the 28 years of peace the Roman Catholic Church has made marvellous progress in Indo-China, and has never been in so flourishing a condition as she is to-day. Of this the statistics given below are ample proof.

Siam.—The first Roman Catholic missionary who entered Siam was the French Franciscan, Bonfer, who preached the gospel there from 1550 to 1554, but without result. He was succeeded by two Dominicans, Jerome of the Cross and Sebastian de Cantu, who converted some 1500 Siamese from 1554 to 1569, when they were put to death. The Dominicans were replaced by Jesuits in 1606 and 1624, and in consequence of a persecution the field was abandoned till 1662, when Alexander VII. made it a vicariate and in 1669 entrusted it to the Missionary Society of Paris with Mgr. Laneau as its first bishop. The Siamese king, Phra Narai, in 1687 signed the treaty of Louvo with Louis XIV. of France, by which the Roman Catholic missionaries obtained permission to preach the gospel throughout Siam. This was done till 1727, when a serious persecution broke out which lasted without interruption for the rest of the century. After the Burmese inroads and wars were over, the 12,000 Siamese Christians were reduced to 1000 with Bishop Florent and 7 native priests in charge. In 1826 and 1830 fresh European missionaries arrived, among them Fathers Bouchot, Barbe, Pallegoix, and Courvezy. In 1834 Courvezy was appointed bishop, and under his administration Siam had 6590 Roman Catholics with 11 European and 7 native priests. His successor, Bishop Pallegoix (1840–62), the best Siamese scholar and the most successful missionary among the Laos, induced Napoleon III. to renew the French alliance with

King Mongkut of Siam (1856). Thanks to the broadmindedness of Mongkut (1851–68) and Chulalongkorn (1868–1910), the Roman Catholic missions in Siam enjoyed peace under Pallegoix's successors, Bishops Dupont (1862–72) and Vey (1875–1909). In 1875 there were in Siam 11,000 Roman Catholics, 17 European and 7 native priests, with 30 churches; in 1913 we find 24,000 Roman Catholics, 45 European and 21 native priests, 35 European and 87 native sisters, 23 principal and 33 secondary stations, 56 churches, 76 elementary schools with 3740 pupils, and 4 high schools with 858 students under Bishop M. J. Perros.

The missions in Laos, which were commenced in 1876 and formally opened in 1883, were separated from Siam as a vicariate in 1899. In 1913 we find there 32 European and 4 native priests, 8 European and 14 native sisters, 12,500 Roman Catholics with 23 principal and 56 secondary stations, and 64 churches and chapels with 53 elementary schools.

4. **Japan.**—The existence of the island empire of Nippon, or Ji-pen, 'the Land of the Rising Sun,' was first revealed to the Western world by the Venetian traveller Marco Polo (1295–98), under the name of Cimpangu, but was not visited by Europeans until three centuries later. Famous among these was the Portuguese Mendez Pinto, who, on 23rd Sept. 1543, landed on Tanegashima and became instrumental in the conversion of three shipwrecked Japanese, Anjiro and his servants. In 1549 St. Francis Xavier, accompanied by the Jesuit Cosmo de Torres and by Brother Fernandez, set out for Japan and landed at Kagoshima, whence he extended his work to Hirado, Hakata, Yamaguchi, Meako, and Bungo, forming everywhere nuclei of promising Christian centres. Before his departure to China in 1551, St. Francis had obtained new helpers from Goa, such as Fathers Balthasar Gago, Gaspar Berse, Edward da Silva, and Peter de Alcavera, who were later on joined by Gaspar Coelho, Vilela, Louis Froes, Melchior, and Antonio Diaz. For forty years the Jesuits remained in sole charge of the missions in Japan, and their work progressed under the protection of Nobunaga, then actual ruler of Japan (1573–82). Torres is said to have baptized 30,000 converts and built 50 churches from 1549 to 1570. Thirty years after the death of St. Francis, we learn from Coelho's annual report for 1582 that at that time 'the number of all Christians in Japan amounts to 150,000 with churches great and small 200 in number.' Down to the year 1563 there had never been more than 9, down to 1577 only 18, and to 1582, 72 members of the Society engaged in the Japanese mission-field. In 1582 a Japanese embassy, consisting of four Japanese princes and a Japanese Jesuit, went to Rome and were received in audience by Gregory XIII. In the meantime Nobunaga had died that same year, and his successor, Hideyoshi Taikosama, became a fierce persecutor of the Christians, ordering the destruction of all the churches and the immediate expulsion of all the Roman Catholic priests (1587). The return of the Japanese embassy from Rome in 1590 and the arrival of Father Valignani with new European Jesuits effected a change, however, and the Japanese Christians began to breathe more freely. In 1593 the Japanese missions numbered 56 European Jesuit priests, 11 European scholastics, 87 Japanese Jesuit brothers, 5 Japanese and 3 Portuguese novices with 23 residences, and about 300,000 or even 600,000 members. Pius V. had appointed the Jesuit Antonio Oviedo bishop of Japan with Melchior Carnero as his coadjutor, but the latter died at Macao, and his successor, Sebastian Morales, who was appointed by Sixtus V., came only as far as Mozambique. Bishop

Pedro Martinez, also a Jesuit, appointed in 1591 and consecrated at Goa in 1595, arrived in Japan in the following year. In 1593 four Spanish Franciscans—Peter Baptist of San Estevan, Bartholomew Ruiz, Francis de Parilla, and Gonsalvus—arrived in Japan and started work at Meako, Nagasaki, and Osaka, thus trespassing upon the privilege granted by Gregory XIII. in 1585 to the Jesuits. The progress of Christianity roused the Bonzes, who accused the Roman Catholic missionaries of being only political agents of Spain and Portugal, and Hideyoshi gave the signal for a cruel persecution, during which 6 Franciscans, 15 Japanese Tertiaries, 3 Japanese Jesuits, and 2 servants, known as the '26 martyrs of Nagasaki,' were put to death on 5th Feb. 1597. Instead of destroying Christianity, however, the persecution only helped to make it known. Hideyoshi died in 1598, and his successor, Jeyasu Daifusama (1605–15), left the Church in peace, which was then governed by the Jesuit Bishop Luiz Serqueyra. In 1602 the Jesuits were reinforced by Franciscans, Dominicans, and Augustinians, and by the year 1613 we find in Japan 130 Jesuits and some 30 priests belonging to the other missionary societies. The actual number of native Christians, however, is doubtful. Between 1549 and 1598, 500,000, between 1598 and 1614, 152,000, and between 1614 and 1630, 25,000 adults were baptized, and we are told that the actual number of native Christians in 1614 amounted to 1,800,000. But the peace and prosperity were the prelude to one of the most terrible persecutions begun by Jeyasu for some unknown reason. In 1614 Bishop Serqueyra died and was succeeded by the Franciscan martyr, Bishop Louis Sotelo, who was burned alive in 1624. In order to weaken the Christians the Shogun arrested 117 Jesuits and 27 other missionaries, together with the Roman Catholic leaders, and transported them to the Philippines (1614); but many of them returned.

Jeyasu died in 1615 and was succeeded by Hidetada, who renewed the edicts of his father, and from 1617 to 1640 the persecution went on without interruption. The 'Great Martyrdom' took place at Nagasaki on 2nd Sept. 1622, when 10 Jesuits, 6 Dominicans, 4 Franciscans, and 32 Japanese nobles were put to death. Jemitsu, the following Shogun, is said to have killed about 20,000 every year from 1623. Over 200 of the missionaries, some 800 native catechists, and 200,000 Christians suffered actual martyrdom. From the year 1638 Christianity appeared to be extinct in Japan; though sporadic efforts were made by Jesuits in 1642 and later, all these failed. Father John Sidotti was the last Roman Catholic priest who entered Japan (1708), and he was put to death on 15th Dec. 1715.

The blood of so many martyrs, however, was not destined to be shed in vain. When in 1832 Gregory XVI. erected the vicariate of Korea, Japan was included. In 1844 Father Forcade and Ko, a catechist, landed on Liu-Kiu Island, and they were joined by Father Leturdu in 1846. In the same year the vicariate of Japan was erected with Father Forcade as vicar-apostolic. But Japan was still a forbidden land till, in 1853, the United States broke down the barriers by a treaty, which was followed by others with Great Britain, Russia, etc., and Father Petitjean was able to build a Roman Catholic church at Nagasaki, which, on 17th March 1865, became instrumental in finding that there were in Japan still 25 Christian villages with several thousand Christians who for 200 years had kept the faith. In 1866 Petitjean was appointed vicar-apostolic. Though some minor persecutions broke out, the Church made progress, and in 1873 the laws and edicts against Christianity were abolished. In 1876 Japan was divided into two vicariates, and under Leo XIII. two more were added in 1888 and 1891, till on 15th June 1891 Leo XIII. re-established the Roman Catholic hierarchy, *i.e.* the archdiocese of Tokyo with three suffragan sees of Nagasaki, Osaka, and Hakodate, which were placed under the care of the Missionaries of Paris, to which have since been added the prefectures of Shikoku (1904) and of Niigata (1912) under the care of the Dominicans and the Missionaries of Steyl. The number of Roman Catholics, which in 1870 amounted to 10,000 with 13 priests, reached 23,000 in 1880, 44,000 in 1891 with 82 European and 15 native priests, 63,000 in 1910 with 150 European and 33 native priests, and 69,755 in 1913.

Korea.—From 1636 to 1876 Chosen, 'the Land of the Morning Calm,' was known only under the name of the 'Hermit Kingdom of the Far East' on account of the rigorous enforcement of her policy of isolation against all foreigners. Yet Roman Catholic missionaries made their way and found their faithful children in Korea, whose very name became known in Europe as the symbol of persecution and martyrdom. When, in 1592–94, Taiko Sama of Japan sent his soldiers to Korea, the Jesuit Gregorio de Cespedez accompanied the troops as chaplain to the numerous Roman Catholics in the army, and in his spare time instructed the Koreans also, baptizing, on his return to Japan in 1593, some 300 Korean prisoners of war. Nothing, however, is known of the fate of his converts in Korea, as in the beginning of the 17th cent. all traces of Christianity had disappeared from the land. In 1783 Seng-hun-i, one of the Korean *literati*, joined the annual embassy to Peking and interviewed there Alexander de Govea, the Franciscan bishop, who baptized him by the name of Peter. On his return he was joined by two friends, Pieki and Il-sini, who became the pioneers of Christianity in Korea. From 1784 to 1794 they received some 4000 neophytes into the Church, who were persecuted by the Bonzes from 1785 to 1791. An attempt made by de Remedios in 1791 to penetrate into Korea failed. In 1794 Father Jacob Tsiu (*alias* Padre Jayme Vellozo), a Chinese priest, succeeded in entering, and for six years continued the apostolate, during which time he baptized 6000 converts and thus increased the flock from 4000 to 10,000 souls. In 1801 new edicts were published against the 'new religion'; among the martyrs were Peter Seng-hun-i, Father Tsiu, and 300 of his flock. For thirty years the Christians in Korea remained without a pastor in spite of repeated requests both to Peking and to Rome, owing to persecutions in China. In 1827 the mission field of Korea was entrusted to the Société des Missions Étrangères of Paris, and on 9th Sept. 1831 Korea was made a vicariate with Bruguière as its first bishop, Fathers Chastan and Maubant being his only assistants. The bishop died in the sight of Korea, while Fathers Maubant and Chastan reached Seoul in 1836 and 1837 respectively. At the end of the year the newly-appointed bishop, Imbert, arrived and found the flock reduced from 10,000 to 6000, which was increased to 9000 two years later, when the bishop and the two priests were put to death (1839). In 1845 Bishop Ferréol, accompanied by Fathers Daveluy and Kim, the first native Korean priest, took over the field, but the latter died the death of a martyr in the following year. From 1846 to 1866 the Church in Korea enjoyed comparative peace, during which numerous converts were made both under Ferréol and under his successor, Bishop Berneux—from 11,000 to 25,000. This was the most flourishing period in the annals of the Church in Korea, which then possessed 2 bishops (Berneux and Daveluy) and 10 priests. In 1866 the persecution raged again, and during it the 2 bishops with 7 priests were put to death and 3 priests had to leave the country. In 1867 attempts were made to reopen the mission, but failed. In 1869 Ridel was appointed bishop, but was not able to enter Korea until 1874, was expelled in 1877, and died in 1884. The treaties of Korea with Japan, the United States, Britain, France, and Austria again opened the gates of the Hermit Kingdom. Bishop Blanc found on his arrival in 1883 only 13,000 Roman Catholics out of 25,000 in 1866, but the flock numbered 16,590 at his death in 1890. During the long reign of Bishop Mutel (since 1890) the missions in Korea, which was declared an independent kingdom in 1895, a Japanese protectorate in 1905, and a Japanese general residency in 1910, have enjoyed freedom. In 1897 we find 32 European and 3 native priests with 32,217 members in 497 stations, in 1909, 46 European and 10 native priests with 68,016 members. At the request of Bishop Mutel, Korea was divided in 1910 into the two vicariates of Seoul and Taiku, and numbered, in 1913, 58 European and 17 native priests with 59 principal and 978 out-stations, and 150 churches with 80,500 members.

II. *Africa.*—There is hardly a more glorious chapter to be found in the annals of the Roman Catholic Church than that of Africa. After the decay of early Christianity there, except for a few sadly corrupted remnants surviving in Kabylia, and among the Copts and the Abyssinians, Africa remained for many centuries a closed continent to Christianity, though the Franciscans and Dominicans, the Trinitarians and the Order of Our Lady of Mercy tried their best in the 13th, 14th, and 15th centuries to alleviate the lot of Christian captives and to instil the lessons of Christianity into the hearts of the Muhammadans of Morocco, Tunis, and the Barbary States. When in the 15th cent. the Portuguese, under the leadership of Henry the Navigator, son of King John I. of Portugal, began their discoveries and expeditions along the west coast of Africa, passed Cape Bojador (1433), reached the Rio de Ouro (1442), and doubled Cape Verde (1444), they unfurled the banner of the Cross. In 1471 they crossed the equator, Diego Cam discovered the Congo (1484), Bartholomew Diaz doubled the Cape of Good Hope (1487), while Vasco da Gama came as far as Mozambique, Malindi, and Mombasa (1497). Pope Alexander VI. in 1494 assigned to Spain all the lands discovered and still to be discovered 370 miles west of Cape Verde Islands, and to Portugal all the land to the east, with the one obligation to further the propagation of Christianity and to support mission work in the east and west. Dominicans and Franciscans, Augustinians and Jesuits, Capuchins and Carmelites, supported by secular priests, vied with one another in carrying into effect the command of Christ 'to teach all nations.' Bishoprics were founded on the adjacent islands of the Dark Continent, viz. Las Palmas in the Canary Islands, Funchal in Madeira (1514), São Thiago do Cabo Verde (1532), São Thomé (1534), etc. King Emmanuel of Portugal took a special interest in the evangelization of the Congo, and from 1505 to 1512 sent annually some missionaries of different religious orders (Dominicans, Franciscans, and Augustinians), who, supported by the native King Alphonsus, made good progress. The bishop of St. Thomas (Gulf of Guinea), to whose jurisdiction the Congo belonged, adopted the title of bishop of the Congo, transferred his see to San Salvador, and erected a chapter consisting of 28 canons. As the missionaries already engaged in the Congo did not suffice for the growing demands, St. Ignatius, at the request of the king of Portugal, sent some Jesuits—among them Fathers Vaz, Ribera, Diaz, Soveral, Noguera, Gomez, etc.—who founded a college at San Salvador. From 1554 to 1592, 8 bishops occupied the see of San Salvador, and, when in 1592 the bishopric of Angola was united with that of the Congo, the see of San Salvador was transferred to St. Paul de Loanda. With the growth and expansion of Portuguese power in the E. and W. Indies, however, Portugal neglected to supply the Congo with a sufficient number of missionaries, so that in 1587 we find only 12 priests for thousands of Christian villages. King Alvaro II. therefore applied to Rome for help in 1608; but it was only in 1640 that 6 Italian Capuchins under Francis of Pamplona were sent, and these were strengthened between 1648 and 1683 by Italians and Portuguese, such as Dionysius Mareschi, Bonaventure Carriglio, Joseph of Antiquera, Jerome of Puebla, Francis of Monteleone, and Anthony Zuchelli, as well as by Carmelites who arrived in the Congo in 1659. It seems that these earlier missionaries extended their work as far as Stanley Pool and to the valley of the Kassai. Carmelites, Franciscans, Jesuits, and secular priests also started missionary work in Senegambia, Sierra Leone, the Gold Coast, Benin, Angola, and Upper and Lower Guinea. Among these pioneers we may mention the Jesuits Barreiva († 1612), Fernandez, Barros, Almeida, Netto, and Alvarez, and the Capuchins Bernardine Renard and Angelus of Valencia. On the east coast missionary work was commenced soon after its discovery—in Mozambique by the Jesuits Sylveira (martyred 11th Aug. 1561), Acosta, and Fernandez; at Sofala by the Dominicans (1586) John dos Santos, John de Pietate, and Nicholas de Rosario; in Madagascar by the Lazarists (1648) Nacquart de Champmartin, Gondren, and Bourdaise (1657). In Egypt the Franciscans continued their work among the Copts, and the Jesuits among the Ethiopians (Bermudez, John Nuñez, Andrew Oviedo, Melchior Carneiro, etc.).

The various wars waged between the Dutch and the Portuguese, the slave-trade which was encouraged by the Christian European Powers, the civil feuds among the natives, the more promising colonies in the east and in the west, and the decrease of Portuguese power in Africa soon made the Portuguese forget their solemn obligation, and, instead of furthering the welfare of Christian civilization, they only became a standing obstacle to the work of evangelization, since they would not allow any missionaries but Portuguese in their colonies. Unable—or, rather, unwilling—to support the missionary work, the flourishing churches on the west and east coasts of Africa became weaker and weaker, and social, political, and religious disturbances, such as the sectarian policy of Pombal, the anti-Roman Catholic attitude of Holland and England, and, finally, the French Revolution, brought every missionary enterprise in Africa to a standstill. According to Louvet (*Les Missions catholiques au XIXième siècle*), the total number of Roman Catholics of continental Africa at the beginning of the 19th cent., including Uniate Copts and Abyssinians, amounted to 47,000.

With the formation of the Society for the Propagation of the Faith in 1822 we perceive the first signs of a change for the better. The conquest of Algiers by France in 1830, which broke down the ramparts of Muhammadan fanaticism, and the reopening of the missions among the Copts in Egypt and their kindred in Abyssinia by de Jacobis in 1839 were the preludes to the Christian awakening of the Dark Continent. The son of a Jewish Rabbi was destined to take up anew the Roman Catholic missions in Africa and to inaugurate the magnificent apostolic movement, for Libermann became the founder of the Missionary Society of the Holy

Heart of Mary and the Holy Ghost, usually called the Congregation of the Holy Ghost, whose members (since 1843) have devoted themselves to the evangelization of the Negroes in Senegambia and Gabun (1844), Sierra Leone (1864), the Portuguese Congo (1873), French Guinea (1878), Cimbebasia (1879), Kunene (1882), Loango (1883), Lower Nigeria (1885), Ubanghi (1887), Zanzibar (1863), Bagamoyo (1891), N. Madagascar, etc. When Mgr. Marion de Bresillac returned from the depth of India to France in 1858, his feelings were drawn to the Dark Continent, and he founded the African Missionary Society of Lyons, whose fields principally lie in the districts known as the 'White Man's Grave'—Dahomey (1861), Benin (1868), Gold Coast (1881), Ivory Coast (1895), Liberia (1906), E. and W. Nigeria, Korhogo (1912), and the Nile Delta. Ten years later another missionary society came into existence, viz. the Missionaries of Our Lady of Africa, or the White Fathers, whose field of action extended rapidly from Algeria to Kabylia, from Tunis to the Sahara and the Sūdān, till the bold hand of its founder, Cardinal Lavigerie, came to drive it, in spite of all obstacles, right to the heart of the African continent. To-day they have charge of 11 missionary districts—Kabylia, Gardaia, W. Sūdān, Nyasa, Bangweolo, Upper Congo, Tanganyika, Unjanjembe, S. and N. Nyanza, and Kivu, with 187,129 members, 196,000 catechumens, 138 principal stations, 502 priests, 52 brothers, 244 sisters, 2289 catechists, 85 native sisters, 2 native priests, 30 students in minor orders, 378 aspirants, 1974 schools with 79,521 pupils, and 341 charitable institutions.

Besides these three African Missionary Societies *par excellence*, work is also carried on by the orders which in days gone by laboured as pioneers in Africa, such as the Franciscans (Egypt, Tripoli, Morocco), the Capuchins (Erythrea, Galla, Somaliland, Seychelles), the Trinitarians (Benadir), the Lazarists (Abyssinia, S. Madagascar), the Jesuits (C. Madagascar, Kwango, Zambesi), and the Missionary Seminary of Verona (C. Africa), the Benedictines of St. Ottilien (Dar-es-Salam, Lindi), the Trappists (Natal, Congo), the Belgian, English, and German missionary societies of Scheut (Congo Free State), of Mill Hill (Upper Nile), of Steyl (Togo), the Oblates of Mary Immaculate (Natal, Transvaal, Orange, Kimberley, Lower Cimbebasia, Basuto), etc.

The missionaries, if they do not precede the explorers or conquerors, accompany them; nowhere are they wanting. From the valleys of the Atlas to the highland plains of Abyssinia, from the Sūdān to the Cape, on the great rivers and lakes, in the desert plains and in the equatorial forests, in the heart of the continent and in the islands, the Cross of Calvary is found to-day set up as the sign of redemption. Where the missionaries have been able to labour they have laboured, and where they could only die they have died. According to the *Katholische Missionen*, Oct. 1912, Africa, as far as it is a missionary country, consists of 6 dioceses, 44 vicariates, and 28 prefectures apostolic, 1 prelature nullius, and 7 independent missions, with 1,100,000 native members and some 600,000 catechumens. When we add the dioceses of Africa and her islands which are not under the jurisdiction of the Propaganda, and, therefore, do not fall under the heading of the African mission field strictly speaking, we find the total number of Roman Catholics amounting to 3,742,000—insignificant when compared with the number of inhabitants, which is said to amount to 165,000,000 or 180,000,000 or even 200,000,000 souls.

III. *N. AND S. AMERICA.*—When, in 1492, Columbus landed on the island of San Salvador, he found a brown-skinned people whose physical appearance confirmed him in his opinion that he had at last reached India, and he called the inhabitants, therefore, 'Indios,' or 'Indians.' Subsequent navigators and explorers found that the same race was spread over the whole continent from the Arctic shores to Cape Horn, and that the people were more or less everywhere alike in their main physical characteristics, whence they extended the name 'Indians' to these aborigines in both S. and N. America with the exception of the Eskimos in the extreme north. Much has been written about the atrocities and cruelties of the white invaders—Spanish, French, Portuguese, Dutch, and English—committed against the Red Men, the original inhabitants and owners of the soil. The Roman Catholic Church, from the very outset of the political conquest of S., C., and N. America, has acted as the protectress of the down-trodden Indians, and her missionaries—Franciscans, Dominicans, Jesuits, and Hieronymites such as Las Casas, Montesino, Nobrega, and Anchieta—have taken up their cause of liberty and religion. Lopez de Vega, one of the greatest Spanish poets, unfolds the whole aim and purpose of the Spanish conquerors in S. America in two lines:

> 'Al rey infinitas tierras
> Y a Dios infinitas almas,'

i.e. 'to extend the boundaries of the Spanish empire over the vast territories of the new world and thereby to gain an infinite number of souls to God.' Religion was her great end and aim, her all-pervading motive. The soothing influence of the Roman Catholic missionaries in S. America is still to be seen in the splendid churches and colleges and the thousands and millions of devoted converts; and, as long as Spain remained faithful to her solemn obligations, she was successful and prosperous. The destruction of the Indian missions, in which the Roman Catholic missionaries had worked for two hundred years, was due to the anti-Roman Catholic policy and legislation of Spain and Portugal; the revival is to be ascribed to the efforts of Pius IX., Leo XIII., and Pius X., who worked in harmony with the rulers of the different States and republics through their apostolic delegates. To describe the Roman Catholic missionary work among the Indians in S. and C. America would mean to write the history of the Roman Catholic Church in the colonial period of these countries from 1520 to 1820. It may suffice to note the work of the Franciscans and the Jesuits during this period.

Franciscan missionaries accompanied Columbus in 1493, and they were followed by others to the Antilles in 1500, to Mexico or Nova Hispania (Peter of Ghent, Martin of Valencia, Molina, Ribeira, the famous Zummaraga [1548], the first archbishop of Mexico, and Martin of Coruña), to Yucatan (Didacus of Landa [1579]), Guatemala and Honduras (Peter of Betancour and Maldonado), Nicaragua and Costa Rica. In S. America the Franciscans had missions in Colombia and Venezuela (John a S. Philiberto [1527], Louis Zapata, and Ferdinand Larrea) with some 200,000 baptized Indians, in Peru (Mark of Nizza and Jodokus Ryke), in Ecuador and Ucayali (Philip Luyando, Dominic Garcia, and Francis Alvarez [1686]). At the request of the king of Spain, Franciscans went to Chile (1553) (Martin of Robleda and Angelus of Espineira (1778]), to Bolivia (Andrea Herrero [1838] and Antonio Comajuncosa [1814]), and into the Pampas of Argentine and to Tucuman (Francis Solanus [1610]). In 1538 they landed in S. Brazil (Bernard Armenta, John de los Barrios [1547], Bernardine of Cardenas, and Louis Bolaños [1629]).

Between 1565 and 1572 Jesuit missionaries went to Florida, Mexico, and Peru, and, under Claudius Acquaviva (1581–1615), the second successor of St.

Ignatius, to Chile and Paraguay, and later on to Maranhão. Names such as Nuñez, Correa, Nobrega, and Anchieta have become household words among the Indians in S. America, while the name of Azevedo, who, with 39 of his fellow-missionaries, suffered martyrdom in Brazil (1570), stands for loyalty to duty. At the time of the suppression of the Society of Jesus the Jesuits were represented in Brazil by 445, in Maranhão by 146, in Paraguay by 564, in Mexico and California by 572, and in New Grenada, Chile, Peru, and Ecuador by 192, 242, 526, and 209 members respectively.

Equally famous among the defenders of the Indians are the Dominicans Las Casas, Louis Bertrand, Antonio Montesino, Dominicus de Betanzos, Dominicus Ortiz, the Augustinian Francis John de Medina, etc. With the suppression of the religious orders and the downfall of the Spanish supremacy in S. and C. America came also the destruction of the flourishing missions. The Christian Indians and Negroes were allowed to drift, nay, were often driven back into paganism, were slaughtered by their cruel white taskmasters, their plantations were destroyed or ruined, their schools and churches were reduced to ashes, and the missionary work which had been accomplished among them by the self-sacrificing heroes of Christian charity during two hundred years with the greatest outlay of money and valuable lives was destroyed. The political upheaval and the masonic influence in the beginning of the 19th cent., with the subsequent scarcity of priests in the S. American Republics, scarcely allowed the missionaries to resume their work among the remaining Indians and Negroes. In recent years the Propaganda has once more appealed to willing workers among the various religious orders and missionary societies for help to establish missionary work among the Indians; yet it remains a difficult task to obtain a precise record of their work, since most of them are at the same time engaged among the numerous European colonists in the S. American Republics. In the following we give only the names of the vicariates, prefectures, and missions in the various States, the dates of their erection, and the missionaries engaged.

Colombia: V. Goajira (Capuchins), 1905; V. Casanare (Augustinians), 1893; V. Llanos de S. Martin (Society of Mary), 1903; P. Caquetà (Capuchins), 1904; P. Choco (Immaculate Heart of Mary), 1908.

Guiana: V. Demerara (Brit. Guiana) (Jesuits), 1837; V. Surinam (Dutch Guiana) (Redemptorists), 1825 (1852); Cayenne (French Guiana) (Congregation of the Holy Ghost), 1643 (?).

Ecuador: V. Canélos y Mácas (Dominicans), 1893; V. Mendez y Gualaquiza (Salesians), 1893; V. Napo (Jesuits), 1893; V. Zamora (Franciscans), 1893.

Peru: P. Amazonas (S. Leon) (Augustinians), 1900; P. Ucayali (Franciscans), 1900; P. Urubamba (Dominicans), 1900; M. Putumayo (Franciscans), 1912.

Brazil: Prel. Santarem (Franciscans), 1903; M. Rio Branco (Benedictines), 1907; Prel. Araguaya, 1911; P. Rio Negro, 1910; P. Solimões (Capuchins), 1910; P. Teffé (Congregation of the Holy Ghost), 1910.

Argentine-Paraguay: V. Patagonia N. (Salesians), 1884; P. Patagonia S. (Salesians), 1883; Gran Chaco and Pampas (Franciscans).

Chile: V. Autotagasta (secular priests), 1895; V. Tarapaca (secular priests), 1894; P. Araucania (Capuchins), 1901.

Mexico: V. California, 1874.

Central America: V. British Honduras (Jesuits), 1888 (1893).

Antilles: V. Curaçao, 1842; V. Jamaica (Jesuits), 1837.

Krose (*op. cit.*) reckons the number of the uncivilized Indians in America at 1,500,000 or 1,750,000, *i.e.*, Brazil, 600,000; Paraguay, 100,000; Argentine, 30,000; Chile, 50,000; Peru, 350,000; Bolivia, 250,000; Ecuador, 200,000; Colombia, 150,000; Venezuela, 60,000. To these must be added some 200,000 or 250,000 Coolies, Negroes, and Chinese. In these missions European colonists live side by side with the Indians, etc. According to Krose, some 401,000 are Roman Catholics, and, allowing some 150,000 as being Europeans, there remains a Roman Catholic Indian and Negro population of 250,000 souls. In the whole mission field there were 476 priests, 230 brothers, 435 sisters, 418 stations, and 340 churches. In C. America and the W. Indies there are still 500,000 or 600,000 pagans, among whom Jesuits, Dominicans, Redemptorists, and Lazarists are at work, some 180 missionaries among 330,000 native Roman Catholics.

The United States of America are composed of former British, Spanish, and French colonies, and their population—91,972,266 (Census of 1910)—consists of a small remnant of the original American Indians (270,000, according to some, 330,000 or 444,000, according to other writers), of imported Negro slaves and their descendants (9,827,763), of yellow or Asiatic immigrants (146,863), and of white or European settlers and their descendants. In the former Spanish (Florida, Texas, New Mexico) and French (Louisiana) colonies the Roman Catholic missionaries have worked for the conversion and Christian civilization of the Indians from the beginning of the colonial epoch. Dominicans entered Florida in 1560, and they were supported in 1568 by the arrival of 12 Franciscans, 5 secular priests, and 8 Jesuits, among whom we may mention Fathers Martinez, Segura, de Quiros, and de Solis. In Texas and New Mexico Spanish Franciscans—Marcos of Nizza, John of Padilla, and Louis of Escalon—had commenced in 1539, but made little progress. In Arizona Francis of Porras (1683) and in California Juniper Serra (1784) commenced missionary work among the Indians, and along the Mississippi we find Father Marquette. The conquest of N. America by the white immigrants drove the Indians further and further, and 'spoliation, outrage, and murder' were the orders for almost one hundred years. According to H. G. Ganss ('The Indian Mission Problem, Past and Present,' in *The Catholic Mind*, no. 13 [New York, 1904]), there remain in the United States some 270,000 Indians, of whom 100,000 are Roman Catholics, 40,000 Protestants (74,000?), 110,000 'follow the old ways,' and 20,000 have no Church affiliation. According to Streit (*Atlas Hierarchicus*, 1914), there are in the United States 440,931 Indians, of whom 64,741 (67,255) are Roman Catholics. These are scattered in 33 dioceses, possess 306 churches, and are attended by 163 priests (Benedictines, Franciscans, Jesuits, etc.) and 391 sisters; 100 schools are attended by 7359 children. Famous among the Indian missionaries in the 19th cent. are Father de Smet and Bishop Marty.

The Negro population in the United States (one-ninth of the whole population), descendants of the slaves who for two hundred and fifty years had been imported into America, have for the last fifty years been emancipated, but are still treated as outcasts. Owing to hostile legislation, the Roman Catholic Church had for many decades a poor chance of alleviating the miserable conditions of the Negroes, since baptism was considered inconsistent with the state of slavery. After the emancipation of the Negroes (1863) and the second Plenary Council of Baltimore (1866), Archbishop Spalding raised his voice for their conversion. The same course was pursued at the third council (1884) by Archbishop (Cardinal) Gibbons, who established a commission for Roman Catholic missionary work among the Negroes and the 'Catholic Board for Mission Work among the Colored People.' It is difficult to obtain the exact number of Negroes professing the Roman Catholic religion in the United States, since some live in coloured parishes while others are mingled with the white population, and of the latter a report is hardly ever made. The *Catholic Encyclopædia* (xii. [1911] 629) gives the number as amounting to 200,000 or 225,000, while, according to the *Atlas Hierarchicus*, there are only 103,436 scattered in 33 dioceses, with 109 churches, 162 priests (Josephites, Missionary Society of Lyons, Congregation of the Holy Ghost, and Mission of Steyl), and 173 schools with 14,181 pupils.

The 'Catholic Board for Mission Work among the Colored People,' in its semi-annual publication, *Our Colored Missions*, 1912, gives the following statistics: churches, 72; priests working exclusively for Negroes, 99; schools, 126 with 11,270 pupils; charitable institutions, 27 with 2520 inmates; Roman Catholics, 260,000. Two religious orders of priests devote themselves exclusively to coloured missions, namely the Josephite Fathers and the Fathers of the African Missions (Lyons). Besides these two there are eight other orders of men in the field: the Jesuits, Franciscans, Dominicans, Marists, Lazarists, Fathers of the Holy Ghost, Fathers of the Divine Word, and the Capuchins (see also *Our Negro Missions*, by the Fathers of the Divine Word, Techny, Ill., U.S.A., 1914).

In Canada the descendants of the aborigines are divided into four families: (1) the Huron Iroquois, (2) the Innuits or Eskimos, (3) the Dénés, (4) the Algonquins. In 1905 their total number amounted to 107,637, of whom 85,553 lived inside, the others outside the reservations. In the earliest days of the French colonial period Franciscans in 1615, Jesuits in 1625, and Sulpicians in 1657 devoted themselves to the conversion of the Algonquins and the Huron Iroquois—some 100,000 souls. Famous among these missionaries are d'Olbeau, Le Caron, Viel, Sagard (Franciscans), Brébeuf, Lallemant, Lejeune, Garnier, Chabanel, Daniel, Jogues, Jolliet, and Marquette (Jesuits). In 1659 the ecclesiastical hierarchy was established in Canada, and the Church entered from the missionary to the colonial period among the immigrants.

Of the 107,637 Indians to-day 35,060 are Roman Catholics; the remainder, with the exception of 10,906 who are still pagans, belong to various Protestant denominations, who are scattered in 33 dioceses. The Roman Catholics are attended by some 160 priests in over 110 stations, with 104 schools, and 200 sisters.

IV. *OCEANIA*.—The southern realm of islands which stud the Pacific Ocean has been named Oceania, and for convenience of reference has been divided into four districts, viz.

Australia with Tasmania.
Melanesia (New Guinea, New Pomerania, Bismarck Archipelago, Solomon Islands, New Hebrides, Loyalty Islands, New Zealand).
Micronesia (Marianne, Caroline, Marshall, and Gilbert Islands).
Polynesia, comprising all the smaller islands between Hawaii in the north and Easter Island in the east.

Discovered in the 16th and 17th centuries by Spanish and Portuguese admirals, such as Balboa, Magellan, Mendana, Quiros, and de Torres, who were followed by Dutch, French, English, and German explorers—Roggewein and Tasman, La Pérouse and d'Urville, Cook and von Humbold—they remained more or less in obscurity till the beginning of the 18th and even the 19th century. That Roman Catholic missionaries set their foot on the islands soon after their discovery, although only occasionally, is certain. Padre Pigafetta accompanied Magellan to the Ladrone Islands in 1521, another priest landed on the Marquesas in 1595, two Spanish missionaries visited Tahiti in 1774, and Abbé de Quelen converted a few natives in the Hawaiian group in 1819. As Spanish and Portuguese supremacy declined, the discoveries were of little consequence to Christianity, and, owing to the political and religious revolution in Europe, the suppression of religious orders, and the scarcity of missionary vocations and pecuniary support, the Roman Catholic missions were to a large extent neglected in the Pacific. The Marianne and Caroline groups were the only ones where progress was made. The former was visited by the Jesuit Diego de San Vittore, who landed with four other Jesuits on Guam in 1668, and these were followed by five more in 1670; but nearly all the Spanish missionaries were killed in 1670, 1672, and 1684. From 1700 to 1766 the Marianne missions were entrusted to German Jesuits, who in 1731 extended their work to the Carolines. After the suppression of the Jesuits the Marianne Archipelago was handed over to Spanish Augustinians in 1786, and the latter were replaced by German Capuchins in 1907.

Several attempts were made by the Jesuits on the Philippines to open a mission in the Caroline Islands in 1700, 1708, 1709, and 1721, but all of them failed, till Father Cantova succeeded in 1731. Owing to the serious loss of lives, however, the Jesuits abandoned the field, and it was only in 1886 that twelve Spanish Capuchins were able to resume missionary work once more in the Carolines; they remained in charge till 1904. In 1911 the German Marianne and the Carolines were united into one vicariate-apostolic with Walleser as its first bishop, while the United States possession of Guam was made an independent vicariate in charge of Spanish Capuchins. The vicariate of Guam numbered, in 1913, 12,000 Roman Catholics, and that of Marianne-Caroline had 5395 in 1914. With the exception of these two island groups, the beginning and development of Roman Catholic missionary enterprise in the Pacific belong to the 19th and 20th centuries. It was on 7th July 1827 that Alexis Bachelot, accompanied by Abraham Armand, Patrick Short, and Robert Walsh of the Picpus Society, landed in Honolulu (Hawaii) to resume the apostolate in Oceania, the whole of which was placed under the ecclesiastical jurisdiction of Solages, then prefect-apostolic of Mauritius (1830). Three years later the vicariate of Oceania was established, and in quick succession the Roman Catholic missions were extended to the various island groups and entrusted to the two pioneer missionary societies in the Pacific, viz. the Missionaries of the Sacred Heart (Picpus) and the Society of Mary (Marists). From 1827 to 1845, under Cardinal Prefect Capellari of the Propaganda and under his pontificate as Gregory XVI., the Society of Picpus sent its missionaries to Hawaii (1827), the Gambier Islands (1834), the Marquesas (1838), and Tahiti (1841), while the Marists went to Wallis, Tonga, New Zealand (1837), New Caledonia (1843), Fiji (1844), and Samoa (1845). Gregory XVI. divided Oceania into two distinct vicariates: Eastern (1833–44) and Western Oceania (1836–48), from which Central Oceania was separated in 1842. These three vicariates form, so to speak, the roots of the ecclesiastical jurisdictions in the Pacific. From the Eastern vicariate were separated those of Hawaii, Marquesas, and Tahiti (1844 and 1848), and from the Central those of New Caledonia (1847), Samoa (1851), and Fiji (1863 [1887]), while W. Oceania was divided into the vicariates of Melanesia (1844–89) and Micronesia (1844–97). From Melanesia were separated New Guinea and New Pomerania (1889), and from Micronesia the Gilbert (1897) and the Carolines (1886). Some of the groups were again divided and subdivided, such as New Guinea and New Pomerania, from which were separated the Solomon (1897–98) and the Marshall Islands (1905). The Marianne group depended upon the diocese of Cebu (Philippines) till it was made an independent vicariate. The divisions demanded new helpers in the ever-expanding field, and during the colonial period of Oceania (1882–1903) three other missionary societies were asked to help: to the Capuchins were entrusted the Caroline (1886 and 1904) and the Marianne Islands (1907), to the Picpus Society the Cook or Hervey Archipelago and Kaiser Wilhelmsland W. (1913), to the Society of the Divine Word (Steyl) Kaiser Wilhelmsland E. (1896), to the Marists the New Hebrides (1887) and the Solomon Islands (1898), and, finally, to the Congregation of the Sacred Heart (Issoudun) New Pomerania (1882), New Guinea, British and Dutch (1884 and 1903), the Gilbert (1888) and the Ellice

---

* According to *Katholische Missionen*, July 1914, the Roman Catholic population of the Marianne-Carolines is 5395, that of Guam 12,400.

Islands (1897), and, lastly, the Marshall Islands (1899).

Where eighty years ago there were—with the exception of the Marianne group—scarcely any Roman Catholics, and no priest or bishop, we find to-day an established hierarchy, with 14 bishoprics, 4 prefectures-apostolic, and 1 mission with 131,000 native and 63,000 European members, 427 priests (8 native priests), 227 brothers, 418 sisters, 1000 stations, 990 churches and chapels, and 700 schools with 30,000 pupils. The population of Oceania proper (without Australia and Tasmania) amounts to 2,650,000 or (without New Zealand, no longer a missionary country) 2,000,000, or, according to others, 1,340,000 souls. The Roman Catholic population is, therefore, comparatively small, and the work, especially in New Guinea, the Solomon group, and other islands, is little advanced. But, bearing in mind the social, moral, religious, political, ethnological, and linguistic problems of the various groups and their natives, the unhealthy climate, in many cases absolutely unsuitable for Europeans, the variety of dialects even among the inhabitants of the same islands, and, lastly, the hostile attitude of some of the European Powers that have divided the islands among themselves towards every Christian enterprise, and the fierce opposition displayed against the Roman Catholic missionaries from 1830 to 1880, the Roman Catholic Church has made slow but sure progress. She has become a Christianizing and civilizing factor in the Pacific, and as such she is now acknowledged by the various European governments and their representatives, by explorers and tourists, and by missionaries of every denomination, whatever their attitude towards the tenets of the Roman Catholic Church may be.

Famous among the Roman Catholic missionaries in the Pacific are the two pioneer missionaries (later bishops), Bataillon (1843–77) of C. Oceania, the founder of the missions in New Caledonia, Fiji, Samoa, and Rotuma, and his fellow-worker, Pompallier of W. Oceania, Bishop Epalle, who was murdered in 1845, Bishop Rouchouze of E. Oceania, etc. Nor must we forget Father Chanel, the proto-martyr of the Pacific and the apostle of Futuna (1841), Father Damian Deveuster, the leper apostle of Molokai, or Fathers Bontemps of the Gilbert and Castanié of the Cook Islands, and, lastly, Brother Eugene Eyraud, the lay apostle of Easter Island.

As space does not allow of a detailed history of the interesting work of Roman Catholic missionary enterprise in the Pacific, we give on p. 726 a table of statistics which will tell the story of the heroic work which the missionaries have achieved within the years 1830–1913 under very trying circumstances of persecution, hunger, poverty, and death.

In the following table of statistics we give the summary of missionary work during the 19th cent. and the results of previous centuries since the Reformation. These statistics we borrow from Krose (*op. cit.* p. 123).

A.—SUMMARY OF R.C. MISSIONS IN THE 19TH CENT. (STATISTICS, 1908).

M. SPITZ.

MISSIONS (Christian, Protestant).—I. *INTRODUCTION.*—The missions of the Reformed Churches of Christendom seem at first sight to be discontinuous from those of the mediæval Church and from the post-Reformation missions of the Roman Church. While the Roman Church carried on extensive missions from the 16th to the 18th cent., the Reformed Churches during the same period were doing practically nothing. Indeed, their divines, when they touched the subject of the Christian obligation to evangelize the world, were mainly occupied in elaborating arguments to show that the command of Christ to do this had lapsed in their day. The causes of this inaction are complex.

After the great crisis of the Reformation the Protestant countries of Europe had not only to adapt their religious life to new conditions, but also to maintain their political existence against powerful hostile combinations. Meanwhile it was to Spain and Portugal, the great representatives of the old creed, that the discovery of America and of the Cape route to India had fallen. To them, accordingly, the pope had committed authority over the newly-found regions of America and Africa as well as the E. Indies, and this dominion they were able, to a considerable extent, to make effective. The revival of the Roman Church which followed the Reformation naturally threw much of its best force into these national undertakings, sanctioned by 'holy Church.' With the armies and administrators of Spain and Portugal went the priests and friars, whose task it was to bring these new territories into the Roman obedience.

With the 17th cent. began the colonial expansion of England, which resulted in the Christianization of N. America, not by the labour of missionaries, but by the migration of Christian peoples. A little later the Netherlands, freed from the rule of Spain, began to take over the dominions of Portugal in the East, and eventually founded a great empire in the Malay Archipelago; they also colonized the extremity of S. Africa and thereby founded a white nation in yet another temperate clime. To the Dutch also largely belongs the credit of opening commercial relations with China and Japan. Meanwhile, in the course of the 18th cent., the great Indian empire of Britain came into existence, and, following on this, relations with the Further East developed during the 19th century. The same period saw the penetration of Africa from south, east, and west, and its partition between Western Powers, among whom Britain and, latterly, Germany represented the Reformed faiths. It was through these political developments that the missionary sphere of the Protestant nations was opened up, so that, when their religious life was effectually revived towards the close of the 18th cent., the missionary call of an open world for which they were specially responsible came to Reformed Christendom with irresistible force.

When we have indicated the main features of the expansion of Protestant nations, we have indicated also the main lines of their missionary development as compared with that of the primitive and the mediæval Church. At first Christianity was conscious in principle of its universal destiny, but was practically confined by a limited world-outlook and the lack of communication between East and West. In the Middle Ages the Church on the one side was straitened by Islām, and on the other was grappling with the unfinished task of absorbing and training the barbarian nations of Europe. In both these periods the evangelist and the evangelized were, on the whole, of similar races and of cultures not radically different. In the modern period the world-outlook has become complete and practical, while, with the facility of intercourse, the immensely greater progress in arts and sciences since the 15th cent. by the Christianized nations has made the intellectual and social difference between the Christian and the non-Christian far greater than at any earlier time. This is at once the advantage and the impediment of modern missions as compared with ancient.

Modern missions generally are continuous with the primitive expansion of Christianity, and in the case of Protestant missions in particular we must go back to the primitive records of the faith and to its early history in order to estimate their work. But in so doing we are at once struck by certain outstanding contrasts connected with the historical situation. Since in primitive times the missionary and his hearers belonged broadly to the same level of culture and to the same sphere of thought and language, and were members of the same or similar communities, the whole range of problems connoted by the terms 'home base' and 'foreign field' was for them non-existent, and the economic problem of modern missions was present only in germ, or even in an inverted form, financial help being sent by the daughter Churches to the mother. Not unconnected with this feature of early conditions is another fact. The propagation of the faith was the work of the Church in each place, whether through its officers or through its ordinary members, for the Church itself was the evangelizing body. Hence in the early records of expansion the professional missionary, as distinguished from the ordinary minister or layman, is conspicuous by his absence. There were great leaders in the work of evangelization among the bishops and others, but for associations distinct from the Church, set apart for evangelism, there was no place. Finally, the political relation of the missionary to his hearers was either simply that of a fellow-subject of the same great empire or that of a stranger from a land of no very different conditions.

Following on the adoption of Christianity as the religion of the Roman State, the irruption of the barbarians, and the rise of monasticism, these conditions were modified. The missionary trained and set apart for the work appears on the scene, more often as a member of an order than as an isolated evangelist. The conversion and control of virile and turbulent barbarians seemed to demand a sterner discipline than the Church alone could exercise; repeatedly the arm of the State was vigorously used, and orders came into existence that were half-monk, half-warrior, such as the Knights of St. John and the Order of Teutonic Knights. The Christianization of the West was largely accomplished through monastic and military agencies, though the individual missionary was not absent. In Asia the wide-spread missionary work of the Nestorians had little of the political element, but it went down before the great onrush of Asiatic migrations—either under the military impact of Islām or under the unified forces of Buddhism. On both sides of the world the faith spread or receded amid the reciprocal contact and strife of nations whose land-frontiers were contiguous. The more stringent organization of missionary work and the training of the worker had made progress, but the political factor had deteriorated its texture.

The doctrine of the Reformation insisted on the liberty of the individual conscience and the freedom of individual access to God, together with the absolute sovereignty of His grace in the work of salvation. The result of this in principle, although slowly realized in practice, was the elimination of the political factor from the spiritual activity of the Church, more especially in missionary work The missions of the counter-Reformation were still closely linked with political conquest and administration, but so also were the earlier Dutch Protestant missions in the East. Both were in reality survivals of the mediæval method. The modern missionary method, both in the Roman and in the Reformed communions, is substantially that of free associations, working on a basis of voluntary co-operation. The missionary orders of the Roman Church have indeed retained continuously their historical organization, adding new orders, as needed, on a similar basis; but the missionary societies of Protestant Christendom are, in effect, an expression of the same principle, only that in them the exercise of individual freedom has been combined with obedience to superimposed organization and discipline for a common purpose. It would not be correct to say that Protestant missions are differentiated from Roman by a lack of direct subordination to Church authority, for many of them are directly administered by the governing bodies of their Churches. There is, however, this obvious difference, that the missions of the Roman Church are all co-ordinated and guided by a single central authority which is conspicuously lacking in Protestant Christendom. On the other hand, the Protestant organizations are now systematically endeavouring to gain the benefits of unity, together with those of freedom, by voluntary co-operation and co-ordination in missionary work, not only as between Churches but also as between nations.

II. *HISTORY.*—**1. Formation and development of societies.**—Up to the 18th cent. the missionary societies in Britain and on the Continent were closely connected. The Dutch East India Company, founded in 1602, was enjoined by its charter to care for the conversion of the heathen in the newly-won possessions of the Republic, and it appointed preachers for the purpose; but the work was carried on mechanically under government pressure. After a century the number of registered Christians in Ceylon was 350,000, in Java 100,000, and in Amboyna 40,000, but few were left of these myriads in Ceylon after English rule came in, and only a small minority in Java under Dutch rule. In New England the Pilgrim Fathers at first had to defend life and property against the Indian tribes who surrounded them, but in 1646 John Eliot, pastor of Roxbury, gave himself to work among the aborigines, learning their language, carefully teaching them, and gathering them into organized churches—the first real Protestant missionary enterprise. In 1649 the Corporation for the Propagation of the Gospel in New England was formed, and it is still extant, but its activities have consisted chiefly in the collection of funds. In 1698 the efforts of Thomas Bray, Rector of Sheldon, Warwickshire, resulted in the formation of the Society for the Promotion of Christian Knowledge. During the 18th cent. this aided the Danish-Halle Mission and other missions in India, but its principal work since 1813 has been the publication and circulation of Christian literature, both at home and abroad. In 1701 the Society for the Propagation of the Gospel was founded to provide clergy for the colonies and dependencies of Great Britain and also to take steps for 'the conversion of the natives'; but little was done for the latter object till after 1817. These three societies are connected with the Church of England.

The revival of spiritual religion in Germany known as Pietism (*q.v.*) resulted in two missionary movements during the 18th century. Frederic William IV., king of Denmark, feeling responsibility for his colonial dominions, found the men whom he needed in Bartholomæus Ziegenbalg and Heinrich Plütschau, followers of the great Pietist leader, Hermann August Francke. They were sent out in 1705 to the Danish settlement of Tranquebar in S. India, and there founded a work which was developed by many successors of note, especially Christian Friedrich Schwartz (1749–98). Their work was partly maintained by the S.P.C.K. The other far-reaching missionary movement of German origin was the Moravian. Members of the Unitas Fratrum of Moravia, driven from their homes for their faith, were settled by the Pietist Nikolaus Ludwig, Count von Zinzendorf, on his estate at Herrnhut in Saxony in 1722. Very soon their zeal led them to send missionaries to the Negroes of the W. Indies and to the Greenlanders who had been evangelized by the Norwegian, Hans Egede, but were left after his return uncared for. This was the beginning of a world-wide work, carried on by a community never numbering more than 40,000 souls in Europe, but with 100,000 converts abroad, and a roll of more than 2000 missionaries, sent out since its foundation. See, further, art. MORAVIANS.

The Presbyterian Society for the Promotion of Christian Knowledge, founded in Scotland in 1709, deserves mention, because among a few missionaries whom it sent to the Indians of N. America was David Brainerd, the evangelist of the Delaware Indians. He died after only three years' work, but his biography powerfully influenced William Marsden of New Zealand, William Carey and Henry Martyn of Bengal, and many others.

By the middle of the 18th cent. these early movements of Protestant missions had greatly slackened owing to the religious deadness which had overtaken the various Churches. But the antidote to this was already working in the evangelical revival connected on the Continent with the names of Francke and Zinzendorf, and in England with those of John Wesley (1703–91) and George Whitefield (1714–70). The inevitable result in the revival of zeal for the evangelization of the outside world became manifest towards the end of the century. The two great leaders and their immediate followers were ministers of the Church of England, but, owing to the deadness of her leaders and people, the movement, while powerfully influencing the Church, resulted in the formation of the strongest of the Protestant bodies, the Methodists of England and America. But it was to another dissenting body that the missionary call first came effectively. The great pioneer William Carey and his fellows founded the Baptist Missionary Society in 1792. In 1795 followed the second society, at first called simply the Missionary Society. It was founded by Church of England, Independent, and Presbyterian ministers. In 1796 two Scottish associations were established, known as the Edinburgh and Glasgow Societies. In 1799 Evangelical members of the Church of England decided to establish the Church Missionary Society, and the undenominational society already mentioned became known as the London Missionary Society. Though others are not excluded, it has since then practically remained the organ of the English Congregationalists. The British and Foreign Bible Society was set on foot in 1804 by the joint action of churchmen and dissenters. The Wesleyan Methodists had already been carrying on missionary work in East and West since 1786 under the personal guidance of Thomas Coke, but after his death in 1814 they established their own society. The societies named, together with the revived operations of the S.P.G., represent the formative beginnings of Protestant missionary work in Great Britain. The American Board of Commissioners for Foreign Missions, formed mainly by Congregationalists in 1810, and the American Baptist Missionary Union (1814) were the earliest societies in America. Before sketching the development of these and indicating the minor societies, it is desirable to mention two outside movements which greatly influenced the history of missions in Africa and the East.

It is reckoned that the African slave-trade during the hundred years preceding 1786 conveyed no fewer than 2,000,000 Negroes into British colonies, chiefly the W. Indies and British N. America; but even in England Negroes were sold and bought till the judgment pronounced by Lord Chief Justice Mansfield in 1772: 'As soon as any slave sets his foot on English ground, he becomes free.' This formed the starting-point for the campaign against the slave-trade in the entire British possessions, carried on within and without Parliament by William Wilberforce from 1789 till its victorious climax amid the throes of the Peninsular War in 1807. The abolition of the slave-trade did not as yet do away with slavery in British possessions outside the United Kingdom, nor with the slave-trade carried on by foreign nations. But it gave a powerful impulse to missionary work among Negroes, and arrangements were made at Sierra Leone for the reception of liberated slaves, of whom many thousands were settled there under the care of C.M.S. missionaries, the same thing being done later on the E. African coast near Mombasa. Meanwhile, the agitation against slavery in the British dominions was continued by Wilberforce and his successors till it was crowned with success in the Emancipation Act of 1833, which liberated 1,000,000 slaves in the W. Indies at a cost to the State of £20,000,000 paid to the owners as compensation. Slavery in the United States, and the trade that fed it, continued till Emancipation Proclamation in 1863. Since then what remained of slavery under Christian rule has been abolished, and slavery in Muslim and pagan lands has been greatly limited. As a result of the shifting of populations, there are now some 12,000,000 Christianized Negroes in the United States and W. Indies, apart from those who have been brought in through missionary effort in Africa.

In the East the greatest of all colonial empires was built up by English merchant adventurers. The East India Company dates its charter from the year 1600, but for 150 years little was done for the spiritual benefit of its European servants, and nothing for the evangelization of the natives of the land. After the battle of Plassey in 1757 things improved somewhat among Europeans, but, when Parliament, on the motion of Wilberforce, in 1793 was ready to afford facilities for missionary work in India, the opposition of the E.I.C. threw out the clauses, and for the next twenty years Christian missionaries were rigorously excluded from its territories. At length in 1813, when the E.I.C. charter was once more revised, not only was the entry of missionaries conceded, but an ecclesiastical establishment was provided for Europeans, the representatives of which have done not a little to forward the cause of missions.

i. BRITAIN.—The later development of British societies, especially Anglican, was strongly influenced by several religious movements. The Irish Revival of 1859 affected England in 1860 and gave an impetus to the formation of undenominational societies, such as the China Inland Mission. In 1875 Dwight L. Moody's first revival in London and the first Keswick Convention marked the beginning of a movement which resulted in an immense growth of missionary zeal, both in offerings and in service on the part of university men, especially in connexion with the C.M.S. The Tractarian Movement had influenced one side of the Church of England for a generation before it began to appear extensively on the mission-field during the last quarter of the century.

(a) *Anglican.*—The *Society for the Propagation of the Gospel* in 1817 was supporting a few clergy and schoolmasters in the N. American colonies and elsewhere. From that time it began its missions to non-Christians (1823) by sending men to Bengal and to S. India, where Robert Caldwell was distinguished as linguist and bishop. It has carried on all its missions under the direct superintendence of the diocesan bishops in the mission-field, and it has included in its activities the provision of ministration to white men in the colonies and on the continent of Europe. Its work among non-Christians has steadily increased and now absorbs £165,000 out of an income of £250,000. In India it has occupied Calcutta, Lucknow, Delhi, Bombay, Madras, Assam, and Burma. In 1821 it advanced to S. Africa, in 1848 to Borneo, in 1862 to the Pacific, in 1863 to N. China, in 1873 to Japan, in 1889 to Korea, in 1892 to Manchuria, and in 1903 to Siam. By constitution the S.P.G. is as broad as the Church of England, but as a matter of fact it has represented mainly the High Church side. It has developed in varying degrees the community type of missions. The Oxford Mission to Calcutta (1881) is now independent; the Cambridge Mission to Delhi and the Cawnpore Christ Church Brotherhood are still connected with the S.P.G. Its most flourishing missions are those to the Tamils of Tinnevelly and to the Kols of Chotā Nāgpur, both in India.

The principal other societies of this type are: (1) the *Melanesian Mission*, founded in 1846 by George A. Selwyn, afterwards bishop of Lichfield, and carried on by the martyr John C. Patteson; (2) the *Universities Mission to Central Africa*, a response made in 1859 to the call of David Livingstone, who appealed to the youth of Oxford and Cambridge to carry on his work. Bishop Edward Steere was its most distinguished scholar and statesman.

The earliest missionaries of the *Church Missionary Society*, like those of the S.P.G. and S.P.C.K., were Germans, and the Basel Missionary Institution, established in 1815, supplied no fewer than 88 C.M.S. missionaries, including the Arabic scholar and writer, K. G. Pfander, and the E. African explorers, J. Rebmann and L. Krapf. Its first mission was in W. Africa (1804). India was entered in 1813, when 'Abd-al-Masīḥ, the disciple of Henry Martyn, opened work at Agra. In 1814 Madras and New Zealand were occupied; Travancore in 1816; Ceylon in 1818; N.W. Canada in 1822; in 1820 C. T. E. Rhenius began work in Tinnevelly. In 1837 L. Krapf first went to E. Africa, and in 1841 H. W. Fox and L. L. Noble began the Telugu Mission in S. India. In 1847 China was entered by W. A. Russell and R. H. Cobbold. In 1850 the Sindh Mission was begun, and in 1852 the Panjāb Mission was started at Amritsar. The N.W. Frontier was first touched at Peshāwar in 1854, British Columbia in 1856, and Kashmīr in 1864. Uganda was opened up in 1876, Persia and Japan in 1869, Egypt (the revival of a previous mission) in 1882.

The C.M.S. represents the Evangelical school of the Church of England, in touch with the more pronounced Anglicanism on the one side and with nonconformist and interdenominational effort on the other. Its missionaries, after the first supply of German recruits, were drawn largely from its college at Islington, but of late years they have been furnished in increasing numbers by the universities. It is the largest of the Protestant missionary societies, with a missionary roll of 1340, an annual income of £400,000, and 450,000 adherents in the mission-field.

The *Church of England Zenana Missionary Society*, founded in 1880, works side by side with the C.M.S. in India and China. In 1913–14 it had 224 women missionaries, 27,239 pupils in zenanas and schools, and an income of £60,000. The *South American Missionary Society* (1851) carries on the Patagonian work begun by Allen Gardiner, and also works in Paraguay and S. Chile.

Most of these societies have associations in Ireland and Scotland, but the contributions and missionaries from those countries are not separately given.

(*b*) *English Free Churches.* — Only the chief societies can be dealt with here. The earliest is the *London Missionary Society* (1795). The discoveries of Captain John Cook moved the founders to send their first mission to the South Sea Islands, where John Williams, after years of work, was martyred on the island of Erromanga (1839). In 1798 S. Africa was occupied, and the labours of Robert Moffat, followed by those of his yet more distinguished son-in-law, David Livingstone, became classical. The most remarkable of L.M.S. missions was that in Madagascar, founded in 1820, and resumed, after long expulsion of the missionaries, with extraordinary fruitfulness. In N. and S. India L.M.S. work has been going on since 1804, extending to Bengal, the United Provinces, Madras, and Travancore. Robert Morrison of this society was the first missionary to enter China (1807), and missions are now planted in S., C., and N. China. C. Africa was taken up as a memorial to Livingstone in 1877. In 1913–14 this mission had 294 missionaries, an income of £214,000, and 316,000 adherents.

The *Baptist Missionary Society*, founded in 1792 on the impulse of William Carey, cobbler, preacher, missionary, and linguist, sent him out as its first messenger. Moved by the narrative of Cook's voyages in the South Seas, his first desire was to go there, but his destination was changed to India, and, being debarred by the E.I.C.'s regulations from settling in British territory, he started the first mission in Bengal at the Danish settlement of Serampore. This became the centre of a unique literary and linguistic work, carried on by Carey with the help of his colleagues, Joshua Marshman and William Ward. From Bengal the English Baptists extended their work eastwards to Assam, north-westwards to Agra, Delhi, and Simla, and southwards to Orissa; also to Ceylon, where a considerable work is done, to three provinces of China, and in Africa to the Lower and Upper Congo; they also did work in Kamerun, which was eventually made over to German missionaries when their government occupied the country. In 1913–14 they had 463 missionaries, an income of £99,000, and 25,170 Church members.

The Wesleyan Methodists had already begun work in the British W. Indies under Thomas Coke in 1786, and in W. Africa from 1811. After his death the *Wesleyan Methodist Missionary Society* was founded as a separate organization, and the work advanced in 1814 to Ceylon, in 1815 to S. Africa, in 1817 to India, in 1822 to Australasia, and in 1851 to China. In the last region, and in S. Africa and the W. Indies, many of the churches are no longer under the management of the society. Like the Baptists in the north of India, the Wesleyans in the south have done much for the cause of vernacular literature. In 1913–14 their missionaries numbered 392, their income was £130,000, and their adherents 307,000.

Of societies connected with the minor sects of Methodism it must suffice to mention the Methodist New Connexion (1824), working in China; the United Methodists (1837), in China, E. and W. Africa, and Jamaica; and the Primitive Methodists (1869), in Africa. The Methodist missions generally are an integral part of the Church organizations. The Welsh Calvinistic Methodists (1840) are, properly speaking, Presbyterian. They have an exceptionally successful work among the Khāsis of the Assam hills.

For convenience we may add here the *Friends' Foreign Mission Association* (1865), working in Madagascar, India, Ceylon, China, and Syria. Like the Moravians, though very much later in time, the Friends prosecute their missionary operations to an extent that is in striking contrast to the smallness of their community, reckoned, as it is, at some 30,000 members.

(*c*) *Presbyterian.* — The Presbyterian societies, like the Methodist, are part and parcel of the Church organization.

Scottish Churches. — The *Glasgow* and *Scottish Missionary Societies*, founded in 1796, carried on their work in the face of considerable indifference and even opposition. In 1824, at the instance of John Inglis, the General Assembly undertook a mission to India, and the sending out in 1829 of Alexander Duff, followed by Murray Mitchell and John Wilson, marked an epoch in the history of educational missions in India, which these men opened up with marvellous ability and zeal. The work at Lovedale in Kaffraria (1841) became famous among industrial missions. At the Disruption in 1843 the missionaries in India and Kaffraria cast in their lot with the Free Church, and this new body soon greatly increased its operations, adding Natal, Nyasaland, the New Hebrides, Syria, and S. Arabia. Since the union of the Free Church with the United Presbyterians the United Free Church field has included operations in W. Africa, the W. Indies, China, and Japan. The work of the Established Church was also revived and extended in India, C. Africa, and China.

The *English Presbyterian Church* (1847) is working in China, Formosa, the Straits Settlements, and India; the *Irish Presbyterian Church* (1840) in Manchuria and India.

All these societies have their organizations for women's missionary work, in some cases distinct from the main body, but mostly as a department of it. Generally speaking, the women's societies or auxiliaries are later developments, for it was hardly practicable to send out unmarried women as missionaries till after the middle of the last century; before this, work among women was carried on by the wives of missionaries, to whom some of the most important organizations owe their foundation and development. In the figures given the women's work is included in that of the main society.

(*d*) *Undenominational.* — Among undenominational societies we notice the two most prominent. The *Indian Female Normal School and Instruction Society* was founded in 1852 for the educational purposes indicated in its name. In 1880 the majority of the Church of England members seceded, and started the *Church of England Zenana Missionary Society.* Under the new name of the *Zenana, Bible, and Medical Mission* the original body has continued to co-operate with Church of England and Presbyterian missions in India, and has developed medical work. The *China Inland Mission* was founded in 1865 by J. Hudson Taylor, who had already worked in China as an evangelist from 1853. Vocation and spiritual preparation are insisted on, but not high educational attainments; careful training, however, is given in language-schools on the field. No direct appeals for funds are made at the home base, and no fixed salary is guaranteed to the missionary. The plan of advance has been to 'occupy' province after province by stationing missionaries in the inland provincial capitals, instead of remaining in or near the treaty ports on the coast. The sending out of seven Cambridge athletes in 1885 created great enthusiasm. The work of the C.I.M. has spread rapidly and given an impetus to advance by other societies into Inland China. In the Boxer Rebellion of 1900 the martyr roll of missionaries of this society far exceeded that of any other. The

Salvation Army has been doing missionary work, principally in India, since 1883; its operations have been mostly of a social kind, such as industrial undertakings and reclamation of certain criminal tribes. The *North Africa General Mission* works mainly in Algeria and Morocco; the *Egypt General Mission* as indicated by its name; the *Regions Beyond* and the *Sudan United Missions* in W. and C. Africa.

(*e*) *Missionary publishing societies.*—In all Protestant missionary work the rule has been to give converts and others access to the Christian Scriptures as soon as possible. Occasionally this may have resulted in premature productions which have afterwards been the cause of misunderstanding or hindrance, but, taken as a whole, the translation of the Scriptures into the languages of the non-Christian world has been one of the most signal and fruitful achievements of modern missions. The Bible, as a whole or in part, is now printed in about 500 languages and dialects. The great bulk of this work has been and is being done by the *British and Foreign Bible Society* (1804), which has issued 487 of these versions up to 1914. The number of these is being increased year by year, and the work of revision of older versions in the light of the best scholarship is constantly proceeding. Many scores of these languages possessed neither book nor script before they were reduced to writing by the missionaries, who soon followed up the spelling-book and the school-reader with the Gospels, and gradually added the whole NT and in many cases the OT also. The B. and F.B.S. circulated, in 1914, 10,162,413 copies of the Scriptures. It received a charitable income (exclusive of sales) of £90,000. The *National Bible Society of Scotland* and the *Trinitarian Bible Society* in the same year circulated respectively 2,762,616 and 154,952 copies in 13 and 2 languages (besides those dealt with by the larger society).

For the production of Christian literature of a more general kind the *Society for the Promotion of Christian Knowledge*, already noticed, is the oldest society. It helps Church of England missions in all parts of the world, principally with books of devotion and theology, but also with works of a more general nature. It has published in 99 languages. The *Religious Tract Society* (1799), with an income (apart from sales) of £17,196, does a similar work on an interdenominational basis, and it has been the means of founding several daughter societies in India and China. It publishes in 200 languages. The *Christian Literature Society for India* was founded in 1858 as a Christian reply to the mutiny. Under John Murdoch (1859–1904) it developed a wide-spread activity in production, both of educational works and of religious and general literature. A similar *Christian Literature Society for China* has done much in producing high-class literature under the leadership of Timothy Richards and others. The *Nile Mission Press* at Cairo (1902) produces Arabic literature for missions to Muslims in the Near East. But the mission presses at work in the four quarters of the globe run into many hundreds.

ii. AMERICA.[1]—The *American Board of Commissioners for Foreign Missions*, founded in 1810, sent out its first missionaries to India in 1812; but, owing to the hostile attitude of the E.I.C., they did not secure a footing in W. India till 1814, and in the same year they entered Ceylon. The other principal steps forward were to Oceania (1819), W. Africa (1830), S.E. Africa (1835), China (1847), and Japan (1869). Since the separation from this Board of the Dutch Reformed and the Presbyterian missions the A.B.C.F.M. represents the Congregationalists of the U.S.A. Income, £200,978; missionaries, 615; adherents, 193,742.

The *American Baptist Missionary Union* came into existence in 1814, when Adoniram Judson entered Burma. In 1827 he began a remarkably successful work among the Karen tribe, which has come over in masses to Christianity. Another Indian mission of the A.B.M.U. in the Telugu country (from 1840) has been the sphere of a large movement. The Union entered China in 1843, the Congo Territory in 1866, and Japan in 1872. The Southern Baptist Convention, an off-shoot from the main body, carries on missions in China, W. Africa, and Japan. Income, £222,885; missionaries, 701; adherents, 505,600.

The *Methodist Episcopal Church* represents the Wesleyan movement in the U.S.A. The larger, or Northern, branch carries on its missions to non-Christians in S. India (1833), China (1847), N. India (1856), Japan (1872), Korea (1885), and Malaya (1889). The Southern branch began missionary work in 1846, and carries it on in India, China, and Japan. The foreign work of this denomination has spread rapidly and widely. Income, £296,506; missionaries, 1396; adherents, 687,368.

The *Presbyterian Church in the U.S.A.* is also a leading missionary force. It separated its work from that of the A.B.C.F.M. in 1837, and has missions in Syria, Persia, India, Siam, W. Africa, China, and Japan. Its educational work in India especially is of a high order. The Presbyterians of the Southern States (*Presbyterian Church in the U.S.A.*; 1861) work in China, Japan, Congo Territory, and Korea. The *United Presbyterian Church* (1859) maintains a vigorous work in China, India, and Egypt (the last named chiefly among Copts); in their Panjāb Mission accessions have been very large. The *Dutch Reformed Church* (1832) works in China, Japan, India, and on the Persian Gulf. The *Disciples of Christ* have missions in China, Japan, India, and Turkey. The first of these denominations in 1914 had an income of £561,142, 1537 missionaries, and 370,238 adherents.

The *Lutheran Churches of the U.S.A.*, numbering over 2,000,000 communicants (and, say, 10,000,000 adherents), are divided into six chief sects, whose first mission was undertaken in 1841. They work mainly in India, where their most important mission is in the Telugu country. Income, £68,907; missionaries, 81; adherents, 70,426.

The total figures for Protestant Missions in N. America amount to 6627 missionaries and 1,396,631 adherents.[1]

Canada has eight leading Protestant missionary societies. The principal of these are the *Baptist*, the *Methodist*, the *Presbyterian*, and the *Anglican*.

In addition to the Boards connected with the various Churches, one organization, connected with no Church in particular, has powerfully influenced the missionary life of all, not only in America, but in the United Kingdom, and on the continent of Europe. The going out of the 'Cambridge Seven' to China in 1884 excited great interest among the students of America as well as among those of Great Britain, and at a conference of students summoned in 1886 by Moody at Mount Hermon, Mass., the *Student Volunteer Missionary Union* was formed on the basis of a declaration by each member of his or her intention to become a foreign missionary. The same movement continued in a less organized form in Britain till it was formally established there also, in Edinburgh, in 1892. It soon became evident that the appeal for missionary service could not be effective without a strengthening of the general Christian life of the student world at large, and in 1893 the *Student Christian Movement for Great Britain and Ireland* was started. This has now a membership of over 9000 students, including those in theological colleges, and it is affiliated to the *World's Student Christian Federation*, with a membership of over 180,000 students in some 40 countries. The S.V.M.U. has become a department of the more general work. Since 1896 it has systematized the study of missions among its members and outside by the formation of study circles and the provision of suitable textbooks for them. The Liverpool Conference of 1912 co-ordinated the foreign missionary and home social problems of the movement more closely than before, and the S.C.M. works at the solution of both as inseparable the one from the other. From the British branch of the S.V.M.U. over 2000 students have left in thirteen years for the mission-field; 700 are still in college, and 600 are undergoing post-collegiate training for missionary work. The Union sends out no missionaries itself, but only through the societies.

---

[1] The figures given are exclusive of work among Indians or others in home territories. Unless otherwise specified, they are for the year ending Dec. 1914. Generally speaking, these American Boards are part of the official organization of their respective Churches. The principal ones only are mentioned.

[1] It is impossible to estimate accurately the distribution of income between home and foreign missions.

iii. GERMANY.—In the latter part of the 18th cent. the Danish-Halle Mission died out, its missionaries being taken over by other societies. The *Moravians* quietly continued their work and celebrated their first centenary in 1832 with much cause for rejoicing; their influence was felt, too, in new undertakings elsewhere. During their second century the work has increased till it embraces 21 mission-fields, mostly in America, but also in Africa, Australia, and India. The income from home contributions is little more than one-third of the total expenditure, the balance being met from free-will offerings in the mission-field, government grants, and trade profits. The fields of work are largely the most remote and inhospitable lands, such as Greenland, Labrador, Alaska, the Mosquito Coast, N. Australia, and Lesser Tibet.

Other German Protestant missionary efforts began with the training of missionaries for societies outside of Germany. Johann Jaenicke from 1800 to 1827 carried on a missionary seminary in Berlin whose *alumni* were sent out from Holland and England. They included pioneers in Tinnevelly (C. T. E. Rhenius) and China (C. Guetzlaff). In S. Germany Christian life was strongest in Würtemberg, Baden, and German Switzerland, and here missionary interest resulted in the foundation of the *Basel Missionary Institute* in 1815, from which 88 candidates were passed on to the C.M.S., many of whose early missions were founded or conducted by them. In 1822 the *Basel Evangelical Missionary Society* was founded, largely through the efforts of Christian Gottlieb Barth. Their first permanent mission was started on the Gold Coast in 1828. In 1843 work was begun on the south-west coast of India, in 1846 in China (Kwantung), and in 1886 Kamerun, becoming a German colony, was taken over from the Baptist Missionary Society. The Industrial Association connected with the Basel Mission has taken a lead in industrial work in S. India, where it carries on weaving, tile-making, etc., at Mangalur and other centres.

The *Berlin Missionary Society* sent out its first missionaries to Africa in 1834, and in 1872 it took over work in S. China, and in 1891 in E. Africa. The valley of the Wupper in Rhenish Prussia was a strong centre of active Christian life, and here, after much preliminary work, the *Rhenish Missionary Society* was founded in 1828. This, too, began work first in S. Africa, extending in 1834 to Borneo, in 1862 to Sumatra, in 1865 to Nias, in 1846 to China, and in 1887 to Kaiser Wilhelmsland. The missions in S. Africa have attained a large measure of self-support, and in Sumatra many Muhammadans have been brought in, together with masses of pagans.

The year 1836 saw the foundation of three German societies. The *Bremen Missionary Society* has had a chequered career, its principal mission being in W. Africa, where the deadly climate has carried off many missionaries. The *Leipzig Missionary Society* was first established in Dresden, and transferred to Leipzig by its director, K. Graul, in 1848. It makes more use of university graduates as missionaries than do the other German missions, which generally employ seminarists. It also more than others represents the pronounced Lutheran element. The Leipzig M.S. in 1840 took over what remained of the old Danish-Halle Mission, and in 1892 it opened work in German E. Africa. The *Gossner Missionary Society* was founded by a Berlin pastor of that name. He began on his own responsibility to train missionaries in Scripture and the devotional life, and within 22 years he had sent out 178 to Australia, British and Dutch India, N. America, and W. Africa. Not a few of them proved able and successful evangelists. After Gossner's death in 1858 many of them joined other societies, but the work among the Kols of Chotā Nāgpur, which had been specially fruitful, was put under a board, since then known as the Gossner M.S. Notwithstanding the secession of several missionaries with their flocks to the S.P.G. in 1868, the Gossner Mission (113,000 adherents) represents the largest group of Christians in the Province of Bengal.

Another mission which belongs to the extreme Lutheran section of German Protestantism, and which also owes its origin to the enterprise of a single man, is the *Hermannsburg Missionary Society*, begun by Ludwig Harms in 1849. After parting with certain fields to others, this mission has work now in S. Africa and India.

Besides the eight societies mentioned above, the following have been founded later: *Schleswig Holstein* (1877), *Neukirchen* (1882), *General Evangelical Protestant* (1884), *Berlin Missionary Society for E. Africa* (1886), together with a number of minor bodies, including several small societies for women's work. The G.E.P. Society is the only body representing a modernist standpoint approximating to Unitarianism. It has a few missionaries in Japan.

iv. HOLLAND.—Owing, perhaps, to the State propagation of the faith in former years, independent missionary societies have not multiplied here so rapidly as elsewhere. The *Dutch Missionary Society*, founded in 1797, has worked in the Malay Archipelago, and the results of its work have largely—especially in Minahassa in Celebes—been taken over by the Established Church, which maintains 36 pastors and 26 assistants, who minister both to converts and to colonists. A number of minor societies have been formed from time to time. The Dutch missions have had considerable success among the Muslims of their colonies.

v. FRANCE.—In France the cause of Protestant missions is represented by the *Société des Missions Evangéliques*, founded in Paris in 1824. Its chief mission is the very successful one among the Basutos in S. Africa with which the name of François Coillard is connected. It has also taken over work from English and American societies in territories such as Madagascar, Gabun, and the Society Islands, which had come under French domination. In French Switzerland the *Mission Romande* was founded in 1879; it works in N. Transvaal and Delagoa Bay.

vi. SCANDINAVIA.—In Scandinavia the *Danish Missionary Society* was founded in 1862, and works in S. India and China. The *Norwegian Missionary*

Society (1842) has missions among the Zulus and in Madagascar. There are minor missions connected with the China Inland, the Alliance, and other societies. Sweden also has had its own *Swedish Missionary Society* since 1835, working in S. India and S. Africa, and a *Swedish Missionary Union*, since 1878, with missionaries in Algeria, the Congo, Ural, Persia, China, and Chinese Turkestan, besides minor associations. Finland has a *Lutheran Missionary Society* with work in S. Africa and *Free Church* missions in China and India.

vii. BRITISH COLONIES.—The British colonial Churches of various denominations maintain a considerable and increasing amount of missionary work. This is done partly through societies locally formed, partly by assisting the older societies in home lands. Australia and New Zealand, in addition to work among their own aborigines, send men and women principally to Asiatic countries, the S. African churches to the pagans of their own territories, the now independent W. Indian Churches to their own neighbours and to their race-fellows in Africa. In India and China, though very few churches are as yet self-supporting, various indigenous missionary societies have been formed, such as the *Tinnevelly Missionary Society* and the *National Missionary Society*, for work in various parts of India. These two had 2416 adherents, 5 missionaries, and an income of about £4000 in 1912.

2. Preparation of missionaries.—In the beginnings of societies the first step taken was frequently the establishment of a missionary seminary. As a rule, the candidates required some school training before entering on their theological course. The fact that many of them had been engaged in trades or handicrafts rendered them all the better suited to the pioneer work which largely fell to their lot, but not a few distinguished scholars developed among them. The Free Churches in England and America have drawn their missionaries mainly from the theological colleges of their denominations, but the Scottish Churches have usually sent out graduates of the universities. In the Anglican Church, missionary seminaries have a more important position, the most prominent being the C.M.S. College at Islington (797 missionaries up to 1913, of whom 13 are bishops) and St. Augustine's College at Canterbury (307 and 5 respectively). On the Continent the great majority of missionaries are seminarists, but their training is generally most thorough, and they seem to have produced as many scholars in proportion as the university-trained men. In American missions it is difficult to distinguish accurately between university and non-university men. In any case, both there and in Europe the S.V.M.U. has greatly tended to bring men and women of good university attainments into the missionary ranks—a tendency emphasized by the rapidly increasing demands of higher education in the mission-field.

Till recently good theological training with a university degree was considered the *ne plus ultra* of missionary preparation from the intellectual side. But since the beginning of this century the conviction has been gaining ground that the task of the missionary demands, besides these, a technical training proper to it. This opinion was voiced by Commission VI. of the Edinburgh Conference, which recommended the establishment of Boards of Study for the special preparation of missionaries both in Britain and in America. This was carried into effect. The American Board of Missionary Studies is working on a somewhat wider basis, taking in theological subjects as well as others, whereas the British Board of Study, by mutual agreement, as an interdenominational body, deals only with general subjects (history and methods of missions, phonetics, linguistics, comparative and special study of religions, ethnography, anthropology, sociology, hygiene, business methods, educational methods). Some colleges already give themselves more or less to the teaching of these subjects: in America the Kennedy School of Missions at Hartford, Conn., the Missions Department of Yale University, the Bible Teachers' Training School, New York, the College of Missions, Indianapolis, the Cincinnati Missionary Training School, in Britain the U.F.C. Women's Missionary College, Edinburgh, and the Kingsmead Training Institution, Birmingham, take up many of these subjects, and it is in contemplation to merge the British Board of Study in a Central College of Missionary Study.

3. Missionary conferences.—The lack of unity and co-ordination in Protestant missions has long exercised the minds of their promoters, and the effort has been made to overcome this difficulty by gatherings for common counsel. The general missionary conferences thus far were held in Liverpool in 1860 (126 members); London, Mildmay Park, 1878 (158 delegates); London, Exeter Hall, 1888 (1494 delegates); New York, 1900 (2300 members); and Edinburgh, 1910 (1206 delegates). The bulk of the membership in these has consisted of delegates of missionary societies and boards, supplemented by missionaries from the field and experts of eminence. The composition of these conferences has become increasingly interdenominational and international; and in Edinburgh not only did High Anglicans attend as members, but messages of greeting were received from Greek and Roman prelates, while Asiatics, Africans, Australasians, Americans, and Europeans of many nationalities took part. The conferences have no legislative or executive authority, but the 'findings' which are formulated as the result of their debates exercise great practical influence on missionary work and methods. The reports of these conferences form a valuable record of the progress of missionary life and policy and a storehouse of missionary thought and argument. The report of the Edinburgh Conference especially (in 9 vols., London and New York, 1910) is indispensable to the student of missions. Its investigations and discussions are carried on by a Continuation Committee which publishes the quarterly *International Review of Missions*. The same kind of work has been carried on in the mission-field by periodical conferences of representatives from different missions at such centres as Madras and Shanghai, and in 1912-13 J. R. Mott convened a series of Continuation Committee Conferences in India, China, and Japan, the findings of which are published in a bulky volume (New York, 1913). By these and other means a large amount of practical union in work has been attained, and the tendency in the mission-field and at the home base towards closer unity has been promoted.

4. The field.—i. AMERICA.—The spread of Christianity in this continent has been mainly through immigration. Paganism is now only a fringe of the total population of 170,000,000. The work of Protestant missions has been chiefly in N. America, among Eskimos, Indians, and Negroes. For our purposes the W. Indian Islands and Guiana go together with N. America. S. America has been touched in Patagonia and Paraguay.

(*a*) *Eskimos.*—The Norsemen who immigrated to Greenland in the Middle Ages had a bishopric of their own, but both they and their faith died out before the 18th century. In 1721 a Norwegian pastor, Hans Egede, having heard of them, repaired to the west coast of Greenland and began work among the Eskimos under great difficulties owing to their utter indifference. It was continued, however, by his son, and eventually taken up by the Danish M.S. The west coast population in this region is Christianized, and missionary work is going on among the pagans of the east coast. Further south on the west coast the Moravians, beginning in 1733, founded the settlement of New Herrnhut, and from that centre Christianized the tribes, so that in 1899 they were able to hand over this territory to the care of the Danish Church. In Labrador since 1771 the scattered Eskimos have been mainly brought in by the Moravians, and they are cared for with the help of trade carried on by the mission ship 'Harmony.' On the other side of the continent the U.S. territory of Alaska contains a relatively considerable population of Eskimos, besides Aleutians, Indians, immigrant Chinese, and white men. Here in 1877 a Presbyterian mission was founded, followed by Moravians, American Anglicans, and others, totalling about 6000 Christians. The race, about 40,000 in number, is intellectually apathetic and feebly organized; hence its contact with white traders has been unfavourable to the development of independent Church life, but missionary work has meant their salvation from extinction through strong drink, disease, and exploitation.

(*b*) *Indians.*—These number now in the U.S. and Canada under 400,000. Over one-half live on reservations; the rest are scattered among their white fellow-citizens. From the 17th cent. onwards the relations of the colonists, whether French, English, or Dutch, with the Indians were those of perennial warfare and commercial exploitation, till the peace of the country was fully established and a more sensible and humane policy was gradually introduced. Missionary efforts were never entirely wanting. John Eliot (from 1646), David Brainerd (from 1743), and David Zeisberger (from 1745) gathered many thousands of Indians into Christian congregations of peaceful citizens, but again and again their work was destroyed by civil war. The later and more gradual settlement of Canada was advantageous to the Indian population, as the missions of all Churches were able to gain a hold, before land-grabbing and commercial greed came strongly to the fore. The first Protestant mission was begun in the Hudson's Bay Territory in 1820; it has been developed largely by the C.M.S., and much heroic work was done by its pioneers among the sparse native population before the colonists came in. Now the whole dominion is parcelled out in dioceses of the Anglican Church, and work among the Indians is carried on by other denominations also, Presbyterians and Methodists being specially active. Since the separation from England the evangelizing of Indians in the U.S. has been more and more taken over by the various Churches, and the still pagan Indians are a small remnant. Their assimilation as citizens of the Republic is still an incomplete process.

(*c*) *Negroes.*—These number (including coloured or mixed population), in the U.S. 9,827,763 (1910), and in the W. Indies 1,280,000. Their introduction into the latter dates from the Spanish conquest, into the U.S. from 1640. Organized missions among the U.S. Negroes practically began about 1860, but during their time of slavery large numbers had been Christianized, especially by the Methodists and Baptists. The bulk of these Negroes are now connected with the various Protestant Churches. In 1913 they contributed about £20,000 for home missions and £10,000 for foreign missions, besides maintenance of churches, ministry, and education. The Negroes of Cuba and Haiti are but little touched by Protestant work, but in the remaining islands they are incorporated into self-supporting churches, the result of previous missionary effort, and their economic condition is less complicated by an overweight of white population than in the U.S. They number about 1,000,000.

(*d*) *S. America.*—The territory of Guiana is closely connected with the W. Indies. Anglicans, Moravians, and Methodists have gathered converts amounting to 90,000. These are partly from among the E. Indian indentured coolies working on the sugar-plantations (who are also to be found on the islands). Catechists and clergy of Indian nationality work among them, and coolies returning home help to spread the faith in India.

Of the 38,000,000 in S. America the aborigines number about 5,000,000, mostly belonging to the Roman Catholic Church. Protestant missions have touched them in Patagonia, where the work set on foot by the heroic pioneer, Allen Gardiner, changed the opinion of Charles Darwin as to the susceptibility of a savage race to higher culture. The Indians of the Chaco in Paraguay have also begun to come in, and the mission among them has been recognized by the government of the Republic as the best mediator between white and coloured peoples.

ii. AFRICA.—(*a*) *W. Africa.*—It is this part of the continent that, owing to the slave-trade, has had the earliest and most intimate connexion with Protestant lands, especially with N. America. The endeavour to influence Africa directly by means of the liberated slave is chiefly represented by the little republic of Liberia, founded in 1824 by the American Colonisation Society. The Christian Negroes who settled there were hardly ripe for administering the Free State proclaimed in 1847, but from this centre work is being carried on by sundry societies among the neighbouring non-Christians. A certain number of American Negroes have been sent as missionaries to Africa by their Churches in the U.S.A., but the effective shaping of their work is a problem that awaits solution.

The north-west coast of Africa as far as the Senegal borders on sparsely-inhabited Muhammadan territory which has scarcely been entered as yet. From this to the mouth of the Congo is the region of Protestant mission-work.

At Sierra Leone the settling of liberated slaves began in 1808, after the abolition of the slave-trade, and its capital received the name Freetown. Up to 1846, 50,000 African slaves had been brought there, chiefly by British cruisers. For years great loss of life was experienced among the C.M.S. and other missionaries who worked there, and among the welter of tribes represented the only common language available was English. To some extent the varying elements were sifted out, and Christianity spread by means of those who rejoined their kindred elsewhere. In 1852 an Anglican bishopric was constituted, and in 1861 the Church, in which meanwhile education had spread rapidly, was made self-governing. It carries on missions among its pagan neighbours. Here and elsewhere in W. Africa the missionary comes into contact increasingly with Muslims from the north. Among a population of 75,000 in the colony 57,000 are Protestant Christians.

The Gold Coast Colony has a population of 1,500,000. The western part is worked by Wesleyan missionaries, the eastern by the Basel Society. The latter, since 1828, has penetrated effectively into the back country formerly under Ashanti rule; the Wesleyans, too, have moved into the northern territory. The country is being opened up by railways, and the rapid increase of commerce is enriching the Christian community here as elsewhere in W. Africa, to the advantage of self-support, but not always to that of spiritual life and morals. The Christian community now numbers upwards of 30,000.

The German colony of Togoland, next on the east, has considerably developed missionary work from that country, during the last few years, among the Ewe nation. Good linguistic work has been done. The community numbers some thousands.

The work in the lower basin and delta of the Niger has assumed increased importance since the constitution of Nigeria, the richest of Britain's African possessions, as a Crown Colony, with a population of 18,000,000. The first mission stations (from 1846 onwards) were started to look after natives of the Yoruba country who had returned from Sierra Leone to their own people. Lagos, the great port of the palm-oil trade, and the large interior towns of Abeokuta and Ibadan were occupied, and considerable Christian communities were gathered, amounting (1913) in the Yoruba province to 50,000. Economic development is going on rapidly, and the demand for education, especially in English, is increasing year by year.

After the Niger had been opened up by three voyages of exploration (1841, 1854, 1857), an African priest of the C.M.S., Samuel Crowther, was sent to this region. He planted several stations, and in 1864 was consecrated bishop. The work was carried on by Africans, with some vicissitudes but with substantial progress, till Crowther's death in 1891, when W. Equatorial Africa was placed under an English bishop, assisted by two Africans, the wealthy churches of the Delta being granted self-government. In N. Nigeria the town of Lokoja had been occupied in 1865, but it was not till the end of the century that an effective advance was made into this territory, where a predominantly Muhammadan population alternates with large patches of paganism, while the spread of Islām continues in a southerly direction. The work here is still in its beginnings. In Calabar at the south-east corner of Nigeria a Christian community of 11,000 has been gathered in by the U.F.C. mission.

Kamerun, a German colony since 1884, was originally evangelized by English Baptists, but their work was taken over mainly by the Basel Society, who were pushing into the back country before the outbreak of the great European war. The Christians number about 15,000 out of an estimated population of 3,000,000.

The Congo River was first opened up completely by Stanley in 1876–77, and the Congo Free State, under the protection of Belgium, has been the scene of rapid missionary advance along the river. Yakuso, the furthest point, near Stanleyville, is 1200 miles from the mouth. Among the first explorers in detail were the English Baptists G. Grenfell and W. H. Bentley from 1879 onwards. Other missionaries of various nationalities followed. Owing to the difficulties of climate and the great multitude of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

The characteristic problems of the W. African missions generally are presented by the constant advance of Islām from the north, the demoralization of commercial intercourse caused by the liquor-trade, and the unsettling effects of a rapid acquisition of wealth formerly undreamt of. On the other hand, the removal of the evils connected with the slave-trade, the increase in prosperity and intelligence, and the creation of a Christian standard of conscience and morals, with the opportunity given to the natives of rising to a higher life, are elements in appreciable progress towards the regeneration of the Negro peoples.

(*b*) *S. Africa.*—In this we include the regions south of the river Kunene on the east and the Zambesi on the west. It contains three African races: the Bantu (including Zulus and Kafirs), the Nama or Hottentot, and the Bushman, the last two scarcely remaining pure, the first virile and prolific. The climate being temperate, Christianity has spread by immigration from western nations, and the white population is reckoned at 1,300,000. Hence the racial problem is at its acutest in S. Africa, and it specially affects the work of missions, which aim at raising the native populations to a higher level, religious, moral, and social, and at giving them the best education which they are capable of assimilating. The earliest Dutch colonists regarded the natives as an inferior class of beings whom it was both lawful and expedient to keep in subjection, and this attitude has not been confined to one section of the white races. Thus there has been a persistent prejudice against, and often actual antagonism to, the work of missions, sometimes aggravated by lack of prudence on the part of the missionary and by unbalanced policy on the part of the government. The conviction is gaining ground, however, that without the moral influence of Christianity the problems resulting from the contact and blending of two cultures cannot be thoroughly solved. Among some 4,000,000 natives there are now about 750,000 Christians, the result of the work of 30 missionary societies belonging to 8 nationalities. The racial factor is especially in evidence in the 'Ethiopian Movement,' composed of groups of congregations who in 1892 formally seceded from their missionary connexions. Some of them in 1899 joined the Anglican Church as 'the Ethiopian Order'; the remainder do not appear to be progressive either in internal life or in external expansion.

In what became in 1886 German S.W. Africa the principal work has been done by German missionaries of the Rhenish Society since the forties. The fruits of their persevering and systematic efforts have suffered greatly through colonial wars. Protestant Christians in the colony number, by last figures, 13,000.

The largest indigenous Christian population is in Cape Colony, numbering 1,145,000 out of a total of 2,500,000; it comprises westwards, broadly speaking, bastardized Hottentots, and, eastwards, Kafirs of relatively pure race. The Moravians, who began work in 1737, were followed in 1799 by the L.M.S., whose missions in Bechuanaland are remarkable for their great pioneers, R. Moffat and, above all, Livingstone. Through the persistence of John Mackenzie and the intervention of the British Government, all attempts to block the northward way of the missionary were frustrated, and the path of the gospel was opened up to the C. African lakes and eventually from the Cape to Cairo. The converts of the L.M.S. in Cape Colony now form a Congregational Union with some 35,000 adherents. Efforts of later dates are represented by the adherents of the Wesleyans (over 90,000, now independently organized), Rhenish M.S. (16,000), Berlin M.S. (50,000), and Scottish Presbyterians (25,000). The majority of the white colonists belong to the Dutch Reformed Church, which for a long time held aloof from missionary work. Since the middle of the 19th cent. its attitude has changed, and it carries on missions within and beyond Cape Colony. In the latter it counts over 80,000 native Christians, the majority of whom are under the charge of its parochial clergy. The Anglican Church in the three dioceses of the Colony claims over 70,000 adherents.

Among the Zulus and Swazis of Natal the work of many denominations has been greatly hindered by frequent and destructive wars, but Christian congregations have grown, and some converts have been gained from among the Indian coolies. Basutoland, blessed with a more quiet development since it became a Crown Colony in 1884, has been worked principally by the Paris M.S., which now counts about 70,000 adherents. Among the Bechuanas of the Transvaal and Orange River Colony Dutch, Anglican, Wesleyan, and Lutheran missions have gathered a Christian community of considerable importance. The problems of moral and social development are greatly complicated by the congestion of labourers, both Christian and non-Christian, in the mine compounds of Johannesburg and the Rand. The thinly-populated Bechuanaland Protectorate includes Khama's Country, where a Christian African prince rules his people well.

Madagascar has been a land of great vicissitudes in missionary work. The first missionaries of the L.M.S. began work with considerable success among the Hovas, the ruling race of the central province, in 1820. In 1836 the accession of a hostile queen brought about the expulsion of the missionaries, and for twenty-five years the Christians were severely persecuted, yet they increased considerably. In 1861 a new ruler recalled the missionaries, and, when another queen was baptized in 1869, conversions began in masses. To cope with the situation other societies, Friends, S.P.G., and Norwegians, entered the island. In 1895 Madagascar was annexed by France, and Protestant mission work was so severely hampered that the L.M.S. was fain to give over a large part of its work to the Paris M.S. The total number of Protestant Christians in Madagascar is estimated now at 287,000, while the scholars number 44,577.

(*c*) *E. and C. Africa.*—Missionaries helped to open up these lands both from the east coast and from the interior southwards. In 1844 Ludwig Krapf, a German in C.M.S. service, landed on the island of Mombasa and began work on the mainland opposite. He planned (1) to carry a chain of mission stations across Africa from Mombasa to Gabun; (2) to establish on the east coast a colony for liberated slaves like that in Sierra Leone on the west; and (3) to work for an African ministry under an African bishop. The second of these objects was accomplished at Freetown in 1874; the first and third are in process of realization now. In 1846 Krapf was joined by Johann Rebmann. After nine years Krapf was invalided; Rebmann held on for twenty-nine years. By their discovery of the snow-peaks of Kilimanjaro and Kenia on the equator, and of the great inland-sea of Nyanza, they revolutionized the geography of C. Africa, and their linguistic labours prepared the way for later workers in a fruitful field.

The yet greater work of David Livingstone is part of history. From his first station of Kolobeng in S. Africa he constantly pressed northwards, crossed Africa from east to west, and opened up the lake regions of Nyasa and Tanganyika, exploring ceaselessly till he died at Ilala in 1873. In his opinion the end of the geographical feat was the beginning of the missionary enterprise. He desired to uproot the slave-trade, and to open up Africa to legitimate commerce and to Christian culture with faith as its root. The Universities Mission to Central Africa undertaken by members of the Church of England, the L.M.S. mission on Lake Tanganyika, and the Scottish Presbyterian missions in Nyasaland are the direct results of his lifework; but it affected the whole missionary enterprise of inland Africa. To Stanley it was given to complete the work of Livingstone by his exploration of the Congo valley, and in the course of it he gave the impulse which has resulted in the formation of a virile Christian State in the centre of Africa, now the kingdom of Uganda. Stanley found the king, Mutesa, hesitating between the claims of Christianity and Islām. Through a Swahili Christian interpreter he put the Christian case before the monarch and straightway appealed to English Christendom to enter this open door. The result was the sending of the well-known C.M.S. mission in 1875. The murder of James Hannington and the barbarous persecution of the early converts only served to increase zeal and enthusiasm. After sundry conflicts and imminent risk of abandonment by the Colonial Office, Uganda became a British Protectorate, under which mission work has gone forward peacefully. The country now contains 96,000 Protestant Christians, with a somewhat larger number of Roman Catholics and a smaller number of Muhammadans. The schools contain scholars up to a secondary standard. The growing Church now forms an effectual breakwater against the rising tide of Islām.

The two protectorates of E. Africa, the English and the German, have each brought the country under civilized administration, and the British Government has opened up its territory by a railway, preceded or accompanied by missionaries. The English work in German territory has been partly made over to German missions since the establishment of the colony in 1884, but a group of C.M.S. missions remains round Mpwapwa, and another of the U.M.C.A. opposite Zanzibar. The German work is chiefly on the northern frontier, and on the north shore of Lake Nyasa and its vicinity. The principal missions of the Nyasaland Protectorate are those of the Scottish churches, with the two industrial centres of Livingstonia in the north and Blantyre in the south—fit memorials of the great Scottish missionary pioneer. His successors have seen the slave-trade entirely wiped out and fierce animist tribes subdued by the influence of Christian love, exemplified in medical missions, and brought under training in civilized industry and commerce. The Anglo-Egyptian Sūdān in its Muhammadan parts is closed to missionary effort by government ruling; among the pagan Dinkas, Azandi, and other tribes missionary work is in its first stages.

iii. OCEANIA.—Missions in Oceania date from 1769, and owe their first impulse to the interest excited by the story of Cook's voyages in the South Seas. The major part of this area is suitable for European colonization, and the aborigines belong to more or less primitive states of culture, in which their physical as well as mental stamina has remained weakly. Owing partly to this and partly to unscrupulous exploitation by white settlers and traders, the result of contact with the white races has been the rapid diminution, and in some cases, as in Tasmania, the entire extinction, of the native races. The work of missions has therefore largely consisted in the rescue of weaker races from extermination through contact with exponents of higher civilizations not imbued with the Christian spirit. In no part of the world have the results of missions been more rapid and wide-spread, but stability is sometimes lacking. The effects of kidnapping, strong drink, and disease have been appreciably counteracted.

Work in *New Zealand* was started by Samuel Marsden in 1814, and after a time made rapid progress. In 1840 the islands became a British colony; unfortunately wars broke out, and in 1864 the strong Hau Hau apostasy, a recrudescence of pagan cults mixed with Christian heresies, drew away great numbers. In spite of this the leading missions of the C.M.S. and Wesleyans were able, before the end of the century, to make over their converts to the local Church organizations. The New Zealand Parliament also has its Maori members. The Maori population of New Zealand is about 50,000, of whom some 30,000 belong to Reformed communions. There appears to be some hope that, in place of declining, the native population is beginning to increase.

In *Australia* the aborigines have dwindled to 74,000, living mostly in the northern parts of the continent. After several abortive attempts missions, with a strong industrial element, have been continuously carried on since 1851 by English bodies of various denominations, as well as by Moravians and Lutherans. Despite pessimism, the aborigines have proved susceptible to the elevating influence of the gospel, and decadence has been to some extent arrested, though independence is not yet in sight. The number of Protestant Christians is computed at 6000.

The *Islands of the Pacific* may be roughly grouped into Polynesia (south of Hawaii), Melanesia (west of Polynesia), and Micronesia (north of Melanesia). Among the larger islands of Polynesia, Hawaii, now a United States territory with Honolulu for its capital, was first evangelized by the American Board from 1820 onwards and Christianized within fifty years. It has sent out and supported missionaries to several other islands. Tahiti, occupied by missionaries of the L.M.S., had a similar history, but after the annexation of the group by France it became necessary to transfer the work to the Paris M.S. Raiatea, the sphere of the famous John Williams, has remained in British connexion. In the Tonga and Viti, or Fiji, Islands the Wesleyans have been the principal workers. Practically the entire population is Christian, and is efficiently ruled by princes of the same faith. Education is wide-spread, and evangelists from Fiji have carried the faith to many other islands.

Melanesia has a population of 475,000, of whom 111,000 are Protestant Christians. The gathering in of these numbers has cost not a few missionary lives, owing to resentment on the part of islanders who had been oppressed by traders. The missionaries are British, German, Dutch, and Norwegian. The martyrdom of Bishop Patteson in 1871 called forth much enthusiasm and service, and during his long life John G. Paton of the United Presbyterian Mission saw 20,000 natives converted in the New Hebrides and contributing £1300 in one year for Church purposes.

On the Micronesian Islands, now under British, German, and American protection, developments since 1852 have been similar. Missionaries from Australia have taken part. Roman Catholic work is stronger here than in the other islands; out of 30,000 Christians the Roman Catholics claim 12,000.

New Guinea, or Papua, was first entered in 1871, when Christians from L.M.S. missions in Polynesia volunteered for the work, in which many of them laid down their lives. They had a great leader in James Chalmers (1876–1901). The Christians now number 35,000. Anglican, Wesleyan, German, and Dutch missionaries have taken part.

In various parts of Oceania, especially Australia, Hawaii, and Fiji, missionary work is carried on among the Asiatic immigrants from India, Japan, and China with the help of native preachers from those countries, not without some result. The barriers of caste and social opposition are less rigid than at home, but the restraints of conventional morality are also loosened.

The total population of Oceania, excluding Australia and New Zealand, is reckoned at some 2,000,000, of whom 320,000 are Christians.

iv. INDIA.—The impact of Christianity on India has been conditioned by certain outstanding features of the land and people. The peninsula is isolated by land and sea. The culture of the people ranges from the most primitive to a highly developed, though stationary, form. Its religion contains a similar variety of cults, ranging from spiritual adoration to cruel and obscene orgies, all bound together intellectually by a subtle pantheistic philosophy, socially by the unique system of caste (*q.v.*). Its contact with the outer world during recent centuries has been mainly through the immigration of foreign invaders, who have brought with them the monotheistic religion and polity of Islām, so that Indian Musalmāns now constitute by far the largest Muslim nation of the world. Most recently, however, India has come into connexion with a seafaring nation of the West more intimately than any other Asiatic land. Here, as elsewhere, the missionary has employed in the first instance the agencies of preaching and persuasion, but the form which the results of his work have assumed has mainly been determined by the conditions of the classes to whom he has addressed his message. To bring out the chief features of it, we may deal with 'mass movements,' education, and philanthropy as main channels of evangelization.

The earliest form of Christianity in India is that of the Syrian Churches of Travancore and Cochin, which probably owe their origin to the Nestorian community of Persia, whose members traded with the Malabar Coast in their early days. From about the 4th cent. a trading and landholding community accepted the Christian faith, and has continued as a local caste to the present day. Early in the last century they were aroused from lethargy by contact with Anglican Christianity, and the work of the C.M.S., first in combination, and afterwards side by side, with the Syrians, has stimulated reform and progress, both in education and in evangelizing zeal. The work of St. Francis Xavier, Roberto de' Nobili, and other great Roman Catholic missionaries of the Portuguese period is principally in evidence now in the masses of fisher folk and other labouring castes in the west and south of India; and in the earliest Protestant missions the same factor of community-movements appears. In the Danish-Halle Mission of the 18th cent. the greatest name is that of C. F. Schwartz (landed 1750, died 1798). The 20,000 Christians whom he gathered in Tanjore and elsewhere were mainly from the village labourers. After his death the work dwindled, till it was taken over by the Anglican Church, and during the first half of the 19th cent. the work of the C.M.S. and S.P.G. in Tinnevelly (principally among the palm-tree climbers), together with that of the L.M.S. in S. Travancore, yielded much more than half the entire number of Protestant converts in India, and naturally also the best organized churches. In 1851 these missions had 51,355 adherents, the remainder of the Madras Presidency 23,821, and all the rest of India 16,916. In the succeeding sixty years these missions and others in S. India have greatly developed, largely through the agency of American societies. The Protestant Christians now number 870,425 (besides over a million and a half Roman Catholics and Syrians), and they contribute £33,721 to the support of worship and schools. The Indian ministry includes 492 ordained men as against 487 foreign missionaries, and the self-administration of the churches is on the increase. Self-extension, too, is shown by the activity of more than one mission of the Indian Churches. The largest is the Tinnevelly Missionary Society, with an income of 12,000 rupees, 4 ordained men, and 2000 converts in a mission which they carry on in the Nizam's territory. Part of their work was made over to the diocese of the first Indian bishop, V. Azariah of Dornakal, when he was consecrated in 1913.

In Travancore a similar movement has made headway in the L.M.S. and C.M.S. missions, which now number 73,000 and 57,000 Christians respectively. Still more wide-spread is the movement in the Telugu country north of Madras. Here, especially since the great famine of 1877–78, the out-caste village labourers have pressed into the churches in myriads. The Christians belonging to Anglicans, American Baptists, Lutherans, and others are estimated at some 150,000.

In Bengal an older movement in the forties of the last century left a considerable church in the Nadiyā district; more recently the Nāmaśūdras of E. Bengal are turning their hopes towards Christianity, and the B.M.S. has admitted some hundreds from among them. In the United Provinces of Agra and Oudh the Chamārs (leather-workers) and sweepers have been principally gathered in by the American Methodist Episcopalians, who record congregations numbering 102,000 adherents, while other Protestant missions have 22,000. The most rapid movement during the last decade was in the Panjāb, where the Christians entered in the government Census returns had increased from 37,000 in 1901 to 163,000 in 1911 chiefly in the American Presbyterian missions.

The movements among the Indian village proletariat which have resulted in these large and growing accessions to Christianity all form part of one upward tendency of populations representing pre-Aryan inhabitants, enslaved by the Aryan conquerors and kept for millenniums in servitude, but now afforded the opportunity of emancipation by rulers whose political and social ideals are bound up with Christianity and whose rule has been accompanied by active Christian efforts of teaching and philanthropy. The effect of these efforts in raising the masses who have responded to them is expressed thus by the Hindu Census superintendent of the Mysore State:

> 'The enlightening influence of Christianity is patent in the higher standard of comfort of the converts, and their sober, disciplined and busy lives' (*Census of India, 1911*, Calcutta, 1913, vol. i. pt. i. p. 138).

To this we may add that evidences of spiritual regeneration and devotional life are also to be found.

The populations so far referred to are the 'untouchables' who live among the Hindus and Musalmāns of the plains. They may number (accuracy is very difficult to secure) some 30,000,000. But there are some 10,000,000 more of non-Hindu aborigines, living mainly in hilly regions, among whom the Christian faith has found ready entry. Such are the Karens of Burma, the Khāsis of Assam, the Kols and Santāls in Bengal. The Christian communities among these amount to some 200,000 persons. Both among these and among the out-castes the expansion of the movement appears to be limited only by the capacity of the Christian Church adequately to shepherd and educate the candidates for discipleship. The effect of education and Christian influence in raising the status of the Christian community as compared with its Hindu and Muhammadan neighbours has been very marked. Some progress has been made in improving their position as agriculturists; in the Panjāb the Christians have been recognized by Government as an agricultural tribe, and in the irrigation colonies there are several flourishing villages of Christian cultivators, holding land direct from the State.

Education of a simple kind, including that of girls, was from the first a regular part of missionary activity, but it was brought into prominence by the Scottish missionary, Alexander Duff (1830–57). He set out to evangelize the upper classes of Bengal by means of higher education, given through the medium of the English language, which, through the efforts of Macaulay and others, had already been adopted by Government as the vehicle of learning for India. Duff was assisted in his plans by Rājā Rām Mohan Ray, the founder of the Brāhma Samāj (*q.v.*). Duff's converts were counted rather by the score than by the hundred, but they included men who made their mark on the Christian Church as leaders throughout N. India. His school also had a powerful effect on the development of the Brahmā Samāj and other liberal movements in Hinduism, and not less did he influence the educational policy of the Government of India, which in 1854 founded departments of public instruction, and in 1857 established universities in Calcutta, Madras, and Bombay, followed later by others in Lahore and Allāhābād, and recently by a Hindu university at Benares and a Muslim one at Aligarh. Duff's school soon developed into a college, and no fewer than 8 other colleges were founded in different parts of India during Duff's lifetime. The most noteworthy contemporary of Duff as an educator was John Wilson of Bombay, who founded the college which bears his name, and added to his English work a profound acquaintance with Hinduism. There are now 38 Protestant missionary colleges in India, containing, in 1912, 5447 students, including 61 women, the latter practically all Christians. Of the total, 4481 students were Hindus, 530 Muhammadans, and 436 Christians. There is a fully-organized missionary college for women in Lucknow; and a college department works in connexion with a girls' high school in Lahore.

The work of elementary and secondary education was powerfully forwarded by the system of grants-in-aid which the Government instituted in 1854. The grants are made in proportion to the educational efficiency of schools, regardless of the religion of the managers. Educational efficiency being greatest among the missionaries, they have earned the chief portion of the grants, though their lead in this respect is no longer so marked as it was. Their secondary schools number 283, with 62,602 boys and 8400 girls; 880 boarding-schools contain 22,193 boys and 17,566 girls, all Christian. In 87 theological schools 1852 students are in training, and 127 training-schools have 1904 male and 1173 female students. The boarding-schools are partly secondary and partly primary. The result of secondary education in conversions has been small, but the influence on social ideals and practice and on religious thought has been very great. The care bestowed on the education of the Christian community, especially the women, has made it, with the exception of the Parsis, the most literate in India, far above the average of the Hindus generally, and little, if any, behind the Brāhmans. The number of Christian officials and teachers is large in proportion to the size of the community, and it is not easy to keep pace with their need for a highly educated ministry, while satisfying the wants of the large rural populations. The provision of elementary education for these is the most urgent missionary problem of the day. True, the elementary pupils in mission schools throughout India number about 450,000, but the great majority of these are non-Christian. In missionary colleges and schools of every kind 576,371 persons were being educated in 1912—about one in ten of all pupils.

Christian literature took its first effective start with the work of the great pioneer, William Carey (1793–1834). Together with Marshman and Ward, he worked chiefly at Bible translations into a multitude of different languages, and also founded a missionary college in Serampore. Most of these versions were mere *ballons d'essai*, but the Bengali became the foundation of all further work in that tongue. Henry Martyn at the same time produced his remarkable Urdu version of the NT, and a long line of translators and authors followed, supported by the publishing societies mentioned above. Krishna Mohan Banerjea among Hindu converts, 'Imād-al-Dīn among Muslims, and John Murdoch among English writers and publishers of Christian literature are outstanding names. Besides Bible versions there is also an incipient Christian literature in all the principal Indian languages, amounting in some of them to several hundred works. These are directed both to the training of the Christian Church and to convincing and persuading outsiders.

Among the philanthropic auxiliaries to the gospel message, medical work takes a foremost place. The effective prosecution of this in India dates from the middle of last century, when W. Lockhart of the L.M.S. was sent to Travancore, and Henry M. Scudder of the American Board to Ceylon. The chain of medical missions on the N.W. Frontier was begun in Kashmīr in 1864, and has since then extended to Peshāwar, Bannu, Derā Ismāīl Khān, and Quetta. The attitude of a turbulent, fanatical, and treacherous Muhammadan population has been greatly modified by the work of medical missions, and, while converts have shown their faithfulness in martyrdom, Christian Scriptures and literature, illustrated by the example of disinterested Christian love, have penetrated far into regions otherwise inaccessible to the missionary. Similar effects have been produced on the intolerance of the caste-proud Hindu, and, while suffering is impartially relieved, regardless of creed or condition, the ministry of healing has brought many to the discipleship of the Healer. The first qualified woman-doctor came to India in 1880, though medical work by women had been carried on long before. Medical missionary women have led the way in relieving the once hopeless suffering of secluded Indian womanhood, given over to treatment by ignorant and clumsy midwives and barber-women. Of the Indian women-doctors now serving under the Dufferin Fund and other public bodies the great majority are Christians, with a sprinkling from the Brāhma Samāj.

Closely allied with general medical work is that of the leper missions. Of the unfortunate leper community, hitherto uncared for, several thousands are under care in Christian institutions, and many of them have accepted Christianity. Christian institutions for the blind and the deaf and dumb are the only ones for these classes in India. Famine orphanages are common, and have furnished an appreciable fraction of the Christian community, especially in N. India; these have in recent years found imitators among non-Christians, and, owing to the influence and example of mission schools and colleges, the conception and practice of social service are spreading among Indian students, as shown by the society of the 'Servants of India,' promoted by G. K. Gokhale.

India affords the largest and most influential sphere of work among the Muslims of the world. Its Musalmān community numbers 65,000,000, and it is both specifically Indian in type and cosmopolitan by ties of religion—a fact which gives this community a greater political importance than its numerical proportion to the Hindu population would warrant. The largest Muhammadan community of India, that of Bengal, now numbering 24,000,000, came under British rule after the battle of Plassey in 1757, but the first effective Christian work among them was done by the chaplain-missionary Henry Martyn when he translated the NT and much of the OT into the Muhammadan *lingua franca* of India—the Urdu, or camp dialect of Hindōstānī. His one convert, 'Abd-al-Masīḥ, was the forerunner of many ex-Muslims who have joined the Christian ministry. It is impossible to estimate accurately the number of converts among the laity, but with their descendants they must run into several myriads. The circulation of the Scriptures, which the Muslim professedly recognizes as divine, is especially effective as a means of evangelism.

Among the Buddhists of Burma and S. Ceylon the results of work have been similar to those among the middle classes in India; *i.e.*, conversions have been sporadic, occasionally in families, with here and there outstanding personalities. The Census of 1911 gave the number of Protestant Christians in India as 1,452,759, compared with 970,385 in 1901. The largest proportion is in S. India (626,000), where the work has been established longest and is most systematic. The distribution elsewhere varies chiefly according to the incidence of mass movements. Protestant Christians in other parts number: Bengal, 178,000; United Provinces, 135,000; Panjāb, 155,000; Bombay, 51,000; Central Provinces and C. India, 24,000. In the native States they are generally fewer—*e.g.*, Haidarābād, 29,000; Mysore, 9,000; Panjāb States, 500; Kashmīr, 700.

Syncretism, in the shape of reform movements, both religious and social, is much in evidence. The earliest organized body of this kind is the theistic Brāhma Samāj, founded in 1828 by Rājā Rām Mohan Ray—a small sect, but influential owing to the social standing, literary ability, and philanthropic zeal of its members. The teaching of its sections ranges from a modified Hinduism to a kind of Unitarian Christianity with Indian atmosphere. The Ārya Samāj (*q.v.*), founded in 1875 by Dayānand Sarasvatī, represents a cruder modification of original Hinduism, professing to hold to the Vedas as absolutely inspired, and accordingly forcing their interpretation to fit modern standards. It has a strong political and nationalist vein, and is bitterly hostile to Christianity; but it has done good work in the cause of education and social reform. It prevails chiefly in the Panjāb and United Provinces. In Bombay the Prārthanā Samāj (*q.v.*) does a similar work. These bodies, following missionary example, are beginning to interest themselves in the amelioration of the depressed classes by education, and the Ārya Samāj actually admits them and also Muhammadans into the 'Vedic religion' by a ceremony of purification (*śuddhi*).

Modernist movement among the Muhammadans dates from the efforts of Sir Sayyīd Aḥmad, who began in 1858 to arouse his fellow-religionists to the imperative need for English education, which resulted in the establishment of the Anglo-Muhammadan College at Aligarh and the All-Indian Muslim Conference. It has also produced something of a school of liberal theology. A more wide-spread movement was inaugurated by Ghulam Aḥmad of Qādiān in the Panjāb in the year 1879. He, like Dayānand, harked back to his sacred Scriptures, and treated the Qur'ān as verbally inspired, interpreting it in a new fashion with an eye to modern thought. This sect, too, is strongly opposed to Christianity, and some members of it have started a mission to England at Woking. Despite their attitude of opposition, these new sects all owe more or less of their originating impulse and of their specific doctrine to the message of Christian missions. The Indian national movement has a tendency to bring the reformed sects nearer together, and its influence is being felt in the Christian community also in a certain touchiness and impatience of foreign influence. At the same time there are signs of an increased feeling of responsibility for the evangelization of

India, marked by the establishment of the National Missionary Society and other efforts.

The Dutch possessions known as Indonesia were previously under Hindu rule, but since the 12th cent. they have gradually been overrun by Muslim chieftains, and out of the total population of 38,000,000 all but 2,000,000 are now Muhammadan. The Dutch East India Company, while building up its Eastern empire, also Christianized the natives after a fashion, but their condition at the beginning of the 19th cent. was very low. Since then it has improved, and the so-called permanent congregations (*gevestigte gemeenten*) are under the care of clergy appointed and maintained by the State; churches of later converts are from time to time placed under this organization. Modern missionary work began in the second decade of last century, and has been carried on mainly by Dutch and German missionaries on the four principal islands of Sumatra, Java, Celebes, and Borneo, as well as on some of the smaller ones. Large numbers of converts have been gathered in Java, in the Batak country on the north coast of Sumatra, and in the Minahassa district of Celebes. In the second of these an effective barrier has been erected to the inland advance of Islām. The total number of converts from Islām in these islands is estimated at 40,000.

v. CHINA.—In contrast with India, China has but one standard language and literature, and may therefore be regarded as a unity, despite its size and diversity. Modern missionary work was begun by Robert Morrison of the L.M.S. in 1807. He baptized the first convert in 1814, and before his death (1834) he had translated the Bible into Chinese, besides writing many pamphlets. But neither he nor his colleague, Robert Milne, was able to enter the jealously-guarded empire of China; they could only reside in the Portuguese settlement of Macao or in British territory at Malacca. The opening of China to foreign intercourse, including missionary effort, was the result of a series of wars, internal and external, the first of which, while it helped to admit the missionary, did much to discredit his message. The three 'opium wars' of 1842, 1858, and 1860 resulted in the opening of twenty-four 'treaty ports' to foreign intercourse, and it was in these, especially Shanghai, Hangchow, Tientsin, and Canton, that Protestant missions first gained a footing. Up to 1850, 3 English societies, 1 German, and 7 American had begun work, and the converts may have amounted to 100. The preponderance of American workers in China became more marked as time went on, and the same is true of Japan.

The next great convulsion was an internal one, the Taiping rebellion, which lasted from 1850 to 1864, and was eventually suppressed by the 'ever victorious army' of a Western leader, General Charles George Gordon, himself in deep sympathy with Christian missions. The leader of the rebellion had once come under the influence of a Christian missionary, and he claimed to have received a divine revelation to destroy idolatry and to put an end to the Manchu dynasty. The second of these aims was accomplished half a century later by another great convulsion, and we may believe that the Taipings did much towards preparing the way for the first, which is yet to come; but we may also be thankful that their iconoclasm did not prematurely succeed before the constructive forces of Christian faith and practice were ready to step into the breach. Meanwhile, missions on the coast were increasing their work, and the year after interior China had been quieted (1865) Hudson Taylor formed the China Inland Mission, which led the way to the formation of a network of stations during the last half century, now extending to the remotest interior of the Republic. This mission alone now numbers 1076 foreign missionaries, as against 473 of all societies and nationalities in 1877. In that year the number of converts was reckoned at 13,000.

The final break-up of the Manchu dynasty was first marked by the Boxer outbreak of 1900, directed, with the connivance of the Empress, against both foreigners and Chinese Christians; 135 missionaries, with 53 of their children, were killed, and some 16,000 Chinese Christians were massacred, many of them accepting death willingly rather than deny the faith. A strong impression was created by the refusal of missionary societies to accept a money indemnity from the Chinese Government for the missionary lives laid down freely for the gospel. During the succeeding decade the number of foreign missionaries in China increased almost 50 per cent (2785 to 4175, including wives of missionaries), and the number of converts more than doubled (204,672 to 469,896 in 1910). In 1913 the number of 'full members' was given as 235,303. Counting children and other adherents who are not included in their statistics by many bodies, the total may be estimated at about 500,000. Foreign missionaries, including wives, are 5186, and Chinese workers 17,879.

The revolution of 1911-12 was the final stage in the opening up of China to Western culture and Christianity. There has, it is true, been a slight reaction from the abolition of Confucianism as the religion of the State, but a stronger power than the iconoclasm of the Taipings is shaking the foundations of the old cults, namely the re-casting of the world-old system of Chinese education in Western and 20th cent. moulds. Moreover, the official request made by the Chinese Government on 27th April 1913 for the prayers of its Christian subjects, whatever motives of policy may have inspired it, was a recognition of Christianity as a power affecting deeply the interests of the nation; and Sun Yat Sen, the leader of the Cantonese revolutionary section and almost of the Republic, is a Christian who seeks to model his political policy on the principles of the Bible. Happily, too, the establishment of the Chinese Republic has coincided with the final abolition of the Indian opium traffic once forced on China by Britain.

The situation thus created has offered to the Christian Churches unexampled opportunities of access to the educated classes of China. These had hitherto looked with contempt on teachers who in very few cases could master the intricacies of their literature, but now they are ready to welcome Western language, literature, and science. Great efforts have been made, especially by the American missions, to grapple with the task of providing centres of higher education on a Christian basis throughout China, and in this, as well as in general work, the tendency towards co-operation between allied bodies is strong and helpful. No fewer than 9 university colleges are in effective operation, 7 in coast provinces, 1 in the centre, and 1 in the west. In several the medical faculty is strong, and Christian missions at present lead in the training of qualified doctors for China. There are some 264 mission hospitals (1913) with 126,788 in-patients and 2,129,774 out-patients for the year. Among the agencies which have been particularly active in taking advantage of the present opportunities the Y.M.C.A. has been specially in evidence. The evangelistic meetings conducted by J. R. Mott, and still more by George Sherwood Eddy (1912-14), were attended by large audiences of educated Chinese, sometimes up to 4000, in many of the principal towns of China. Among the hearers were officials of high rank, of whom one was baptized, while thousands of men promised to study the Bible, and hundreds have actually joined the Christian Church.

The creation of a Christian literature for China has been carried on mainly by co-operation between the missions represented in the Christian Literature Society for China, under the guidance of Timothy Richards and others. The rapid opening of the mind of China to appreciation and reception of Western thought has given missionary scholars both the opportunity and the task of providing not only religious but general and scientific literature for readers, whether Christian or non-Christian. Both this and the work of Bible translation in China have been greatly facilitated by the existence of a common standard of written language, though versions of the Bible are being produced in several local vernaculars, as also in a popular form of the Mandarin. The circulation of the Bible is increasing by leaps and bounds; in 1910 a million and a half copies of Bibles, New Testaments, or single books were circulated; in 1914 two million and a quarter.

The first L.M.S. woman missionary to China was appointed in 1868. The work among women has been greatly hampered by the custom of foot-binding and by social prejudice, but these have been in great measure overcome, largely as the result of missionary effort, and the desire for the education of women is greatly on the increase; some are using their education not only to qualify for the medical and teaching professions, but also for social service. Over 600 members have been enrolled in a Student Volunteer Movement for the Christian ministry, putting aside prospects of lucrative careers. The tendency in this class is to work for the formation of an indigenous Chinese Church free from Western control, and some progress is being made in the self-support of native churches. Meanwhile the various cognate bodies which have hitherto been carrying on separate missions, such as Anglicans, Presbyterians, and Methodists, are amalgamating their organizations as a first step towards larger union.

In the outlying provinces of China work is still in its beginnings. It is furthest advanced in Manchuria, where Presbyterians and Lutherans have a community of some 33,000. The devoted work of James Gilmour (1870–91) in Mongolia left little visible result, and the societies which are following it up are gathering a few converts amid great difficulties. In Chinese Tibet these are insuperable, and the only quarter from which the gospel has entered that land is Little (or Western) Tibet, belonging to India, where Moravian missionaries have some small congregations, and have done much for the investigation of Tibetan language, literature, and history. Among the Muslims of Chinese Turkestan Swedish and China Inland missionaries are in the early stage of work.

vi. JAPAN, KOREA, AND FORMOSA.—Here, as in China, we have countries in which, after periods of notable success on the part of Roman Catholic missions, the native rulers have turned upon them as politically dangerous, and have violently persecuted the Christian Church, almost to extinction, till, through political changes, intercourse with the West has been resumed, but on a different footing, and with this the way has been opened for missions of the Reformed communions also. In the case of Japan this re-opening dates from the year 1859, when American missionaries were the first to settle in the country. The first Protestant Christian was baptized in 1864, but meanwhile persecution of Christians continued, sometimes with severity, till the Revolution of 1868, which once more brought the Mikado to power, and inaugurated the modern government of Japan. G. Ensor (C.M.S), who arrived in 1869, was the first English missionary, but full religious toleration was not granted till 1873, to be speedily followed by the serious suggestion that Christianity should be made the State religion. This was, however, negatived, and subsequently there was a distinct reaction against foreign influences, among which Christianity was included, especially during the first decade of this century. But a swing back of the pendulum was indicated by the action of the Minister of Education in 1912, when he announced that the Government had resolved to recognize Christianity, alongside of Shinto and Buddhism, as a religion deserving of encouragement, expressing, at the same time, the hope that Christianity would conform itself to national aspirations. In this connexion it is noteworthy that the Christian message in Japan has appealed specially to men of culture. A quite disproportionate number of Christians are found among members of Parliament, high military and naval officers, doctors and professors, and Count Okuma has recorded that 'the indirect influence of Christianity has poured into every realm of Japanese life' (*Intern. Review of Missions*, Oct. 1912, i. 654). The number of Protestant Christian adherents in Japan may be reckoned at about 100,000. Forty per cent of the mission stations are said to be self-supporting. Three-fourths of the converts are attached to one or another of four amalgamated Churches representing the Anglican, Congregational, Presbyterian, and Methodist missions respectively. The great majority of the Protestant missions have established an organization for the promotion of common work, called the 'Federated Missions of Japan.' This has formed a general Christian Literature Society, and promoted joint efforts for evangelization, both in the towns and in the hitherto neglected rural districts.

The work of missionary education bulks less largely at present in Japan than in China, owing to the fact that from the first opening of the country education has been steadily taken in hand by the State, which now provides a completely organized system of education from the primary schools (at which attendance is compulsory) up to the universities and technical schools. There are 14 Protestant middle schools, with about 5500 scholars, and two colleges of university grade, of which the Doshsisha College at Kyoto, founded by Joseph Niishima, has 700 students. Elementary missionary education is backward, as Christian children have access to well-worked Government schools. The educational work of the Y.M.C.A. has been much appreciated in Japan, and has strongly influenced the student world; and the Y.W.C.A. is reaching women increasingly. Christian missionary efforts among the aboriginal Ainus of Yezo have been appreciated by the Japanese Government, who bestowed a decoration on John Batchelor of the C.M.S. in recognition of his work for this dying race.

Among the dependencies of Japan, Formosa, first entered in 1865, now has some 30,000 Christians. Korea, after three and a half centuries of absolute seclusion, was not effectively entered till 1882, first by American missionaries, and, in 1890, by Anglicans. The growth of the work has been phenomenal, especially in the years following the Russo-Japanese war of 1905–06. Adherents in 1913 numbered 185,000, over 19,000 children were under education in mission schools, and 20 hospitals and 23 dispensaries were in operation. This progress has been accompanied by remarkable zeal in the study of Scripture and by reformation of life.

vii. THE NEAR EAST.—Under this term we include the lands, stretching from Morocco to Persia, in which Islām first arose and spread. Owing to the long dominance of Islām the work of Christian missions to Muslims in this region is either non-existent or in its infancy. For our present purpose, we are not dealing with missions to the surviving Abyssinian, Coptic, Armenian, Syrian, Nestorian, or Jacobite Churches. We may, however, note that the educational work carried on among Oriental Christians, principally by American missionaries, in the Turkish empire and Egypt has resulted in the formation of considerable Protestant communities, whose progress in intelligence, morality, and zeal has raised the Christian name in the eyes of the Muslims and reacted favourably on the ancient churches by stimulating a desire for reform and progress. There is among the Protestant Orientals also the dawn of a desire to evangelize the Muslim—a feeling that had been eradicated from the Oriental Christian by a thousand years of oppression and misrule, which prevented him from seeing in the Muslim anything but an irreconcilable tyrant. The most effective missionary work done by men of these nationalities is that of Bible colporteurs. The Muslim verbally acknowledges the Scriptures of the OT and NT to be inspired, and, if once induced to study them, he is in many cases led to see that the theory of their corruption subsequently to Muhammad is a figment of his divines. Thus their witness to Christ, as well as their incompatibility with the Qur'ān, is a powerful influence in the conversion of the Muslim. The British and Foreign Bible Society employs in the countries referred to 71 colporteurs, and has 27 depots, through which 128,926 copies of Bibles, Testaments, and portions are circulated. Individual conversions through these means are fairly frequent, but the building up of Christian communities is a slower process, hampered by special obstacles.

In Morocco, Algeria, Tunis, and Tripoli, among a total population of about 14,000,000, work is carried on mainly by the N. Africa Mission and other undenominational agencies. There are converts here and there. The principal agency, besides that of colportage, is schools, which are elementary. In Egypt work was begun in 1854 by the American United Presbyterians, principally among the Copts, and resuscitated by the C.M.S. in 1882. Considerable access has been gained among the Effendi class, and a number have been baptized, while medical work has to some extent reached the masses, in both town and country. Schools, primary and secondary, contain 17,094 pupils (largely of Coptic faith or origin), and a scheme for the establishment in Cairo of a Christian university is being actively promoted by American missionaries. German and English missionaries are pushing out into the Anglo-Egyptian Sūdān, and, though Christian propaganda is barred among the Muslims of that region, yet in Omdurman some educational work is being done. Cairo is the chief literary centre of the Muhammadan world, and from the Christian side vigorous efforts are being made by the Nile Mission Press, an Anglo-American undertaking, to produce and circulate evangelistic literature in Arabic.

In Asia Minor and Syria Protestant work has been done chiefly by American missions working among the ancient churches. The system of education which they have developed, from primary schools to colleges, especially the Roberts College in Constantinople, has notably affected the Muslim community in thought and attitude towards Christianity. Medical missions, in Palestine especially, have tended in the same direction. Arabia is touched on its outskirts at Baghdād, Bahrain, and Aden by schools, medical work, and colportage. Persia was first entered by Henry Martyn, when he completed his translation of the NT at Shīrāz in 1811. In 1829 K. G. Pfander visited Persia, and wrote his celebrated *Balance of Truth*, laying the foundation of a Persian Christian literature, built upon later by W. St. Clair Tisdall and others. In 1871 American Presbyterians organized work among the tribes of N. Persia, and in 1875 S. Persia was occupied by R. Bruce of the C.M.S. Medical and educational work has developed largely, and the demand for schools on a Western model far exceeds the power of the missionaries to supply it. The modernist sect of Bahaism, sprung from the Bābī reform movement, has borrowed freely from Christianity but does not so far make much return (see art. BĀB, BĀBĪS). Throughout these missions work among women, visiting, teaching, and medical, has initiated or helped on the movement perceptible in Muslim lands for the elevation of the female sex.

viii. MISSIONS TO JEWS.—The Jewish population of the world is approximately 12,000,000. Protestant missionary work among them is carried on by 95 societies, maintaining 500 men and 350 women missionaries. The *London Society for Promoting Christianity among the Jews* (253 missionaries; income in 1914, £51,000) is the principal one. Statistics are quite imperfect. Some 250 of the Anglican clergy are converts or sons of converts from Judaism. J. F. de le Roi estimates baptisms during the 19th cent. in Protestant churches at 72,740; Roman Catholic, 57,300; Greek, 74,500. The theologians Neander and Edersheim, the missionary bishops Schereschewsky, Hellmuth, Alexander, and Gobat, were Christian Jews.

III. *GENERAL ASPECTS.*—**1. Principles.**—As a result of the work of missions by the Reformed Churches since the end of the 18th cent. there is now a growing community of some 6,000,000 native Christians belonging to the most varied races and cultures, from the primitive aborigines of Australia to the progressive people of Japan. Yet in the age which has seen this unexampled expansion of Christianity in every direction the question has been raised whether Jesus of Nazareth ever intended that His disciples should carry the message of His redemption into all the world, though it is fully allowed that the world mission of His faith was the legitimate and necessary consequence of the principles which He enunciated and exemplified. To suppose that the Originator of this life and teaching, which have persisted in spreading their vitalizing influences among the nations for nineteen centuries, was Himself without desire for or intention of producing such an effect would be to face the most insoluble enigma of history. The development which we have sketched makes it abundantly clear that the mainspring of this world-wide enterprise of missions has been the conviction that its promoters and messengers were carrying out the conscious purpose and explicit command of the Saviour of the world. At the same time it would be unnatural that the reconstruction of thought which our age is experiencing in every sphere of life should leave the conception of foreign missions entirely unaffected. Among the Reformed Churches more especially Zinzendorf's motto of 'souls for the Lamb' as the one goal of missionary effort has expanded, under the influence of teachers like G. Warneck in Germany and B. F. Westcott in England, into the wider and deeper conception of a call to regenerate the nations spiritually, morally, intellectually, and socially, and to build up the universal Church of Christ. Moreover, the results of research into Christian origins have helped us, with a truer historical perspective, to test our contemporary missionary work by the example and spirit of the Apostolic Age. From subsequent early and mediæval history, too, the Churches have been learning lessons of the manifold adaptation of the form of missionary work to the conditions and needs of different ages and peoples, and of these lessons the whole modern development is an amplification. But this larger sweep of outlook and effort has by no means made the first aim of individual conversion superfluous. On the contrary, this remains the vital centre of the whole, and it is as this is expanded and co-ordinated in the larger aim that the true end of missionary work is attained.

2. Methods, apostolic and contemporary.—The radical question is raised again and again whether the close following of the methods of St. Paul is not the true solvent of our most fundamental difficulties, particularly of the lack of spiritual and economic independence in our mission churches. Were the evangelist to make brief sojourns instead of settling down, to devolve authority straightway on native helpers instead of keeping them in long tutelage, to demand instead of giving pecuniary assistance, Christian congregations might, it is urged, be smaller, but they would be stronger and self-reproducing. Each of these paths has been tried in modern missions, generally with scant success, for the same end under different conditions may demand different means. Where there was a Jewish diaspora standing at the threshold of Christianity, teaching and discipline had been assimilated which may now require a generation; where habitat and civilization of evangelist and evangelized were practically identical, the problems now arising from disparity of civilizations and distance of abode were non-existent. Recognizing these and other special difficulties and defects of modern missionary work, we have to seek their solution not in the forms of apostolic, or any other, evangelism, but in the principles embodied in those forms. Thus in the adventure of faith undertaken by the C.I.M., which has so remarkably opened up China to the gospel, we have a contemporary adaptation of the Pauline method, rapidly following the main lines of communication and occupying the chief cities of an empire which in culture and administration offers much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions we have a useful adaptation of early and mediæval monasticism to the conditions of the mission-field of to-day. But both of these have the defects of their qualities.

The effect of modern thought on the adaptation of NT principles to contemporaneous missionary work may be traced in the development of the chief missionary methods. The mission school and college have no precedent in apostolic times, and they differ greatly from the cloister school of monastic missionaries, their original purpose being to serve as a means of conveying the message to the children of the literate, or would-be literate, classes who are otherwise not easily reached, and of bringing them into the Christian Church when they have arrived at years of discretion. The most notable effect of earlier educational work was the conversion of men of mark, who exercised great influence on the development of the Church. Within the last generation this aspect of the work has receded into the background; the conception of educating the mind of a nation and creating an atmosphere permeated by Christian ideals has exercised increasing influence on missionary educators, especially in high schools and colleges, and it is certain that their successes have lain mainly in this direction. The value of such preparation of the community for the eventual reception of Christ as Lord and Master is immense, and it may be hoped that much of the work which commonly falls to be done after conversion is thus being accomplished beforehand. But there is need of balanced judgment and steadfast will, lest elaboration of the scaffolding delay or even prevent the erection of the building. Similarly, in the now indispensable work of medical missions the physical benefits conferred were at first entirely subsidiary to the spiritual aim; but the conception of a Kingdom of God to be realized in things temporal as well as spiritual has led to emphasis upon the fact that the work of healing, even apart from any spiritual effects, is a worthy aim of the missionary. This involves the risk that the medical missionary may be merged in the philanthropist. The modern medical missionary would not, if he could, ignore the demand for the greatest possible scientific efficiency, for he will not allow Christian zeal to be the bosom friend of second-rate professional skill; yet he will lay the decisive emphasis of his calling on the specific aim of the missionary to carry home his message. Again, in the delivery of that message by the general missionary a comparative study of religion and sociology has modified the method of approach by the Christian messenger to non-Christians. He is less inclined to attack their observances and rites than to elicit the need latent in each human heart of something higher, less prone to controvert their doctrines and deities than to set forth Christ in life and teaching. The conviction is gaining ground among his hearers that he is no ruthless iconoclast of their national religion, but a sympathetic guide who would lead them to satisfactions which it fails to supply. But, if he is to do this, his aim must still be that they may be 'redeemed from the vain manner of life handed down from their fathers' (1 P 1[18]) and come to know the only true God. Without attacking concrete sin and error this cannot be done. The manner of controversy has been rightly modified, and it is well to use points of agreement as a basis for approach; but the reason for adopting one faith in place of another cannot lie in their points of resemblance, but only in those of difference. Hence controversy or polemic, in the right form, can never become obsolete as a missionary weapon. Once more, in the case of missionary work for women its first, and most worthy, aim was simply to deliver sisters whom the Christian woman found in degradation, ignorance, and suffering from these evils into the liberty of Christian womanhood. As, in the course of generations, they laboured for this end, the great task of training new types of Christian motherhood suited to each nation gradually dawned upon them, and they became aware that they had stimulated a greater awakening than they had dreamed of among the women of China, India, and Africa. But Christian personality remains the key of the position, and the feminist movement, which is growing in East and West alike, finds its true regulative everywhere in the principles of the gospel.

3. Cognate activities.—A bare mention must suffice of the achievements of missionaries in works ancillary to their main calling. The names of Livingstone, Krapf, and Rebmann among explorers, of James Legge, R. Caldwell, H. A. Jaeschke, and Carl Meinhof among philologists, and of R. Codrington and John Roscoe among anthropologists are but a few among many. In civil life, too, missionaries have sometimes held a prominent place—*e.g.*, C. F. Schwartz in Tanjore and John Mackenzie in Bechuanaland; and in India municipal offices have occasionally been held by them. To outsiders these public services have been a vindication of the missionary's usefulness; to some among the missionary public it has seemed that they might be a hindrance to it. In the nature of things such services must remain exceptional, rendered by isolated individuals who possess the ability and energy. As by-work they have been of service; were they more than this, they would prove a hindrance.

4. Results and problems.—The present condition of the world mission-field shows off-shoots of the Reformed Churches in every stage of growth. Their members, as always, vary in genuineness and strength, but everywhere they include whole-hearted followers of Christ, and, as a body, they have advanced greatly in tone and conduct from their former non-Christian manner of life. The animist, the pantheist, the agnostic, and the deist have come to believe in one almighty Father, one sinless Saviour, one indwelling sanctifying Spirit. From this faith grow the fruits, both of higher morality and of social amelioration, enhanced culture, and intellectual progress. In many directions the desire is shown to hand on the benefits of the gospel to others, and readiness to make sacrifices in so doing is evident. It has been remarked that the churches of the mission-field have produced no first-class heresy, implying thereby a lack of serious intellectual striving. But other causes may more reasonably be assigned for this. The intellectual training and status of the foreign teacher is so far superior, in the great majority of cases, to that of his converts that it would be difficult for them to maintain positions contrary to those which he has laid down—all the more so as the possible variations of intellectual formulation have been fairly fully worked out by previous heresies, the weaknesses of which have been pointed out to them. Moreover, no inconsiderable part of the effect produced by Christian missions is to be found in the change of attitude, the new beliefs and ideals of conduct, individual and social, taken over from them by the still non-Christian world. In this process the analogues of early Christian heresies are to be found in the teachings of bodies outside the Christian Church. Thus the Brāhma Samāj reform of Hinduism represents a kind of Arianism; the Bahai offshoot of Islām would stand for one variety of Gnosticism, and theosophy (*q.v.*) for another. Generally speaking, syncretism is largely practised, and in many cases by men of noble character who are striving for a reconciliation of the old and the new, but the religion of the amateur collector is not more likely to stand now than in the early centuries, though it is a pitfall of which the abler intellects of the young churches need to beware.

Analogous to this is the problem of unity in the Reformed Churches. The majority of the divisions which have sprung up in the West from local and temporary causes have naturally no meaning to the Eastern convert; and the same holds good of many dividing lines in doctrine. The resulting tendency to unity in faith and practice, in face of powerful opposing forces, is healthy and hopeful. There is, however, a danger that members of the young churches should regard all distinctions in doctrine and discipline indiscriminately as mere Western peculiarities which may be swept aside in order to construct an edifice of truly indigenous Christianity. A sound attitude of the missionary teacher towards questions of race and nationality will do much to meet this danger.

Next to the essential spiritual element no factor in missionary work is more weighty than the social progress which it has initiated or stimulated. From these successes a difficulty often springs. In the contact of two deeply-separated civilizations the convert naturally assimilates that of his Western teacher, but without the exercise of wisdom and restraint he may evolve a mere caricature of Western culture without its balance and restraint, thereby repelling alike his own countrymen and his Western fellow-Christians; and among higher races he may acquire needs and habits which will involve him in economic difficulties. Meanwhile, Western culture and commerce are ceaselessly flooding into mission lands, and the change of life connected with them is affecting non-Christians scarcely less than Christians. As a result of this the efforts of the missionary to promote a simple indigenous style of living may be resented as intended to repress the progress of the native Christian. One of the missionary's most difficult and delicate tasks is to decide and to convince his charges what is justly due to the decencies and progress of Christian life and what is illegitimate as ministering to extravagance and parasitic growth.

Thus social progress is intimately connected with the great difficulty presented by the economic dependence of the mission churches on their parents at the home base. The amount annually expended by home churches on the maintenance of ministers, preachers, and teachers of indigenous races is estimated at £7,000,000. The amount recorded as raised by the native churches in the same connexion is £1,500,000. Allowing for a liberal margin of error, the disparity is still immense, even when we consider that a large number of the converts are drawn from impoverished strata of society whose financial weakness must be great for some time to come. Almost every advance is dependent on fresh exertions made by the mother churches, who also contribute largely to the maintenance of worship, pastoral care, and teaching. In the last resort the economic dependence of mission churches is part of the larger problem of the economic dependence of the coloured races on the white, and in all probability the one will not be solved without the other.

Everywhere we are brought up against the racial problem. It was there from the first, and the success of missions has been in proportion to that of the messenger in understanding and treating with wise sympathy people of a foreign race. As the races have become conscious of their common ideals, traditions, and interests, the racial question in the mission-field has developed into the national. Everywhere the missionary is met, actively or passively, by insistence on the rights of the race in its own sphere and a demand for equal opportunity, as against the old idea of the inherent superiority of the white man. The opposition thus engendered reacts against the white man's religion, and there is on each continent a restiveness and impatience of control on the part of converts and churches such as did not exist a generation ago. To deal with this firmly and sympathetically as a sign of healthy growth, and as a pathway to new and fruitful relations, is the part of wisdom. Premature independence and unduly delayed emancipation both have their dangers. Smartness and efficiency may be made an idol; but it is also a temptation to take the easy path of lowering the ideals of the gospel, and this leads to deterioration. The problem is to be solved only by patient, tenacious charity on the part of the missionary who understands the national and racial feeling, and whose watchword is the responsibility of the stronger.

LITERATURE.—H. U. Weitbrecht, *Bibliography for Missionary Students*, Edinburgh, 1913. Special mention may be made of: G. Warneck, *Outline of a Hist. of Protestant Missions*, do. 1906 (new Germ. ed., Berlin, 1913), *Evangelische Missionslehre*, 5 vols., Gotha, 1897–1903; J. S. Dennis, *Christian Missions and Social Progress*, 3 vols., Edinburgh, 1899–1906; *Report of the World Missionary Conference*, do. 1910; J. R. Mott, *The Continuation Committee Conferences in Asia, 1912–13*, do. 1913; J. Warneck, *Paulus im Lichte der heutigen Heidenmission*, Berlin, 1913; J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915; C. H. Robinson, *Hist. of Christian Missions*, Edinburgh, 1915.

H. U. WEITBRECHT.

MISSIONS (Muhammadan).—The materials for the history of Muhammadan missionary activity are much less abundant than those for the history of the propagation of Christianity. Muhammadan historians appear to have been singularly incurious as to the spread of their own faith, and only scanty references to conversions are found at rare intervals in the vast historical literature of the Muhammadan world. The absence of a priesthood in Islām, implying the setting apart of a separate body of men as exponents of the doctrines of the faith, has had its counterpart in a lack of ecclesiastical annals; there have been no Muslim missionary societies (except towards the end of the 19th cent.), no specially trained propagandists, and very little continuity of missionary effort; even the religious orders of Islām, which have at times done much for the spread of the faith, have not cared to set on record the story of the success that has attended their preaching. There is, therefore, nothing in Muhammadan literature to correspond to the abundant materials for the history of Christian missions provided in the biographies of Christian saints, the annals of the Christian religious orders, and the innumerable journals and other publications of the various Roman Catholic and Protestant missionary societies. In fact, the fullest details as to Muslim missionary activity are generally to be found in the writings of the Christian clergy who have watched with apprehension the rapid extension of Islām. Yet to this poverty of information from Muhammadan sources there is one notable exception, namely, the biography of Muhammad himself. The missionary activity of Islām begins with the life of the founder, and the numerous biographies of the Prophet are full of stories of his efforts to win over unbelievers to the faith.

In the Qur'ān itself, the duty of missionary work is clearly laid down in the following passages (here quoted in chronological order according to the date of their revelation):

'Summon thou to the way of thy Lord with wisdom and with kindly warning: dispute with them in the kindest manner' (xvi. 126). 'They who have inherited the Book after them [*i.e.* the Jews and Christians] are in perplexity of doubt concerning it. For this cause summon thou (them to the faith), and walk uprightly therein as thou hast been bidden . . . and say, In whatsoever Book God hath sent down do I believe: I am commanded to decide justly between you: God is our Lord and your Lord: we have our works and you have your works: between us and you let there be no strife: God will make us all one: and to Him shall we return' (xlii. 14). 'Say to those who have been given the Book and to the ignorant, Do you accept Islām? Then, if they accept Islām, they are guided aright: but if they turn away, then thy duty is only preaching' (iii. 19). 'Thus God clearly showeth you His signs that perchance ye may be guided, and that there may be from among you a people who invite to the Good, and enjoin the Just, and forbid the Wrong; and these are they with whom it shall be well' (iii. 99 f.). 'To every people have we appointed observances which they observe. Therefore let them not dispute the matter with thee, but summon them to thy Lord: Verily thou art guided aright: but if they debate with thee, then say: God best knoweth what ye do' (xxii. 66 f.). 'If any one of those who join gods with God ask an asylum of thee, grant him an asylum in order that he may hear the word of God; then let him reach his place of safety' (ix. 6).

Further, the faith of Islām was to be preached to all nations, and all mankind were to be summoned to belief in the One God.

'Of a truth it [*i.e.* the Qur'ān] is no other than an admonition to all created beings, and after a time shall ye surely know its message' (xxxviii. 87 f.). 'This (book) is no other than an admonition and a clear Qur'ān, to warn whoever liveth' (xxxvi. 69 f.). 'We have not sent thee save as mercy to all created beings' (xxi. 107; cf. also xxv. 1 and xxxiv. 27). 'He it is who hath sent His apostle with guidance and the religion of truth, that He may make it victorious over every other religion, though the polytheists are averse to it' (lxi. 9).

In the hour of Muhammad's deepest despair, when the people of Mecca turned a deaf ear to his preaching, when the converts that he had made were tortured until they recanted and others had to flee from the country to escape the rage of their persecutors, the promise was revealed:

'One day we will raise up a witness out of every nation' (xvi. 86).

The life of the Prophet himself presented, for succeeding generations, an ensample of Muslim missionary activity. When he began his prophetic career, his first efforts were directed towards persuading his own family; his earliest converts were his wife, Khadījah, his adopted children, Zaid and ʻAlī, and some members of his immediate circle. He did not begin to preach in public until the third year of his mission, but he met only with the scoffing and contempt of the Quraish. In the fourth year of his mission he took up his residence in the house of al-Arqam, one of the early converts, and many Muslims dated their conversion from the days when the Prophet preached in this house, which was in a central position, much frequented by pilgrims and strangers. The conversion of ʻUmar b. al-Khaṭṭāb about two years later was a source of great strength to the little band of Muslims, who now began publicly to perform their devotions together round the Kaʻbah. Though Muhammad continued to teach for ten years, the number of converts remained very small, and an attempt to win adherents outside Mecca, in the town of Ṭā'if, ended in complete failure; but some pilgrims from Yathrib (or, as it was afterwards called, Medīna) showed themselves to be more receptive, and Muhammad sent one of his early converts, Muṣʻab b. ʻUmair, to Yathrib to spread the faith in that city. Muṣʻab's mission was so successful that in the following year he was accompanied by more than seventy converts in the pilgrimage to Mecca; they invited Muhammad to take refuge in Yathrib, and he accordingly migrated thither in September 622—a date which was afterwards adopted as the beginning of the Muhammadan era. In Medīna the little Muslim community gradually developed into a political organism that spread over the greater part of Arabia before the death of Muhammad in 633, and political expediency tended to thrust purely religious considerations into the background; but the proselytizing character of the new faith was not lost sight of, and the Arab tribes that submitted to the political leadership of Muhammad accepted at the same time the faith that he taught. But of distinctively missionary activity there are only scattered notices, and for some time after the death of Muhammad there is a similar lack of evidence of distinctively proselytizing effort on the part of the Muslims during the expansion of Arab rule over Syria, Persia, N. Africa, and Spain, though in all these countries large numbers of persons from among the conquered populations passed over to the dominant faith. There is one notable exception in the case of the pious Umayyad khalīfah, ʻUmar b. ʻAbd al-ʻAzīz (717–720), who was a zealous propagandist and endeavoured to win converts in all parts of his vast dominions from N. Africa to Transoxania and Sind.

With the decline of the Arab empire the Muslim world was faced with the task of converting its new rulers. The conversion of the Turks proceeded very slowly; the earliest converts appear to have been the Turkish soldiers who took service under the khalīfah in Baghdād; there are a few legends of proselytizing efforts in Turkestan, but the history of the conversion of the Turkish tribes is obscure, and Islām seems to have made little way among them before the 10th cent., when the Seljūq Turks migrated into the province of Bukhārā, and there adopted Islām. The conversion of the main body of the Afghāns probably belongs to the same period or a little earlier, though national tradition would carry it back to the days of the Prophet himself.

A more formidable task was the conversion of the Mongols, and here Islām had to enter into competition with two other missionary faiths, Buddhism and Christianity, both of which at the outset met with greater success. The devastations of the Mongols had brought ruin to the centres of learning and culture in the Muhammadan countries which they overran, and it was only by slow degrees that Islām began to emerge out of the ruins of its former ascendancy and take its place again as a dominant faith. From the latter part of the 13th cent. converts began to be made from among the Mongols, and a new epoch in Muslim missionary history then commenced, in which the religious orders, and the Naqshbandī in particular, played a prominent part. In the profound discouragement which filled the Muslims after the flood of the Mongol conquest had poured over them their first refuge had been in mysticism, and the *pīr*, or spiritual guide, who during this period began to exercise an increasing influence, became of special importance among the proselytizing agencies at work. The first Mongol ruling prince to profess Islām was Baraka Khān, who was chief of the Golden Horde from 1256 to 1267; according to one account, he owed his conversion to two merchants whom he met coming with a caravan from Bukhārā; but the conversion of their prince gave great offence to many of his followers, and half a century later, when Uzbeg Khān (who was chief of the Golden Horde from 1313 to 1340) attempted to convert the Mongols who still stood aloof from Islām, they objected, 'Why should we abandon the religion of Jenghīz Khān for that of the Arabs?' In other parts of the Mongol empire the progress of Islām was still slower and more fluctuating, and it did not become the paramount religion in the kingdom of the Īlkhāns of Persia until 1295, or among the Chaghatāy Mongols until three decades later. The first Muhammadan king of Kāshgar (which the break-up of the Chaghatāy dynasty had erected into a separate kingdom) was Tūqluq Tīmūr Khān (1347–63), who is said to have owed his conversion to a holy man from Bukhārā, by name Shaikh Jamāl al-Dīn; but so late as the end of the 16th cent. a dervish named Isḥāq Walī found scope for his proselytizing activities in Kāshgar and the neighbouring country, where he spent twelve years in spreading the faith.

The extension of Mongol rule over China gave an impulse to the spread of Islām in that country; though Muslim merchants had been found in the coast towns from a much earlier period, the firm establishment of their faith in China dates from the 13th cent., and the settlements of immigrants from the west, which were founded from that period, developed into the great communities of Chinese Muslims of the present day—through various causes, of which proselytism has been one. The rise of the Mongols was also incidentally the cause of renewed missionary activity in India; Islām had gained a footing in Sind and on the Malabar coast as early as the 8th cent., and in the north after the establishment of Muhammadan rule at the close of the 12th cent., but the terror of the Mongol arms caused a number of learned men and members of religious orders to take refuge in India, where they succeeded in making many converts.

To the period of the Mongol conquests—though in no way connected therewith—is traditionally ascribed the first establishment of Islām in the Malay Archipelago. Sumatra appears to have been the first island into which it was introduced—probably by traders from India and, later, Arabia; but the extension of the new faith was very slow, and even to the present day large sections of the population of this island remain unconverted. The conversion of Java, according to the native annals, began in the 15th cent. and spread from this island into the Moluccas and Borneo. The arrival of the Portuguese and, later, of the Spaniards, in the 16th cent. checked for a time the growing influence of Islām in the Malay Archipelago, and the rival faiths of Christianity and Islām entered into conflict for the adherence of its peoples; but the oppressive behaviour of the Spaniards and their attempts to enforce the acceptance of their religion ultimately contributed to the success of the Muslim propagandists, who adopted more conciliatory methods for the spread of their faith, intermarried with the natives, and conformed to their manners and customs. The missionary activity of Islām has been carried on spasmodically in these islands up to the present day—for the most part by traders. From the very nature of the case, there has been little historical record of their labours, and this little is chiefly found in the reports of Christian missionaries. Legendary accounts of the arrival of the earliest apostles of Islām in several of the islands have been handed down, but they are uncritical and of doubtful historical value.

The history of the spread of Islām in India by missionary effort is not quite so scanty, but it has largely been overshadowed by the absorbing interest of political events; for, though the Indian Muhammadans have produced a large body of historical literature, their references to the propaganda of their faith in these histories are few. The biographies of saints, however, and local traditions contain many references to a successful propaganda, and, among much that is legendary and fantastic, there is evidence of the activity of a number of missionaries from the beginning of the Muhammadan period. Among these may be mentioned Shaikh Ismā'īl, a Bukhārī Sayyid who preached in Lahore in 1005, Sayyid Nādir Shāh, the patron saint of Trichinopoly (where he died in 1039), and 'Abd Allāh, who landed in Cambay in 1067, and is said to have been the first missionary of the Musta'lī Ismā'īlī sect (known in India as 'Bohorahs'). Towards the close of the same century another Ismā'īlī missionary, but of the Khojah sect, Nūr al-Dīn (generally known as Nūr Satāgar), carried on a successful propaganda in the Hindu kingdom of Gujarāt. In 1236 there died in Ajmer one of the greatest of the saints of India, Khwājah Mu'īn al-Dīn Chishtī, who settled in that city while it was still under Hindu rule and made a large number of converts; ten years later died one of the apostles of Islām in Bengal, Shaikh Jalāl al-Dīn Tabrīzī, the forerunner of a long series of missionaries in that province. Of importance in the history of Islām in the Panjāb is the settlement in that part of India of saints of the Suhrawardī order; *e.g.*, to the preaching of Bahā' al-Dīn Zakarīyā, and of Sayyid Jalāl al-Dīn and his descendants, many of the tribes of the Panjāb owe their conversion. These are but a few out of the long series of preachers of Islām who carried on a distinctively missionary work, side by side with the various influences, social and political, that contributed to the spread of Islām in that country.

Of the vast history of the spread of Islām in Africa it is not possible here to give more than a brief sketch. For the early period of the Arab conquest of Egypt and N. Africa, though conversions took place on a large scale, there is little evidence of active missionary effort. The opposition of the Berbers in the west and the Nubians in the Nile valley checked for a time the southward movement of Muslim influences. By slow degrees, however, Islām penetrated among the Berbers, but acquired an ascendancy over them only when it assumed the form of a national movement with the rise of the native dynasties of the Almoravids in the 11th, and the Almohads in the 12th, century. The Berbers introduced Islām into the lands watered by the Senegal and the Niger, and Arabs from Egypt spread their faith in the eastern Sūdān during the 12th cent., to which period the conversion of Kordofan and Kanem appears to belong. In the 13th cent. the Mandingos come forward as zealous missionaries of Islām, to be followed by the Hausas, whom they had converted, and the Hausas have carried their faith with them from one end of the Sūdān to the other. Their propagandist efforts were intermittent, however, and many parts of the Sūdān remained untouched by Muslim influences until the 19th century.

Except in India and the Malay Archipelago, there are few records of Muslim missionary activity from the 15th to the 18th century. Nevertheless many conversions occurred during this period; *e.g.*, the Turkish conquests in Europe in the 14th and 15th centuries were followed by conversions to Islām on a large scale, and in the 17th cent. thousands of Christians in Turkey in Europe went over to the religion of their rulers; similarly the conquests of Aḥmad Grāñ in Abyssinia (1528–43) were signalized by numerous conversions to Islām; but there is little evidence of any direct propagandist efforts on the part of the Muslims.

A great revival of the missionary spirit of Islām followed the Wahhābī reformation; this movement stirred the whole of the Muslim world—either to sympathy or to opposition—and thus directly or indirectly gave the impulse to the great missionary movements of the 19th century. In India the Wahhābī preachers aimed primarily at purging out the many Hindu practices that caused the Muslims to deviate from the ways of strict orthodoxy, but incidentally they carried on a propaganda among unbelievers, and their example was followed by other Muhammadan missionaries, whose preaching attracted to Islām large numbers of converts throughout the country. In Sumatra Wahhābī reformers stirred up a revival and made proselytes. But a more momentous awakening was felt in Africa. 'Uthmān Danfodio returned from the pilgrimage to Mecca full of zeal for the Wahhābī reformation, and under his leadership his people, the Fulbe, who had hitherto consisted of small scattered clans living as shepherds, rose to be the dominant power in Hausaland; the methods of the Fulbe were violent and political, and they endeavoured to force the acceptance of Islām upon the pagan tribes which they conquered. On the other hand, a peaceful propaganda was carried on in the Sūdān by members of the Amīrghaniyyah and Qādiriyyah orders; the former takes its name from Muhammad 'Uthmān al-Amīr Ghanī, whose preaching won a large number of converts from among the pagan tribes about Kordofan and Sennaar; after his death in 1853 the order that he founded carried on his missionary work. The Qādiriyyah order had been introduced into Western Africa in the 15th cent., but awoke to renewed life and energy in the 19th. Up to the middle of that century most of the schools in the Sūdān were established and conducted by teachers trained under the auspices of the Qādiriyyah, and their organization provided for a regular and continuous system of propaganda among the heathen tribes. Another order, the Sanūsiyyah (founded in 1837), has also been very active and successful in proselytizing.

A fresh outburst of Muslim missionary zeal in Africa exhibited itself when the greater part of that continent was partitioned among the Powers of Christian Europe—Britain, France, and Germany; by establishing ordered methods of government and administration, and by facilitating communication by means of roads and railways, they have given a great stimulus to trade and have enabled that active propagandist, the Muslim trader, to extend his influence in districts previously closed to him and to traverse familiar ground with greater security.

Throughout the course of Muhammadan history Islām has at times received large accessions of converts for various reasons—political and social—wholly unconnected with missionary enterprise; at the same time it has always retained its primitive character as a missionary religion, without, however, having any permanent organization to serve as a medium for its expression. Societies for carrying on a continuous propaganda were unknown in the Muslim world before the last decades of the 19th cent., and such Muslim missionary societies as are now found in Egypt and India appear to have owed their origin to a conscious imitation of similar organizations in the Christian world. The most characteristic expression of the missionary spirit of Islām is, however, found in the proselytizing zeal of the individual believer, who is prompted by his personal devotion to his faith to endeavour to win the allegiance to it of others. Though there have been religious teachers who may be looked upon as professional missionaries of Islām, especially the members of the religious orders, it is the trader who fills the largest place in the annals of Muslim propaganda; but no profession or occupation unfits the believer for the office of preacher of the faith, nor is any priestly ministrant needed to receive the convert into the body of the faithful. Some observers, entitled to respect for their knowledge of the Muhammadan world, have gone so far as to say that every Muslim is a missionary:

> 'À tout musulman, quelque mondain qu'il soit, le prosélytisme semble être en quelque sorte inné' (Snouck Hurgronje, *RHR* lvii. [1908] 66). 'The Muslim is by nature a missionary . . . and carries on a propaganda on his own responsibility and at his own cost' (W. Munzinger, *Petermann's Mittheilungen*, 1867, p. 411).

However exaggerated such an opinion may be, stated thus as a universal, it is certainly true that there is no section of Muslim society that stands aloof from active missionary work, and few truly devout Muslims, living in daily contact with unbelievers, neglect the precept of their Prophet:

> 'Summon thou to the way of thy Lord with wisdom and with kindly warning' (Qur'ān, xvi. 126).

Even the prisoner will on occasion take the opportunity of preaching his faith to his captors or to his fellow-prisoners. The first introduction of Islām into Eastern Europe was the work of a Muslim jurisconsult who was taken prisoner, probably in one of the wars between the Byzantine empire and its Muhammadan neighbours, and was brought to the country of the Pechenegs (between the lower Danube and the Don) in the beginning of the 11th cent.; before the end of the century the whole nation had become Muhammadan. In India, in the 17th cent., a theologian, named Shaikh Aḥmad Mujaddid, who had been unjustly imprisoned, is said to have converted several hundred idolaters whom he found in the prison. Women as well as men are found working for the spread of their faith; the influence of Muhammadan wives made itself felt in the slow work of converting the pagan Mongols, and in Abyssinia in the first half of the 19th cent. the Muhammadan women, especially the wives of Christian princes, who had to pretend a conversion to Christianity on the occasion of their marriage, brought up their children in the tenets of Islām and used every means to spread their faith. In the present day the Tatar women of Kazan are said to be zealous propagandists of Islām.

The individualistic character of Muhammadan missionary effort partly explains the absence of detailed records of conversion; there is a similar lack of the common apparatus of modern Christian missions—*e.g.*, tracts and other missionary literature for general distribution; but in learned circles a vast controversial literature has been produced, to which some of the ablest of Muslim thinkers have contributed—*e.g.*, al-Kindī († 873), al-Mas'ūdī († 958), Ibn Ḥazm († 1064), al-Ghazālī († 1111), etc., as well as a number of converts who have written apologies for their change of faith and in defence of their new religion.[1] Several documents making a direct appeal to unbelievers have been preserved; the earliest of these are the letters[2] which Muhammad addressed to the great potentates of his time, the emperor Heraclius, the king of Persia, the governor of Yaman, the governor of Egypt, and the king of Abyssinia. To the reign of al-Ma'mūn (813–833), who himself is said to have been zealous in his efforts to spread the faith of Islām, belongs the interesting treatise of 'Abd Allāh b. Ismā'īl al-Hāshimī, in which he makes an impassioned and affectionate appeal to his Christian correspondent to accept Islām.[3] Of a much more formal character are the two letters, one in Arabic and the other in Persian, which the Tīmūrid prince, Shāh Rukh Bahādur, addressed in 1412 to the emperor of China, inviting him to 'observe the law of Muhammad, the Apostle of God, and strengthen the religion of Islām, so that he might exchange the transitory sovereignty of this world for the sovereignty of the world to come.'[4] A similar royal missive was sent by Mawlā'ī Ismā'īl, Sharīf of Morocco, to King James II. in 1698.[5] Coming from such an exalted source, these documents have been preserved, while the efforts of humbler folk have remained unrecorded. The publication of tracts and periodical reports of missionary societies makes its appearance only in the latter part of the 19th century.

LITERATURE.—Some attempt to give a bibliography of the scattered notices of Muslim missionary activity is made in *The Preaching of Islam*², London, 1913, by the present writer. For the early period the most valuable source is *Annali dell' Islām*, by Leone Caetani, Milan, 1905 ff., with exhaustive references to authorities, both Christian and Muhammadan. China is the only country to which any detailed monograph on the spread of Islām has been devoted, in Marshall Broomhall, *Islam in China*, London, 1910; see also *Mission d'Ollone, Recherches sur les Musulmans chinois par le commandant d'Ollone*, etc., Paris, 1911 f. For different parts of Africa separate monographs have appeared, *e.g.*, C. H. Becker, 'Zur Geschichte des östlichen Sūdān' and 'Materialien zur Kenntnis des Islam in Deutsch-Ostafrika,' *Der Islam*, i. and ii., Strassburg, 1910, 1911; G. Bonet-Maury, *L'Islamisme et le Christianisme en Afrique*, Paris, 1906; A. Le Chatelier, *L'Islam dans l'Afrique occidentale*, do. 1899; M. Klamroth, *Der Islam in Deutschostafrika*, Berlin, 1912. For the Malay Archipelago see the article 'Mohammedanisme' and the various place-names in *Encyclopaedie van Nederlandsch-Indië*, ed. P. A. van der Lith and J. F. Snelleman, Leyden, 1899–1905; C. Snouck Hurgronje, *Nederland en de Islâm*², do. 1915; G. Simon, *Islam und Christentum im Kampf um die Eroberung der animistischen Heidenwelt: Beobachtungen aus der Mohammedanermission im Niederländisch-Indien*, Berlin, 1910. Much material may be gathered from the works of travellers in Muhammadan countries, from the journals and other periodical literature published by the various Roman Catholic and Protestant missionary societies, and from the periodicals specially devoted to the study of Islām, viz. *Revue du monde musulman*, Paris, 1906 ff., *Der Islam, Zeitschrift für Geschichte und Kultur des islamischen Orients*, Strassburg, 1910 ff., *The Moslem World, a Quarterly Review of current Events, Literature, and Thought among Mohammedans*, London, 1911 ff., *Mir Islama*, Petrograd, 1912 ff., and *Die Welt des Islams, Zeitschrift der deutschen Gesellschaft für Islamkunde*, Berlin, 1913 ff.

T. W. ARNOLD.

MISSIONS (Zoroastrian).—Zoroastrianism began as a distinctly missionary religion. According to tradition, Yima (on whom see art. BLEST, ABODE OF THE [Persian]) was the first mortal asked by Ahura Mazda 'to remember and to cherish' the faith (*Vend.* ii. 3), but he professed himself unequal to the task and—unless the tradition is devoid of all meaning—contented himself with extending the domain of Iranian temporal power. Previous to the rise of Zoroaster there is no record of any conscious endeavour to propagate Iranism, which, like all religions which have no personal founder, was non-missionary.[1] With Zoroaster's advent, however, the attitude changed, and he himself, convinced that his religion was 'the best for existent beings, to further my creatures when followed in accord with righteousness' (*Ys.* xliv. 10), and that it would confer blessing for all eternity (*Ys.* liii. 1), besought Ahura Mazda and Aša to reveal to him their divine plan that he could rightly know how to proclaim (*srāvayaēmā*) the religion (*Ys.* xlix. 6), to the end that he might 'convert all men living' (*yā jvantō vīspēng vāurayā*, *Ys.* xxxi. 3). The potency of the faith would convert many hearers (*Ys.* xlvii. 6), and the promise of Paradise would turn the wicked (*Ys.* xxviii. 5). Indeed, a later text (*Yt.* xiii. 87–94) celebrates the greatness of Zoroaster, destined to spread the Mazdayasnian faith over all the world. Such was the merit of the religion that, if a non-believer accepted it and did not sin in future, all his past transgressions, even the most heinous, were forgiven (*Vend.* iii. 40 f.).

Zoroaster was successful in winning to his doctrine King Vištāspa of Bālkh, who spread the faith with his conquests (cf. *Yt.* xiii. 99 f.; *Šāh-nāmah*, tr. A. G. and E. Warner, London, 1905 ff., v. 76 f., 85; A. V. W. Jackson, *Zoroaster*, New York, 1899, pp. 80–92); and among the converts were Turanians,[2] such as Fryāna and his descendant Yōišta (*Ys.* xlvi. 12; *Yt.* v. 81, xiii. 120), Arejahvant (*Yt.* xiii. 113), Frārāzi (*Yt.* xiii. 123), Saēna (*Yt.* xiii. 97; cf. *Dīnkarṭ*, IX. xxxiii. 5), and Isvant (*Yt.* xiii. 96; *Dīnkarṭ*, *loc. cit.*). Zoroaster is represented as praying that he may be able to cause heads of houses, villages, districts, and lands to think, speak, and act in accordance with the religion (*Ys.* viii. 7), and missionaries went afar 'to them who in [other] lands seek for righteousness' (*Ys.* xlii. 6), while, according to a Persian *rivāyat*, some account of the Zoroastrian propaganda was contained in the lost Vištāsp Nask of the Avesta (*SBE* xxxvii. [1892] 424). Itinerant (*pairi-jaθan*) priests are mentioned side by side with those who laboured at home (*dainhāurvaēsa* [*Vīsp.* iii. 3, ix. 2; *Yt.* xxiv. 17]), and in some cases such priests were evidently invited abroad, since they are described as 'desired afar' (*dūraē-frakāta* [*Yt.* xvi. 17]). On the other hand, the missionaries sometimes encountered opposition, as when Keresāni sought to suppress them, but was driven from his kingdom by Haoma (*Ys.* ix. 24), though the present writer is inclined to regard this account as an Iranian reflex of a Vedic myth, the rôle of the hero being reversed, as is the case also in certain other figures surviving from the period of Indo-Iranian unity.[1] When, in like manner, the Pahlavi *Šikand-gūmānīk-Vijār* states (x. 67 f.) that the sons of Vīštāspa 'even wandered to Arūm [the Byzantine empire] and the Hindūs, outside the realm, in propagating the religion,' the tradition of missionary activities in these countries (on which see Jackson, pp. 85–90) deserves no credence, and equally apocryphal is the statement of the *Dīnkarṭ* (*SBE* xxxvii. p. xxxi) that the Avesta was translated into Greek.[2]

---

[5] *RHR* xlvii. [1903] 174 ff.

[1] In one of the Aramaic papyri from Elephantine a Persian is mentioned as head of a city (perhaps Syene; cf. E. Sachau, *Aram. Papyri und Ostraka aus . . . Elephantine*, Leipzig, 1911, pp. 51–54) in the reign of Darius II., and is described as a 'Mazdayasnian' (מזדיזן). Since this word (Av. *mazdayasna*) is frequently used in the Younger Avesta to denote a Zoroastrian (cf. C. Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, col. 1160 f.; the borrowed Armenian *mazdezn* is employed in the same sense [H. Hübschmann, *Armen. Gramm.*, Leipzig, 1895–97, i. 190]), it may possibly support the theory (opposed by the present writer in art. ACHÆMENIANS, but advocated by J. H. Moulton, *Early Zoroastrianism*, London, 1913, p. 39 ff.) that the Achæmenians were Zoroastrians. On the other hand, the writer has always maintained that the Achæmenian Persians were Mazdayasnians in the rigid sense of the word, so that the Av. term would prove little in this connexion.

[2] The ethnology of the Turanians is uncertain. They have commonly been supposed, since the days of F. Max Müller, to be non-Iranian, but this seems to be true only in part. Their names, as recorded in the Avesta, are Iranian, and the *Šāhnāmah* (i. 189) records that they were descended from Tūr, son of Farīdūn, while the name Tūra appears to be Iranian (Bartholomae, col. 656). It is possible that they were Scyths (J. Marquart, *Ērānšahr*, Berlin, 1901, pp. 155–157; S. Feist, *Kultur . . . der Indogermanen*, do. 1913, pp. 405 f., 425, 471; cf. art. SCYTHS). While they may well have been a congeries of races, like the Scyths, they appear to have been regarded, by the Avesta, as nomad Iranians as opposed to the pastoral folk who evolved the Avesta. See, further, art. TURANIANS.

From the close of the Avestan period to the dynasty of the Sasanids (224–651), there is almost a blank in the history of Zoroastrianism, for neither Seleucids nor Parthians seem to have taken much interest in the religion.[3] Nevertheless, there was considerable diffusion, if not of orthodox Zoroastrianism, at least of Iranism during this time. We have already had occasion to note the spread of Iranian concepts in Cappadocia as shown in the month-names of that country (art. CALENDAR [Persian], vol. iii. p. 130ᵃ); and a curious amalgamation of Semitic and Iranian religious ideas is revealed by a Cappadocian Aramaic inscription of the 2nd cent. B.C. (M. Lidzbarski, *Ephemeris für sem. Epigraphik*, i. [1902] 67–69), which runs as follows:

'This (?) Dēn-Mazdayasniš (דינמזדיסנש־א), the queen (?), the sister and wife (אחתא ואנתתא) of Bēl, spake thus: "I am the wife of King Bēl." Thereupon Bēl spake thus to Dēn-Mazdayasniš: "Thou, my sister, art very wise, and fairer than the goddesses; and therefore have I made thee wife of Bēl (?)." The reference to *xvaētvadatha* (on which see MARRIAGE [Iranian], § 2) is also of interest.[4]

An inscription of Antiochus I. of Commagene (1st cent. B.C.) at Nīmrūd Dāgh is of much value as the expression of the religious fervour of a prince who traced his lineage, on the paternal side, to the Achæmenians themselves, and also as showing the character of a late Zoroastrian cult in a foreign land. The relevant portions of this text (ed. most conveniently by W. Dittenberger, *Orientis Græci inscript. selectæ*, Leipzig, 1903–05, no. 383 [i. 593–603]) may be summarized as follows (cf. also F. Cumont, *Textes et monuments figurés relatifs au culte de Mithra*, Brussels, 1896–99, i. 11, 233, 238, ii. 89–91, and below, p. 754ᵇ):

'I considered piety (εὐσέβειαν) not only the strongest foundation of all things good, but also the sweetest joy to men, and held it to be the criterion both of fortunate power and of blessed usefulness (κρίσιν καὶ δυνάμεως εὐτυχοῦς καὶ χρήσεως μακαριστῆς); throughout my life I was seen by all to deem holiness (ὁσιότητα) both the most faithful guardian and the inimitable delight of my kingdom' (11–19); and to this all his success during a long and hazardous career was due. When he ascended his ancestral throne, he appointed a common abode for all the gods (κοινὴν θεῶν ἁπάντων . . . δίαιταν), adorned their images with every device according to ancient Persian[1] and Greek regulation, and honoured them with sacrifices and laudations (μορφῆς μὲν (ε)ἰκόνας παντοίαι τέχνηι καθ' ἃ παλαιὸς λόγος Περσῶν τε καὶ Ἑλλήνων—ἐμοῦ γένους εὐτυχεστάτη ῥίζα—παρέδωκε κοσμήσας θυσίαις δὲ καὶ πανηγύρεσιν [20–34]). He was not, however, content with this. Having determined to found a mighty monument (ἱεροθεσίου) most nigh the heavenly thrones (οὐρανίων ἄγχιστα θρόνων), where, after he had sent his soul 'to the heavenly thrones of Zeus Oromasdes,' his body might slumber 'till boundless time,'[2] he declared that holy spot to be the common enthronement of all the gods, who were imaged in token of his piety (34–53). Accordingly, he set up statues of Zeus-Oromasdes, Apollo-Mithra-Helios-Hermes, Artagnes [Verethraghna]-Herakles-Ares, Commagene, and himself[3] in gratitude for the 'immortal care' (ἀθανάτου φροντίδος) which had aided him in all his times of trial (54–66). He made every provision for the upkeep of the shrine, the priests of which were to wear Persian vestments (71 ff.). Besides the sacrifices enjoined by old and new custom alike, he directed that the anniversary of his birth and of his coronation be observed annually by all, and that in each month the priests should commemorate the days—the 16th and the 10th—on which the gods had caused these two events to take place. All this is safeguarded by a law which 'my voice spake, but the mind of the gods ratified' (121 f.).

At the festivals the images of the gods should be clad in Persian fashion and be crowned with golden diadems (132–139); incense and perfumes were to be offered (142 f.), and an abundant feast was to be provided for all comers (146–161). The service at these banquets was performed by *hierodouloi* (*q.v.*), who, with their children, were inalienable (161–191), as were also the villages, etc., dedicated for the maintenance of the shrine (191–205); and the inscription closes with the hope that the dedicator's children will follow his example, and with blessings on those who observe his will and curses on those who seek impiously to undo his work (205–237). For a fragmentary inscription which begins in closely similar fashion see Dittenberger, no. 404 (i. 621 f.).

As regards India, we note that on the coinage of the Kuṣān kings Kaniṣka (*q.v.*) and Huviṣka (1st–2nd cent. B.C.) a number of Zoroastrian deities appear along with Greek and Hindu gods and effigies of the Buddha (M. A. Stein, 'Zoroastr. Deities on Indo-Scythic Coins,' in *BOR*, 1887, pp. 155–166; and especially A. von Sallet, *Zeitschr. für Numismatik*, vi. [1879] 386–409; A. Cunningham, 'Coins of the Kushâns, or Great Yue-ti,' in *Numismatic Chron.* III. xii. [1892] 40–82, 98–159 and plates xiv.–xxiv.; P. Gardner, *Coins of the Greek and Scythic Kings of Bactria and India in the Brit. Mus.*, London, 1886, pp. 129–161 and plates xxvi.–xxix.; *Cat. of Coins of the Ind. Museum* [Calcutta], Calcutta, 1893–96, iv. 39–50; further literature in E. J. Rapson, *Indian Coins*, Strassburg, 1898, p. 18).

According to a section (ch. cxxxvi. [cxxxix.]) of the *Bhaviṣya Purāṇa* written after the middle of the 6th cent. A.D., priests called Magas were brought from Šākadvīpa ('Scyth-[is] land') to serve sun-temples. This is scarcely to be construed as Iranian propaganda; for the function of these foreign priests see art. SAURAS AND MAGAS, and cf. D. B. Spooner, *JRAS*, 1915, pp. 63–89, 405–455.

With the rise of the house of Sāsan Zoroastrianism not merely revived, but again developed a markedly missionary spirit. According to the *Dīnkarṭ* (ed. and tr. P. B. and D. P. Sanjana, Bombay, 1874 ff., vol. x. p. 12), Ahura Mazda commands that the faith be spread through the world; and in elucidating the meaning of Av. *fravarāne*, 'I profess,' the Pahlavi commentators add that every Zoroastrian endeavours to propagate the religion among all mankind, while the highest praise attaches to the quondam non-believer who renounces his former tenets in favour of Zoroastrianism (*SBE* xviii. [1882] 415). Sapor II. (309–379), aided by his great priest Ādarbād (on whom see Justi, *Namenbuch*, p. 49), worked zealously in the cause of proselytism (*Dīnkarṭ*, vol. ix. p. 579), and the *Dīnkarṭ* (vol. viii. p. 26) directly sanctions propaganda by force. That this was by no means a merely academic attitude is amply proved by the records of persecution of the Christians by the Sasanid rulers in Persia.[1] The Pahlavi portion of the *Nīrangistān* (ed. D. P. Sanjana, Bombay, 1894, fol. 16^a, 17^a) bears witness to the admission of proselytes, and the Pahlavi *Māṭigān-ī-Hazār Dāṭistān* (ed. J. J. Modi, Poona, 1901, p. 1; tr. Bartholomae, *WZKM* xxvii. [1914] 347 ff.) states that a slave belonging to a Christian should be ransomed by Zoroastrians from his master if such a slave embraces Parsiism, though he is not to be set free if he becomes a Zoroastrian together with or after his master.

---

[1] Keresāni is apparently to be identified with the Vedic Kṛśānu, an archer who shot at the eagle which was carrying off Soma (Rigveda, IV. xxvii. 3 f.; cf. A. Bergaigne, *Religion védique*, Paris, 1878–83, iii. 30 f.; A. Hillebrandt, *Ved. Myth.*, Breslau, 1891–1902, i. 448 f.; A. A. Macdonell, *Ved. Myth.*, Strassburg, 1897, p. 137). For Keresāni see F. Justi, *Iran. Namenbuch*, Marburg, 1895, p. 161 (J. Darmesteter's identification of him with Alexander the Great [*Zend-Avesta*, Paris, 1892–93, i. 80–82] is quite improbable).

[2] Contrariwise, much of a very second-rate character was current in Greek under the names of Zoroaster, Ostanes, Hystaspes, etc. (J. A. Fabricius, *Bibliotheca Græca*, Hamburg, 1705–28, i. 245–252, 92–95); cf. also the folk-medicine and magic ascribed to Zoroaster in *Geoponica*, I. vii. f., x., xii., II. xv., V. xlvi., VII. v. f., xi., X. lxxxiii., XI. xviii. 11, XIII. ix. 10, xv. 1.

[3] On the Parthian religion see G. Rawlinson, *Sixth Great Orient. Monarchy*, London, 1873, pp. 398–402; F. Justi, *GIrP* ii. [1904] 486 f.; A. V. W. Jackson, *ib.* p. 694; J. M. Unvala, 'The Religion of the Parthians,' in *Sir Jamsetjee Jejeebhoy Madressa Jubilee Vol.*, Bombay, 1914, pp. 1–10. Cf. also art. PARTHIANS. For the Seleucids see E. R. Bevan, *House of Seleucus*, London, 1902, i. 290 f.

[4] It is implied in *Yt.* xvii. 16 that Daēna (Religion personified) is the *daughter* of Ahura Mazda and Ārmaiti, but she is neither his sister nor his wife.

[1] Cf. art. IMAGES AND IDOLS (Persian). The term 'laudations' (πανηγύρεσιν) looks very like a literal translation of Av. *yašta*, 'Yašt,' panegyric of an individual deity.

[2] τὸν ἄπειρον αἰῶνα may possibly translate Av. *zrvan akarana*.

[3] For the brief individual inscriptions to all these see Dittenberger, nos. 384–388 (i. 604–606).

During the period under consideration there was some extension of Zoroastrianism in China (cf. Jackson, pp. 278–280), though no details are thus far known. It would appear, however, from the discoveries made by M. A. Stein, A. Grünwedel, A. von Le Coq, and P. Pelliot in Turkestan, where Buddhist, Persian, Turkī, Greek, and Chinese relics lie intermingled, that Zoroastrianism passed along the great trade-routes. It may be doubted whether there was any active propaganda.[2]

We have just seen that the Sasanids proceeded by force against non-Zoroastrians in Persia; they pursued a similar course in Armenia. Ample proof of this is given in the Armenian historians,[3] and much further information is doubtless to be gleaned from the hitherto untranslated Acts of the Armenian Martyrs.[4] As an example it will be sufficient to summarize the data of the 5th cent. writer Elisæus (*Hist. of Vartan*, tr. C. F. Neumann, London, 1830):

All non-Zoroastrians were oppressed in Armenia from the reign of Aršak III. (341–367) till that of Artašēs IV. (422–429). The Persian Yazdagird II. (438–457) followed this example, urged by the Zoroastrian priests to 'exterminate the sect of the Christians,' and he deprived them of their property and martyred those who remained steadfast. Some he induced to become apostates by money and high rank, saying, 'Oh that you would but receive the doctrine of the Magi into your souls! Oh that you would but exchange the heresy of your souls for the true and excellent laws of our gods!' The Magi exhorted him, if he would prove his gratitude for his power and his victories, to make Zoroastrianism dominant everywhere. In the course of his endeavours the Zoroastrians promulgated an interesting Zarvanite statement of theology, to which the Christians replied (pp. 11–20). The persecution provoked a revolt, which was not suppressed until the Christian leader, Vardan, fell in battle in 451. The whole account of Elisæus shows the clash of two religions, each of uncompromising character. Cruelty and craft were only too evident, but the spirit of sincere conviction must be recognized.

With the overthrow of the Sasanian dynasty by the Arabs the missionary enterprise of Zoroastrianism practically came to a close. The plight of those who remained in Persia was—and is—too wretched to allow more than a reluctant and hostile toleration at best from the dominant Muhammadanism.[1] Those who, in the 7th cent., migrated to India and thus gave rise to the communities of Parsis (*q.v.*) were received with none too warm a welcome. As Dhalla observes (p. 323), with regard to their abstention from propaganda in India,

'The precarious condition in which they lived for a considerable period made it impracticable for them to keep up their former proselytizing zeal. The instinctive fear of disintegration and absorption in the vast multitudes among whom they lived created in them a spirit of exclusiveness and a strong feeling for the preservation of the racial characteristics and distinctive features of their community. Living in an atmosphere surcharged with the Hindu caste system, they felt that their own safety lay in encircling their fold by rigid caste barriers.'

Nevertheless, a certain amount of proselytizing continued as late as the 18th cent., especially in the case of slaves purchased from low-caste Hindus. Such procedure, however, instead of being welcomed as extending the faith, aroused hostility on social grounds, some Parsis being unwilling to permit such converts to prepare sacred cakes (*drons*) for the festivals or to allow the proselytes to be exposed after death on the Parsi 'Towers of Silence.' The question was referred more than once to the Zoroastrians in Persia, whose replies were in favour of admitting converts. From the point of view of orthodox Zoroastrianism, there cannot be the slightest question that the ruling of the Īrānī (Persian) Zoroastrians was right. On the other hand, it was felt by the Parsis of India that an influx of low-caste Hindus would be prejudicial to the purity of their Iranian community.

The only cases in which proselytism has been urged in recent years have been instances in which a Parsi has married a non-Zoroastrian wife, or has desired to have children born by such a wife, or by a non-Zoroastrian mistress, received into the Parsi community. In all these cases admission has been granted only in the face of intense opposition.

The motives of the converts have been, in practically every instance, worldly, not religious, and the conversions have been purely nominal. Parsis hold that such proselytes are harmful to the faith, and that, if converts are admitted at all, it must be under conditions which put the sincerity of the neophytes' religious convictions beyond suspicion. The Zoroastrian community has no organization for training new converts; the matrimonial opportunities of Parsi girls are lessened by the possibility of converting prospective wives of other religions; and the admission of illegitimate children of Parsis is felt to be virtually a condoning of immorality.

This attitude—so different from that of Zoroaster and of Zoroastrianism until the migration to India—is fraught with grave possibilities to Parsiism. The age of marriage is rising, and the birth-rate is falling. There is a steady leakage towards agnosticism (not towards conversion to Christianity, Muhammadanism, or any form of Hinduism). Even among those who regard themselves as Zoroastrians there is much laxity. Theosophy (*q.v.*) is making a form of 'esoteric' Zoroastrianism which can scarcely be reconciled with the Avesta. Some of the radical wing of the 'reforming' party, at the other extreme, rationalize the religion until it becomes a travesty of its real content. Against all this must be reckoned many wisely conservative Parsis, both priests and laymen,[2] but whether, so long as all accessions from without are forbidden, they can advance and extend the 'good religion' is a question for the future.

LITERATURE.—M. N. Dhalla, *Zoroastrian Theology*, New York, 1914, pp. 11–13, 72–75, 198 f., 323–325, 367 f.; letter of Rustamji Edulji Dastur Peshotan Sanjana to the writer (5th July 1915).

MITHRAISM.—The religion generally known by this name, which enjoyed a wide-spread popularity in the centuries immediately preceding and following the Christian era, centred in the worship of Mithra, a divinity worshipped in the Indo-Iranian period by the two most easterly branches of the Aryan race, as is shown by the fact that his name appears in the form Mitra among the gods of the Vedic pantheon and in that of Mithra in the early religious poetry of Persia. The name coincides in form with a common noun which in Sanskrit means 'friend' or 'friendship' and in Avestan 'compact,'[1] and it would seem to follow that from the earliest times the conception of Mithra was an ethical one.

1. Mitra in Vedic religion.—In the only hymn addressed exclusively to him in the Rigveda (iii. 59) Mitra is said to 'bring men together, uttering his voice' and to watch the tillers of the soil 'with unwinking eye'—phrases which suggest a solar divinity; and from the numerous hymns in which Mitra and Varuṇa are conjointly addressed it is abundantly clear that both divinities are manifested in the celestial light. In the *Brāhmaṇas*, indeed, the view prevails that Mitra represents the light of day, especially that of the sun, while to Varuṇa belong the 'thousand eyes' of night. This seems, however, to be a later refinement, the beginnings of which may be traced in the Atharvaveda, especially IX. iii. 18, where Mitra uncovers in the morning what Varuṇa has concealed. The theory of Oldenberg,[2] that the group of divinities known as Ādityas, who are said in Rigveda IX. cxiv. 3 to have been seven in number,[3] originally represented sun (Mitra), moon (Varuṇa), and five planets, and was borrowed from a Semitic race, has little to commend it. It is more probable that Varuṇa was by origin the all-encompassing vault of heaven (√*var*, 'cover'), Mitra the light which proceeds therefrom. Ethically the two gods were probably differentiated in the Indo-Iranian period, Varuṇa being the supreme upholder of physical and moral order, Mitra the all-seeing witness who guarantees good faith between man and man. This is not so clear in the Vedas as in the early religious poetry of Persia, where the place of Varuṇa is taken by Ahura Mazda (='Wise Lord,' the word Ahura corresponding to Skr. *asura*—a term which in later Vedic literature means 'demon,' but in the Rigveda is applied to gods, more especially to Varuṇa and Mitra, and is plausibly suggested to have connoted the possession of occult power).

2. Mithra in Iran.—Among the Iranian peoples the worship of Mithra attained an importance which it never possessed in India. The early history of this worship is very obscure, owing to the uncertainties which beset the interpretation of the Avestan texts. From the inscriptions found by H. Winckler at Boghaz-keui in 1907,[4] especially the treaty between the Hittite king Subbiluliuma and Mattiuaza, the son of Tushratta, king of Mitanni, it appears that Mitra, Varuṇa, Indra, and the Nāsatya, or 'Twins,' were worshipped in the district of Mitanni in the 14th cent. B.C. Eduard Meyer ('Das erste Auftreten der Arier in die Geschichte,' *SBAW*, 1908, p. 14 ff.) regards this fact as a proof that an Aryan community existed in Mitanni; in *EBr*[11] xxi. 203 he suggests that the Aryans in question were a caste ruling over a non-Aryan people. It is, however, uncertain whether we should regard them as the ancestors of the Iranians, and even possible (as J. H. Moulton has suggested, *Early Zoroastrianism*, London, 1913, pp. 7, 26) that we have here the relic of a prehistoric migration backward from India to the North-West. It is to be observed that the name Varuṇa is otherwise unknown in Iranian texts, whilst Ahura Mazda, who takes his place, appears under the form Assara Mazāsh in an Assyrian list of divinities of about 650 B.C. (published by F. Hommel, *PSBA*, 1899, pp. 127, 138), and had, no doubt, been borrowed from an Iranian people at a considerably earlier date. To the same period belongs a tablet from the library of Assurbanipal in which Mithra is identified with Shamash (R. iii. 69, 5, l. 72). Our next evidence dates from the Achæmenian dynasty. The inscriptions of Cyrus, it is true, throw no light on his worship of Iranian divinities, and Darius I. mentions Ahura Mazda only; but the evidence of theophoric names (*Μιτραδάτης* [Herod. i. 110, 121], *Μιτροβάτης* [*ib.* iii. 120, 126, 127], and, earlier still, *Μιτραγαθής*, if this is the correct reading, in Æsch. *Pers.* 42) makes it plain that Mithra was prominent in the Persian pantheon,[1] while Artaxerxes Mnemon (403–358 B.C.) names as his divine protectors Ahura Mazda, Anāhita, and Mithra (*Art. Sus.* a, 4 f., *Ham.* 5 f. [O. Pers. text]). The coupling of Mithra with the goddess Anāhita reminds us of the confusion between the two of which Herodotus is guilty in the passage (i. 131) in which he describes the Persian religion, and identifies *Μίτρα* with the 'Assyrian' Mylitta (an appellative of Ishtar).

3. Mithra in early Zoroastrianism.—We have next to consider the position of Mithra in the religion of Zarathushtra. Adopting the position (1) that the *Gāthās* go back to the time of the Prophet himself, and that this was not later (and very possibly earlier) than the traditional date (7th cent. B.C.), and (2) that the *Yashts*, at any rate as regards the metrical portions, are not many centuries later,[2] we observe that Mithra is never mentioned in the former, and was ignored by Zarathushtra in his reform. It may even be possible to go further, and to hold that the Prophet regarded him as a *daēva*, or demon, whose worship was to be banished from the pure faith. In *Ys.* xxxii. 10 we hear of the teacher of evil who 'declares that the Ox and the Sun are the worst thing to behold with the eyes,' which may perhaps refer to the nocturnal sacrifice of the bull by Mithraists; and it is also possible that the Ox-Creator (*Gēush-tashan*) named in *Ys.* xxix. 2 was a substitute for Mithra devised by Zarathushtra. These are only conjectures;[3] but we shall find in later Mithraic ritual abundant proofs of the survival of primitive conceptions such as Zarathushtra endeavoured to eradicate. It is not necessary here to discuss the difficult questions regarding the measure of success attained by the Prophet's reform and the origin of the counter-movement (perhaps Magian) which restored the more primitive worships. It may be worth mentioning, however, that in the Persian calendar, which there is reason to think (on astronomical grounds) was introduced into Cappadocia by Darius I.,[4] the names of the months are derived from divine names, which include those of Mithra

---

[1] These words are connected by etymology with the base **mei*, 'exchange,' seen in Lat. *com-munis*, Goth. *ga-mains*, M.H.G. *ge-mein*, etc.; see K. Brugmann and B. Delbrück, *Grundriss*², Strassburg, 1897 ff., II. i. 346, and especially A. Meillet, *JA* x. x. [1907] 143–159.

[2] *Religion des Veda*, p. 185 ff.

[3] Six Ādityas are enumerated in Rigveda II. xxvii. 1, and eight in x. lxxii. 8 f.

[4] Cf. H. Winckler, 'Die Arier in den Urkunden von Boghazköi' *OLZ*, 1910, pp. 289–301.

[1] Cf. also the names Μιθροβαρζάνης (Corn. Nepos, *Datam.* vi. 3, Diod. Sic. XV. xci. 5), Μιθροβουζάνης (Diod. XVII. xxi. 3; Arrian, *Anab.* I. xvi. 3), Μιτραφέρνης (Nicolaus Damasc. *FHG* iii. 363), Μιθροπαύστης (Plut. *Themist.* 29), Μιθραύστης (Arrian, *Anab* III. viii. 5), etc. (F. Justi, *Iran. Namenb.*, Marburg, 1895, pp. 208 f., 213, 216 f., and esp. Cumont, *Textes*, ii. 76–85, 464–466).

[2] A popular account of the present state of the question will be found in J. H. Moulton's *Early Religious Poetry of Persia*, Cambridge, 1911, and further details in the same author's *Early Zoroastrianism*.

[3] Moulton, *Early Zoroastrianism*, pp. 129, 357.

[4] See excursus, *ib.* p. 430 ff.

(but not Anāhita) and the six Amesha Spentas (or Amshaspands), which are among the most characteristic features of Zoroastrianism properly so called. For our knowledge of Mithra-worship among the Persians we naturally turn to the *Mihir Yasht* (*Yt.* x., Eng. tr. in *SBE* xxiii. [1883], by J. Darmesteter, more accurately in German by F. Wolff, *Avesta . . . übersetzt*, Strassburg, 1910, pp. 198–221). The opening lines of the poem show clearly the high position enjoyed by Mithra, although, as a *yazata* ('adored one') he stood technically on a lower level than the six Amshaspands of Zarathushtra's creed.

> 'Thus spake Ahura Mazda to the holy Zarathushtra: When I created Mithra, lord of wide pastures, then, O Spitama, I created him as worthy of sacrifice, as worthy of prayer as myself, Ahura Mazda' (*Yt.* x. 1).

The *Yasht* speaks with no uncertain voice either of the physical or of the ethical character of the god:

> 'The first of the spiritual *Yazatas*, who rises over the Mountain[1] before the immortal sun, driver of swift horses; who foremost attains the gold-decked, fair summits, whence he surveys the whole dwelling-place of the Aryans, he, the most mighty' (*Yt.* x. 13).

This is clearly neither the sun himself nor any individual object, but the heavenly light in general, and it suits well with the recurring formula of the hymn:

> 'To Mithra, the lord of wide pastures, we sacrifice, the truth-speaking, eloquent in assembly, the thousand-eared, the shapely, the myriad-eyed, the exalted, (lord of) the broad look-out, the strong, the sleepless, the vigilant' (*Yt.* x. 7, etc.).

Here the ethical and the physical are already combined; and in the second stanza of the hymn the god and the 'promise' or 'compact' over whose fulfilment he watches are almost identified; for Zarathushtra is thus addressed by Ahura Mazda:

> 'Break not the compact [*mithrem*], whether thou make it with the faithless or with the righteous fellow-believer, for Mithra stands for both, for the faithless as for the righteous.'

Throughout the *Yasht* the invincible might of Mithra is invoked against the *mithradruj*, which may be translated either 'deceiver of Mithra' or 'promise-breaker.' It is this guardianship of truth and good faith that gives Mithra his special character; but he is also invoked, like other divinities, as the protector of the needy,

> 'whom the poor man, who follows the teaching of righteousness, when wronged and deprived of his rights, with uplifted hands invokes for help' (*Yt.* x. 84), and his aid is sought 'in both worlds, in this world of the body, and in the world of the spirit' (*ib.* 93).

The last trait may remind us that among the functions of Mithra was that of assisting the souls of those departed in the faith on their journey to Paradise.

> He is implored to 'be present at our sacrifice, come to our libations . . . bear them for atonement, lay them down in the House of Praise' (*Yt.* x. 32).

It is natural, therefore, to find as his companions Sraosha ('obedience') and Rashnu ('justice'), who, in later Zoroastrianism,[2] are found beside Ahura Mazda in the Final Judgment. In the *Yasht*, however, they figure as his henchmen in the great struggle between the powers of light and darkness.

> 'Mithra strikes terror into them, Rashnu strikes a counter-fear into them, Sraosha drives them together from every side toward the protecting angels' (*Yt.* x. 41).

Throughout the poem Mithra appears as pre-eminently a god of battles; he was, therefore, especially fitted to become, as he did in later times, the favourite deity of the Roman soldier. Of the ritual of Mithra-worship the *Yasht* tells us little; *haoma* (*q.v.*) and milk were offered to him in libation; and the Mazdayasnian is bidden to sacrifice 'beasts small and great, and birds that fly,' and to prepare himself for the sacrifice by ablutions and penance (*Yt.* x. 119–122).[1]

4. External influences on Mithraism.—(*a*) *In Babylonia.* — The picture thus sketched — and nothing essential would be added by drawing on the later portions of the Avesta or the Pahlavi texts—is in many ways very different from that of Mithraism as known to us from the inscriptions and monuments of the Roman period, and the problem of accounting for the difference is one which the evidence at present available does not enable us to solve. It is, however, clear that the transformation was due partly to Babylonian influence, partly to contamination with beliefs current in Asia Minor. The former influence, no doubt, began to exert itself at an early date, since the confusion of which Herodotus was guilty, in identifying Mithra (as a supposed female divinity) with Ishtar, and the coupling of Mithra with Anāhita (*q.v.*), who, in spite of her associations with the Oxus, was a goddess of an easily recognized Semitic type, point to a close *rapprochement* between Persian and Babylonian cults. The most important feature of later Mithraism, due to Chaldæan influence, was the prominence of astrolatry. There is nothing to show that this was a feature of early Iranian religion, whereas we know that the observation of the heavenly bodies and the belief in their influence on the affairs of men were of great antiquity in Babylonia. When, therefore, we find the busts of sun and moon and the circle of the zodiac standing features in Mithraic monuments, we can have no doubt as to the ultimate source of this element; nor can it be questioned that the elaboration of a body of doctrine, expressed in and through myth and symbols, also took place in the Farther East, although the details of the process escape us. We can say no more than that the dualism of Iranian religion furnished a clue both to the cosmic process and to the destiny of the individual soul, and that the results which flowed from the doctrine were worked out in detail on the banks of the Euphrates. The brief account of Zoroastrianism given by Plutarch in the *de Iside et Osiride*[2] shows us how far the Magians had already carried the transformation of the simple Persian faith into that which meets us in the *Bundahishn* and other Pahlavi texts of the Sasanian era, and enables us to rely on these to some extent for the interpretation of doubtful details in the evidence. Essential features are: (1) the separation in the material universe of the province of Ahura Mazda, 'withdrawn beyond the sun as far as the sun is from the earth,' from that of Angra Mainyu, the prince of darkness, and the intermediate position of Mithra, the μεσίτης; and (2) the doctrine that the soul is a divine spark of light descending from the highest heaven and acquiring a gross and earthly envelope which taints it with corruption and makes its existence on earth a continual struggle with the power of evil. The moral consequences of this doctrine, particularly the inspiring conception of Mithra, the Mediator, as at once the commander under whom the individual shares in the fight against the prince of darkness and the Redeemer[3] who grants to his faithful servants final deliverance from the body of death, followed by the return of the purified spirit to the sphere from which it came, we may believe to be characteristically Iranian; to Chaldæa we shall attribute the elaboration of the astrological dogmas connected with the influence exercised by the planets upon the soul in its passage through their spheres, and the prominence given to the conception of Destiny as revealed in the unchanging order of the heavenly process, carried on throughout unending time (*zrvan akarana* in later Zoroastrianism). Fatalism was the necessary corollary of these doctrines; but its acceptance in theory did not prevent Mithraism from becoming an intensely practical creed, full of stimulus for the activity of the individual.[1]

---

[1] *Hara berezaiti* is the name elsewhere applied to the peak upon which 'Ahura Mazda the Creator fashioned for Mithra a dwelling where is neither night nor darkness, nor chill wind, nor hot, nor death-dealing sickness, nor pollution wrought by demons, nor do mists rise thereon' (*Yt.* x. 50). To the Iranian this meant Mt. Alburz.

[2] See L. C. Casartelli, *Philosophy of the Mazdayasnian Religion under the Sassanids*, Bombay, 1889, pp. 79–81; Dhalla, *Zoroastrian Theology*, p. 239 f.; Cumont, *Textes*, i. 37.

[1] At the close of the *Yasht* (x. 145; cf. 113) Mithra and Ahura are jointly invoked, just as Mitra and Varuṇa are in the Vedic hymns.

[2] Ch. xlvi. f.

[3] In a Manichæan Turfān fragment Mithra is designated as 'redeemer and benefactor' (*bōxtār ūd xvābar*, C. Salemann, *Manichaeische Studien*, i. [Petrograd, 1908] 4 d, 2 [p. 6]).

(*b*) *In Asia Minor.*—It is much more difficult to say what was the effect upon Mithraism of its diffusion throughout Asia Minor.[2] We have no contemporary evidence for the stages by which this took place, but it is at least probable that the later Achæmenian kings, who were, as we have seen, ardent votaries of Mithra and Anāhita—Artaxerxes Ochus is said[3] to have erected statues of the goddess in many places—established the worship of these divinities in the outlying portions of their dominions. It was not long before they became assimilated to those which were indigenous to the land; Anāhita was readily identified with the Great Mother whose worship was so deeply rooted in Anatolia (see art. MOTHER OF THE GODS), and thus the way was paved for an alliance between Mithra and Cybele (*q.v.*). Mithra himself took the shape of Men in Pontus (see below), and was assimilated in art with Attis (*q.v.*), in spite of the profound differences of nature and function between the two. More than this we can hardly say, for the primitive features of Mithraic ritual, to be considered later, were not necessarily borrowed, but may go back to Iranian antiquity. The *taurobolium*, however, is believed by Cumont (i. 334 f.) to have been taken over by Mithraism from the cult of the Great Mother. The propagation of Mithraism in the West had its political as well as its religious side. One of the earliest conceptions of Iranian religion was that of the 'glory,' or *hvarenō*.[4] This was conceived as a kind of mystical effulgence or aureole derived from the heavenly light, and possibly borrowed some of its features from the widely diffused conception of the external soul. In the story of the Fall, embodied for the Iranians in the myth of Yima, sin entailed the loss of this precious talisman; and in the *Mihir Yasht* the *dush-hvarenō*, 'he of evil glory,' is the man who 'thinks that Mithra sees not all his evil deeds and lying' (*Yt.* x. 105). But the *hvarenō* was more especially the talisman of the royal house of Irān, and as such is the main subject of an entire *Yasht* (*Yt.* xix.), which deals with those who have or will possess it, beginning with Ahura Mazda himself and ending with Saoshyant, the future deliverer of the world from evil, but giving in the main, as Darmesteter points out (*SBE* xxiii. 286), 'a short history of the Iranian monarchy, an abridged Shāh Nāmah.' Historically, therefore, the *hvarenō* is the token of Iranian kingship and the talisman which gives victory over the Turanian. Naturally enough, the Near Eastern dynasties which sprang from the wreck of Alexander's empire were anxious to secure this token of legitimacy, and were therefore fervent worshippers of Mithra, 'the spiritual *Yazata* who rides through all the Karshvars, bestowing the *hvarenō*' (*Yt.* x. 16). The prevalence of this conception is but thinly veiled by the disguise which the *hvarenō* attained among half-Hellenized Asiatics as the Τύχη *βασιλεως*. It was doubtless at the courts of these mushroom monarchs that the Hellenization of Mithraism, which was the indispensable condition of its further diffusion, was brought about. In this respect our most instructive monument is the enormous cairn set up by Antiochus I. of Commagene (69–38 B.C.) on the tumulus of Nimrūd Dāgh, on either side of which was a terrace with identical series of five statues.[1] These, as the king tells us in his inscription, represented (1) Zeus-Oromasdes (=Ahura Mazda), (2) Apollo-Mithras-Helios-Hermes, (3) Artagnes-Herakles-Ares (= Verethraghna, 'victory'), (4) Commagene, (5) Antiochus himself; of the last the king says that by setting up the fashion of his own form he has 'caused the honour of ancient deities to become coeval with a new Τύχη.' The identification of Mithras with three Greek divinities illustrates the elastic methods of syncretism; Hermes is probably chosen as the guide of souls in the world beyond the grave,[2] and, at the same time, it may be, with allusion to the planet assigned to him (in common with Apollo) by the Greeks, since Antiochus was a convinced astrologer and has left us his horoscope in relief on the retaining-wall of the terrace; yet Mithras is also, as so often later, identified with the sun himself. Antiochus's father, it may be added, was one of the numerous bearers of the name Mithradates; and another of the reliefs shows Antiochus clasping the right hand of Mithras, represented in Persian costume with the radiate nimbus. This grouping of the god with the ruler whom he protects is a motive which recurs in various quarters, especially, as M. I. Rostowzew[3] has shown, in Scythia. On the coinage of Trapezus (Cumont, ii. 189–191) Mithras, in Persian costume, appears on horseback —in one instance flanked by the figures of Cautes and Cautopates (see below); hence we are able to recognize him in the mounted divinity (generally trampling on a prostrate foe) represented on various works of art found in the tumuli of the Scythian princes in the Caucasus and Southern Russia. A notable example is the silver *rhyton* from Karagodeuashkh,[4] where Mithra, holding sceptre and drinking-horn, is faced by a Scythian prince, also mounted, who uplifts his right hand in the gesture of adoration.

5. Contact with Greece and Rome.—It was in Asia Minor that Greek art was enlisted in the service of Mithraism and created the sculptural types which were diffused throughout the West and form the chief source of our knowledge of the cult. The group of Mithras the bull-slayer, to be described presently, though ultimately inspired by the bull-slaying Nike of the Athenian acropolis, is manifestly the creation of a Pergamene artist, and adorned every sanctuary of Mithras. In spite of this fact, however, it is to be noted that Mithraism never became popular in Greek lands; it is not found, *e.g.*, at Delos, where so many foreign cults flourished in the later Hellenistic age, and its traces are rare (and generally of Imperial date) throughout the Hellenized East, in Syria, Egypt, etc. Even in the 2nd cent. A.D. Lucian writes of Mithras as a barbarian god, οὐδὲ ἑλληνίζων τῇ φωνῇ (*Deorum Conc.* 9).

---

[1] 'Astral theology' as a system is foreign to the Avesta; the worship of Tishtrya (=Sirius), to whom *Yt.* viii. is addressed, forms no real exception to this rule. Of the constellations only the Great Bear is mentioned in this hymn (*Yt.* viii. 12).

[2] That Mithraism came to Asia Minor from Semitic sources is proved by the Græco-Aramaic bilingual inscriptions of Cappadocia, in one of which (from Rhodandos) a Persian records how he *ἐμάγευσε μίθρῃ* (*Comptes rendus de l'acad. des inscriptions*, 1908, p. 434), and also (as Cumont points out) by the fact that the form Μαγουσαῖοι is a transliteration from the Aramaic.

[3] Clem. Alex. *Protrept.* 5.

[4] The word appears in the compound names which the Greeks wrote Τισσα-*φέρνης*, Φαρνά-*βαζος*, etc. Cf. for other names Justi, pp. 90–98, 178, 181 f., 493. On the 'glory' itself see especially E. Wilhelm, 'Hvarenō,' in *Sir Jamsetjee Jejeebhoy Madressa Jubilee Vol.*, Bombay, 1914, pp. 159–166.

[1] For this inscription see K. Humann and O. Puchstein, *Reisen in Klein-Asien und Nord-Syrien*, Berlin, 1890, p. 262 ff., and cf. Cumont, ii. 89–91, 187–189.

[2] Cf. the dedication 'Deo invicto Mithræ Mercurio' found at Stockstadt together with a statuette (F. Drexel, *Das Kastell Stockstadt*, Heidelberg, 1910, p. 86; Cumont, *Mystères*^{3}, p. 146).

[3] *Predstavlenie o monarchitcheskoi vlasti v Skithii i na Bospore*, Petrograd, 1913, p. 4 ff.

[4] *Ib.* pl. i. 1.

The cult of Mithras is said by Plutarch (*Pomp.* 24) to have been brought to Rome by Cilician pirates taken captive in 67 B.C., and there is no reason to doubt the statement; but it certainly failed to achieve the popularity already attained by some other Oriental religions until almost the close of the 1st cent. after Christ, for the earliest Mithraic inscription as yet found in Rome was set up by a freedman of the Flavian dynasty (*CIL* vi. 732 = Cumont, ii. 105 f.), and, although the British Museum contains a statuary group of Mithras and the bull dedicated by a slave of Ti. Claudius Livianus, *præfectus prætorio* in A.D. 102 (Cumont, ii. 228; cf. 106), Mithraic monuments and inscriptions do not become common in the West until the Antonine period.

6. Diffusion in the Roman world.—(*a*) *By the army.*—The diffusion of Mithraism was largely the work of the army. Pontus, Cappadocia, Commagene, and Lesser Armenia—precisely those regions in which the specialized form of the cult had been developed—were recruiting-grounds largely drawn upon by the Romans, even while as yet only client-kingdoms of the empire, and still more when they were annexed and became provinces. During the Parthian wars under Claudius and Nero a considerable Oriental element thus entered the service of Rome, largely as auxiliaries, but also in the legions. Whether or no the soldiers of the Third Legion who saluted the rising sun at the second battle of Betriacum (A.D. 69) were Mithraists, it is at least certain that the Fifteenth, which served in the Parthian wars of Nero and was transferred by Vespasian to the Danube, brought the cult of Mithras to its camp at Carnuntum in A.D. 71. Another important centre of the cult in the same region was Aquincum, the headquarters of Legio II. Adjutrix, founded by Vespasian from the sailors of the Ravenna fleet, who, as freedmen, were doubtless in many instances of Oriental birth. But the wide spread of Mithraism on the frontiers was largely due to the auxiliary corps—*alæ* and *cohortes*—raised in the East under the Flavian and succeeding dynasties and used to garrison the line of the Danube and the Rhine or the Vallum in Northern Britain. Except for a relief found in London (Cumont, ii. 389 f.), all the Mithraic monuments and inscriptions found in Britain belong either to the legionary camps at Isca (Caerleon-on-Usk [*CIL* vii. 99 = Cumont, ii. 160]) and Eboracum (York [Cumont, ii. 391 f.]) or to the forts on or near the wall, such as Borcovicum (Housesteads [*CIL* vii. 645–650 = Cumont, ii. 161, 393–396]), Amboglanna (Birdoswald [*CIL* vii. 831 = Cumont, ii. 162]), Bremenium (High Rochester [*CIL* vii. 103 = Cumont, ii. 162]), Vindobala (Rutchester [Cumont, ii. 392 f.]), and others. So, too, in the Two Germanys the sanctuaries of Mithras (with some few exceptions[1]) are found either in legionary camps, such as Vetera Castra, Bonna, and Moguntiacum (Cumont, ii. 389, 385 f., 381–383), or in the forts along the *limes Germanicus*, where they are lacking in none of the principal posts—Butzbach, Friedberg, Saalburg, Heddernheim, Grosskrotzenburg, Osterburken, Böckingen, Murrhardt (*ib.* ii. 354–360, 472 f., 362–381, 351–354, 348–351, 154), and others. We have already mentioned the military settlements of Carnuntum and Aquincum, on the Upper Danube, as centres of Mithraism; the same might be said of practically every important post on that river down to its mouth—*e.g.*, Vindobona, Brigetio, Viminacium, Oescus, Durostorum, and Troesmis (*ib.* i. 363, ii. 329, 275, 130, 489 f., 272), to name the principal centres. In Africa also the camp of the Third Legion at Lambæsis, and several military posts, such as Mascula and Sitifis (*ib.* ii. 168, 170, 405 f.), have furnished Mithraic monuments; and in the countries where traces of Mithraism are relatively rare they are often found in the colonies of veterans—*e.g.*, Emerita (Merida) in Spain[1] (*ib.* ii. 166) and Patræ in Greece.

(*b*) *By slaves.*—Next in importance to the army, in the diffusion of Mithraism, came the slave population employed by the State, the municipalities, or private individuals. The first class comprises more especially the employés of the custom-houses and the State-properties, such as mines and quarries. Thus in the Danubian provinces, especially Dalmatia and the Pannonias, the *stationes* of the customs-barrier at which the *vectigal Illyrici* was levied have furnished a number of Mithraic dedications, due to slaves and freedmen in the public service, several of whom bear Greek names and were, therefore, doubtless natives of the Eastern provinces. Again, the presence of numerous Mithraic monuments in Noricum (*ib.* ii. 150–152, 335–339, 472) is accounted for, not so much by the military occupation—though the station of Commagene, which clearly takes its name from an auxiliary regiment, forms a natural exception—as by the mines owned by the State in that province. In Italy the *servi publici* of the municipalities contributed largely to the spread of the religion. At Sentinum, which has yielded an inscription (*CIL* xi. 5737 = Cumont, ii. 121) giving a list of thirty-five *patroni* of a Mithraic congregation, the slaves and freedmen of the municipality figure side by side with *ingenui*; at Nersæ a slave employed as *arcarius* restored a Mithræum (*CIL* ix. 4109 f. = Cumont, ii. 120). It goes without saying that private slaves—especially in the households of the wealthy in Rome itself—played a large part in the spreading of Mithraism.

(*c*) *By trade-routes.*—We may in part trace to imported slaves the spread of Mithraism along the trade-routes which were in communication by sea with the Eastern Mediterranean, though doubtless the merchants themselves were often worshippers of Mithras. Thus in the African provinces, apart from the military stations mentioned above, the only traces of Mithraism are to be found in such coast towns as Cæsarea, Cirta, or Rusicade (Cumont, ii. 171, 168, 170, 406 f.); in Southern Gaul we can trace by the presence of Mithraic monuments the spread of the cult on the trade-route which followed the valley of the Rhone and in the towns of Narbonensis, which were always open to transmarine influence from their nearness to Massilia; and Aquileia, whence the trade of the Mediterranean found its way into Central Europe, was itself both a centre of Mithraic worship and a stage in its further diffusion. It is thus, *e.g.*, that we must explain the remarkable prevalence of Mithraic monuments in the upper valley of the Adige and on the Brenner route to the Upper Danube, as well as on the North-Eastern route *via* Emona and Poetovio. No province of the empire is richer in remains of Mithraism than Dacia, where all the principal sites—Sarmizegetusa, Apulum, Napoca, Potaissa, etc. (Cumont, ii. 131–139, 280–306, 308–319)—have furnished material of this kind. We can hardly explain this entirely by the influence of the army which occupied Dacia and the neighbouring Danube provinces, and are forced to conclude that among the settlers planted by Trajan in the province and drawn 'ex toto orbe Romano' (Eutrop. viii. 6) were many Orientals who brought with them their native faiths, among which the worship of Mithras soon assumed a commanding position.

---

[1] Four out of twenty-six, according to Toutain (see below, p. 756a).

[1] It may be noted that an officer of the Seventh Legion dedicated an altar in this sanctuary (*L'Année épigraphique*, 1905, no. 25). The finds have recently been published fully by Pierre Paris (*RA* ii. [1914] 1 ff.)

7. Geographical and social distribution.—The geographical distribution of the monuments of Mithraism may most easily be grasped by an examination of the map which accompanies Cumont's volumes, upon which the sites, when they have been found, are marked in red. It will be seen at a glance that, except in the places and districts of which mention has already been made, traces of the cult are few and far between. In Greek lands, in Western Gaul, and in Spain, taken together, the sites where its monuments have been found may almost be counted on the fingers. Hence Toutain[1] has argued that the cult of Mithras never became widely diffused in the West, outside the army and certain regions in direct communication with the East, and that the notion that it was at one time not far from achieving the triumph which was reserved for Christianity is much exaggerated. Toutain leaves out of account Rome and Italy—which makes his presentation of the evidence one-sided. But he endeavours to reinforce his argument by a consideration of the social condition of the adherents of Mithraism. He points out with justice that the dedicators of votive sculptures and the builders or restorers of Mithraic sanctuaries are very largely drawn from the official classes and provincial governors, military commanders, or *procuratores*, etc., employed in the civil administration. As early as the age of the Antonines we find *legati* and *tribuni militares* among the votaries of Mithras; in the reign of Commodus, M. Valerius Maximianus, governor of Dacia, dedicates an offering to 'Sol invictus Mithras' (*CIL* iii. 1122 = Cumont, ii. 133); under Septimius Severus, C. Julius Castinus, governor of Pannonia, consecrates an altar to Mithras (*CIL* iii. 3480 = Cumont, ii. 141), and the number of similar instances is multiplied in the 3rd cent. after Christ, while imperial *procuratores* in Noricum and Dacia follow their example. It would be natural to infer that Mithraism was at least favourably regarded by the government; and, in fact, we learn from the *Historia Augusta* (cap. 9) that Commodus was initiated into the mysteries, while an inscription of the age of the Severi (*CIL* vi. 2271 = Cumont, ii. 100) mentions a 'sacerdos invicti Mithrae domus Augustanae,' and the largest Mithræum at present known was discovered in 1912 in the Thermæ of Caracalla; in this was found an inscription in honour of Zeus-Helios-Sarapis-Mithras,[2] and this unusual identification is explained by Caracalla's special devotion to the Egyptian divinity. This imperial patronage goes far to explain the popularity of Mithras-worship in the 3rd cent.; it also accounts for the fact that, though by no means confined to the public services, military and civil, it was mainly found among their members and took no general hold on the population of the western provinces, so that the withdrawal of imperial favour was a fatal blow.

8. Grades of initiation.—Our knowledge of the doctrines and ritual of Mithraism is largely drawn from the inscriptions and monuments discovered in the Mithræa, to the interpretation of which something is contributed by ancient texts, especially those of Christian apologists. The most important of these is a passage of St. Jerome (*Ep.* cvii.), who describes the destruction of a 'cave of Mithras' and the 'monstrous images' used in the initiation of the votaries, who are enumerated as follows: *Corax*, *Gryphus* (MSS *nunphus* or *nymphus*), *miles*, *leo*, *Perses*, *heliodromus*, *pater*. These names are naturally taken to indicate seven grades through which the neophyte passed in succession; and this is confirmed by other texts. The inscriptions found in a Mithræum in Rome (*CIL* vi. 749 ff. = Cumont, ii. 93 f.) mention ceremonies described by the words 'tradiderunt hierocoracica, leontica, persica, heliaca, patrica'; the adjectives clearly correspond with five of the grades mentioned by St. Jerome. We find also 'ostenderunt (*or* tradiderunt) cryfios (chryfios).'[1] The last word seems to be equivalent to *κρύφιος*, and has been substituted for the corrupt *nymphus* in the text of St. Jerome. The title *pater* (or *pater patrum*) for the highest grade is common in inscriptions; and a passage of Porphyry refers as follows to the others:

> τοὺς μὲν μετέχοντας τῶν αὐτῶν ὀργίων μύστας λέοντας καλεῖν, τὰς δὲ γυναῖκας ὑαίνας, τοὺς δὲ ὑπηρετοῦντας κόρακας· ἐπί τε τῶν πατέρων . . . ἀετοὶ γὰρ καὶ ἱέρακες οὗτοι προσαγορεύονται· ὅ τε τὰ λεοντικὰ παραλαμβάνων περιτίθεται παντοδαπὰς ζῴων μορφάς (*de Abstin.* iv. 16).

We infer that the *κόραξ* was a low grade, and that initiation into the mysteries proper began with that of *leo* (cf. *τοῖς τὰ λεοντικὰ μυουμένοις* [Porph. *de Antro Nymph.* 15]). The mention of women called *ὕαιναι* stands alone; it has been proposed to read *λεαίνας*, and some confirmation may be found in the discovery of a tomb at Œa in Tripoli in which a husband and wife were buried and described as *leo* and *lea* (*Comptes rendus de l'acad. des inscriptions*, 1903, p. 357 ff.). For the 'eagles' and 'hawks' independent evidence is not forthcoming, unless two inscriptions from Lycaonia which mention *ἀετοί* are Mithraic (cf. *Bonner Jahrbücher*, 1902, p. 12). Porphyry, it will be noticed, speaks of the animal disguises worn by the *leones*. In the *Quæstiones veteris et novi testamenti* falsely attributed to St. Augustine (*PL* xxxv. 2348) we read how 'some flap their wings like birds and imitate the voice of the crow; others roar after the manner of lions'; and the passages quoted are strikingly illustrated by a relief found at Konjica, in Bosnia, carved on the reverse of a slab which shows the usual subject of Mithra the bull-slayer (see below).

In the centre of the scene are two figures reclining on a couch, in front of which is a table with four loaves marked with a cross; beside the table are seen a lion and a bucranium. On either side are two figures; on the left a *κόραξ*, *i.e.* a man wearing the mask of a crow, and a 'Persian,' distinguished by his dress; to the right a *leo*, wearing a lion's mask, and a figure the upper portion of which is unfortunately lost. It will be noticed that the *miles* of St. Jerome does not appear in the other sources—though the use of the term in Mithraism is confirmed by a passage of Tertullian (*de Præscr. Hær.* 40) and by the title *miles pius* in two inscriptions from Wiesbaden (*CIL* xiii. 7570, 7571), in Greek *στρατιώτης εὐσεβής* (inscription of Amasia, *Recueil des inscr. du Pont*, Brussels, 1910, 108). It is possible, therefore, that the mutilated figure of the Konjica relief represents the *cryfius*, and that the *miles*, though he belonged to the rank and file of Mithras's soldiery, was not admitted to partake in the mysteries. He was, however, initiated by a ceremony described by Tertullian (*de Corona*, 15); a crown was set before him, *interposito gladio*, and then placed on his head, but removed by the neophyte, who exclaimed 'Mithras is my crown.'

In the passage previously quoted Tertullian speaks of a soldier of Mithras as 'branded in the forehead'; and the *καύσεις μυστικαί* of which Gregory of Nazianzus speaks (*Orat.* iv. 70 [*PG* xxxv. 592]) may refer to this. Tertullian (*de Bapt.* 5) also mentions a Mithraic purification 'per lavacrum' resembling the rite of baptism; and it is to be noted that the Mithræa which have been excavated either contain natural springs or have water specially laid on. Of the ceremonies which accompanied the higher degrees of initiation we know little; Porphyry (*loc. cit.*) tells us that the *leo* had both hands and tongue purified with honey, which was also used in the initiation of the *Persa*. In the passage quoted above Gregory of Nazianzus mentions the *βάσανοι* to which the initiates were subjected; and his commentator Nonnus (*PG* xxxvi. 989, 1009, 1012) enlarges on this topic and speaks of 'eighty punishments' by water and fire, frost, hunger, thirst, and journeyings, in an ascending scale of severity. These may to some extent be imaginary; but it must be remembered that the *Mihir Yasht* (§ 122) speaks of ablutions and stripes. Tertullian (*de Præscr. Hær.* 40) uses the phrase 'imago resurrectionis,' which suggests a simulated death; and the biographer of Commodus tells us that the emperor 'sacra Mithriaca vero homicidio polluit.'[1] Thus the little that we know of the Mithraic rites of initiation shows that they were of a type well known in primitive religion, and carry us back to a stage far earlier than the developed theology of later Iranian times. Nor can we say more of the rites in which the initiates partook; Christian writers found an analogy to the eucharist in the Mithraic communion of bread and water (*ἄρτος καὶ ποτήριον ὕδατος* [Justin, *Apol.* i. 66], *panis oblatio* [Tert. *loc. cit.*]), which seems to be represented on the Konjica relief.

[1] *Les Cultes païens dans l'empire romain*, ii. 144 ff.

[2] *Notizie degli Scavi*, 1912, p. 328.

[1] A relief from Arčer, now at Sofia (*ARW* xv. [1912] pl. i. 4), shows a kneeling figure wearing the 'Phrygian' cap, partly hidden by a veil held by two other figures. Rostowzew (p. 53) explains this with reference to the phrase quoted in the text

9. Sanctuaries, ritual, and monuments.—The central act of worship in Mithraism, however, appears to have been the sacrifice of the bull, the prototype of which was the slaying of the bull by Mithra himself, represented in relief in every Mithraic sanctuary. These places of worship were described by the term *spelæum* (*CIL* iii. 4420 = Cumont, ii. 146), for which we also find *crypta* (*CIL* iii. 1096 = Cumont, ii. 132) and *antrum* (*CIL* vi. 754 = Cumont, ii. 94), and were often established in natural caves or grottoes, as, *e.g.*, on the north slope of the Capitol at Rome, beneath the church of Araceli. As a rule, however, the place of the grotto was taken by a subterranean crypt, approached by a stairway; the chapels attached to private houses were naturally placed in cellars—*e.g.*, the Mithræum below the church of San Clemente in Rome. It should be noted that the Mithræa are never of great size, and, where the adherents of the worship were numerous, the number of *spelæa* was multiplied. Thus Ostia possessed five, Aquincum at least four, and Carnuntum three sanctuaries. The more elaborate examples show a fore-court, or *pronaos* (the term is used in *CIL* xiv. 61), leading to a small chamber, whence the staircase descended to the crypt in which the mysteries were celebrated. This was traversed by a central passage, on either side of which were *podia* about six feet broad with inclined surfaces. Whether, as Cumont supposes, the worshippers knelt upon these, or reclined upon them while partaking of the ceremonial banquet, it is hard to say. At the extremity of the crypt, which often took the form of an apse (called *exedra* in *CIL* iii. 1096), was placed the relief of Mithras and the bull, often accompanied by other sculptures, such as figures of Cautes and Cautopates or the lion-headed Kronos.

The symbolism of these monuments is not easy of interpretation, and ancient texts help us little. In the central scene, the type of which (as was mentioned above) was certainly fixed by a Pergamene artist, probably in the 2nd cent. B.C., Mithras, clothed in the conventional costume which in Greek art signified the Oriental, places his left knee on the back of a bull, and, seizing its horn (or muzzle) with the left hand, plunges a knife into its throat.[2] The scene of the action is a cave, the prototype of the *spelæum*, which sometimes contains plants or even trees. A scorpion fastens on the testicles of the dying bull, while a dog, and usually a serpent also, drink the blood which flows from the death-wound. A crow is almost always present, perched either on Mithras's mantle or on the edge of the cave. Finally, we have a significant detail in the ears of corn in which the tail of the bull terminates (or which, in some instances, spring from the wound). In interpreting the scene we must also take into account a second representation with which the reverse of the slab is decorated at Heddernheim (Cumont, ii. pl. viii.). Here Mithras stands beside the body of the slain bull, holding a drinking-horn in his left hand and receiving from the hands of the sun-god a bunch of grapes. On either side are the figures of children holding baskets of fruit; in the background a radiate cap is planted on a pole; and in an upper register we have a scene in which a central figure, unfortunately defaced, is surrounded by animals (dogs, wild boar, sheep, ox, possibly horse). The explanation of these scenes can hardly be doubtful. We read in the *Bundahishn* (esp. xiv. 1) of the bull which was the first creation of Ahura Mazda, and was slain by Ahriman, but through its death gave birth to vegetable life on the earth; from its spinal marrow 'grain grew of fifty-five species, and twelve species of medicinal herbs.' Moreover, its seed was 'carried up to the moon, where it was purified and produced the manifold species of animals' (*ib.* 3). From its blood, again, sprang 'the grape-vine from which they make the wine' (*ib.* 2). Though we cannot definitely trace this cosmogony to earlier Avestan sources, it is indubitably of great antiquity; and the Mithraic monuments offer a remarkable modification of it. Here the central doctrine that the death of the bull was the source of life, both animal and vegetable, remains the same; but the killing of the animal is not the act of the evil spirit, but a sacrifice performed by Mithras himself, probably acting as the minister of Ahura Mazda, whose messenger we may see in the crow.[1] The function of the creatures of Ahriman (scorpion and serpent) is limited to that of endeavouring to nullify the miracle in process. But the significance of the scene was not only cosmological; it was also eschatological, for the new creation to which the Zoroastrian looked forward at the end of time was to be heralded by the sacrifice of a second bull, this time by the 'redeemer' (Saoshyant) (*Bundahishn*, xxx. 25). Nor can we doubt that these myths, like so many others, were interpretations of a rite older than mythology, and that the sacrifice of the bull was in origin intended to promote fertility and ensure the annual renewal of life on the earth, the bull being chosen as the victim on account of his great generative power.

10. Myth.—The myth of which Mithras was the hero and the slaying of the bull the culminating episode can no longer be reconstructed in its details, but many of its episodes are represented on the monuments. The reliefs of the bull-sacrifice are often enclosed in a framework broken up into small panels, on each of which an episode of the myth is shown. The chief of these are the following.

(1) *Birth of Mithras from the rock.*—On several monuments the figure of the god is seen emerging from a rock, the 'petra genetrix' of several inscriptions (*CIL* iii. 8679 = Cumont, ii. 139, etc.); cf. the expressions θεὸς ἐκ πέτρας (Firmicus, *de Err. prof. relig.* 20), πετρογενὴς Μίθρας (Lyd. *de Mens.* iii. 26), etc. The scene is sometimes completed by the addition of a shepherd or shepherds who witness the miraculous birth.

(2) *Mithras and the tree.*—On some monuments the figure of Mithras is seen half-concealed by a tree from which he seems to be emerging, or, again, which he is stripping of its foliage. The first might be considered as a variant of the birth-scheme, if it did not occur on the same monuments; in any case, it seems to show that Mithras was on one side a vegetation-spirit.

(3) *The archer and the rock.*—Mithras, in Oriental costume,

---

[1] *Vita Commodi*, ix. 6. The statement of Socrates (*HE* iii. 2) that human sacrifices were offered in Mithraism is unworthy of credence.

[2] In the best examples Mithras wears an expression of pathos, as though he were the unwilling instrument of heaven; A. Loisy (*RHR* lxvi. [1913] 538) suggests that this is because god and victim are, in a sense, one; but this seems fanciful. The 'Alexandroid' type used by the artist was a 'romantic' creation.

[1] For the crow in Zoroastrian literature cf. *Bundahishn*. xix. 22.

discharges an arrow at a rock, from which a stream gushes out; a kneeling figure receives the water in his hands or refreshes his throat. Sometimes a suppliant kneels before Mithras and implores him to perform the miracle.

(4) *Mithras and the sun.*—Here there is a series of scenes, of which the following are the most important: (*a*) investiture of the sun by Mithras; the sun-god kneels before Mithras, who places the radiate crown on his head with the left hand, while in the right hand he holds an indistinct object, probably a drinking-horn; (*b*) alliance of Mithras and the sun; the two figures are represented clasping the right hand in token of friendship; (*c*) Mithras conveyed in the sun's chariot across the ocean, represented as a reclining figure in the style of Greek art; (*d*) banquet of Mithras and the sun (sometimes with other guests); they recline on a couch, generally holding drinking-horns, and before them is a small table with viands.

(5) *Mithras and the bull.*—Though the slaying of the bull is never found except as the principal scene, other episodes of the legend are often used in the decoration of the side-panels. The following are the chief: (*a*) and (*b*) the bull in a boat, the bull issuing from a gabled building; these two scenes, when found on the same monument, are always in juxtaposition; in one case (a relief found at Saarburg in Lorraine) two figures in Oriental costume are setting fire to the building; (*c*) the capture of the bull; this is represented in a series of scenes, which display, first the bull at pasture, then Mithras seizing it by the horns, vaulting on its back and riding on it, and eventually either carrying it on his shoulders or, more often, dragging it by the hind-legs, while its fore-feet hang on the ground; the last scene seems to be described by the word *transitus* (*CIL* iii. 14354, 27 and 28).

(6) *Scenes in which Mithras takes no part.*—These are either simple representations of other divinities in the form given to them by Greek art, such as the unexplained head of the Osterburken relief (perhaps = Kronos), the figures of the Earth-goddess, of Atlas, of Oceanus, and the three Fates, or scenes in which Zeus is shown, either receiving the thunderbolt as the symbol of power at the hands of Kronos or in combat with the giants.

No successful attempt has been made to explain the series of representations just described; the last class, no doubt, clothe in Greek form conceptions derived from Persian sources, the identification of which can at best be a matter of guess-work.[1] We can, however, be certain that, whatever the original content of the Mithraic legends, it had been profoundly modified by the astral religion of Babylonia. Mithras, as we saw, was by origin a god of the heavenly light; and it is possible that his birth from the rock may symbolize either the appearance of the dawn on the mountain-tops or the effulgence of light from the vault of heaven conceived as a solid dome. At any rate, there can be no doubt as to the meaning of the two torch-bearers, dressed in the same Oriental costume as Mithras himself, who regularly appear on either side of the scene of the bull-slaying, and are also found at the birth of Mithra. One holds his torch aloft, the other lowers it, and these actions clearly symbolize the rising and setting of the sun,[2] so that Mithras and the torch-bearers form a triad hinted at in the phrase Μίθρας τριπλάσιος (pseudo-Dionys. Areop. *Ep*. vii. 2).[3] But the monuments show that the heavenly phenomena played a still more important part in Mithraism. Mention has been made of the lion-headed figure of human form, wrapped in the coils of a serpent, of which a large number have been found in Mithræa. The figure often has four wings and holds in its hands a pair of keys, or a sceptre and thunderbolt. The symbolism of the figure would be easy of comprehension even apart from the fact that we find the signs of the zodiac engraved on its body in some instances. It represents eternal time, the *zrvan akarana* which became the chief divinity in one of the theological systems that sprang up in the bosom of later Zoroastrianism, and seems to have been described in Greek as Κρόνος, though we have no direct proof of this.[4]

The zodiac is also commonly found either as a framework enclosing the scene of the bull-slaying or, as in most of the reliefs from the *limes Germanicus*, as a border to the upper edge of the *spelæum* in which this takes place. In addition to this, the more elaborate reliefs are almost always decorated with busts of sun and moon, while many also exhibit the planets, or symbols which represent them.[1] We also find the seasons and the winds; and it is beyond doubt that the lion,[2] the *crater*,[3] and the serpent must be combined with these last as emblems of the elements. It may be added that the sea (*oceanus*) and heaven (*cœlus*) are both mentioned on a stele from Heddernheim (Cumont, ii. 156). It is clear, therefore, that in the Mithraic mysteries a complete system of cosmography was taught; nor can there be any doubt of its application to the soul and its destiny. The doctrine of the microcosm, which pervades all the speculations of later antiquity, was popularized by the Stoics, especially by Posidonius, and, together with the astrological doctrines which accompanied it, was derived from Oriental sources. It formed part of the common stock of teaching imparted to the votaries of the various 'other-worldly' religions (of which Mithraism was one) which became diffused throughout the West from the beginning of the Christian era onwards. We should be able to give a more definite account of Mithraic eschatology if we could assume that the 'Mithrasliturgie' published by Dieterich from the Paris magical papyrus (*Bibl. Nat. Suppl. Grec.* 574) deserved that name. This document, committed to writing about A.D. 300, is in its present form part of the stock-in-trade of an Egyptian magician, and is interspersed with *voces magicæ* and supplemented by directions for its use in the *séances* of this practitioner. The question is whether the compiler made use of a genuine Mithraic document; this is suggested by the opening words, which may be translated as follows:

> 'Be gracious unto me, Providence and Fortune, to me, who am writing down these, the first of all traditional mysteries, and grant immortality to my only child, an initiate worthy of this mighty power, which the Great God, the Sun, Mithras, bade his archangel transmit to me, that I alone, an eagle, might soar through the heavens and behold all things.'

It is to be noted that this private revelation made by the initiator to his 'only child' resembles those of the *Corpus Hermeticum* (the product of an Egyptian school of theosophy) rather than the ritual of a community; also that the 'eagle' is introduced into the text by a conjectural emendation of Dieterich. In the revelation itself we find nothing that distinguishes Mithraism from other theosophies, and a good deal which is definitely Egyptian; Dieterich lays stress on the 'golden shoulder of the ox, which is the Great Bear,' which he would recognize in the object held by Mithras in the investiture of the sun as represented on a relief from Virunum (Cumont, ii. 336, fig. 213); but the identification is extremely doubtful; other examples of the same subject show nothing at all resembling an ox's shoulder, and in any case the conception is specifically Egyptian. On the whole, therefore, it is safer to regard the papyrus as nothing more than a syncretistic product.[1] It is likely enough, however, that the ascent of the soul through the seven spheres was taught in the Mithraic mysteries; Celsus (*ap.* Origen, *c. Cels.* vi. 22) explicitly tells us of a 'ladder with seven gates' made of the seven metals assigned to the planets which was shown to the initiates; Porphyry, quoting a certain Eubulus, who attributes to Zoroaster the doctrine that the 'cave' was a symbol of the universe, of which Mithras was the creator, speaks of it as containing *κατὰ συμμέτρους ἀποστάσεις σύμβολα τῶν κοσμικῶν στοιχείων καὶ κλιμάτων*;[2] and it can be no accident that in one of the Mithræa at Ostia six semi-circles are traced on the floor of the central passage, while six planets are represented on the walls of the *podia* and the signs of the zodiac on their upper surface (Cumont, ii. 243–245). Beyond this all is speculation; and Porphyry himself probably knew little more than we do, for he mentions (*de Abstin.* iv. 16) as his chief authority on the mysteries a certain Pallas, who explained the animal disguises worn by the initiates either as symbols of the zodiacal constellations or as shadowing forth the doctrine of metempsychosis (which Eubulus also stated to be Mithraic). It is not necessary to repeat the astrological speculations, confused in themselves, by means of which Porphyry endeavours to interpret the symbols of Mithraism; but there can be no doubt that the all-pervading influence of astrolatry affected Mithraic doctrines. Thus we sometimes find that the figures of Cautes and Cautopates hold the symbols of the bull and the scorpion, the signs which mark the beginning of spring and winter.

---

[1] Explanations differing in some respects from those of Cumont are given by Toutain, *RHR* xlv. [1902] 145 ff.

[2] But see also § 9 *sub fin.*

[3] No explanation can be given of the names Cautes and Cautopates applied, as the inscriptions show, to these figures; that they were by-forms of Mithras himself is proved by the full expression 'Deo M(ithræ) C(auto)p(ati) S(oli) I(nvicto),' *e.g.* *CIL* vii. 650 = Cumont, ii. 161.

[4] F. Legg (*PSBA* xxxiv. [1912] 138 ff.) prefers to see in this figure a representation of Ahriman, whose worship by Mithraists is attested by dedications 'deo Arimanio' (Cumont, ii. 98, 141). A mutilated relief at York (Cumont, ii. 393) seems to represent this figure with some variation from the usual type, and the inscription (also mutilated) contains the name ARIMANIV(S).

[1] On a relief from Apulum (Cumont, ii. 311) we find a series of the following four objects: (*a*) sacrificial knife, (*b*) altar, (*c*) *pileus*, (*d*) tree, repeated seven times. These symbols represent the elements, and their repetition indicates that each planet contained all four.

[2] 'Ardentis naturæ sacramenta leones Mithræ philosophantur' (Tert. *adv. Marc.* i. 13).

[3] *παρὰ τῷ Μίθρᾳ ὁ κρατὴρ ἀντὶ τῆς πηγῆς τέτακται* (Porph. *de Antro Nymph.* 18).

11. Final phase.—In its final phase Mithraism was absorbed into the 'solar pantheism' which supplied Roman society in the 3rd and 4th centuries with a theology reconciled with contemporary philosophy and science, and became, under Aurelian, the official religion of the Roman State.[3] 'Sol invictus,' as the ruler of the universe was called in a phrase of Oriental associations, was represented on earth by the emperor, and his identification with Mithras was far easier than many others which syncretism was able to effect. Thus 'invictus Mithras,' 'deus invictus Mithras,' or (in full) 'deus Sol invictus Mithras' became the commonest title of the god. It was with this modification that Mithraism bade fair during the last quarter of the 3rd cent. A.D. to become a world-religion. The State-cult of Sol was no more fitted than the worship of the emperor to satisfy the religious instinct; but Mithraism could supply the defect through its mystical teaching and its ties of brotherhood; and it was, besides, *par excellence* the religion of the army and the official classes. In A.D. 307 Diocletian, Galerius, and Licinius, meeting in conference at Carnuntum, dedicated an altar to Mithras, 'fautori imperii sui,' in one of the oldest centres of his worship in the empire; but the victory of Constantine dispossessed him in favour of a rival creed, which had struck its roots more deeply in those populations of the empire which were less immediately in touch with the legions and the official hierarchy. It became clear that the vogue of Mithraism was in large measure an artificial one, created by the powerful machinery of the imperial government. When Mithraism sank from a position of privilege to one of toleration, and before long became an object of persecution, its days were numbered. It lingered on, on the one hand, in certain less civilized outposts of empire and in the Alpine valleys, while, on the other, it became the symbol of a lost cause to the group of cultured pagans which maintained the defence of paganism in the senate-house. The emperor Julian, whose oration, *εἰς βασιλέα* Ἥλιον, is a characteristic exposition of 'solar theology,' was a votary of Mithras; but his attempt to revive the defunct creed of the pagan emperors and to give it an organization resembling that of Christianity was still-born. After his death persecution began in earnest, and, as far as the evidence enables us to judge, the destruction of Mithræa was wide-spread during the reign of Gratian. The letter of St. Jerome quoted above, which enumerates the seven Mithraic grades, describes such an act performed in Rome by Gracchus, *præfectus urbi* in A.D. 377. The latest inscriptions in which Mithras is named are those of the group of senators belonging to the society of which Macrobius's *Saturnalia* gives us a picture. Vettius Agorius Prætextatus († A.D. 385) is called 'pater sacrorum' (*CIL* vi. 1779 = Cumont, ii. 95) and 'pater patrum' (*CIL* vi. 1778 = Cumont, ii. 95), and these inscriptions are the latest datable evidences of the cult. The measures of Theodosius gave the death-blow to the practice of pagan worship; and the Mithræum at Saarburg in Lorraine was destroyed in his reign.

12. Relations with other cults.—Mithraism lent itself readily to alliances with other worships, especially those of female divinities, which supplied what it was unable to offer to women; and it seems to have been specially associated with the cult of the Magna Mater. We find their sanctuaries adjoining each other at Ostia and on the Saalburg; dedications are commonly made simultaneously to both divinities; and the *taurobolium*, which (whatever its origin) was certainly attached to the worship of Magna Mater in the West, received an added significance when interpreted in terms of Mithraism, in which the life-giving blood of the bull became the pledge of immortality. In the Danube region a curious by-form of Mithraism is revealed to us by a series of reliefs and leaden plaques which have been interpreted by Rostowzew in the article (in Russian) quoted above. Here a female goddess, whose attribute is a fish, no doubt a local derivative of Anāhita, is accompanied by two mounted figures, in whom we must recognize a duplication of the horseman Mithras found on the coasts of the Black Sea.

LITERATURE.—The great work of **Franz Cumont**, *Textes et monuments figurés relatifs aux mystères de Mithra*, 2 vols., Brussels, 1896–99, supersedes all previous treatises, a list of which he gives in vol. i. p. xxi ff.; he has also published an abridgment of his larger work under the title *Les Mystères de Mithra*^{3}, Paris, 1913, in which the bibliography of the subject is brought up to date; the earlier editions of this work have been translated into English and German. Among recent works the most important are **A. Dieterich**, *Eine Mithrasliturgie*^{2} (ed. R. Wünsch), Paris and Berlin, 1910, and **J. Toutain**, *Les Cultes païens dans l'empire romain*, Paris, 1908–11, vol. ii. ch. iv., 'Le Culte de Mithra.' Other works and articles dealing with special points are referred to in the course of the article. For the Vedic Mitra see **A. A. Macdonell**, *Vedic Mythology*, Strassburg, 1897, §§ 13, 44, and authorities there cited, especially **A. Hillebrandt**, *Varuṇa und Mitra*, Breslau, 1877; **H. Oldenberg**, *Die Religion des Veda*, Berlin, 1894; **A. Eggers**, *Der arische Gott Mitra*, Dorpat, 1894. For the Avesta Mithra see especially **M. N. Dhalla**, *Zoroastrian Theology*, New York, 1914, pp. 103–111.

H. STUART JONES.

MOAB.—The name 'Moab,' like that of the neighbouring peoples, Israel, Edom, Ammon, Aram, etc., appears to have been the name of a race rather than of a district, for, as G. A. Smith has pointed out (*EBi*, art. 'Moab,' § 1), in Nu

---

[1] We do not even know what was the language officially used in the Mithraic communities. The inscriptions are naturally for the most part in Latin. Some Persian words occur—*e.g.*, *nabarze* (usually connected with Pers. *nabard*, *nabardah*, 'courageous'; this etymology, proposed by G. Kuun, *Arch. epigr. Mitteilungen*, vi. [1882] 107, is uncertain because of the Pahlavi form, *n(i)part*, 'battle'; Persian was scarcely spoken as early as the Mithraic period), as an epithet of Mithras, and *nama sebesio*, where *nama* probably = 'praise' (cf. Cumont, i. 314, note 2).

[2] *de Antro Nymph.* 6.

[3] For this see esp. Cumont, 'La Théologie solaire,' *Mémoires présentés à l'acad. des inscriptions*, xii. [1909].

21^{11-15} (cited by F. Brown, S. R. Driver, and C. A. Briggs, *A Heb. and Eng. Lexicon of the Old Testament*, Oxford, 1906, p. 555, as evidence that the name Moab=‘territory of Moab’), ‘in v.^{13} Moab is parallel to the Gentilic Amorite ; in v.^{15} also it is the people.’ The derivation and meaning of the name are unknown. The etymology מֵאָבִי, ‘from my father,’ given in Gn 19^{37} (LXX), which doubtless gave rise to the malicious story of Moab's origin, is merely popular. Since Moab and Ammon are represented as related to Israel through Lot, Abraham's nephew, whereas Esau is Jacob's twin brother, we may conclude that at the time when these stories took shape the Israelites considered that the Moabites and Ammonites, though of kindred stock, were by no means so closely related to them as Edom. Moab is said to be descended from Lot's elder daughter (Gn 19^{37}); therefore it was probably supposed that the settlement of Moab preceded that of Ammon. Whether the Moabites themselves possessed any tradition of a migration from Mesopotamia may well be doubted, the statements of Gn 11^{31} $12^{4f.}$ being perhaps mere inferences from the belief that the Israelites were connected with Mesopotamia. Since, however, the expression ‘children of Lot’ (Dt $2^{9.19}$, Ps 83^{8}) scarcely rests directly upon Gn $19^{37f.}$, Lot was probably more prominent in early times than the OT as a whole would imply; but whether the Moabites and Ammonites regarded themselves as ‘children of Lot,’ or succeeded them in the districts which they occupied, cannot be determined. The late antiquarian note in Dt 2^{10} implies that the population of Moab was not altogether homogeneous, while the place-names clearly show Canaanite influence.

The constant boundary of Moab on the west was the Dead Sea and the Jordan ; the north, east, and south frontiers varied from time to time. Probably the Wādy el-Ḥasy represents the farthest extent of Moabite territory to the south and the Ḥajj road that to the east. The Wādy Nimrīn, some 8 miles north of the Dead Sea, may be taken as the extreme northern limit (see G. A. Smith, *op. cit.* § 2).

Beyond the mere mention of Moab as included in the conquests of Ramses II. nothing is known of its history before the period of the Israelite invasion of Palestine. According to Nu 21^{21-31}, shortly before the arrival of Israel, an Amorite king, Sihon, seized the Moabite territory north of the Arnon. What circumstances determined the Israelite invasion of Palestine from the east is not certainly known, but it is not unlikely that the Israelites attacked Sihon in response to an appeal from the Moabites (as Wellhausen, *EBr*^{9}, art. ‘Israel,’ has suggested), and that it was only after the defeat of Sihon that the Moabites discovered that their allies had no intention of giving up the fruits of their victory. There is certainly no valid reason for disputing the general historicity of the tradition. The statement that Reuben was the first-born son of Israel naturally implies that Reuben was the first tribe to obtain a settlement, while the assignment of Moabite territory to Reuben, and the belief that Moses died and was buried there, as well as the tradition that the Israelites crossed the Jordan near Jericho, all point to a belief that N. Moab was occupied at least for a time by Israel. After the invasion of W. Palestine, however, the Israelites were disintegrated and engaged in a perpetual conflict with the Canaanites, Philistines, etc. (see art. ISRAEL), with the result that the Moabites were able to recover their own. The tribe of Reuben, in spite of its reputation for bravery, was nearly exterminated (Gn $49^{3f.}$, Dt 33^{6}), and Moabite rule was extended even over the Jordan valley west of the river. For a time, indeed, Moabite aggression was checked by Ehud, but we find Israel and Moab again at war during the reign of David, and perhaps also during that of Saul.[1] But, although David's treatment of Moab is said to have been drastic enough, Moab was not incorporated in Israel. The Moabites merely ‘became servants to David, and brought presents’ (2 S 8^{2}). It may be inferred that Reuben had already been nearly exterminated or practically absorbed in Moab. Whether Moabite influence was strong in Jerusalem in the days of Solomon, notwithstanding 1 K $11^{1-8.33}$, is very doubtful ; Solomon's idolatry is described in terms of a later age. It was probably during his reign or that of Rehoboam that Moab recovered independence.

Under the vigorous rule of Omri the Moabites again felt the hand of Israel. According to the inscription of Mesha (found at Dîbān [Heb. Dîbhôn] in 1868, commonly called the Moabite Stone), the period of Israelite domination occupied forty years.[2] It is not necessary to suppose that Mesha's inscription is earlier than the events recorded in 2 K 3, for it is clear from that account that the campaign of the allied kings was unsuccessful. Moreover, an ancient king in recording his achievements was naturally silent about his reverses.

The independence which Moab recovered under Mesha was perhaps lost again in the reign of Jeroboam II. It is, however, impossible to speak with certainty on this point, for the south limit of Jeroboam's kingdom is given as ‘the sea of the Arabah’ (2 K 14^{25}), and may refer only to the north of the Dead Sea. For ‘the sea of the Arabah’ Amos (6^{14}) speaks of ‘the brook of the Arabah,’ which has been identified with ‘the brook of the ‘*Ărābhîm*’ or ‘willows’ (Is 15^{7}), which by some has been identified with the Wādy el-Ḥasy. These identifications are, however, by no means certain, and the order of names in the preceding verses of Is 15 suggests that ‘the brook of the willows’ is to be sought in the north of Moab. Amos (2^{3}) mentions a judge of Moab in lieu of a king, and it has accordingly been argued that at the time Moab possessed no king of its own ; but this cannot be decided with certainty.

During the Assyrian period Moab appears to have shown more prudence than the Israelite kingdom in bowing to the storm. Tiglath Pileser exacted tribute, and, although in 711 B.C. Sargon mentions Moab in conjunction with Philistia, Judah, and Edom as having formed an alliance with Egypt, Moab probably avoided an invasion by a timely submission. It continued subject to Sennacherib, Esar-haddon, and Assurbanipal, and, according to 2 K 24^{2}, furnished troops to Nebuchadrezzar against Jerusalem. Doubtless in Moab as in Judah there was throughout a party bent on regaining the national independence, and at the beginning of the reign of Zedekiah of Judah (Jer 27) this party appears to have been in power. Yet no actual revolt from Nebuchadrezzar seems to have taken place, and Moab afforded an asylum to fugitive Jews (Jer 40^{11}). It is not improbable that after the destruction of Jerusalem the policy of Moab coincided with that of the king of Ammon, who apparently intended by the murder of Gedaliah to compel Judah to join a confederacy against the Chaldæans.

---

[1] The summary of Saul's wars (1 S 14^{47}) bears such a strong resemblance to that of David's (2 S 8) that it may be doubted whether there was any definite tradition of a campaign of Saul against Moab. Hostilities between Saul and Moab would not indeed be inconsistent with 1 S $22^{3f.}$, and David, when he succeeded to the throne, would at once stand in a different relation to the king of Moab from that which he had occupied as a rebel against Saul.

[2] A discussion of the way in which this statement is to be harmonized with the Biblical chronology lies outside the scope of this article. It is to be noted that, although by ‘the son of Omri’ Mesha probably means Ahab, the expression would not preclude a later successor (see W. H. Bennett, *The Moabite Stone*, pp. 20–22).

Moab was menaced, however, by a danger even more formidable than that from Assyria or Babylonia: east and south the country was exposed to invaders from the desert, and Ezekiel ($25^{8\text{f.}}$) already perceived the coming disaster. The criticism of Jeremiah (48), which describes the devastation of Moab, is extremely difficult; the chapter, however, appears to be to a great extent a cento of various earlier passages, and this in itself implies a late date. Is 15–16^{12}, which is used by the author of Jer 48, notwithstanding the corrupt condition of the text and later modifications, gives a clearer picture of Moab's disaster. Here it is evident, if we argue from the names of places which may be identified with tolerable certainty, that the invader advances from south or south-east to north or north-west, and therefore cannot be the Assyrian, Chaldæan, or Persian, but must be a foe from the desert.[1] With this invasion the national existence of Moab came to an end, though Jewish writers long continued to mention the country by the old name (Is 25^{10}, Ps 60^{8} 83^{6} 108^{9}). It is remarkable that the name Moab does not occur in 1 Maccabees. It is found, however, in Dn 11^{41}, and Josephus (*Ant.* I. xi. 5, XIII. xiii. 5, XV. 4) uses the term 'Moabites' to denote the Nabatæan Arabs.

The language of Moab, as we know from Mesha's inscription, was Hebrew, differing only dialectically from the language of the OT. It is, indeed, not impossible that what we regard as peculiarities of Moabite speech once belonged also to the spoken Hebrew of W. Palestine. Although portions of the OT are earlier than the 9th cent. B.C., they were probably long preserved in an oral form, in which case peculiarities of dialect may well have been modified.

The land of Moab affords many proofs even in these days of its former fertility and prosperity. The OT has several references to the cities of Moab, many of which are named, and mentions its vineyards as well as its sheep. Being situated off the direct line of communication between Egypt and the great Asiatic empires, it was less liable than W. Palestine to be made a battlefield, though doubtless there was constant need of warding off the attacks of dwellers in the wilderness. On the whole, however, Moab seems to have had a far more peaceful history than Israel. In the words of Jer 48^{11}, 'Moab had been at ease from his youth, and had settled on his lees, and had not been emptied from vessel to vessel, neither had he gone into captivity.'

The religion of Moab presents many parallels to the popular religion of Israel in pre-Exilic times. There is no evidence, however, that any great Moabite prophets, if such existed, could point, as did the Israelite prophets, to a tradition of purer religion in the past. Like Israel, Moab had taken possession of a land containing stone circles (in OT language, *gilgāls*) and other primitive monuments, and it is probable that in the land of Moab, as in W. Palestine, some of these were adapted to the worship of the later strata of population. From the occurrence of such names as Baal-Meon and Baal-Peor it may be inferred that the pre-Moabite religion of the land resembled the pre-Israelite religion of W. Palestine, and was in fact Canaanite. This inference is confirmed by the occurrence of the curious compound 'Ashtar-Chemosh' (Moabite Stone, line 17); for Ashtar is probably a masculine form of the name familiar to us as Ashtoreth, and the combination of it with Chemosh suggests that some ancient sanctuary of Ashtar or Ashtoreth had been appropriated by Chemosh, just as the ancient sanctuaries of Canaan in W. Palestine came to be considered sanctuaries of Jahweh. We know both from the OT and from the Moabite Stone that Chemosh was the national god of Moab exactly as Jahweh was the national God of Israel. Indeed, the Moabite conception of Chemosh appears to have coincided with the ordinary Israelite conception of Jahweh. The name Chemosh appears compounded in proper names precisely as the name Jahweh. Thus Mesha's father's name was Chemosh in combination with some word which has been variously read as *melekh* and *gad*; a Chemosh-nadab (cf. the Israelite name Jonadab) paid tribute to Sennacherib; and the name Chemosh-yahī (cf. the Israelite Jehiah) is inscribed on a gem found near Beirūt (*EBi*, art. 'Chemosh'). Mesha speaks of Chemosh in precisely the same terms as an Israelite of his day might have used in speaking of Jahweh, and in Nu 21^{29} the Moabites are called 'the people of Chemosh' and also his 'sons' and 'daughters.' Evidence of the existence of other cults in pre-Moabite times may be found in the occurrence of such a name as Nebo, but there is no reason for supposing that such worship continued among the Moabites. The name Dawdah, or Dawdoh, occurs on the Moabite Stone (line 12) apparently as a divine name; but, since Ataroth, where the altar-hearth of Dawdoh was seized, was Gadite, the name throws no light on Moabite religion. Whatever the worship of Chemosh may have been before the permanent settlement of Moab, it is extremely probable that it was thenceforth largely intermingled with Canaanite elements. The OT makes it abundantly clear that the worship of Jahweh was tainted in precisely the same way, and Nu 25 affords no evidence that Moab was worse than Israel in this respect; only, whereas, by the 6th cent. B.C., Israelite religion had to a considerable extent been purged of the grosser Canaanite elements, that of Moab remained unreformed. Besides religious prostitution, indications of the prevalence of drunkenness in Moab have been found in Gn $19^{32\text{ff.}}$, Jer 48^{26}; and, having regard to the references to vine-culture, this is not improbable, though the Israelites were scarcely in a position to throw stones. It is related (2 K 3^{27}) that Mesha, when hard pressed by Israel, sacrificed his son, and we may therefore assume that human sacrifice was a definite feature of Moabite religion. Human sacrifice, not only of the infant first-born, but on occasion of other victims also, was common in Israel down to the 7th cent. B.C. Mesha's sacrifice of his son should probably be compared, not with 2 K 16^{3}, Mic 6^{7}, for in the case of Ahaz probably only the ordinary offering of the infant first-born is meant, but rather with Jg $11^{30\text{f.}}$ Cf. also Gn 22, 2 S 21^{9}, 1 K 16^{34}. Further evidence of the general agreement of Moabite religion with that of Israel is to be found in Mesha's boast (Moabite Stone, line 17) that he has banned or made tabu the population of Nebo.

The danger to Israel of intimate intercourse with a people closely akin in race, speaking the same language, and holding religious ideas similar to those of which the prophets had so earnestly laboured to rid Israel, was clearly perceived by the Israelite reformers, and will partly account for the stringent law in Dt 23^{3}, though political considerations may also have dictated this.

LITERATURE.—See the excellent articles on 'Moab' in *HDB* and *EBi*; also W. H. Bennett, *The Moabite Stone*, Edinburgh, 1911, with the bibliography there given (p. 64).

MODERATION. — Cicero in an interesting passage expresses some hesitation as to the proper Lat. equivalent of the Gr. word *σώφρων* :

> ‘Veri etiam simile illud est, qui sit temperans, quem Graeci *σώφρονα* appellant, eamque virtutem *σωφροσύνην* vocant, quam soleo equidem tum temperantiam, tum moderationem appellare, nonnunquam etiam modestiam; sed haud scio an recte ea virtus frugalitas appellari possit’ (*Tusc. Quæst.* iii. 8).[1]

He proceeds to describe the virtue in question as follows :

> ‘Eius videtur proprium, motus animi appetentis regere et sedare, semperque adversantem libidini, moderatam in omni re servare constantiam.’

Moderation, according to this view, is a part of temperance. If temperance consists in self-control in regard to the pleasures of sense, moderation is self-control exercised in less difficult spheres. Limitation (*modus, moderatio*) is, of course, a feature in all virtue; this idea has a long history in the philosophy of Greece, and takes formal shape in Aristotle's doctrine of ‘the mean’ which gives expression to the peculiarly Greek notion that virtue in its essence means ‘harmony, grace, and beauty in action’ (see A. Grant, *The Ethics of Aristotle*^{2}, London, 1866, vol. i. essay iv.).[2] The word ‘moderation,’ however, is in Christian ethics specially assigned to the virtue which ‘in least things sets the limit.’ If temperance is concerned with strong passions, moderation controls those which are less vehement. Such, at any rate, is the view of Aquinas in his discussion of *modestia* (*Summa*, II. ii. 160).

Following the guidance of Aquinas, we find that ‘moderation’ is chiefly concerned with four matters : (1) the desire of excellence or superiority ; (2) the desire of knowledge; (3) the outward actions concerned with the conduct of life, business, and recreation, work and rest, etc. ; (4) apparel, furniture, and the external apparatus of life.

Each of these points is fully discussed by Aquinas in II. ii. 161–169.

(1) As regards the desire of superiority, the virtue which moderates it and regulates it is humility (*q.v.*).

(2) The virtuous control of the desire of knowledge is called by Aquinas *studiositas* as opposed to a form of excess which he calls *curiositas* (cf. Aug. *Conf.* X. xxxv. 54). Little needs to be added to the discussion in the *Summa* (II. ii. 166, 167). We may, however, call attention to a fine passage in Bernard (*in Cant.* xxxvi. 3), who points out that in 1 Co 8^{2} St. Paul ‘non probat multa scientem, si sciendi modum nescierit.’ Christian moderation, he says in effect, will prescribe the limitations under which knowledge should be pursued, in respect of the choice of subjects, the degree of zeal, and the purpose of the student. He lays great stress on the question of motive. Those who wish to know merely for the sake of knowing give way to ‘turpis curiositas.’[3] Those who pursue knowledge ‘ut aedificent’ are guided by charity; those who seek it ‘ut aedificentur,’ by prudence (cf. T. Wilson, ‘Maxims of Piety and Morality,’ no. 429 [*Works*, Oxford, 1847–63, v. 423]).

(3) Moderation in the matter of work and recreation and other corporal actions and movements is discussed in *Summa*, II. ii. 168. What Aquinas says practically amounts to this—that man's external behaviour is to be consistent with his dignity as a reasonable being and with the claims made upon him as a member of a community. What St. Paul means to imply in the words *σεμνός* and *κόσμιος* is here in point (1 Ti $3^{2.4}$), as to which Trench (*Synonyms of the NT*, Cambridge, 1854, § xcii.) draws the following distinction :

> ‘Whatever there may be implied in *κόσμιος*,[1] . . . something more is involved in *σεμνός*. If the *κόσμιος* orders himself well in that earthly *πολιτεία*, of which he is a support and an ornament, the *σεμνός* has a grace and dignity not lent him from earth; but which he owes to that higher citizenship which is also his,’ etc.

Aquinas deals at length with the question of recreation, but says little as to the duty of moderation in work. This point is one which has its importance for us owing to the conditions of modern industrial life. It has been said of the Anglo-Saxon race that ‘an excess of industry,’ ‘intemperate labour,’ is one of its most prominent characteristics (A. Wylie, *Labour, Leisure, and Luxury*, new ed., London, 1887, p. 19). Christian moderation implies such self-restraint in the matter of labour as will give fair play to the faculties, spiritual and mental, which are not absorbed in the business of life (on this point W. Law writes suggestively in his *Serious Call*^{10}, London, 1772, ch. iv.). On the other hand, pleasure-worship is a more obvious peril of our time. In every class there are multitudes who are ‘lovers of pleasures more than lovers of God’ (2 Ti 3^{4}), and the result is seen in a wide-spread enfeeblement of will and conscience. Recreation is, of course, a duty which we owe to our nature—a duty distinctly implied in the Fourth Commandment, and there is a virtue concerned with the due regulation of the natural desire for relief from labour.

> ‘Ludendi etiam est quidam modus retinendus’ (Cic. *de Off.* i. 29; cf. 34).

We can scarcely on this point improve upon the maxim of Aristotle that in determining the right mean in such matters tact alone (*ἐπιδεξιότης*) can decide, *i.e.* a sense of fitness trained by exercise and reflexion.[2] Aquinas points out that, as there can be sinful excess in the matter of amusement, so there may be a wrong defect, for a man in social intercourse must ‘show himself friendly’ (Pr 18^{24}).

> ‘It is contrary to reason for a man to make himself irksome to others, taking no pains to please them and even hindering their pleasures’ (*Summa*, II. ii. 168. 4 resp.).

Still, since amusement is to be sought with a view to labour (Arist. *Eth. Nic.* x. 6. 6 : *παίζειν ὅπως σπουδάζῃ*), happiness does not consist in amusement, and to make a serious business of it is ‘foolish and very childish’ (*ib.*). Christian *tact* in these matters was what the Puritans of the 17th cent. lacked. They were credited with the opinion that ‘no honest mirth or recreation is lawful or tolerable in our religion’ (see the *Declaration* of Charles I. of 18th Oct. 1633, which may be found in H. Gee and W. J. Hardy, *Documents illustrative of Eng. Church Hist.*, London, 1896, p. 528 ff.). The Puritan, says J. R. Green, lacked ‘all sense of measure and proportion in common matters.’[3] John Bunyan's sin which ‘he could not let go’ was ‘a love of hockey and of dancing on the village green.’ It was in the midst of ‘a game of cat’ that the converting voice ‘did suddenly dart’ into his soul (Green, v. 103 f.).

(4) The virtue of moderation finally finds scope in the *minutiæ* of external apparel, furniture, and other conveniences of life (cf. Cic. *de Off.* i. 39 : ‘eadem mediocritas ad omnem usum cultumque vitae transferenda est’; see also i. 35, and cf. Basil, *Hom. de Humilitate*, vii., and Ambrose, *de*

---

[1] Cf. *Orat. pro Deiot.* ix. 26 : ‘Ego frugalitatem, id est, modestiam et temperantiam, virtutem esse maximam iudico’ (quoted by Aug. *de Beata Vita*, 31). Ambrose, in *de Off. Min.* i. 43, treats moderation and temperance as synonymous.

[2] Cf. Aug. *de Nat. Boni*, 3; Aquinas, *Summa*, II. ii. 141. 7.

[3] Cf. Seneca, *Ep.* lxxxviii. 36 : ‘Plus scire quam sit satis, intemperantiae genus est.’

[1] Theodoret (on 1 Ti 3^{2}) remarks that the word *κόσμιος* implies good behaviour in voice, appearance, and gait, *ὥστε καὶ διὰ τοῦ σώματος φαίνεσθαι τὴν τῆς ψυχῆς σωφροσύνην*.

[2] The virtue concerned with recreation, according to Aristotle, is *εὐτραπελία*, for which *urbanitas* or *comitas* might be a fair Latin equivalent. As to the peculiarly Greek grace of *εὐτραπελία* see *Eth. Nic.* iv. 8; cf. Thuc. ii. 38, 41.

[3] *Hist. of the English People*, London, 1895–96, v. 102; cf. Ambrose, *de Off. Min.* i. 18 [78], who derives *modestia* ‘a modo scientiae quid deceret.’

Off. Min. i. 18). We may note that the word κόσμιος is applied to the dress of women (1 Ti 2^{9}), and a similar expression, ἐν καταστήματι ἱεροπρεπεῖς, is found in Tit 2^{3}. The principle implied seems to be that a person's dress is to be proportioned to his station or office in life, or to the occupation in which he may chance to be engaged (work, or recreation, or worship).[1] Law goes to the root of the matter when he represents 'Paternus' as advising his son on these points:

> 'Let your dress be sober, clean, and modest, not to set out the beauty of your person, but to declare the sobriety of your mind, that your outward garb may resemble the inward plainness and simplicity of your heart. For it is highly reasonable, that you should be *one man*, all of a piece, and appear outwardly such as you are inwardly' (*Serious Call*, ch. xviii.).[2] As to the dress of women see what is said of 'Miranda' (ch. ix.).

It may be objected that this entire account of 'moderation' is somewhat arbitrary. The fact is that moralists have evidently found difficulty in distinguishing between the different spheres of action in behaviour which are regulated by moderation, sobriety, and temperance respectively. There is, however, practical convenience in following the line suggested by Aquinas. He may be criticized as over-systematic, but we need not suppose that his classification is intended to be exhaustive. The virtue which 'in minimis modum ponit' will be differently estimated according to the various circumstances in which men find themselves placed:

> 'Quaerendum etiam in omni actu quid personis, quid temporibus conveniat atque aetatibus, quid etiam singulorum ingeniis sit accommodum. Saepe enim quod alterum decet, alterum non decet' (Ambrose, *de Off. Min.* i. 43 [212], speaking of moderation).

It remains to add that the word 'moderation' occurs in AV only in Ph 4^{5} (τὸ ἐπιεικές). In RV the word is translated 'forbearance.' The grace which St. Paul has in mind—'considerateness' or 'reasonableness'—is, of course, a form of that beautiful 'moderation' which Wilson describes in 'Sacra Privata' (ed. Oxford, 1849, p. 41 [*Works*, v. 31]) as 'the way of an happy life':

> 'Lay nothing too much to heart; desire nothing too eagerly; rejoice not excessively, nor grieve too much for disasters; be not violently bent on any design; nor let any worldly cares hinder you from taking care of your soul; and remember, that it is necessary to be a Christian (that is, to govern one's self by motives of Christianity) in the most common actions of civil life.'

This is essentially the spirit enjoined by St. Paul (1 Co 7$^{29-31}$). Cf. Ambrose, *de. Off. Min.* i. 18 [70]:

> 'Magna igitur modestia, quae cum sit etiam sui juris remissior, nihil sibi usurpans, nihil vindicans, et quodammodo intra vires suas contractior, dives est apud Deum.'

MODERATISM.—See EVANGELICALISM.

MODERNISM.

—Modernism is the name given by the papal encyclical which condemned it to a complex of movements within the Roman Communion, all alike inspired by a desire to bring the tradition of Christian belief and practice into closer relation with the intellectual habits and social aspirations of our own time. These movements arose spontaneously and, for the most part, in entire independence of one another during the last decade of the 19th century. Since they had thus a common inspiration and a common purpose, it was neither unnatural nor unfair that the authority which condemned them should unite them under a common designation in a common censure. Yet it is necessary to insist that, in the earlier stages of their development, the various movements grouped together and logically correlated by the author of the encyclical *Pascendi* had little or no conscious connexion, and that it was only the external pressure of adversity that gradually forced them at a later period into mutual relations of a more intimate kind.

It may be well in the first place to sketch briefly the history of this complex movement as a whole, and then to give some account of the various forms which it has assumed. These may perhaps be treated most conveniently under the heads of (*a*) apologetic, (*b*) historical criticism, and (*c*) ecclesiastical and social reform.

1. History.—It must not be forgotten that the Vatican Decrees were the result of a liberal movement in the Church. For its founders, or at any rate for most of them, Ultramontanism was the vision of a Roman Catholicism freed from the entanglements of ancient dynastic contentions and in its new independence pledged to the spiritual leadership of the rising democracies. It was natural that the movement should find its fruitful seed-bed in the countries which had yielded most readily to the spell of the Revolution. Lamennais, Lacordaire, and Montalembert were its chief names in France; in Italy, Gioberti and Rosmini. But the hopes of the earlier Ultramontanism, open to all the winds of the century, perished in 1848. The consolidation of the spiritual empire of the papacy was to be achieved by other instruments and in another spirit. The Council of the Vatican seemed, both to the victors and to the vanquished, to be the definite reproof of the generous dreams which had made it possible. Its reactionary character was accentuated by contemporary happenings—the consolidation of the Italian kingdom at the expense of the temporal power, and the establishment of the Third Republic in France. Yet, in fact, a new era had dawned. Both in the intellectual and in the political spheres new and strange problems urgently demanded the attention of Roman Catholic scholars and thinkers. Many among them felt that the Church was in danger of being paralyzed by the Syllabus and the Vatican decrees, and were resolved that this danger must at all costs be averted. The accession of Leo XIII. in 1878 seemed to give them their opportunity. His numerous encyclicals, while conservative and traditional in tone and perhaps still more so in intention, were nevertheless so framed as to be capable of being turned to account by the progressives. Of these encyclicals, three may be specially recalled: *Æterni Patris* (4th Aug. 1879), which enjoined a return to the traditional metaphysics of St. Thomas Aquinas as the necessary foundation for the demonstration of the chief points of Christian belief; *Rerum Novarum* (15th May 1891), which dealt with the condition of the working classes; and *Providentissimus Deus* (18th Nov. 1893), which expressly condemned 'disquieting tendencies' in Biblical interpretation 'which, if they prevailed, could not fail to destroy the inspired and supernatural character of the Bible.' The warnings and counsels contained in these documents were resumed and reinforced in a further encyclical, dated 8th September 1899, and addressed to the archbishops, bishops, and clergy of France. It may be said that the whole history of Leo XIII.'s pontificate, its success and its failure, is to be found in a comparison of the last of these documents with its three predecessors. Such a comparison reveals a growing alarm on the part of authority at the development both of those new tendencies in apologetic or exegesis which it had attempted to repress and of the social action of the clergy which it had encouraged.

---

[1] In classical writers sentiments of this kind occasionally occur: *e.g.* Hor. *Carm.* I. v. 5; Ter. *Heaut.* II. iii. 47; Cic. *de Off.* i. 36: 'a forma removeatur omnis viro non dignus ornatus; et huic simile vitium in gestu motuque caveatur.'

[2] We are reminded of the advice of Polonius to Laertes in *Hamlet*, act i. sc. 3. Ambrose says strikingly (*de Off. Min.* i. 18 [71]): 'Vox quaedam est animi, corporis motus.'

That alarm was not without justification. It is in France, intellectually and politically the most highly developed country of the Roman Communion, that the reason for it can be most clearly traced. In 1875 the French episcopate secured from the government of the Third Republic the right to establish what were practically Roman Catholic universities free from all State control. Of the foundations thus authorized the most important was the Catholic Institute of Paris, which came into existence in 1878. Among its first professors was Louis Duchesne, a scholar who, though then only thirty-five years of age, had already achieved considerable reputation as an ecclesiastical historian of wide knowledge and independent judgment. Three years afterwards one of Duchesne's pupils, Alfred Loisy, a young priest belonging to the diocese of Châlons, was appointed to the chair of Hebrew at the Institute. Both scholars claimed the right to apply a rigorously scientific method to their respective spheres of research, the one to ecclesiastical history, the other to Biblical exegesis. Their contention was that it was not only possible, but necessary, to distinguish between the requirements of history and of faith. Duchesne's critical boldness in the treatment of ecclesiastical legend speedily aroused the hostility of the traditionalists, and in 1885 he was compelled to suspend for a year his course at the Institute. It was not till 1893 that Loisy was forced to resign his chair—a resignation which was followed by the condemnation, in the encyclical *Providentissimus*, of the principles of Biblical interpretation which he had upheld. During the decade of his connexion with the Institute, however, a group of scholars had been formed who, having become teachers in their turn, carried an enthusiasm for the critical method into the other Catholic Institutes and many of the diocesan seminaries.

The new movement towards a positive theology, as it was called, had its effect also upon the lay world. The beginning of the nineties was marked in intellectual France by what Brunetière described as 'the bankruptcy of science.' This meant that science had proved unequal to the needs of life, that man could not live by science alone, and that religion was coming into its own again. But, if it meant a revolt against scientific dogmatism, it meant equally a revolt against philosophic dogmatism. New tendencies in philosophy were beginning to appear which assigned to the will or to the total activity of the human spirit the principal rôle in determining truth. A young Roman Catholic philosopher, Maurice Blondel, turned these new tendencies to account in the interests of Christian apologetic in a thesis entitled *L'Action*, sustained before the Sorbonne for his doctor's degree on 7th June 1893. A year or two earlier, a group of young members of the university, attracted by the new spirit among the teaching clergy and prepared to find in it a promise of reconciliation between religion and contemporary knowledge and ways of thought, had founded a society which was to embrace those who desired to retain or regain religious belief without sacrifice of intellectual honesty. The society (its title, *L'Union pour l'action morale*, sufficiently indicated its object) had among its members religious freethinkers, Roman Catholics, Protestants, and Jews. On the occasion of a congress of Roman Catholic youth, held at Grenoble in May 1892, Leo XIII. had written a letter to the bishop of Grenoble in which he declared that it was the part of Christian wisdom to promote the co-operation of all men of goodwill, whether believers or those who, while not believers, were yet *naturaliter Christiani*, in the pursuit of individual and social good. This declaration was received with enthusiasm by the members of the new Union, and its president, Paul Desjardins, sought an interview with the pope and obtained from him the assurance of his entire sympathy with its aims. Meanwhile many of the younger clergy had found in the encyclical *Rerum Novarum* and in Leo XIII.'s advice to French Roman Catholics to rally to the Republic the long-awaited opportunity of religious action upon the democracy. Numerous Roman Catholic democratic journals were started, the democratic clergy were invited by many bishops to explain their views to the students of the diocesan seminaries, and public conferences were organized at which men of all shades of democratic opinion were welcomed.

Thus throughout the French Church a new era of intellectual and social activity seemed suddenly to have dawned under the immediate sanction of authority. Leo XIII.'s later pronouncement, it is true, aimed at keeping in check the various phases of the complex movement which his earlier encyclicals had been interpreted as in some degree encouraging. Yet up to the end of his pontificate no individual condemnation had taken place, and that though it was believed that determined efforts had been made to procure the condemnation of Loisy's first attempt to utilize the results of his critical studies for popular apologetic purposes in his little book *L'Évangile et l'église*. This book, published towards the end of 1902, was afterwards described by its author as '(1) a historical sketch and explanatory account of the development of Christianity, and (2) a general philosophy of religion and an essay in the interpretation of dogmatic formulas, official Symbols, and conciliar definitions, with a view to bringing them into agreement, by the sacrifice of the letter to the spirit, with the data of history and contemporary ways of thinking' (*RHLR* xi. [1906] 570). It precipitated a ferment which had been slowly and silently working throughout the Roman Church during twenty years. In Italy, Germany, England, America, and even in Spain, Loisy was suddenly hailed as an interpreter of ideas which had long been more or less clearly present to many minds. His treatment of religion on its side of human growth had welded together the philosophical and the more strictly theological elements of the new apologetic method. His treatment of the nature of ecclesiastical authority in the *Autour d'un petit livre* (a sequel to *L'Évangile et l'église*) served to demonstrate to the social reformers within the Church a close kinship between their own aims and methods and those of the theological reformers. Loisy had all unconsciously become the nucleating centre of a movement which knit together all the various elements of reform and extended its ramifications throughout large sections of the Roman Catholic world.

The election of Pius X. to the papal chair was an opportunity for stern dealing with this new threat to the fixity of Roman Catholic tradition. For some years before the death of his predecessor the peril of the new doctrines had been vehemently proclaimed by the traditional theologians, notably by C. F. Turinaz, the bishop of Nancy, and J. Fontaine of the Society of Jesus. Leo XIII. had probably no sympathy whatever with the attempted reconciliation between the Church and modern life, but he had himself aimed at some reconciliation, and he therefore shrank from direct condemnation. Pius X. had no such difficulty. Reconciliation implied that tradition was perfectible, which he could not admit. He hastened, within a few months of his election, to strike at both the theological and the social activities of the reformers. On 16th December 1903 five of Loisy's books were placed on the Index, and two days afterwards a *motu proprio* was issued which aimed at regulating 'popular Christian action.' The war, which was to be waged during the next four years, had been declared. A varied and continued literary activity, on the one side, was met by repeated condemnations, on the other. Loisy indeed made a formal submission, and devoted himself in silence to the preparation of his great work on the Synoptic Gospels. But Blondel's 'philosophy of action' was popularized by Lucien Laberthonnière, a priest of the Oratory, in a series of articles published for the most part in the *Annales de philosophie chrétienne*, and afterwards issued in two small volumes—*Essais de philosophie religieuse* and *Le Réalisme chrétien et l'idéalisme grec.* In the *Quinzaine*, a review edited by Georges Fonsegrive, a professor of the university, another university professor, Edouard Le Roy, inaugurated a discussion of the nature of religious dogma which provoked a considerable controversy. Le Roy afterwards published, in the form of a volume entitled *Dogme et critique*, a collection of replies to his critics, together with the original articles. In Italy Antonio Fogazzaro, the novelist, launched a programme of ecclesiastical reform, having for its object a general renewal of Christian life, in his novel *Il Santo* (Milan, 1906). In the same country Giovanni Semeria, a Barnabite, did much by his lectures on both the historical and the philosophical aspects of apologetics to disseminate the new ideas, while Romolo Murri, a secular priest of the diocese of Fermo, continued his crusade on behalf of Christian democratic action, undismayed by numerous manifestations of hostility on the part of authority. Among his chief supporters in this crusade was Salvatore Minocchi, a professor of Hebrew at Florence, who had also become known as a Biblical critic through his studies of the Psalms and of Isaiah. In England the movement was represented principally by the writings of George Tyrrell, a member of the Society of Jesus, and Friedrich von Hügel. The latter had read a paper on the progress of OT criticism as it concerned the Hexateuch at a Roman Catholic Congress held at Fribourg-in-Switzerland in 1897, which afforded ample evidence of his accurate scholarship and of the freedom of his critical method and conclusions. Since then he had been engaged on an important work on *The Mystical Element of Religion* (it was not published till 1908), which revealed his originality and depth as a thinker on all the problems connected with religion, while it gave further proof of his competence as a critical historian. Meanwhile he had contributed articles to the *Quinzaine*, *Il Rinnovamento*, and other Modernist reviews, notably a reply to an article by Blondel which had impugned the right of criticism to a complete autonomy in the religious domain, and a defence of critical conclusions with regard to the Pentateuch against a judgment of the papal Biblical Commission affirming its Mosaic authorship (27th June 1906). Tyrrell was already widely known for his frank and bold handling of religious difficulties, but it was his acknowledgment of the authorship of *A Letter to a University Professor*, which had been privately circulated, and his consequent expulsion from the Society of Jesus (Feb. 1906), that brought him to the forefront of the Modernist movement and made him its universally acknowledged leader till his death in July 1909. In Germany the movement was for the most part confined to an agitation for ecclesiastical reform. Franz Xavier Kraus, a professor at Freiburg-im-Breisgau, was the determined opponent of Ultramontanism. An Ultramontane he defined as 'one who places the Church before religion, who identifies the pope with the Church, who is ready to sacrifice a clear decision of his own conscience to the sentence of an external authority' ('Kirchenpolitische Briefe,' ii., in *Allgemeine Zeitung*, Supplement, 1895, no. 211; the letters were signed 'Spektator,' one of the pseudonyms adopted by Kraus; see Schnitzer, *Der katholische Modernismus*, in the series *Die Klassiker der Religion*, p. 39, where the letter is given in full as the work of Kraus). Kraus, however, died in 1902, too early to be involved in the distinctively Modernist controversies. Hermann Schell, a professor in the Theological Faculty at Würzburg, had as early as 1896 published a book entitled *Katholizismus als Prinzip des Fortschritts*, which provoked long and bitter controversy. As a result certain bishops of Northern Germany forbade their priests to attend his lectures. Two years afterwards controversy was renewed over Schell's views on eternal punishment, and four of his books were placed on the Index. Schell made a formal submission after receiving an assurance from the bishop and the Theological Faculty of Würzburg that such submission did not imply any sacrifice of conviction on his part. But he withdrew none of the condemned books from circulation, and continued till his death in 1906 to be the leader of a strong liberal movement in German Roman Catholicism. Among his most influential disciples were Albert Ehrhard of Strassburg, Joseph Schnitzer of Munich, and Hugo Koch of Braunsberg.

Pius X. did not fail to reply to the growing menace of this movement. During the years 1905–06 he issued a series of encyclicals in condemnation of the Christian Democratic movement in Italy. Another series of decisions by the Biblical Commission which Leo XIII. had appointed in 1902 reproved the audacities of criticism in questioning accepted beliefs as to the authorship and authenticity of certain books of Scripture. In April 1906 the works of Laberthonnière and Fogazzaro's *Il Santo* were condemned by the Congregation of the Index. But it was not till the beginning of 1907 that the storm burst in its full fury. Murri was suspended 'a divinis' on 15th April. Two days later the pope delivered an allocution in which he denounced the new movement as 'the compendium and poisonous essence of all heresies,' and called upon the cardinals to aid him in eradicating these evils from the Church. At the end of the same month the Cardinal Prefect of the Index wrote to Cardinal Ferrari, archbishop of Milan, enjoining him to procure the suppression of *Il Rinnovamento*, a Modernist review which had been launched at the beginning of the year. The Cardinal Prefect's letter was remarkable not only for the strong terms in which it denounced the review as 'notoriously opposed to Catholic spirit and teaching,' but also because it took the unusual course of expressly naming certain writers—Fogazzaro, Tyrrell, von Hügel, and Murri. In May the archbishop of Paris, inspired, no doubt, by similar action on the part of the Cardinal Vicar, prohibited the reading of Le Roy's *Dogme et critique*, and at the same time forbade any priest in his diocese to collaborate in Loisy's *Revue d'histoire et de littérature religieuses.* The professors of the Catholic Institute of Paris were at the same time forbidden by the bishops who controlled that seat of learning to contribute to *Demain*, a small Modernist weekly which had been founded at Lyons in 1905. In June Pius X., in a letter of felicitation to Ernst Commer, a professor at Vienna, who had written an attack upon the theology of Hermann Schell, described those who had projected a monument to Schell's memory as 'either ignorant of Catholicism or rebels against the authority of the Holy See,' though among them were the archbishop of Bamberg and the bishop of Passau.

By this long series of censures the way was prepared for a more stringent and inclusive condemnation of all the various heresies, exegetic, apologetic, philosophical, and social, that were troubling the Roman Catholic world. That condemnation was pronounced in the decree of the Inquisition, *Lamentabili sane exitu*, dated 3rd July 1907, and the encyclical *Paecendi Dominici gregis*, of 8th September in the same year. The decree *Lamentabili* was a mere collection of sixty-five propositions which were to be condemned. No indication was given of the sources from which they had been derived, and no writer was condemned by name, but thirty-eight of the propositions were directly concerned with Biblical criticism, and Loisy, in some notes on the decree which he published at the beginning of the following year, accepted its condemnation as directed in large measure against himself. The encyclical *Pascendi* was a document of much greater importance, and was recognized as such by the leading Modernists. Tyrrell met it with vigorous criticism and open defiance in two articles which appeared in the *Times* on 30th September and 1st October, in the full knowledge that he was exposing himself to the severest censures of the Church. On 28th October a more detailed reply was published in Rome under the title *Il Programma dei modernisti.* The encyclical had deduced from an unsound philosophical principle all the various errors which it grouped together under the name of Modernism, and it maintained that the false conclusions of the Modernists with regard to history, dogma, and the Bible were all the necessary result of an erroneous philosophy. To this the *Programma* replied that it was, on the contrary, the undeniable results of historical criticism that had made necessary a new apologetic of some kind.

The attitude of Tyrrell and of the authors of the *Programma* revealed a determination to resist the action of authority. The watchword of this resistance was to be 'No schism.' Even if excommunicated, the Modernist leaders were resolved to claim their inalienable right of spiritual domicile within the Church. Authority might cut them off from its outward communion, but could not affect their inward communion with it. Tyrrell expounded the new policy in an article contributed to the *Grande Revue*, and remained till his death its most consistent adherent. But the difficulty of giving effect to the policy soon became apparent. The chief difficulty lay in the economic dependence of the Modernist clergy, which prevented their action in the open. On the morrow of the publication of the *Programma*, *e.g.*, the reading of the book was forbidden to the faithful and its authors were excommunicated. But, as they still remained anonymous, the effect of their protest upon the outer world was largely discounted. Yet it was in Italy that resistance to the encyclical was most obstinate and prolonged. In spite of the assiduous suppression of Modernist journals, both scientific and social, new ones continually appeared in that country. Among these the most influential was *Nova et Vetera*, founded in January 1908, in which for the first time theological views of a decidedly negative character, such as found expression in the *Lettere di un prete modernista*, published at Rome in the same year, began to appear. Meanwhile condemnations were launched against the leaders who had appeared in the open. Loisy was formally excommunicated on 7th March 1908. The same sentence was pronounced against Murri, who had been elected as a deputy to the Italian Chamber, on 22nd March 1909. Tyrrell had been deprived of the sacraments on 22nd October 1907. The same fate befell Schnitzer at the beginning of February 1908. Minocchi was suspended 'a divinis' in January of the same year, and in the following October voluntarily withdrew into secular life. This series of personal condemnations was followed up and completed by a blow aimed at the Christian Social movement in France. The *Sillon*, the organ of the movement, was formally condemned on 25th August 1910, and its promoters ordered to work henceforward for social reform under the direction of their respective bishops. Marc Sangnier, the lay leader of the movement, made his submission, but Pierre Dabry, its most prominent clerical representative, withdrew into secular life.

The various measures of repression set forth in the encyclical *Pascendi* having failed, after a lengthened trial, to produce the desired effect, Pius X. issued, on 1st September 1910, the *motu proprio Sacrorum Antistitum*, in which he enjoined the imposition of a special oath of adhesion 'to all the condemnations, declarations, and prescriptions contained in the encyclical *Pascendi* and the decree *Lamentabili* upon all professors of seminaries and Roman Catholic universities and institutes on admission to their office and upon all ordinands. It fell, however, not to a priest or even to a layman, but to a woman, to make a protest against what she conceived to be a violation of Christian liberty. Maude Petre, the biographer of Tyrrell, having been called upon by the bishop of the diocese in which she resided to subscribe to the condemnations contained in the encyclical *Pascendi* and the decree *Lamentabili* as a condition of her admission to the sacraments, refused to do so on the ground that such subscription would imply a readiness to defend, if necessary with her life, every word of those documents as being equally important for faith with the Apostles' Creed itself. About the same time an anonymous document, purporting to represent the views of a numerous group of ecclesiastics belonging to all the French dioceses, appeared in a Parisian newspaper, the *Siècle*. It contained a declaration that its authors desired, before taking the oath under constraint, to protest before God and the Church that they did not regard their act of submission as in any way binding upon their consciences or as implying any modification of their opinions. Whether with this reservation or not, the anti-Modernist oath was generally taken by most of those suspected of being Modernists, and the history of Modernism as an open movement in the Roman Catholic Church had come to an end.

2. Forms.—(*a*) *Apologetic of immanence.*—It was the aim of the philosophic Modernists, notably of Laberthonnière, to establish the cardinal points of Christian belief by the aid of the modern evolutionary or dynamic view of the universe. That involved a departure from the traditional scholastic method of apologetic. But they did not abandon scholasticism arbitrarily, simply because it was old. On the contrary, it was their sincere belief that the Aristotelian metaphysic and logic utilized by the scholastic theologians provided a less perfect instrument for the illustration and defence of specifically Christian belief than the more modern conceptions of life. It is, *e.g.*, an essential part of Christian belief that God is personal and that He is Creator. But it is only in the light of a dynamic conception of the universe that the full significance of these affirmations is disclosed. The God of Aristotle was a logical abstraction, the ultimate Idea. Creation was but the logical derivation of the divine Idea in specific forms towards a passively receptive matter. It was in no sense a productive effort realizing new life. But that is just what the Christian belief demands. For it God is the sovereign source of power, and that power goes forth, must by its very nature go forth, in a real creative effort issuing in new life independent of and yet closely united with its source. And the very essence of that new life is again real creative action. For action is always creative, an extension of life beyond itself, its prolongation into another life, not itself, of which it remains the constitutive principle. Thus creation is God's transcendent reality introducing itself into the world and becoming immanent in it. And this act of creation is the act of the divine love by which God is eternally pledged to His world, by which His world, becoming self-conscious in man, needs and can receive His grace. Again, as Laberthonnière points out, it is just because God is not the 'pure act' of Aristotle, but the power which by His own nature acts continually, that we can conceive of a plurality, a society engendered within the unity of His own Being. The doctrine of the Trinity assumes a vital and not a merely formal character.

Thus the reality which we assign to life, because we already feel it there, is itself the motive of our belief in the personality of God. That personality is not a mere idea to which we attain by logical inference. It is a vital inference from our total experience of life as free creative action. That experience implies a more or less conscious communion of each separate creative unit with an original infinite source of creative life, and of all the units with one another in and through that life. All the terms which this essentially religious experience has formulated to express itself—communion, inspiration, revelation, faith, judgment—imply a concretely personal character in God. On the other hand, these terms, when interpreted to us and by us through the logical abstractions of the Aristotelian metaphysic, lose much of their distinctively religious significance. The conception of faith, *e.g.*, as an assent of the intelligence to the truth acquired extrinsically, by the teaching of a divinely deputed authority, fails to do justice to its concrete reality. That concrete reality of faith is an immediate response of the whole personal nature to the personal divine action upon it, a response in virtue of which it recognizes authority and the measure in which authority mediates the divine action to it. The intellectual element in faith exists, but it exists as a derivative from some profounder and more vital action of faith. So, again, revelation, when conceived as the final and imperfectible deposit of truth-statements to be imposed upon the intellect from without, is shorn of much of its religious character. Assent to such a revelation need not be religious at all. The real concrete revelation of God is to the whole personal nature apprehending His action upon it. And the perfect instruments of that revelation are Christ, the Incarnate Word, and the life of His Church in so far as it is a real extension of His life. The thought of the Church, its dogmas, its truth-statements, are but the partial and ever-perfectible translation in terms of one aspect of man's activity, his power of intellectually apprehending reality, of its living apprehension of God in Christ. Thus even the Gospels themselves are not a completed revelation. They indeed enshrine the perfect revelation of the Christ-life. But that revelation can be apprehended only in proportion as it is lived, and by those by whom it is lived. The Gospels were but the earliest attempt of those who had lived it to read and interpret its mysteries. Thus history is not of merely accidental importance to Christianity, but is, on the contrary, of its essence. As Laberthonnière frequently puts it, Christianity has dared to conceive of God *sub specie temporis.* God condescends to weave the texture of His vast designs with human hands. The divine inspiration of each individual life is a free product of the total inspiration of past humanity and a contribution towards all future inspiration. So tradition acquires a vital, and not a merely formal, value.

(*b*) *Historical criticism.*—It was the aim of the philosophical Modernist to vindicate the Church as the supreme organ of the vital religious tradition of mankind. The historical Modernist sought to do the same thing in his own special field of study. The orthodox apologist, grounding himself on the closed character of revelation as imperfectible truth-statement, had to prove the practically formal identity of the dogmatic statements of the Church to-day with the Scriptural revelation. For the historian, however, the admission of such formal identity was impossible. The development of dogma from the most general to the most exact forms of statement, from the simplest to the most complex and detailed forms, was a fact of history. As a historian, the Modernist had merely to trace the development and expose its character. But, as a Christian apologist (the rôle which alone constituted him a Modernist), he had to undertake the much more difficult task of reconciling this development of dogma with its permanent truth-value. This he attempted to do by distinguishing between the spirit and the form of each dogmatic statement, ascribing to the former an absolute and permanent, to the latter a merely relative, instrumental, and mutable value. By the spirit of a dogma such apologists meant its witness to some aspect of religious experience which was necessary to the reality of the religious life, and therefore universal or capable of becoming universal. But that witness could pass current between mind and mind only by the aid of some intellectual symbol capable of suggesting the actually experienced reality. Such symbols, necessarily shaped by the intellectual methods and habits of their period of growth, were clearly perfectible. But the growth of dogma was something more, and more truly organic, than the adaptation, as it were consciously and from without, of more perfect thought-forms to a constant experience. For thought reacts upon life, the clear perception of an experience upon the experience itself, enlarging and deepening its import. And so many of the Modernist apologists were ready to find in the more developed forms of dogma a fuller expression of its spirit, the experienced reality actually deepened by the more adequate form of the witness to it. A similar method of treatment was applied by the Modernist historian to the growth of ecclesiastical government and institutions and all the formal aspects of the Church's life. As a historian, he had to deny the orthodox contention that the actual fabric of Church order had been instituted by Christ Himself. But he claimed that the Church as a society had grown out of the spirit of Christ, and that each stage in the evolution of its order could be shown to have been the necessary means, under the circumstances of its particular historical moment, of preserving or extending the operation of that spirit.

(*c*) *Ecclesiastical and social reform.*—Yet the movement did not propose simply to divinize the existing Church. Her actual institutions came into existence in a distant past in response to the needs of the spirit then operating within her. But to-day those institutions may be suffocating her true life. They may even, as Fogazzaro's saint suggests, be introducing false and destructive spirits into her system—'the spirit of falsehood, the spirit of clerical domination, the spirit of avarice, the spirit of immobility' (*Il Santo*, pp. 336–342). Yet none of the chief Modernist writers can be said to have put forward any definite programme of ecclesiastical reform. They urge rather that Church authority should remember of what spirit it is, what spirit it exists to serve and extend.

'The Church is the hierarchy with its traditional concepts, and it is the world with its continuous hold upon reality, with its continuous reaction upon tradition; the Church is official theology, and the inexhaustible treasure of Divine truth which reacts upon official theology; the Church does not die, the Church does not grow old, the Church has in its heart more than on its lips the Living Christ, the Church is a laboratory of truth in continuous action' (*ib.* p. 293).

Only when possessed by such a conception of her character and mission will the Church discover what reforms she needs to make her equal to both in the profoundly changed circumstances of contemporary life. It is the conception which has inspired the Modernist social reformer also. He has aimed at making Christianity the leaven of national, political, social, and economic life, and therefore the principle of a larger and humaner life which may embrace and harmonize all these. He has conceived of the Church as an instrument of world-civilization rather than of world-renunciation, and of world-renunciation only in so far as it is involved in and necessary to a genuine world-civilization. And so he has tried to understand sympathetically and to co-operate with all the generous hopes and endeavours of the modern democratic movement, whether among Churchmen or among those who are outside the Church's pale. It has been perhaps the chief burden of his offence in the eyes of authority. The Modernist social reformer has been at one with the Modernist ecclesiastical reformer in thinking that the Church needs especially to be saved from the danger of becoming increasingly a clerical autocracy, exacting from the laity as the sum of their duty a passive submission to its decrees. It may be said in conclusion that the one purpose which was common to all the allied but independent movements grouped together under the name of Modernism was the self-reform of the Church, a reform inspired by belief in life, in the totality of human action, as itself most likely to provoke man's need of God and to ensure a genuine satisfaction of that need—a reform, therefore, which was to be sought along the lines of contemporary thought and action. It was a generous purpose, arising out of a genuine revival of intelligent religious faith. Though authority, taking a different view of the religious needs of the time and of the method of their due satisfaction, has succeeded in suppressing the open activity of the movement, it is as yet impossible to predict its ultimate success or failure. One thing, however, may with some confidence be asserted, viz. that its apparent failure for the moment has been due less to the action of authority than to the prevailing lack of interest among the Latin peoples in thought about or discussion of religious questions. If that interest should ever be revived, it is certain that it will demand and procure throughout the Latin churches reforms similar in inspiration, in range, and in effect to those for which the Modernist leaders contended during the last decade of the 19th cent. and the first decade of the 20th.

LITERATURE.—For the history of Modernism the following books are the most important: A. Houtin, *Histoire du modernisme catholique*, Paris, 1912, *La Question biblique chez les catholiques de France au xix*^{e} *siècle*, do. 1902, and *La Question biblique au xx*^{e} *siècle*, do. 1906; J. Schnitzer, 'Der katholische Modernismus,' in *Zeitschrift für Politik*, v. 1 [1911]; J. Kübel, *Geschichte der katholischen Modernismus*, Tübingen, 1909; M. Petre, *Autobiography and Life of George Tyrrell*, London, 1912; A. Loisy, *Choses passées*, Paris, 1913. Among the chief Modernist documents are: A. Loisy, *L'Évangile et l'église*, Paris, 1902, *Autour d'un petit livre*, do. 1903, *Simples réflexions*, do. 1908, and *Quelques Lettres*, do. 1908; G. Tyrrell, *A Much-Abused Letter*, London, 1906, *Lex Orandi*, do. 1904, *Lex Credendi*, do. 1907, *Through Scylla and Charybdis*, do. 1907, *Medievalism*, do. 1908, *Christianity at the Cross-Roads*, do. 1909; L. Laberthonnière, *Essais de philosophie religieuse*, Paris, 1903, *Le Réalisme chrétien et l'idéalisme grec*, do. 1904; E. Le Roy, *Dogme et critique*, do. 1907; F. von Hügel, *The Mystical Element of Religion*, London, 1908; G. Semeria, *Scienza e fede*, Rome, 1903, *Dogma, gerarchia, e culto*, do. 1902; R. Murri, *La Vita religiosa nel Cristianesimo*, do. 1907, *Della Religione, della chiesa, e dello stato*, Milan, 1910; U. Fracassini, *Che cos'è la Bibbia*, Rome, 1910; *Il Programma dei modernisti*, do. 1907, Eng. tr., London, 1908. To these may be added an excellent anthology, representative of the chief Modernist writers of Germany, France, Italy, and England, selected by J. Schnitzer, and published under the title *Der katholische Modernismus* in the series *Die Klassiker der Religion*, Berlin, 1912. Unfortunately this anthology bears the same title as the same author's critical study of Modernism mentioned above. The chief pontifical condemnations are conveniently given in Denzinger^{11}, nos. 1701–80 ('Syllabus errorum'), 2001–65 ('Lamentabili'), 2071–2109 ('Pascendi'), 2145–47 (anti-Modernist oath); and all the documents are collected by A. Vermeersch, *De Modernismo tractatus*, Bruges, 1910 (cf. also his art. 'Modernism,' in *CE* x. [1911] 415–421).

A. L. LILLEY.

MOGGALLĀNA.—Moggallāna was one of the two chief disciples of the Buddha. He was a Brāhman by birth, and his mother's name is given in the *Divyāvadāna* (p. 52) as Bhadra-kanyā. Nothing is known of his youth, but in a very early document[1] we are told the story of his conversion.

There was a Wanderer (or Sophist) at Rājagaha named Sañjaya.[2] Moggallāna and a friend of his, another young Brāhman from a neighbouring village, had become 'Wanderers' (*paribbājakā*) under Sañjaya. Each had given his word to the other that the first to find 'ambrosia' should tell the other. One day his friend, Sāriputta, saw Assaji, another Wanderer, passing through Rājagaha on his round for alms. Struck by Assaji's dignified demeanour, Sāriputta followed him to his hermitage and, after compliments had been exchanged, asked him who was his teacher and what was the doctrine he professed, seeing that his mien was so serene, his countenance so bright and clear. 'There is a great man of religion, one of the sons of the Sākiyas, who has gone forth from the Sākiya clan. He is my teacher; it is his doctrine I profess,' was the reply. 'Well, what is the doctrine?' asked Sāriputta. 'I am but a novice, only lately gone forth. In detail I can not explain, but I can tell you the meaning of it in brief.' Sāriputta told him that that was just what he wanted—the spirit, not the letter, of the doctrine. Then Assaji quoted a verse:

'Of all phenomena sprung from a cause
The Teacher the cause hath told;
And he tells, too, how each shall come to its end,
For such is the word of the Sage.'

On hearing this verse Sāriputta obtained 'the pure eye for the truth'; that is, the knowledge that whatsoever is subject to the condition of having an origin is subject also to the condition of passing away. (This is the stock phrase in the early Buddhist books for conversion.) He at once acknowledged that this was the doctrine that he had sought for so long a time in vain. He went immediately to Moggallāna, and told him that he had found the ambrosia, and, when he explained how this was, Moggallāna agreed with him in the view that he had taken, and they both went to the Buddha and were admitted into his order.

The story here summarized is repeated, in almost identical terms, in various commentaries.[3] It is curious in two ways. In the first place, who, on being asked to give the spirit of the Buddhist doctrine in a few words, would choose the words of Assaji's verse? One may search in vain most manuals of Buddhism to find any mention of the point raised in the verse;[4] and yet the verse has been so frequently found on tablets and monuments in India that Anglo-Indians are wont to call it, somewhat extravagantly, 'the Buddhist creed.' The Buddhists, of course, have no creed in the European sense of that word, but any one who should draw up one for them ought to include in it a clause on this matter of causation. The quotation may very well have made a special impression upon Sāriputta and Moggallāna. They had already renounced the sacrifice as a satisfactory solution of the problems of life, and were seeking for something more satisfactory than the vague hints now to be found only in later passages, such as *Īśā* 14, where the ambrosia is brought into a mystic connexion with cause and with passing away. Here, in this new theory of causation, was a quite different view of things, which seemed to these inquirers to meet the case.

---

[1] *Vinaya*, ed. H. Oldenberg, i. 39–44; translated in Rhys Davids and H. Oldenberg, *Vinaya Texts*, i. 144–151.

[2] It is not stated that he was the same as the Sañjaya of *Dīgha*, i. 58, the famous 'eel-wriggler.'

[3] *Dhammapada Com.* i. 85–95: *Theragāthā Com.* on verse 1017; *Aṅguttara Com.* on i. 83, etc.

[4] But see the chapter on causation in C. A. F. Rhys Davids, *Buddhism*, London, 1912, pp. 78–106.

It is also, at first sight, curious that they should have called this particular doctrine 'ambrosia' (*amata*). Though this expression was no doubt first used of the drink that preserved the gods from death, it must before the rise of Buddhism have acquired, among the Wanderers, the secondary meaning of salvation as being the ineffably sweet.[1] It is true that the other idea of salvation, as being a deliverance (from evil, or from the eternal round of rebirths and redeaths), is also found in pre-Buddhistic works (see MOKṢA). But it was natural, in the beginnings of speculation, to have varying attempts at the expression in words of so complicated a conception; and it is improbable that the early Buddhists invented such a phrase as ambrosia, connoting, as it does, so much of the earlier polytheism.

Moggallāna is frequently mentioned in the canon, and usually with the epithet Mahā ('the Great'). A number of verses ascribed to him, including one long poem and several shorter ones, are preserved in the anthology called *Theragāthā* ('Psalms of the Brethren').[2] The *Dīgha* is curiously silent about him; but a whole book is assigned to him in the *Saṁyutta*;[3] and about two score of passages in the *Majjhima* and the *Aṅguttara*, and elsewhere in the *Saṁyutta*, record acts done or words spoken by him.[4] We need not give the details of these passages. The general result of them is that he was considered by the men who composed them to have been a master of the philosophy and of the psychological ethics, and especially of the deeper and more mystical sides, of the teaching. There is, *e.g.*, an interesting passage where the Buddha compares Sāriputta with Moggallāna:

> 'Like a woman who gives birth to a son, brethren, is Sāriputta to a young disciple, like a master who trains a boy so is Moggallāna. Sāriputta leads him on to conversion, Moggallāna to the highest truth. But Sāriputta can set forth the four Aryan Truths and teach them, and make others understand them and stand firm in them, he can expound and elucidate them.'[5]

In one characteristic Moggallāna is stated to have been supreme over all the other disciples. This is in the power of *iddhi* ('potency').[6] Both word and idea are older than the rise of Buddhism; and the meaning is vague.[7] The early Buddhists, trying, as they often did, to pour new wine into the old bottles, distinguished two kinds of *iddhi*—the one lower, intoxicating, ignoble; the other higher, temperate, religious.[8] The former has preserved for us the belief common among the people, the latter the modification which the Buddhists sought to make in it. The former reminds us of the *mana* of the South Seas, or the *orenda* of some American tribes, or sometimes of the strange accomplishments of a spiritualistic medium. Birds have *iddhi*, with especial reference to their mysterious power of flight.[9] Kings have *iddhi*[10] of four kinds (differently explained at *Dīgha*, ii. 177 and *Jātaka*, iii. 454). It is by the *iddhi* of a hunter that he succeeds in the chase.[11] *Iddhi* is the explanation of the luxury and prosperity of a young chief.[12] By *iddhi* one may have the faculty of levitation, or of projecting an image of oneself to a distant spot, or of becoming invisible, or of walking on water, or of passing through walls, or of visiting the gods in their various heavens.[1] All these are worldly *iddhi*, the *iddhi* of an unconverted man. That of the converted, awakened man is self-mastery, equanimity.[2] Both these kinds of potency were regarded as natural, that is, neither of them was, according to Indian thought, what we should call supernatural. And neither of them, in Buddhist thought, was animistic, that is, either dependent upon or involving the belief in a soul as existing within the human body.

In both these respects of *iddhi*, the worldly and the spiritual, Moggallāna, in the oldest records, is regarded as pre-eminent. An amusing and edifying story is preserved of the way in which, like an ancient St. Dunstan, he outwits the Evil One.[3] We are also told how, in order to attract the attention of the gods to the very elementary exposition of ethics that he thought suitable to their intelligence, he shook with his great toe the pinnacles of the palaces of heaven.[4] Other instances of Moggallāna's instructing the gods are given in the *Moggallāna Saṁyutta* referred to above, and in the *Aṅguttara* (iii. 331, iv. 85), while two anthologies, probably the latest and certainly the most dreary books in the canon, the *Vimāna Vatthu* and the *Peta Vatthu*, consist entirely of short poems describing interviews which Moggallāna is supposed to have had with spirits in the various heavens and purgatories.

Most of the episodes in which Moggallāna figures are localized, that is, the place where the incident or conversation took place is mentioned by name. The names are very varied, and it is clear that no one place could be regarded as his permanent residence.

Tradition has preserved no further account of his life, but the manner of his death is explained in two commentaries, the two accounts being nearly identical.[5] Both Sāriputta and Moggallāna died in the November of the year before the Buddha's death, just before the Buddha started on his last journey.[6] Sāriputta died a natural death; Moggallāna, it is said, was murdered, at the instigation of certain jealous Jain monks, by a bandit named Samaṇa-guttaka, at the Black Rock cave on the Isigili Hill near Rājagaha.

When Cunningham opened the topes (memorial mounds) at Sānchī, he found in one of them two boxes containing fragments of bone and inscribed respectively 'Of Sāriputta' and 'Of Moggallāna the Great' in Pāli letters of Aśoka's time.[7] A similar discovery was made in the neighbouring group of topes at Satdhāra.[8] It is evident that more than two centuries after their death the memory of the two chief disciples had not yet died out in the community, and that the Buddhist laity who erected these monuments considered it suitable that their supposed relics should be enshrined in the same tomb.

The name Moggallāna was occasionally adopted as their name in religion by candidates for the order until the 12th cent. of our era. The belief that the power of *iddhi* had been actually exercised by Moggallāna the Great and others in the ancient days is still held by those of the orthodox who adhere to the ancient tradition, though, except as practised long ago, the belief in it soon died out. There is no evidence, later than the canon, of any

T. W. RHYS DAVIDS.

MOKṢA (Skr., also *mukti*) and **VIMUTTI** (Pāli, also (*vi*)*mo*(*k*)*kha*).—These terms, other prefixes being sometimes substituted, are all derivatives from *much*, 'to let go,' 'discharge,' 'release,' and, with varying import, are identical in primary meaning with our 'deliverance,' 'emancipation,' 'freedom,' 'liberty,' 'release.' Whichever equivalent be selected, the inquirer may start with two general way-marks. In the first place, the concept in question has a negative side, viz. a having got loose from, or rid of, and a positive side, viz. the cœnæsthesis, or general sense of expanded outlook, calm, security, attainment, power to be and do, without which the 'getting freed from' were in some cases too costly a gain. If these two aspects be held together in the mind, then the common terms for them, stated above, may—and this is the second way-mark—be considered as, more perhaps than any other idea, the pith and kernel of the religious faiths of India, and as coming nearer to the Christian 'salvation' than any other. It should, however, be added that the concept grew within those faiths, and that it was by no means always and everywhere given this paramount emphasis and importance. Awareness of emancipation as such, or of its absence and desirability, is not patent in the earliest recorded expressions of the Indian mind. The vital importance of solidarity, either with tribal custom and convention or with the decrees and the very life of his gods, is far more pressing on the man of primitive culture than is any revolt or self-exclusion from, or independence of, any order or destiny, socially or divinely imposed on all. Moreover, the particular deliverances or riddances that came in time to be generalized under a common notion varied in kind.

Before making good these general considerations by analysis, it may be well to guard the reader of translations from Indian literature against gaining an inaccurate idea of the frequency of allusions to 'freedom,' etc. Perhaps no language is as rich in privative or negative inflexions as is that of the Indian classics, whether it be Vedic, Prākrit, Pāli, or Sanskrit. We have ourselves a few terms where the negative form exceeds, in inspiring emphasis, the positive form—*e.g.*, independence, infinite, immortality, etc. Such terms are very numerous in Indian literature, and it often happens, notably in translations by Max Müller and Fausböll, that, to give the force or elegance of the originals, words with a negative prefix—*a*, *ni*, *vi*—are rendered by 'free from,' and even 'freedom from.'

Thus we find such renderings as 'free from evil,' *a-pāpa*; 'free from fear,' *a-bhaya*; 'free from grief,' *vi-śoka*; 'free from desire,' *niṣkāma*; 'free from the body,' *a-śarīra*; 'free from decay, death,' *vi-jara*, *vi-mṛtya*, *a-mṛta*; and many others, notably, 'being freed from good and freed from evil,' *vi-sukṛta*, *vi-duṣkṛta*, *i.e.* 'sundered from (*vi*) the well-done and the ill-done,' in other words, rid of the effects of his actions or *karma* (*Kauṣītaki Upaniṣad*, i. 4).

Many other 'liberties' taken by the lavish use of 'free from' go to swell this misconception. The phrase just quoted occurs in an archaic account of *saṁsāra*, or transmigration. Now, it is true that the *mukti*, or *mokṣa*, concept centres in the release of the soul or self, not only from this body, but also from all future bodies. But the only term expressive of release here is in the translation. 'All who depart from this world go to the moon . . . if a man make reply [on arriving] to the moon, it *passes him on*' (*atisṛjate*), *i.e.* he does not return to be reborn on earth. This is translated, in *SBE*, 'sets him free.' Further on, in ii. 7, in an ancient sun-hymn occurs the unique appellation *varga*, 'twister' or 'turner': 'Thou art the twister! twist thou the sinning of me' (*vargo 'si pāpmānaṁ me vṛṅdhi*). This is translated (*ib.*): 'Thou art the deliverer, deliver me from sin.' In the *Taittirīya Upaniṣad*, ii. 9: 'he frees himself' is, literally, *spṛṇute*, 'he saves himself.' In the *Bṛhadāraṇyaka Upaniṣad*, IV. iv. 23, Regnaud renders *uparatas* (M. Müller: 'satisfied,' Deussen: 'entsagend') by 'libre de tout désir.' In the *Chhāndogya Upaniṣad*, VIII. i. 6, the words rendered 'freedom in all the worlds' are, literally rendered, 'faring as they list' (*kāmachāra*); and in *Maitrāyaṇa Upaniṣad*, i. 2, 'had obtained freedom from all desires' (M. Müller) is, in the original, 'had turned to renunciation' (Deussen).

It is very possible that the translators were encouraged in this habit by consulting the mediæval commentaries of Śaṅkara, in whose philosophy *mokṣa* was a well-evolved concept, and who uses it liberally in his paraphrases.

For instance, in *Kaṭha Upaniṣad*, II. vi. 18—'Nachiketa became free from passion (*vi-raja*) and obtained Brahman'—the last clause is explained as 'became freed' (*mukto 'bhavad*).

In being thus advised to discount much factitious emphasis laid in these ancient works on a notion that was evolving in them, the reader may contend that most at least of the translations criticized render only what is really implicit in the various riddances referred to, namely, a liberty emerging through the abandonment of this or that. It is true that the Indian mind did indeed work its way to a positive concept of *mokṣa* or *vimutti* chiefly through an austere elimination viewed as the getting relieved of discarded burdens. Even a Buddhist commentator of probably the 5th cent. A.D. chose to define *vimokha* as so-called 'because of the being set free (*vimuchchanato*) from opposing things' (*Puggala-Paññatti Com.*). But the state of emancipation, as a conscious assurance, belongs none the less to that more evolved and positive side of its psychology which, in the West, is usually associated with political autonomy and social or personal self-congratulation. The freedom in which the Indian gloried was spiritual:

> 'O free indeed! O gloriously free am I
> In freedom from three crooked things . . .
> Ay, but I'm free from rebirth and from death,
> And all that dragged me back is hurled away'
> (*Psalms of the Sisters*, 11).

'Henceforth in the real (or true) Brahman he becomes perfected and another. His fruit is the *untying of bonds*; without desires he attains to bliss imperishable, immeasurable, and therein abides' (*Maitrāyaṇa Upaniṣad*, vi. 30).

And *Kathā-vatthu*, ix. 1, is intended to bring out the fact that, whereas one enters on 'the Path' to salvation, full of a sense of dangers to be got rid of, the gradual putting off of 'fetters' converts this consciousness into expectation of the bliss of perfected deliverance, *i.e.* of Nibbāna.

For *vimutti* is 'comparable to' Nibbāna, and 'the holy life is planted on, and leads to and culminates in Nibbāna' (*Majjhima*, i. 304; *Saṁyutta*, v. 218).

There is but the faintest anticipation of this in the Vedas. The only 'setting free' in those pages is the resting-place (*vimochana*) where horses are eased for a while from harness. Gods are called upon to deliver from sin—but it is such 'as clings to our bodies' (*Rigveda*, VI. lxxiv. 3; cf. I. xxiv. 9, VIII. xviii. 12, *muñchatam*)—and to let the enemy catch snares and be slain (VII. lix. 8). But such a prayer as 'May I be *detached from death* like a gourd from its stem, but *not from the immortal* [*amṛta*]' (*ib.* 12) is the precursor of the later thought. Beyond such expressions the vocabulary of freedom was, it would appear, unborn.[1] The Brāhmanas give, in the elaborate ritual of the altar-building, a rite to be chanted while laying the 'bricks of saving' (*spṛtah*), that is, from evil and from death (*Śatapatha Brāhmana*, VIII. iv. 2), but elsewhere (XI. iii. 3) it is said that none but a *brahmachārin* or *religieux* is exempted by Brahman from death, and only on the condition that he daily tends the sacred fire. Not here any more than in the Vedas does the grasp and realization of an emancipated consciousness appear. It is still apparently only inchoate in the Upaniṣads ranked as the oldest. Of these the *Kena Upaniṣad* is silent on the matter. In the *Aitareya Āraṇyaka*, an ancient mystic nature-monologue, there are hymns prescribed for rites proficiency in which brings the compassing of 'all desires.' These desires are enunciated—long life, luck, wealth, fame, etc.—but 'liberty' is not among them. Progress in spirituality is revealed in the *Taittirīya* and *Chhāndogya Upaniṣads*, but the emancipation-spirit is still immature. The former shows the growth of it at the end of the second part:

---

[1] *Mukti* is said in O. Böhtlingk and R. Roth (*Sanskrit-Wörterbuch*, Petrograd, 1855–75, v. 801) to occur once in the *Śatapatha Brāhmaṇa*, but it is a faulty reference, and the present writer cannot trace it.

> 'He who knows the bliss of that Brahman whence speech, whence mind turn back, not finding it, . . . tortures not himself with: "What good have I left undone? What evil have I done?" He, knowing this, saves himself.'

The latter (*Chhāndogya*, VI. xiv. 2) shows a parallel growth in the parable of the man brought blindfold from his Gandhāra home into the desert, and thence, with sight restored, directed how to get home again; even so does one who has gained true knowledge through his teacher know that

> 'I shall only so long belong to this [system of rebirth] till I am emancipated (*vimokṣye*); then I shall go home' (so Deussen).

And in the closing section occurs the favourite simile for deliverance:

> 'Freeing myself from the body, as the moon frees himself from Rāhu's jaws, I go into the world of Brahman.'

The same simile is hinted at in the *Kaṭha Upaniṣad*:

> 'He who has perceived the soundless, the intangible . . . the eternal . . . the unchangeable, is freed from the jaws of death' (I. iii. 15).

But in the following passage (*ib.* II. v. 1) we see how the idea is finding expanded expression:

> 'There is a town with eleven gates of the Unborn, of thought influctuate. Whoso approaches (Deussen: 'honours') it, he grieves no more and, emancipated, is set free (*vimuktaś cha vimuchyate*). Verily this is that.'

From what 'set free' is not unambiguous (M. Müller: bonds of ignorance; Deussen: the body), but 'liberty' is becoming realized as an ideal.

Turning now to the long *Bṛhadāraṇyaka Upaniṣad*, we come at length to an emphatic designation of certain attainments as constituting 'liberty' (III. i. 3 ff.). The priest asks the Veda-teacher how he who institutes a sacrifice may be freed from the influence and thraldom of death, of day and night, and of the waxing and waning moon, and how the bright worlds shall be reached up a stairless sky. By this or that celebrant priest are given the several replies, and to each reply is added: '*That* is liberty, *that* is utter liberty (*sā muktiḥ sā atimuktiḥ*).' These are then termed the *atimokṣas*.

It is noteworthy that, while these four 'liberations' are alone so emphasized, aspiration does not (in the adjacent section) stop at heaven. Urged by another interlocutor, a Kṣatriya, again and again, with proffered largess, to 'speak of that higher thing which avails for emancipation,' Yājñavalkya, the Veda-teacher, finally discourses of the soul and of beholding the soul as God.

> 'Scarce visible and old there lies a path
> That reaches into me, was found by me.
> Thereon the wise whose is the Brahma-lore
> Fare onward to the world of light, and thence
> O'erpassing that are utterly released'
> (*utkramya svargaṁ lokam ito vimuktāḥ*).

> 'As the slough of a snake lies on an anthill dead and cast away, there lies this body, but that disembodied, that immortal, that life, is Brahman only, only light' (IV. iv. 8, 7).

This with its context is not designated as *atimokṣa*, or as *mukti*. When we find again the snake-skin simile, in the *Praśna Upaniṣad*, V. 5, where the emancipation described is that of spiritual ecstasy rather than of a disembodied spiritual unity, or full realization of the same, the freedness, on the one hand, is made more explicit, and, on the other, the liberation is described as 'from evil.' But, whether emancipation be from the power of the body during life or from the body itself and from all subsequent bodies at final death, the main positive consciousness, realized in this early stage of Vedāntist *mokṣa*, is, intellectually, discernment of the identity between the Absolute, Brahman or Ātman, and the soul located in man, and, emotionally, the sense of security and assurance resulting therefrom. For the individual becomes invested with the powers, negatively expressed, of the Absolute Being: undecaying, imperishable, unattached, unbound, unlimited, unsuffering, etc. (*Bṛhadāraṇyaka Upaniṣad*, IV. ii. 4).

> 'If a man clearly beholds this self as lord of all that is and will be, . . . who has entered into this patched-together hiding-place, he is creator, maker of all, his is the world, he is the world . . . then is he no more afraid' (*ib.* IV. iv. 13, 15).

Proceeding to the less ancient Upaniṣads, such as may have been influenced by Buddhist and other developments, we find in the 'Upaniṣad of the Shavelings' (*Muṇḍaka*) the compound *parimuchyanti* (III. ii. 6), 'completely freed':

> 'They who have grasped the sense of Veda-lore,
> All anchorites, their inmost being purged
> In earnest resignation, at the final death
> In Brahma-heaven become immortal, wholly freed.'

But in the *Śvetāśvatara Upaniṣad*, and the allied but perhaps still later *Maitrāyaṇa Upaniṣad*, the reader finds himself among new ideas jostling against the older ones. These are yet present—soul and Brahman, release from life and death, and knowledge as giving release—but the current has widened, if not deepened. The theism of Yoga, the theory of separate souls and their self-emancipation from conditioned, mutable concomitants of the Sāṅkhya system, the critical, scientific attitude of Buddhism, and the tragic earnestness of the two former and of Jainism—all these have caused a revolution in outlook that strikes a new note at the very first words:

> 'Om! The Brahman teachers say: What is the primal cause, what Brahman? Whence are we?' (*Śvetāśvatara Upaniṣad*, i. 1).

Through it all the *mokṣa*-idea appears as the work of a creator:

> 'The Deva' or Īśvara ('Lord'), 'himself self-caused, is the condition (the cause) of the maintenance and the movement (*sthiti*, *saṁsāra*), the bondage and the liberation (*bandha*, *mokṣa*) of the world' (*ib.* vi. 16). To know him, to 'see, making his own being a lamp, the being of the Lord,' is to have 'all fetters fall away, all sufferings destroyed, and the ceasing of birth and death come to pass' (*ib.* i. 11, ii. 15). 'I, seeking for freedom, take in him my refuge, supreme Causeway to that-which-is-not-dead (*amṛtasya paraṁ setuṁ*), Fire that burneth where no fuel is' (*ib.* vi. 18 f.).

> 'As soon a man might wrap the atmosphere
> About himself like any cloak, as reach
> The end of suffering, not knowing God' (*ib.* vi. 20).

Yet both here and in the *Maitrāyaṇa Upaniṣad* the Ātmanistic monism is none the less maintained, and all personal deities are recognized as names of the self (IV. v. f., VI. v. 8).

> Much, it is true, is made of a disparate 'element-soul' or self, bound by the fetters of the fruits of good and evil, crippled, and as one in prison, till 'by knowledge, by *tapas* (austerities), by meditation he is freed from those things by which he was filled and overcome, and obtains union with the Ātman' (IV. ii. 4).

Yet this concept no longer satisfies:

> 'Having seen his own self as the Self (or soul), he becomes selfless (*nirātman*); and, in virtue of selflessness he is to be conceived as immeasurable, unconditioned. This is the highest mystery, betokening emancipation . . . through selflessness he has no part in pleasure or pain, but attains absoluteness (*kevalatva*)' (VI. xx. f.)—

a wondrous blend of Buddhist and Sāṅkhya concepts.

Yet another new term reveals a fresh and notable development of the *mokṣa*-consciousness, that of 'autonomous,' or independent—*svatantra* (V. xxviii. 38):

> 'Independent, standing on his own greatness, he contemplates the cycle of rebirth as it were a rolling chariot-wheel' (that has ceased to convey him). Cf. the 'autonomy' prescribed in and vital for Buddhism (*Dīgha Nikāya*, ii. 100, and elsewhere).

The psychology also of the *process* of self-liberation has attained an interesting development (*Maitrāyaṇa Upaniṣad*, VI. xxxiv.). *Manas* (*i.e.* the mental mechanism of sense-cognition, a narrower concept than 'mind') is, like Īśvara himself, called 'the cause of bondage and of liberty.' And to bring it to its right anchorage, to bring it, in fact, 'to an end in the heart' (the seat of the soul)—'that is knowledge, that is *mokṣa* . . . that man is wholly freed (*parimuchyate*).' Nor does this austere discipline, nor does the evolving power of introspection dull the rapture associated in the earlier books with this setting free. With a poet's licence, or through theistic influence, the poet pictures the Absolute soul (Brahman) as reciprocally 'longing for a true (or real) man' (*ib.* VI. xxx.).

That the yet later Upaniṣads could use *mokṣa* as practically synonymous with religion appears in the *Mukti Upaniṣad*, which recommends him who seeks for *mokṣa* to study the *Māṇḍūkya Upaniṣad*, and, if that suffice not, certain others, and so on till all are included. The one named consists in a concise effort to define the essence (*sāra*) of the soul or Brahman. More pertinent is the definition of *mokṣa* in another of the aforesaid Upaniṣads, the *Sarva-sāra*, as the destruction of the illusion that the material body, or any other factor of the phenomenal self, is the Ātman ('soul'), who is God. The illusion is the bond, ignorance its cause. (This illusion is the first of the 'Ten Fetters' of Buddhism.)

Mokṣa as the supreme aspiration runs through that best known portion of the *Mahābhārata* epic called the *Bhagavad-Gītā*. The allusions occur almost entirely in the parts judged by R. Garbe to be older (see BHAGAVAD-GĪTĀ). We find *mokṣa* applied to liberation from evil (iv. 16), from the body (v. 23), from lusts and anger (v. 26), from decay and death (vii. 29), from works (ix. 28), from the illusion of opposites (xv. 5). But, however the bondage be conceived, release is effected, here also, by a spiritual union with Brahman, conceived as, or as behind, Īśvara, lover of the human soul, who invites his utter self-surrender, and bestows on him, in virtue of that surrender, release from this or that form of limitation (cf. ix. 26 f., xii., xiii. 9 f.). Another section of the epic is called 'the *mokṣa*-doctrine'; yet it is in the *Anugītā* section that the complete picture of the emancipated individual occurs (*Adhyāya*, 19). In this we see him contemplating Ātman, attaining Brahman, sunken in this one goal, oblivious as to the past, freed from results, heedless of 'this' or 'that.' Yet he is a friend to all, suffering all, master of sense and self, fearless, wrathless, meek, upright, treating all creatures as if they were he, indifferent to opposites, lost to social and domestic ties, wanting naught, cleaving to naught, detached. 'He is in every sense free.' All classes, the trader and the labourer, too, may enter on this upward way, and even women, but much more the Brāhman and the Kṣatriya who study, joy in their duty, and hold the Brahma world as highest; for the fruit of achievement is liberty, and the utter abatement of ill. Beyond that lies no greater bliss.

This notable climax is in complete harmony with Buddhist thought. It is more than probable that, before the epic attained its final form, the influence of Buddhist culture had made itself deeply felt, and that to it is largely due the breaking down of class and sex disability to attain the highest, the humaneness of the lonely saint, and the crucial emphasis on the ending of suffering. *Dukkha* ('ill') is not, of course, absent from the earlier Vedāntic literature, but it attains emphasis only in that which must have felt the impress of Buddhism, to say nothing of Jainist and Sāṅkhyan influence. Now, in the doctrine of Arahantship, or the release from continued deaths and rebirths by the perfected character, *vimutti* is not only dominant to the same extent as is *mukti* (*mokṣa*) in Vedānta, but the treatment of it is more consistent and therefore, perhaps, simpler. In it *vimutti*, *vimutta*, 'freedom,' 'freed,' express the actual and consciously realized achievements; *vimok(k)ha* nearly always refers to certain prescribed courses of rapt mentality, whereby such a state might be sooner acquired, or, if acquired independently, quickened—a sort of morning sacrament (*Dīgha Nikāya*, ii. 112; *Puggala-Paññatti Com.* [*JPTS*, 1914, p. 177]):

> 'He who before he breaks his fast can touch
> Mental emancipation's eight degrees,
> In grade ascending and so back again'
> (*Psalms of the Brethren*, 1172).

Hence the terms 'freed by understanding,' 'freed-both-ways,' meaning emancipated by the work of understanding only, or emancipated both thus and by the eight *vimokhas* or similar exercise in *samādhi* (cf. *Majjhima Nikāya*, i. 477).

Moreover, *vimutti*, as expressing final achievement, with the rapturous assurance of it, was at the heart of the Buddhist Dhamma from the first. In that which is recorded as his second sermon—the *Anatta-lakkhaṇa Sutta* (*Vinaya Texts*, i. 101; cf. 107)—Gotama Buddha stated how emancipation grew out of the rejection of the cosmic soul as immanent in and identical with the sense of individual personality ('self' being only an abstract idea inseparable from bodily and mental factors). Perception of the absence of Ātman-qualities (permanence, omniscience, bliss) in these denuded them of factitious attraction. Craving to renew them in future lives fell away. The freed individual knew that he was free, and thenceforth needed only to await the final hour in quieted but blissful well-being and righteous living. Again, in sending forth his first missionaries, the Buddha named as his and their supremely adequate qualification:

> 'I am freed from all snares human and divine; ye are freed from all snares human and divine . . . Go ye now . . . for the welfare of the many . . .' (*Vinaya Texts*, i. 112 f.).

The subjective awareness of the freed state, held to be also valid objectively, is further enhanced by the use of such terms as 'realizing,' 'touching,' 'tasting' (*Dīgha Nikāya*, iii. 230; *Majjhima Nikāya*, i. 477; *Aṅguttara Nikāya*, ii. 244, i. 36, iv. 203, etc.).

> 'Wherefore thus must ye study: "more and ever more striving our very best shall we realize supreme emancipation"' (*Aṅguttara Nikāya*, iii. 218).
>
> 'Having liberated his mind with respect to things that should be let go he touches perfect liberty' (*ib.* ii. 196; cf. 244).
>
> 'The eight deliverances (*vimokhā*) are to be realized by personal contact' (*Dīgha Nikāya*, iii. 230).
>
> 'Few are they who obtain the taste of liberty' (*Aṅguttara Nikāya*, i. 36).
>
> 'As the ocean has but one taste, that of salt, so has Nibbāna but one taste, that of emancipation' (*ib.* iv. 203; *Vinaya Texts*, iii. 304).

Awareness of full attainment was realized as a timeless moment of ecstatic consciousness (*Kathāvatthu*, iii. 4), but the reverberations formed an abiding joy:

> 'Gladness springs up within him, and rapture thereto; the thoughts of his enraptured consciousness become tranquillized; thus tranquillized he knows bliss; and in that bliss his consciousness is stayed' (*Dīgha Nikāya*, iii. 241, 'The five occasions of emancipation'; cf. i. 73).

Imagination plays about the term:

> 'He with fair flowers of Liberty enwreathed,
> Sane and immune, shall reach the perfect peace'
> (*Psalms of the Brethren*, 100).
>
> 'Above the rolling chariot of this earthly life spreads the silken canopy of emancipation' (*Saṃyutta Nikāya*, iv. 293).

And in the later *Questions of King Milinda*:

> 'As the ocean is all in blossom with the innumerable . . ripple of its waves, so is Nibbāna all in blossom, as it were, with

the innumerable, diverse, delicate flowers of purity, knowledge, emancipation' (iv. viii. 69).

Arahantship, again (*ib.* v. 17), is called 'the Exalted One's jewel of emancipation (*vimutti-ratana*), chief diadem of all.'

The three terms here brought together—Nibbāna, Arahantship, emancipation—are largely, though not wholly, coincident in range, presenting different aspects of the ideal, Nibbāna: the having eliminated 'the fires' of evil and of craving for continued life human or divine; the contemplation of an Ātman-less Absolute; Arahantship: supreme positive attainment in life on earth; Vimutti: the subjective aspect of both, the negative force in it never far off:

'Let go (*muñcha*) that which has been, let go what will be,
Let go what thou art midst of, thou that dost
Transcend Becoming! On every side freed-minded
Thou'lt not again come toward birth and dying'
(*Dhammapada*, 348).

But the self-knowledge that he *is* free is a clause in the formula confessing Arahantship:

'Emancipated by right (or perfect) gnosis (*sammadaññā-vimutta*)'; 'in him thus set free there arises the knowledge "freed"!' . . . (Nikāyas, *passim*; *Dialogues*, i. 93).

And the unity connecting the negative and positive aspects may be discerned in the *Sutta Nipāta* verses:

'In whom no sense-desires do dwell,
For whom no craving doth exist,
Who hath crossed o'er [the sea of] doubt:—
What sort of freedom [waits] for him?
No other freedom [waits] for him' (1089 f.).

In the Nikāyas *vimutti* and Nibbāna are declared to be 'comparable' one with another (in the same thought-category, *Majjhima*, i. 304). But in the *Dhamma-saṅgaṇi vimutti* is distinguished into higher mental freedom and Nibbāna (p. 234; cf. *Dīgha Nikāya*, i. 174).

As the subject of a distinct group (*khandha*) of religious experience, *vimutti* is ranked in the *Suttas* fourth with the groups 'ethics' (*sīla*), concentrative studies (*samādhi*), and insight (*paññā*, *Majjhima*, i. 214; *Aṅguttara Nikāya*, i. 125, *passim*), while for the Arahant a fifth was reckoned: knowledge and intuition of *vimutti* (*vimutti-ñāna-darsana*, *ib.* i. 162, etc.). Closely associated with the fourfold path to Arahantship, and called, later, modes of progress, avenues, or channels to *vimutti*, are the studies in 'Emptiness,' 'the Signless,' 'the Not-hankered-after' (*Dīgha Nikāya*, iii. 219; *Saṁyutta*, iv. 295–297; *Dhamma-saṅgaṇi*, 344 f., and *Compendium of Philosophy*, London, 1910, p. 216).

A very frequent allusion to emancipation in the Nikāyas is that of *chetovimutti paññāvimutti*, corresponding fairly well to emancipation of heart and head. The systematic expansion of ethical emotion was not peculiar to Buddhism (see LOVE [Buddhist]). But the founder of Buddhism is represented (*Saṁyutta*, v. 118) as claiming that he alone inculcated in such exercises emancipation of the heart.

In this way, in suffusing the idea of more and more beings with (1) love—'let all beings be void of enmity and malevolence,' (2) pity—'let all be set free from suffering,' (3) sympathy—'let all be happy and fortunate,' (4) equanimity—'all are the owners, the heirs of their deeds,' these mental exercises, if fully practised, result in a thorough self-mastery through complete emancipation from the respectively opposed moods of (1) enmity, (2) harmfulness, (3) antipathy, (4) passion (Ledi Sadaw, Mahāthera, in a letter to the writer).

Taken alone, apart from that supreme enfranchisement from all the conditions for rebirth, they constituted the best way to Brahma-heavens.

'*Sāriputta*: This, I told Dhānañjani, is the way to share existence with the Brahma gods.

The Buddha: Why did you establish Dhānañjani in that inferior Brahma-world, when there was more to be done?

Sāriputta: I judged, lord, that these Brāhmans preferred that heaven' (*Majjhima*, ii. 195).

'All other bases of meritorious acts which are stuff for rebirth (*opādhika*) are not to be compared to the emancipation of the heart by love. That takes all those up into itself, as the moon outshines the stars, the sun the mirk, the morning star the night, shining in radiance and in splendour' (*Iti-vuttaka*, 19–21).

But to be emancipated by intuition or insight is to have broken all the ten 'fetters' by the four successive stages of the Ariyan Path—Stream-winning, Once-Returning, Never-Returning, Arahantship—and to have reached the going-out of all fevered desires as to lives on earth or in the heavens (*Dīgha Nikāya*, iii. 108).

'For not by the slothful nor the fool, the undiscerning, is that Nibbāna to be reached which is the *untying of all knots*' (*Iti-vuttaka*, 102).

The mountain ranges of *vimutti* were the haunts of those who, 'with the world well lost,' had developed the symptoms of life's culminating in its final end. Hence it is in the two works containing the legacies of such matured creatures—the *Sutta-Nipāta* and the anthologies of *Theras* and *Therīs*—that the theme of emancipation is maintained most steadily:

'Come now, let us see Gotama, who lion-like
Doth roam alone . . .
. . . and let us ask of him
How can we be set free from snare of death?
Declare to us who ask as to the way
How may a man from sorrow be set free'
(*Sutta-Nipāta*, 164 f.).

'Passed he away fraught with the seed of rebirth,
Or as one wholly free? That would we know'
(*Psalms of the Brethren*, 1274).

'And as the sun rose up out of the dawn
Lo! then my heart was set at liberty' (*ib.* 477).

'Whose range is in the Void and the Unmarked
And Liberty:—as flight of birds in air
So hard is it to track the trail of him' (*ib.* 92).

'And see, O Master! Sundarī who comes
To tell thee of Emancipation won
And of the night no more to be reborn;
Who hath herself from passion freed (*vītarāgā*),
Unyoked from bondage' (*Psalms of the Sisters*, 334).

'Tho' I be suffering and weak and all
My youthful spring be gone, yet have I come,
Leaning upon my staff, and clomb aloft
The mountain peak. My cloak thrown off,
My little bowl o'erturned: so sit I here
Upon the rock. And o'er my spirit sweeps
The breath of Liberty!' (*ib.* 29, 30).

'Passion abandoned, hatred and illusion,
Shattered the bonds, nor is there any trembling
In that the springs of life are wholly withered:—
Like the rhinoceros let him wander lonely'
(*Sutta-Nipāta*, 74).

'E'en as a fish that breaks its net in ocean,
E'en as a fire that turns not back to burnt stuff:—
Like the rhinoceros let him wander lonely' (*ib.* 62).

'Dwelling in love, in pity, and in freedom,
In friendly joy, in balance, each in season,
Nought in the world disturbing his composure:—
Like the rhinoceros let him wander lonely' (*ib.* 73).

The evolution of *mukti*, or *mokṣa*, in Jainism cannot be adequately dealt with till its early literature is more fully accessible. As evolved, the idea is clearly presented above (art. JAINISM, vol. vii. pp. 468, 470).

Similarly the (*vi*)*mokṣa*, or *apavarga*, concept of Sāṅkhyan thought, which survives in mediæval commentaries, and which, even in the aphorisms on which these are based, shows a later and a more habile metaphysic than such as the foregoing discussions reveal, will be dealt with in art. SĀṄKHYA. In those aphorisms (*Sūtras*) the individual soul, called *puruṣa*, is conceived as 'neither bound, nor liberated, nor migrating' (lxii.), as is the rest of man's nature, physical and mental. Emancipation consists in having discerned the 'subtle difference between this [dual] nature (*pradhāna*) and the soul' (xxxvii.). 'By knowledge is liberation (*jñānena chā'pavargo*), by the opposite is bondage' (xliv.). With this knowledge the work of good and evil is done; the union of soul and organism may 'go on like the potter's wheel revolving from the effect [of his impact]' (lxvii.) after the finished pot is removed, but, when nature thereupon ceases to act, the soul obtains absoluteness (*kaivalyam āpnoti*) (lxviii.).

LITERATURE.—Works quoted from: *The Upanishads*, tr. Max Müller, *SBE* i. [1879], xv. [1884]; P. Deussen, *Sechzig Upanishad's des Veda*, Leipzig, 1897; P. Regnaud, *Matériaux pour servir à l'histoire de la philosophie de l'Inde*, Paris, 1876–79 (translates many selections, giving the original as well); P. Deussen, *Vier philosophische Texte des Mahâbhâratam*, Leipzig, 1906, *Allgemeine Geschichte der Philosophie*, i. pt. 3, iv. 6, do. 1908; *Vinaya Texts*, tr. T. W. Rhys Davids and H. Oldenberg, 3 vols., *SBE* xiii., xvii., xx. [1881–85]; *Questions of King Milinda*, tr. T. W. Rhys Davids, *SBE* xxxv.–xxxvi. [1890–94]; the four *Nikāyas, Dhammapada, Sutta-Nipāta*, and other Pāli works: publications of the PTS, London, 1882 f. (the two last tr. Max Müller and V. Fausböll, *SBE* x.^{3} [1898]); *Psalms of the Early Buddhists*, 2 vols., and *Points of Controversy (Kathāvatthu), PTS; Dialogues of the Buddha*, tr. of *Dīgha Nikāya*, i. (in *SBB*, ii., iii.). The blend of theism and 'ātmanism' handed down from the stage of Vedāntist thought indicated in the *Maitrāyaṇa* and *Śvetāśvatara Upaniṣads*, and developed in the *Bhagavad-Gītā*, may be studied in P. Narasimha's description of *mukti* in 'The Vedântic Good,' *Mind*, Jan. 1915. Another interesting account of *mokṣa*, with a criticism on P. Deussen's treatment of the place of moral considerations in the doctrine, is by Dvijadas Datta, 'Moksha, or the Vedântic Release,' *JRAS* xx. pt. 4 [1887–88], p. 513.

C. A. F. RHYS DAVIDS.

MOLINISM.—There is no problem in theology more difficult than that which has reference to the knowledge and causality of God, on the one hand, and the liberty and eternal destiny of human beings, on the other. The problem includes three difficulties: (1) How is it possible to reconcile God's foreknowledge with the freedom of the human will? (2) If the entire physical reality of our free acts proceeds from God as the First Cause, how is it possible for our will to be a free cause, or for evil actions to be imputed to us? (3) Given the sincere will of God to save all men, how account for the terrible fact that many die without the light of faith and never attain to eternal salvation?

The endeavours of theologians to throw light on these difficulties have brought forth two systems: Thomism and Molinism. The doctrine of the Thomists, which is the old traditional doctrine of St. Augustine and St. Thomas Aquinas (*qq.v.*), was attacked by Molina at the close of the 16th cent.; since then an unending controversy has raged in Roman Catholic schools of theology.

I. *HISTORY OF THE CONTROVERSY.*—In the 13th cent. St. Thomas Aquinas, a Dominican, synthesized the sum of human knowledge with regard to God as the First Cause and Final End of all things in a work called the *Summa Theologica*. Herein is contained all that the human mind, aided by revelation, can know concerning God's providence, universal causality, grace, etc. So great became the renown of St. Thomas for the solidity and sublimity of his doctrine that at the Council of Trent the *Summa Theologica*, alone of all theological treatises, was thought fit to be used in consultation with the sacred Scriptures. The Order of St. Dominic is sworn to love and defend the doctrines of St. Thomas as by hereditary right; and it is their loyalty to these doctrines that has earned them the well-merited name of Thomists.

At the close of the 16th cent. the Jesuit Luis de Molina (1535–1600) published a new doctrine on predestination, grace, free will, etc. The basis of the whole system is the so-called *scientia media*, a theory borrowed by Molina from his master, Pedro da Fonseca, who, knowing it to be entirely new and against the traditional doctrine, had not dared to publish it. Molina's book was published at Lisbon in 1588 and is entitled: *Concordia liberi arbitrii cum gratiæ donis, divina præscientia, providentia, prædestinatione et reprobatione.* Had this theory been known, says Molina, Pelagianism would never have existed, Luther would not have denied free will, and Semi-Pelagianism would easily have been stamped out. Molina further adds that St. Augustine and the other Fathers would have unanimously approved of this theory of predestination and this manner of conciliating free will with the foreknowledge and providence of God, if it had been propounded to them (*Concordia*, ed. Paris, 1876, p. 548). This new doctrine, however, did not arrest the teachings of Michael Baius, nor did it prevent the rise of Jansenism (*q.v.*), but was itself the cause of an unending and bitter controversy which has lasted for centuries between Thomists and Molinists. The above assertions of Molina aroused the indignation of the followers of St. Augustine and St. Thomas. Dominic Bañes vigorously attacked the new theory, and so great was the dissension caused by the ensuing controversy that in 1594 the matter came before Pope Clement VIII., who, in 1598, instituted a special board of inquiry, known as the 'Congregatio de Auxiliis.' There were, in all, 181 assemblies of this congregation, which debated the doctrines under discussion. Three condemnations in succession were drawn up by the consultors against Molina. On 13th March 1598 they declared that the *Concordia* and the doctrine of Molina must be unreservedly condemned. On 19th Dec. 1601 they condemned 20 propositions taken from the *Concordia*. At the assembly of the Cardinals (8th March 1606) it was decided to give orders to the consultors to draw up a bull for the condemnation of 42 propositions taken from the *Concordia*. The bull was actually prepared for publication, but on 28th Aug. 1607 Paul V. held a congregation of cardinals in which it was decided to postpone the condemnation. The result of the 'Congregatio de Auxiliis' was, then, a moral defeat for Molinism. So forcibly was this brought home to Acquaviva (the General of the Jesuits) and his counsellors that the Congruism of F. Suarez was substituted for Molinism and imposed upon the Society by Acquaviva by his decree of 14th Dec. 1613. For more than 200 years Congruism (see below, p. 776^{b}) was taught by the Jesuits in obedience to the decree of Acquaviva, but pure Molinism has now been revived by some Jesuit theologians.

In this matter an important point to be noted is the declaration of Paul V. that both Molinism and Thomism agree in *substance* with Catholic truth, but differ only as regards the *mode* of explaining the efficacy of grace, *both of which opinions may be held.* Innocent XII., in reply to the University of Louvain (7th Feb. 1694), and Benedict XIII., in a brief (*Demissas preces*, 6th Nov. 1724), vindicated the Thomistic doctrine of the efficacy of grace *ab intrinseco* and the gratuity of predestination. Lest, however, the words uttered by Benedict XIII. should be understood to minimize the doctrines of Molinism, Clement XII. said (2nd Oct. 1733):

> 'We do not wish the eulogies (which we iterate, approve, and confirm) of our predecessors (Clement XI. and Benedict XIII.) in praise of the Thomistic school to detract in any way from the authority of other Catholic schools' (*Bullarium Ord. Præd.* viii. 291).

Since the encyclical *Æterni Patris* of Leo XIII. (4th Aug. 1879), Roman Catholic schools of theology have done their utmost to claim as their own not only the doctrine, but the very name of St. Thomas Aquinas. In spite of the remonstrances of Thomists, Molinists have endeavoured to drag St. Thomas to their side, and even to impose on St. Thomas the theory of *scientia media*, which, before Molina, was not even dreamed of ('ne per somnium quidem'), as C. Tiphanus, himself a Jesuit, declares.[1] The first crossing of swords took place between R. P. Beaudoin and C. Mazzella. Not long after, G. Schneemann published a work in 1881, in refutation of which A. M. Dummermuth published a work at Paris in 1886, which contains a complete demonstration of the mind of St. Thomas. In 1893 V. Frins essayed a reply, and in refutation of this Dummermuth published another work in

---

1895. Since then there have been many minor publications, chiefly in theological and philosophical *Reviews*.

II. *ESSENCE OF MOLINISM*.—**1. Natural order.** —(1) *God's foreknowledge and free will.*—The knowledge of God, considered in itself, is one and indivisible; considered with reference to objects which are the term of His knowledge, it is divided according to the diversity of objects into speculative and practical, into necessary and free, etc. The division which concerns us now is that into the knowledge of vision (*scientia visionis*) and the knowledge of simple understanding (*scientia simplicis intelligentiæ*). The former has reference to things which have existed, exist, or will exist; the latter has reference to the purely possible, *i.e.* to objects which have not existed, do not, and will not exist (cf. *Summa Theol.* I. qu. 14, art. 9). Now, if this division is adequate, God must know a future free act by the 'knowledge of vision.' But, according to St. Thomas (I. qu. 14, art. 8, and art. 9 ad tertium), this knowledge necessarily implies an act of God's will or a divine decree. Hence a future free act is known by God by virtue of, in fact *in*, His decree, and therefore no future free act can exist unless God decrees its existence. This is the doctrine of the Thomists.

For Molina this is subversive of the freedom of the human will. Hence, he says, a means must be found whereby God knows a future free act before, and independently of, the divine decree. Now there is a third kind of object, continues Molina, which neither is purely possible nor yet belongs to the category of those objects which, in some difference of time, have actual existence. There is the future event which would exist if certain conditions were realized, which, however, will *not* be realized. Under this head are to be classed all those free acts which, though never destined actually to exist, would exist if certain conditions were fulfilled. These are called conditioned future events (*futura conditionata*, or *futurabilia*); and God knows these by the *scientia media*, a knowledge which is midway, as it were, between that of vision and that of simple understanding. Although a future conditioned event is that which will never come to existence, because the condition on which it depends will never be fulfilled, the *scientia media*, as such, abstracts from the realization or non-realization of such a condition; hence, by the *scientia media*, God explores and knows, with infallible certainty, what the human free will will infallibly do by its own innate liberty (consent or dissent, do this act or that, etc.) if it be placed in such or such circumstances. God, if He wishes, *e.g.*, Peter to consent, to do this act, etc., decrees to put Peter in these or those circumstances, and decrees conditionally to grant His help or concurrence for the particular action determined upon by Peter's free will (see below, 'simultaneous concourse'). In this decree, which follows the foreknowledge of the future free act, Molinists say God knows the absolute future consent without prejudice to the free will; but the certitude of His knowledge is due, not to the intrinsic efficacy of the decree, but to the *scientia media*, which sees the consent before the decree.

The unanimity among Molinists is mainly negative, namely, that God does not know future free acts in any absolute, actual decree of His will; but, as regards the medium in which God sees a future free act, *quot homines, tot sententiæ.*

(*a*) Molina and, after him, R. Bellarmine, M. Becanus, etc., teach that God knows the future free act in the super-comprehension of the free will; *i.e.*, God's knowledge penetrates into the innermost recesses of the will and sees there what it will infallibly do in such and such circumstances. This is the direct denial of free will, for the certain knowledge of an effect in its cause is the knowledge of a necessary effect. (*b*) Therefore Suarez taught that God knows the future free act in His decree foreseen as future. But it is impossible even to conceive of a future decree in God: the divine decrees are eternal, and are therefore neither past nor future. Unable to answer this, Suarez had recourse to another medium: (*c*) God knows future acts in their truth, which is either formal or objective. The reality of the future free act is the objective truth; the proposition expressing that reality is the formal truth. Some Molinists (G. Vasquez, M. Liberatori, H. Kilber, D. Palmieri, etc.) hold to the formal truth, asserting that of two contradictory propositions expressing a future contingent event one is determinately true, the other determinately false from all eternity, and this independently of God's will; but God knows all truth; therefore . . . This medium is rejected, not only by all Thomists, but by many Molinists, by Billot, G. Lahousse, etc. Others (F. Suarez, J. B. Franzelin, Mazzella, etc.) hold to the objective truth, since the truth of a proposition expressing the future depends on the objective truth of a future event. This medium is rejected by other Molinists—by Lahousse, who says that God sees future free acts, not in their truth, as such, but in their reality (*in ipsismet*). Billot, among others, refutes this. Others—J. Kleutgen, P. Carnoldi, T. de Régnon—failing to find a medium which does not involve absurdities, admit the *scientia media*, but acknowledge their ignorance as to its process of operation. Hence, the *scientia media*, invented to explain a difficulty, is the greatest difficulty of all.

(2) *God's causality and free will.*—God is the First Cause; therefore no being or mode of being can escape His causality. Thomists teach that in virtue of the divine decree the human will is physically, *i.e.* efficiently, predetermined by God to produce a free act. This divine influx precedes the action of the will by a priority of nature and causality, and applies the will to act (*i.e.*, makes the will pass from the state of not acting to the state of acting), thus rendering the will *in actu primo* capable of freely determining itself *in actu secundo*. The free will infallibly consents to that to which it is premoved; *i.e.*, the premotion is efficacious; yet the power to dissent remains with the will, for the premotion, divinely efficacious, effects that, although the will has the power to dissent, it infallibly consents and does not dissent. According to pure Molinism, the divine influx does not precede the action of the free will, but simultaneously co-operates with it, helping, as a partial cause, to produce the same action and the same effect. This divine action, called 'simultaneous concourse,' is, therefore, not received into the will, but is rather alongside of it, and is received immediately into the action and effect of the will. In order to safeguard the universal causality of God, it is said that, although God and the free will are partial causes of the free act, nevertheless the effect is wholly produced by God as the First Cause, and wholly by the will as the secondary cause. The simultaneous concourse is not efficacious, but is, of its very nature, indifferent, and is modified or determined by the free will, and hence can be used for volition or nolition, for this act or that act, indiscriminately, according to the determination of the free will. Other Molinists reject this simultaneous concourse, and admit a kind of premotion, *i.e.* a physical influx received into the faculty of the will previous to the determination (action) of the will. By this influx the will is moved and determined to general or universal good,

but of itself the influx is indifferent and inefficacious for this or that particular good : without any further influx from God, the will determines itself to act, not to act, to do this, or to do that.

Thomists are accused of making God the cause of sin by the physical premotion which is efficacious, but the difficulty of sin has to be solved by Molinists also. Physical premotion effects, it is true, that the will cannot but infallibly do that to which it is premoved, but no Thomist allows that God predetermines to sin *qua* sin (see THOMISM): the simultaneous concourse of the Molinists is a co-operation of God with the will, not indeed to produce the sinful action as sinful, but to produce the physical reality of the action. It is a lesser evil to co-operate than to make another commit a sin ; Molinists have chosen a lesser evil, but have not solved the difficulty.

Against the two theories of Molinism with regard to the divine influx Thomists object that neither safeguards the universal causality of God. The self-determination of the will is not nothing; it is a reality, which, therefore, cannot escape God's causality. To argue, as does a recent Molinist (Lahousse, *Theol. Nat.*, Louvain, 1888, cap. 9, art. 3, no. 502), that there seems no reason why this quality (*i.e.* the determination of the will whereby it makes itself pass from the state of not willing to the state of willing) cannot be efficiently produced by a created being is not only to beg the question, but manifestly to deny, in very words, God's universal causality.

2. Supernatural order.—(1) *Grace and free will.*—Against Pelagians both Thomists and Molinists defend the necessity of grace for the production of a salutary act. Against Semi-Pelagianism both defend the necessity for the very beginnings of faith, and for the desire to do a salutary work. Both teach the absolute gratuity of actual grace, even for the very beginnings (*prima gratia vocans*) of justification. Against Calvin, Luther, and Jansen both teach that sufficient grace is given to all without exception, and that, under the influence of efficacious grace, the freedom of the will remains intact. The first point of difference between Thomism and Molinism concerns the nature of sufficient and efficacious grace, which both agree to be a division of actual grace. For the Thomist efficacious grace is entitatively, *i.e.* intrinsically (*ab intrinseco*), different from sufficient grace. Sufficient grace gives the proximate power of producing a salutary act ; it raises the will to a supernatural level, and constitutes it *in actu primo* capable of performing a salutary act ; but in order to produce that act *de facto* an efficacious grace (which is a physical premotion in the supernatural order) is necessary. Hence sufficient grace in Thomism gives the *posse*, efficacious grace the *agere* (see THOMISM). For the Molinist the same grace can be sufficient or efficacious ; it remains sufficient if the will resists ; it becomes efficacious if the will consents. Grace, therefore, is efficacious, not intrinsically or of its very nature, but extrinsically, by the consent of the will (*gratia efficax ab extrinseco*). In the natural order, as said above, the divine indifferent concourse is not received into the will, nor does it precede the action of the will, but in the supernatural order it precedes (owing to which it is called *gratia præveniens*) the action of the will, and is received into it, thus elevating and making the will the principle *in actu primo* of the salutary act (this saves Molinism from Semi-Pelagianism). Prevenient grace is a physical reality produced by God in the soul moving it (owing to which it is called *gratia excitans*) morally (not physically, *i.e.* efficiently) to consent; it co-operates (owing to which it is called *gratia co-operans*) with the will to elicit a salutary act ; but the consent does not follow infallibly, because this grace is not of its very nature, or intrinsically, efficacious (cf. Molina, *Concordia*, qu. 14, art. 13, disp. 41). According to this doctrine, one and the same grace can be merely sufficient for one individual and efficacious for another ; further, a lesser grace can be efficacious for one person, while a greater grace can remain merely sufficient for another. Nevertheless, an efficacious grace is a greater boon than a grace merely sufficient. Thus, God from all eternity foresaw (by the *scientia media*) that, if He gave grace A to Peter, he would consent, but, if He gave grace B, Peter would not consent. When, therefore, God gives to Peter grace A, which He foresees will be efficacious, that grace is a greater gift than grace B, which He foresees would be merely sufficient (Molina, L. Lessius, Mazzella, H. Hurter, Palmieri, P. Tepe, etc.).

Bellarmine, Suarez, Vasquez, etc., modified this doctrine, and held what is called Congruism. In this form of Molinism sufficient grace is not indeed intrinsically different from efficacious grace, but differs only as regards the manner in which it affects the will. Efficacious grace (called *gratia congrua*) is that which is so accommodated to man's temperament and to the circumstances of time and place that the will infallibly, but freely, consents ; sufficient grace (*gratia incongrua*) is that which is not so perfectly adapted to a man's character and to the circumstances of time and place, etc., and hence the will *de facto* resists. If, therefore, God wishes Peter to consent to grace, He decrees to give him congruous grace—*i.e.* a grace perfectly adapted to Peter's character—to put him in the most fitting circumstances, etc.

(2) *Predestination.* — According to the two theories of grace in the Molinist system, there are two theories of predestination : predestination due to foreseen merits (*post prævisa merita*) and gratuitous predestination (*ante prævisa merita*).

(*a*) *Predestination due to foreseen merits.*—God truly and sincerely wishes all to be saved (the salvific will of God) ; to all he gives sufficient grace. Foreseeing, by the *scientia media*, who will consent to grace and persevere in it, God predestines them to glory. In this opinion predestination to glory presupposes the good use of grace and is therefore not gratuitous (Lessius, Vasquez, Becanus, Franzelin, H. Tournely, etc.). As is evident, this theory entails all the insoluble difficulties of the *scientia media*. Moreover, all that man has he receives from God, according to St. Paul (Ro 11[35f.] 'Who hath first given to him, and it shall be recompensed unto him again ? For of him, and through him, and unto him, are all things'; cf. 1 Co 4[7] 'What hast thou that thou didst not receive ? but if thou didst receive it, why dost thou glory, as if thou hadst not received it ?'). Now Pelagians, Semi-Pelagians, and Molinists deny the gratuity of predestination, for no other reason than because they presuppose something on man's part which is the reason why God predestines some to glory and not others. The Pelagians presuppose good works, the Semi-Pelagians the beginning of good works, and Molinists the good use of grace. But, if all these things are from God, He cannot look for or await them in order to predestine some and not others ; on the contrary, He gives even the good use of grace to some because he pre-elected them to glory. In accordance, then, with the teaching of St. Paul, with the doctrine of St. Augustine and St. Thomas, Thomists, and some Molinists of high repute, teach the absolute gratuity of predestination, *i.e.* irrespective of foreseen merits.

(*b*) *Gratuitous predestination.*—God wishes all to be saved ; to all He gives sufficient grace. By a special act of love and mercy He elects some to glory in preference to others, without any other reason than that of His own divine will. To the chosen He gives graces by which they will infallibly reach heaven (Suarez, Bellarmine, J. de Lugo, Billot, etc., and all Thomists, after St. Augustine and St. Thomas). On this point there is practically no difference between Thomists and this group of Molinists; the difference between them has reference to another question treated above, namely, the origin of the efficacy of grace. Some Congruists teach that God gratuitously elects certain ones, not to glory, but to congruous grace, to which they will infallibly consent, and in which they will persevere. Foreseeing this consent by the *scientia media*, God predestines them to glory. Against the latter opinion Thomists object, in particular, that God is made to act in a manner that implies the denial of an axiom received as true not only by all schools of philosophy but by common sense. In the order of actual realization the means must necessarily precede the end; but in the order of intention the end must precede the means, for it is impossible to choose and adapt means to an end without a preconception of the end. Now, since God must act as an intellectual being, He must (according to this axiom) first of all conceive the end, then choose the means for obtaining that end. But grace, good use of grace, merit, are the means, and glory is the end. Therefore He must first predestine to glory before He predestines to congruous grace. In the Congruist theory He does exactly the opposite. To this simple and irrefragable argument no Congruist has ever essayed a reply that is not suicidal. Molina also teaches the gratuity of predestination (*Concordia*, qu. 22, art. 4, 5, disp. 1, membr. xi.), but his explanation is very different from that of the majority of those who follow him. In eternity God knows all possible universes, infinite in number; in each universe or order there is a series of free acts, all of which God knows by the *scientia media* independently of any act of His will. In each of these possible orders certain people are predestined, not, indeed, through the efficacy of a divine decree (which as yet has not intervened), but through grace made efficacious by the consent of the human will, in which the will perseveres unto the end. The omniscient God knows all this by the *scientia media*. By His own free will, without any regard whatsoever to foreseen merits, He gratuitously decrees to bring one of these orders to existence. The difference between Molina and Suarez on this point comes to this, that the former teaches predestination to glory before a prevision of absolute future merits, but after the prevision of conditioned future merits, whereas the latter teaches predestination to glory before prevision of future merits, whether absolute or conditioned. Molina explains his own theory in a manner more subtle and more profound than any of his followers. But, apart from the insuperable difficulty of the *scientia media*, there are difficulties in this explanation which absolutely destroy free will. We deny absolutely that a free act can be connected with any one order; it is the denial in very words of the freedom of the act. It is absolutely false that a free act is connected with any circumstances whatever, in the sense that, given the circumstances, a particular free act must follow. All those possible universes are contradictions, and have therefore no reality or conceivability; God, therefore, could not conceive them.

(3) *Reprobation.*—It is a defined doctrine of Catholic faith that no one is destined by God to eternal damnation except after a prevision of demerits; this is called 'positive reprobation.' In the theory of gratuitous predestination, by the very fact that God gratuitously elects some and not others, those not chosen will infallibly not be saved; hence a reprobation of some sort is concomitant with the predestination of some to glory; this is called 'negative reprobation.' The difficulty is to conciliate negative reprobation with the universal salvific will of God. Suarez and his followers say it is a 'positive act of nolition to elect'; some Thomists (as J. B. Gonet, V. Contenson, etc.) that it is a 'direct exclusion from glory'; others (as A. Goudin, C. R. Billuart, etc.) that it is the 'omission of an effectual election' to heaven. It is, however, very difficult to safeguard the salvific will of God if negative reprobation be a positive act on God's part. Why not say, therefore, that it is the entire absence of any act of the divine will, whether of volition or nolition? It is the mere absence of the act of assumption.

ÆLRED WHITACRE.

MOMENTARY GODS.—'Momentary gods' (*Augenblicksgötter*) is an expression coined by H. Usener (*Götternamen*, Bonn, 1896, p. 279), and one whose credentials are open to question. It must certainly be admitted that the phenomena which Usener brings under the term are of very diverse kinds. It is true, of course, that human beings whose minds are dominated by fetishistic and animistic ideas may, under the influence of a momentary impression, ascribe to objects or occurrences a divine or dæmonic character; but the question is whether it is worth while to differentiate such procedure from the general mass of fetishistic and animistic phenomena by the use of a special term. Thus we frequently meet with the practice of worshipping the lance or other weapon (L. Deubner, *ARW* viii. [1905], Beiheft, p. 71), such being often invoked to witness an oath (Æsch. *Sept.* 529; schol. Apoll. Rhod. i. 57); but these facts in reality furnish reasons for doubting whether the weapon was only then deified, and suggest rather that it was thought of as permanently possessed of divine qualities. Thus, too, while Vergil makes Mezentius say: 'dextra mihi deus et telum quod missile libro,'[1] and is imitated in this artifice by later epic authors (Silius Ital. v. 118, vi. 137; Statius, *Theb.* iii. 615, ix. 548), such poetic fancies throw no light whatever upon primitive religious feeling. The lightning-flash smiting down upon the earth is regarded everywhere with a religious dread, and Greeks and Romans alike avoided all contact with the spot where it had struck, this being for the former a consecrated place (ἠλύσιον, ἐνηλύσιον), and for the latter a *bidental*, which is explained by the phrase 'fulgur conditum.'[1] Thus the lightning-flash actually came to be regarded as a divine being: some of the Diadochi adopted the name Keraunos; in Seleucia Seleucus Nicator instituted a cult of the κεραυνός (Appian, *de Rebus Syr.* 58), the existence of which is attested by numerous coins; and there is an Orphic hymn dedicated to this deity. Keraunos is often represented as subordinate to Zeus, who in this capacity is called Keraunios, Kataibates, and Kappotas, just as Juppiter Fulgur is designated Fulgurator and Fulminator (Usener, *Kleine Schriften*, iv. Leipzig, 1913, p. 471). The natural phenomenon here involved is, of course, one of relatively rare occurrence, and but seldom arrests special attention by leaving visible traces of its action, but the worship of lightning, in its essential features, cannot be separated from that of winds and meteoric stones. Quite a different case, again, is presented by the worship of the last sheaf, or of the harvest-wreath (Gr. εἰρεσιώνη), and by other practices which have been explained by W. Mannhardt;[2] the harvest-wreath, which was wound round with white and red woollen threads, and for the year remained hanging at the door as an amulet for the house, is unmistakably a fetish, *i.e.* a sacred object fashioned and consecrated by human beings (R. M. Meyer, *ARW* xi. [1908] 320); in the last sheaf, however, and things of similar formation, is concealed the corn-spirit which, according to animistic ideas, renews the life of the corn, but, while it is only at harvest-time that the spirit becomes in a manner manifest to sight, it is in reality always present, and is therefore not a 'momentary god' in the proper sense. Usener likewise adduces the conceptions of the δαίμων and the *genius* of the individual. It is very difficult to come to a definite conclusion regarding the ultimate origin of these conceptions; they have undoubtedly been influenced in part by ideas of the soul, and, in the case of the δαίμων, by the notion of 'possession' (J. Tambornino, *De antiquorum dæmonismo*, Giessen, 1909), while the snake-form of the *genius* seems to point in quite a different direction (W. F. Otto, in Pauly-Wissowa, vii. 1155 ff.). In any case, the present writer can see no rational grounds for bringing δαίμωὶν and *genius* under the category of 'momentary gods.'

---

[1] *Æn.* x. 773.

While, however, the conception of 'momentary gods' is thus in part a rather indeterminate one, and in part of limited significance, the introduction of the term 'special gods' (Germ. *Sondergötter*) has proved to be of real advantage. This term, too, we owe to Usener, who framed it on the suggestion of E. Lehmann in connexion with Varro's *di certi*; like the latter, the special gods are deities with a clearly defined sphere of action, and thus closely allied to the momentary gods. Usener has shown that in the development of religion—so far, at least, as Greece was concerned—they are anterior to the great deities, and this result might, no doubt, be very widely generalized. Unmistakable examples are found in Greek heroes like Euodos (G. Kaibel, *Epigrammata Græca*, Berlin, 1873, no. 825), Myiagros (Paus. VIII. xxvi. 7), Teichophylax (Hesych. *s.v.*), or Horophylax (*JHS* viii. [1887] 236), who never had more than a local significance and a narrow sphere of action. Other beings of this type were absorbed by the great Olympian (*i.e.* Homeric) deities; thus Kourotrophos (also in plur., *Ephem. Arch.*, 1899, p. 143) was originally an independent deity who at length became a mere epithet of Ge, Artemis, Demeter, etc., and Zeus Erechtheus, Athene Hygieia, etc., are to be interpreted in the same way. We may even venture to say that the displacement of these special deities by the Olympians was one of the most important processes in the development of Greek religion within historical times.[1] Among the Romans such special deities are found more especially in the Indigitamenta (*q.v.*), in which every particular operation—*e.g.*, in agriculture—was assigned a distinct tutelary spirit—Vervactor, Redarator, Imporcitor, Insitor, Obarator, Occator, Sarritor, Subruncinator, Messor, Convector, Conditor, Promitor. It is said, indeed, that even the *lupanaria*, *culinæ*, and *carceres* had each their special deity (Tertull. *ad. Nat.* ii. 15).[2] From this, however, we derive but scanty information as to the earlier state of things which had been disturbed by the incursion of the Greek religion; even in Varro's lists of these gods we already find many names of extraneous origin, and we are quite unable to say what degree of importance attached to the individual deities.

Very valuable data are furnished by the accounts of the Lithuanian special gods, as critically discussed by Usener (*Götternamen*, p. 79; cf. Deubner, *ARW* ix. [1906] 284; O. Schrader, *ERE* ii. 31 f.); here we find Austheia, the goddess of bees, Babilos, the honey-god, Budintaia, the goddess who arouses from sleep, Kiauliukruke and Kremata, the swine-gods, Meletele, the goddess of the colour blue, Raugupatis, who causes the fermentation of beer, and Wejopatis, the lord of the wind. Kindred figures are found among the Letts.

As regards the existence of such special deities in other religions—with the exception, however, of the heathenism that was not wholly submerged by the Roman Catholic Church (see below)—our knowledge is at fault, partly from lack of materials and partly from lack of research. We may unhesitatingly take for granted, however, that, *e.g.*, the pantheons of the Vedas and the Avesta[3] correspond with that of Homer in presenting various types of deities, and that the place of the great gods who hold sway in these literary monuments was, among the people, *i.e.* in the living religion, taken by a multitude of less imposing beings, of whom, it is true, our knowledge is most imperfect. The Phœnician religion provides an instructive example; here it was not, strictly speaking, a single self-identical Baal to whom divine honours were paid; on the contrary, each several tribe and city had its own special Baal, and worshipped him as a tribal or tutelary deity. The data which lie most readily to hand are found in countries where residual elements of heathen views still co-exist with or underlie the Roman Catholic religion in the practice of saint-worship, and have to some extent been countenanced by the Church (D. H. Kerler, *Die Patronate der Heiligen*, Ulm, 1905). Thus, *e.g.*, among the Zamaites of Prussia, St. Agatha took care of the household fire and St. Nicholas was the guardian of boatmen, St. Apollonia cured toothache and St. Laurentius rheumatic pains, St. Crispin was the patron of shoemakers and St. Goar of potters.[4] In the Vosges St. Abdon is believed to drive away fleas, St. Catherine to secure husbands for maidens, St. Sabina to allay the pangs of love, and so on. A number of these tutelary offices of saints are universally recognized by the Roman Catholic Church, and are entered in the *Diario Romano*, in which we are told, for instance, that St. Blasius cures sore throat and St. Liberius pains due to calculus, and that St. Martha protects from epidemics. Almost every district has its own particular patron saint, and in many cases clings to him with marked tenacity.

[1] Cf., however, the criticism by L. R. Farnell, 'The Place of the "Sonder-Götter" in Greek Polytheism,' in *Anthropological Essays presented to . . . Tylor*, Oxford, 1907, pp. 81–100.

[2] The necessary corrections of Usener's statements in this connexion will be found in G. Wissowa, *Gesammelte Abhandlungen zur röm. Rel.- und Stadtgesch.*, Munich, 1904, p. 304, and W. F. Otto, *Rhein. Mus.* lxiv. [1909] 449, 468.

[3] On Iranian 'special gods' cf. the remarks of J. H. Moulton, *Early Zoroastrianism*, London, 1913, pp. 69–71, 105, 150. A notable instance is Verethraghna, 'Victory.'

[4] On the saints who exercised an official function Deubner, *De Incubatione*, Leipzig, 1900, is well worth consulting.

LITERATURE.—This has been sufficiently indicated in the article.

W. KROLL.

MONADISM.—See LEIBNIZ.

MONARCHIANISM.—Monarchianism is a term generally used to designate the views of those heretics who, to safeguard the Divine unity (*monarchia*), so refined away the distinction of the Divine Persons as to destroy the Trinity. Hippolytus has left us a summary account of their origin. A certain Noetus, so he tells us, was the protagonist of these ideas; they were upheld by his disciple, Epigonus, and further propagated by the latter's disciple, Cleomenes.[1] From Epiphanius we gather that Noetus must have died shortly before A.D. 250.[2] But Hippolytus, who appears to have been martyred about A.D. 240, and who composed his *Philosophumena* between the years 230 and 235,[3] says in his *Tractate against Noetus*, i., that he 'died not very long since.'[4] And this seems more probable; for Cleomenes, the disciple of Noetus's disciple Epigonus, according to the *Philosophumena*,[5] caused much trouble during the pontificates of Zephyrinus and Callistus, viz. 198–222.[6]

Hippolytus endeavours to show that Noetus's views were in reality only those of the philosopher Heraclitus the Obscure, who held that 'the Father is an unbegotten creature who is creator.'[7]

> Noetus and his disciples hold, says Hippolytus, these Heraclitean tenets, for they say 'that one and the same God is the Creator and Father of all things; and that when it pleased Him, He appeared.'[8] And again: 'When the Father had not been born, He [yet] was justly styled Father; and when it pleased Him to undergo generation, having been begotten, He Himself became His own Son, not another's.' 'In this manner,' adds Hippolytus, 'he thinks to establish the sovereignty [of God], alleging that Father and Son, [so] called, are one and the same [substance], not one individual produced from a different one, but Himself from Himself; and that He is styled by name Father and Son, according to vicissitude of times.'[9]

Hippolytus, as we have seen, says that Noetus set forth his views as a means of upholding the Divine sovereignty, but, as a fact, the term *monarchia* (*μοναρχία*) was ambiguous and could be used as the watchword of both parties. Thus Eusebius tells us[10] that St. Irenæus wrote a work, *de Monarchia*, against those who held that God was the author of evil. Similarly Justin Martyr has left a treatise, *de Monarchia*, to prove that God is the sole governor against paganism;[11] see also Athenagoras, *Legatio* viii.[12] But, as was only natural, the Apologists previous to the Council of Nicæa were faced with the grave difficulty that, while combating polytheism, they had to maintain the divinity of Christ without impairing the Divine unity. And it must be acknowledged that, in insisting upon the divinity of Christ, they often, through lack of precision in their choice of terms, laid themselves open to the charge of ditheism. Thus Hippolytus says that Callistus reproached the opponents of Noetianism with being ditheists;[1] and Pope Dionysius felt himself compelled to point out that in opposing Sabellius many 'divide and cut to pieces and destroy that most sacred doctrine of the Church of God, the Divine monarchy, making it as it were three powers and partitive subsistences and godheads three.'[2] An example of this unintentional vagueness may be found in Justin, *Dial.* cxxix., and, what is even more remarkable, in those who most strenuously resisted the Noetians and their successors, the Sabellians. Thus Novatian, while insisting on the divinity of Christ and urging the precision with which Christ Himself says 'I and the Father are one' (*ἕν*, 'one,' that is, in the neuter, and consequently not in person, but in substance or nature), yet offers no explanation of how this can be. The retort was obvious: Then you hold that there are *two* Gods![3] Even Tertullian, in spite of his lawyer-like precision of terms and his undoubted orthodoxy on this point—even in his Montanist days—has some most misleading expressions which the post-Nicene writers would have avoided at all costs.[4] Yet these things are inevitable, and it is by such discussions, with occasional lapses from exactitude on either side, that the Church can come to a full knowledge of the deposit of truth.[5]

A remarkable exception to this prevailing vagueness is furnished by Athenagoras, who, in his *Legatio*, says:

> 'The Son of God is the Logos of the Father, in idea and in operation; for after the pattern of Him and by Him were all things made, the Father and the Son being one. And, the Son being in the Father and the Father in the Son, in oneness and power of spirit, the understanding and reason (*νοῦς καὶ λόγος*) of the Father is the Son of God. But if, in your surpassing intelligence, it occurs to you to inquire what is meant by the Son, I will state briefly that He is the first product of the Father, not as having been brought into existence (for from the beginning, God, who is the eternal mind [*νοῦς*], had the Logos in Himself, being from eternity instinct with Logos [*λογικός*]); but inasmuch as He came forth to be the idea and energizing power of all material things.'[6]

Nor is it surprising that these so-called Monarchians should have had a strong following. God is One. For this monotheism the prophets had fought and prevailed. But, if God is One, then, though there may be diversity of actions *ad extra*, there can be no such diversity of action *ad intra* as shall imply distinction of Persons. But Christ is God, and Christ suffered upon the Cross. Therefore the Father suffered![1] The conclusion seemed compelling; but the Noetians and Sabellians shrank from it and endeavoured to explain that this suffering of the Father was in some sense not really His.[2] Theirs was a strong position. They seemed to be the advocates of orthodoxy against the orthodox themselves. It was in vain that the latter rejoined: Then, according to your argument, it is the Father who sits at His own right hand! For, while the NT as a whole clearly taught the divinity of the Son and the distinction of Persons, yet there were certain texts which, while maintaining the former, seemed expressly to deny the latter. Thus Praxeas insisted on 'I and the Father are one' (Jn 10^{30}); this it was easy to explain in a monotheistic sense, as Tertullian does.[3] But it was not so easy to explain 'He that hath seen me hath seen the Father; and I am in the Father, and the Father in me' (Jn $14^{9f.}$). Tertullian treats this passage at considerable length,[4] but it can hardly be said that his answer precludes the retort: Then there are *two* Gods!

[9] *Ib.*

[10] *HE* v. xx. 1.

[11] Περὶ Θεοῦ Μοναρχίας, tr. in *Ante-Nicene Fathers*, ii. [1892] 329 ff. (*PG* vi. 311), but probably not the work referred to by Eusebius, *HE* IV. xviii. 4; and note Origen, *Com. in Ep. ad Titum* (*PG* xiv. 1304): 'philarchiae morbo languentes dogmata statuerint.'

[12] Athenagoras, Πρεσβεία (*PG* vi. 903; *Ante-Nicene Fathers*, ii. 375 ff.).

[1] *Phil.* ix. 7. Much capital has been made out of Hippolytus's violent attacks on the orthodoxy, and, indeed, on the personal character, of Popes Zephyrinus and Callistus. But Hippolytus himself says (*Phil.* ix. 7) that Callistus excommunicated Sabellius, though he maintains that Callistus did so out of fear of himself, Hippolytus. Perhaps the best commentary on Hippolytus's diatribes is furnished by the absolute silence of all other writers of the period.

[2] Quoted by Athanasius, *Epistle in Defence of the Nicene Definition*, 26 (*PG* xxv. 462); J. H. Newman, *Athanasius*, Oxford Library of the Fathers, 1842–44, i. 45; also *Ante-Nicene Fathers*, xviii. [1895], 'Tertullian,' iii. 385–387, a fragment of an epistle or treatise of Dionysius, bishop of Rome, against the Sabellians; cf. also Dionysius of Alexandria, *adv. Sabellium*, given in Eusebius, *Præp. Evang.* viii. 19 (*PG* x. 1270); Mansi, *Concilia*, i. col. 1011.

[3] Novatian, *de Trin.* xi.–xviii., xxvii.

[4] Thus in *adv. Prax.* iii. (*PL* ii. 158) he speaks of the angels as being 'members of the Father's own substance,' and in iv. (*ib.* 159) of the *monarchia* as 'committed' by the Father to the Son.

[5] Cf. St. Augustine's remark apropos of the re-baptism controversy: 'Quomodo enim potuit ista res tantis altercationum nebulis involuta ad plenarii concilii luculentam illustrationem confirmationemque perduci, nisi primo diutius per orbis terrarum regiones multis hinc atque hinc disputationibus et collationibus episcoporum pertractata constaret? Hoc autem facit sanitas pacis, ut, cum diutius aliqua obscuriora quæruntur et, propter inveniendi difficultatem, diversas pariunt in fraterna disceptatione sententias, donec ad verum liquidum perveniatur, vinculum permaneat unitatis, ne in parte præcisa remaneat insanabile vulnus erroris' (*de Baptismo c. Donatistas*, II. iv. (5) [*PL* xliii. 129]; the whole passage is worth reading in this connexion).

[6] Athenagoras, Πρεσβεία, x. (*PG* vii. 907; *Ante-Nicene Fathers*, ii. 385); cf. xxiv. (*PG* vii. 946).

It is only when we turn to such an analysis of these passages as is furnished by Athanasius (*e.g.*, on Jn 14^{10}, in *Orat.* iii. 23) and Augustine (*Tract.* xix. 13, xxi. 4, xxii. 14) that we realize the distinction between ante- and post-Nicene clearness of expression when handling the questions ventilated by the Noetians and their successors. St. Phœbadius († *c.* A.D. 393) puts the dilemma clearly:

> 'If we speak of one God in the singular, excluding the word "Second Person," we thereby approve that mad heresy which says that the Father Himself suffered. If, on the other hand, we admit of number combined with division, then we join hands with the Arians who hold that God was made from God, and who say that He fashioned a new substance out of nothing. We must, then, hold to the rule which confesses that the Father is in the Son and the Son in the Father, to the rule which while preserving the oneness of substance acknowledges an economy (*dispositionem*) in the Divinity.'[5]

Both sides, then, claimed to be the sole upholders of a true conception of the Divine monarchy:

> 'Marcellus and Photinus,' says Athanasius, 'negative Christ's existence before ages, and His Godhead and unending Kingdom, upon pretence of supporting the divine monarchy.'[6]

Tertullian states the case in his usual pithy manner:

> 'We, say they, maintain the monarchy. . . . Yes, but while the Latins take pains to pronounce *monarchia*, the Greeks refuse to understand *œconomia* . . . for, extolling the *monarchia* at the expense of the *œconomia*, they contend for the identity of Father, Son, and Spirit.'[7]

And then he puts his finger on the real difficulty which the Noetians had to face:

> 'Praxeas put to flight the Paraclete, and he crucified the Father!'[8]

Hence the opprobrious nickname for the so-called Monarchians—Patripassians,[9] *i.e.* 'those who made the Father suffer' in the person of the Son. Methodius († *c.* 312), commenting on Rev 12^{1-6}, likens those who have gone astray with regard to one of the Three Persons in the Trinity to the third part of the stars that fell:

> 'As when they say, like Sabellius, that the Almighty Person of the Father Himself suffered.'[1]

It is of interest to note how these heresies shaded off into one another. Thus Sabellius apparently denied that he was a Patripassian; but, in order to do so, he seems to have held that our Lord came into being only on His human birth.[2] The Arians, on the contrary, said 'before the ages,' thus agreeing, so it would seem, with the Patripassians. Again we note that, whereas Sabellius claimed to rank as a Monarchian, yet the Arian bishops, writing to Alexander, say:

> 'We do not do as did Sabellius who, *dividing the One*, speaks of a Son-Father.'[3]

Thus their ground of complaint against Sabellius was precisely that on which he plumed himself on not doing, viz. separating the Divine *monarchia*. Similarly Athanasius says:

> 'Sabellius supposed the Son to have no real subsistence, and the Holy Spirit to be non-existent; he charged his opponents with dividing the Godhead.'[4] And once more: 'Sabellius, dreading the division invented by Arius, fell into the error which destroys the Personal distinctions.'[5]

It must, however, be remembered that no one can at this date say what precisely were Sabellius's opinions, partly because of the inevitable fluctuations through which he passed, partly, and chiefly, because history is apt to confuse him with his disciples, as in the passage last quoted from Athanasius.[6]

How grievous were the ravages worked by these Monarchian views can be seen by the frequent condemnations of them in the shape of Sabellianism. Thus Pope Damasus condemned them in the Council held at Rome in 380 (or [?] 382):

> 'We anathematize those also who follow the error of Sabellius in saying that the Father is the same as the Son.'[7]

Similarly, in the ecumenical Council of Constantinople (A.D. 381) the first canon is directed against various shades of Arianism, and finally against the Sabellians, Marcellians, Photinians, and Apollinarists.[8] By the time of the provincial Council of Braga (561) we see how these Monarchian principles have verged into Priscillianism and are tainted with Manichæism.[9] The same comprehensive condemnation was repeated in the Lateran Council of 649 (can. xviii.).[10] Lastly, Eugenius IV. found it necessary to remind the Jacobites, in his decree dated 4th Feb. 1441, that the Church 'condemns Sabellius for confusing the Persons and for thus altogether doing away with the real distinction between them.'[11]

The subsequent ramifications of the Monarchian tenets do not concern us here. Suffice it to say that they spread very widely, though in forms which varied considerably from those originally set forth. Thus Eusebius mentions that Beryllus, bishop of Bostra, 'deserted the ecclesiastical standard,' *i.e.* the Rule of Faith, and asserted that Christ did not pre-exist in a distinct form of His own, neither did He possess a divinity of His own, but only that of the Father dwelling in Him.[12] This is clearly a derived form of Monarchianism. The most prominent, perhaps, among the later

[7] *Adv. Prax.* iii. (*PL* ii. 158), and ix. (*ib.* 164). Tertullian's use of the term *œconomia* is unusual. In the NT it generally refers to the ministry of the Word of God (*e.g.*, 1 Co 9^{17}); also to the divine counsel as fulfilled in the Incarnation (Eph 1^{10}). And thus it is used by the Greek Fathers of the mystery of the Incarnation (cf. J. C. Suicer, *Thes. eccles.*, Amsterdam, 1728, *s.v.*). But here Tertullian uses it of the relationship of the Three Persons of the Trinity, a usage of which Suicer takes no notice.

[8] *Ib.* i. (*PL* ii. 156). Of Praxeas himself very little is known. Hippolytus apparently knows nothing of him, though, if we are to argue from his silence, we could equally well argue from Tertullian's silence regarding Noetus, Cleomenes, and Sabellius. For some of the views which have been held regarding his identity see *DCB*, *s.v.* 'Praxeas.'

[11] *Ib.* xxxi. 1735.

[12] *HE* vi. xxxiii. 1, with McGiffert's notes.

Monarchians were the Priscillianists. They are of interest by reason of the strange influence which they had on the Latin text of the Gospels[1]—*e.g.*, indirectly on 1 Jn 5[7]. To them are due the Monarchian *Prologues* which have attracted so much attention in later years.[2]

It is usual to embrace under the heading Monarchianism the so-called Adoptianist heresies. But, while it is true that the Adoptianists may be regarded as the legitimate outcome of the Monarchians, yet they approach the question from an entirely different standpoint. For Adoptianism is a Christological heresy, whereas Monarchianism, at least in its original form as Patripassianism, concerns the Father rather than the Son. To embrace the two heresies under one heading is to obscure the issue. See art. ADOPTIANISM.

HUGH POPE.

MONASTICISM.—I. *ETYMOLOGY; DEFINITION.*—The word 'monasticism' is derived from the Gr. word *μόνος*, 'alone,' 'solitary,' from which a whole family of words has been formed: *μονή* and *μοναστήριον*, 'monastery'; *μοναχός*, 'monk' or 'solitary'; *μονάζειν*, 'to lead the solitary life'; *μονάζοντες*, 'solitaries'; *μονάστρια*, 'nun'; *μοναδικός*, *μοναχικός*, *μοναστικός*, *μονήρης*, 'monastic'; *μονάζουσα*, *μοναχοῦσα*, *μοναχή*, 'nun'; *τὸ μοναχικόν*, 'monasticism'; *μοναστικῶς*, 'monastically'; *μοναχισμός*, 'monachism.'[3]

In Latin this word has given *monachus* and its derivatives, *monacha*, *monachatus*, *monachare*, *monachizare*, *monachismum*, *monachatio*, *monasterium*, and a few other words.[4]

> 'Interpretare vocabulum monachi, hoc est nomen tuum: quid facis in turba qui solus es?' (Jerome, *Ep.* xiv. [*PL* xxii. 350]). 'Sin autem cupis esse quod diceris, monachus, id est solus, quid facis in urbibus, quae utique non sunt solorum habitacula sed multorum?' (*Ep.* lix. [*PL* xxii. 583]).

All these words, derived as they are from the same root, indicate the idea of solitude, of isolation. This solitude must not, however, be interpreted as implying absolute isolation—such as that of the hermit in the desert. As we shall see, the term 'monk' has come to be applied to men living the same life in common—a life in which they are indeed separated from the world, but not from one another.

In common usage the word 'monasticism' is often incorrectly extended to embrace the idea of the religious state in general, comprising even those religious orders which cannot be regarded as belonging to this category — such, *e.g.*, as the Dominicans and Franciscans, the Jesuits and other clerks regular. Strictly speaking, the term should be reserved for the form of religious life led by those who, having separated themselves entirely from the world, live in solitude—as, in fact, the etymology of the words 'monk,' 'monastery,' etc., clearly indicates. We shall see below (§ III.) in what the special characteristics of the monk properly so called consist, the special conditions of the monastic life, and its various types. The monks, in fact, form a class apart among what are known as the 'religious orders'; they must be distinguished from those that are commonly termed the 'mendicant orders' or 'friars'—*e.g.*, Dominicans, Franciscans, or Carmelites—from the clerks regular, such as the Jesuits, and from other forms of the religious life and religious congregations—*e.g.*, the Redemptorists, Oratorians, Sulpicians, etc. (see art. RELIGIOUS ORDERS).

At the present day monks are represented in the Catholic Church by the Basilians and other monks of the East; by the Benedictines, Cistercians, Camaldolese, Olivetans, Carthusians, and other religious families of less importance. They must be distinguished from the ascetics who existed in the early ages of the Church, and who were simply Christians living a more austere life in the world. Nevertheless, after the monastic life properly so called had been instituted, many of these ascetics of both sexes entered the monasteries; hence we find the name 'ascetic' applied sometimes to the monks also (see, *e.g.*, the *Peregrinatio Etheriæ*; cf. art. ASCETICISM, vol. ii. p. 63 f.). The canons regular and the military orders should also be distinguished from the monks, although there were many points of contact between them. We are not, however, concerned with them here.

II. *MONASTICISM OUTSIDE OF CHRISTIANITY.*—Monasticism cannot be regarded as an institution belonging exclusively to Christianity, although it is chiefly in that religion that its full development is to be sought. Examples occur in the non-Christian religions as well, and we shall see in what relation these stand to Christian monasticism.

1. Worship of Sarapis.—In recent years it has become the fashion to see in the *κάτοχοι*—pagan recluses who lived in the temples of Sarapis and their dependencies—the authentic ancestors of the Christian monks. Weingarten, to whom this theory owes its origin, has even maintained that St. Pachomius, the founder of Christian cenobitism, not only drew a large part of his Rule from the usages of these *κάτοχοι*, but had been himself a *κάτοχος* of Sarapis, before his conversion to Christianity, at the Sarapeum of Chenoboscium. This theory, however, rests on a series of unverified hypotheses. Pachomius was never a *κάτοχος*. All that can be gathered from the most ancient life of this saint is that he withdrew to an abandoned temple of Sarapis, and that, while there, he had a vision of God—not, however, of the pagan divinity, but of the God of the Christians. Moreover, the analogies that have been drawn between these *hierodouloi* and the cenobites of Christianity are only apparent.[1]

2. Neo-Platonism.—The Alexandrian school of philosophy in the 2nd and 3rd centuries taught a kind of mysticism, more philosophical than religious, in which moral ideas and ascetic practices occupied an important place. The attempt has been made to find in this mystic philosophy the source of Christian asceticism. The latter, however, was in existence before this date, and under a very different form. Moreover, it seems difficult to avoid the conclusion that the Alexandrian philosophy, far from influencing Christianity, was itself deeply imbued with Christian ideas (cf. ASCETICISM, vol. ii. p. 65ᵇ).[1]

---

[1] Thus note canon xvii. of the Council of Braga (A.D. 561): 'If any one reads the Scriptures which Priscillian corrupted in accordance with his own erroneous views . . . let him be anathema' (Mansi, ix. 774).

[1] With regard to this question of *κάτοχοι* and cenobites cf. H. Weingarten, 'Der Ursprung des Mönchtums im nachkonstantinischen Zeitalter,' in *ZKG* i. [1877] 1 ff.; E. Preuschen, *Mönchtum und Sarapiskult: eine religionsgeschichtliche Abhandlung*, Giessen, 1903; E. Revillout, 'Le Reclus du Sérapéum, sa bibliothèque et ses occupations mystiques,' in *REg* i. [1880] 160, also *Rapport sur une mission en Italie*, Paris, 1878, p. 38; P. Ladeuze, *Étude sur le cénobitisme pakhomien*, Louvain, 1898, p. 37; J. Mayer, *Die christliche Ascese*, Freiburg, 1894, p. 37; Brunet de Presle [C. M. Wladimir], 'Mémoire sur le Sérapéum,' in *Mémoires présentés par divers savants*, I. ii. [1852] 575; A. Bouché-Leclercq, 'Les Reclus du Sérapéum de Memphis,' in *Mélanges Perrot: Recueil de mémoires concernant l'archéologie classique, la littérature et l'histoire anciennes*, Paris, 1903, p. 21 f.; A. Rusch, *De Serapide et Iside in Græcia cultis*, Berlin, 1907; Leclercq, art 'Cénobitisme,' *DACL* ii.² 3053–3056.

3. Druidical communities.—It will be enough to mention the theory of Alexandre Bertrand, who saw in the druids the ancestors of the Christian cenobites. This theory, which regards the monks not only as the imitators, but as even the legitimate descendants of the communities and brotherhoods of the old Celtic religion, has no solid foundation, and has been unanimously rejected by specialists; hence we need not discuss it in detail.[2]

4. Orphic communities.—Orphism, which had so much in common with Pythagoreanism, had, like it, a certain resemblance to Platonism and Neo-Platonism; it counselled practices of asceticism, some of which resemble those of Christianity. It imposed on the 'pure' and the 'holy' a rigorous system of penances and privations, among which were the practice of vegetarianism and numerous purifications. Although our information regarding these *thiasoi*, or Orphic societies, is not very extensive, we know that they were not only spread throughout Greece, but were also found in Italy, Africa, Gaul, and the whole of the Western world. Lactantius alludes to these confraternities (*de Div. Instit.* i. 22 [*PL* vi. 242 f.]). There were rites of initiation, mysteries, prayers, hymns, and unbloody sacrifices, which were celebrated during the night. But the doctrines and mysteries of Orphism have a very special character of their own and very little in common with those of the Christian religion.[3]

5. Buddhist asceticism.—Both Buddhism and Brāhmanism possess institutions that have certain characteristics analogous to those of Christian monasticism. In the sacred books of the Hindus mention is made of hermits forming colonies and dedicating their lives to the study of the Vedas and to the contemplation of Brahman. They are vegetarians, and practise mortification in all its forms. While in Brāhmanism the monastic life has preserved its eremitic character, in Buddhism we find it, on the contrary, in the cenobitic form. The monks live together in monasteries, in the practice of poverty—as mendicants, in fact—and celibacy. Such monasteries are still to be found in Japan, Korea, China, India, and Ceylon.

The lamaseries of Tibet are the most curious examples of this form of monasticism. The monastic capital of Tibet (*q.v.*) is Lhāsa, and of the 30,000 inhabitants of this city 10,000 are monks, who are divided among 2500 monasteries. In the provinces of China there are also monasteries of this kind, some of which contain from 300 to 400 bonzes. They have the head shaven, and spend their time reciting prayers and performing ceremonies before the statue of Buddha. Many of them condemn themselves to a life of absolute silence, others to complete immobility.

The *faqīrs* of India offer another variety of the life of mortification and renunciation. A. Hilgenfeld and other writers have tried to establish the influence of these institutions on Christian monasticism. But it is easy to show, with the advance of scholarship, that it is the contrary that is true, and that certain practices of Buddhist monasticism owe their inspiration to Christian influence.[1]

6. Monasticism among Jews and Muhammadans.—(*a*) *Essenes.*—The Essenes (*q.v.*) may be regarded as one of the most striking examples of the monastic life outside of Christianity. Whether they be looked on as a sect, as a tribe, or as a religious community, the Essenes (150 B.C.) offer all the principal characteristics of the cenobitic life—community of goods, practice of poverty and mortification, prayer, and work, meals and religious exercises in common, silence, celibacy, etc. Although there is no direct relationship between them, it is nevertheless true that both Essenian and Christian asceticism derived much of their practice from the same source, viz. the Jewish religion.

(*b*) *Therapeutæ.*—The Therapeutæ (*q.v.*), whose very existence has been disputed, are described by Philo (*de Vita Contemplativa*) as cenobites, leading a life almost identical with that of the Christian cenobites. This description bears so striking a resemblance to the life led by Christian monks that more than one writer has been led to deny its authenticity as a work of Philo and to uphold the opinion that it is a Christian compilation undertaken with the view of providing a venerable ancestry for the Christian cenobites. Renunciation of the world, prayer, life in common in real monasteries, vigils, chants carried out by alternate choirs, the practice of fasting and other mortification—such are the chief characteristics of the life of the Therapeutæ. Nevertheless, they do not seem to have exercised any direct influence on Christian monasticism.[2]

(*c*) *Nazirites.*—The Nazirites (*q.v.*) were men who lived an austere life, abstained from wine and all fermented liquors, never cut their hair, avoided scrupulously all legal impurities, and took a vow to consecrate their lives to God. They had certain practices in common with the monks, although their ideal was not the same. Regarding such resemblances we may point out that, as in the case of the Essenes, since Christianity itself had its ancestor in Judaism, it is not astonishing that there should be certain resemblances between their respective institutions on many points.[3]

(*d*) *Rechabites.*—Some (cf. T. K. Cheyne, *EBi* iv. [1903] 4019) regard the Rechabites as forming 'a sort of religious order, analogous to the Nazarites,' and St. Jerome himself saw in them the precursors of the monks (*Ep.* lviii., 'ad Paulin.,' 5 [*PL* xxii. 583]). But such analogies should not be pressed too far. The Rechabites were distinguished by certain special observances, such as abstinence from wine, the prohibition against building houses, and the obligation to live in tents, but it is difficult to see in them anything more than a tribe of Bedawī such as still exist in these days and observe the customs of their ancestors with such zeal.[4]

(*e*) *Muhammadans.*—Muhammadanism has given birth to several 'religious orders,' the chief of which are the Qādirī, the Maulavī, the Baqtāshī, the Rufā'ī, etc. The monks are called Dervishes ('poor'); they live together, 20, 30, or 40 at a time, in a monastery under a head (*shaikh*). The Dervishes wear a long robe of coarse stuff. Reception into their order is preceded by a time of probation, which lasts sometimes 1001 days. As regards their religious practices, these Muhammadan monks have prayers, sacred dances, and sometimes penances, such as the privation of sleep, immobility (ensured by fetters on the feet), fasting, and solitude (see art. DERVISH). Many of them are also mendicants. Some of the orders claim to go back to the time of the Prophet himself, although he had said 'In Islām there are no monks,' and although no mention of the monastic life is to be found in the Qur'ān. Even during the lifetime of Muhammad, however, the Ṣūfīs gave themselves up to certain practices of monasticism and lived together in community (see art. ṢŪFĪISM). Abū Bakr and 'Alī, contemporaries of the Prophet, formed, with his approval, communities of the same kind. Other orders were founded on the same model in Egypt, Arabia, Persia, and Turkey. There were no fewer than 27 monasteries in the island of Crete alone. One of the most celebrated of Muhammadan monasteries, that of Konia in Asia Minor, possessed 500 cells.[1]

---

[1] T. Keim derives Christian asceticism from this source (*Aus dem Urchristenthum*, Zürich, 1878, p. 204 f.). Against this theory cf. D. Völter, *Der Ursprung des Mönchtums*, Freiburg, 1900, p. 39, and G. Grützmacher, 'Mönchtum,' in *PRE*³ xiii. 217.

III. *CHRISTIAN MONASTICISM.*—Is Christian monasticism derived from one or other of these sources, or is it an original institution? This is a question that has often been discussed. On account of certain undeniable resemblances between Christian monasticism and the various forms just described, some writers have not hesitated to regard the one as the child of the other. But in this case, as in that of the history of all institutions, however striking such resemblances may appear at first sight, they are not sufficient of themselves to establish a relationship. This is a principle now accepted by all serious students of history. To prove relationship between the institutions of Christianity and those of other religions, it is necessary to produce facts clearly demonstrating that one institution has been derived from the other. This, however, still remains to be done. We shall therefore regard Christian monasticism as a plant that has grown up on Christian soil, nourished exclusively on the principles of Christianity. This seems, for the moment at least, to be the only theory that can safely be maintained.[2]

i. PRINCIPAL CHARACTERISTICS. — Christian monasticism possesses certain characteristics all of which are not equally essential, but which, nevertheless, when taken together, are necessary to constitute a monk.

1. Poverty, chastity, humility, and obedience.—The first monks, after the example of the Christian ascetics, practised poverty, chastity, and humility—virtues which, along with obedience, soon came to be regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

'Beati pauperes spiritu' (Mt 5^{3}); 'si vis perfectus esse, vade, vende quae habes, et da pauperibus' (Mt 19^{21}); 'non potestis Deo servire et Mammonae . . . ne solliciti sitis animae vestrae quid manducetis, neque corpori vestro quid induamini,' etc. (Mt $6^{24\text{ff.}}$). 'Sunt eunuchi qui seipsos castraverunt propter regnum coelorum. Qui potest capere, capiat' (Mt 19^{12}). Cf. St. Paul (1 Co $7^{7\text{f.}\ 32\text{-}35}$). 'Si quis vult post me venire, abneget semetipsum, et tollat crucem suam, et sequatur me' (Mt 16^{24}; cf. 10^{38}).

The first monks, like the ascetics before them, took these words of the gospel literally and abandoned all that they had in order to live in poverty and by the labour of their hands. They practised chastity under the form of complete celibacy and perfect continence. The practice of obedience consisted in following in the footsteps of Jesus Christ, recognizing Him as their Master, and in submission to those who represent Him here below. In the case of the cenobites this obedience was the result of their very life itself. The moment that many monks united to live together, they were obliged to adopt a rule of life which would be the same for all, and to submit to the authority of a head. This, again, was but to obey Christ, by showing obedience to the Rule or to him who was its guardian. Schenoudi of Atripe obliged his monks to make a profession of obedience to the Rule of the monastery. This profession was a written and signed engagement, and was preserved in the archives of the monastery.[1] The greater number of monasteries had the same custom under one form or another. These virtues were taught and practised by all the early monks, and, as soon as monastic customs began to be drawn up and codified, we find severe laws laid down to ensure their practice.

2. Mortification (fasting, etc.). — Along with these virtues we find others which in reality flow from them or complete them, and which were always practised by the monks and prescribed by the different Rules. Mortification is essential to the practice of asceticism; it takes the form of the renunciation of the pleasures of sense (chastity, celibacy, fasting, etc.); work, silence, prayer even, may all be considered forms of mortification. As in all schools of asceticism (Neo-Platonist, Buddhist, etc.), fasting is considered one of the essential exercises of the Christian 'athlete'; Jesus taught it to His disciples and practised it Himself; and it was regarded by the monks as one of the most efficacious of all exercises of mortification. The history of the early solitaries tells of intrepid fasters who passed two, three, and even five days without touching food. The custom of taking food only once during the week from Monday to Saturday which was observed by those known as 'Hebdomadarii' was common.[2] There is, in fact, no monastic Rule in which restraint in matters of food and drink is not arranged for.

It is chiefly in the monasteries of the East (Syria, Palestine, Asia Minor) that one comes across extraordinary forms of mortification; though these must be regarded as exceptional cases, they cannot be passed over in silence. There were, first of all, the Stylites and the Dendrites, who condemned themselves to perpetual immobility, the former on their columns, the latter on the branch of a tree. Then there were the βοσκοί, or 'Browsers,' mentioned by Sozomen. These were solitaries of Mesopotamia, and were so called because they lived on grass like cattle. Others, again, chained themselves to a rock, or bore on their shoulders a species of cangue, or yoke. Sozomen also speaks of a Syrian monk who abstained from eating bread during eighty years.[3] All these are exceptional cases, and are even regarded by some as mere eccentricities, recalling the practices of the *faqīrs* of India. It should be noted carefully that the monastic Rules not only never prescribe such feats of strength, but even condemn them.[4]

---

[1] Heimbucher, i. 51 f.; art. 'Dervich,' in *Kath. Lexicon*, iii. 1527 f.

[2] It should be remarked that this is the conclusion now reached by writers of very different opinions, such as Berlière, *L'Ordre monastique*, Leclercq, *loc. cit.*, Grützmacher, *loc. cit.*, and Workman, *The Evolution of the Monastic Ideal*, p. 86 f. An exception must be made, as we have already pointed out, for certain Jewish institutions, since between Jews and Christians many principles and religious ideas are held in common.

3. **Work.**—Certain fanatics, such as the Messalians or Euchites (*q.v.*), maintained that the life of a monk should be entirely given up to prayer; hence they condemned all work or other forms of activity. This tendency was early reprobated by the Church; all monastic founders or legislators realized the danger of such exaggerations; and one and all signalized the vice of idleness as the one most to be dreaded in the monastic life. St. Augustine, in his treatise *de Labore Monachorum*, condemns this error, and shows the real necessity of work for those who follow the monastic vocation. Already in the East, during the 4th cent., it was an established principle that the monk should live by the labour of his hands. The work of the monk was of two kinds: (*a*) manual, and (*b*) intellectual.

(*a*) *Manual.*—The manual labour of the early monks consisted chiefly in the weaving of mats or the cultivation of the soil. These occupations had as their principal motive not so much interest or gain as mortification in addition to all the mortifications already forming part of their existence, and especially the avoidance of idleness. The proceeds of their work were usually handed over by the monks to the poor or to the prisoners, or else they served to sustain the community itself (Cassian, *de Cœnobiorum institutis*, x. 22 [*PL* xlix. 388 f.]). In the case of the monks of the West this manual work was carried out in so orderly and methodical a manner that it resulted in the clearing of a large part of the waste-land of Europe.[1]

The various arts and crafts had also their place in monastic activity, but in the West rather than in the East. A monastery came, in course of time, to form a little city in itself. Founded, as most monasteries then were, far from the towns and centres of worldly activity, they were obliged to provide for themselves, and, besides cultivating the soil, the monks had to give themselves to the exercise of the various trades necessary for their wants—*e.g.*, baking, carpentry, weaving, etc. In addition to the arts of drawing and miniature painting, architecture, sculpture, and the fine arts were cultivated with great success.

(*b*) *Intellectual.*—The intellectual work of the monks consisted chiefly in the *lectio divina*, *i.e.* the reading and study of the sacred Scripture and other holy writings. In the West this part of the monastic curriculum underwent a great development. More and more time was given to intellectual work. The copying of ancient MSS in the scriptorium of the monastery became one of the principal occupations of the monk, and it is to this fact that we owe the preservation of the greater part of the works of classical antiquity. The arts of calligraphy, drawing, painting, and the illumination of MSS soon followed as a natural consequence, and some monasteries had attached to them studies, from which came forth works of art that are now among the most precious possessions of the libraries of Europe.[2]

(*c*) *External work; the sacred ministry.*—The monks, especially in the East, retired from the world into solitude, there to lead lives of prayer and labour apart from all intercourse with it. They took part in the external ministry of the Church only on rare occasions and by force of special circumstances. A number of monasteries, however, received 'oblates,' *i.e.* children consecrated from an early age by their parents to the monastic state. These it was necessary to instruct; hence schools were established in the monasteries, some of which became famous and were attended by secular students as well.[1]

In the West the monks were led in time to take up in certain countries—*e.g.*, England and Germany—the work of evangelizing the people. They thus became missionaries, and had, in fact, a large part in bringing about the conversion of Europe.

4. **Prayer.**—But it was always clearly understood that neither work nor any other occupation should absorb the whole of the monk's activity. A considerable part of his time was always devoted to prayer. In substance this prayer consisted in meditation on, or recitation of, the Psalter, which was distributed according to the days of the week or the hours of each day. It was organized more methodically when regular monasteries began to be established in greater numbers; and from it has evolved the divine office as we now have it, with its different 'Hours' for the night and the day—Matins, Lauds, Prime, Tierce, Sext, None, Vespers, and Compline.[2]

5. **Silence.**—Silence, recommended by philosophers as a necessary condition for meditation or intellectual research, was one of the practices most rigorously enforced in the monastic life. In the case of the hermits, living in complete isolation, silence was practically absolute, and rare were the occasions on which they could indulge in conversation. They did, however, occasionally visit one another, and sometimes returned to their monasteries for a certain length of time. For the cenobites talking was naturally of more frequent occurrence, but severe regulations were established on this point in the greater number of monasteries.

6. **Solitude.**—Solitude, as in the case of silence, was interpreted in a more or less wide sense. For the anchorites, hermits, and Stylites, living in their caves, in their tombs, or on their pillars, solitude was absolute and complete. For the cenobites it consisted rather in their separation from the world, in the practice of silence, and in certain restraints. It is this need of solitude that may be said to have given to monastic architecture its principal characteristics and the disposition of its various parts. The monastery was enclosed by walls; one gate alone gave access to it. Communication with the outside world was subject to strict control, and, to render the necessity less frequent, the monastery, like a little city, was to be self-contained. There were exercised all the different trades and crafts demanded by the needs of the community.

7. **Stability.**—Stability, *i.e.* the engagement undertaken by a monk to remain all his life in the same monastery, was only an accidental condition of the monastic state, and was not established everywhere. In certain regions a monk could, without any breach of his vows, pass from one monastery to another. The abuse of this custom, as seen in the wandering monks, or 'Gyrovagi' (see below, iii. 6), and other considerations as well, led to the establishment of stability as a law of the monastic state, which little by little became general. St. Cæsarius of Arles imposes it in his Rule, and also St. Benedict.[3]

ii. CUSTOMS, ORGANIZATION, HIERARCHY, CONSTITUTIONS OF THE MONASTERY, RULES, COSTUME.—The hermits and anchorites lived separate and alone in the desert; hence they were their own masters. It often happened, however, that the hermit, sensible of the dangers resulting from this independence, would submit himself to the direction of another, whom he regarded as his spiritual father. Sometimes colonies of hermits were formed under the direction of a head, to whom the others rendered obedience. Again, we find hermits living near a monastery of cenobites, to which they were obliged to return at certain times, generally on Saturday and Sunday and on feast-days. With regard to the monastic hierarchy and the organization of authority among the cenobites, great variation is to be observed in primitive ages. It was generally, however, fairly simple in character. At the head of the monastery was a superior, at once spiritual father and temporal administrator, who was known by the various titles of archimandrite (ἀρχιμανδρίτης), hegumenos (ἡγεμών, ἡγεμονεύς, ἡγούμενος), abbot (ἀββᾶς and ἄμμα),[1] προεστώς, præpositus, or provost, etc. This superior governed the community, sometimes with the help of an assistant and other officials who fulfilled various charges, such as cellarer, porter, etc. He was generally assisted also by a council composed of the older members of the community (*seniores*). The office of the seniors, who were nominated by the superior himself, expired at the end of the year. The government of these monastic societies was a monarchy rather than an oligarchy; often it was even an absolute monarchy.[2] The cellarer (κελλαρίτης, whence *cellerarius*, 'cellarer'), the official who had charge of the stores of the monastery, had, as a rule, very wide powers over the temporal affairs of the monastery. Sometimes the abbot, as already mentioned, was assisted in his office by an official who ranked second after himself in the monastery; sometimes there was a third as well (prior and subprior).

The monasteries thus constituted usually enjoyed complete autonomy. There was nothing resembling the modern order or congregation, in which the different religious houses are united under a superior-in-chief or 'general,' and depend upon one house, which is the mother-house of the whole congregation. In the West it was not till the time of St. Benedict of Aniane that the idea of grouping monasteries together under a central authority was actually realized. For example, St. Basil in his Rule, which was the law everywhere in the East, contents himself with giving a few general principles as to the choice of the superior and the exercise of authority. In certain monastic colonies, too, the organization was very rudimentary in character. St. Anthony and St. Hilarion, *e.g.*, were the spiritual and temporal heads of the communities founded by them, and unity and order were maintained by visiting the various houses subject to them (*Vita S. Hilarionis*, ch. iii.).

Nevertheless, even in the early age of monasticism, we have instances of the attempt to group certain monasteries together under a central authority. Pachomius, *e.g.*, formed his monasteries into a real 'congregation.' He visited each house in turn; he assembled the superiors together four times a year in what closely resembled the general chapters of later days. In these assemblies the interests and affairs of the various communities were discussed and settled. Pachomius himself nominated the superiors of the different houses, and a 'procurator-general' for the whole confederation. Tabenna, the head-house of this congregation, was an almost military organization. The monks were divided into companies, often under an official called the dean; ten companies formed a further division, at the head of which was another official. At an early period the Rules, or constitutions, of the various monasteries came to be written down. A great number of these exist, some of which can be safely attributed to the most ancient masters of the monastic life. We shall speak only of the principal ones.

The *Regula Antonii* cannot be regarded as the work of St. Anthony himself, but it is extremely ancient.[1] This collection of maxims on the monastic life was brought together in Egypt, in the course of the 6th cent., but there is nothing against the belief that many of them are authentic and of much earlier date than the collection itself.[2] The same may be said of the authenticity and age of the *Regula ad Monachos Macarii Alex.* (*PG* xxxiv. 967–970), and the *Regula ad Monachos Serapionis, Macarii, Paphnutii et alterius Macarii* (*PG* xxxiv. 971–978).

The Rule of St. Basil (Ὅροι κατὰ πλάτος, *Regulæ fusius tractatæ*; Ὅροι κατ' ἐπιτομήν, *Regulæ brevius tractatæ* [*PG* xxxi. 889–1052, 1080–1305], tr. Rufinus, in L. Holste, *Codex Regularum*, Paris, 1661, i. 67 f.; cf. C. T. G. Schoenemann, *Bibl. Patr. Latina*, Leipzig, 1792–94, i. 619 ff.) has had a wide influence on Oriental monasticism, and is at the present day practically the only Rule existing. Even in the West its influence was considerable, as may be seen—to cite but one example—from the reference made to it in the Rule of St. Benedict. A long letter, written by St. Basil to St. Gregory of Nazianzus before the drawing up of his Rule, may be regarded as an outline or rough draft of the latter.[3]

The Rules attributed to St. Pachomius and to Schenoudi, although not authentic in the same sense as the Rule of St. Basil, are, nevertheless, substantially their work in spite of later retouching and additions.[4] The Rule of Pachomius, written originally in Coptic, was translated into Greek and Latin (Ladeuze, p. 272). There are three texts of the Rule of Schenoudi (cf. *Monuments de la mission archéologique française au Caire*, iv. 235 f., and Leclercq, in *DACL* ii.² 3111).[5]

The Book of the Governors of Thomas of Marga, of the 6th cent., describes the life led by the cenobites and anchorites of the Nestorian monastery of Beth-Abhe in Mesopotamia.[6]

In the West, besides Cassian, whose two works exercised the widest influence on monasticism in that part of the world,[7] we must mention the Rule of St. Benedict, *Regula S. Patris Benedicti*.[8]

Other Rules are: the *Regula incerti auctoris*, later than the works of Cassian, but earlier than the Rule of St. Benedict (Holste, *Codex Regularum*, ed. M. Brockie, Augsburg, 1759, i. 137 f.), the *Regula Sanctorum Pauli et Stephani*, almost contemporary with that of St. Benedict (*ib.* i. 138 f.), the Rule for nuns attributed to St. Augustine, *Ep.* ccxi. (*ib.* i. 141). For this Rule and those of SS. Fructuosus and Isidore, see, further, v. iii. 1 (*d*) below.

Several Rules written for the Celtic monks are in existence. The Rule written in verse, and attributed to St. Ailbe, is not, strictly speaking, a Rule. That attributed to St. Columba is a short collection of prescriptions and maxims of asceticism, and was written for the use of solitaries. There are also other documents of the same character, attributed with more or less likelihood to St. Comgall of Bangor and others. The Rule of

---

[1] The word 'abbot' did not originally designate the superior (cf. J. M. Besse, *Les Moines d'Orient*, Paris, 1901, p. 168; also art. 'Ama,' *DACL* i.² 1306–1323).

[2] Monastic government has even been presented as a kind of 'spiritual democracy' (Workman, p. 132). This is true, in a sense, but the monastic form of government cannot in reality be ranged under any very definite category. It possesses the characteristics alike of monarchy, oligarchy, and democracy.

[8] On the Rule of St. Benedict, the authenticity of which is incontestable, and its various edd. see below, p. 792ᵇ, note 1.

St. Columban, his Penitentiary, and that of St. Cummian, are the only ones the authentic character of which is really established.[1] At an early date collections were made of all these monastic Rules.[2]

The question of monastic costume is one with regard to which the different Rules show a bewildering variety. It is also, from the archæological point of view, one of the least clear. It seems that there was originally no special dress for monks. The only rule on this point seems to have been that the monk in his character of ascetic should, like certain ancient philosophers, show in his costume the outward sign of the poverty and humility of his state of life and of his detachment from the things of this world. Even St. Benedict, at a time when monasticism already had customs and traditions both numerous and of long-established date, does not seem to have given much importance to the form, colour, or quality of the habit worn by his monks (*Regula*, ch. lv.). Nevertheless, at an early date certain garments worn by the monks, and borrowed in all probability from the peasant population among whom they lived, came to be regarded as traditional, and in time even had a mystic meaning attached to them, as in the case of the liturgical vestments. In spite of this the monastic habit must always be carefully distinguished from the latter category.

We may now enter into greater detail regarding the various garments worn by the ancient monks both in the East and in the West. Many of these garments are still in use among their descendants.

The ancients did not know the use of linen. The tunic of wool was their only under-garment (λεβιτίον, κολοβή, *colobium*). The monks adopted this. It had short sleeves or was sleeveless. The anchorites often wore the tunic made of goatskin or camel's hair, which acted as a veritable hair-shirt (Cassian, *Instit.* i. 8 [*PL* xlix. 74]). The tunic was girded by a cincture, which recalled that worn by John the Baptist ('zona pellicea circa lumbos suos,' Mt 3[4]), and which soon became an essential part of the monk's habit. It was usually made of leather (*cinctura, zona*, ζώνη, *balteus, cingulum*, etc.).[3] The hood and the scapular are also characteristic of the monastic habit. The first (*cucullus, cucullio*) was originally merely a covering for the head. It was, in fact, the ordinary head-covering of peasants, and is found in both East and West. It protected the head against the heat or the cold, and could be thrown back at will on the shoulders.[4] The hood came in time to be attached to a garment covering the shoulders and breast to protect them against the weather, and finally developed, after various transformations, into the cowl—an ample vestment falling in wide folds to the feet and with large sleeves. The cowl is the distinctive choir-habit of the monk. The scapular (*scapulare*) seems to be peculiar to Benedictine monks, since there is no mention of it before the time of St. Benedict. Still it is evident, from the text of his Rule, that it was not his own invention. By some it has been compared to an analogous garment worn by Eastern monks; but it is more probable that it was originally a kind of blouse or smock-frock with hood attached, such as was worn by peasants in the neighbourhood of Monte Cassino. St. Benedict prescribes it as a working dress—'scapulare propter opera.' It was worn to protect the rest of the habit, and replaced the cowl. Its etymology indicates that it covered the shoulders.[5]

The Eastern monks usually went barefooted. St. Pachomius, however, gave his monks sandals, and St. Benedict speaks of 'pedules et caligae,' which seem to have been a kind of stocking, or sock, and sandals. Archæologists have disputed at length as to the exact meaning of these terms and also regarding the other parts of the monastic habit.[1]

iii. DIFFERENT TYPES OF MONKS.—The monks may be divided into various classes.

1. **Hermits.**—The hermits (ἐρημῖται, from ἔρημος, 'desert') lived in solitude in the desert; St. John the Baptist, and later St. Paul the Hermit and St. Anthony, were the first of these.

2. **Anachorites or anchorites** (ἀναχωρηταί, from ἀναχώρημα, 'retreat').—This title is synonymous with the first, and indicates those monks who practised the solitary life. This form of the monastic life is the most ancient; it spread, first of all, in Egypt, then in Palestine and Syria, through the whole of the Eastern world, and, finally, in the West.[2] In course of time the Camaldolese, Carthusians, Hermits of St. Augustine, and certain other institutions of like character arose. These may be grouped under the class of anchorites or hermits, since they have preserved, along with the cenobitic element in their lives, many of the characteristics of the eremitic state.

3. **Recluses and Stylites.** — With the hermits and anchorites must be classed the recluses and Stylites, who, on account of their relatively small number, may be regarded as exceptional cases. The former lived enclosed in cells, sometimes completely walled up and communicating with the exterior only by means of a small window. The latter, who are found almost exclusively in the East, lived on the top of a pillar, more or less elevated from the ground.[3]

4. **Dendrites.** — The Dendrites (from δένδρον, 'tree') lived in trees.

5. **Cenobites** (from κοινόβιος, 'one who lives in common with others').—This was the general term for all monks living together in community. During the primitive period the comparative advantages and excellence of the solitary and cenobitic forms of monastic life formed the subject of frequent discussions. St. Basil stoutly maintains his preference for the cenobitic life over the eremitic life, and his preference is shared by St. Benedict. It is undeniable that in early days the eremitic life had the greater number of adherents; but in course of time it declined, even in the East, while, in the West, it cannot be said ever to have existed except as an exceptional state of things. After the 16th cent. it almost completely disappeared.[4]

6. **Sarabaites and Gyrovagi, or Circumcelliones.**—Among the other monastic types, ancient authors draw attention to the Sarabaites and the Gyrovagi, who were regarded as an evil kind of monks. The first, mentioned by St. Jerome under their Syriac name of 'Remoboth' (*Ep.* xxii. 34 [*PL* xxii. 419]), lived together in twos and threes in a monastery, in order to live a life without

---

[1] Holste gives two other Rules attributed to SS. Comgall and Columba. For this question see L. Gougaud, 'Inventaire des règles monastiques irlandaises,' in *Revue Bénédictine*, xxv. [1908] 167–184, 321–333; O. Seebass, *Ueber Columba von Luxeuils Klosterregel*, Dresden, 1883; Leclercq, in *DACL* ii.^{2} 3212 f.

[2] The earliest and most celebrated of these collections is that made by St. Benedict of Aniane († 821), entitled *Concordia Regularum* (*Concordia Regularum nunc primum edita ex Bibliotheca Floriacencis Monasterii, notisque et observationibus illustrata ab H. Menard O.S.B.*, Paris, 1638 [=*PL* ciii. 701–1380]); cf. L. Traube, 'Bibliotheca Goerresiana,' in *Neues Archiv für ältere deutsche Geschichtskunde*, xxvii. [1902] 737 f. For other attempts of this kind see J. Trithemius, Aubert Le Mire, etc.; cf. also Heimbucher, i. 76. Of more recent date: L. Holste, *Codex Regularum Monasticarum et Canonicarum*, 3 vols., Rome, 1661, completed by Brockie, *Holstenii Cod. regular. etc. nunc auctus, amplificatus et observ. criticis historicis illustratus*, Augsburg, 1759 (*PL* ciii. 393–700).

[1] See especially A. Calmet, *Commentario litterale, istorico, e morale sopra la Regola di S. Benedetto*, Arezzo, 1753, ii. 179 ff., and the *Commentaire sur la règle de S. Benoit* by (D. Delatte) the abbot of Solesmes, Paris, 1913, p. 394 f. On the question of monastic costume in general cf. P. Bonanni, *Ordinum religiosorum in ecclesia militante catalogus eorumque indumenta*, 5 vols., Rome, 1722; Hélyot, *Hist. des ordres monastiques, religieux et militaires*, etc.; R. A. S. Macalister, *Ecclesiastical Vestments*, London, 1896, App. I., 'Costumes of the Religious Orders'; J. Braun, *Die liturgische Gewandung im Occident und Orient*, Freiburg i. Br., 1907.

[2] Cf. Heimbucher, i. 41.

[3] For the recluses cf. *Hist. Laus.* 43; Theodoret, *Hist. rel.* 29, 30, etc. (*PG* lxxxii. 1490–1494); R. M. Clay, 'The Hermits and Anchorites of England,' in *The Antiquary's Book*, London, 1914; Heimbucher, i. 145, note; for the Stylites, all quotations in H. Delehaye, *Les Stylites*, Brussels, 1895; Vailhé, 'Les Stylites de Constantinople,' in *Echos d'Orient*, 1898; for the different classes of monks cf. Besse, p. 19 f.

[4] Cf. Synod of Vannes, 465, canon 7; Synod of Agde, 506, canon 38; G. D. Mansi, *Concilia*, Paris reprint, 1901–13, vii. 954, viii. 331.

either rule or law, following no other rule than that of their own will or caprice. The Gyrovagi or Circumcelliones (‘vagabonds’) went from monastery to monastery, demanding a lodging for a few days, and scandalizing all true Christians by their excesses.[1]

7. Catenati.—As the name indicates, these monks loaded themselves with chains. They took no care of their bodies, allowed their hair and beards to grow neglected and untrimmed, went barefooted, and wore a black cloak (Leclercq, in *DACL* ii.^{2} 3218).

8. Apotactites (from ἀποτάσσεσθαι, ‘to renounce’; cf. Lk 14^{33}).—These formed a class intermediary between the earlier ascetics and the monks properly so called. They are found in Jerusalem, in the East, and in Asia Minor. Some of them followed the example of the Gyrovagi, and spent their life wandering about, and some fell into the heresy of the Encratites.[2]

IV. *HISTORY OF MONASTICISM.*—i. ORIGIN OF THE MONASTIC LIFE; THE ASCETICS. — The ascetics of early Christianity may be regarded as the ancestors of the monks. The greater number of the characteristics of which we have already spoken as belonging to the essence of the monastic life are found among the ascetics—poverty, celibacy, the practice of mortification, fasting, silence, prayer, etc. The ascetics were, in fact, simply monks living in the world.

> ‘Asceticism and cenobitism are inseparable. Asceticism is an individual phenomenon, cenobitism is a social institution.’[3]

It was but natural that, as Christians gradually became more worldly, the ascetics should retire from their midst and betake themselves to the desert; and here we have the origin of true monasticism—the first monks were ascetics living retired from the world in the desert.

This is not the place to enter upon a detailed history of these Christian ascetics (see art. ASCETICISM). But it may be remarked, in passing, that Christian asceticism, while recognizing among some of the prophets and just men of the Old Law (such as Isaiah, Jeremiah, and John the Baptist) its ancestors or forerunners, claims, above all, as its source and foundation the doctrine of Jesus Christ, who taught renunciation under all its forms. Not to mention certain texts occurring in the writings of the Apostolic Fathers—in those, *e.g.*, of Tertullian, Origen, and Clement of Alexandria, whose ‘true Gnosticism’ offers many characteristics of asceticism — one may consult certain documents that will give assistance in arriving at a knowledge of this movement precursory of monasticism, especially the *Epistles* of pseudo-Clement ‘To Virgins’ and the work of pseudo-Cyprian, *de Singularitate Clericorum*.[4]

ii. MONASTICISM IN THE EAST.—**1. Sources.**—The question of the authenticity and truthfulness of the documents on which the history of the early years of Eastern monasticism is founded has given rise, in recent years, to lengthy and impassioned disputes.

(*a*) *Vita Pauli.*—The *Vita Pauli*, written by St. Jerome, is sometimes considered to have no serious historical basis. The first of the hermits withdrew to the desert not before the middle of the 3rd cent., and, towards the end of his life, would have made the acquaintance of St. Anthony.[1]

(*b*) *Vita Antonii.*—If the authentic character of St. Jerome's life of Paul the first hermit be denied, it is St. Anthony who must be regarded as the father of the eremitic life. The *Vita Antonii*, attributed to St. Athanasius, has serious historical foundation, despite the discussions of which it also has been the subject.[2] In it St. Athanasius describes the life of a man whom he has himself known, and who died between 356 and 362. According to this life, Anthony was born at Coma, or Comon, in the middle of Egypt. At the age of 20, on hearing the passage in the Gospel of St. Matthew regarding the rich young man (19$^{17ff.}$), he sold his belongings and put himself under the direction of an ascetic in order to learn the practice of Christian renunciation. Then he retired to the desert and led the life of a hermit for twenty years, a number of disciples gathering round him. During the persecution of Maximian, he went to Alexandria to fortify his brethren in the faith, returning there again, later on, to refute Arius. Living retired in his desert, he visited from time to time the colonies of hermits who had been his disciples and who peopled the desert. He died in 356 (or 362), at the age of 105. We have already seen what is to be thought of his Rule. The letters and sermons attributed to him are not more authentic in character (*PG* xl. 963–1066).

(*c*) *Lausiac History of Palladius.*—Another document which has been much disputed is the *Lausiac History of Palladius* (*PRE*^{3} xiii. 219); it recounts the origins of monasticism. Weingarten and Lucius see in it nothing more than a romance, and Amélineau has further complicated the question by the unjustifiable use of the Coptic sources. Butler, in his excellent work on the subject, *The Lausiac History of Palladius* (Cambridge, 1898–1904, i. 257–277), has re-established the real text and demonstrated its importance from the historical point of view.[3]

(*d*) *Rufinus.*—Rufinus of Aquileia († 410) travelled through Egypt in order to visit the most celebrated solitaries, and his *Historia Monachorum* furnishes interesting details on the monastic life in that country.[4]

(*e*) *Cassian.*—Far more important for the history of monastic institutions, customs, and teaching are the two works of Cassian—*de Institutione Cœnobiorum* (12 books), and *Collationes Patrum* (24 Conferences). Cassian, like Rufinus, travelled about from one monastic colony to another in Egypt and Palestine in order to be initiated into the manner of life there observed.[5]

(*f*) *Peregrinatio Etheriæ.*—The *Peregrinatio ad loca sancta*, of which the date has been so much disputed, but which can, in all probability, be assigned to the latter half of the 4th cent., is the account of a pilgrimage to the monasteries of Egypt, the peninsula of Sinai, Palestine, and Syria, and gives many interesting details regarding the hermits and the monasteries of the period.[6] There are many other sources of Eastern monastic history, but the historians and writers of the 4th, 5th, and 6th centuries, such as Eusebius, Theodoret, Sozomen, Socrates, etc., afford less room for discussions as to authenticity and credibility, and their testimony serves to control the truth of the accounts furnished by Palladius, Rufinus, and the others.

2. History.—Apart from the life of St. Anthony, summarized above, the general lines of monastic history in the East may be presented as follows.

(*a*) *Egypt.*—Amun (Ammonius), a contemporary of St. Anthony, founded colonies of hermits in

---

[1] For these different kinds of monks cf. Cassian, *Collationes*, xviii. ch. iv. f. (*PL* xlix. 1093 f.), and *Institutiones*, v. 36, with the notes by A. Gazée (*PL* xlix. 255); *Regula S. Benedicti*, i.; *Regula Magistri*, i.; St. Jerome, *Ep.* xxii. ‘ad Eustochium’ (*PL* xxii. 419 f.); St. Augustine, *de Opere Monachorum*, 28 (*PL* xl. 575 f.).

[2] Cf. art. ‘Apotactiques, Apotaxamènes,’ in *DACL* i.^{2} 2604 f.; Cabrol, *Étude sur la Peregrinatio Silviæ*, p. 135 f.

Férotin, ‘Le véritable Auteur de la Peregrinatio Silviæ, la vierge espagnole Etheria,’ in *Revue des questions historiques*, lxxiv. [1903] 367–397; and *PRE*^{3} xviii. 345–347.

Lower Egypt, and was the father of monasticism in Nitria.[1] His disciples lived in huts and met together in the monastic church on Saturdays and Sundays. There were 8 priests in the colony to carry out the liturgical functions for the community. According to the *Lausiac History*, there were 600 hermits in the desert of Nitria. Idleness was carefully excluded, each monk being obliged to provide for himself by his own labour. In the evening psalms and hymns were chanted. The discipline of the life was very strict. Ammonius died before 356. His disciples continued his traditions in Nitria. The theological works of Origen were studied there, and the 'tall brothers,' Ammonius, Dioscorus, Eusebius, and Euthymius, who made such a disturbance in the theological world later on, belonged to this monastic family.[2]

About six miles to the south of the mountain of Nitria was the Desert of Scete, where another colony of hermits was established. The brethren observed perpetual silence; as at Nitria, they assembled in church for the offices only on Saturdays and Sundays. Their cells were either mere caverns in the rocks or else wattled cabins. Macarius the Greater († 383 or 387) was the first of these hermits. He has left behind him among the *Apophthegmata* a series of remarkable maxims and homilies that show him to have been one of the founders of Christian mysticism.[3] Macarius the Younger, Evagrius Ponticus, and Mark the Hermit are also figures that stand out among these solitaries.[4] The Desert of Scete still preserves the ruins of their ancient monasteries, one of which, known as the monastery of St. Macarius, is inhabited by a few Coptic monks.[5]

Besides Nitria and Scete, the whole of Egypt was strewn with hermitages—the Thebaid, Lycopolis, Kopres, Oxyrhynchus (where there were to be found, it is said, 10,000 monks and 20,000 nuns), and Arsinoë, where there were also 10,000 monks (*Hist. Laus.* 5, 18).

In Upper Egypt the name of Pachomius attracted special attention. He was instructed in the monastic life by a venerable hermit named Palamon, and established himself at Tabenna (Tabennîsi)—a name that was to remain famous in monastic history. Pachomius is the real founder of the cenobitic life. His disciples lived together under the same roof and were subject to the same discipline. Other monasteries were founded which followed the same observance, and thus cenobitism was established. Regarding the organization of the Pachomian monasteries see above (p. 785; cf. also W. E. Crum, *Theological Texts from Coptic Papyri, edited with an Appendix upon the Arabic and Coptic Versions of the Life of Pachomius, Anecdota Oxoniensia*, Semitic ser., pt. ii., 1913).

While speaking of Pachomius, we must not omit to mention one of his disciples named Schenoudi of Atripe, whose history has been revealed recently through Coptic MSS, and who, although he did not exercise so marked an influence as Pachomius, played an important part in the history of the cenobitic life. The profession of obedience which he imposed on his monks is the oldest document of this kind that we possess, and it marks a stage in the history of monastic Rules. Schenoudi made the attempt to combine the eremitic with the cenobitic life, and he succeeded to a certain extent.[1]

(*b*) *Sinai.*—From Egypt the monastic life soon spread as far as the Sinaitic peninsula, on which there were later several flourishing monasteries. St. Nilus the Sinaitic († *c.* 430) and St. John Climacus were its shining lights, and may be regarded as the great doctors of the ascetic life. The *Peregrinatio Etheriæ* gives interesting details regarding the monasteries of Sinai (see below, iii. 1 (*d*)).

(*c*) *Palestine.*—The monastic foundations of Palestine were no less illustrious. It will suffice to quote the names of Hilarion of Gaza, a disciple of St. Anthony of Egypt, and especially those of Melania the Elder at the Mount of Olives, Paula, and St. Jerome.[2] In this region monasticism made considerable headway. The number of monasteries and lauras rose to 100, and the influence of these religious houses in the quarrels between Origenism, Eutychianism, Monotheletism, and iconoclasm was very important. It would be impossible to give here even a résumé of this history; we must be content to refer the reader to the authors cited in note 2 below, and also to the attempt at a classification of some of the Palestinian monasteries in Leclercq, *DACL* ii.^{2} 3165–3175. It was only with the Arab invasion of Palestine that the progress of these monasteries was arrested.

(*d*) *Syria.*—Syria became at an early period a land of monasteries. It has even been questioned whether the monastic life there was not indigenous, *i.e.*, whether it did not, as in Egypt, spring directly from the native practice of asceticism—which must be regarded as an early phase of monasticism—or whether, on the other hand, it was an importation from without. The latter opinion seems to be the more likely. The Syriac life of Mark-Arogin, beneath its legendary surface, contains a residue of history that can be extracted with little difficulty. According to this history, he came from a Pachomian monastery, established himself among the mountains near Nisibis, and died there in 363, leaving behind him a flourishing monastic house.[3] The recently edited works of Aphraates give some curious information about other solitaries (μονάζοντες), who seem to have been ascetics living in the world rather than real monks.[4]

At Edessa and in Osrhoene we have Julian regarded as the founder of monastic life in that country, and especially Ephraim the Syrian, a contemporary of St. Basil. He lived many years as a hermit, then went to study monastic traditions under the guidance of St. Basil, and perhaps visited Egypt also. He is one of the principal scholars of the Syrian Church, and his numerous works contain much information regarding the monastic life.[1]

Schwen, *Afrahat, seine Person und sein Verständnis des Christentums*, Leipzig, 1907.

There were colonies of hermits in Cilicia, round about Antioch, and in the Desert of Chalcis in the 4th century. The Desert of Chalcis was known as the Thebaid of Syria, and there St. Jerome lived as a hermit from 373 to 380.[2] In the 5th cent. the first of the Stylites, St. Simeon, makes his appearance in the north of Syria (Theod. *Hist. Rel.* 26 [*PG* lxxxii. 1464 ff.]). This strange form of monastic life survived as late as the 15th century.[3]

(*e*) *Asia Minor.*—In Asia Minor in the 2nd cent. Montanism (*q.v.*) had appeared—a movement in the direction of an excessive ultra-asceticism. In Pamphylia in the 4th and 5th centuries the Euchite or Messalian monks allowed themselves to be carried away by the same excessive views, and appear also to have undergone Manichæan influences. They were always resisted by the Church and were finally condemned, but revived during the Middle Ages in the sects of the Paulicians and Bogomils.

Eustathius of Sebaste, who introduced monasticism into Armenia, Paphlagonia, and Pontus, was of Egyptian origin and a disciple of Arius. He exercised a wide influence on monasticism in that part of the world and also spread his errors abroad. His disciples, the Eustathians, were condemned by the Church.[4] The Council of Gangra, in 340, gives valuable information concerning the history of the ascetics and monks and the excesses of some of those whom it condemns.[5]

(*f*) *Cappadocia.*—It was chiefly in Cappadocia and under the inspiration of St. Gregory of Nazianzus, St. Gregory of Nyssa, and St. Basil, the real legislator of the monks of the East, that monasticism started its true development. Basil had become acquainted with the monastic life in Syria and in Palestine. He declared himself distinctly in favour of the cenobitic type, and it was for cenobites that he wrote his Rule, or rather his Rules (see above, p. 785^b). The Rule of St. Basil has remained in use in the East to the present day. It does not enter into details, but lays down in general the virtues and duties of the monastic state. The monk is the perfect Christian; the ascetic life does not consist merely in carrying out certain practices, but in the sanctification of one's whole being and in the love of one's neighbour. One must raise up and perfect nature and not destroy it. Christian perfection completes, elevates, and purifies the wisdom of the ancients. In his monasteries the education of children was undertaken, and work was recommended and encouraged. The public prayer of the community was already organized, and we find the various Hours of Matins, Tierce, Sext, None, Vespers, and the Night Office (*μεσονύκτιον*).[6]

(*g*) *Cyprus.*—According to St. Jerome, monasticism was brought to the island of Cyprus by Hilarion. St. Epiphanius, who had himself been a monk in Palestine, defended the monks with ardour.

(*h*) *Constantinople.*—When Palestine and Egypt had ceased to be the chief centres of monastic life in the East, it was Constantinople, and, later, Mt. Athos, that succeeded to that position. The foundations attributed to Constantine or to the time of his immediate successors can, however, be admitted only with reserve.[1] It was not till towards the end of the 4th and especially during the course of the 5th cent. that monasticism began its development at Constantinople. In the reign of Justinian there were no fewer than 80 monasteries at Constantinople,[2] and the emperor legislated for the monastic life as for all other institutions of the empire. The Acœmetæ and the Studites deserve a long study to themselves; they have already formed the subject of monographs, to which we can here only draw attention in passing. The names of St. John Damascene and Theodore the Studite recall the long strife maintained by the monks on the question of the iconoclasts.[3]

(*i*) *Mount Athos.*—From the 9th, but especially during the 10th, cent. the peninsula of Mt. Athos, in the Ægean Sea, became a monastic centre of the highest importance, and formed a kind of monastic republic. Safe in their monasteries, built for the most part on steep cliffs, defended by the sea and by the thickness of their walls, the monks of this peninsula, which is connected with the mainland only by a narrow isthmus, were able to defy all attacks, and the cenobitic life has been maintained there up to the present day. The history of this monastic colony may be given in a few words. The origin of monasticism on Mt. Athos is obscure. The first testimony on which we can depend is found in the 9th cent., but it is probable that long before that there were hermits living among the rocks and in the forests of this peninsula, so well fitted for the solitary life. The year 963 is the date of the foundation of the first great monastery by St. Athanasius, one of the most celebrated of the Athos monks. From this date onwards foundations followed one another in rapid succession. The great monasteries of Iviron, Vatopedi, Xeropotamos, Esphigmenon, Dochiaru, Agios Paulos, etc., rose up in different parts of the holy mountain from the 10th to the 14th century. The latest in date is the monastery of Stavronikita, founded in 1542. A number of smaller houses and simple hermitages depend upon these greater monasteries. The Rule followed is that of St. Basil. The monasteries form a kind of confederation or little republic, which is represented by 20 members, constituting at once a parliament and a tribunal under the direction of 4 presidents, one of whom has the title of *πρῶτος*. In each monastery the *ἡγούμενος* enjoys supreme authority. In the 14th cent. the idiorrhythmic form of life (*ἰδιοῤῥυθμία*) was introduced, in accordance with which, in certain of the monasteries, the monks possess money of their own and enjoy a number of dispensations. Autonomous during a certain period, the governing council of Mt. Athos was finally subjected to the jurisdiction of the patriarch of Constantinople. Under the various governments and dynasties that succeeded one another in the East—the Comneni, the Palæologi, even the Turks themselves, and the hospodars of Wallachia—the liberty of the monks of Mt. Athos was always respected. Painting, architecture, and calligraphy were cultivated with success, and their libraries contain MSS of the highest value.[4]

iii. MONASTICISM IN THE WEST.—1. Before St. Benedict.—(*a*) *Rome and Italy.*—It has been remarked, and with justice, that while, in the inscriptions of the catacombs, careful mention is made of all the various degrees of the ecclesiastical hierarchy—even down to that of *fossor*—no allusion has ever been found to ascetic, anchorite, cenobite, monk, or nun.[1] The existence at Rome of monks, of consecrated virgins, and of monasteries at that period cannot, however, be denied. We leave on one side the legend of Boniface and Aglæ, which is, moreover, of Eastern origin.[2] Constantia, daughter of Constantine, gathered together around the tomb of St. Agnes a community of virgins. It was in a Roman monastery also that St. Marcellina, sister of St. Ambrose, consecrated herself to God (352–366.)[3] Pammachius, another Roman patrician, along with Fabiola, lived the ascetic life, and founded near the mouth of the Tiber a hospice which was served by monks.[4] St. Athanasius arrived in Rome after 339, accompanied by two Egyptian monks. He remained there three years and inspired this community, so deeply Christian in spirit, with admiration of and sympathy with the monastic ideal of the Thebaid. He made proselytes even from among the highest society of Rome, and Marcella, daughter of the widow Albina, along with Melania the Elder, devoted herself to the life. A community of ascetics and cenobites was founded on the Aventine, from which stand out names such as those of Sophronia, Asella, Paula, and Fabiola. The favour shown towards such institutions by Pope Damasus and, in particular, the arrival in Rome of St. Jerome, who became the spiritual father of the community on the Aventine, greatly accentuated the movement.[5] The attempt made by Vigilantius to oppose it in favour of monasticism had no other result than that of starting a controversy with St. Jerome, from which Vigilantius came forth utterly crushed and humiliated (*c.* 385).[6]

In the rest of Italy the progress of monasticism was scarcely less rapid than in Rome itself. In the middle of the 4th cent. Eusebius of Vercelli, till then exiled in Egypt, returned to his church (in 363) and obliged the clergy of his cathedral to submit to the monastic rule of life. His example was soon followed in Milan, under St. Ambrose, and at Aquileia,[7] while Cremona, under the bishop Vincent (407–422), Novara, under the bishop Gaudentius (397–417), Bologna, Ravenna, under St. Peter Chrysologus, Pavia, under the bishop Ennodius, and Turin, under the bishop Victor, all favoured the monastic movement.

In S. Italy, besides Nola with its illustrious bishop, St. Paulinus, we find monasteries at Naples, at Capua, and in Etruria, Sabina, Umbria, Picenum, at Tusculum, Monte Calvo, Fundi, on the banks of Lake Fucino, on the islands off the Mediterranean coast of Italy, Gorgona, Capraja, Sardinia, and the Isle of Cabis (near Torrentum).[1] It would be difficult to draw up even a simple catalogue of these monasteries, so numerous were they.

Cassiodorus (*c.* 570) was contemporary with St. Benedict. It has even been conjectured that his Rule was borrowed from the latter, but this is no more than a conjecture. What is certain is that the minister of Theodoric, on his property of Vivarium, gave the example of a monastery where the ascetic practices of the monastic life were allied with a high degree of intellectual culture. While, on the summit of Mt. Morius, the hermits gave themselves up to their solitary vocation, in the monastery built at the foot of the mountain the cenobites spent their time in the diligent copying of MSS.[2]

(*b*) *Gaul.*—Monasticism, which was to play so considerable a part in Gaul, was established there at an early date (2nd half of the 4th cent.) and with great éclat by St. Martin of Tours. At first it took the eremitic form. The disciples of St. Martin lived as hermits, meeting for exercises in common only on certain occasions. The first monastery founded in Gaul was that of Ligugé, in 360. There were, besides, Marmoutier (Martini Monasterium) and, no doubt, a great number of other houses, for we read that 2000 monks were present at the obsequies of St. Martin.[3] St. Martin wrote no Rule for his monks, and the latter seem simply to have followed the general traditions of the ascetic life. Several of his disciples applied themselves in company with their master to the work of the apostolate. This would explain why this first attempt at monasticism in Gaul did not leave any lasting traces behind it.

We find, about the same date, that there were monks at Rouen, in the Morinie (Boulonnais, Artois, W. Flanders), in the forests, along the seacoast, and even in the islands of the coasts.[4]

St. Sulpicius Severus, the historian of St. Martin, established a community of ascetics in his villa of Primuliacum.[5] Gregory of Tours († 594) gives in his works most valuable information regarding the monastic movement in Gaul in the 5th and 6th centuries. The greater number of the monks whose lives he wrote, while possessing their own characteristic spirit, are still largely under the influence of the teaching of St. Martin.

The most interesting of all these experiments in the monastic life at this period is the foundation of the celebrated monastery of Lérins on an island of that name off the coast of the Mediterranean near Cannes. Monastic life, inaugurated there towards the year 410 by St. Honoratus, was to continue through many long centuries, almost without interruption, to our own day. It was at the beginning a mingling of the eremitic and cenobitic elements. Both manual and intellectual work were held in honour, and great was the influence exercised by the monks of Lérins throughout the Middle Ages.[6] It will be sufficient, for this earlier

period, to cite the names of Vincent of Lérins and Salvianus.

Another important influence exercised over the development of monasticism in Gaul during this period was that of Cassian. His works were in reality the first monastic code in Gaul (see above, p. 787^b), and, it may be said, in the whole of the West. He founded the monastery of St. Victor at Marseilles, which became renowned, and other monasteries also.[1]

St. Cæsarius, bishop of Arles, must also be regarded as one of the principal monastic legislators at this date.[2] We can only mention the monasteries founded by Leonian in the diocese of Vienne, by St. Theudaire in Isère, in the Isle Barbe, at Condat (St. Claude), and at St. Maurice of Agaune, and by SS. Romanus and Lupicinus in the Jura.[3]

(*c*) *Britain, Ireland, the Celts.*—The monastic life was established fairly early among the Celts and Anglo-Saxons, and underwent an extraordinary development among them. Its introduction into Great Britain was due to St. Germanus, bishop of Auxerre, who came to the island in 430 to restore ecclesiastical discipline. In Wales Llan Lltud, Llancarvon, Ti-Gwen, and Bangor soon became renowned. Some of the monks from these monasteries—St. Gildas, St. Lunain, St. Paul Aurelian, and St. Samson—established the monastic life in Brittany (Armorica), where it also made great advance.[4] Monasticism in Ireland has much in common with that of Brittany, to which it seems, in fact, to owe its origin. The name of St. Columba and that of his foundation at Iona stand out conspicuous in its history.[5] Another saint whose name we must not forget to mention among the Celtic monks, although his chief foundation, Luxeuil, belonged to Gaul, is St. Columban, the rival and namesake of Columba. His Rule, inspired entirely by the principles and traditions of Irish monasticism, spread rapidly in Gaul and disputed for a time the predominance of that of St. Benedict.[6]

(*d*) *Spain.*—In Spain the beginnings of the monastic life are somewhat obscure. The Council of Elvira (*c.* 300) makes no allusion whatever to either ascetics or virgins. The *Peregrinatio Etheriæ* belongs to the last quarter of the 4th century. It is the account of her journeying in the East and her pilgrimages to the holy places, sent to her nuns in Spain by a Spanish virgin named Etheria, or Egeria, who was, in all probability, abbess of the community to which she writes.[7] We find further traces of the ascetic and monastic life among the Priscillianists of Spain, in this century. Priscillian gave himself out as an example of asceticism (see art. PRISCILLIANISM). It has recently been shown that the *Regula Consensoria Monachorum*, attributed at first to St. Augustine, then to a contemporary of St. Fructuosus, probably comes from a Priscillianist source, in the 5th century. It is a Rule for cenobites, original in character.[1]

The Rule of St. Isidore († 636) and that of St. Fructuosus of Braga (*c.* 660) also deserve mention. They enjoyed considerable success until the advent of the Rule of St. Benedict in Spain, which became there, as in almost the whole of the Western world, the only Rule for monks.[2]

Vigilantius, who represents the element hostile to the monks and ascetics, was a priest at Barcelona in 396. During the year 409 the invasions in Spain, as everywhere else, resulted in the destruction of the monasteries. Mention of this is to be found in the chronicles of the period.[3]

The Council of Tarragona, in 516, turned its attention to the monks.[4] St. Martin, abbot of Dumio near Braga, who is known as St. Martin of Braga, and who had been a monk in Palestine and played so important a part in the history of the conversion of the Suevi, laboured at the restoration of the monastic life in Spain.[5]

Two other bishops, SS. Leander and Isidore, also worked for the same end. The first wrote a Rule for the use of virgins, and the second drew up a Rule for monks.[6] The latter was already known to St. Leander, the friend of St. Gregory the Great, and to Tajo, bishop of Saragossa (*c.* 650), the great admirer of the works of St. Gregory and of his *Dialogues*, in which the praises of St. Benedict are set forth. This bishop did much to spread the knowledge of these works in Spain.[7] Besides these names, we find, between the date of the conversion of Visigothic Spain (587) and that of the Arab invasion (711), those of certain monks and hermits—the African Donatus, who, along with 70 monks, also from Africa, took refuge in the monastery of Servitanum, in the province of Valencia; St. Emilian, who enjoyed a wide-spread cultus in Spain; the hermit, Valerius, in the neighbourhood of Astorga, etc.[8]

(*e*) *Africa.*—In Africa the first monastic centre seems to have been formed around the person of St. Augustine. This saint had studied the monastic life both in Rome and in Milan, and, on his return to Tagaste, he installed himself with some of his friends in a house, where they gave themselves to the practices of asceticism. Ordained priest, he founded a second monastery at Hippo, where he lived himself till he was made bishop in 396. He then transformed his episcopal dwelling into a monastery like those of the bishops of Milan, Vercelli, and others at this time, and so founded what we may call a 'cathedral monastery,' or, as he himself called it, *monasterium clericorum*. Others of the African episcopate soon followed this example, and Hadrumetum, Uzala, Calame, Cirta, Mileve, and Carthage became real centres of monastic life. The *Regula pro Monachis* attributed to St. Augustine is not his under this form, as we have already said, but it is drawn from his letter (ccxi.) to religious bodies of both sexes living in poverty and chastity, passing their time in prayer and ascetic practices, and in certain works of charity. The counsels of the great bishop are characterized by the charity, discretion, breadth of mind, and high spirituality to which all his works bear witness.[1] We have already spoken of his famous treatise, *de Opere Monachorum*, composed in the year 400.

The Vandal persecution was unable to destroy all these monasteries, but it arrested for the time the progress of monasticism in Africa. Byzantine rule (533–709) restored peace and liberty, and a true renaissance of religion took place, in which monasticism naturally benefited. Several new monasteries were founded, notably at Ruspe and at Tebessa. The ruins of the latter still exist.[2] But the Muhammadan invasion was to destroy monastic life in Roman Africa as well as Christian life in general.

(*f*) On the Danube, in the region of Noricum, we have to mention the wonderful work among those people of St. Severinus († 482), called 'the apostle of Noricum.'[3]

2. From St. Benedict to the 13th century.—St. Benedict, born at Nursia (*c.* 480), died at Monte Cassino (*c.* 540), deserves a place apart in the history of Western monasticism. The influence exercised by his Rule in the West may be compared to that of St. Basil in the East. Having dwelt, at first, as a hermit among the Sabine mountains, he later gathered disciples round him, founded monasteries at Subiaco and Monte Cassino, and wrote a Rule which, after the lapse of two centuries, was to become the one monastic Rule of the West. It may, in fact, be said that the history of Western monasticism is practically identical, for the greater part of the Middle Ages, with that of the Benedictines.[4] The Rule of St. Benedict, which is divided into 73 chapters, is written for cenobites, and addresses itself exclusively to those who follow that form of monastic life. It teaches the virtues of humility, obedience, and poverty, and enjoins the practice of silence, hospitality, and manual work. It regulates the hours for prayer and lays down the order of the psalmody. The monastery forms, as it were, a little city or, better, a complete society provided with all its necessary organs. At the head of all is the abbot, assisted by his provost, or prior, and his seniors, while at the head of every 10 monks is the dean. Then there are the cellarer, who is charged with the temporal affairs of the monastery, and the various other officials that divide between them the different functions necessary to the well-being of the house. The monastery should, as far as possible, provide for itself and possess a garden, a mill, and all the necessary offices and work-shops. The sick, too, are to be specially taken care of, and the monks and the *oblati* receive necessary instruction. Guests are to be received with honour. Those who offend against the Rule must receive punishment according to their deserts.[1] Such is, in summary, the Rule of St. Benedict—a Rule characterized by great simplicity, but in which is clearly reflected that spirit of wise discretion and justice which was the genius of the Roman character, while at the same time it is penetrated through and through by the purest spirit of Christian asceticism, and rivals in its discretion and its sublimity of view the Rule of St. Basil itself.

St. Gregory († 604), the greatest of all the popes of the early Middle Ages, in giving to this Rule the support of his authority and in recounting, in his *Dialogues*, the life and miracles of its author, assured its predominance over all other monastic Rules. He himself founded a monastery in his own house (the Monastery of St. Andrew, on the Cœlian), in which the Rule of St. Benedict was observed, and sent to England one of its monks, his disciple St. Augustine, who, while commencing the work of converting the Anglo-Saxons, at the same time implanted in their midst that Rule which was destined to take such firm root there and to spread far and wide over the land.

(*a*) *England.*—The Christianity established by St. Augustine among the Anglo-Saxons was thoroughly monastic in character. In the greater number of towns—*e.g.*, at Canterbury, York, London, Ripon, Peterborough, etc.—the monastery was the centre of the new Christianity. The church of the monastery became the cathedral, and the abbot the bishop of the diocese that was thus gradually formed. The kingdoms of the Saxon heptarchy were one after another converted by the disciples or successors of St. Augustine, and the history of the four centuries extending from the death of St. Augustine in 605 to the Norman Conquest in 1066 is one of the finest parts of the history of Western monasticism.[2] It would be impossible to give even a summary of it here. We cannot do more than cite some of the principal characters and the names of the chief monasteries that stand out in its pages. Among the former we have the abbots and monks Aidan, Oswald, Wilfrid, Theodore, Cuthbert, Benedict Biscop, Aldhelm, Boniface, Bede, Alcuin, Odo, Dunstan; among the latter are Canterbury, Westminster, Malmesbury, York, Lindisfarne, Ripon, Peterborough, Yarrow, Wearmouth, Croyland, Whitby, Coldingham, Tynemouth, and Hartlepool. Even after the Norman Conquest in 1066 the history of monasticism in England does not come to an end. It was still flourishing in the 11th cent., and the Normans, far from destroying the English monasteries, founded new ones. Lanfranc and Anselm, archbishops of Canterbury, re-peopled the Saxon monasteries with colonies of monks brought over from the famous abbey of Bec and from other Norman monasteries. Cluny, too, made several foundations in the country, and the Cistercians, in their turn, established themselves at Waverley, Rievaulx, Fountains, and many other places. St. Stephen Harding, who exercised so great an influence on the order of Citeaux and gave it its organization, was an Englishman. The order of Savigny, which also had numerous foundations in England, was absorbed by that of Citeaux. But with the 14th and 15th centuries English monasticism began to decline.[1]

[2] It is to this history of the Anglo-Saxon and Celtic monks that Montalembert has consecrated the greater part of his history of the monks of the West; see also W. Dugdale, *Monasticon Anglicanum*, new ed., London, 1817–30; E. L. Taunton, *The English Black Monks of St. Benedict*, 2 vols., do. 1897; F. A. Gasquet, *English Monastic Life*, do. 1904.

(*b*) *France.*—However great the success of the Benedictine life in England, it may be said with truth, if its history be regarded as a whole, that France was the land of its predilection. The story of the Rule of St. Benedict being brought to Merovingian Gaul by his disciple, St. Maurus, and of the latter's foundation of the abbey of Glanfeuil on the banks of the Loire as the first Benedictine monastery in that country, has been contested.[2] Whatever the truth of this question may be, it is certain that the Rule was introduced into France at an early date—from the beginning of the 7th cent.—and it spread there with such rapidity that it soon succeeded in supplanting the Rule of St. Columban and in imposing its authority on all the monasteries. A synod held at Autun, in 670, speaks of it as though it were the only monastic Rule in existence, and that of Châlons, in 813, declares formally that it is followed in almost all the monasteries of the country.[3] The movement attained its apogee under Charlemagne, the great protector of the Benedictine monks, and under his son, Louis le Débonnaire. The reform of St. Benedict of Aniane witnesses at once to the unity and to the vitality of Benedictine life.

It is again in France that we must seek the origin of the important monastic reform of which Cluny was the cradle, and which, little by little, spread beyond the limits of France into Italy, Spain, England, Germany, and Poland. The abbey of Cluny, near Macon, was founded by William, Duke of Aquitaine, in 910; the monks were brought from the abbey of Baume, where the Constitutions of St. Benedict of Aniane were followed; hence the Cluniac reform sprang from that of the 9th century. Its first abbots, Bernon, Odo, Mayeul, Hugh, Odilo, and Peter the Venerable, raised Cluny to the highest degree of prosperity and extended its influence to every country in Christian Europe. The work of Cluny, in the religious, social, and political order, was considerable; during the 10th, 11th, and a part of the 12th centuries it exercised an unrivalled influence on Christian morals and institutions. From the political and religious points of view, it offered to the popes valuable and indispensable assistance in their struggle against the emperors of Germany, and the latter, as well as the kings of France, were obliged, more than once, to reckon with the powerful abbey.

Among the monasteries that accepted the Cluniac reform and flourished under it must be cited especially the great abbeys of Moissac, St. Martial, Uzerches, St. Jean d'Angély, St. Bertin, St. Germain d'Auxerre, and Vézelay in France, and Cava, Farfa, and S. Paolo fuori le mura in Italy.[4]

At the very moment when the influence of Cluny began to decline, a new star arose on the monastic horizon. On 21st March 1098, Robert, abbot of Molesmes, founded in the diocese of Dijon the abbey of Citeaux, which was to become the centre of a new reform of Benedictine life. While Cluny, although careful to remain faithful to the spirit of St. Benedict, had become the seat of culture, of the liberal arts, and of letters, and had exercised considerable influence on the external world, Citeaux, under the inspiration especially of St. Bernard, returned to an austerer conception of the monastic life. All sumptuousness and solemnity, even in the liturgical offices, were proscribed, monastic architecture was reduced to its simplest expression, and intellectual and artistic culture was set on one side, manual labour and the exercise of every kind of hard work taking its place.[1]

The Cistercian reform, whose influence, while not to be compared with that of Cluny, was nevertheless of considerable importance, especially during the 12th cent., spread beyond France and took in a large number of monasteries in other countries. It continued to exercise its influence till the end of the Middle Ages, and was revived on a new basis in the 17th cent. in the celebrated reform of La Trappe under the Abbé de Rancé.[2]

(*c*) *Germany.*—Before the introduction of the Benedictine Rule into Germany, monastic life was but feebly represented in that country. The Anglo-Saxon monks, SS. Pirmin and Boniface, with their disciples, brought to Germany, along with their missionary zeal, the traditions of Benedictine life, which scarcely existed there at that period, the only known trace during the 6th cent. being found in the life of St. Eugendus.[3]

During the 7th and 8th centuries the Celtic monks of St. Columban came into Germany and founded a number of monasteries. Among these we may mention St. Gall, Ebersmünster, Moyen-Moutier, St. Odile, Honau (Onogia), and Aschaffenburg, not to speak of those at Strassburg, Mainz, Cologne, Ratisbon, Würzburg, Erfurt, and Heggbach.[4]

In 1185 all the Scottish monasteries of Germany were united to form a congregation, under the jurisdiction of the abbot of St. James of Ratisbon, by Innocent III. Gradually the numbers of Scoto-Irish monks that were at first continually coming into Germany began to diminish, and by the 15th cent. they were replaced, in most of the monasteries, by Germans. This congregation ended by entering that of Bursfeld and becoming one with it. Mention, however, is made in the 17th cent. of a Scottish abbot, Ogilvie by name († 1646).

Reichenau on Lake Constance began, in 724, a history glorious in monastic annals, and Murbach, Fritzlar, Hersfeld, Heidenheim, and Bischofsheim are scarcely less famous. Fulda, in the days of its prosperity, counted 100 monks among its inmates and became a nursing-ground for missionaries, of whom the chief were to play an important part in the history of Christian Germany. Such were Sturmius, Willibald, Wunibald, and also SS. Walburga, Lioba, and Thekla. Synods held in Germany in 744 and 745 discussed monastic affairs and prescribed that all monks were to live according to the Rule of St. Benedict. Worthy of special mention in this connexion is the Synod of Aix-la-Chapelle in 802, famous for the legislation which it laid down for the monks. Under Dukes Ottilo and Tassilo, no fewer than 29 cloisters were founded, some of which have left a name behind them in history—*e.g.*, Tegernsee, Benediktbeuern, Polling, Wessobrunn, Kremsmünster, Scharnitz, and Metten.

Charlemagne and Louis the Pious were the great protectors of the Benedictine monks. At their courts were to be seen Alcuin, Adalhard, Wala, Angibran, Arn, Ansegise, Paul the Deacon, and, above all, Benedict of Aniane, the great monastic reformer. The Cluniac reform found its way also to Germany, where it commenced a new era of activity and prosperity for the monastic life. The monasteries of Reichenau, St. Maximin of Trèves, Echternach, St. Emmeran of Ratisbon, Tegernsee, St. Maurice of Magdeburg, and Weissenburg flourished anew under its protection. Einsiedeln, whose patron was St. Meinrad, a hermit who died in 861, became likewise the centre of an important monastic reform,[1] which extended to the abbeys of Petershausen, Disentis, Pfäffers, St. Blaise and Muri, Hohentwiel, Kempten, Ebersberg, and Rheinau (near Schaffhausen). The monastery of St. Emmeran of Ratisbon in its turn introduced its own customs into the monasteries of St. Peter of Salzburg, Tegernsee, Prüll, Weltenburg, and several others. Ulrich of Ratisbon (or of Cluny, † 1093) was one of the most active agents in the Cluniac movement in Germany and Switzerland.

Hirsau, or Hirschau, founded about 830, was also of great importance from the monastic point of view. The constitutions of this monastery were adopted by 150 other monasteries. Hirschau, as well as Cluny, offered valuable assistance to St. Gregory VII. in his struggle against investitures and against the abuses among the clergy. Like the great Burgundian abbey, it also had much influence on art, architecture, and culture in general. The reform of Hirschau, while keeping its own spirit intact, was, to a large extent, inspired by that of Cluny. The annals of the abbey were written by Trithemius and Baselius.[2]

Another reform, which, like that of Hirschau, drew much of its inspiration from Cluny, while keeping certain special characteristics of its own, made itself felt not only in Italy, the land of its birth, but in Germany also. This was the reform inaugurated by the monastery of Fructuaria (Früdelle), near Turin, founded in 1003. Its constitutions were adopted by many Italian monasteries and in Germany, notably by the monasteries of Gorze, St. Maximin of Trèves, St. Blaise, in the Black Forest, and by Muri, Garsten, Gottweig, Lambach, etc.[3]

Besides these reforms issuing from within the monastic order itself, mention must be made of the efforts made by ecclesiastical councils to bring back the monasteries to the practice and observance of the Rule. In particular may be cited the Synod of Rouen (1074), and those of Poitiers (1078), Rome (1083), London (1112), and Paris (1212–13). The decrees of the last council, which received the approbation of Innocent III., exercised a great influence on the monastic order as a whole. The 4th Council of the Lateran (1215) established rules that are still in force at the present day, especially as regards the convoking of general chapters—a kind of monastic council, composed of abbots and delegates from the various monasteries, wherein are discussed matters relating to the discipline and general interests of the monastic life.[1]

3. From the 13th to the 20th century.—In the 13th cent., whilst monasticism, in spite of all these attempts at reform, continued to decline, new forms of the religious life arose which answered better perhaps to the spirit of the age, but which none the less drew numerous souls athirst for perfection and formed a current which, although not actually inimical to the ancient monastic institutions, was nevertheless very distinct from it. Such were the great Dominican and Franciscan orders and a few other religious families inspired with the same principles. No other attempt at monasticism that was really original and powerful remains to be considered, with the possible exception of the congregation of St. Maur. Hence it will be sufficient to give a brief outline of the principal characteristics of monastic history during the last centuries of the Middle Ages.

The great schism of the West and the Hundred Years' War dealt another terrible blow to the monastic orders, but the attempts at reformation were not less numerous than in the preceding centuries. The Council of Constance (1414–18) consecrated some of its decrees to the reformation of the Benedictine order, and was the factor that inspired a great meeting, comprising 131 abbots of various monasteries, which was held at Petershausen in 1417. In 1418 Pope Martin V. sent the abbot of Subiaco, Nicholas Seyringer, to Melk, the great Austrian abbey, to lay the foundation of that restoration of monastic life. The enterprise was successful, and a great number of the monasteries of Austria, Bavaria, and Swabia rallied to the movement—*inter alia*, Mariazell, Seittenstetten, St. Peter of Salzburg, Kremsmünster, St. Emmeran of Ratisbon, Braunau, Tegernsee. The great Italian abbeys of Subiaco and Farfa also accepted this reformation. In other respects all these monasteries remained independent and did not form a real congregation.[2]

The Council of Trent dealt with the question of monasteries as it did with all other Christian institutions. The 25th Session (3rd Dec. 1563) treats *de regularibus et monialibus*, renews the decree of Innocent III. and of the 4th Lateran Council, unites the exempt monasteries to form congregations, institutes, general chapters, and cloisters, and legislates concerning visitors, presidents of congregations, novices, and the election of superiors and nuns; in a word, it establishes a collection of rules and laws concerning the monastic life.[3] Congregations were immediately after founded on those principles.[4]

Even more important than the Melk reformation, so far at least as Germany is concerned, was that of Bursfeld. Founded in 1003 on the banks of the Weser and colonized by Corby, this abbey was destined to play an important part in monastic history from the 15th century. John

[1] We have already seen that, even as far back as the time of St. Pachomius, the endeavour was made to unite monasteries in a species of federation; another example of this occurs in the 9th cent., under the authority of St. Benedict of Aniane. But it is not, in reality, till the 11th cent. that we find among the Cistercians the usage of general chapters properly so called. From the Cistercians the practice passed to the Benedictines, and from them to other orders (cf. Berlière, 'Les Chapitres généraux,' in *Mélanges d'hist. bénédictine*, 4th ser., Maredsous, 1902, p. 52 ff., and Heimbucher, i. 274 f.).

Dederoth († 1439), who had already reformed the abbey of Clus, took Bursfeld in hand in 1433 and also Rheinhausen. The three monasteries remained closely united. In 1446 the abbot of Bursfeld became the president of the congregation. The constitutions show a solid organization, with general chapters, visitors, and every means of safeguarding the observance of piety and regularity. The success of this reformation grew from day to day. The cardinal of Cusa,[1] Nicholas V., and Pius II. became its ardent promoters. At the death of Abbot Johann von Hagen (1469) the congregation numbered 36 monasteries, which later increased to 230. In 1579 the abbey of Bursfeld, which up to this time had been the head-house of the congregation, went over to Protestantism under the influence of Julius of Brunswick, and the congregation was itself secularized in 1803.[2]

We have already spoken of the monastic origins in Spain. For a long time the Rule of St. Isidore was observed in that country, side by side with that of St. Benedict. The Synod of Coyaca (1050) prescribed that either the Rule of St. Isidore or that of St. Benedict should be observed in all monasteries in Spain. Not many years later, however, the influence of Cluny began to be felt and to spread throughout Spain; gradually it predominated, until it finally eliminated the observance instituted by St. Isidore. In the 14th and 15th centuries two important congregations rose up, those of Valladolid (1390) and Monserrat (1492). The latter made foundations in Portugal, Peru, and Mexico.[3] The movement of the claustrales at Saragossa and at Tarragona were less important.[4]

The Low Countries were a monastic land for centuries. Wilfrid of York, on the occasion of a journey to Rome in 678, having been thrown on the shores of Friesland, was there welcomed with great warmth. After his return to his monastery at Ripon, he sent over Willibrod, one of his monks, who established himself at Utrecht, and became the great apostle of Friesland, having St. Boniface as a fellow-labourer for some time. Other missionaries soon came from Iona, and, like England, the country became Christian and monastic at the same time. The most celebrated of these foundations was the monastery of Echternach.[5]

The Reformation in Germany in the 16th cent. led to the expulsion of the monks from their monasteries, the closing of monastic buildings, and the handing over of their revenues to laymen, and especially to Protestant princes. A great number were sacked. It has been calculated that in the Peasant War more than 1000 monasteries and castles were destroyed. A few monasteries were, however, saved from the general ruin (cf. Heimbucher, i. 295).

In England the effects of the Protestant Reformation were still more terrible for the monasteries. In 1524 the Holy See had caused Cardinal Wolsey to make a visitation of the monasteries, and one of the consequences of this general visit was their confiscation and almost complete secularization by Henry VIII. and his minister Thomas Cromwell (1534). Elizabeth finished the work of destruction in 1560. Scotland's turn came later on (1559–1560). In all it has been estimated that 578 monasteries, of which 63 were Benedictine, were confiscated. Besides the falls and lamentable defections there were not wanting monks who became martyrs, and who paid with their lives their fidelity to their vows.[1] Benedictine life was maintained throughout all these centuries of persecution, and the Anglo-Benedictine congregation has preserved the inheritance of its ancestors to the present day.

The Reformation which destroyed the monasteries in England and Germany did not succeed in establishing itself in France. There the monasteries held out. The 17th cent. was marked by an important monastic restoration, the Benedictine congregation of SS. Vannes and Hydulphus in Lorraine and that of St. Maur in France. These two congregations, with an end and a constitution that were similar, had for their common object to re-establish a stricter mode of observance in Benedictine monasteries and to bring back the monks to the rigorous practices of the Benedictine Rule. The very large part played by the congregation of St. Maur in intellectual work bore splendid fruits and helped to found a school of erudition that has given to France a Mabillon and a Montfaucon, a Denys de Sainte-Marthe, a d'Achéry, a Coustant, a Ruinart, etc.—a school that has never been equalled.[2]

A certain number of new orders which practised the monastic life and accepted the Rule of St. Benedict as their fundamental guide may be regarded as branches of the Benedictine order. We can give only a very brief outline of their history here.

(*a*) *Sylvestrines.*—The first of these orders sprung from the Benedictine trunk is the Sylvestrines, so called from the name of its founder, Sylvester Gonzelin, of the family of Gozzolini († 1267). In 1227 he retired to Osimo and followed the Rule of St. Benedict, adding new austerities, until in a short time a few ancient monasteries took their place under the new discipline. At the time of its greatest prosperity it comprised 56 monasteries, the greater part of which were in Italy and a few in Portugal and Brazil. At the present day this number is greatly diminished. The church of St. Stephen del Cacco in Rome now belongs to them.

(*b*) *Celestines.*—The Celestines are a more important branch than the Sylvestrines. They owe their foundation to the pope of that name, St. Celestine V., who at first was a hermit on Monte Morone in the Abruzzi, and then at Mt. Majella. He endeavoured to combine under one manner of life the cenobitic principle of the Benedictines and the practices of the anchoretic life. When he became pope, he protected and favoured the order which he had founded, approved of its constitutions, and accorded it many privileges. His congregation, having made numerous foundations in Italy, spread into France, Saxony, Bohemia, and the Low Countries. It possessed 150 monasteries, of which 96 were in Italy and 21 in France.[3]

(*c*) *Olivetans.*—The Olivetans were founded by Bernard Tolomei († 1348), a professor of Law at Siena, who, in company with a few companions, retired to Mount Oliveto, some leagues from Siena, whence his congregation takes its name. They lived as hermits, while following the Rule of St. Benedict in so far as its main principles are concerned. Pope John XXII. gave his approbation to their constitutions. Fourteen years after its foundation more than 100 monasteries, including Monte Cassino, had rallied to this mode of life. Their principal monasteries were those of San Miniato in Florence, and Settignano and S. Francesco Romana at Rome. Among their members are counted 4 cardinals, 5 archbishops, 30 bishops, and a few savants, such as Lancelotti, Bianchieri, etc.[1]

(*d*) *Humiliati, Pulsano, and Monte Vergine.*—Three other orders or congregations—the Humiliati, Pulsano, and Monte Vergine—are also offshoots in Italy of the Benedictine tree. The first was founded in the 12th cent., with the aid of St. Bernard, by St. John Oldrado († 1159) near Cosmo, but later they joined the partisan demagogues of Arnold of Brescia and then the Waldenses. St. Charles Borromeo made a futile attempt to reform them; the rebel monks tried to get rid of the saint by endeavouring to bring about his death, and were consequently suppressed by St. Pius V. in 1571.[2] The order of Pulsano, which never made any great progress, was founded in Apulia by St. John de Matera († 1139).[3] That of the Guilhelmites, or hermit Benedictines of Monte Vergine, was founded by a friend of St. John de Matera—St. William (Lat. Guilielmus) of Vercelli († 1142), who had at first lived as a hermit on Monte Vergine, in the neighbourhood of Naples. He had a certain number of followers, and built several other monasteries in Italy and even as far off as Sicily. The monastery of Monte Vergine became and has remained the centre of a very flourishing pilgrimage.[4]

(*e*) *Fontavellane.*—Among the reforms in the Benedictine order we must not omit to mention that of Fontavellane under the inspiration of Dominic of Foligno († 1031) at Faenza in Umbria. St. Peter Damian († 1072) was its most powerful and most fervent promoter, and St. Dominic le Cuirassé ('the armoured') is also one of its glories. Its Rule added new austerities to those of St. Benedict's. In 1570 it was united to the Camaldolese.[5]

(*f*) *Camaldolese.*—This was one of the most numerous and most powerful of the congregations of the Benedictine order. They essayed to combine the cenobitic with the anchoretic mode of life. At one time they numbered 2000 monks, and their history is intermingled with the most important events of the Church in Italy in the 11th century. Their founder was St. Romuald († 1027), who was at first abbot of San Apollinare in Classe at Ravenna, and withdrew thence to Campo Maldoli (whence the name 'Camaldoli' or 'Camaldolese') in the Apennines with a colony of hermits.[6]

(*g*) *Vallombrosa.*—The order of Vallombrosa was founded by St. John Gualbert († 1073) at Vallombrosa in Tuscany. The founder, who was not ignorant of the attempt of the Camaldolese, also took up the idea of uniting the anchoretic life with the cenobitic mode, basing his plan on the Rule of St. Benedict. This congregation, like that of the Camaldolese, also played an important part under Leo IX. and St. Gregory VII. in the reformation of the Church in its fight against simony.[1]

(*h*) *Grammont and Fontevrault.*—France, which, in Cluny and Citeaux, had given birth to the two most illustrious reformations of the Benedictine order, has still two more interesting attempts to its credit, although of much less importance—the order of Grammont and that of Fontevrault. The first resembles the Camaldolese order. Its founder, St. Stephen of Muret, near Limoges († 1142), where he lived a very mortified life, withdrew to Grandmond, or Grammont, a place which was at that time a desert in the same country. His order was more or less of a success in France, and at one time numbered about 60 monasteries.[2] Fontevrault (*Fons Ebraldi*), in the Department of Maine-et-Loire, gave its name to the order founded by Robert d'Arbrissel, who renewed an ancient institution, namely, that of double monasteries.[3] The founder's influence as a missionary and preacher was enormous, and at his death 3000 monks and nuns were united under his guidance. His Rule spread to England and Spain, but Fontevrault remained the principal house. The most rigorous discipline maintained the spirit of St. Robert in the monasteries thus brought together.[4]

There were also a few partial reformations that arose in certain great abbeys which we might call monastic capitals, Chaise-Dieu, L'Abbaye de Cluse, Sasso-Bigno, Sauve Majour, Le Bec, Thiron, Savigny, Saint-Sulpice, and Cadouin.[5]

(*i*) *Mechitarists.*—The Mechitarists represented one of the most curious attempts at reform in the Benedictine order. Mechitar (Mechithar or Mekhitar, † 1749) was an Armenian who, with the object of enlightening his fellow-countrymen concerning the Roman Catholic Church, resolved to found an order consecrated to the work of the mission and the education of youth and the composition or the translation of Catholic works. In Armenia he was subjected to long persecutions on the part of the schismatics, but, far from being discouraged, he succeeded in founding his congregation in Armenia. His most celebrated foundation, however, was in the island of St. Lazarus, near Venice; it became a very active centre for Armenian studies. The monastery of Vienna, founded in 1810, is also celebrated for its printing-press and its seminary.

(*j*) *Carthusians.*—The Carthusians, like the Camaldolese, represent a mixture of the anchoretic and the eremitic modes of life in Western monasticism. St. Bruno, their founder, withdrew to the desert of the Chartreuse (whence the name 'Carthusian') in the diocese of Grenoble, France, where he established a little colony of hermits, whose successors have succeeded in keeping together and maintaining their traditions down to the present day. A great number of foundations were made throughout all the nations of Europe. In a Carthusian monastery each monk lives in his own cell and cultivates his little garden. They come together only for divine office in choir, for conference, or for chapter, and on certain days they meet in the common refectory and for the weekly walk. They have always been noted for their fervour, and among them there have been a few ascetic writers of high merit. Some of their chapter-houses are celebrated for their architectural beauty and for the art treasures which they contain.[1]

[5] For the details cf. Heimbucher, i. 265.

The 19th cent. was one of restoration for monasticism. While in England, Germany, Austria, and Italy the ancient monastic congregations and the great abbeys were maintained in spite of all difficulties, some attempts at monastic restoration were made in France, Italy, Switzerland, Germany, and America. It will suffice to refer the reader to the article 'Benedictine Order,' in *CE* ii. 443–465, for a fuller account of these attempts (cf. Heimbucher, i. 600).

V. *CONCLUSION.* — In an article that must necessarily be brief, we have been able to give only a very short summary or historical outline. To give it any degree of completeness one should study in detail the influence exercised by the monks on the Church and on society in general; consider what has been their work of sanctification, of charity, of apostleship; enumerate the services which they have rendered to civilization as savants, litterateurs, artists, agriculturists, and, at times, as politicians. It would then be seen that, although vowed by their monastic profession to a life of retreat and renunciation, which is the kernel of their vocation, the monks have accomplished a work that has been equalled by no other society down to the present day.

If this résumé of monastic history had any pretensions to completeness, some mention should here be made of the nuns, in whose ranks are found characters as remarkable as those of Lioba, Mechtild, Gertrude, Hildegarde, Roswitha, and others. From the historical point of view, however, this is unnecessary. The nuns brought no new element into the monastic life, but were content to follow in the footsteps of the monks under the influence of the great reformers of the monastic order.

F. CABROL.

MONASTICISM (Buddhist).

I. The monastic order.—The monastic order in Buddhism, as instituted by Gautama Buddha himself, was not essentially a new creation in India, but was derived from ancient Hindu usage and practice. Separation from the world, in the solitary existence of a hermit or ascetic or in regulated communities, had been almost from time immemorial a characteristic feature of Indian life. In adopting the principle of monastic rule and self-discipline as the basis of his religious system, and defining this as the sole way of religious attainment, the Buddha presented to his hearers no new doctrine or ideal, but urged and enforced a duty familiar to them from the teaching of their own sacred books. The distinctive feature of the Buddhist order, in which it was differentiated from its predecessors, and to which, in large part at least, it owed its wide extension and success, was the removal of all restrictions of caste. Membership of the order was open to all from the highest to the lowest, without distinction of race or birth. All alike were bound by the vow of poverty, relinquished all personal or individual possession of worldly goods, and sought in meditation and spiritual endeavour that deliverance from the bonds of existence and misery which, the Buddha taught, could never be achieved in the turmoil and distraction of a life in the world. To indicate, therefore, the life of renunciation and strenuous pursuit of the highest aim to which they pledged themselves the monks were known as *bhikṣus*, 'beggars,' *śramaṇas* or *śrāmaṇeras*, 'endeavourers,' the latter term being given to the novices or junior monks, and *sthaviras*, 'elders,' to those who were the senior or ruling members in the monasteries. The community of monks as a whole was known as the *Saṅgha*, or order, and with the Buddha himself and the *Dharma*, the sacred rule or law, formed a Buddhist triad, each member of which was idealized and invested with a sacred character, and ultimately became the object of a definite worship.[1] On the sculptures the Saṅgha is represented as a man holding a lotus in his hand, the symbol of stainless purity.

In inception and intention the monasteries were not the established homes of the monks. To the latter no permanent abodes were assigned, but they were to follow the wandering life of an ascetic or beggar, dependent for their livelihood upon the gifts of the laity, their only shelter the trees of the forest, or booths constructed of leaves and branches (*parṇaśālā, pannasālā*). Only during *Vassa* (*Varṣa*), the season of the rains, when travelling became impracticable or could be prosecuted only at the grave risk of injury to living beings, was it incumbent upon them to remain in a definite place or a permanent building. Caves, either natural or artificially excavated in the rock, seem to have been among the favourite dwelling-places of the early Buddhist monks. Gautama is represented as giving permission for five different kinds of abodes (*pañcha lenāni*): 'I allow you, O Bhikkhus, dwellings of five kinds, vihāras, aḍḍhayogas, storied dwellings, attics, caves.'[2] The more elaborate and permanent dwellings were, in the first instance, apparently always the gifts of wealthy laymen, who desired in this way to do honour to Gautama himself or to the order which he had founded. A usual name for the larger monasteries was *saṅghārāma*, the abode or delight of the Saṅgha; and the term *vihāra* was employed also to denote the temple where the images were enshrined, in a building which, in the great monasteries at least, was usually distinct from the main hall.

It became necessary, moreover, at an early date to place restrictions upon the absolute freedom of entrance into the order. Such restrictions took the form of the prohibition of admission to those suffering from any mental or bodily defect, as the blind or lame, and to the vicious in habit or life, gamblers and those involved in debt.[1] The consent of parents also was required in the case of a minor. No distinction or priority of caste, however, was ever recognized in Buddhism, although it seems to have been true that the earliest converts were for the most part Brāhmans. Inasmuch as in and through the order alone was final deliverance to be attained, it was an essential feature of the Buddha's gospel that no accident of birth should hinder a man from entering upon and prosecuting the path that led to salvation, to *nirvāṇa*. It was impossible for the layman to work out his own salvation while in the world, fettered by its ordinances and under the spell of its attractions. He must renounce the world and become a monk, that, undistracted and at leisure, he might pursue the highest ends and win for himself final deliverance.

[1] A. Miræus, *Origines monasteriorum Carthusianorum per orbem universum*, Cologne, 1609; G. Corbin, *Hist. sacrée de l'ordre des Chartreux*, Paris, 1653; C. Le Couteulx, *Annales Ordinis Cartusiensis*, new ed., 8 vols., Neuville-sous-Montreuil, 1888–91; on the bibliography of the Carthusians cf. Chevalier, *Répertoire : Topo-bibliographie*, *s.v.* 'Chartreux.'

[1] Thus in the 'three-refuge formula' which every candidate for admission into the order was required to repeat the Saṁgha is personified, and to each in succession the suppliant applies for protection and aid: *Buddhaṁ śaraṇaṁ gachchhāmi, Dharmaṁ śaraṇaṁ gachchhāmi, Saṅghaṁ śaraṇaṁ gachchhāmi*, 'I seek refuge in the Buddha, the Religion, and the Order' (*Mahāv.* i. 12. 4).

[2] *Chullav.* vi. 1. 2; *SBE* xx. 158; cf. *Mahāv.* i. 30. 4, where these are termed 'extra allowances'; *aḍḍhayoga* is explained by the commentator to mean a gold-coloured Bengali house.

The earliest ceremony of admission to the monastic order appears to have been as simple as possible, and confined to a recital of the 'three-refuge formula,' together with a declaration on the part of the applicant of his desire to become a monk. At first Gautama himself received and admitted all candidates. Later he entrusted this right to the monks themselves, each monk being permitted to ordain one novice. This rule again was found to be too strict, and ultimately the only limit to the number that a monk might himself receive was the condition of efficient oversight.[2]

On admission the candidate provided himself with the usual almsbowl and the appropriate three vestments (*trichīvara*) which constituted almost his sole possessions.[3] The colour of the robes seems to have been originally dull red or reddish-yellow, as worn by most of the Hindu ascetics, but varies at the present time in different countries; in the south it is usually yellow. They were to be made in patches or torn pieces, like the rice-fields of Magadha.[4] Besides the almsbowl the ordained monk carried also with him a staff, a razor and tooth-pick, and a water-strainer, the last in order to ensure that no living creature should inadvertently be destroyed by him when drinking. The use of the rosary in addition was a practice of later origin. Frequently the robes were the gift to the Buddha or his disciples of wealthy laymen, who sought to secure merit for themselves by generosity to the order.

Upon converts from other sects who came desiring to receive *upasampadā* a probation (*parivāsa*, 'sojourn,' 'delay') of four months was imposed. Fire-worshippers and Jaṭilas (wearing the *jaṭā*, *i.e.* with matted hair), however, were to be accepted forthwith, on the ground of their orthodox belief; Śākyas also, because of their kinship with the Buddha.[5]

The daily routine of monastic life admitted of little variation. The day began early with recitation and prayers, followed by the regular round for alms. Silently and with downcast eyes the monks moved in procession and presented themselves before the householders' doors, to receive whatever food might be placed in their bowls. For this they were not allowed to make request, as the Brāhman students and ascetics were accustomed to do. Whatever was bestowed they were to accept with gratitude; if no gift were offered, they were to pass on to another house without showing resentment. On their return a simple noon-day meal was followed by rest and meditation, the day closing with service and recitations in the temple or hall of the monastery. In most of the monasteries regular instruction was given to the *śrāmaṇeras*, or junior monks, and an elementary education was thus available for the entire male population. There were no public services, however, within the monasteries, nor any worship in the usual sense of the term. Only in *Vassa* did the monks ordinarily engage in preaching, or place themselves at the service of the laity for the reading of the Scriptures or prayer. Twice a month at the new and full moons on the *uposatha* days, the days of abstinence and fasting, the *pratimokṣa*,[1] or confession of sin, was to be formally recited at a full chapter of the monks. Later a weekly recitation was instituted, which included the intermediary days, on the seventh and twenty-first of the lunar month.[2]

In intention and practice, therefore, the Saṅgha formed a brotherhood, within which no distinction was made of rank or birth; age, learning, and seniority formed the only title to authority and respect. The control of the monasteries was in the hands of the *sthaviras*, the elders or senior monks. The *upādhyāyas* or *āchāryas* were ordained members of the fraternity, of some years' standing, qualified by character and learning to give instruction and to conduct the recitations and prayers. The novices or junior monks were required to devote themselves to study, to perform the necessary services of the monastery buildings, to wait upon the senior monks, and sometimes to attend them when they moved abroad. All alike pledged themselves to obey the rules and discipline of the order. There were, however, no irrevocable vows. The monk was free at any time without blame to discard his robes and return to the world. In this way in some Buddhist countries the entire male population passed through the monastery schools, and for a longer or shorter period wore the yellow vestments. By his return to the world the monk definitely desisted from his endeavour to secure for himself deliverance from suffering and misery; for only within the order, according to the teaching of the Buddha, was salvation to be attained. Lay brethren also (*upāsaka*, 'worshipper,' 'servant') were admitted to the monastery as labourers and servants, and upon them a less strict discipline and obligation were imposed. Nothing further probably was required of them than to recite the 'three-refuge formula.' They took no part in the regular life of the monastery, did not join in the daily itinerancy for alms, and were in all matters under the direction of the monks. The outside laity also were accustomed to visit the monasteries to make offerings at the shrines.

The rules of extreme poverty incumbent upon the monks individually did not extend to the monasteries in their corporate capacity. These might be and often were powerful and wealthy corporations, possessed of great resources, and wielding a corresponding influence in the neighbouring districts. Their property consisted for the most part of land and the revenues of estates or villages which had been granted to them in perpetuity by wealthy patrons, whose piety and liberality earned its recompense in the merit which thereby accrued to the donor. Gifts in money as well as in kind were frequently bestowed. Sometimes also these donations took the form of the building and furnishing of monasteries for the use of the brethren. Such benefactions are recorded within the lifetime of Gautama himself. He gave his permission for the dedication of the estate and buildings, expressed his pleasure at the meritorious service of his followers, and prophesied of the future good which would be theirs as a certain reward. In respect, however, of their wealth and resources the monasteries of Buddhist countries differ to a considerable extent. In Ceylon, with the exception of a few that are more influential and renowned, the buildings are small, and shelter few inmates. In Mongolia and Tibet they are large and elaborately furnished and decorated, and frequently occupy imposing positions of great natural beauty. Burma and Siam possess buildings of much architectural merit; and the monasteries and temples of Japan are not excelled for stateliness and charm by any in the whole Buddhist world. The Chinese monasteries have suffered much from neglect and decay, and in many instances have within recent years been altogether abandoned, or diverted to secular purposes.

[1] *Mahāv.* i. 39–76.

[2] *Ib.* 52, 55. See art. INITIATION (Buddhist).

[3] The regulations with regard to clothing appear to have been in part polemical and directed against the Jain ascetics, who went about unclothed.

[4] *Mahāv.* viii. 12.

[5] *Ib.* i. 38.

[1] Pāli *pātimokkha*, 'release,' 'liberation.' That the term ordinarily conveyed this meaning there can be no doubt. Its original significance is in dispute (see Kern, pp. 74 and note, 85 ff.).

[2] Kern, p. 99 f.

2. **Nuns.**—Apparently only with much reluctance did the Buddha consent to the establishment of an order of nuns (*bhikṣuṇīs*, Pāli *bhikkhunīs*). The traditional account relates that at the thrice-repeated request of Mahāpajāpatī, Gautama's aunt and nurse, strongly supported by Ānanda, the Buddha gave his permission for women to 'go out from the household life and enter the homeless state under the doctrine and discipline proclaimed by the Tathāgata.' The concession, however, would prove disastrous, so Gautama prophesied, to the prosperity and duration of the faith which he taught; the pure religion and the good law would endure only for five hundred years instead of a thousand. On the same occasion he prescribed the obligations and duties of the *bhikkhunīs* contained in 'Eight Chief Rules,' to which they were bound in strict obedience. The regulations involved subservience to and dependence upon the order of monks in all respects. A nun even of a hundred years' standing was to rise and respectfully salute even the youngest monk, nor was a nun to venture to admonish a monk, though she must submit to receive admonition from him. Further a nun may not keep *Vassa* in a district in which no monk is resident.[1] It is probable that the ordination of women as *bhikkhunīs* and the establishment of nunneries are in reality due to a later age than that of the founder of Buddhism. The institution has never become popular or gained a strong hold in any Buddhist country; and the number of the nuns has always been small relatively to the number of monks.

3. **India.**—The Chinese pilgrims, Fā-Hian, Hiuen-Tsiang, and others, in the 5th and following centuries of the Christian era, found monasticism flourishing in N. India, and the great monasteries with their thousands of learned and studious monks exercised a powerful and attractive influence. They belonged in almost equal proportion to the two great schools of Buddhist doctrine, the Hīnayāna and the Mahāyāna (*qq.v.*). In the time, however, of the visit of Hiuen-Tsiang, the most renowned of the Chinese monks (A.D. 629–645), they seem to have been losing ground everywhere to the rival sects of the Brāhmans. The most famous Buddhist monastery was that at Nālanda, the modern Barāgāon near Gayā (*q.v.*), a description of which is given by the latter pilgrim.[2] See, further, art. NĀLANDA.

4. **Ceylon.**—In Ceylon the power and influence of the community during the early centuries of the Christian era, under the rule of the native Ceylonese kings, who were enthusiastic Buddhists, attained a high level, and were exercised not only ecclesiastically but also in political affairs. The rulers themselves received *abhiṣeka* (*q.v.*) at the hands of the monks, who not only offered advice and exercised authority in matters of State, but as judges decreed penalties for breaches of the law. On the other hand, the kings interfered in the maintenance of ecclesiastical discipline, and are themselves said to have taught publicly and expounded the principles of the religion. The most flourishing period of monastic life, when the communities of the monks were most numerous and wealthy, appears to have been from the 2nd cent. B.C. to the 10th cent. after Christ, when the Tamil invaders from S. India began to overrun the northern half of the island, which was then the chief home of religious faith and prosperity, destroying the monasteries and introducing the beliefs and practices of Hinduism. Towards the close of the 12th cent. a brief revival of national religion took place with the re-establishment of national independence under Parākrama the Great († *c.* A.D. 1197). After the death of the king, however, a decline of national and religious life again set in, during which the monasteries and schools of Buddhism manifested little vigour or initiative, and, although the religious life of the community maintained itself outwardly, it gradually fell to a low level of intelligence and spirituality. Only within the last few years have there been signs of a renewed vitality and interest in the purer doctrines and principles of the faith, and of energy or zeal on behalf of its preservation and extension.

The chief authority for the history of the order in Ceylon is the *Mahāvaṁsa*, or 'Great Chronicle,' a native record of religious and political events in the island from the introduction of Buddhism by Mahinda (Mahendra), the son, or, according to Hiuen-Tsiang, the younger brother, of Aśoka, at the close of the 3rd or the beginning of the 2nd cent. B.C., to the reign of King Mahāsena in the earlier part of the 4th cent. A.D.[1] There is also a collection of devotional 'songs' or 'psalms' of the monks (*Theragāthā*) contained in the *Sutta-Piṭaka* of the Pāli Scriptures, which throws much light on the thoughts and aspirations of the inmates of the monasteries, and gives on the whole a high conception of their piety and self-denying spirit. A similar collection of *Therīgāthā*, 'Songs of the Nuns,' forms part of the same *Piṭaka*.[2] The defect of the *Mahāvaṁsa* regarded as an authority, over and above its obvious exaggeration of details and naive acceptance of miraculous traditions intended to glorify the course of Buddhist history, is its partisan character. Written in the interest and from the point of view of the monks of the Mahāvihāra at Anurādhapura, the capital city of N. Ceylon and for many centuries the centre of Buddhist monastic life and enterprise, it takes no account of the development of doctrine or teaching in the two great rival communities of the Abhayagiri and the Jetāvana monasteries, each with an independent life of its own. For a period of more than ten or twelve centuries, to the close of the 12th cent. A.D., when the leading sects were reunited, no record is available of the activities or influence of these two important monastic institutions. Apparently they were protestant in their beliefs and practices as regarded the leading and established church of the Mahāvihāra. To what extent, however, their teaching diverged from the orthodox standard, or their manner of life was nonconformist, we have no means of ascertaining.[3]

Rhys Davids under the titles of *Psalms of the Early Buddhists, the Sisters*, and *Psalms of the Early Buddhists, the Brethren*, were published at Oxford in 1909 and 1913.

[3] See Cave, *Ruined Cities of Ceylon*; Copleston, *Buddhism in Magadha and Ceylon*^{2}, ch. xxiv.

More recently there has been a recrudescence of sectarian differences in the island. These, however, concern monastic usage and habit rather than belief; and in the latter respect there is little if any variation throughout Ceylon. There are three chief sects, the origin of which appears to have been due in all instances to external initiative and influence; and one of these at least seems to owe its existence to a distinct protest against laxity of demeanour and rule. The earliest and most numerous sect is known as the Siamese, established about the middle of the 18th cent. by a number of monks from Siam, who came to Ceylon to restore, it is said, the true succession which had been lost. About fifty years later a separation took place, apparently on disciplinary, not doctrinal grounds, and the Amarapura sect was founded, its leaders being monks who owed their rank and ordination to the Burmese city. The third and protestant sect, the most recent and numerically the least important, is the Rāmanya or Rangoon. The Siamese is the most wealthy and numerous, including among its followers about half of the monks of the island. Most of the important and popular temples and shrines are in their hands. From ten to fifteen per cent belong to the Rāmanya. These last pledge themselves to a stricter observance of the vow of poverty, and neither individually nor collectively do they own, as do the others, landed property. They follow also a simpler mode of life, and avoid with the greatest scrupulousness all contact with the worship or customs of Hinduism. Outwardly the sects differ in the manner in which the yellow robe is worn; the Siamese leave the right shoulder uncovered, but the Rāmanya and the Amarapura draw the robe over both shoulders. The Rāmanya is most influential in the southern part of the island, the Siamese in the central provinces; but the latter is said to be losing ground to its younger rival.[1]

The monasteries of Ceylon are for the most part small, rarely containing more than from ten to twenty monks. The few larger and more important institutions alone, as at Kandy, will accommodate up to forty inmates. In the country districts frequently only two or three monks live together. Recitation, confession, and preaching by the monks take place especially at new and full moon, and on the mid-days intervening; thus four times in the lunar month. More formal services last for ten days or a fortnight without intermission, and are carried out at the expense of wealthy laymen, who by charity to the monks secure merit for themselves. During the three months of *Vassa* (*Was*) the monks leave the monasteries and live in the villages, either in specially constructed sheds or booths or by invitation in the houses of rich laymen, who entertain them generously at their own expense. The rule that in the season of the rains, corresponding in Ceylon to our late summer and autumn, no journeying may be undertaken is interpreted in the sense that no monk may be absent from his village or temporary home for more than six or seven days.[2]

5. **Siam.**—Perhaps the most distinctive feature of Siamese monastic rule is the control exercised by the monarch. Otherwise the habit and discipline of the monks are similar to the practice of Ceylon. The king is visitor and patron of the monasteries, and himself nominates the *sangkharat*, or archbishop, the supreme ecclesiastical dignitary of the country. He selects for the office one of the four chief abbots, who are entrusted severally with the control of the northern and southern provinces of the kingdom, the general oversight of morals and ritual, and the management of the interests of the wandering monks or ascetics who are unconnected with any of the *wats*, or monasteries. These hermits, who make their home in the jungle, are now few in number, but are said to have been very numerous in former times. The inmates of the monasteries themselves frequently spend a considerable part of the year in journeying from one shrine or sacred place to another. Parties of these pilgrims are known as *phra todông*, and as they file in procession along the roads they form a picturesque element in the country side. Each monk is accompanied by a *sisya*, or attendant, who carries his almsbowl and other utensils, and a portable shelter or tent consisting of a large Chinese umbrella, which is set up in the ground at halting-places and a white cloth thrown over it. There are also a few nuns, known as *chi-sông*, who live for the most part in huts in the neighbourhood of the monasteries. They are usually women advanced in years who are without relatives to provide for their well-being or maintenance. There are no regular nunneries.

The four chief abbots, together with four coadjutors or assessors, form a sort of Court of Final Appeal in all matters of religious or ecclesiastical administration or discipline. The general control is in the hands of provincial ministers of the Church, who exercise jurisdiction within districts that correspond usually with the civil divisions of the country. The ecclesiastical organization, therefore, is parallel to the civil; and the ruler of the State is supreme over all.

In Siam, as in Burma, the rule obtained that every male member of the nation should at some time in his life take upon himself the monastic vows, and become resident in a monastery. The accepted minimum period of residence was three months; after this the monk was free to return to the life of a layman. Most of the boys also passed through the monastery schools, receiving an elementary education in reading and writing and the fundamental doctrines of Buddhism. The layman retained an attachment to the monastery of which he had been an inmate, and once at least in the twelve months, at the religious celebrations in the autumn at the close of *Was*, brought gifts and new robes for the use of the monks during the coming year. At the more important monasteries in Bangkok the king himself, as head of the Church, goes in procession with much ceremony, bearing rich presents and costly robes for the monks. In all the festivals and numerous public holidays the monks take a considerable if unofficial part, and are the recipients of much attention and many generous gifts. In Siam the obligation of individual and personal poverty is less strictly observed than in most Buddhist countries. In some instances the monastic cells are adorned with books and pictures and furnished with ornaments and other objects of luxury, and the monks may be seen driving about the streets in carriages. The majority, however, live a simple life, and are regular in their duties and apparently sincere in their devotion. The monasteries also frequently derive considerable revenues from land or other endowments granted to them by Government, or from the gifts of private donors.

The routine of life within the monasteries is practically the same as in Burma and elsewhere in the south. The day begins and ends at an early hour. Morning prayers in the *bôt*, the principal hall or temple of the monastery, before the great gilded image of the Buddha, are followed by the usual early begging round. The food placed in the bowl is received in silence, and eaten immediately on the return to the monastery. No solid food is taken after mid-day. The intervals in the morning and afternoon are occupied with study and meditation and in giving instruction, in recitation from the sacred books, or in preaching. The usual title of the monk is *phra*, 'saint,' or *telepoin*. The latter name is said to be of Môn origin, signifying 'our Master.' The Japanese term *bonze* is also in use among Europeans.

---

[1] See Copleston, ch. xxvii., 'Modern Monastic Life,' where other and minor differences between the sects will be found recorded; A. S. Geden, *Studies in the Religions of the East*, London, 1913, p. 556 ff.

[2] *Mahāv.* iii. 1 ff.; Copleston, pp. 129 f., 261 f.

6. **Burma.**—The monastic life of Burma is in its essential features similar to that of Ceylon. The monastic buildings themselves, however, are on a far more elaborate and costly scale, and the lives of the monks are more strictly ordered and devotional. The monasteries also have been more closely in touch with the laity, both because the monks have mingled freely with the people in their festivals and religious ceremonies and, more especially, on account of the influential position which they have occupied as centres of learning and education. Previous to the establishment of European missionary and Government institutions, which to an increasing extent have supplanted them, every Burmese lad passed through the monastery schools, owed whatever book knowledge he possessed to the teaching of the senior monks, and for a longer or shorter period himself participated as a recognized member of the community in the orderly life of the monastery.[1] Thus, although the majority returned to a secular life and to the pursuit of agriculture or trade, the entire male population of Burma had practical acquaintance with the life of a monk, and knew from within his requirements and aspirations. The system contributed effectively to national unity and strength, and for many centuries made of the Burmese a literate people, even if the standard of attainment was not very high. The boys learnt also respect for their elders and habits of regularity and obedience which served them well in their after careers. See art. BURMA AND ASSAM (Buddhism in).

7. **Tibet.**—The distinctive feature of the monasticism of Tibet is its elaborate and gorgeous ritual, recalling in many respects the ceremonial of the Roman Catholic Church. The similarity is due for the most part to the influence of the early Nestorian missionaries, who, while leaving little trace of their doctrinal teaching, succeeded in impressing upon the religious life of the country much of the outward form and observance which had been developed in Western lands and on Christian foundations. But, further, the Lāmaist ritual includes ceremonies of exorcism and magic, accompanied by music, dancing, and dramatic performances, the whole most widely divergent from the spirit and simplicity of primitive Buddhism, the source of which is to be found in the ancient native superstitions and practices of the people, which the Buddhist missionaries from India tolerated either from necessity or of choice, if they did not actually foster them. The monastic communities of Tibet are wealthy and powerful, with large revenues and possessions. The buildings themselves are often of great size, sheltering as many as ten thousand inmates, and are imposing rather from their unrivalled position on the sides or summits of lofty rugged hills than from any architectural excellence. At the other extreme, among the anchorites and hermits has been developed a rigorous and cruel asceticism, which is no less opposed to the true Buddhist spirit, but which is closely allied to and probably derived from the Saivite mysticism and practices of N. India. See art. LAMAISM.

8. **Central Asia.**—That for a considerable period Central Asia was the home of a broad and vigorous Buddhist life has long been known. That life naturally centred in the monastic communities established in the several cities on the important roads of pilgrimage and traffic that skirted the central desert of sand on the north and south. In the countries, however, that were subjected to Muhammadan invasion and conquest little trace of the faith remains. The Chinese pilgrims repeatedly make mention of monasteries with large numbers of inmates whose zeal and piety excited their admiration;[1] these for the most part if not entirely were adherents of the Mahāyāna school. Their narrative, nevertheless, conveys the impression that the real influence of the faith upon the character or habits of the people beyond the monastery walls was but slight. Recent exploration and excavations have entirely confirmed the record of the Chinese, and suggest a fairly strong and prolonged Buddhist hold upon the country. Ruined *stūpas* are numerous, and bear witness to Buddhist traditions and the presence of Buddhist monks. The monastic buildings themselves would be of less solid construction, and either have perished or are unrecognizable.[2]

9. **China.**—Of the monastic life of other Buddhist lands which follow the Mahāyāna with more or less concession to native modes of thought and superstitions there is little further that requires notice in a general survey. It will be sufficient to refer to the articles on the several countries. The main character and type have been everywhere preserved, but the details of mode of life and profession have varied greatly with environment and the genius of the people. In China the monks have occupied generally a degraded position, with a few honourable exceptions, holding a creed and practising a ritual in which there was more of sorcery and magic than of Buddhist faith. The exceptions were the highland monasteries, and those remote from the centres of population, where the monks, though ignorant, were simple, kindly, and pious, seeking salvation through self-denial and right living. The nuns were no less degraded and for the most part despised. Recent events in China, however, with the diversion of numerous temples and monasteries to educational purposes, the desertion or destruction of others, and the spread of Western influence and science, have entirely changed the situation as far as the religious life and thought of the people are concerned. It is not easy to forecast what the ultimate effect upon Buddhism will be, or how far it will modify or even destroy so essential and characteristic a feature of the Buddhist faith as monasticism has ever been. That the effect will be profound and far-reaching there can be no doubt.[3]

10. **Korea.**—The monastic institutions of Korea resemble those of China, whence both doctrine and practice have been derived. Religiously as in other respects the country has always been dependent on its greater neighbour to the south, and neither in belief nor in rule of life does Korean Buddhism present much that is novel or of interest. Overshadowed by Confucianism and ancestor-worship, it has developed few distinctive features, and has for some centuries exercised a decreasing influence on the thought and habits of the people.

[1] *e.g.* Kashgar, Beal, ii. 306 f.; Khotan, *ib.* 309 ff., Fa-Hian, ch. iii. (Legge, p. 16 ff.); Yarkand, Beal, ii. 307 f.; Sarikol, *ib.* 298 ff.

[2] Cf. M. A. Stein, *Ancient Khotan*, 2 vols., Oxford, 1907, *passim*, and *Ruins of Desert Cathay*, 2 vols., London, 1912; artt. by L. Giles, J. Pelliot, and others, in *JRAS*, 1914, etc. Stein found that the memory of the Chinese Buddhist pilgrim, Hiuen Tsiang, is still retained at the 'Halls of the Thousand Buddhas,' in the west of the province of Kansu, and elsewhere in Central Asia to the present day. The tradition of his learning and devotion, and of the miraculous powers with which he was credited, proved to be a real power in the minds of the priesthood.

[3] Hackmann, *Buddhism as a Religion*, bk. iii. ch. vi.; Edkins, *Chinese Buddhism*^{2}; Wieger, *Bouddhisme chinois*, i., 'Monachisme,' p. 133 ff.

The monasteries are usually small, the number of inmates rarely exceeding twenty-five or thirty, and sometimes, as in Ceylon, no more than three or four monks are found living together. The more important institutions are grouped around the capital, but none are allowed within its walls. Their numbers also are decreasing. The monks themselves command little respect, and are drawn, for the most part, as in China, from the lower classes. The example and influence of Japan also may perhaps be traced in the character of some of the buildings, which are fortified and built on high ground to dominate the country at their base. In the neighbourhood of Seoul a few nunneries exist.

The most distinctive feature of Korean monasteries is the presence of pictures on the walls. These are drawn and coloured on paper and mounted on silk, and usually represent scenes from the lives of the Buddha. Often the entire surface of the interior walls is thus hung with pictures, presenting a remarkable contrast to the monasteries of other lands. Externally the walls are covered with paintings in bright colours of *bodhisattvas* or other supernatural beings. The sanctuaries often contain only a single image, rarely more than two or three; and these are small, and for the most part of clay or wood. Metal images are almost if not entirely unknown.

In their dress the monks have preserved the national costume in the form of a long cloak with sleeves, worn over all, and generally white. The head is shaved, in conformity with Buddhist practice, but not the beard. The shaven head, however, is not branded after the Chinese custom, although branding may be effected on other parts of the body, as the breast or arms. The order is recruited mainly from boys received by dedication or adoption in early childhood. Endowments are not numerous. Most of the monasteries are dependent for their maintenance upon the gifts of the laity, or, where opportunity serves, upon the personal labour of the monks in the cultivation of the temple lands.

11. Japan.—The temples and monasteries of Japan are large and well-appointed, and give the impression of a reality of creed and life which is almost altogether wanting to those on the continent. The numerous Buddhist sects of Japan have their home and distinctive life in the monastic communities, and the monasteries themselves in the details of their architecture present varieties of construction according to the sect to which they belong. In creed and belief the sects differ greatly among themselves, and have few features in common with the Buddhism of the south. In the past the activity and strenuousness of the national life found their almost complete counterpart in the monasteries, which formed associations of fighting monks at war with one another, oppressing and plundering the common people. In more settled times speculative thought, mystical, devotional, and idealistic, has been highly developed, perhaps most conspicuously in the 'Sect of the Pure Land,' who hold a theistic creed, and expound and practise a moral code which has much in common with that of the NT. Accompanying a revived religious life also, at different periods of the nation's history, missionary effort and preaching have been prosecuted with zeal and success. Both at home and in China a similar work of propagandism is being carried on at the present time with much devotion and energy.[1]

12. Conclusion.—It is natural to compare and contrast the monastic principles and life of Buddhism with those of the Christian orders of the Early and Middle Ages in Europe. In the general features of discipline and government there is much obvious similarity. All communities vowed to poverty and a celibate life, whether Hindu, Muhammadan, Buddhist, or Christian, almost of necessity organize themselves on somewhat similar lines. The essentially distinctive features of Buddhist monasticism would seem to be two: (1) the practice of literal mendicancy, which takes the form of a daily round, equipped with staff and begging-bowl, to receive whatever portions of food the charity of the householders may bestow. In the countries where the Mahāyāna type of Buddhism has prevailed this custom is not and probably never has been obligatory or usual. It forms a distinct and characteristic element, however, of early Buddhist rule and observance. (2) According to Buddhist teaching, salvation is to be found only within the limits of the order. The layman can achieve his own deliverance only if and when he dons the robe of the monk, and takes upon himself the monastic vows. He must seek refuge from the world in a life of retirement, meditation, and self-denial, for not otherwise can the fetters of *karma* be broken and *nirvāṇa* gained. In Buddhist polity and doctrine, therefore, the order holds a pre-eminent place distinct from and above that which it occupies in any other great religious system.

LITERATURE.—A selection only from a great and ever-growing literature can here be given. Many important works have been referred to in the course of the article. The original sources are available in the translations of *SBE* and elsewhere: *SBE* xiii. [1881], xvii. [1882], xx. [1885], 'Vinaya Texts,' xi. [1900] 'Buddhist Suttas,' xlix. [1894] 'Buddhist Mahāyāna Sūtras'; H. C. Warren, *Buddhism in Translations*, Cambridge, Mass., 1896; T. W. A. S. GEDEN.

MONASTICISM (Hindu).—The habit of monasticism owes its origin, it has been said, to the natural tendencies of mankind towards mysticism and asceticism. These are developed, set in order, and satisfied, in the rule and restraint of the monastic life. In India, more perhaps than elsewhere, the practice is of very great antiquity; and the motives and instincts suggested, although true in general of the rise and history of Indian monasticism, in two respects at least render an insufficient account of the causes at work. In the routine existence of the monasteries, as far as this is distinct from the solitary or wandering life of the hermits and ascetics, mystical devotion has played but a small part. Mysticism in India has shunned companionship. The mystic aim has been the chosen and cherished pursuit of the lonely ascetic. And the latter, the ascetic motive or ideal, has been overwhelmingly predominant among the causes that have urged such great numbers of Indian men and women at all times to adopt the monastic robes and manner of life. A third motive, however, exercised a powerful influence in determining the choice of the monastic profession. This was the Indian view of life as a whole. By the Indian life has ever been regarded as essentially evil, and relief from the burden and sorrow of existence as the chief and final goal. In many forms of Indian doctrine, especially the Buddhist, but also in that of Hindu leaders and teachers before Gautama, this end was to be achieved only in and through a monastic dedication and life. It was impossible for the layman, distracted by the cares and encumbered by the possessions of the world, to secure salvation. Emancipated from these, he was free to devote himself to the highest aim, and to win his way to deliverance (*mokṣa* [*q.v.*]).

---

[1] Hackmann, bk. iii. ch. viii.; Geden, *Studies in the Religions of the East*, p. 368 ff.

A second respect in which historically Indian monasticism in general has been distinguished from Buddhist or Christian is the deficiency of co-ordination or of a central control. The various orders have been for the most part loosely organized, and that from want not of organizing power but of inclination and will. The ideal of the Indian monk or ascetic is not and never has been a fixed residence and occupation, but rather freedom to wander at pleasure, to visit the various sacred places and shrines, and to dispose his manner of life and his time independently in all respects as seemed best to himself. Apparently the habits and methods of the monastic life have undergone little change or development since the earliest ages. The mendicant, or wandering ascetic, rather than the resident community of monks, has been the characteristic feature of Indian religious life; and the monasteries have served in a greater degree as lodging- or rest-houses than for fixed and permanent habitation. The earliest delineations of Indian social and religious life present the same features as are seen in modern times—a large drifting population of mendicants and ascetics, who find only a temporary home in the monasteries, and after a longer or shorter stay move on entirely as their own inclination prompts.

The habitual practice of a life thus ordered and determined is of extreme antiquity in India. It would seem to be based ultimately upon the Hindu regulation of the four *āśramas* (*q.v.*), according to which every Brāhman towards the close of his life must renounce the world and adopt the homeless life and the ascetic garb. In intention, therefore, no low-caste or out-caste man could become a monk, but only the 'twice-born.' In practice, of course, the wandering population is recruited from all castes; and many follow the life as an easy and convenient mode of gaining a subsistence without trouble to themselves.[1] The ancient Indian custom, familiar to Indian thought and in closest harmony with Indian ideals, formed the model for the great Buddhist and Jain communities of monks, and gave to them precept and habit and rule. Only in organization did the daughter communities go far beyond anything that was developed in Hinduism. Here the preference for an independent and self-regulated life proved itself the stronger, and broke away from all attempts at a settled and established order or government.

The Hindu monasteries, or 'maths' (Skr. *maṭha*), are invariably of small size, providing accommodation for only a few inmates. Except at the important pilgrim centres, as Hardwār or Benares (*qq.v.*), where durable buildings of brick are found, they are often little more than a collection of huts or cells ranged around a central court-yard. Permanent quarters are provided for the *mahant*, or presiding abbot, of the monastery and his resident students. The remaining buildings are occupied at the periodical festivals by the members of the order to which the monastery belongs. Attached are a temple or shrine for the service of the deity, and in the larger monasteries at least a separate *dharmaśālā*, or rest-house, for the accommodation of travellers. The term *maṭha* appears to have been originally applied to the solitary hut of the religious recluse, and then to similar dwellings of the communities of hermits living together in the forest in the practice of austerities. Of such a woodland hermitage an attractive description is given in Kālidāsa's *Śakuntalā*. The name was ultimately extended to include all more or less permanent homes or residences for the monks. The maths exist in considerable numbers all over India, but the inmates for the most part live a retired life, keeping to themselves, and both they and their homes are little known to outsiders or Europeans. Each sect or monastic order has its own maths, that of the founder of the order being regarded as the chief. There is, however, no central control, nor any interference in the management or affairs of another monastery. The older monastic buildings are of the simplest character and architecture. Later more elaborate buildings were erected, sometimes of more than one storey; but they never compete in size or architectural pretensions with the great Buddhist *vihāras*. When the latter faith died out in Bengal, some of its monasteries passed into Hindu keeping and were appropriated for the use of Hindu monks.

To erect a monastery for the service of the monks and wandering ascetics has always been regarded as an act of religious merit. The math is the gift of a generous and pious layman; and of such donors there has never been any lack in India. In most instances an endowment for the upkeep of the monastery is provided either at the time of erection or by subsequent grant, and this is increased from time to time by the gifts of patrons who endeavour thus to secure merit for themselves. The individual monk is bound by a vow of poverty, but the monasteries often become exceedingly wealthy in revenue and lands. Since the monks themselves do no manual labour, nor indeed work of any kind, the lands are usually farmed out to Hindu lay-proprietors. The management, however, by the temple authorities of their large revenues has sometimes been so defective that the British Government has been compelled to interfere, and take over temporarily the control of the monastic estate.

The Hindu monk is known as *yatin*, one who curbs his passions and has renounced the world, or *vratin*, the devotee who has taken upon himself the vows of renunciation and consecration. The former term is technical among the Jains also, but is said to be regarded with disfavour. The *naiṣṭhika* is the religious student, who engages himself to remain with the *guru* as pupil and disciple after the close of the regular period of service as a *brahmachārin*. The titles *yogin* and *sannyāsin* are more appropriate and more usually applied to the wandering ascetic, without home or stated means of livelihood. The former denotes the Hindu mystic and saint, who endeavours to attain to union with God by the way of self-control and asceticism. The *sannyāsin* has 'cast off' all worldly fetters and attachments, and is separated from all earthly wants or ties. *Bhikṣu*, 'beggar,' describes rather the common characteristic of the class. In the Pāli form of *bhikkhu* it has become the usual term for the Buddhist monk; Hindu usage ordinarily gives the preference to other names. All monks depend for their livelihood solely upon the charitable gifts of the laity. The daily round with the begging-bowl for doles of food at the door of the Hindu householder is never made in vain, and the flow of Indian charity and hospitality to ascetics is unstinted. The red- or yellow-coloured robe of the monk is an unfailing passport to generosity and benevolence all over India. Such generosity accrues to the merit of the giver, and has no regard to the character or motive of those who receive the alms. Among the latter there are not a few whose robes cover avarice and greed, or perhaps more often mere indolence and a desire to save themselves the trouble of providing for their own wants. But there are also among them sincere men, often of considerable learning, earnest and devoted in their pursuit of the truth.

---

[1] The abbot of a monastery in the Panjāb made complaint to J. C. Oman of the crowd of idle and worthless *sādhus* who charged themselves upon him and took advantage of his hospitality (*Mystics, Ascetics, and Saints of India*, p. 262 f.).

The Sanskrit law-books contain rules and regulations for the guidance of the ascetic life. The sixth book of Manu is entirely devoted to this subject. Hermits and ascetics are to beg for their food once a day, to be indifferent to their reception, neither vexed at a refusal nor exultant when their bowl is well filled, to restrain their senses and appetites, eating little, and always to be on their guard lest they accidentally destroy life, watching the ground before them as they move, that their feet may not crush any living thing.[1] The same purpose is in view in the rule that a monk must not change his residence during *Vassa*, the season of the rains.[2] Elsewhere it is provided that students, ascetics, and others shall be free from tolls and taxes.[3] They are not to be allowed to bear witness in the law-courts,[4] probably because, being separated from the world, their testimony with regard to its doings would necessarily be unreliable; nor do they inherit property.[5] Penances also are prescribed for those who for successive days omit to go on the begging round or neglect their other duties.[6] The oversight of the monastery and the responsibility for entertaining itinerant monks or strangers are in the hands of a presiding elder or abbot (*maṭhādhipati*). Around him usually is gathered a band of young disciples, who are instructed by him in the Hindu scriptures and render him personal service in accordance with ancient immemorial custom. There is, however, no definite or fixed hierarchy or gradation of office. The inmates of the monastery are free to come or go at their own will, and neither their movements nor their actions are in any way controlled. They must wear the monastic garb, observe the vow of poverty, and depend entirely upon the bounty of others for their daily sustenance. Beyond these simple conditions they do as they please. The actual possessions which the monk or *sannyāsin* carries with him vary to a slight degree with the sect to which he belongs. The essentials are the robes and a begging-bowl; to which are usually added a staff, water-pot, and rosary, a strainer, a pair of sandals, the materials for smoking and betel-chewing, and perhaps one or more vessels for carrying or cooking food.

The vows (*vrata*) which the ascetic or monk undertakes to observe are five in number: avoiding hurt to any living creature, truthfulness, abstinence from theft, self-restraint, and liberality (Skr. *ahiṁsā*, *satya*, *asteya*, *brahmachārya*, *tyāga*). These have been adopted, with the exception of the last, in the Jain and Buddhist systems. There are also five lesser vows: equanimity of mind, obedience to the *guru*, gentleness, cleanliness, and purity in eating.[7] The third is explained as having reference to the danger to living beings involved in rough or hasty conduct. There is considerable difference between the sects in respect of the degree of ascetic self-denial or actual discomfort and pain which they voluntarily endure. Saivite monks are, as a rule, more extreme in their manner of life and austerities. The Vaiṣṇavites allow themselves greater liberty and seldom, if ever, inflict upon themselves the prolonged bodily tortures by which the others seek to gain notoriety or accumulate merit. In all the monasteries the chief Hindu festivals are observed with religious rites and free entertainment for visitors, and the introduction or appointment of a new abbot is attended with much ceremony. Of the routine details of the ordinary monastic life, however, little is known.

The Sikhs also have monasteries of their own and religious orders. The three principal are those of the Akālins, Nirmālins, and Udāsins (*qq.v.*).[1] They vary in both their dress and manner of wearing the hair, some being shaven and others displaying the loose dishevelled locks of the typical *sādhu*. In one instance at least in a monastery visited by J. C. Oman the *mahant* wore robes differing from those of the ordinary monk—a white long-sleeved coat or tunic and a turban of bright colours. The chief and largest monastery is at Amritsar (*q.v.*) near the Golden Temple, built of brick in two storeys and with two open courts, belonging to the Udāsin sect. The other sects also possess monasteries and temples of considerable size. In all a large part of the religious worship consists in the reading of the *Granth* (*q.v.*), and sometimes of other Hindu sacred books. Except at the seasons of the great festivals the monasteries are usually almost deserted, but on these occasions they are thronged with monks and others who have come to join in the feasting and religious ceremonies.

The monastic institutions of the Jains in some respects hold an intermediate position between those of the Hindus and the Buddhists. Their rule and order are more definitely framed than the former, but are less exacting than the Buddhist and allow more freedom to the individual. As in Buddhism also, the existing system or practice of the Brāhman monks or ascetics formed the model on which the founder of the Jain faith ordered his own community. Mahāvīra himself is said to have had a following of fourteen or fifteen thousand monks, and more than twice that number of nuns. Over the monastic schools into which the community was divided were placed eleven chief disciples, or *gaṇadharas*, or twelve if Gośāla be reckoned, who proved himself the unworthy rival and opponent of his master. Jain writers are said to compare the twelve disciples of their founder with the twelve apostles of Christ, and to assign to Gośāla the part of Judas the traitor.

The prevision and independence of the founder of Jainism are shown in the recognition which he accorded to the laity. It has been urged with much probability that this was one of the chief facts that enabled Jainism to withstand the stress of persecution and the steady pressure of the dominant Hinduism, when Buddhism, based solely upon a priesthood, decayed and fell away. Mahāvīra established four orders of society within his system, each with its respective functions and rights: monks (*bhikṣus* or *yatins*) and nuns (*bhikṣuṇīs*), laymen (*śrāvakas*) and laywomen (*śrāvikās*). The Jain laity thus hold a definite place in the Church by the side of the ecclesiastical order. The Digambaras, however, refuse to women the right to enter the order, and assert that they cannot attain salvation (*mokṣa*).

The five vows of the Jain monk are the same as those of the Brāhman ascetic with the exception of the last, for which is substituted *aparigraha*, the renunciation of all desire, *i.e.* entire indifferentism.[1] This was the aim also of the Hindu monk; and it is probable that this was the original meaning of the fifth vow in Hinduism, although it is now differently explained. A sixth vow is said to be undertaken by some of the Śvetāmbaras, never to eat after dark lest they should inadvertently destroy life; others declare that this rule is implicit in the first, *ahiṁsā*. To this duty of avoiding in every way injury to life Jains of every sect attach greater importance than either Hindu or Buddhist monks. The Jain layman is hardly less rigorous and careful than the monk. All Jain ascetics carry a piece of cloth to place over their mouths lest they should cause injury when inhaling.[2] The stricter sect of the Sthānakavāsins (Dhuṇḍhīas) wear the mouth-cloth always, by night as well as by day; the other sects are less scrupulous. These precautions against the taking of life do not under all circumstances apply to the monk's own life. When the twelve necessary years of asceticism have been passed, which every monk observes in imitation of the founder of his faith, religious suicide is not only innocent but an act of merit and may be even a duty. Most of the *gaṇadharas* are said to have thus ended their lives by voluntary starvation, and the practice is reported to have been not infrequent in former times.

In addition to the mouth-cloth the Jain monk bears the usual begging-bowl, and a strainer for his drinking-water. The members of all sects carry also an instrument for sweeping the path before them, which in the case of the Digambaras is usually a peacock's feather; the Śvetāmbaras and Sthānakavāsins use a broom, of greater or less size. The head is shaved, and the two last-named sects wear the monastic robes of five pieces, of a white or yellow colour. The Digambaras ('sky-clad') go about unclothed. These last are for the most part found in the south of India. All monks are subject to the vow of personal poverty, but it is said that in many instances this is evaded, even to the extent of carrying coin or bank-notes on their person.

The monastic life both of the monks and of the nuns is ordered on similar lines to the Buddhist. In the ordinary course the inmates of the monastery rise early, and each then makes confession of the known or unknown sins of the past night, and proceeds to the temple for morning worship. This consists in meditation, bowing down before the idol with recitation of a sacred *mantram*, and in *pradakṣiṇa*, or circumambulation, which is performed four or seven times. About ten in the morning the round is made to beg for food. One monk, however, goes on behalf of all the inmates of the monastery; and in this respect Jain practice differs from Hindu or Buddhist. The food may not be eaten in the houses of the laity, but is brought back to the monastery and divided among all. According to rule the begging round should be made only once a day, but it is often repeated in the afternoon. After returning confession is made to the *guru* before partaking of the morning meal. The hours from one to three are devoted to study; and, if an afternoon circuit is undertaken for alms, it is succeeded, as in the morning, by confession. The second and last meal of the day is taken about sunset, and no monk is allowed to leave the monastery after dark.[3]

Initiation (*dīkṣā*) into the monastic order takes place at the hands of a priest after a year's probation. The novice lays aside his lay garments and ornaments, and adopts the robes of a monk. Within the monastery itself three grades or orders are recognized, based upon seniority or the choice of the community. The ordinary *sādhu*, monk or ascetic, of not less than a year's standing, may be elected *upādhyāya*, and it then becomes part of his duty to give instruction to the younger monks. Further powers of administration and discipline, including the right of excommunication, are in the hands of the *āchārya*, who is appointed on the ground of seniority, or for recognized knowledge and ability. Confession is usually made to the *āchārya*. For the greater part of the year most of the monks itinerate from place to place. It is only during the rainy season and at the principal festival seasons that the monasteries are fully occupied.

A. S. GEDEN.

MONEY.—Money is the name applied to the instrument devised by man which enables him conveniently to effect exchanges of goods and services. It was a great advance upon barter when an intermediary was adopted by the trafficking parties that provided at the same time a measure of values and a generally acceptable medium of exchange. As man advanced from simple barbarism, he acquired some elementary forms of personal wealth, and the practice of exchanging with others to satisfy his growing diversity of wants would naturally arise; in course of time the advantage of possessing an intermediary which formed a unit of comparison of worth and represented a standard of values would come to be recognized. For this purpose objects of common utility or ornament were early adopted—oxen, cattle, sheep, furs, slaves, shells, nuts, precious stones, and bits of metal are examples of the various substances used as money in different circumstances and stages of civilization. These selected substances illustrate the kinds of wealth that were accumulated as stores of value and used as means of paying tribute and debt. They thus became also a form of what is called 'capital' in modern economics.

Gradually the defects of some of the various substances employed to satisfy the money-function became apparent in their inconvenient bulk and lack of divisibility for small payments, their perishableness and absence of equality and stability. Thus by degrees the essential attributes of good money emerged; it was found that the superior metals (gold and silver) possessed in an exceptional degree the qualities desirable in a good medium and a measure of value. Money should have stability in value; it should be durable, portable, divisible; it should be easily recognizable and capable of being coined. No substances possess and retain all these attributes absolutely, but gold and silver display them in the highest degree; consequently they have been generally adopted for money by civilized nations. Since they are natural products, variations in their supply create some fluctuations in value, as do also changes in demand which follow on the growth of population and the irregularities of trade. But, on the whole, gold has responded best to the needs of society as a basis for its complex and ever increasing trade and commerce. Standard money has the attribute of universal acceptability; it commands confidence that it will be promptly received by others without loss of value. It measures the value of the services of labour; and wages as well as goods are estimated in terms of money. The value of goods, when expressed in money, is called their price.

---

[1] For a full statement and discussion of the Jain vows see Stevenson, *Heart of Jainism*, p. 234 ff.

[2] It is usually supposed that the purpose of this is to avoid killing insects or minute animalcules in the air by drawing them into the mouth. Mrs. Stevenson, however, maintains, on the authority of some of the Jains themselves, that it is done lest the air itself should suffer harm (*Heart of Jainism*, pp. 100, 227).

[3] Stevenson, p. 228 ff.

The business of money-changing, of banking and finance, consists largely in the manipulation of money in its various forms and of obligations—debts, credits, loans, etc.—expressed in terms of money. These claims are discharged either by gold and silver or by documents (notes, cheques, bills, etc.), *i.e.* by paper money, representative of sums of metallic money and ultimately redeemable in standard coin.

The introduction of credit-instruments, as the paper substitutes for gold are called, is an extension of the money-function and a refinement upon the employment of metallic money. It is virtually a kind of return to barter; for, while it diminishes the use of coin, it simplifies exchanges and substitutes for payment in metal a promise on paper; this representative money becomes a valuable commodity and multiplies business by its convenience. Debts are set off against debts by means of credit-instruments, substitutes for money that circulate quickly; they become a peculiar currency of promises or claims that do temporary duty, and they are easily transmitted by post; thus they vastly facilitate the business of exchange. The term 'credit' implies that these instruments are promises, and they rest in the long run upon the recognized metallic basis—gold; therefore an adequate amount of gold must be accumulated and safely stored in order to give stability and confidence to the system.

In OT times money was always weighed (Gn 23^{16}). This was a necessary precaution in earlier periods, but in modern times the process of coining, exercised as an exclusive function of the Government, confers absolute certainty, accuracy, and uniformity, and inspires confidence; the stamped coin carries with it evidence of the amount and value of the gold that it represents, where gold is the accepted standard of value. The subsidiary coins of silver and bronze are legal tender only within moderate limits, viz. two pounds in silver, and twelve pence in bronze in Great Britain; they are only token coinage, and do not correspond to their intrinsic value in metal, which is small. The value of gold, like that of other commodities, depends ultimately upon the law of supply and demand; the value varies with the amount available for money purposes, for large quantities of the precious metals are absorbed in the arts and as personal ornaments.

The quantity theory of money—*i.e.* that the value varies inversely as the quantity—assumes that all exchanges are made in the standard coin, but the use of paper substitutes, while it does not nullify the abstract theory, introduces modifications too technical for detailed explanation in an article which is mainly descriptive. The system of substituting paper currency for the standard coin requires for security that such paper shall be convertible into gold on demand. To provide this most essential requisite an adequate cash reserve of gold must be maintained. This is one of the responsible functions of the Bank of England. The management and control of the reserve are matters too intricate for present discussion. The excessive issue of inconvertible paper—*i.e.* of notes which cannot be met by gold on demand—has led many countries into great difficulties, and has frequently caused much loss and suffering. Paper currency debased by over-issue drives out gold, destroys confidence, raises prices, and produces financial disaster; business is checked, and the injury falls with peculiar severity upon the wage-receiving classes, who find that their wages paid in paper at such times fall greatly in buying power. There is no remedy but the re-instatement of the currency on a sound basis. A large number of interesting economic problems arise in connexion with the use of money; they are, however, too technical for present consideration, which is restricted to a general account of the nature and services of this useful instrument of civilization. Money is a powerful factor in the spread of civilization, in advancing progress, in distributing the varied products of nature throughout the world. Money, in fact, may rank with roads, vehicles, beasts of burden, railways, steamships, posts, and telegraphs in the advancement of human material well-being. The oft-quoted passage, 'The love of money is the root of all evil,' is frequently misapplied as casting a slur upon money itself and upon those engaged in occupations concerned with its employment. The dictum was, however, intended as a condemnation of greed, selfishness, worldliness, and absorption in gain; its profound truth and seriousness render it in no sense condemnatory of the use of money, which is of as great service to society in the distribution of products as a ship, a railway, or any other instrument subservient to the material needs of man. In many of the remarks of Jesus in the parables and in the gospel narratives reference is made to money in its ordinary uses; in all these cases its practical utility is taken for granted and its economic service is unquestioned.

G. ARMITAGE-SMITH.

MONGOLS.—1. Ethnology and habitat.—Like the Ainus and the Dravidians (*qq.v.*), the Mongols are a race distinctively Asiatic. They fall into three great divisions—Buriats (*q.v.*), Western Mongols (Kalmuks), and Eastern Mongols. The habitat of the Kalmuks extends from the Hoang-ho to the Manich (a tributary of the Don), their special centres being Astrakhan and the Caucasus, Zungaria, N.W. Mongolia, Alashan, N. Tibet, and the Chinese province of Kokonor. The Eastern Mongolians inhabit chiefly Mongolia, the southern portion being divided into a number of tribes, such as the Tumets and Chakhars, while the northern section consists of the more homogeneous Khalkas.

The Mongolian type is best represented by the Kalmuks and the Khalkhas:

> 'Nearly average stature (1m. 63–64); head, sub-brachycephalic (ceph. ind. on the liv. sub. 83); black straight hair, pilous system little developed; the skin of a pale-yellow or brownish hue, prominent cheek-bones, thin straight flattened nose, Mongoloid eyes,' etc. (J. Deniker, *Races of Man*, London, 1901, p. 379).

Another peculiar characteristic of this race is the 'Mongolian spot,' small dark patches of pigmentation, especially in the sacrolumbar region, frequently observable in infants, but disappearing in early childhood. The 'Mongolian spot' is not, however, restricted to the Mongols; it occurs sporadically elsewhere, instances having been noted, *e.g.*, among the modern Indians of Mexico (cf. also Deniker, p. 51).

As a result of migrations, the Mongolian race has spread far beyond its original habitat. It has profoundly affected the Chinese (particularly in the south) and Japanese; in Bengal and Orissa the crossing of Mongolian with Dravidian has given rise to the Mongolo-Dravidian type, and other 'Mongoloid' types appear in the Himālaya region and in the Far East.

The chief Asiatic area occupied by non-Buriat

Mongols (Kalmuks, Khalkas, etc.) is bounded on the north by Siberia, on the south by China, on the west by Russian Turkestan and Chinese Turkestan, and on the east by Manchuria. It forms a high but depressed undulating plateau, roughly 2500 feet in altitude, hemmed in by an immense double or triple chain of forest-covered mountains, known together as the Hingan and Yinshan, on the one side, and by the Altai range and its offshoots on the other. Although the greater portion is Gobi (a Turki word), or 'Great (Desert) Expanse,' and is destitute of rivers sufficiently broad and deep to impede seriously the swooping movements of horsemen, there are plenty of salt lakes (only one of which escapes into Russia by a river), innumerable oases and pasture lands, suitably located sweet-water wells, and even cultivable or forest lands dotted about and available in turn at different seasons of the year to the nomads who know the peculiarities of the country so well. This fact explains how armies of millions can easily move on the simple condition that they possess sufficient cattle, horses, sheep, and camels to drive before or with themselves as food and clothing; nothing else matters, for wood and iron can be picked up by the way at various well-known places, and women with babies can be carried with the tents in huge carts. This vast rim of mountain range nearly all round constitutes a huge watershed, and on the outer side rivers run into Manchuria, Russia, and Turkestan; but the gravelly expanse of Gobi with its parched atmosphere soon causes the sources flowing into the depressed desert portions of Mongolia to dry up or disappear into the sands, so that in many places recourse must be had to rude cisterns or reservoirs, automatically collecting fresh water after each summer storm. The Onon and Kerulon rivers, the valleys of which have during the past 2000 years witnessed the successive rise to political prominence of several obscure tribes, bring the north centre of Mongolia proper into direct water communication with Siberia (*i.e.* Russia) and N. Manchuria (*i.e.* China).

2. Civilization and religion.—Mongol family life has been admirably described in a series of articles written (anonymously) by a Protestant missionary for the *Chinese Recorder* (a Shanghai publication) in 1875. Immovable property is scarcely conceived of, and the idea of personal property and individual rights is almost equally lacking, except in reference to one's horse and saddle, clothing, and weapons. Even one's wife—who, so far as nature allows it, seems to be the absolute equal of her husband—is only a life interest, for all wives (except one's own actual mother) pass over on the death of their temporary possessor, with the felt tent and the stock-pot, to the eldest son, or, failing sons, to brothers, cousins, or uncles. In case of great warlike expeditions, of course, there are temporary aggregations of men, and the modern Mongols, like the Turks and Huns, always have an annual tryst; but as a rule tribes scatter, families scatter, and individuals scatter, so that the *yurtā*, or the felt tent (or *mêng-gu bo*, as the Chinese call it in E. Mongolia), is the sole economical unit. In 1760 the entire Kalmuk nation, four subdivisions, consisted of only 200,000 tents all told, *i.e.* before they were conquered. In the distance, on the prairie or grassy plain north of the Great Wall, one sees one or more black spots like dung-heaps. These turn out on closer inspection to be felt *bo*, firmly attached by long ropes to pegs or other firmer anchorages fixed in the ground. It is the correct thing to make some sound on approaching; otherwise one or more powerful dogs, often of Tibetan breed, may attack the intruder. The tents are composed of thick felts, arranged to withstand the wind and snow. According to wealth or poverty the interior is hung with handsome or shabby stuffs, and the exterior is sometimes additionally protected with Chinese oil-paper or other such impervious material; but severe simplicity is the general rule; all luxury is makeshift. If a man has horses and dogs, or even only one horse and one dog, and maybe works for someone else as a herd, he is a poor man; a rich man may have as many as 1000 or more horses and 100 or more camels (all of the two-humped or Bactrian kind), not to mention sheep and goats (never pigs); but, rich or poor, the mode of life is always the same—rough, strong, home-made clothes, harness, and equipment; one or two trunks to contain treasures and best clothes; a hospitable reception for any traveller, poor or rich; no tables or chairs; and a fixed etiquette as to privacy, precedence, or the right to squat in certain honoured or tabued places. No one who carefully reads all that has been recently written about the eastern and western nomads from the Shilka to the Volga can doubt that in physique, mode of life, and even in basic language, they are and always in historical times have been practically the same people, *i.e.* a congeries of tribes whose national designations have no deeper significance than that from time to time an eponymous hero or a brilliant family, clan, or tribe has succeeded in bringing most other tribes under his or its own name or banner.

With regard to the modern Mongols—especially the Khalkas—who had (sometime before the Manchus seized their opportunity of taming them through Lāmaism and saintly influences) already succumbed to drink and earlier strong religious influences, they may be said to have now entirely lost the ferocity, warlike initiative, and passion for plunder that characterized the conquering hordes of Jenghiz Khan in the early 13th century. Even Jenghiz himself, though a mere shamanist, or casual 'idolater,' and, so far as is known, destitute of any religious training, seems to have been by natural rectitude of character susceptible to ethical influences when not injudiciously thrust upon him; and this quite spontaneously, for he sent for and respectfully consulted a humble Chinese Taoist philosopher who travelled all the way from Shan Tung to Samarqand to advise him as to the humanity of his own warlike proceedings.[1]

The religion of the Kalmuks and of the Eastern Mongols is Lāmaism (*q.v.*); the older Mongol religion, however, was shamanism, which is retained by the Buriats (*q.v.*).

3. Present-day distribution.—When the Chinese Ming dynasty in 1368 sent the Mongol tyrants in Peking back to their steppes, the old division into the Western or right 'wing' and the Eastern or left 'wing'—practically Kalmuk and Khalka—was reverted to by the ejected Mongols, and these two wings were subdivided into the *Djïrgughan Tumen*, or 'Six Myriads.' When the Manchus conquered or conciliated the Chakhars and other inner (Eastern) Mongols in 1628–33 (*i.e.* before they became emperors of China in 1644 as well as Manchu emperors), they organized all of them except the Chakhars into six *chogolgan*,[2] or 'leagues' (translated by the Chinese word *mêng*, 'sworn alliance'). These six leagues, four east (Chih Li) and two west (Shan Si), are again subdivided into 24 *aimak*, or 'tribes' (translated by the Chinese word *pu*; this word *aimak* occasionally appears in Chinese Jenghizide history as *aima*, and in Chinese Manchu history occasionally as *aiman*).

[1] See E. Bretschneider, 'Travels of the Taoist Ch'ang Ch'un,' *Chinese Recorder*, v. [1874] 178–199, vi. [1875] 1–22; also 'Traces of Christianity in Mongolia in the XIII century,' by the archimandrite Palladius, *ib.* vi. [1875] 104–114.

[2] W. F. Mayers, *The Chinese Government*, Shanghai, 1878, suggests that, in so doing, the Manchus were continuing the principle of the Six Myriads, and (pending the conquest at a later date of the Khalkas and Kalmuks) were applying it to the Inner Mongols along the Great Wall.

This is not the place to introduce a discussion on language or a long list of native Mongol tribal names; but it may be mentioned as specially significant that the Khartsin tribe of the Chosotu league are the absolutely direct descendants of Jenghiz and Kublai; they now occupy the steppes north of Jêhol (thrice visited in 1869–71 by the present writer).

Besides the 24 tribes of Inner Mongols under their own native *jassaks*, and irregularly subdivided into 49 flags, or banners, there is still a more intimate class of Inner Mongols known as the 'herdsmen,' who are not ruled by their own princes at all, but by the military governors at Tenduc, Kalgan, and Jêhol. The extramural area of which Kalgan (='the gate' in Mongol) is the governing centre is popularly known as Chakhar, a word derived from the leading tribe, called during the Ming dynasty Chakhar, or Chakhan-r. There are also the Mongols of Kokonor, descendants of a collateral branch of Jenghiz's family, with whom have been associated a number of Kalmuk tribes from the west; they also intermarry with the Manchus, but were not entitled, like the Inner Mongols, to style themselves 'cousin.' Besides these main divisions, there are the Tumet tribes of N. Shan Si, the Bargu, the Urianghai, the Mingad, the Jakchin, and other odd remnants mostly of Kalmuk type, which for convenience are ranked among the herdsmen, and are under the administration of one or the other of the Manchu (now Chinese) *tutungs*, or military governors, from Uliassutai in the west to Jêhol in the east.[1]

The Outer Mongols mainly consist of two races—the Khalkas and Kalmuks—between whom there were prolonged and bloody wars until the Manchus (after having subdued the Inner Mongols and China itself) reduced both to complete subjection. Even after the ejection of the Jenghizide dynasty from China, when both classes of Mongols were thrust back upon their deserts, they frequently crossed the desert and fought incessantly between themselves, besides, separately or in unison, making raids upon the Ming empire. The Khalka area is easily recognizable on any map because the four (originally three) tribes or khanates into which they are divided are usually plainly marked as the Tushétu, Tsetsen, Jassaktu, and Saïnnoïn khanates; the last-named was carved out of the first, during the Ming dynasty, by the Dalai Lāma of Tibet as a reward for services rendered to the Yellow-hats at the expense of the Red. These four Khalka tribes, or khanates, were again subdivided into over 80 flags, or banners, but this arrangement was complicated by two of their banners having been incorporated with the Inner Mongols, whilst, on the other hand, three Kalmuk banners were incorporated with the Khalkas. The other two of the four Khalka khanates used to fall under the high political influence of the Mongol *hutuktu*, or saint, at Urga, who had a Manchu resident to keep things right. A certain proportion of the Kalmuk race was moved to the neighbourhood of Lake Kokonor after the Manchu conquest of 1753–54, and it there falls under the control of the Chinese military governor at Si-ning. These Mongol tribes are divided among themselves; the Kalmuks have their own local saints both in the west and at Kokonor, but the Khalkas, though kinsmen, are almost hereditary enemies. Nor can the Khalkas easily coalesce with the 49 flags or 24 tribes of Inner Mongols. The latter represent the true historical Tata, as the immediate descendants of the Jenghizides were officially styled by the Ming dynasty; after nearly 200 years of warfare with China they joined the Manchus honourably and nearly as equals, for they were never conquered, as the Khalkas and Kalmuks were some generations later. They have always been kindly treated by and have intermarried with the Manchus, some of whose emperors have married pure Mongol women, recognizing them as legitimate empresses of China. When the Republic was first declared in 1912, there was some talk of the Inner Mongols from a racial point of view joining their countrymen, the Khalkas, under the united rule of the rebellious *hutuktu* at Urga, but this uprising was averted by the moral delinquencies of the *hutuktu*, the political acumen of President Yüan, and the lack of sympathy between the pure outer nomads and their inner brethren, who are now by long habit more or less impregnated with Chinese civilization, political privilege, and economic luxury.

E. H. PARKER.

MONISM.—1. The term.—The term 'monism' was coined by Christian Wolff (1679–1754), and was used by him to denote the philosophical theories which recognized only a single kind of reality, whether physical or psychical, so that he could apply the name 'monists' equally well to the materialists and to the so-called idealists of his age. It is easy to understand why the word in this artificial sense should never come into general use, and in fact it was so employed only sporadically by individual thinkers of the 18th century. In the 19th cent. the term 'monism' came to be used by the disciples of Hegel as designating their own peculiar mode of thought; thus, *e.g.*, K. F. Goeschel, in 1832, published a work entitled, *Der Monismus des Gedankens* ('The Monism of Thought'). In this sense too, however, the term had but a limited usage. In point of fact, it first found a place in current speech as the designation of a philosophical movement closely related to the modern theory of biological evolution, and it was, in particular, the biologist Haeckel and the philologist Schleicher who brought the word into general currency. In Germany the philosophical movement referred to has found concrete expression in a 'monistic society' (*Monistenbund*), which has drawn to itself a considerable body of adherents. Nevertheless, certain other applications of the term still maintain their ground. In especial, the name 'monism' is given to the philosophical theory which, instead of subordinating the soul to the body, or the body to the soul, interprets them as equivalent aspects of a single fundamental process, and on this ground constantly refers each to the other. Of monism in this sense Spinoza is generally regarded as the leading exponent. Finally, taking the term in its widest sense, we might apply it to every mode of thought which seeks to transcend the distinction between the physical and the psychical, and to reach an ultimate unity. The fact that these various significations are often mingled together in common usage has led to great confusion and much unprofitable controversy.

---

[1] See Parker, 'Manchu Relations with Mongolia,' 'Campaigns against the Khalkas and Oelots,' and other papers on this subject in *China Rev.* xv. [1886–87], xvi. [1888–89]; also a paper on 'Kalmuck Organization,' *ib.* xxiii. [1898–99].

2. **Monism as expressing an inherent need of the mind.**—In its widest sense monism is the expression of a demand which no philosophy and no religion can in the last resort evade. The human mind at length refuses to allow the real to fall apart into the irreconcilable opposites of body and soul, of nature and spirit; and every system of thought must ultimately arrive at some kind of unity. In this sense Christianity itself is a monism—a spiritual monism—since it traces all reality to the divine Spirit. In the philosophical realm, however, monism usually stands for the Spinozistic view, which recognizes an exact correspondence between extension and thought, the visible and the invisible, finds the same laws and forces to work in each, and interprets the order and connexion of thought as identical with the order and connexion of things (Spinoza, *Eth.* ii. prop. 7: 'ordo et connexio idearum idem est ac ordo et connexio rerum'). This view has the advantage of providing a solution of the simplest kind for a problem which cost Spinoza's predecessors much trouble—the problem, namely, of the interaction of soul and body; for, on this theory, according to which the two series of facts proceed side by side quite independently, and yet remain ever in mutual harmony, there is no interaction at all, the specific data of either series being explained by the relations of that series alone. Modern psychology, in following up this theory, has propounded the doctrine of 'psychophysical parallelism,' and strives to apply the doctrine to mental and bodily processes in detail. As this whole mode of thought apparently permits each aspect to develop its own distinctive character, without severing it or keeping it apart from the other, it has proved remarkably attractive to the human mind.

3. **Its tendency to one-sidedness.**—Its power of attraction, however, lasts only as long as we keep to the general outlines of the problem, and every attempt to give the idea a more precise application encounters great difficulties, and results in giving the preponderance to one or other of the two sides: either the physical becomes predominant, and the psychical a mere reflexion or concomitant of it, or else the psychical is assigned the superior position and the physical becomes simply its outward expression or a means to its ends. Thus monism inevitably breaks up into two forms—an idealistic and a naturalistic—and there never has been, nor can there ever be, a pure monism, *i.e.* a monism maintaining a perfect equipoise between body and spirit. The clearest exemplification of this is found in Spinoza himself; a closer scrutiny of his thought shows that he is never purely monistic, but always leans more either to naturalism or to idealism—the former in the groundwork, the latter in the consummation, of his system, as appears more especially in his *Ethics*. In the beginning of that work the supreme factor, the core of the real, is nature, while psychical life is a mere representation of the natural process, and simply follows its order; at the close, however, this naturalism is transmuted into an idealism, for Spinoza's doctrine that all reality is supported and integrated by a divine life, and that nature only moulds that life into visible form, as well as the doctrine that man is capable of assimilating the whole universe, and of attaining infinity and eternity by the intellectual love of God ('amor dei intellectualis'), cannot be called anything but idealism. Whatever Spinoza may have meant, he certainly did not reach a pure monism; and the subsequent development of philosophical thought shows that the monistic movement always inclines either to the one side or to the other.

(*a*) *Idealistic monism.*—The classical period of German literature was dominated by an idealistic monism, and, in particular, Goethe gave his full adherence to the view. In the philosophy of the period, this type of idealism found powerful support in Schelling's philosophy of identity. Yet, while in art and philosophical thought the outer and inner worlds were made closely dependent upon each other and were firmly interlinked, they were not regarded as of co-ordinate authority; on the contrary, the universe of reality seems here to be pervaded by an inner life, and the union of the visible and the invisible world is brought about upon the basis of the spirit. It was, however, strongly insisted upon that the inward life cannot come to its own, or realize itself perfectly, without in some way embodying itself and taking perceptible form in the external. Here we have the genesis of an æsthetic and philosophical monism of the idealistic type.

(*b*) *Naturalistic monism.*—On the other hand, the monism frequently associated with the modern theory of evolution exhibits a naturalistic tendency. It regards the physical world as the essential substance of the real, and differs from materialism only in the circumstance that it conceives the psychical, not as derived from physical processes, but as present from the first even in the most minute elements of the material world, and as forming an essential constituent therein. Even so, however, the psychical is not thought of as attaining to independence and spontaneity; it has no powers or laws peculiarly its own, but is in every respect subordinate to, and wholly interwoven with, external nature; nor again, on this theory, is human life endowed with any special significance or accorded any distinctive vocation. It is true that this naturalistic monism, in its theory of practical life, recognizes the ideal ends of the Good, the True, and the Beautiful, and undertakes the task of furthering them. But it can do so only by contravening its own naturalistic principles, and thus it comes to exhibit the fatal inconsequence of theoretically recognizing unity as its supreme aim while in practice falling into an absolute contradiction between thought and action.

The progress that this theory of naturalistic monism, in spite of its inherent flaws, is making in contemporary life, in Germany at least, is due to the concurrence of various causes. Nature, formerly so often sadly ignored, has come to mean more and more for the modern mind. Not only does she reveal ever more fully the delicate texture of her being, but in yielding herself to the practical arts she has added vastly to our command of the environment. The importance of the material factor for human well-being is much more widely recognized in modern civilization than was once the case. The result of these various developments is that

Nature now exercises a much more profound influence even upon our thoughts and convictions than she formerly did. This does not, of course, lead necessarily to a naturalistic philosophy, nor was there any great danger of such an issue as long as high spiritual ends held sway among human beings and dominated their common efforts. But such spiritual ends have been, if not entirely lost sight of, yet largely obscured, in the development of modern life; with regard to the ultimate questions of human existence mankind is now in a state of grave disunion, and common effort has given place to widely divergent tendencies. Amid so much diversity regarding the content of the spiritual life, the longing for a single all-embracing theory of existence readily attracts men to the path of naturalism, which proffers what seems to be the simplest and most intelligible solution of the great problem. In reality, therefore, it is the defects of the opposite view that here lend strength to monism.

Another factor which—in Germany at least—operates in favour of naturalistic monism is found in the perplexities that have emerged in the province of religion and the Church. That religion at the present day bristles with problems, and that the minds of men differ widely in the treatment of them, are facts that cannot be denied even by those for whom religion is a supreme interest. In Germany, however, the situation is greatly aggravated by the intimate relations between Church and State, since in such circumstances the doctrines of religion readily come to be felt as a restraint imposed by the State upon thought; and, where large numbers are already alienated from religion, or in dubiety regarding it, there is a natural tendency to look with sympathy upon movements that set forth with perfect candour the conflict of ideals, especially the conflict between natural science and the teaching of the Church, and seek to bring it to a decisive settlement. From this position the monist may regard himself as a champion of freedom and truth.

4. Its function and limitations.—When we have in this way explained the spread of naturalistic monism, we have at the same time shown its limitations. It possesses a certain power and has also a degree of rightful authority as long as it maintains a critical attitude and provides incentives to special tendencies of thought; and this condition is fulfilled when it insists upon a higher recognition of the natural factor in human life, and demands that the assured results of modern science shall not be ignored by those who speak in the name of religion. Its weakness, again, shows itself in the positive aspect of its work, and in its claim to serve as a guide to human life and to satisfy the human soul. For such ends it has, in truth, nothing to offer but an intellectual interpretation of things—an interpretation which purports, by improving our conceptions of nature and by showing that man forms part of nature, to be able to supply the human heart with powerful impulses and endow it with happiness. But between ends and means, between claim and achievement, there is a wide disparity. The scientific procedure of monism, moreover, suffers from the defect of confusing natural science with the philosophy of nature, and of too rashly transforming the results of natural science into principles of the cosmos, while giving no recognition at all to the peculiar character of spiritual life or the process of universal history. But, whatever judgment we may pass upon this modern monism, it is certainly a notable feature in the life of the present day.

MONKEY.—See ANIMALS.

MONOLATRY AND HENOTHEISM.

—A whole group of words, some of them classical, are compounded with *μόνος* as a prefix. Ecclesiastical usage added not a few others—*e.g.*, 'monogamy,' marriage only once, re-marriage after the death of one's wife being forbidden, 'Monophysites,' 'Monotheletes.' To these was added, in modern times, 'monotheism' (*q.v.*); this term was touched with ambiguity, since it was sometimes a synonym for unitarianism. Last of all, apparently by Julius Wellhausen,[1] 'monolatry' was coined to express not belief in the sole existence of one god, but restriction of worship to one object of trust and loyalty, although other races might admittedly have other supernatural helpers.

If the first half of the word shows it to be akin to monotheism, its affinities on the other side are with idolatry (see IMAGES AND IDOLS). Christian usage, from the Bible downwards, vacillates between interpreting idolatry as image-worship and as worship of 'false' gods in the sense of non-existent beings. In the Roman Catholic Church the distinction is made between *latria*, worship paid only to the Persons of the Trinity, and *dulia*, veneration of the saints (even the Blessed Virgin receives not *latria*, but *hyperdulia*). Both in the Roman and in the Greek Churches *adoratio* (*προσκύνησις*) or *dulia* is rendered to images or icons of the Divine Persons and saints, as well as to the Gospels, relics, etc. (cf. Denzinger^{11}, nos. 302, 337, 342, 985 f.).

Unhappily, there is another term which habitually presents itself as a synonym for monolatry and as a rival—henotheism. This word was coined by F. Max Müller while under the influence of Schelling. In a review of Renan, entitled 'Semitic Monotheism,' and contributed to the *Times* in 1860 (reprinted in *Chips from a German Workshop*, i. [1867], and again in *Selected Essays*, ii. [1881]), Müller, while repudiating Renan's theory of a monotheistic instinct peculiar to the Semites, finds at the basis of all religion a crude or vague faith in the divine, not yet articulated either into polytheism or into monotheism, and calls this 'henotheism.' As thus defined on its first emergence, henotheism is a hypothetical construction, belonging to a period earlier than recorded history. E. von Hartmann[2] is fairly in line with this when he speaks of henotheism as 'the original nature-religion'; as the 'indifference of mono-, poly-, and pan-theism'; as the 'identity of essence of all the gods.'

Much greater importance, however, attaches to Müller's later usage, introduced in a 'Lecture on the Vedas' of 1865 (also reprinted in *Chips*, i. and *Essays*, ii.). Here we have a pair of synonymous terms—'henotheism' and 'kathenotheism'—which refer to a well-marked historical phenomenon. Study of the Vedas had impressed Max Müller with the way in which each deity, out of a large recognized pantheon, is treated in turn as if the supreme or even the sole god. While Indian religion offers the classical illustration of this attitude, it recurs elsewhere. Max Müller recognizes it in Greece, Italy, and Germany (*HL*, 1878, London, 1879, p. 286), as well as in Finland (*Contributions to Science of Mythology*, London, 1897, p. 264). Both these books speak of 'henotheism or kathenotheism' (*HL*, p. 271), 'kathenotheism or by a shortened name henotheism' (*Contributions to Science of Mythology*, p. 140). When P. Asmus describes the whole of 'Indo-germanic' religion as henotheistic,[1] because of the alleged tendency of all its divinities to pass into each other, he is inspired by Max Müller's second usage, though he distorts it.

---

[1] T. H. Huxley (*Nineteenth Cent.*, xix. [1886] 495) is quoted by *OED* in this sense; Robertson Smith is also quoted (*OTJC*, Edinburgh, 1881, p. 273; 'natural . . . Semitic monolatry').

[2] As summarized in O. Pfleiderer, *Phil. of Religion*, Eng. tr. London and Edinburgh, 1886–88, iii. 19.

It may seem to us that Müller has himself been guilty of a certain confusion. But the worst confusion of all is introduced by Pfleiderer (*loc. cit.*), without regard to either of Müller's definitions, and in conscious opposition to Hartmann and Asmus. He recognizes—distinctively among the Semites—not, of course, a monotheistic instinct, but a 'national or relative monotheism which in the case of Israel was the porch to pure monotheism' (iii. 34 n.); and this he calls henotheism. We cannot wonder if high authorities have proposed to suppress the term 'henotheism' because of its ambiguity (*e.g.*, J. Estlin Carpenter, in *EBr*^{11} xxiii. 72^{a}; H. Oldenberg, *Rel. des Veda*, Berlin, 1894, p. 101, note 1; E. W. Hopkins, 'Henotheism in the Rig Veda,' in *Class. Studies in Honour of H. Drisler*, New York, 1894, pp. 75–83, *Religions of India*, Boston, 1895, p. 139 f.; A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 16 f., with references to earlier literature).

'Kathenotheism' is regarded by Carpenter as already extinct. The word is cited by E. B. Tylor (*PC* ii. 354), but has certainly found little favour.

One might have wished to see 'kathenotheism' and 'monolatry' spared, as names for two very different approaches towards monotheism, while the word 'henotheism' might either be wholly suppressed or else generalized to include both kathenotheism and monolatry, together with any other workings of monotheistic tendency that fall short of monotheism properly so called. There is much significance for theists in irrepressible movements towards recognition of one great help, one supreme power, one sovereign goodness.

Allan Menzies's distinction (*Hist. of Religion*^{4}, London, 1911, ch. iv. p. 55; he has been good enough to confirm or explain his meaning in a private letter) between henotheism and kathenotheism follows Pfleiderer (and makes henotheism cover exactly the phenomena of monolatry). But any suggestion that this distinction is Max Müller's own must be repelled. Cf., further, Müller's *Physical Religion*, 1891 (Glasgow Gifford Lecture of 1890), p. 181 n.: 'It is to be regretted that other scholars should have used the name henotheistic in a different sense from that which I assigned to it. Nothing causes so much confusion as the equivocal use of a technical term [but is Müller himself quite clear of blame?], and the framer of a new term has generally had the right of defining it.'

The classical region of monolatry is the religion of Israel, whose phenomena, as we saw, probably suggested the name. The First Commandment (of the greater Decalogue, Ex 20 or Dt 5) crystallizes the requirement and carries it into the moral region. Kindred Western Semitic races—possibly other races too—may have known something similar, upon its lower side. Moab or Ammon or Edom may have been loyal to the tribal god in mere patriotic prejudice. Loyalty to the God of righteousness, in Israel or in all lands under heaven, means vastly more. The only real justification for monolatrous behaviour is the monotheistic fact. It is indeed true that 'the distinction between monolatry and monotheism' is often a narrow one (art. GOD [Biblical and Christian], vol. vi. p. 253). It is also true that there will be an element of monolatry in religion as long as earthly conditions endure. Human faith—theistic, or fully Christian—is no bare recognition of facts which exist independently of our attitude. Faith is choice of God and a pouring out of our humble all in His service.

LITERATURE.—Besides the references given above, see art. GOD (Biblical and Christian), noting both 'monolatry' (vol. vi. pp. 251^{b}, 252^{a}, and 253^{b}) and 'henotheism' (pp. 252^{ab}, 275^{b}, 276^{a}, 277^{a}, 283^{b}, 289^{b}). The student must carefully observe in what sense either word is employed by the different writers. 'Kathenotheism' is not employed at all in the articles.

ROBERT MACKINTOSH.

MONOPHYSITISM.

1. Before the Monophysites.—The name 'Monophysites,' as denoting a party in the Christian Church, ought in strict usage to be applied only to those who regarded as erroneous the doctrine formulated as a standard by the Synod of Chalcedon (A.D. 451), *i.e.* the doctrine of the two natures (*δύο φύσεις*), divine and human, in the one person (*ὑπόστασις* or *πρόσωπον*) of Jesus Christ, and who took as the watchword of their faith 'the one nature of the incarnate Word of God' (*μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένου*). The doctrine of the single nature of Christ, however, did not then emerge for the first time, and we begin by narrating the history of Monophysitism prior to the rise of the Monophysites proper.

The formula *μία φύσις* is first found among the Arians (see art. ARIANISM, vol. i. p. 775 ff.). **Lucian of Antioch** and his followers had spoken of the one divine or, more properly, semi-divine nature (*φύσις* or *ὑπόστασις*, the two terms not being as yet distinguished) of the Logos, in which inhered liability to suffering (*πάθη*) and limited knowledge (*ἀγνοεῖν*). **Eudoxius of Constantinople** († A.D. 370) acknowledged the Word made flesh but not become man (*σαρκωθέντα, οὐκ ἐνανθρωπήσαντα*), who had not assumed a human soul, but became flesh in order to manifest Himself to us as God through the flesh as through a curtain; it was therefore quite wrong to speak of two natures (*δύο φύσεις*), since the Word was not man in the full sense (*τέλειος ἄνθρωπος*), but God in the flesh (*θεὸς ἐν σαρκί*), *i.e.* viewed as a whole, one composite nature (*μία τὸ ὅλον κατὰ σύνθεσιν φύσις*). **Apollinaris of Laodicea** (see art. APOLLINARISM, vol. i. p. 606 ff.) expressed himself in similar terms, though in a line of thought directly contrary to that of Arianism. It was his firm conviction that the perfect God (*θεὸς τέλειος*) had descended upon the earth, and in this belief he felt that he was at one with the Nicæans as opposed to the Arians; but no less decisively he maintained also that two complete entities cannot become a unity (*δύο τέλεια ἓν γενέσθαι οὐ δύναται*), and thus that the union of perfect deity with complete manhood is impossible (*εἰ ἀνθρώπῳ τελείῳ συνήφθη θεὸς τέλειος, δύο ἂν ἦσαν*). Hence Apollinaris, in writing to the emperor Jovian, expressed himself as follows:

> 'We acknowledge, not two natures in the one Son, one worshipped and the other not worshipped (*μίαν προσκυνητὴν καὶ μίαν ἀπροσκύνητον*), but one nature of the Divine Word (*μίαν φύσιν τοῦ θεοῦ λόγου*), incarnate, and worshipped together with His flesh in one worship (*σεσαρκωμένην καὶ προσκυνουμένην μετὰ τῆς σαρκὸς αὐτοῦ μιᾷ προσκυνήσει*)' (*Ἐπιστολὴ πρὸς Ἰοβιανὸν τὸν βασιλέα* [J. Dräseke, 'Apollinarios von Laodicea,' *TU* vii. [1892] 3, 4, p. 341; H. Lietzmann, 'Apollinaris von Laodicea und seine Schule,' *TU* i. [1904] 1, p. 250]).

This, however, involves a deification of the flesh, and it is but a short step to the inference that all the conditions which rendered the Logos liable to suffering during His earthly course are in the flesh brought into connexion with the divine nature (*παθητὴν εἶναι τὴν τοῦ θεοῦ θεότητα*).

For a time Christian theology was in danger of surrendering to this illusory logic, as was the case, *e.g.*, when it undertook the task of coming to terms with the Antiochene school (see art. ANTIOCHENE THEOLOGY, vol. i. p. 584 ff.). The Christological interest of the Antiochenes, in contradistinction to that of the Apollinarians, culminated in the view that a perfect humanity was retained along with perfect deity in Christ. These theologians, accordingly, spoke of two natures (*δύο*

---

[1] Pfleiderer, iii. 20.

φύσεις or *δύο ὑποστάσεις*) in the one Christ—since for their conceptions, too, *φύσις* and *ὑπόστασις* were equivalent terms—and thus seemed to endanger the unity of His person. Their leading opponent, **Cyril of Alexandria,** was supremely concerned to maintain this unity, but he did it only by leaving out of account every element of human personality in the Saviour. According to Cyril, we must assume that two natures, the divine and the human, existed in Christ before He became man, and that at His becoming man these two natures were fused together in an indissoluble unity (*συνέλευσις δύο φύσεων καθ' ἕνωσιν ἀδιάσπαστον ἀσυγχύτως καὶ ἀτρέπτως*), and could thus be distinguished only in theory (*θεωρίᾳ μόνῃ*). To denote this divine-human nature Cyril likewise availed himself of the formula *μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένη*; he borrowed it from a confessional work of Apollinaris — the *Περὶ τῆς σαρκώσεως τοῦ θεοῦ λόγου* (cf. *ERE* i. 608), of which, it is true, he believed that Athanasius was the author. We can see how closely he approaches Apollinaris at this point. The Alexandrian, nevertheless, did not proceed to the conclusions drawn by the Laodicean, who rejected the view that the Saviour had assumed a complete humanity and a *ψυχὴ λογική*. To Cyril the formula remained a religious postulate, and he used all the resources of an artificial logic to give it also a theological validity. Here he takes *φύσις* simply as a *κοινόν*; the divine-human nature, however, is something new in relation both to the divine nature and to human nature, and the properties of these, viz. sovereign majesty and passibility respectively, may be in mutual communication in Christ without forcing us to assume that there is any blending of them. In this way, accordingly, two natures go to form one (*ἐκ δύο φύσεων μία φύσις* [or *ὑπόστασις*]).

To follow such intricate theories was a task beyond the power of simple and unlearned minds. It is true that, of the subtleties of Cyril's discriminative logic, **Eutyches,** the aged archimandrite of a monastery near Constantinople, had come to a knowledge of the idea expressed in the phrase *μετὰ τὴν ἕνωσιν μία φύσις*, but precisely on that ground he would not grant that Christ's bodily form was identical in character with the human (*ὁμοούσιος ἡμῖν*); at the local Synod of Constantinople in 448, addressing the tribunal of bishops, he declared, *οὐκ εἶπον σῶμα ἀνθρώπου τὸ τοῦ θεοῦ σῶμα*; and, although in the course of the proceedings he further modified his statements, he was condemned on the ground of the Docetic tendencies which he could not conceal (see art. DOCETISM, vol. iv. p. 832 ff.). Thenceforward, in the memory of the Church the name of Eutyches was one of reproach, and Eutychianism was stigmatized as heresy. Another group who would not renounce the idea of *δύο φύσεις μετὰ τὴν σάρκωσιν* were those who in their deepest hearts assented to the formula *μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένη* defended by Cyril. For them it served to ease the situation that a distinction was now being made between the terms *φύσις* and *ὑπόστασις*. This distinction, in fact, soon came to be quite as important as that between *οὐσία* and *ὑπόστασις* in the doctrine of the Trinity. In the development of that doctrine the latter distinction had served to make intelligible how three divine persons (*ὑποστάσεις*) could participate equally in the divine being (*οὐσία*); and in like manner it was now thought possible to explain how two natures (*φύσεις*), the divine and the human, could equally inhere in one person (*ὑπόστασις*), viz. Jesus Christ.

The theologians of the West, from the days of Tertullian, had been accustomed to speak of the 'duplex status, non confusus, sed coniunctus, in una persona, deus et homo Jesus.' What they called *natura* (*substantia*) found an equivalent expression in *φύσις*, and *persona* could be rendered by *ὑπόστασις*. In reality, therefore, the best solution of the problem seemed to be that formulated by Pope Leo in his letter to Flavian of Constantinople (dated 449; the so-called *Τόμος Λέοντος*, *Ep.* xxviii., 'ad Flavianum') as follows:—

> 'Salva proprietate utriusque naturae et substantiae et in unam coeunte personam suscepta est a maiestate humilitas, a virtute infirmitas . . . agit utraque forma (*μορφή*) cum alterius communione, quod proprium est . . . propter hanc unitatem personae in utraque natura intelligendam et Filius hominis dicitur descendisse de coelo . . . et rursus Filius Dei crucifixus dicitur et sepultus' (*PL* liv. 755 ff.).

What was subsequently termed the *communicatio idiomatum* (*ἀντίδοσις τῶν ἰδιωμάτων*) thus already finds clear expression in Leo's words. Nevertheless Gibbon is quite right in saying:

> 'An invisible line was drawn between the heresy of Apollinaris and the faith of St. Cyril; and the road to paradise, a bridge as sharp as a razor, was suspended over the abyss by the master-hand of the theological artist' (*Decline and Fall of the Roman Empire*, v. 126).

In point of fact, while Western theology thus avoided the extreme of Apollinarism, it was menaced by the spectre of the Antiochene peril. Here too it could be said: 'incidit in Scyllam qui vult vitare Charybdin,' and at all events the doctrine of the two natures in one person (Dyophysitism, or, grammatically more correct, Diphysitism) not only failed to compose perturbed minds, but actually fanned the latent elements of controversy into flame. In this controversy the disputants, moving on the lines of Cyril (and Apollinaris), went back to the watch-word *μία φύσις*; now, however, they spoke, not of the one incarnate nature of the divine word, but of the one nature of the incarnate word (*σεσαρκωμένου*, not *σεσαρκωμένη*), the intention being to indicate decisively that the point involved was not *μία φύσις* merely *μετὰ τὴν σάρκωσιν*. We now proceed to trace the history of this Monophysitism properly so called.

2. The Council of Chalcedon and its results.—After Cyril's death in 444 the episcopal throne of Alexandria was occupied by **Dioscurus,** a man destitute of theological learning and possessed with a more daring ambition than even his predecessor. His great aim was to secure the supremacy of Alexandria, and the Alexandrian theology, in the Eastern Church, and, as long as he had the ear of the emperor, and Rome did not contest his claims, he seemed to be on the fair way to attain his end. At his instigation Theodosius II. summoned a general Synod to meet in Ephesus in 449 (shortly afterwards stigmatized by Leo I. as *latrocinium*, *σύνοδος λῃστρική*, 'the Robber Synod'). Here, with the assistance of the civil power, and the physical violence of fanatical Egyptian monks, he succeeded in giving full effect to his claims; and, while Eutyches, who enjoyed the protection of Dioscurus, was restored to the communion of the Church, Flavian of Constantinople, Domnus of Antioch, and Theodoret of Cyrus were deposed. The triumph of Dioscurus, however, was but short-lived, for not only did he damage his case by his ruthless dealings, but he committed the blunder of irritating Leo by refusing, in spite of the protest of the Roman legate, to have the *Epistula ad Flavianum* read at the Council. The result was a swift revulsion. The emperor died on 28th July 450, and his sister Pulcheria, the moving spirit of the administration, had even before his death come to recognize that the transference of the ecclesiastical centre of gravity from the capital to Alexandria, and the consequent liberation of the Church from political control, might be attended with the gravest consequences. As empress, with the acquiescence of her husband, the military commander Marcian, who was little interested in ecclesiastical or doctrinal affairs, she actively promoted a plan of co-operating with Leo to put an end to the theological dispute at a great assembly of the Church and thus to restore the ecclesiastical balance in the East.

To achieve this desirable end was the task of the fifth Ecumenical Council, held in 451 at Chalcedon in the vicinity of Byzantium. The deposition of Dioscurus, as it could quite well be justified on grounds of ecclesiastical polity, was effected without difficulty. The demand that Leo's doctrinal letter should be accorded the authority of a symbol, however, was resisted with the utmost tenacity by a majority of the members. After protracted discussions the Council at length agreed—not, indeed, without menaces from the throne—upon a formulary designed to make for reconciliation, although, as a matter of fact, it involved, in its most decisive passage, a rejection of the Cyrillian tradition. The formulary, which was carried on 22nd Oct. 451, starts from a recognition of the Councils of Nicæa (325), Constantinople (381), and Ephesus (431), and reproduces the Nicene and the so-called Nicæno-Constantinopolitan creed; it then affirms that Cyril's letters to Nestorius and the Orientals, as well as Leo's *Epistle to Flavian*, have been adopted as attestations of the true faith. It next proceeds to the confession of belief in Jesus Christ as perfect God and perfect man, consubstantial with the Father according to His deity, consubstantial with us according to His humanity, in two natures (*ἐν δύο φύσεσιν*, not *ἐκ δύο φύσεων* as in portions of the literary tradition), without confusion or change, without division or separation (*ἀσυγχύτως, ἀτρέπτως, ἀδιαιρέτως, ἀχωρίστως*). The confession ends with a statement already quoted from Leo's letter, now rendered as follows:

> *τῆς τῶν φύσεων διαφορᾶς ἀνῃρημένης διὰ τὴν ἕνωσιν, σωζομένης δὲ μᾶλλον τῆς ἰδιότητος ἑκατέρας φύσεως καὶ εἰς ἓν πρόσωπον καὶ μίαν ὑπόστασιν συντρεχούσης.*

A decree, promulgated (7th Feb. 452) by the two emperors Marcian and Valentinus III., imposed severe penalties upon all who should henceforth dispute in public regarding the faith; offending clergy and army officers should be deprived respectively of their priestly and military status, and others proceeded against by law. Dioscurus was exiled to Gangra in Paphlagonia, where he died in 454.

The results of the Council were not long in manifesting themselves. In *Palestine* an active revolt broke out among the monks. Juvenal, bishop of Jerusalem, who had become prominent at Ephesus (449) as an energetic partisan of Dioscurus, had at Chalcedon, in fear of a diminution of his ecclesiastical power, deserted the Alexandrian and his protégé Eutyches, and had also accepted the formula, taking part, indeed, in its final revision. By this defection he lost the confidence of a large and influential body of monks in Palestine, who elected the monk Theodosius as bishop in opposition to him. The spiritual leader of the insurgents was Peter the Iberian, monk and bishop of Mayuma, the port of Gaza. The rebellious monks found a patroness of high rank in the empress-dowager Eudocia, then resident in Jerusalem. It is told of one of these fanatics that, when Leo's *Epistle* was brought to him, he took it to the tombs of the Fathers and asked whether he should accept it or not, and that a voice cried from the tomb:

> 'Cursed be the ungodly Leo, robber of souls, as his name signifies; cursed be his profane *Tomus*; cursed also be Marcian and the ungodly Pulcheria; cursed be Chalcedon and its Symbol and all who yield acceptance to it; cursed be he who acknowledges two natures in Christ, the Son of God, after the union' (E. Renaudot, *Hist. patriarcharum Alexandrinorum Jacobitarum*, Paris, 1713, p. 120).

This wild outburst of hate expresses most appositely the state of feeling then prevalent in Palestine. By A.D. 453, however, the movement was suppressed for the time by military measures.

In *Egypt* the situation was still more troublesome. A certain Proterius was forcibly thrust by the government upon the Alexandrians as bishop in place of Dioscurus. On the accession of the emperor Leo I. (457–474), the presbyter Timotheus Aelurus (*i.e.* 'the Weasel'), who had been on friendly terms with Cyril and was known as a rigid Monophysite, was raised to the episcopal throne by methods of sheer violence. At Easter, 457, Proterius was murdered by the populace in the baptistry of the cathedral church, while Timotheus purged the Egyptian sees of Diphysites, and pronounced the anathema upon Chalcedon ('the Synod,' as it now comes to be called in the sources). Timotheus held his position until 460, when, after fierce conflicts, he was driven from Alexandria and banished to Gangra; he was subsequently sent to Cherson, and there devoted himself to the composition of a 'Refutation of the doctrine laid down at the Synod of Chalcedon,' a work which only recently (1908) came to light in an Armenian translation.

The patriarchate of *Antioch* was likewise kept in a state of unrest by long protracted dissensions. Here the presbyter Petrus Fullo (*Γναφεύς*, 'the Fuller'), who in no long time supplanted Bishop Martyrius, zealously opposed the teaching of the Council, and contended for the doctrine that God had been crucified (*ὅτι θεὸς ἐσταυρώθη*). To the liturgy he added the singing of the Trisagion (Is 6^{3}) supplemented by the phrase *ὁ σταυρωθεὶς δι' ἡμᾶς*; and he also introduced the 'Credo' (the Nicene) into the Mass, probably with a view to emphasizing his opposition to the Chalcedonian formula, as also, however, to Eutychianism. But his tenure of the see did not last long, for in 471 the emperor Leo ordered him to be deposed. The imperial government thus found itself confronted by a serious task. On the one hand, it was a matter of urgency to preserve unity between East and West, between Byzantium and Rome, and this could be done only if there was no deflexion from the lines marked out at Chalcedon; on the other, those in the East whose dissatisfaction and resentment were due to the Council had to be restrained, pacified, and, if possible, reconciled to what had been done. The emperors Zeno (474–491) and Anastasius (491–498) exerted all their energies to establish ecclesiastical equilibrium in the East, but they failed altogether in the task of maintaining peace with Rome at the same time. A proceeding of signal importance was the attempt of Zeno (482) to gain acceptance for a new formulary, the so-called *Henotikon*, in place of the Chalcedonian symbol. The Henotikon was designed to give emphatic expression to what was common to all parties, and accordingly it recognized the Councils of Nicæa, Constantinople, and Ephesus as witnesses to the faith, disclaimed Nestorius and Eutyches, and condemned every one who 'now or ever, at Chalcedon or elsewhere, thought or thinks otherwise.' The formulæ expressing the doctrine of the natures of Christ were adroitly kept in the background, so that every cause of offence might be removed. In spite of all, however, the project of the emperor failed of complete success. It is true that Acacius, the court-patriarch of Constantinople, and Petrus Mongus (*i.e.* 'the Stammerer'), who now occupied the episcopal chair of Alexandria instead of Timotheus Aelurus, worked straightforwardly for the union of the warring factions, but the policy of reconciliation was repudiated by the uncompromising Monophysites, especially in Egypt, where the extremists (*ἀκέφαλοι*) actually severed themselves from the rest of their party. On the other hand, the convinced Diphysites, including the Acœmetæ monks of Constantinople, bitterly resented the virtual repudiation of Chalcedon. The most serious result was the rupture of good relations with Rome. This was due in part, no doubt, to the dogmatic problem, but certainly not less to jealousy of the ever-growing ascendancy of the Constantinopolitan bishop as 'ecumenical patriarch'—a title that now begins to gain currency. Thus the rupture of communion between East and West which was brought about in 484 by Felix III. of Rome presents itself as the outcome of an inner necessity. That ecclesiastic excommunicated Acacius, and demanded that in the *causæ Dei* the emperor should subordinate his own will to that of Christ's priests. The two communions remained apart for thirty-five years. The first overtures for peace were made by the emperor Anastasius in negotiations with Pope Hormisdas, the proposal of calling another general synod being taken as a basis; but the demands of the Roman pontiff, who insisted upon the recognition of Chalcedon and the condemnation of the now long deceased Acacius, brought the negotiations to an end. It was not till the accession of Justin I. (518–527), who left the administration of affairs to his nephew Justinian, that the hour of re-union struck. To win Rome seemed well worth a sacrifice; and all Rome's conditions were accepted, the name of Acacius, as well as those of the emperors Zeno and Anastasius, being removed from the diptychs of the Church.

This renewal of amity with Rome, purchased at so great a cost, carried with it, of course, a complete rupture with the Monophysites. During the reign of Anastasius the latter had gradually won a position of greater influence in Church politics. Anastasius too, no doubt, tried to steer a course in line with the Henotikon, but his own Monophysite convictions tempted him, especially towards the close of his reign, to show an imprudent complaisance to the more fiery and impetuous spirits in the Monophysite camp, and it is not without good cause that his name stands in the Monophysite calendar of saints. The aggressive movement of the malcontents began in Syria, where the Monophysites, under the leadership of Severus of Antioch and Philoxenus of Hierapolis (cf. § 3), gained an ascendancy over the Henoticists. At the Synod of Tyre (513, or, more probably, 515) they renounced the Council of Chalcedon, and thus publicly proclaimed their repudiation of the policy directed from Constantinople. Palestine, too, was the scene of a Monophysite reaction, while in Egypt they completely gained the upper hand. The change of policy begun in Justin's reign was dictated mainly by a desire to put an arrest upon these successes. A fierce persecution was the result, especially in the diocese of Antioch, many bishops, including Severus and Philoxenus, being banished from their sees.

3. The Monophysite theology.—The views of the Monophysites regarding the theological problem were by no means homogeneous. The one point in which the sect were unanimous was their opposition to Leo's *Tŏmus* and the symbol of Chalcedon—that idol with the two faces, as Zacharias Rhetor called it. Only a few of them drew from the doctrine of the one nature the Docetic inferences of Apollinaris or even of Eutyches. The majority tried to keep to the lines marked out in the theology of Cyril. This was the case, *e.g.*, with Timotheus Aelurus, and, above all, with Severus of Antioch, ecclesiastically the most influential, and theologically the most outstanding, champion of moderate Monophysitism, while Julian of Halicarnassus and Philoxenus of Hierapolis were more extreme in their views.

Severus, born *c.* 465 at Sozopolis in Pisidia, was the grandson of a bishop and the son of a town-councillor. He studied grammar and rhetoric at Alexandria and law in Beirūt. While in Alexandria he had been in touch with pietistic circles (φιλόπονοι), but was converted through the influence of Zacharias Scholasticus, subsequently his biographer, in Beirūt. He was baptized, and gave himself devotedly to fasting and prayer. In a short while he joined the monks of Peter the Iberian's monastery at Mayuma; for a time he lived as a hermit in the Desert of Eleutheropolis, and afterwards built a monastery of his own, soon winning great renown as a director of souls. In 508–511 we find him in Rome, acting as the representative of the monks who were being persecuted for their Monophysite principles. At the court of Anastasius he laboured for the principle of the Henotikon. At the expulsion of Flavian he was raised, despite the opposition of the suffragan bishops, to the patriarchal chair of Antioch (6th Nov. 512). The Synod of Tyre (515; cf. § 2) marks the summit of his work as an ecclesiastic. He was very active in the visitation of his diocese, and was most willing to preach either within or beyond the confines of his episcopal city. At the accession of Justin (Sept. 518), however, he was driven from his see, and fled to Alexandria. Considerably later, the administration of Justinian seemed to open a prospect of further ecclesiastical activity for Severus, who expected that the conferences in Constantinople (538) would set the seal of success upon his efforts. But the fall of Anthimus (cf. § 4) brought disaster to him too; he was excommunicated in 536, and withdrew to the desert country southwards from Alexandria. He died at Xois, on the Sebennitic arm of the Nile, probably on 8th February 538 (not 543).

Of his numerous writings all that has come down to us in Greek is fragments in Catenæ and anthologies. There are, however, Syriac translations of his works by Paul of Callinicus, Jacob of Edessa, and others. Of his exegetical and doctrinal writings may be mentioned *ἀποκρίσεις πρὸς Εὐπράξιον κουβικουλάριον*, and *κατὰ Ἰωάννου γραμματικοῦ τοῦ Καισαρείας*. Other writings worthy of note are his *λόγοι ἐπιθρόνιοι* or *ἐνθρονιστικοί* (125 homilies dating from the years he spent in Antioch, ed. R. Duval and others in the *Patrologia Orientalis*, Paris, 1906 ff.), his letters, extant in 23 books (bk. vi. ed. E. W. Brooks, London, 1902–04), and his hymns (the so-called Octoēchus, ed. E. W. Brooks, *Patrologia Orientalis*, 1910; cf. also art. Hymns [Greek Christian], vol. vii. p. 8^b).

Philoxenus, whose native name was Xenaya, was a student in Edessa while Ibas was bishop of that city, and we may thus infer that he was born *c.* 450. From Edessa he went to Antioch, where his ardent championship of the Henotikon brought him into conflict with the patriarch Kalandion, who had him expelled from the city. In 485 he was ordained by Peter the Fuller as Metropolitan of Hierapolis (Mabug). From the time when Flavian of Antioch, who was an adherent of Chalcedonian views, held office, Philoxenus appears as the spokesman of the Monophysite party in the patriarchate; subsequently, however, he was thrown into the background by Severus. Like the latter, he was eventually exiled (518 or 519), being sent first to Thrace, and then to Gangra in Paphlagonia, where, perhaps in 523, he died a violent death. He ranks as one of the most eminent of Syrian writers, though most of his works still lie dormant in the British Museum and other libraries; of those that have been published the most important is the *Discourses on Christian Doctrine* (tr. E. A. W. Budge, London, 1894–95).

Our knowledge of Julian rests upon very meagre data. The date of his birth is unknown. While bishop of Halicarnassus in Caria, he was concerned in the intrigues which led to the downfall of Macedonius, patriarch of Constantinople, in 511. He was himself expelled from his bishopric in 518, and took up his abode in the monastery of Enaton, outside the gates of Alexandria. Here he was embroiled in a doctrinal controversy with Severus (see below), who was then resident in that city, and this resulted in a temporary rupture within the party. At the death of the Monophysite patriarch Timotheus IV. the followers of Julian were able to secure the chair for their candidate, Gaianus, in place of the regularly elected Theodosius, and Theodosians and Gaianites were soon involved in a bitter strife. Of Julian's later fortunes we have no knowledge, nor, indeed, can we say definitely whether he was alive when, for the second time, the ban was pronounced upon him at Constantinople in 536. Of his writings we still possess a number of letters from his correspondence with Severus, and a Commentary on Job, transmitted in a Latin translation, and wrongly ascribed to Origen.

It was far from the minds of Severus and those who shared his views to argue for a fusion of the divine and the human in the person of Christ. Their insistence upon the singleness of Christ's nature after the Incarnation rested upon their conviction that the hypothesis of two natures necessarily implied two subjects or individual entities. What they found specially objectionable was the inference drawn in Leo's letter from the permanently distinct character of each nature—the inference, namely, that in the unity of Christ's person each nature, while no doubt in communication with the other, maintains its own distinctive function. According to the Monophysites, the theory that ascribed to each of the two natures a distinct mode of action (ἐνέργεια) divided the one Christ into two *πρόσωπα*, since no nature could possibly assert itself (*ἐνεργεῖν*) that did not remain self-subsistent (*ὑφίστασθαι*); the hypothesis of two *φύσεις* led to that of two *ὑποστάσεις*, and so to the abhorred heresy of Nestorius. In conformity with the position of Cyril, and with a mode of expression first met with in the writings of pseudo-Dionysius the Areopagite, viz. *ἀνδρωθεὶς θεός* and His *καινὴ θεανδρικὴ ἐνέργεια* (cf. art. MONOTHELETISM, § 1, p. 822^a), Severus took as the basis of his speculations the inherently complete divine nature and person of the Logos. The Logos, in His act of assuming flesh—flesh animated by rationality—becomes flesh and man, and, as man, is born of woman, but still remains, even as He had been, One, since, in virtue of such an indissoluble union, and without detriment to His inherent character, He transmutes and transfigures the flesh with His own glory and power. The united elements thus form a composite nature and a divine-human hypostasis, and it is to this that all His activities are to be traced.

The thesis that the body of Christ was subject to the laws of nature was deemed of the utmost importance by the Severians and Theodosians, who saw in it an expression of the identity of essence between that body and our own, and were thus able to avoid the heresy of Eutyches. It was precisely this thesis, however, that gave offence to the extremists of the party. To Julian and his followers it was simply inconceivable that Christ's body had been subject to corruption (*φθορά*), which has been a characteristic of human nature since the Fall. In order to understand the precise usage of this term in the present connexion, we must note that it did not refer to the *φθορά* which denotes the complete dissolution of the body into its elements at death; all parties were at one in asserting that Christ's body was not subject to *φθορά* in that sense, *i.e.* as decomposition. The question at issue here had to do with the natural infirmities of the human body (*ἀνθρώπινα πάθη*)—its liability to hunger, thirst, weariness, sweating, weeping, bleeding, and the like. The view of Julian, Philoxenus, and the Gaianites was that, while Christ certainly hungered and thirsted, it was because He desired, not because He required (*οὐκ ἀνάγκῃ φύσεως*), to do so—because, in short, according to the divine counsel (*κατ' οἰκονομίαν*), He had voluntarily taken upon Himself human pains and needs. He was the Son of man, as man was before the Fall, while all other men, though sons of Adam too, were possessed of a body and a soul of a nature that was due to Adam's fall.

We are thus able to understand the heretical designations applied by the warring Monophysite parties to one another. The Julianists or Gaianites charged their opponents with phthartolatry, the worship of the corruptible. These 'phthartolaters,' however, retorted upon their accusers with the epithet 'aphthartodocetists' or 'phantasiasts,' *i.e.* those who would change the reality of Christ's human experience into a mere appearance. As a matter of fact, the latter view was quite a natural inference, and many of the extremists were led astray by it. The most extravagant view seems to have been reached by those Gaianites who asserted that the body of Christ, from the moment of its union with the Logos, should be regarded not only as uncorrupted (*ἄφθαρτον*) but also as uncreated (*ἄκτιστον*). These were stigmatized as 'aktistetes' by their opponents, whom in return they called 'ktistolaters,' *i.e.* 'worshippers of that which was created.' Divisions arose even among the Severians themselves. Themistius, a deacon, taking his stand upon such Scripture passages as Mk 13^{32} and Jn 11^{34}, maintained that, as the body of Christ was subject to natural conditions, so its animating spirit could not be regarded as omniscient. To the adherents of this doctrine their opponents applied the name 'agnoetes.'

4. Justinian and the new orthodoxy.—On 1st August 527 Justinian became sole emperor of Rome. It does not fall to us here to set forth fully his far-reaching ecclesiastical policy in its transforming effect upon all things. The decisive factor in his attitude towards the West was his recognition of the Roman chair as the supreme tribunal of the Church, though this did not prevent him, after his victory over the Goths, from giving the popes an experience of his autocratic power. The defection of the Eastern Church gave the imperial ecclesiastic many an anxious hour. He soon came to recognize that his persecution of the Monophysites (see § 2 at end) had been a grave error. Little as he might wish to displace once more the orthodoxy now officially recognized, he could hardly help desiring to reconcile the Monophysites, especially as the empress Theodora was working with growing fervour for the rehabilitation of the party with which she sympathized in her devout moods. A few years after Justinian's accession to the throne, accordingly, negotiations were opened with the insurgents, and the most eminent of the bishops deposed in 518—not, however, including Severus—were summoned to Constantinople, where, it was hoped, they would be won over at a religious conference. In this conference, on the orthodox side, only such theologians were to take part as unequivocally accepted the thesis that one of the Trinity had suffered in the flesh (*ἕνα τῆς τριάδος πεπονθέναι σαρκί*). This Theopaschite formula was manifestly a friendly overture to the Monophysites. But the 'Collatio cum Severianis' (533 [or 531]), after two days of verbal controversy, came to nothing. On 15th May 533 Justinian issued an enactment in which he once more declared Chalcedon to be a standard of faith co-ordinate with the three earlier councils. The negotiations with the Monophysites were, nevertheless, still proceeding, and communications were now opened with Severus as well. Severus, yielding to reiterated pressure, went at length to the capital, where in 535 Anthimus, a protégé of the empress Theodora and a theological partisan of Severus himself, had been raised to the episcopate. But the interlude was not of long duration. In the following year (536) Pope Agapetus was able so to influence the emperor that the doctrinally suspect patriarch was superseded by the orthodox Menas. It is nevertheless the case that, during the entire reign of Justinian, the Monophysites firmly maintained their position at the court, while in Syria and Egypt their ecclesiastical power was supreme (cf. § 5).

Justinian himself made zealous efforts to comprehend the points of the doctrinal controversy. His great aim was to reconcile the teaching of Cyril and the Symbol of Chalcedon. In this he found effective support in that most eminent of his theologians, **Leontius of Byzantium** († 543 as a monk in Palestine), who, in his *Ἐπίλυσις τῶν ὑπὸ Σευήρου προβεβλημένων συλλογισμῶν*, *κατὰ Νεστοριανῶν καὶ Εὐτυχιανιστῶν* and other writings, won renown as a prolific author and an able assailant of the Severian Christology. The theology of Leontius is based wholly upon the Aristotelian logic. A novel feature of it, however, was his ingenious application of the idea that the *ὑποστῆναι* of Christ's human nature was *ἐν τῷ λόγῳ*, so that that nature is not *ἀνυπόστατος*, but *ἐνυπόστατος*. The term 'enhypostasis' operated like a spell. It seemed to obviate in the happiest way all the difficulties that beset the doctrine of the God-man. By its means the Chalcedonian Symbol could, without violation of its actual words, be interpreted in the sense of

Cyril's doctrine. It was nevertheless the use of this expression that led to the introduction of scholasticism into the Byzantine theology.

Justinian died in 565. Under his successors the Monophysites of the city and diocese of Constantinople had much to bear, and their harsh experiences have been graphically described by John of Ephesus, himself a Monophysite, in his Church History. Negotiations for a union of the warring factions, it is true, were once more resumed, but were foredoomed to failure by the circumstance that the ecclesiastics of the imperial court would not surrender the understanding with Rome, while the Monophysites regarded that understanding as the root of all evil. The consequence was that in the course of the 6th cent. the Monophysite communities in the Byzantine patriarchate were destroyed one after another. The Churches of Egypt and the Eastern provinces, on the other hand, remained quite impervious to the ecclesiastical influence of the capital, and the severance of the purely Monophysite communion from the Catholic Church became ever the more complete.

5. The independent Monophysite churches.—The Monophysites of *Syria* never ceased to regard the banished Severus as the rightful patriarch of Antioch, and declined to recognize the standing of those who were successively appointed to the office by the emperor. The organizer of their church life was **Jacob Barâdai** (*i.e.* 'he with the horse-cloth'; † 578), who, originally a monk in Constantinople, had been ordained, *c.* 541, bishop of Edessa by Theodosius of Alexandria (cf. § 3), then also resident there; and in consequence the Syrian Monophysites came to be called Jacobites. Barâdai, in his long journeys in W. Asia and Egypt, instituted communities, and consecrated patriarchs, bishops, presbyters, and deacons. The chief representatives of literature in Syria were nearly all Monophysites.

In addition to Severus, Philoxenus, and Julian (cf. § 3), the following writers of the earlier period deserve mention: Jacob of Sarug († 521), the author of widely read metrical homilies, which earned for him the title of 'Flute of the Holy Spirit'; Sergius of Resaïna († 536), physician and priest, who translated into Syriac several works of Aristotle and Galen, as also of the pseudo-Dionysius Areopagitica; Jacob of Edessa († 708), equally renowned as theologian, liturgical writer, philosopher, historian, exegete, and grammarian; George, bishop of the nomadizing Arabs, a writer whose letters have come down to us in large numbers. Of the mediæval authors one of the most prominent was Bar Hebræus (Abulfaraj; † 1286), whose *Chronicle* forms one of the most important sources of information regarding Monophysitism.

From the time when Islām became the dominant power in Syria, the Jacobites decreased in numbers more and more. At the present day there are some 200,000 of them in the Turkish empire, and about 1,000,000 in India—on the Malabar coast and in Ceylon. Their ecclesiastical superior (formerly entitled 'maphrian,' now 'katholikos') resides in the monastery of Deir-Safaran, near Mardin. Efforts made by the Jacobites, from the close of the 18th cent., to effect a union with Rome had a very meagre result. At the present day the Roman Catholic Syrians number about 30,000, and are subject to a patriarch, who takes his title from Antioch, but lives in Mardin.

In *Egypt* the conflicts between the Severians and the Julianists or Gaianites (cf. § 3) at length ruptured the unity of Monophysitism, which, nevertheless, became the faith of nearly the whole Coptic population. The patriarch of the orthodox, the Melchites (*i.e.* 'Imperials'), who was also procurator of the province, could count upon the homage of very few outside the higher official ranks in Alexandria and some of the larger towns. The Monophysite propaganda was carried also to the Nubians and the Alodians. From 616 marauding bands of Persians ravaged the religious stations on the Upper Nile, and it was only after the Arabs, with the hearty good-will of the Copts, took possession of the country that the Monophysite patriarch ventured to leave his place of refuge in the Upper Egyptian desert. During the Middle Ages the condition of the Coptic Church was a fairly prosperous one, but subsequently it was sorely harassed and ravaged by Muslim fanaticism, and it is only within recent times that it has been able to make a fresh advance. The Christian Copts of the present day still maintain their Monophysite creed (see, further, art. COPTIC CHURCH).

Finally, Monophysitism penetrated also to *Armenia*. The Armenians, while still engaged in battling for their own faith with Parsi Mazdæism, were quite unaffected by the dogmatic controversies of the Imperial Church. The expanding propaganda of the Persian Nestorians, however, induced them to adopt the Henotikon of Zeno (cf. § 2). Thereafter they maintained close relations with the Syrian Monophysites, and at the Council of Dvin, in 554, they overtly accepted the more radical position represented by Julian of Halicarnassus. From that time they have remained faithful to Monophysitism, though they subsequently gave their adherence to the more moderate Severian school.

LITERATURE.—i. *SOURCES.*—(*a*) Decrees of the Councils, Declarations of Synods, papal briefs.

(*b*) *Historical works and Chronicles.*—Zacharias Rhetor (Scholasticus), shortly after the accession of Anastasius, wrote, from the Henotic standpoint, a record of ecclesiastical events from the Council of Chalcedon to the death of Zeno (extant only in a Syriac version; see below, under *Historia Miscellanea*); Theodorus Lector, Anagnostes in the Church of St. Sophia in Constantinople at the beginning of the 6th cent., wrote, from the orthodox standpoint, a history of the Church from Nestorius to Justin I., which now exists only in fragments; Johannes Malalas, *Chronography*, composed in Justinian's reign; Evagrius, *Ecclesiastical History*, written after 546 (ed. J. Bidez and L. Parmentier, London, 1899); Theophanes Confessor, *Chronography*, composed between 810 and 815 (ed. C. de Boor, Leipzig, 1883–85). Of the Latin chroniclers Liberatus, *Breviarium causæ Nestorianorum et Eutychianorum*, is worthy of note. The most important of the Syrian authorities are: *Chronicon Edessenum* (ed. I. Guidi, in *Corpus Scriptorum Christianorum Orientalium*, 'Chronica Minora,' I. i., Paris, 1903), dating from the middle of the 6th cent.; *Historia Miscellanea*, a compilation of the same period by an unknown Monophysite writer, and including the history of Zacharias Rhetor mentioned above (ed. K. Ahrens and G. Krüger, Leipzig, 1899; also F. J. Hamilton and E. W. Brooks, London, 1899); John of Ephesus († *c.* 585), *Ecclesiastical History* (3rd part ed. W. Cureton, Oxford, 1853).

(*c*) *Various.*—The *Plerophories* of Johannes Rufus of Mayuma, a collection (*c.* 515) of the sayings, prophecies, visions, and revelations of various distinguished Monophysites, and especially of Peter the Iberian (ed. F. Nau, in *Patrologia Orientalis*, Paris, 1911); the biography of Peter the Iberian, probably by the Johannes Rufus just named (ed. R. Raabe, Leipzig, 1895); *Vitæ virorum apud Monophysitas celeberrimorum* (ed. E. W. Brooks, in *Corpus Script. Christ. Orient.*, 'Scriptores Syri,' III. xxv., Paris, 1908); the biographies of the Syrian monks Euthymius and Sabas, by Cyril of Scythopolis († after 557), etc.

ii. *MODERN WORKS.*—L. S. Le Nain de Tillemont, *Mémoires pour servir à l'hist. ecclésiastique des six premiers siècles*^{2}, Paris, 1701–12, xv. f., E. Gibbon, *The Hist. of the Decline and Fall of the Roman Empire*, ed. J. B. Bury, 7 vols., London, 1901–06, and C. W. F. Walch, *Hist. der Kezereien . . . bis auf die Zeiten der Reformation*, Leipzig, 1762–85, vi.–viii., are still indispensable. Of more recent works on the general history of the period the following deserve special mention: J. B. Bury, *A Hist. of the Later Roman Empire*, London, 1889; H. Gelzer, 'Abriss der byzantinischen Kaisergeschichte,' in K. Krumbacher's *Gesch. der byzantinischen Literatur*^{2}, Munich, 1897; C. Diehl, *Justinien et la civilisation byzantine au vi^{e} siècle*, Paris, 1901; and W. G. Holmes, *The Age of Justinian and Theodora*, London, 1905–07. On the questions of literary history the reader should consult (in addition to Krumbacher) W. Wright, *A Short Hist. of Syriac Literature*, London, 1894, and R. Duval, *La Littérature syriaque*^{3}, Paris, 1907. Of Histories of the Church and of Dogma, the most important are the following: I. A. Dorner, *Entwicklungsgesch. der Lehre von der Person Christi*, ii.^{2}, Berlin, 1853 (Eng. tr., Edinburgh, 1861–63); C. J. von Hefele, *Conciliengeschichte*^{2}, Freiburg, 1873–90, ii. (1875) (best form now in the Fr. revised ed. of H. Leclercq, Paris, 1907–13); A. Harnack, *Lehrbuch der Dogmengeschichte*^{4}, Tübingen, 1909–10, ii. (Eng. tr., London, 1894–99); L. J. Tixeront, *Hist. des dogmes dans l'antiquité chrétienne*, 3 vols., Paris, 1906–12, iii.; L. Duchesne, *Hist. ancienne de l'église*, Paris, 1906–10 (only to the close of the 5th cent. A.D.),

iii. ; the best monograph on the subject is J. Lebon, *Le Monophysisme sévérien*, Louvain, 1909. In writing the present article the author has drawn upon his contributions to *PRE*^{3} ('Julian von Halikarnass,' 'Justinian I.,' 'Monophysiten,' 'Philoxenus,' 'Severus,' 'Zacharias Scholastikus,' etc.), and upon his *Handbuch der Kirchengeschichte*, i. (Tübingen, 1911); additional literature will be found both in the articles and in the book.

G. KRÜGER.

MONOTHEISM.—In the history of religion monotheism, the doctrine that 'there is one God,' or that 'God is One,' is somewhat sharply opposed to a very wide range of beliefs and teachings. The contrast, when it appears in the religion of a people, or in the general evolution of religion, tends to have an important bearing both upon religious practices and upon religious experience, since to believe in 'One God' means, in general, to abandon, often with contempt or aversion, many older beliefs, hopes, fears, and customs relating to the 'many gods,' or to the other powers, whose place or dignity the 'One God' tends henceforth to take and to retain. If these 'many,' as the older beliefs, which some form of monotheism replaces, had dealt with them, were themselves for the older faiths 'gods,' then the monotheism which is each time in question opposes, and replaces, some form of 'polytheism.' This is what happened when Judaism and Muhammadanism replaced older local faiths. If one were satisfied to view the contrast in the light of cases closely resembling these, and these only, then the natural opponent of monotheism as a belief in 'One God' would appear to be, in the history of religion, polytheism as a belief in 'many gods.'

Since, however, there are various religions and many superstitions which recognize the existence of powers such as, despite their more or less divine character, lack some or all of the features which naturally belong either to God or to gods, and since demons, the spirits of the dead, or magic powers may be in question in such religions, the name 'polytheism' can hardly be quite accurately applied to the whole class of beliefs which are in any important way opposed to monotheism. So, in the history of religion, monotheism has two opponents: (1) polytheism proper, and (2) beliefs that recognize other more or less divine beings besides those that are properly to be called gods.

In the history of philosophy, however, monotheism has a much narrower range of contrasting or opposing beliefs. Polytheism, as an explicit doctrine, has played but a small part in the history of philosophy. To the doctrine 'God is One' or 'There is one God,' where this doctrine forms part of a philosophy, there are opposed forms of opinion which are often classified under three heads: (1) philosophical pantheism, (2) philosophical atheism, (3) philosophical scepticism regarding the divine beings. The modern name 'agnosticism' has been freely used for a philosophical scepticism which especially relates either to God or to other matters of central interest in religion.

Frequently, in summaries of the varieties of philosophical doctrine, the term 'pantheism' has been used as a name for such philosophical doctrines as 'identify the world with God.' Pantheism is often summed up as the doctrine that 'All is God,' 'Everything is God,' or, finally, 'God is everything.' But a more careful study of the philosophical doctrines which have gone under the name of pantheism, or which have been so named by their opponents, would show that the name 'pantheism' is too abstract, too vague in its meaning to make any clear insight easily obtainable regarding what ought to constitute the essence of a philosophical pantheism as opposed to a philosophic monotheism. The two propositions (1) 'God is One,' and (2) 'God is identical with all reality,' or 'with the principle upon which all reality depends,' are not, on the face of the matter, mutually contrary propositions. How far, in reference to a given creed, or theology, or religious tradition, the first proposition appears to be contrary to the second depends upon the special interpretation, and sometimes upon the special prejudices of critics, sects, or philosophers of a given school.

One who asserts the 'unity of God' may or may not be laying stress upon the fact that he also makes a sharp distinction between the reality called God and other realities—*e.g.*, the world. That such sharp distinctions are often in question is an important fact in the history of philosophy. Nevertheless the doctrine that 'God is One' has been philosophically maintained at the same time with the doctrine that 'God is all reality.' For such a view, the two doctrines would simply be two ways of expressing the same centrally important fact. One who wishes to understand the numerous controversies, subtle distinctions, and religious interests which at one time or another have been bound up with the name 'pantheism' must be ready to recognize that the term 'pantheism,' when used without special explanation, is a poor instrument for making clear precisely where the problem lies. In brief, one may say that, while the term 'pantheism' has been freely employed by philosophers, as well as by those who are devoted to practical religious interests, it is, as a historical name, rather a cause of confusion than an aid to clearness. The proposition, 'God is One,' has, despite the complications of doctrine and of history, a comparatively definite meaning for any one who advances a philosophical opinion concerning the nature of God. But the proposition, 'God is all,' or 'God is all reality,' has, in the history of thought, no one meaning which can be made clear unless one first grasps all the essential principles of the metaphysical doctrine of the philosopher who asserts this proposition, or who at least is accused by his critics of asserting it.

If we endeavour, then, to make clearer the essential meaning of the term 'monotheism' by contrasting the historical forms of monotheism with philosophical doctrines which have been opposed to it, we may attempt to solve the problem of defining what is essential to philosophical monotheism by dwelling upon a contrast which, especially in recent discussion, has been freely emphasized. One may assert, *e.g.*, that in speaking of the nature of the 'One God' who is the essential being of monotheistic belief, either (1) one holds that God is 'immanent' in the world, thus asserting the doctrine of the 'divine immanence,' or (2) one holds to the doctrine of the 'transcendence' of God, thus asserting that the divine being in some fashion 'transcends' the world which He has created or with which He is contrasted. But here, again, one deals with two doctrines which, in certain philosophical contexts, do not appear to stand in contrary opposition to each other. For, as is well known, there are philosophies which insist that God is in a certain sense 'immanent' in the world, and also in a certain sense 'transcendent' in His relation to the world. Aristotle, in a well-known passage (*Met.* xii. 10), gave a classic expression of the relations of the doctrines which are here in question, when he stated the question as to whether the divine being is related to the world as the 'order' is to the army, or as the 'general' is to the army. Aristotle replied by saying that 'in a certain sense' God is *both* the 'order' of the world and the 'general,' 'although rather the general.' Thus the opposition between divine immanence and divine transcendence does not precisely state the issue and class of issues which one finds playing the most important part in the history of philosophical monotheism (see art. IMMANENCE).

Another attempt to get the issue between monotheism and the contrasting or opposed philosophical doctrines clearly before the mind may take the well-known form of declaring that monotheism, properly so called, lays stress upon the 'personality of God,' while the opposed or contrasting doctrines, which so often are regarded as constituting or as tending towards pantheism, have as their essential feature the tendency to view God as 'impersonal.' From this point of view, it would be of the essence of monotheism to declare that the One God is a person, while it would be of the essence of those doctrines which are opposed to monotheism to declare, in a fashion which might remain simply negative, that the divine being is not personal. It would then remain for further definition to consider whether the divine being is 'superpersonal' or is 'merely material,' or, again, is 'unconscious,' or is otherwise not of a personal character.

But the difficulty in this way of defining the contrasts which have actually appeared in the history of thought lies in the fact that the very conception of personality is itself, in the history of philosophy, a comparatively late as well as a decidedly unstable conception. It is fair to ask how far the most widely current modern ideas of personality were present to the minds of such Greek philosophers as Plato and Aristotle. All the ideas of personality which philosophers may now possess have recently been vastly influenced by the whole course of modern European civilization. The problem of how far the Occidental and Oriental minds agree regarding what a 'person' is is one about which those will be least likely to dogmatize who have most carefully considered the accessible facts. In fact, the whole experience of the civilized consciousness of any nation or philosopher is likely to be epitomized in the idea of personality which a given philosophy expresses. It seems, therefore, inconvenient to make one's classification of the philosophical doctrine about the nature of God depend upon presupposing that one knows what a philosopher means by the term 'person.' It is true that whoever makes clear what he means by 'person' will thereby define his attitude towards nearly all fundamental philosophical problems. But the idea of personality is, if possible, more difficult to define than any other fundamental philosophical idea. Therefore, to define monotheism as a 'belief in a personal God' will give little aid to the understanding of what sort of belief is in question, so long as the idea of what constitutes a person remains as obscure as it usually does.

A still further effort has been made to define monotheism by making explicit reference to philosophical doctrines concerning the question whether the world was created or is self-existent. As a matter of fact, that set of Christian theological doctrines and of scholastic interpretations of Aristotle which goes by the name of 'creationism' has played an important part in the history of the more technical forms of monotheism. Yet the issues regarding creation are, after all, special issues. How they bear upon the problem of monotheism can hardly be understood by one who has not already defined monotheism in other terms. Creationism is the familiar doctrine that 'the world was created by God.' This doctrine can become clear only if one first knows what one means by God.

The effort to make some further advance towards unravelling the great variety of interwoven motives which appear in the history of monotheism, and which have been suggested by the foregoing considerations, will be aided by attempting, at this point, once more to review the issues with regard to the nature of God, but now from a somewhat different point of view. The problems, both about 'God' and about 'the gods,' have everywhere been inherited by the philosophers from religions whose origins antedated their philosophy. In a few cases, notably in the case of Greece on the one hand and India on the other, the origin of the philosophical traditions regarding the divine being can be traced back to ancient religious tendencies, while the transition from religion to philosophy is fairly well known, and passes through definite stages. In one other instance, the transition from a tribal religion to a form of monotheism which was not due to philosophers but which has deeply influenced the subsequent life of philosophy is also decidedly well known, and can be traced in its essential details. This is the case of the religion of Israel. Now in the three cases in question—that of India, that of Greece, that of Israel—the rise of a doctrine which is certainly in each case a monotheism can be fairly well understood. The three forms of monotheism which resulted led in the sequel to contrasts of doctrine which, in the case of the history of philosophical thought, have been momentous. Ignoring, then, the complications of early religious history, ignoring also the effort further to define and to classify those doctrines which have been summarized in the various definitions of monotheism and its opponents which we have just reviewed, it seems well to reconsider the important varieties of philosophical belief regarding the divine being in the light of the great historical contrast of the three forms of monotheism which India, Greece, and Israel put before us. We shall discard the name 'pantheism,' and make no attempt to define the contrast between divine immanence and divine transcendence, or to speak of the problem in what sense God is personal and in what sense impersonal. Nor can we here exhaust the varieties of philosophical opinion. But the threefold contrast just given will help us to make clearer the philosophical issues of monotheism by naming certain varieties of philosophical thought which have both a definite historical origin and a great influence upon the character of opinion about the divine being. Simplifying the whole matter in this somewhat artificial but still well-founded way, we may say that, from the historical point of view, three different ways of viewing the divine being have been of great importance both for religious life and for philosophical doctrine. No one of these three ways has been exclusively confined to the nation of which the form of opinion in question is most characteristic, and in the history of philosophical thought the three motives are interwoven. But a comparatively clear distinction can be made if we emphasize the three contrasting doctrines, and then point out that these doctrines, while not exclusively due each to one of the three nations or to philosophies which have grown out of the religious traditions of the nation in question, are still, on the whole, fairly to be associated, one with the tradition of Israel, the second with the influence of Greece, and the third with the influence either of India or of nations and civilizations which, in this respect, are closely analogous in spirit to the civilization of India.

(1) The monotheism due to the historical influence of the religion of Israel defines God as 'the righteous Ruler of the world,' as 'the Doer of justice,' or as the one 'whose law is holy,' or 'who secures the triumph of the right.' The best phrase to characterize this form of doctrine, to leave room for the wide variety of special forms which it has assumed, to indicate its historical origin, and also to imply that it has undergone in the course of history a long process of development, is this: 'the

ethical monotheism of the Prophets of Israel.' We include under this phrase that form, or type, or aspect of monotheism, which characterizes philosophies that have been most strongly influenced, directly or indirectly, by the religion of Israel.

(2) The monotheism which has its historical origin very largely in the Greek philosophers defines God as the source, or the explanation, or the correlate, or the order, or the reasonableness of the world. It seems fair to call this form 'Hellenic monotheism.' In the history of philosophy, and especially of that philosophy which has grown up under the influence of Christianity, this idea of God has, of course, become interwoven—sometimes consciously, sometimes unconsciously—with the ethical monotheism of Israel. But, when a philosophy of Christian origin is in question, while in some respects this philosophy, if positively monotheistic, is almost sure to be strongly influenced by ethical monotheism, the most important and essential features of the philosophy in question will be due to the way in which it deals with the relation between the order of the world and the nature of the 'One God.' Aristotle's statement of his own problem regarding whether God is identical with the 'order' or is related to the world as the 'general' is related to the army is a good example of the form which the problem of monotheism takes from this point of view.

(3) The third form of monotheism is very widespread, and has actually had many different historical origins. In the history both of religion and of philosophy this form of monotheism, somewhat like the Ancient Mariner, 'passes, like night, from land to land' and 'has strange power of speech.' Often unorthodox at the time or in the place where it is influential, it has indirectly played a large part in the creeds of various times and places. Usually fond of esoteric statements of doctrine, and often condemned by common sense as fantastic and intolerable, it has had many times of great popular influence. The official Christian Church has had great difficulty in defining the relation of orthodox doctrine to this form of opinion. In the history of philosophy the more technical statements of it have formed part of extremely important systems.

This form of monotheism is especially well marked in the early history of Hindu speculation. It is often called 'Hindu pantheism'; and it is indeed fair to say that it is in many respects most purely represented by some systems of belief and doctrine which have grown up on Indian soil. On the other hand, it has a less exclusive relation to Indian philosophy than the Hellenic form of monotheism, in its later history, has to Greek philosophy, so that the connexion here insisted upon between this kind of monotheism and the early history of Hindu philosophy must be interpreted somewhat liberally. In fact, at the close of the history of Greek philosophy this third form of monotheism appeared as a part of the Neo-Platonic philosophy. Yet in this case an Oriental origin or direct influence is extremely improbable. Examples of the tendency of this form of monotheism to take on new forms, and to be influenced by other motives than those derived from the religion or philosophy of India, are to be found in the recent revival of such types of doctrine in various forms of 'intuitionalism' and 'anti-intellectualism' in European thought.

The essence of this third type of monotheism is that it tends to insist not only upon the 'sole reality of God,' but upon the 'unreality of the world.' The name 'acosmism' therefore is more suggestive for it than the name 'pantheism.' It might be summed up in the proposition 'God is real,' but all else besides God that appears to be real is but an 'appearance' or, if better estimated, is a 'dream.' If we attempt to make more precise the vague word 'pantheism' merely by saying, 'God and the world are, according to pantheism, but one,' the natural question arises, 'If they are but one, then which one?' But what we may now call, in a general way and upon the general historical basis just indicated, 'Indic monotheism,' whether it appears in Hindu philosophy, in Spinoza, or in Meister Eckhart, tends to assert, 'The One is God and God only, and is so precisely because the world is but appearance.' This definition of the third form of monotheism relieves us of some of the ambiguities of the term 'pantheism.'

The threefold distinction now made enables us similarly to review some of the great features of the history of philosophical monotheism in a way which cannot here be stated at length, but which, even when summarily indicated, tends to elucidate many points that have usually been unduly left obscure.

The ethical monotheism of the Prophets of Israel was not the product of any philosophical thinking. The intense earnestness of the nation into whose religious experience it entered kept it alive in the world. The beginnings of Christianity soon required philosophical interpretation, and in any such interpretation the doctrine of the righteous God must inevitably play a leading part. In the course of the development of the Church this doctrine sought aid from Greek philosophy. Consequently, the whole history of Christian monotheism depends upon an explicit effort to make a synthesis of the ethical monotheism of Israel and the Hellenic form of monotheism. This synthesis was as attractive as, in the course of its development, it has proved problematic and difficult. The reason for the problem of such a synthesis, as the philosophers have had to face that problem, lies mainly in the following fact. Whether taken in its original form or modified by philosophical reflexion, ethical monotheism, the doctrine that 'God is righteous,' very sharply contrasts God, 'the righteous Ruler,' or, in Christian forms, 'God the Redeemer of the world,' with the world to which God stands in such ethical relations. On the other hand, for the Hellenic form of monotheism, the problem which Aristotle emphasized about the 'order' and the 'general' indeed exists. But in its essentials Hellenic monotheism is, on the whole, neutral as to the kind of unity which binds God and the world together. Our later philosophies, in so far as they are founded upon Hellenic monotheism, must therefore attempt explicitly to solve the problem which Aristotle stated. And, on the whole, such philosophies tend towards answering the question as Aristotle did: God is both 'order' and the 'general' of the army which constitutes the world. Hellenic monotheism, moreover, is influenced by strongly intellectual tendencies. On the other hand, the monotheism of Israel was, even in its ante-philosophical form, a kind of voluntarism. God's law, viewed as one term of the antithesis, the world which He rules, or which He saves, viewed as the other, are much more sharply contrasted than Aristotle's 'order' and 'general' tend to be. When, in the development of the philosophies which grew out of the Greek tradition, the Hellenic concept of the Logos (*q.v.*) assumed its most characteristic forms, its intellectual interests were, on the whole, in favour of defining the unity of the divine being and the world as the most essential feature of monotheism. But, at each stage of this development, this intellectual or rational unity of the Logos and the world gradually came into sharper and sharper conflict with that ethical interest which naturally dwelt upon the contrast between the righteous

Ruler and the sinful world, and between divine grace and fallen man.

Therefore, behind many of the conflicts between so-called pantheism in Christian tradition and the doctrines of 'divine transcendence' and 'divine personality,' there has lain the conflict between intellectualism and voluntarism, between an interpretation of the world in terms of order and an interpretation of the world in terms of the conflict between good and evil, righteousness and unrighteousness.

Meanwhile, in terms of this antithesis of our first and second types of philosophical monotheism, we can state only half of the problem. Had the monotheism of Israel and the Hellenic doctrine of God as the principle of order been the only powers concerned in these conflicts, the history both of philosophy and of religion would have been, for the Christian world, far simpler than it is. The motives which determine the third idea of God have tended both to enrich and to complicate the situation.

It is true that a direct connexion between ancient Hinduism and early Christian doctrine cannot be traced. But what we have called, for very general reasons, the Indic type of idea of God became, in the course of time, a part of Christian civilization for very various reasons. As we have seen, the doctrine that God alone is real while the world is illusory depends upon motives which are not confined to India. In the form of what has technically been called 'mysticism,' this view of the divine nature in due time became a factor both in Christian experience and in philosophical interpretation. The Neo-Platonic school furnished some of the principal technical formulations of such a view of the divine nature. The religious experience of the Græco-Roman world, in the times immediately before and immediately after the Christian era, also in various ways emphasized the motives upon which this third type of Christian monotheism depends. The Church thus found room within the limits of orthodoxy for the recognition, with certain restrictions, of the tendency to view the world as mere appearance, ordinary life as a bad dream, and salvation as attainable only through a direct acquaintance with the divine being itself.

The very complications which for philosophy have grown out of the efforts to synthesize Hellenic monotheism and the religion of the Prophets of Israel have repeatedly stimulated the Christian mystics to insist that what the intellect cannot attain, namely, an understanding of the nature of God and His relation to the world, the mystic experience can furnish to those who have a right to receive its revelations. Philosophy—intellectual philosophy—fails (so such mystics assert) to solve the problems raised by the contrasts between good and evil, between God and the world, as these contrasts are recognized either by those who study the order of the universe or by those who thirst after righteousness. What way remains, then, for man, beset by his moral problems, on the one hand, and his intellectual difficulties, on the other, to come into real touch with the divine? The mystics, *i.e.* those who have insisted upon the third idea of God, and who have tested this idea in their own experience, have always held that the results of the intellect are negative, and lead to no definite idea of God which can be defended against the sceptics, while, as the mystics always insist, to follow the law of righteousness, whether with or without the aid of divine grace, does not lead, at least in the present life, to the highest type of the knowledge of God. We approach the highest type of knowledge, so far as the present life permits, if we recognize, in the form of some sort of 'negative' theology, the barrenness of intellectualism, and if, meanwhile, we recognize that the contemplative life is higher than the practical life, and that an immediate vision of God leads to an insight which no practical activity, however righteous, attains. To teach such doctrines as matters of personal experience is characteristic of the mystics. To make more articulate the idea of God thus defined has formed an important part of the office of theology.

Without this third type of monotheism, and without this negative criticism of the work of the intellect and this direct appeal to immediate experience, Christian doctrine, in fact, would not have reached some of its most characteristic forms and expressions, and the philosophy of Christendom would have failed to put on record some of its most fascinating speculations.

It is obvious that, on the face of the matter, the immediate intuitions upon which mystical monotheism lays stress are opposed to the sort of insight which the intellect obtains. Even here, however, the opposing tendencies in question are not always in any very direct contrary opposition in the thought or expression of an individual thinker or philosopher. Thus, in an individual case, an exposition of mysticism may devote a large part of its philosophical work to a return to the Hellenic type of theism. That this was possible the Neo-Platonic school had already shown (see art. NEO-PLATONISM). Wherever Christian monotheism is strongly under the Neo-Platonic influence, it tends to become a synthesis of our second and third types of monotheism. In such cases the monotheism is Hellenic in its fondness for order, for categories, and for an intellectual system of the universe, and at the same time devoted to immediate intuitions, to a recognition that the finite world is an appearance, and to a definition of God in terms of an ineffable experience, rather than in terms of a rational system of ideas. Such a synthesis may, in an individual system, ignore the conflicts here in question. Nevertheless, on the whole, the opposition is bound to become, for great numbers of thinkers and, on occasion, for the authorities of the Church, a conscious opposition. And the opposition between the ethical and the mystic types of monotheism is in general still sharper, and is more fully conscious. Despite all these oppositions, however, it remains the case that one of the principal problems of Christian theology has been the discovery of some way to bring the third of the ideas of God, the third of the tendencies to define God as One, into some tolerable and true synthesis either with the first or with the second of the three types of monotheism, or with both.

In the technical discussions of the idea of God which have made up the introductory portions of many systems of so-called 'nature theology,' it has been very general for the philosophers of Christendom to emphasize the Hellenic type of theism. The so-called philosophical 'proofs of the divine existence' make explicit some aspect of the Hellenic interest in the order and reason of the world. The 'design argument,' first stated in an elementary form by Socrates, and persistently present in popular theology of the monotheistic type ever since, is an interpretation of the world in terms of various special analogies between the particular sorts of adaptation which the physical world shows us and the plans of which a designing intelligence, in the case of art, makes use. The so-called 'cosmological argument' reasons more in general terms from the very existence of this 'contingent' world to the Logos whose rational nature explains the world. The highly technical 'ontological argument' insists upon motives which arise in the course of the effort to define the very nature of an orderly system. In its briefest statement the ontological argument is epitomized by Augustine when he defines God as 'Veritas' and declares that Veritas must be real, since, if there were no Veritas, the proposition that there is no Veritas would itself be true. The more highly developed forms of the ontological argument reason in similar fashion from our own ideas of the nature of the Logos, or of the rationally necessary order system of the universe—in other words, from the realm of Platonic ideas, in so far as it is manifested through and to our intellect, to the reality of such a system beyond our intellect.

It has been insisted, and not without very genuine basis, both in religion and in the controversies of the philosophers, that all such efforts, through the intellect, to grasp the divine nature lead to results remote from the vital experience upon which religious monotheism and, in particular, Christian monotheism must rest, if such monotheism is permanently to retain the confidence of a man who is at once critical and religious. Into the merits of the issues thus indicated, this is no place to enter. In any case, however, both the warfare of the philosophical schools and the contrast between intellectual theology and the religious life have often led to philosophical efforts to escape from the very problems now emphasized to some more immediate intuition of the divine, or else to assert that there is no philosophical solution to the religious problem of theism. Thus intellectualism in theology, in the forms in which it has historically appeared, has repeatedly tended to bring about its own elimination. The more highly rational it has become, and the more its apparent barrenness, or its inability to combine the various motives which enter into the three different monotheistic tendencies has become manifest, the more the result of a careful analysis of the intellectual motives has led either to the revival of mysticism or to a sceptical indifference to philosophical theism. To say this is merely to report historical facts.

Some negative results of the more purely Hellenic type of monotheism became especially manifest through the results of the Kantian criticism of reason and of its work. It is extremely interesting, however, to see what, in Kant's case, was the result of this criticism of the traditional arguments for the existence of God. By temperament Kant was indisposed to take interest in experiences of mystic type. For him, therefore, the failure of the intellect meant a return to the motives which, in no philosophical formulation, but in the form of an intensely earnest practical faith, had long ago given rise to the religion of Israel. Therefore the God of Kant is, once more, simply the righteous Ruler. Or, as Fichte in a famous early essay defined the idea, 'God is the moral order of the world.' This Kantian-Fichtean order is, however, not the Hellenic order, either of the realm of Platonic ideas or of the natural world. It is the order of 'the kingdom of ends,' of a universe of free moral agents, whose existence stands in endless contrast to an ideal realm of holiness or moral perfection, after which they must endlessly strive, but of whose real presence they can never become aware through a mystical vision or by a sure logical demonstration. The righteous man, according to Kant, says: 'I will that God exists.' Kant defines God in terms of this will. Monotheism, according to this view, cannot be proved, but rationally must be acknowledged as true.

Yet, in his *Critique of Judgment*, Kant recognized that the requirement to bring into synthesis the intellect and the will, and to interpret our æsthetic experience, *i.e.* our acquaintance with the kind of perfection which beauty reveals—this ideal, a synthesis of the ethical, the intuitional, and the rational—remains with us. And, despite all failures, this ideal is one from which philosophy cannot escape.

The revived interest in intuition and in religious experience which has characterized the transition from the 19th to the 20th cent. has once more made the mystical motives familiar to our present interest. The permanent significance of the ethical motives also renders them certain to become prominent in the attention of serious-minded men, even though the Kantian formulation of the ethical ideals seems for the moment, in our mobile contemporary philosophical and religious thought, too abstract and rigid. And so we are not likely, in future, to accept any merely one-sided Hellenism.

While no attention can here be given to the solutions of the problem of philosophical monotheism which have been proposed during the last century, the problem of monotheism still remains central for recent philosophy. It may be said that dogmatic formulations are at the present time often treated with the same indifference which is also characteristically shown towards the faith of the fathers, viewed simply as a heritage. Nevertheless, the problems of philosophical monotheism remain as necessarily impressive as they have been ever since the early stages of Christian theology. They are as certain to survive as is philosophy itself. What the whole history of the monotheistic problem in philosophy shows becomes to-day, in view of our explicit knowledge of the philosophy of India, and in view of our wide comparative study of religions, more explicit than ever. Philosophy is a necessary effort of the civilized consciousness, at least on its higher level. Monotheism is a central problem of philosophy. This problem is not to be sufficiently dealt with by merely drawing artificial or technical distinctions between Platonic or Neo-Platonic theories; nor can the problem be solved by calling it the problem of the immanence of God as against His transcendence. The question 'Is God personal?' becomes and will become more explicit in its modern formulation the more we become aware of what constitutes a person. Meanwhile, as was remarked above, the problem of monotheism has other aspects besides the problem of personality.

The essentials of the great issue remain for us, as for our fathers, capable of formulation in the terms which have here been emphasized. To repeat, the philosophical problem of monotheism is (1) In what sense is the world real? (2) In what sense is the world a rational order? (3) In what sense is the world ethical? The effort to answer these questions cannot be made by exclusive emphasis on one of them. For, as we have seen, the problem of monotheism requires a synthesis of all the three ideas of God, and an answer that shall be just to all the three problems. Whether monotheism is true or not can be discovered, in a philosophical sense, only through a clear recognition of the contrast of the three ideas of God, and the synthesis which shall bring them into some sort of harmony. The further discussion of the nature of this harmony does not come within the scope of this article (see art. GOD [Biblical and Christian]).

JOSIAH ROYCE.

MONOTHELETISM.—1. The problem.—The Monenergistic or Monothelete controversy seems at first glance to be a mere sequel to the Monophysite conflict, a knowledge of which is assumed in the present article. On a closer examination, however, we see that the later controversy has a character of its own, since it shows how the adoption of the orthodox Diphysite point of view was not regarded as leading necessarily and directly to Dithelete conclusions. In the art. MONOPHYSITISM (p. 811 ff.) it was indicated how the new orthodoxy came to terms with the problem of the two natures in the one person of Jesus Christ—the problem raised by the Symbol of Chalcedon. The person of the God-man was conceived as arising from the person (*ὑπόστασις*) of the Logos, which assimilated the human attributes, and upon which, as the core of personality, human nature was, so to speak, engrafted by the process of *ἐνυπόστασις*. On this hypothesis it might seem entirely justifiable to ascribe everything that Christ said or did to the one volitional activity (*ἐνέργεια*) of the God-man, and actually, indeed, to regard all as emanating from His undivided will (*θέλημα*). Such a view, moreover, could be supported by the evidence of earlier Fathers. Cyril, with reference to Lk 8^{54}, had said of Christ: *μίαν τε καὶ συγγενῆ δ᾽ ἀμφοῖν* [*i.e.* word and hand] *ἐπιδεικνὺς τὴν ἐνέργειαν*; and it was possible, above all, to adduce the witness of a passage in the fourth Epistle of the pseudo-Dionysius—a passage containing the phrase *μία θεανδρικὴ ἐνέργεια*, which was destined to play so important a part in the coming days. The Monenergists were possessed with the idea that the redemptive activity of the God-man emanated wholly and solely from His divine nature, that nature providing the stimulus which was mediated by His rational soul and brought to realization in His body. Nor had even the natural operations of Christ as a rational being their source in His human nature purely by itself, as that nature subsisted, not by itself alone, but in the divine nature conceived as inherently personal. Hence that which in Christ corresponds to human nature was itself the work of God: it was one energy, whose source is God, and whose instrument was His humanity; it was one will, and that will was divine. To Sergius of Constantinople (cf. § 2) it seemed perfectly obvious that the rationally endowed body of Christ effected its natural movements only in accordance with the measure assigned by His divine will, and that, just as our bodies are governed by our rational souls, so the whole complex of Christ's human nature was constantly directed by His deity.

The objections urged by the opposite party against this theory of the oneness of Christ's *ἐνέργεια* were based upon the feeling that it surrendered the distinctively human element in Christ's activity, since it implied that His human nature was a mere passive instrument, and must therefore be conceived as inanimate or, at least, as non-rational. Such a view, however, was in reality a reversion to Apollinarism (*q.v.*); and, even if the Monenergists did not go so far, yet their idea of the one composite energy really presupposed that of the one composite nature as held by the Severians. In point of fact, the theses of the Monenergists approximate very closely to those of the Severians—the more moderate party of the Monophysites. As the Monenergists themselves came to recognize this, they surrendered the phrase *μία ἐνέργεια* and rallied around the *ἓν θέλημα*. This position they regarded as unassailable, since two wills (as distinguished from mere impulses or natural tendencies to action) seemed inevitably to involve two subjects endowed with volition (*δύο ὑποστάσεις*). They rightly recognized that, if there was in the God-man a will which diverged from His divine will, that divergent will could spring from nothing else than an ungodly tendency in the nature which He had assumed. Such a view, however, would have been in conflict with the doctrine of the sinlessness of Christ's human nature, in which all parties were at one, and would therefore have been accounted blasphemy. Gregory of Nyssa, writing long before, had said: *τὸ ἐκείνου θέλειν οὐδὲν ὑπεναντίον τῷ θεῷ, θεώθεν ὅλον*. The adverse party was wont to appeal to passages like Mt 26^{39}, where the human will and the divine will seem to stand in opposition; but the Monotheletes sought to show from the Fathers that, on a strict interpretation of this text, Christ had a human will *κατ᾽ οἰκείωσιν* only. They did not mean to deny the presence of a human activity in the one will of Christ, but they held that this activity was entirely due to His divine will. In relation to His divine *ἐνέργεια*, they maintained, the human *ἐνέργεια* becomes a *πάθος*, and, when Gregory said of Christ that His soul wills, he meant that the volition of Christ's soul was due to the will of the Deity who was personally united with His soul, and that, accordingly, it was divine volition in a human form.

The Monenergists and Monotheletes sought to support their contention also on the ground that the phrase *δύο ἐνέργειαι* had never yet been heard in the doctrinal controversy; and, while this claim was not absolutely valid, yet Sergius could say with some show of reason that none of the *θεόπνευστοι τῆς ἐκκλησίας μυσταγωγοί*, *i.e.* none of the recognized Fathers of the Church, had made use of the phrase. As regards the formula of the *δύο θελήματα*, again, the Monothelete case was a still stronger one. In earlier writers the phrase *δυὰς θελημάτων* is used only as expressing a final consequence foisted upon those who held the doctrine of the two natures. The use of the phrase in a positive sense can be traced only in a single work, written—if genuine—before the Monothelete controversy, viz. the treatise *περὶ τῆς ἁγίας τριάδος καὶ περὶ τῆς θείας οἰκονομίας* ascribed to Eulogius of Alexandria († 607). But, while the Ditheletes were thus unable to call tradition to their aid, they operated all the more zealously with the inherent logic of their case. In point of fact, no logical objection could be urged from the standpoint of the new orthodoxy, as, *e.g.*, from that of Leontius of Byzantium, against the procedure of ascribing *δύο φυσικαὶ ἐνέργειαι* to the *δύο φύσεις*. Indeed, it was, more than all else, this logical inference, *i.e.* the consistent development of the position affirmed in the formulæ of Chalcedon, that helped the doctrine of the two wills to gain the day. It is true that the contradiction involved in the doctrine of the two natures was rendered still more palpable in that of the two wills. But those who had come to terms with the former doctrine had no difficulty in accepting the latter, and it is the aim of the following historical sketch to show how this point was reached.

2. The beginnings of the controversy.—The secession of the Monophysites did serious damage to Byzantium and its Church. It smoothed the way for the advance of the Arabs and of Islām. Far-seeing and energetic politicians sought to arrest the mischief by working for the ecclesiastical reconciliation of the eastern and southern provinces of the empire. The most outstanding figures in this movement were the emperor Heraclius (610–641) and the patriarch Sergius (610–638). Sergius, a Syrian born of Jacobite parents, was already giving his mind to the thought of union in the early years of his tenure of office. He caught at the watchwords *μία ἐνέργεια* and *μία θέλησις ἤγουν ἓν θέλημα*, which had apparently been introduced into the controversy by the Alexandrian Monophysites, and he succeeded at the outset, on the basis of the doctrine implied by these expressions, in winning the emperor's approval of his designs. Soon afterwards (622) Heraclius issued an edict proscribing the doctrine of the *δύο ἐνέργειαι*. But, although Sergius brought all the weapons of patristic learning to bear upon the Armenian and Syrian Monophysites, the negotiations made little headway. It was not until 633 that indications of real progress began to show themselves. **Cyrus**, patriarch of Alexandria, whom Heraclius had translated to that city from Phasis in Lazica, succeeded in bringing about a union with the Theodosians, *i.e.* the Monophysites (see art. MONOPHYSITISM, § 3). The doctrinal programme drawn up by Cyrus, while setting the doctrine of the two natures in the forefront, guarded it carefully by special clauses; it distinctly recognized the Cyrillian terminology of the one incarnate nature, and it adopted the Areopagite formula of the one theanthropic energy. The Monophysites had some grounds for thinking that, as one of our sources puts it, it was not they who made alliance with Chalcedon, but rather Chalcedon with them. About this time, too, the metropolitan church succeeded in effecting an understanding with the Armenian, though this did not last long. The greatest triumph, however, was the winning of **Athanasius**, the Jacobite patriarch of Antioch; for now the occupants of the three great Oriental sees were all on the same side. But at this juncture the union that had been brought about with such difficulty was gravely imperilled by the action of a Palestinian monk.

This was **Sophronius**, who had at an early date maintained relations with the Alexandrian patriarchs Eulogius and John the Merciful. He now made his way from Palestine to Egypt in order to lodge a protest with Cyrus against the articles of union, in which he thought he discerned Apollinarism. As Cyrus hesitated to withdraw the articles at the request of Sophronius, the latter proceeded to Constantinople and tried to induce Sergius to delete the expression *μία ἐνέργεια* from the document. The patriarch was not prepared to take that step, but for the sake of peace he agreed to send his Alexandrian colleague a letter recommending him to have done with the dispute as to one *ἐνέργεια* or two, but forbidding him to sanction the thesis of the two wills, which he stigmatized as blasphemous (*δυσσεβές*). With this Sophronius was satisfied. Sergius, moreover, secured another triumph in gaining the support of Pope Honorius for his pacific policy (cf. § 3). Shortly afterwards (634) Sophronius was appointed to the see of Jerusalem. He broke away at once from the accepted understanding by referring in his inaugural encyclical to the two natures, though he certainly avoided any overt acceptance of the doctrine of the two wills. His action was deeply resented by Sergius, and Honorius tried, though without success, to persuade him to drop the objectionable expression. Eventually the emperor issued a decree, framed by Sergius—the so-called Ecthesis of 638—forbidding all mention either of one energy or of two energies: of one, because the mention of it might lead to a denial of the two natures, and of two, because two energies seemed logically to involve two mutually antagonistic wills.

3. The case of Honorius.—Honorius of Rome, by reason of his attitude in the Monothelete controversy, was, as will be explained below (§ 5), put under the ban by an Ecumenical Council. This proceeding has had such important consequences in the war of the confessions that the historian cannot afford to ignore it. Here we must first of all ask what Honorius had really said. The missive in which he explained his theological position to his colleague in Constantinople is extant only in a Greek translation, but the agreement of this translation with the Latin autograph was definitely confirmed at the Council. In this letter Honorius had set in the foreground his desire that the controversy as to one or two energies should be allowed to rest or relegated to the grammarians. The introduction of the new phrases into the doctrinal terminology might bring those who used them under suspicion either of Eutychianism or of Nestorianism. He nevertheless adhered impartially to the view that, whatever decision might be made between the hypothesis of the one and that of the two energies, it was at all events necessary to accept the doctrine of a single will (*ὅθεν ἓν θέλημα ὁμολογοῦμεν τοῦ κυρίου Ἰησοῦ Χριστοῦ*); for, as the Son of God had assumed a pure and supernaturally begotten human nature, the idea of a second will, disparate or antagonistic (*διάφορον ἢ ἐναντίον θέλημα*), was simply out of the question. Passages like Mt 26[39] or Jn 5[30], in which Christ seems to mark a contrast between His own will and the will of God, did not in any real sense indicate a different will, but simply referred to the economy of His assumed humanity (*οὐκ εἰσὶ ταῦτα διαφόρου θελήματος, ἀλλὰ τῆς οἰκονομίας τῆς ἀνθρωπότητος τῆς προσληφθείσης*). Christ, as our example, adopted this manner of speaking for our sake, *i.e.* in order that we should follow His footsteps, not seeking our own will but the will of God.

The letter of Honorius reveals throughout an intelligent and accurate grasp of the situation. To reproach its writer with having adopted the doctrine of the one will is simply an anachronism, for that doctrine had not yet become ecclesiastically suspect. Even Sophronius himself, in fact, as has already been said, had not put the doctrine of the two wills upon his programme, and the question as to the Monotheletism of Honorius is of a piece with that regarding the Monophysitism of Cyril of Alexandria. We might venture to say, indeed, that, if Honorius had, a generation later, occupied the Roman chair in place of Agatho, he would have given the same judgment as the latter did, and thus, to speak paradoxically, would have pronounced his own condemnation. Agatho and the Council of 681 stood face to face with a situation of a totally different kind. As Monotheletism had then become a thing of evil repute, they were simply bound to condemn it, and, in doing so, they could not avoid reprobating the missive of Honorius as well. Above all, however, we must not forget that Agatho not only refrained from protesting against the anathematization of his predecessor, but by the voice of his legate actually gave it his sanction. In the following year Pope Leo II. expressly ratified the condemnation in a communication to the emperor, in which he spoke of Honorius as one 'qui hanc apostolicam sedem non apostolicae traditionis doctrina illustravit, sed profana proditione immaculatam fidem subvertere conatus est.' This judgment is, no doubt, unduly severe, and, measured by the standard of historical truth, positively false. Still, it certainly shows the remarkable freedom from prejudice with which the authority of a pope in matters of doctrine could then be viewed even in Rome itself. It is quite incompetent, on the other hand, to bring the case of Honorius into the question of papal infallibility. If we keep in mind the provisions of the Vatican dogma regarding the import and scope of the pope's infallibility, we shall see at once that they do not apply at all to the missive of Honorius. If the latter is declared to be without error, the same attribute might with equal justification be applied to any other utterance of a pope.

4. Byzantium and Rome in conflict.—After the death of the emperor Heraclius, and the brief reigns of his two sons, his grandson, **Constans II.** (641–668, son of Constantine III.), was raised to the throne in consequence of a court revolt. Constans, too, adhered to the Ecthesis, which, however, had meanwhile encountered a keen resistance, especially among the clergy of the West. In Rome Pope John IV. officially condemned Monotheletism; the N. African bishops raised a vigorous agitation against it; and soon the whole western province was ringing with passionate debate. Constantinople, on the other hand, remained loyal to the Ecthesis. The patriarch Pyrrhus, who had succeeded Sergius, was deposed by Constans on political grounds, being superseded by Paul, a man of like doctrinal views with himself. Pyrrhus went to Africa, and there intervened vigorously in the conflict. With Maximus, an abbot of Constantinople, who had likewise removed to Africa, he conducted a discussion the records of which are among the most notable documents of the whole controversy. Here Maximus proved the victor.

This Maximus was the most eminent and effective champion of Ditheletism, and his constancy to his creed won him the title of 'Confessor.' He was born *c.* 580 at Constantinople. His career was that of a high State functionary, and he acted as imperial secretary in the reign of Heraclius. From 630 he lived in the monastery at Chrysopolis (now Scutari), where he soon attained to the dignity of an abbot. He worked energetically on behalf of Ditheletism both in Africa and at Rome, and it was at his instigation that the Lateran Council of 649 (see below) was summoned. As the part which he thus played ran counter to the policy of the emperor, he was at length put upon his trial. In 653 he was arrested and taken to Constantinople, and two years later he was banished. In 662 the unfortunate man was once more subjected to a legal process, as a result of which his tongue was cut out and his right hand struck off, and he died within the year in Lazica on the east coast of the Euxine. The best known of his extant works is his *Scholia* to the pseudo-Dionysian writings, and it was, in fact, the comments of Maximus that secured the Church's recognition of these texts.

The vehement opposition of the Ditheletes, however, did not wholly fail to influence the ecclesiastical policy of the emperor. Already in 648 Constans, acting on the advice of the patriarch Paul, had issued a decree, the so-called Typus, declaring that the dispute regarding the doctrine of the wills must come to an end at once. The Typus, unlike the Ecthesis, avoids all argumentation on matters of detail; disobedience to its provisions was to be visited with severe ecclesiastical and civil penalties. But the Ditheletes would not be silenced. They had now their centre in Rome, and a Council conducted in 649 by Pope Martin in the Constantinian basilica of the Lateran Palace, and attended also by the Greek monks who had fled to Rome, affirmed, in explicit conformity with the declaration of Chalcedon, its adherence to the doctrine of two wills and two energies corresponding to the two natures of Christ. The action of Martin raised an agitation in both East and West, and the emperor, bitterly resenting this, as well as the pope's friendly relations with the exarch Olympius, then lying under suspicion of high treason, had him sent to Constantinople (653), and, after a criminal trial, banished to the Chersonese, where in 655 death released him from his sufferings.

5. The 6th Ecumenical Council and the end of the controversy.—For a time it appeared as if the new policy of peace would be attended with success. Pope Vitalian entered into friendly alliance with the emperor; ecclesiastical communion between East and West was tacitly restored; and, when Constans visited Rome in 663, he was received with due imperial honours. At the murder of the emperor, however, the antagonism broke out more fiercely than ever, and the dissension led to a fresh rupture of ecclesiastical relations. Such a state of matters was felt by the politicians, as formerly in Justinian's time, to be intolerable; and to deal with it the emperor **Constantine IV.** Pogonatus (668–685) resorted to the plan of holding an imperial Synod. In November 680, accordingly, the Eastern prelates, together with the legates of Pope Agatho, assembled in the Hall (*τροῦλλος*, hence 'Trullan' Council) of the imperial palace at Constantinople. This Council, which sat, with considerable interruptions, until September 681, is recognized officially by both Churches as the 6th Ecumenical Council. The members, with abundant excerpts from the Fathers in their hands, carried the debate from one point to another, until at last the Roman representatives won acceptance for the doctrine of the two wills, and procured the condemnation of its opponents, living and dead alike, including, as we saw above (§ 3), Pope Honorius. The Roman point of view is set forth in the comprehensive statement laid by Agatho before the emperor—a document that came to be regarded as a counterpart to the Tomus of Leo I. (cf. art. MONOPHYSITISM, § 1). In the Symbol of the Council the terms in which the Chalcedonian formula defines the relation of the two natures are applied to the two inherent wills (*δύο φυσικαὶ θελήσεις ἤτοι θελήματα*). Thus the two wills corresponding respectively to the two natures are not opposed to each other (*οὐχ ὑπεναντία*); on the contrary, the human will is obedient to the divine and omnipotent will to which it is subject (*ἑπόμενον τὸ ἀνθρώπινον αὐτοῦ* [*i.e.* *τοῦ λόγου*] *θέλημα καὶ μὴ ἀντιπίπτον ἢ ἀντιπαλαῖον, μᾶλλον μὲν οὖν καὶ ὑποτασσόμενον τῷ θείῳ αὐτοῦ καὶ πανσθενεῖ θελήματι*), for it was necessary that, while the will of the flesh must indeed act, it should be subordinate to the divine will. Just as the flesh of the God-Logos (*τοῦ θεοῦ λόγου*) is called flesh, and is flesh, so the natural will of this flesh is called, and rightly called, the will of the God-Logos. And, as His holy and stainless animate flesh was not taken away in being made divine (*θεωθεῖσα οὐκ ἀνῃρέθη*), but remained within its own limitations and relations (*ἐν τῷ ἰδίῳ αὐτῆς ὅρῳ καὶ λόγῳ διέμεινεν*), so the human will likewise was not abolished in the act of deification, but was still preserved.

Agatho did not live to see the triumph of his cause, and it was left to his successor, Leo II., to secure the acceptance of the Council's decrees in the West. The most zealous antagonist of Ditheletism in the East, Macarius, patriarch of Antioch, was prevented from doing further mischief by confinement in a monastery. The second Trullan Council, the so-called Concilium Quinisextum (692), homologated the condemnation of Monotheletism. This does not mean, of course, that the conflict was wholly at an end, and, in fact, it was intermittently fanned to fresh outbursts by the wranglings of the Byzantine court. Eventually the emperor Philippicus Bardanes (711–713) undertook to deal with it, while his successor, Anastasius II. (713–715), restored the authority of the Council of 680–681. But Monotheletism was still faithfully adhered to by the Maronites of Mt. Lebanon.

LITERATURE.—i. *SOURCES.*—(1) Letters and other written communications of those who took part in the controversy, as found in the documents of the Lateran Synod and the 6th Ecumenical Council; (2) contemporary works, esp. the writings of Maximus Confessor (*Opuscula theologica et polemica ad Marinum*, *Disputatio cum Pyrrho*) and statements in Anastasius Sinaita, Περὶ τοῦ κατ' εἰκόνα καὶ καθ' ὁμοίωσιν, bk. iv. (A. Mai, *Script. Vet. Nova Coll.*, Rome, 1821, vi. 193 ff.); (3) later chronicles and historical works, as, *e.g.*, the Ἱστορία σύντομος of the patriarch Nicephorus, and the Χρονογραφία of Theophanes.

ii. *MODERN WORKS.*—The reader should consult the works cited at the art. MONOPHYSITISM; those of Gibbon, Walch, Dorner, Hefele, Harnack, and Krumbacher are well worth attention also as regards Monotheletism. The disputes in Armenia touched upon in § 2 of the present article are discussed with special care in G. Owsepian, *Die Entstehungsgeschichte des Monotheletismus nach ihren Quellen geprüft*, Leipzig, 1897. The best recent discussion of the case of Honorius—though from

the standpoint of papal infallibility—is given in J. Chapman, *The Condemnation of Pope Honorius*, London, 1907 (=*Dublin Review*, cxxxix. [1906] 129 ff., cxl. [1907] 42 ff.). For the relation of the present art. to the writer's artt. in *PRE*^{3}, cf. the closing note in the literature of art. MONOPHYSITISM.

G. KRÜGER.

MONSTERS (Biological).—'Monstra vocantur quia monstrant.' This ancient platitude may seem ridiculous to-day, but it has not yet lost its meaning entirely. Doubtless in a modern civilized society the birth of a two-headed lamb, of a 'bull-dog calf,' or of a cyclopian child no longer excites attention as a portent of disaster or proof positive of witchcraft. Yet to a certain section of the community the objects present opportunities of enlarging the common store of biological knowledge. The specimens themselves demonstrate eloquently the possibilities of aberration in the processes of normal development and growth. They testify to the existence of numerous independent forces or influences, balanced delicately under normal circumstances. They point to a disturbance of the balance. They reveal the nature of individual influences, as manifested when one has been exerted in excess, to the exclusion or suppression of the countervailing factors.

In biology monsters are regarded as extreme instances of developmental varieties. Variations of lesser degrees constitute the class of 'abnormalities,' although, as explained in art. ABNORMALITIES (Biological), no hard and fast line separates the two groups. Many monstrous formations are determined by disturbances affecting the embryo or the fœtus, though the post-natal period of growth is by no means free from disorders productive of a comparable result. And instances of the latter kind, such as retarded adolescence, or precocious senility, may be included fairly with others showing the extreme tenuity of the neutral zone between health and disease.

The study of monsters falls naturally into two divisions: (*a*) the investigation of their actual structure, and (*b*) research into the mode of their production.

(*a*) On the anatomical side a classification has been attempted, and it is based upon consideration of the part or parts actually affected. In view of the vast number of categories thus recognized, only the most cursory survey is possible here; and, instead of rehearsing the long list of classes and their subdivisions, it must suffice to note that, while the whole body has suffered in some cases, in others certain parts only will be found to be distorted.

The developmental history of monsters shows us that, as a general rule, the departure from what is normal will be greater and more complete in proportion as the disturbance was early in its occurrence. For in the first phases of development, when the total mass of the embryo is almost infinitesimally small, even a slight error will affect the rudiments of every organ and structure that is to be perfected subsequently. At this point again two distinct groups of monsters must be contrasted. In some cases the uterus may void its contents prematurely as a shapeless mass; to this, in human pathology, the antiquated term 'mole' is still applied. Or, again, the disturbance may lead to partial 'gemination,' *i.e.* to some distorted kind of twin-formation. Thus twins of equal size may continue to grow though connected with each other, and at the birth may produce such a phenomenon as the 'Siamese twins.' In other instances of this class the twins are quite unequal in point of size and, it may be, of development. As a result, an almost normal child may be born with an imperfect twin attached to it. The two are then distinguished as the 'autosite' and 'parasite' respectively. The parasite is most commonly attached to the autosite in or about the middle line of the body. It may present almost any appearance, from that of a mere wart-like excrescence to that of a headless trunk with arms and legs. In rare instances the parasite has been found to be entirely enclosed within the body of its host, so that it is not visible externally at all.

Lastly, in yet another class of monsters, the process of gemination may have been complete but unequal, and one twin is born in a normal state, while the other is represented by a spherical mass, consisting of various tissues and rudiments of organs in the most complete confusion. Even the latter may be maintained alive throughout the intra-uterine period of existence.

Apart from these instances of 'twinning,' we may notice that certain particular structures such as the heart or the brain may be defective to the point of obliteration, while a large class bears witness to interference with such normal processes as the formation of the face or the closure of the walls of the body to protect the viscera.

(*b*) The study of the normal processes of development throws a flood of light on the problem of explaining the particular aberration responsible for the occurrence of a monster. Physiological investigations have dealt with the nature of the disturbing causes, and to these we shall now turn.

The artificial production of monsters first claims attention. In fish-hatcheries the occurrence is accidental and unwelcome, yet the frequency with which grotesquely-formed individuals appear among the fry is so well known as to be almost a matter of common knowledge. The eggs of the domestic fowl have been used for experimental purposes for at least fifty years past. In this department of biology the name of the French observer, C. Dareste, deserves special mention. The more usual modes of procedure are to subject the eggs during artificial incubation to selected abnormal influences. These may be of the nature of magnetic force, variations of temperature, or, again, the disturbances caused by partially varnishing the eggs, or by subjecting them to incessant rotation. In these ways various physical agencies have been shown to be influential in producing monstrous forms. Eggs of other animals (often those of Invertebrates) have been employed to test the effects of chemical agents or of altering the chemical constitution of the media in which the developing eggs normally rest. Such ova have also been the subjects of experiments in which the fertilizing element has been varied.

Physiological research of this kind has established clearly the susceptibility of the egg-cell to a variety of influences, whether these be physical, mechanical, or chemical. At this point another possibility seems to demand notice. The influence of so-called maternal impressions has long been discussed by those who are not prejudiced on this subject. Only the highest forms of life are suitable for observation or research in this respect, and it cannot be said that the potency of such impressions has been established.

Turning more particularly to human beings, it may be mentioned that medical research has shown that certain monstrous developments, viz. Acromegaly and Achondroplasia, are due to the excess or deficiency of certain fluids which normally pass with the blood to bathe the tissues of the body. In this department of research only the first steps have been taken as yet.

In such ways the anatomical study of monsters shows the investigator what parts have suffered, while the physiologist is able to point to the disturbing element. Thus we are left with the impression that, where the balance of reacting forces is so delicate, no absolute standard of what is a normal form is possible. A normal individual is connected with others which we call abnormal by an infinite number of intermediate forms. And the abnormal examples in turn lead on to monsters.

That which is born is the outcome of a host of interacting forces. Its capacity to maintain existence and to reproduce its kind depends first upon its conformation, and then upon the environment in which it finds itself. Two remarks may be made in conclusion. Though the attribute of vast size is commonly associated with our ideas of monsters, yet from the biological point of view this is not necessary, and huge monsters are but representative of one out of many possibilities.

And lastly, while in this article the occurrence of monstrous forms among animals has been reviewed, it is to be remembered that most of the considerations here set forth are applicable equally to the vegetable kingdom.

LITERATURE.—Special mention may be made of **C. Dareste**, *Recherches sur la production artificielle des monstruosités*, Paris, 1877; other contributions to the literature are so numerous as to preclude even a partial enumeration here. Reference is made specially to the exhaustive bibliography provided by E. Schwalbe, *Morphologie der Missbildungen*, Jena, 1906.

W. L. H. DUCKWORTH.

MONSTERS (Ethnic).

1. Various kinds of monsters.—The existence of monstrous beings, human, animal, or diabolic, is believed in at all levels of culture. They are referred to or described in stories, traditions, or myths, or they are depicted or represented in some artistic form. Among savages monstrous animals are often supposed to exist, like the Bun-yip of Australian tribes—a mythic water-monster who carries off women—or the monsters or dragons said to swallow youths at initiation in New Guinea.[1] Frequently more or less distant tribes are believed to have some monstrous or abnormal feature—one eye, more than two eyes, eyes under the arms, vast ears, two or more heads—to be headless or featureless or of great size, or to possess tails. Ghosts, especially ghosts of those who have died a violent death, are often visualized as monsters of a more or less horrible kind, usually with a fondness for human blood. Among barbaric peoples similar beliefs are found, especially in Oriental mythology and folk-lore. Here whole classes or tribes of monstrous beings exist, like the *rākṣasas* of Hindu myth—hideous fiends with shape-shifting powers—or the evil *jinn* or the ghouls of Arabic belief, or the satyrs, centaurs, and cyclopes of Greek mythology. Here also human tribes of monstrous form are a subject of popular belief. The people of Jābah (Java?) were supposed by the Arabs to have their heads in their breasts.[2] Herodotus describes some of the tribes supposed to live beyond the region of the Scythians—men with goats' feet, men with one eye (the Arimaspi)—and other tribes believed in by the Libyans—monsters with dogs' heads or headless with eyes in their breasts.[3] Pliny also writes copiously about such tribes.[4] Irish mythology speaks of tribes of men with dog, or cat, or goat heads.[5] Tribes or individuals covered with an abnormal growth of hair are often mentioned by ancient or mediæval travellers from the Carthaginian Hanno onwards.[6] In Egypt monstrous creatures were often figured on tombs, and the god Bes is depicted as a dwarfish but monstrous and repulsive figure. The monstrous creatures of Babylonian and Assyrian art are well-known—winged bulls or lions with human heads, and other abnormal forms. These were set in front of entrances as a means of frightening away evil spirits, and a similar use of hideous figures is known elsewhere (see DOOR, vol. iv. p. 848 f.), at both lower and higher levels.[1]

Among the folk everywhere monstrous beings have a real existence to the imagination, and are doubtless survivals of similar beings believed in by their forefathers. But the influence of Christianity was often to give a sinister aspect to the supernatural beings of the older paganism. The water-horse and water-bull of Celtic lore are typical examples of monsters which have still a real existence to the folk in remote districts. Demoniac beings are also often envisaged as monsters, and everywhere more or less repulsive giants and dragons have been subjects of popular belief (see DEMONS AND SPIRITS, GIANTS).

The mythologies of most races tend to give a demoniac, gigantic, or monstrous form to the supernatural enemies of culture-heroes[2] or the gods—Tiāmat and her brood in Babylonia, the opposing hosts of beings whom Rā daily conquered in Egyptian belief, the demons, giants, or monsters who strive with gods in Hindu, Greek, Teutonic, or Celtic myth. They typify chaotic powers as opposed to and conquered by the powers of order, and hence they constantly tend to be regarded as evil, while their opponents embody righteousness and goodness.

As early as the days of primitive man monstrous forms have been depicted in various ways. Thus in caves at Marsoulas and Altamira grotesque faces may represent demons, while other curious hybrid figures, half-human, half-animal, have been variously interpreted, but may represent monsters of the imagination of the Stone Age.[3] Savage art tends to give all its human or supernatural subjects a grotesque, if not monstrous, form, often, no doubt, from lack of skill, but there is sometimes a deliberate exaggeration, in a horrible or grotesque direction, of features or of one or more members of the body. This monstrosity of feature is also seen in masks worn on ceremonial occasions by savages, and often meant to represent the faces of particular spirits.[4] Indian art delighted to represent its divinities as many-headed or many-armed—a method which has spread into adjacent countries.[5] Tibetan representations of demons or gods are often repulsive in their monstrosity. Reference has already been made to the monstrous Babylonian figures. In mediæval and later Christian art demons and the devil were depicted in the most sinister and horrible form possible—half-human, half-animal, or with exaggerated features, tusks, horns, tails, or with faces on chest, stomach, or knees.[6]

2. Origin of the belief in monsters.—Probably no single origin is to be looked for. There may have been different origins for the belief as a whole, or particular monstrous forms may have had an origin different from that of some other forms.

(*a*) Imagination is doubtless responsible for much of the monstrosity that is attributed to men, mythical animals, or demons in mythology or primitive art. As man's imagination peopled the world around him with spirits, so these appeared to his imagination as 'gorgons, hydras, and chimæras dire.' There was a constant tendency to visualize the creatures of belief as human and yet as more than human, as animal and yet as more than animal. As man drew little distinction between himself and animals, as he thought that transformation from one to another was possible, so he easily ran human and animal together. This in part accounts for animal-headed gods or animal-gods with human heads. Or, where gigantic superhuman strength, wisdom, or productiveness was concerned, man represented these to himself by forming images of the beings who possessed them with numerous or enormous heads or arms or phallus.[1] There is little doubt also that the lack of skill in depicting the human form tended to fill with suggestions of monstrosity the minds of those who gazed on such images.

(*b*) This last fact may have in turn influenced the dreams of men, and, as dream figures were realities, such forms were believed to have a real existence. But, apart from that, and especially when we consider the way in which dreams are deliberately cultivated by the medicine-man (see AUSTERITIES), they have, no doubt, had strong influence in the creation of monsters, of which the mind in waking hours could no more rid itself than could Frankenstein escape his monstrous creation. The combination of existing but diverse forms would easily occur in sleep, and such monstrous forms would play a part in the drama enacted during the hours of sleep. Such forms, seen in sleep by men to whom dreams had an intense reality, became a real part of the contents of the actual world in which they lived.[2] Primitive and savage men are like children, and they no doubt had their night terrors, caused by fantastic or horrible figures seen in dreams and still appearing to haunt them when sleep was rudely broken by the effect of fear. Again, hallucinations seen in waking hours by those whose mental balance was deranged might also aid in the creation of monsters, as they form part of the world inhabited by persons with certain kinds of mental affliction.

> 'Long rows of horrible characters may pass in endless procession before the strained and wearied eyes; pictures of a vividness scarcely ever realised in normal life are presented, in which the most horrible acts are being committed by personages of frightful mien.'[3]

Such hallucinatory appearances, described to the sane, would by them be accepted as real, and it is probable that the medicine-man, living an abnormal life and given to seeing visions, is never quite sane. But, again, the savage in his waking life is probably the subject of hallucinatory impressions to a far greater extent than the civilized man. His psychic state when awake bears a close resemblance to his psychic state when asleep. What he thinks he sees is actual to him, and every illusion, however incredible or monstrous, is a fact.[4] Even in cultured Egypt there were figured on the tombs the monstrous forms which the deceased thought he had seen in his lifetime.[5]

(*c*) Monsters, again, may owe their origin to a basis of fact. Any large predatory animal whose coming and going was obscure would tend to be envisaged in still more awful guise. Some, indeed, have argued that belated survivals of now extinct animals may have suggested the dragons and other monsters of folk-tale and tradition, and, if this were true, it is certain that the impression made by them would easily become legendary.[1] Most savages have traditions of monstrous animals, which are really exaggerated forms of actual animals seen by their ancestors, but unknown to their descendants in their new habitat—*e.g.*, the monstrous lizards of Maori tradition are the crocodiles of the land whence the Maoris migrated.[2]

Perhaps actual abnormal or monstrous births may have assisted in the formation of mythical monsters, or would tend to be regarded in popular belief as matters of common occurrence. Thus in China the standard histories are full of such prodigies.[3] It is certain also, apart altogether from the possibility of abnormal births as a result of bestiality, that men have often speculated upon this or imagined the effects of such unnatural unions between different species of animals or between beasts and human beings. This is seen in universal folk-lore and in ancient myth, as well as in the half-gossiping histories and chronicles of bygone days and in the pseudo-scientific works on natural history from the time of Pliny onwards.[4] Mediæval theology also believed that the union of demons and human beings resulted in the birth of monsters.

The brutality or merely the hostility of other tribes, nearer or more distant, would inevitably cause them to be regarded in a still more sinister or monstrous aspect. Horrible deformities were attributed to them, or this or that feature was exaggerated, or habits of a peculiar vileness were ascribed to them—*e.g.*, forms of loathsome cannibalism. Even remoteness or ignorance of such tribes would invest them with distorted forms. Here, probably, is to be seen the origin of the belief in those monstrous tribes already alluded to. Invading peoples, behaving with brutality, are sure to be regarded as monsters. In the same way the monstrous cannibalistic ogres of folk-tale are exaggerated forms of actual cannibals (see CANNIBALISM). Again, where certain deformities are assumed by warriors to strike terror into their opponents, where faces are painted or tatued, masks or animal head-dresses worn, these are apt to become a real part of the men themselves.[5] They are regarded as monsters rather than as men.

(*d*) Lastly, the misinterpretation of fact may easily give birth to monsters. This is especially seen where the bones of fossil animals of large size have been regarded as those of monsters or giants, or their tusks as the claws of monstrous birds—the griffin or the rukh. Hence the rise of many myths about these beings—*e.g.*, of how they were slain by gods or spirits beneficent to men.[6]

There is no doubt that the belief in the existence of monstrous forms has had a profound influence on the mind of man, probably for the reason that, as has been proved experimentally, any abnormal shape has a strong power of suggestion.[7]

MONTANISM.—1. The movement now generally known, from the name of its founder, as Montanism had its birth at a village called Ardabau in the part of Mysia adjoining Phrygia, probably not far from Philadelphia (Ramsay, *Cities and Bishoprics of Phrygia*, p. 573). There, as it seems, about A.D. 156, Montanus, a recent convert, who had been a pagan priest, began to prophesy. His prophesyings were accompanied by strange phenomena resembling those associated with demoniacal possession. In what way his exercise of the prophetic charisma was regarded by his opponents as differing from that of the genuine prophets we have various hints from nearly contemporary documents: he spoke while he was actually in a state of ecstasy; the true prophets received their message in ecstasy, but did not deliver it till their faculties returned to a normal condition. Moreover, the 'ecstasy' of Montanus was a kind of madness, deliberately induced, whereas prophets, acknowledged as such by the Church, even when in a state of ecstasy, were of sound mind; the so-called ecstasy of Montanus was, in fact, not *ἔκστασις*, but rather, as a contemporary writer (*ap.* Eus. *HE* v. xvi. 7, 14) calls it, *παρέκστασις*. In agreement with these statements an oracle of Montanus declares that the prophet is as a lyre played upon by the divine plectrum; and the form in which most of his extant utterances are cast implies that he was a mere passive instrument, and that the phrases which fell from his lips were actually the *ipsissima verba* of the Deity. His opponents reminded him of the style of the ancient prophets, who as human agents proclaimed the will of God—'Thus saith the Lord.'

2. After a time—as seems to be implied, a considerable time—Montanus was joined by two women, Maximilla and Priscilla, or Prisca, who with his sanction deserted their husbands, and who also claimed to possess the prophetic charisma. Their utterances were similar in matter and in manner to those of their leader.

3. There can be no doubt that Montanus maintained that this 'new prophesying' differed essentially from all preceding prophecy. Thus the novelty of its form was to be explained. It was the fulfilment—so it was alleged—of the Lord's promise of the coming of the Paraclete (Jn 14^{12-18}). The apostles had not the perfection of the Holy Spirit (1 Co 13^{8-10}); this was reserved for the new prophets, of whom Christ spoke in Mt 23^{34}. This is stated to be the Montanist doctrine by many writers, and it is the basis of the exaggerated assertion of Eusebius (*HE* v. xiv.) that Montanus claimed that he himself was the Paraclete.

4. It is not clear whether in the earliest period the prophetesses were regarded as mouth-pieces of the Paraclete in the same sense as Montanus. Eusebius suggests the contrary when he reports that, while Montanus was held to be the Paraclete, the women were 'as it were prophetesses of Montanus' (cf. Did. Alex. *de Trin.* iii. 41. 2; pseudo-Tert. *Hær.* 7). It is possible that at first they were put in a lower position, Mt 23^{34}, but not Jn 14^{12-18}, being taken as referring to them; and that it was only at a later time, perhaps after the death of Montanus, that they were regarded as on a par with him.

5. It is evident that the acceptance of the 'new prophecy' as embodying the final teaching of the Paraclete, and as in some sense superseding earlier revelation, was the cardinal principle of Montanism. This is made manifest by the very phrase 'new prophecy' constantly used by its adherents; by the title *πνευματικοί* which they arrogated to themselves, as distinguishing them from other Christians (*ψυχικοί*) (Tert. *passim*; Clem. Alex. *Strom.* iv. 13 [*PG* viii. 1300 C]); and by the polemics of anti-Montanist writers, whose argument was mainly directed to proving that this 'so-called prophecy' was in truth a false prophecy proceeding from the spirit of evil.

The charisma was not regarded as confined to Montanus and 'the women.' Theodotus, *e.g.*, was an ecstatic, and was reported to have died while in an ecstasy.

6. We are not surprised to learn that this sudden outburst of prophecy, and the claims that were made for its leaders, provoked much opposition. Many of those who heard Montanus and his companions would have silenced them. Two Phrygian bishops made an ineffectual attempt to 'prove and refute' the spirit that spoke in Maximilla; another, who had come from Anchiale in Thrace, attempted to exorcize Priscilla. At first, we are told, the movement advanced slowly: 'but few of the Phrygians were deceived.' But after a time, it seems, the majority of the Phrygian Christians became adherents of Montanus. Thus only can we account for the fact that at an early period his followers were commonly spoken of as 'the Phrygians,' and their teaching as 'the heresy of the Phrygians' (*οἱ Φρύγες, ἡ κατὰ Φρύγας αἵρεσις*, whence the Latin *cataphryges*, *cataphrygiani*). In due course formal protests were issued by the bishops. While the movement was still in its infancy, Claudius Apollinarius, bishop of Hierapolis, wrote a treatise against it, to which were appended the signatures of many bishops, at least one of whom came from Thrace. Other confutations of the new teaching followed it (Eus. *HE* v. xvii. 1). Many synods met in Asia and excommunicated its adherents. On the other hand, the Montanists used scathing words about the ecclesiastical rulers, and stigmatized them as slayers of the prophets. They put forth treatises in which the arguments of their opponents were answered. It is impossible to determine with accuracy the date of the inevitable crisis; but it is certain that in Phrygia before the year 177 the Montanists were excluded from the Catholic Church (Eus. *HE* v. iii. 4; cf. xvi. 22, which clearly refers to the persecution under Marcus Aurelius).

7. It is difficult to fix the date of the beginning of the prophesying of Montanus. The choice is usually held to lie between A.D. 172, under which year Eusebius records the origin of the movement in his *Chronicon*, and A.D. 156–157, which is supported by Epiphanius (*Hær.* xlviii. 1). It is not clear, indeed, that these two dates are inconsistent, for Eusebius may be giving the year, not of the earliest prophesying of Montanus, but of some prominent event which he regarded as the starting-point of the 'heresy'—*e.g.*, the migration to Pepuza (see below, § 9), or the promulgation of one of Montanus's more startling innovations. In any case it is probable that Eusebius's date is a mere inference from the fact that Claudius Apollinarius wrote his anti-Montanistic treatise—which Eusebius appears to have dated on insufficient grounds after 174 (Lawlor, *Eusebiana*, p. 150 f.)—'when Montanus with his false prophetesses was in the act of introducing his error' (*HE* iv. xxvii.). It must therefore be regarded with caution. It is to be observed that Apollinarius wrote some time after Montanus had been joined by 'his false prophetesses' (*ib.* v. xix. 3)—an event which was itself probably a good deal later than the beginning of the prophesying. Further, (1) the history of which a short account has been given in the preceding section requires a period of a good many years; and (2) Maximilla, the last of the three leaders, died in 179–180. The movement must have enjoyed the advantage of their supervision for a sufficiently long time to give it the strength and stability which it undoubtedly possessed. These considerations point to an origin much before 172. The earlier date is therefore to be preferred, though with the misgiving which necessarily attaches itself, in such matters, to the statements of Epiphanius. He has certainly fallen into error in one passage (perhaps two) in which he gives dates connected with the Montanist movement (*Hær.* xlviii. 2, li. 33).

8. That the Paraclete was manifested in Montanus, and in him and his companions revealed the fullness of Christian teaching, was, as we have seen, the original and essential doctrine of Montanism. But, since it was the office of the Paraclete to supplement the teaching of Christ, it was to be expected that this doctrine would be made the basis of a system differing at many points from the teaching of the Church as usually understood. Montanus,

it is true, did not consciously deviate from ecclesiastical dogma. His opponents bear witness that he accepted the canonical Scriptures and was orthodox with regard to the resurrection of the dead and the doctrine of the Trinity. But in another sphere his 'innovations' were considerable.

9. Not long after the beginning of the prophesying Montanus crossed the Phrygian border and established himself with his followers at a city called Pepuza, which Ramsay (pp. 213, 573) places west of Eumenia, and not far from the Phrygian Pentapolis. Pepuza, with the neighbouring village of Tymion, he named Jerusalem. To this settlement, which was thenceforward the centre and holy city of Eastern Montanism, he endeavoured to gather adherents from all quarters. These facts, coupled with the lavish promises made by the prophets to their adherents and certain predictions of Maximilla (Eus. *HE* v. xvi. 9, xvii. 4; Epiph. *Hær.* xlviii. 2), apart from a more explicit oracle attributed to another prophetess (Epiph. *Hær.* xlix. 2), would lead us to the conclusion that the 'new prophecy' taught men to expect in the near future, at Pepuza, the final Parousia of the Lord (*ib.* xlviii. 14). The primitive Montanists, in fact, held the doctrine of chiliasm, but chiliasm of a new kind. It was this hope of the Parousia at their Jerusalem that gained for them the name of Pepuzians.

10. Connected in some measure with their chiliastic teaching was their view of the prophetic office in the Church. The prophetic charisma was not an occasional gift, bestowed as the need for its exercise arose; according to the dictum of 'the Apostle' (1 Co $13^{8f. ?}$), it was perpetual, one of the notes of the Church. Consequently Montanus, Maximilla, and Priscilla received their office in a line of succession. Quadratus and Ammia of Philadelphia were the links which connected them with Agabus, Judas, Silas, and the daughters of Philip (Eus. *HE* v. xvii. 3, 4; Epiph. *Hær.* xlviii. 2). But, since Montanus and his companions were the channels of the ultimate revelation, they were the last of the prophetic succession. After them would come the end.

11. Again, the exalted position given to the 'new prophets' led naturally to the assignment to them of prerogatives generally regarded as belonging to the bishops, and thus to a conflict between the prophets and the regular hierarchy. The prophets had the power of absolution (orac. *ap.* Tert. *de Pud.* 21). This power they shared with the 'martyrs' or confessors (Eus. *HE* v. xviii. 7).

12. Once more, the association with Montanus of two prophetesses involved the recognition that women might hold high office in the Church. Maximilla and Priscilla seem to have made independent contributions to Montanist teaching (Hipp. *Phil.* viii. 19; cf. Did. Alex. *de Trin.* III. xli. 3; *ZKG* xxvi. 486); and they were probably in the habit of prophesying in the congregation (Eus. *HE* v. xvi. 9: ἀκαίρως). There is evidence that, at any rate in later times, other women followed their example (Orig. *ap.* Cramer, *Cat.* v. 279), or even outdid it; for we read of a prophetess in Cappadocia in the 3rd cent., perhaps a Montanist, who baptized and celebrated the Eucharist (Firmilian, *ap.* Cypr. *Ep.* lxxv. 10), of female bishops and priests, and of virgins who regularly officiated in the congregation at Pepuza (Epiph. *Hær.* xlix. 2 f.; Did. Alex. *de Trin.* III. xli. 3).

13. Montanus made laws regarding fasts (Eus. *HE* v. xviii. 2: ὁ νηστείας νομοθετήσας; cf. Hipp. *Phil.* x. 25; Tert. *de Iei.* 13). This does not mean, apparently, that he increased the number or the rigour of fasts, but rather that he reduced them to rule, eliminating thereby the element of free will in such matters, making them a duty to be observed by all Christians alike, and not only by those who used them as a means for attaining higher perfection. Among these ordinances (perhaps a later development, due to 'the women' [Hipp. *Phil.* viii. 19]) were some which enjoined abstinence from particular kinds of food (ξηροφαγίαι, ῥαφανοφαγίαι). There is some evidence that in Phrygia the Montanist rule as regards the number of fasts fell below Catholic custom (Soz. *HE* vii. 19, where the two weeks of Lent seem to correspond to the 'duae hebdomadae xerophagiorum' of Tert. *de Iei.* 15), while in the West it did not greatly exceed it (see de Labriolle, *La Crise*, p. 399 f.). The regulations about fasting are therefore to be regarded as instances of the Galaticizing or legal tendency which was descried in Montanism by its adversaries (Tert. *de Iei.* 14). This was the natural outcome of a system which invested the exhortations of the prophets with a divine sanction, giving them the character of unalterable laws, to be observed as ends rather than as means for the attainment of holiness.

14. Under the same category may be brought the Montanist repudiation of second marriages. For on this point their divergence from the Church must not be exaggerated. The Church discouraged second marriage; the Montanists held it to be fornication. That which the Church permitted in special cases the Montanists excluded by a law which admitted no exception.

15. We learn (Eus. *HE* v. xvi. 20, xviii. 5) that the Montanists held martyrs (including confessors) in high honour, and even set special store by their opinion on questions of doctrine and practice. But this was no peculiar feature of their system; it reflected the general feeling of the age. And, when they went a step further and allowed them the power to forgive sins, they were in agreement with the orthodox of the West (Tert. *de Pud.* 22), if not also with those of Phrygia. It must be added that there is no proof of the statement, often made, that Phrygian Montanism inculcated a severe asceticism, or that its adherents were more antagonistic to heathenism than other Christians in the same district, or displayed special eagerness for martyrdom. Such evidence as exists points in the opposite direction (Lawlor, *Eusebiana*, pp. 127–135).

16. Montanism, after its severance from the Church, though it retained the hierarchy of bishops, priests, and deacons, developed in its organization some peculiar features. Montanus was responsible for the innovation (as it was esteemed) of salaried preachers, and for the institution, doubtless connected therewith, of collectors of money, headed, as it seems, by a steward (ἐπίτροπος [Eus. *HE* v. xvi. 14]). St. Jerome (*Ep.* xli. 3) reports, in agreement with an ordinance of Justinian (*Cod. Just.* I. v. 20. 3), that the hierarchy consisted of the patriarch of Pepuza, κοινωνοί (apparently the successors of the stewards), bishops, and inferior ministers.

17. Of the peculiarities of Montanism here enumerated some were a revival—perhaps rather a survival—of the belief and practice of an earlier period; such, *e.g.*, are the recognition of prophets as a permanent order (1 Co 12^{28}, Eph 4^{11}; *Didache*, 11 ff.), the prohibition of second marriage (Athenag. *Leg.* 33; Theoph. *ad Autol.* iii. 15; Iren. III. xvii. 2), chiliasm (Just. *Dial. c. Tryph.* 80; Eus. *HE* III. xxxix. 12 f.). Others are in harmony with what is known of the Oriental religious temperament, especially that of the Phrygians, and may be accounted for by the influence of environment. Among these are the 'enthusiasm' of the prophets (Bonwetsch, *Gesch. des Montanismus*, p. 62 ff.), the ministry of women, and the expectation of an immediate Parousia (Hipp. *in Dan.* 18 f.; Orig. *c. Cels.* vii. 8–10). The substitution of Pepuza for the literal Jerusalem may be due to the same influence. It had, at any rate, the practical advantage of providing a holy city in the district from which Montanus drew the greater number of his adherents.

18. It is not necessary to pursue the history of

Eastern Montanism in detail. For some years after the death of Maximilla, the last of the original trio, in 179–180, there were no prophets, and the Church and the world enjoyed peace—facts which, as anti-Montanistic writers pointed out, disproved the claims of the first prophets. But the spread of the sect was not permanently checked thereby. A revival of prophecy seems to have taken place shortly before A.D. 200 (Eus. *HE* v. xviii. 3–12), and ultimately adherents of the movement were found in every part of Asia Minor, in Egypt (Clem. Alex. *Strom.* iv. 13 [*PG* viii. 1300 C]; Did. Alex. *de Trin.* etc.), and even in Constantinople, though they were always most numerous in Phrygia. The sect survived the stringent edicts of various emperors, and was perhaps not wholly extinguished till the period of the Turkish invasion (Ramsay, p. 574).

19. Before we turn to its history in the West, some important facts may be mentioned. The early Montanists were prolific writers. Their controversial tracts have been referred to above (§ 6). Here it is to be noted that Caius (*c.* A.D. 200) accuses them of composing new Scriptures (Eus. *HE* VI. xx. 3), while other authorities attribute numerous writings to Montanus, Maximilla, and Priscilla. A certain Asterius Urbanus compiled a collection of oracles of the prophets (*ib.* v. xvi. 17); and Themiso 'wrote a Catholic Epistle in imitation of the Apostle' (*ib.* xviii. 5). An anonymous author quoted by Eusebius alludes to literature of this class when he states that he hesitated to write against the Montanists for fear of being charged with adding to the Canon (*ib.* xvi. 3). It is clear that the 'new prophecy' was propagated by writing as well as by oral teaching.

A necessary result of this was a tendency to division. The Montanists must have regarded the writings of their own prophets as of at least equal value with the Scriptures: they constituted in fact, if not in intention, an enlargement of the Canon. It was inevitable that they should be used, like the canonical Scriptures, as authoritative expositions of dogmatic Christianity, and that, like them, they should be variously interpreted. By the end of the 2nd cent. there were two parties of Montanists, who took different sides in the Monarchian controversy, and both of them appealed to the oracles of the prophets as well as to the Scriptures (Hipp. *Phil.* viii. 19; pseudo-Tert. *Hær.* 7; Did. Alex. *de Trin.* ii. 15, iii. 18, 23, 38, 41; *ZKG* xxvi. 452 ff.; Tert. *adv. Prax.* 2, 8, 13). Thus the authority ascribed to the writings of the prophets produced a tendency to the formation of parties differing from one another in matters of faith, and probably also in matters of discipline. This tendency would be greater if, as seems likely, such writings were not collected into a *Corpus.* Each community would follow the teaching of such books as they happened to possess, without the obligation of harmonizing it with that of the books possessed by other communities.

20. A similar tendency is revealed in the fact that in the earliest times, apart from the title of Phrygians, which merely indicated the place of its origin (Clem. Alex. *Strom.* vii. 17), there was no generally accepted name for the sect. The various communities seem to have been commonly designated by the names of local leaders. Thus we hear of the followers of Proclus or of Æschines (pseudo-Tert. *Hær.* 7), the adherents of Montanus, Alcibiades, and Theodotus (Eus. *HE* v. iii. 4), the followers of Miltiades (*ib.* xvi. 3: probably the Montanists of the Pentapolis), the Priscillians, and the Quintillians (Epiph. *Hær.* xlix. 2; on the latter name see Voigt, *Eine verschollene Urkunde des antimontanistischen Kampfes*, pp. 107, 129 f.). Apparently the last name of this class to emerge was that with which we are most familiar, 'Montanists' (first found in Cyril, *Cat.* xvi. 8). There are also nicknames, which we may suppose to have been merely local, and to have witnessed to local customs (cf. Jerome, *in Gal.* ii. 2). Such are the Artotyritæ of Galatia (from the use of bread and cheese in the mysteries), the Tascodrugitæ (from a peculiar way of holding the hands in prayer; of this Passalorynchitæ is a variant form; cf. Ramsay, p. 576), and the Ascodrugitæ or Ascitæ of Galatia (from orgies connected with a wine-skin [Epiph. *Hær.* xlviii. tit. 14; Filast. 49, 76; Aug. *Hær.* 76]). It is perhaps scarcely correct to speak of Montanism as a sect. In its later stages it was rather a congeries of sects somewhat loosely held together by an acknowledgment of the manifestation of the Paraclete in Montanus (cf. Voigt, p. 131).

21. The earliest notice which we possess of any knowledge of the Montanist movement in the West appears in the year 177. In that year the Christians of Gaul, acting as ambassadors for the peace of the churches, wrote letters to Pope Eleutherus and to the brethren in Asia and Phrygia expressing their opinion of the movement. Since Eusebius (*HE* v. iii. 4) pronounces their judgment 'pious and most orthodox,' it may be inferred to have been, on the whole, anti-Montanist. And this conclusion is confirmed by an examination of the account of the persecution at Vienne and Lyons, written at the same time (de Labriolle, *La Crise*, p. 225 ff.). If we may judge from two passages of Irenæus (*Hær.* III. xi. 9, IV. xxxiii. 6 f.), who was their emissary to Rome, though they avoided the extreme position of the Alogi (see art. LOGOS, above, p. 137ª), who in their zeal against Montanism rejected the Johannine writings, and though they refused to deny the existence of prophetic gifts or the right of women to prophesy in the church, they yet condemned the followers of Montanus as schismatics. It would seem that Eleutherus confirmed their judgment.

It is difficult to explain this incident without supposing that there was at the time a Montanist propaganda in Rome. No doubt the Montanist missionaries there were quickly followed (perhaps preceded) by representatives of the orthodox party in Phrygia; and it may be conjectured that among these was Avircius Marcellus of Hierapolis in the Pentapolis, 'the chief figure in the resistance to Montanism in the latter part of the second century' (Ramsay, p. 709). He certainly visited Rome with a purpose in some way connected with the welfare of the Church; and in one of the passages from Irenæus just referred to there are phrases which recall both the labours of the Gallican Christians for the peace of the churches (cf. Iren. *Hær.* IV. xxxiii. 7 with Eus. *HE* v. iii. 4) and a treatise dedicated to Avircius almost at the time when his famous epitaph recording the visit to Rome was written (cf. Iren. *Hær.* IV. xxxiii. 6 with Eus. *HE* v. xvi. 7 f., and see Ramsay, pp. 709 ff., 722 ff.).

22. Twenty-five years later, under Pope Zephyrinus, a fresh attempt was made to introduce Montanism into Rome. The Montanist leader Proclus held a disputation there with Caius, which was afterwards published, and some fragments of which remain (Eus. *HE* II. xxv. 6 f., VI. xx. 3). The pope favoured the 'new prophecy,' and had actually put forth 'letters of peace to the churches of Asia and Phrygia'; but in the end, under the influence of Praxeas, these letters were withdrawn (Tert. *adv. Prax.* 1). There were doubtless later attempts of the same kind; one is referred to by St. Jerome (*Ep.* xli.). But Montanism was never strong in Rome, and it is not heard of there after the beginning of the 5th century.

23. It secured some foothold in Spain. But of its history in that region we know nothing except

that it had some adherents there at the end of the 4th century (Pacianus, *Ep.* i. 1 ff.).

24. In Africa the propaganda had more success. By the end of the 2nd cent. knowledge of the 'new prophecy' had reached Carthage—perhaps from Rome, less probably direct from Phrygia—and it gained there its most illustrious convert in the person of Tertullian. St. Augustine seems to have gone beyond his evidence when he stated that Tertullian at first opposed the movement; he was certainly in later life a sincere and ardent champion of the teaching of Montanus, as he understood it.

25. The qualifying words are necessary; for Montanism, as it appears in the pages of Tertullian, differs so much, and withal is so little conscious of difference, from the Montanism of Phrygia that we are compelled to suppose that his acquaintance with the teaching of the prophets was imperfect. He can hardly have received direct instruction from Eastern Montanists; his knowledge of their tenets must have been, in the main, derived from books, including a collection (*de Fuga*, 9; note the words 'et alibi') of the oracles of Montanus and Priscilla (he never quotes Maximilla by name), which was apparently incomplete.

Tertullian accepted, without reserve, the claim of the prophets to inspiration by the Paraclete. But, though he speaks of prophetic speech in a state of ecstasy (*de Iei.* 3), we find no hint in his writings of the strange phenomena which were the normal concomitants of Montanist prophecy in the East. He tells us (*de An.* 9) of a sister who fell into an ecstasy during a church service; but she was not permitted to communicate the revelation which she had received till the congregation had departed. None of the usual anti-Montanist arguments (see Epiph. *Hær.* xlviii. 3–8) would have had any force against ecstasy so well controlled as this. Tertullian, indeed, identifies ecstasy with *amentia* (*adv. Marc.* iv. 22, v. 8), but with such qualifications of the meaning of *amentia* (*de An.* 45) as to bring him very near to the standpoint of Eastern orthodox writers. Moreover, with habitual inconsistency, he affirmed, in direct opposition to the Phrygians, that the apostles had the fullness of the Spirit.

Further, Tertullian seems to betray no consciousness of the doctrine that there was a succession of prophets from the days of the apostles to Montanus. In his view prophecy ceased with the Baptist (*de An.* 9, *de Iei.* 12), till it was restored in the prophets of the Paraclete.

Again, Tertullian never mentions Pepuza. He was a chiliast, and he expected the Parousia in the near future; but he believed that it would take place in Jerusalem (*adv. Marc.* iii. 24). He cannot have read the oracle (Epiph. *Hær.* xlix. 1) which declared that the New Jerusalem would descend at Pepuza.

Tertullian agreed with the Phrygians in allowing to the prophets authority to absolve from sin, though he has some difficulty in reconciling this view with his own opinion that certain sins are unpardonable (*de Pud.* 19, 21). But he is indignant with those who hold that martyrs have a like prerogative (*ib.* 22).

On another subject he is in conflict with the Phrygians. He will not permit a woman 'to speak in the church, nor to teach, nor to baptize, nor to offer, nor to assume any function which belongs to a man' (*de Virg. Vel.* 9). If the sentence had been less trenchant, one might have supposed that it came from an anti-Montanist polemic.

26. Thus Tertullian rejected much that in Asia Minor was counted Montanist. And he added much, especially in the direction of rigorism, of acute opposition to paganism, and of avidity for martyrdom. For it is not to be assumed that, when his later views differ from his earlier, and when he proclaims them as taught by the Paraclete, they were really derived from primitive Montanism. Thus in his *de Fuga* he denounces flight in persecution as sinful, though in his *ad Uxorem* (i. 3) he counts it lawful; and in his *de Pudicitia*, forsaking the milder teaching of the *de Pœnitentia*, he denies the power of the Church to forgive grosser sins. But in the former case he quotes oracles which make no reference to flight, and in the latter one which flatly contradicts his thesis (*de Fuga*, 9, *de Pud.* 21). In both, the oracles are more in harmony with his earlier than with his later opinions. Visions also enabled him to add, now a new doctrine (*de An.* 9), now a fresh rule of discipline (*de Virg. Vel.* 17), to the official teaching of the 'new prophecy.'

27. Even on subjects in which he was in entire accord with Eastern Montanism we find no essential difference between his earlier and later teaching; *e.g.*, he expressed disapproval of second marriage in his pre-Montanist treatise *ad Uxorem*; the arguments used are identical with those of his *de Exhortatione castitatis* and *de Monogamia*, including that founded on the nearness of the end, which is more strongly stated in the earlier work. His description of marriage as a form of fornication occurs in all three. The result of his adoption of Montanist principles is seen merely in the fact that an absolute prohibition takes the place of a strong expression of disapproval; or, in other words, that he draws the logical conclusion from his argument. Here, as elsewhere, he found in oracles or visions only a new sanction for opinions already formed.

28. Thus we see that, if the form of Asiatic Montanism was largely determined by environment, and possibly by the influence of individual leaders, the form of African Montanism, or, as it was afterwards rightly called, 'Tertullianism,' was determined by the personal force of Tertullian himself, and doubtless in some degree by the environment which moulded his character. We cannot forget that the home of Tertullianism was later to become the home of Novatianism and Donatism.

29. If it be asked, What was there in Montanism to attract such a man as Tertullian? it must be remarked that he was unaware of, or ignored, many of those features of the movement which to Eastern opponents caused most scandal. There remained the proclamation of the inspiration of the living Church, burdened with a few corollaries, most of which had been anticipated by his own thinking. Premising this, we may accept the answer of Swete (*Holy Spirit*, p. 79): 'For Tertullian the interest of Montanism lay chiefly in the assurance which the New Prophecy seemed to give that the Holy Spirit was still teaching in the Church.' It need only be added that the acceptance of the Montanist oracles as embodying the teaching of the Paraclete was made easier for him by the support which they seemed to give to opinions which he maintained in opposition to other Christians.

30. The Tertullianists seem to have become an insignificant body after the death of their founder. They are never referred to by St. Cyprian, in spite of his veneration for Tertullian. The last adherents of the sect returned to the Church when St. Augustine was at Carthage, and he reports that, when he wrote his work on heresies, their basilica was in Catholic hands (*Hær.* 86).

MORAL ARGUMENT.—'Moral argument' is distinguished from logical either in the nature of the facts to which appeal is made or in the assurance which the conclusion expresses. It is possible that both implications are associated with its meaning. But in general it is often used to denote some probability in the nature of it as distinguished from the certitude of logical argument.

It is probable that the term derived its specific import from the implications of the 'moral argument' for the existence of God and immortality in the Kantian philosophy. In this method of 'proving' them Kant remarked the impossibility of meeting the demands of the moral law in this life, and, as this law required the adjustment of duty and happiness, he sought this realization in a life to come. To effect this adjustment the existence of God was supposed to be required. This argument was assumed to be valid when all the logical arguments for the same conclusion were null and void. The want of absolute assurance implied in the conclusion was transferred to all arguments which gave what is called 'moral certainty.'

It also derives part of its meaning from the implication that the moral order of things favours or expresses the ultimate significance of what lies behind it. That is, the assumed rationality of things is taken to imply the nature of the causal agency behind it, and the 'moral argument' is an expression of what is supposed to be implied by the admission of an actual moral order in the world, while the logical argument is supposed to be limited to a physical order and its implications.

A fuller exposition of Kant's moral argument for the existence of God and immortality is the following:

> 'Happiness is the natural condition of a rational being in the world, and is the natural accompaniment of virtue. In fact, the moral law itself requires a union or synthetic connexion between virtue and happiness. But in the present natural order this ideal union is not effected, and we cannot treat the world as rational unless it provides for this connexion between them. The connexion requires an infinite time for its realization, and hence we have to postulate immortality as the condition of realizing the demands of the moral law which holds valid for the present. Immortality thus becomes a necessity of a rational order. But this union of virtue and happiness, not being a necessary one, requires the causal interposition of something to bring it about. Since we postulate immortality as the condition of rationality, we postulate the existence of God to effect the realization of happiness in connexion with virtue The argument, thus, is that morality, if valid and binding at all, requires God and immortality to make its imperatives rational and its rewards possible.

JAMES H. HYSLOP.

MORAL EDUCATION LEAGUE.—Following on the rise of the Ethical Movement (*q.v.*) in England, a number of persons interested in the training of the young began to study methods of imparting moral instruction on an ethical basis pure and simple, and in such a manner as to meet the needs of children drawn from all denominations. The Union of Ethical Societies seized the opportunity of an approaching election of the London School Board to invite a wide variety of societies to send delegates to a conference. In July 1897 the delegates met under the presidency of Frederic Harrison, and adopted a policy of which the two leading statements were as follows:

> (1) 'That there is urgent need of introducing systematic moral instruction without theological colouring into the Board schools in place of the present religious teaching.'
>
> (2) 'That this moral instruction should be made the central, culminating and converging point of the whole system of elementary education, giving unity and organic connection to all the other lines of teaching, and to all the general discipline of the school life.'

A direct result of this conference was the establishment of the Moral Instruction League at a well-attended meeting in St. Martin's Town Hall on 7th December 1897, and annual meetings have been regularly held and reports issued since January 1898. The original object, 'to substitute systematic non-theological moral instruction for the present religious teaching in all State schools,' was changed, in 1901, to the purely constructive policy 'to introduce systematic non-theological moral instruction into all schools.' On the same principle, the object was, in 1909, relieved of the phrase 'non-theological,' and made to run thus: 'To urge the introduction of systematic moral and civic instruction into all schools, and to make the formation of character the chief aim in education.'

At the same time the title of the society was altered to the Moral Education League. The League, however, definitely affirms that it 'works on a non-theological basis,' and both its considerable output of literature and its practice during the seventeen years of its history (1898-1915) have obviously exhibited its detachment from all forms of sectarian and denominational principles. Its supporters in the earlier stages made attempts, with some success, to induce parents to take advantage of the Conscience Clause of the Education Act of 1870, withdraw their children from religious instruction, and apply for special moral lessons. These efforts ceased as the League became more absorbed in its scheme for building up a sound method of civic teaching, and for illustrating that method by lessons publicly given under the direction of a Moral Instruction Circle. The Circle was nominally conducted by the Union of Ethical Societies, but naturally proved very useful to the League as a means of propaganda, and it was maintained for several years. Active dissemination of the League's views by meetings, in the press, and among Education Committees and Members of Parliament gradually leavened public opinion. In 1904 the Government Education Code appeared with a preface in which character-training was emphasized; in 1905 the official volume of *Suggestions for the Consideration of Teachers and Others concerned in the Work of Public Elementary Schools* contained a section on the formation of character; and in 1906 the Code, issued by Augustine Birrell, directed local authorities to devote 'greater and more systematic attention' to the subject, though the choice of 'direct' or 'incidental' methods was left open. In 1909 a debate on moral instruction, led by G. P. Gooch and William Collins, took place in the House of Commons, and a deputation, largely composed of League representatives, waited upon the Minister of Education (W. Runciman) in May of the same year. Since that date the League has been quiescent in the political field, and has mainly devoted its energies to influencing the opinion of educationists and the general public. A return issued by the League in 1908 showed that, of the 327 local education authorities in England and Wales over 100 had taken definite action in emphasizing moral instruction in their schools, in some cases by setting apart a lesson in the secular time-table, but usually by incorporating special moral elements in the religious course; and twenty authorities had adopted the syllabus drawn up by the League. Besides this syllabus, which supplies a detailed series of notes for the seven standards, the literature of the League includes a number of text-books by A. M. Chesterton, Baldwin, Waldegrave, Robson, Reid, Wicksteed, and F. J. Gould, numerous pamphlets, a Quarterly (beginning April 1905), and a volume designed for use in India (*Youth's Noble Path*, 1911). The education authorities in Bombay, Ceylon, and Mysore have evinced practical interest in the methods of the League; and significant sympathy has been shown by H.H. the Gaekwar of Baroda, and many other Indians as well as Anglo-Indians. Each annual report testifies to a spirit of inquiry aroused in various colonies and foreign countries. A remarkable testimony to this spirit was afforded in 1907, when a committee of inquiry into moral instruction and training in schools examined witnesses and collected papers, its report being published in two volumes in 1908 (vol. i. 'United Kingdom,' vol. ii. 'Foreign and Colonial'). The inquiry was carried on independently; but several members of the League sat on the Committee and contributed to the volumes just named. A still more striking reinforcement of the League's endeavours appeared in 1908 in the shape of the first International Moral Education Congress, held in London under the secretaryship of G. Spiller. A similar congress was held at The Hague in 1912.

F. J. GOULD.

MORAL LAW.—The concept of law is one of the two concepts which may be taken as fundamental in an ethical system. According as we start from the idea of a good to be attained or of a law to be obeyed, we have a teleological or a jural theory of ethics. The former of these was the characteristic type of Greek theories; the latter became predominant in Christian times. Under the teleological conception morality is looked upon as fundamentally a matter of self-expression or self-realization, and its laws are regarded as rules for the attainment of a good which every man naturally seeks. It is in this sense that Socrates was able to maintain his paradoxical position that no man is willingly vicious and that all vice is ignorance. Such a position is essentially a naturalistic one, implying a native goodness in human nature which needs only enlightenment to realize its natural good. Moral conduct is the rational pursuit of happiness.

In a jural system of ethics, on the other hand, human nature is conceived as divided against itself and therefore in natural opposition to the good. Morality is not a harmonious development of natural powers guided by the idea of happiness, but a life of discipline and subordination to an authoritative law. It is not the natural value or the pleasure of an act that renders it moral, but its value as commanded by the law. It is not commanded because it is good, but it is good because commanded.

It is evident, therefore, from this distinction of starting-points and attitudes that the term 'moral law,' in its strict meaning, denotes an imperative, regarded as having practical efficacy in conduct. The idea is of an order which is to be imposed upon human nature and, accordingly, to be accepted by the rational will. One must, therefore, distinguish between such an imperative, which does not rest upon any natural desire for happiness, and a moral rule or law in the teleological sense of the term. The moral laws, in the teleological view, are not imperative, but counsels of prudence, pointing out the best ways for the attainment of happiness. Their practical efficacy rests upon a natural desire for satisfaction, and hence, in their hypothetical character, they have more the nature of uniformities in the scientific sense of the term 'law.' They are rules of applied psychology. Although such rules are often spoken of as laws, yet, lacking the element of imperativeness, they are perhaps better not designated by that term.

Historically, the conception of morality as law is an early one, primitive morality consisting in obedience to tribal custom regarded as ultimately imperative for the individual. When ethical reflexion awakes, however, with its scepticism and questioning of authority, the natural view of morality is the teleological one, and the concept of moral law gives way to that of good. Experience and a deepening of the moral and religious consciousness, such as occurred in the Hellenistic age and in early Christian times, revived the dualistic idea of morality, and we have the Christian theories with their central doctrine of moral law and obligation. While these were at first theological in character, in modern philosophy we find the idea of law maintained also upon a natural basis.

Considered with reference to the nature of moral law and its authority, three types of system may be distinguished: (1) theological, (2) natural, and (3) rational.

1. Theological. — In the theological systems moral law is regarded as a rule of conduct which has its ground in the nature or will of God and not in the nature of man or in the consequences involved in obedience or disobedience to the law. The rule may be for the good of man, but it is for his good because it is the divine will, and not the divine will because it is for his good. 'Man's chief end is to glorify God and to enjoy him for ever.' God is the beginning and the end of the moral world, man but an incident in the creation. Sometimes it is the will, sometimes it is the intellect, that sets the standard, but in all cases systems of this type are theocentric in nature. To this type belong the various forms of scholastic theory, so far as they succeed in really breaking away from their classical originals, as well as the chief systems of Protestant moral philosophy.

The serious difficulty in theological systems has always been the question of the authority of the divine law and its hold over the individual. Emphasis upon the divine has tended by contrast to raise new centres of interest in the human, and men have always refused to remain satisfied with the idea of a law whose basis is outside themselves. The significant element has therefore been found either in the consequences of the law for man, in which case we have a utilitarian principle, or in the human nature itself, under which hypothesis we have a natural basis for morals.

2. Natural.—Natural law as a basis for morals may therefore be described as an order of human nature, known to be such by the unaided reason of man, and recognized as binding without reference to the desires or pleasures and pains of the sentient life. Man knows himself as properly of a certain nature, and cannot reasonably depart from the rules involved in its realization. These rules are not imposed from without, but are the expression of his own nature and binding only as such. To be moral is to be truly a man, and to be truly a man is to be truly a rational animal. The norms of reason are the moral laws. This type of theory was prevalent in the earliest period of modern ethics, and represented the attempt to place morals upon a rational basis. The general idea takes various forms as it is expressed in the Stoic formulæ of Grotius and the Neo-Platonic doctrines of the Cambridge Platonists and their like. While theistic in their philosophical implications and foundations, these systems agree in their desire to free morals from theological authority and to found them upon an immanent rather than a transcendent basis. Yet in so doing they tend to lose their jural character and revert to the teleological type of their Greek originals. The dictates of reason which reveal these moral or natural laws are indeed authoritative, but their authority really rests upon the value of the good end or ideal which they express. Moral law, when rationalized, ceases to be supreme, whence it was very easy for the transition to be made from these Platonizing systems to the early forms of English utilitarianism. Indeed, in spite of their legal terminology, it is hardly accurate to include them at all under the jural type; they are the natural compromises of the transitional period.

3. Rational. — The rational interpretation of moral law finds its clearest expositor in Kant. It is true that Butler formulated the traditional English theory of conscience half a century earlier, but even in his conception the supremacy of conscience does not involve independence of consequences; its function is to decide between the rival interests of self-love and benevolence, not to dictate a law irrespective of either. It was Kant's merit, as he conceived it, to separate out the pure principle of a moral law and present it free from any admixture of motions drawn from a consideration of consequences. To be moral is not to seek to satisfy a desire for anything, however good, but to obey a dictate of reason determined by nothing outside its own rationality. A moral law is thus a categorical imperative addressed by the reason to a being not naturally inclined to obedience. The motive to obedience is respect for the law itself whose authority we feel in our sense of moral obligation. The law, as grounded neither in the nature of God nor in its consequences for man, is thus absolute and the expression of a free reason which commands of itself alone, or is autonomous—to use Kant's term. That there is such a categorical imperative is the only fact given us by pure reason, and that, if there are free beings, they must govern themselves by such laws is evident; but how there can be free beings at all, and how we as sentient beings can be subject to such absolute dictates of reason—these are matters involved in the mysteries of personality. The form of such a law, as independent of consequences, must be abstract. Be rational, or 'act from a maxim fit for universal law,' is the formula. It is thus essentially negative—a critical test rather than an informing principle. No act is to be done whose maxim is not capable of universalization, but no principle is given us, apart from experience, by which to determine any positive control for the will.

In its illustration of this rational concept of moral law, Kant's theory also illustrates most adequately the jural concept of morality in general, the essence of which, as in Kant's system, is the primacy and absoluteness of law. In the theological forms the law tends to become heteronomous and foreign, and hence immoral, while in the natural systems it tends to subordinate itself to the concept of good and thus lose its jural character. In Kant's system alone is it at once a law and absolute.

NORMAN WILDE.

MORAL OBLIGATION.—The word 'obligation' comes from Lat. *obligare*, and implies that we are bound to some rule or norm. While legal obligation involves, in any last analysis, some external coercion, moral obligation assumes an inner compulsion, a sense of the personality being bound by that which may have no external authority to enforce it, and which, indeed, may be but very imperfectly formulated. Language bears witness to a universal human experience of a sense of this obligation or 'oughtness.' Even the most primitive speech reveals the sense of an inner compulsion, an inner voice that says 'I must.' In its actual history, however, this inner compulsion has rarely been quite separated from the sense of some external coercion. We find it first expressed in a series of more or less definite inhibitions. Its earlier chapters are written in a series of commandments, saying, 'Thou shalt not,' and this primitive morality is based upon customary and largely external usage. It is, moreover, shaped and sustained in an increasingly elaborate system of 'tabus,' which form a link between the external and internal authorities. The realization of an internal authority as compelling as any external coercion is a relatively recent conception. Indeed, only quite recent discussions have clearly distinguished in theory what practical purpose early made definite, namely, that to the extent that coercion becomes foreign to the agent's will, to that extent it ceases to be the agent's action. Moreover, older moral reflexion failed to draw any sharp line between the sense of moral obligation, as a category of the practical understanding, and that empiric content of the rule or norm to which the moral agent feels himself bound.

1. Uncritical religious intuitionalism ascribed both the sense of moral obligation and the content of the ethical code to an innate sense, and regarded both as a divine implanting in the human soul. Thus to both was ascribed a certain absolute and fixed character that often ended in an unreal and static morality. Religious and philosophical history and reflexion have revealed the fact that all codes are, in part at least, subject to change according as social and economic conditions change. And, as it became clear that empiric morality was thus conditioned, the question naturally arose whether the whole sense of moral obligation was not equally empiric and destitute of any normative or permanent character. Men began to seek its origin in the ebb and flow of human tradition. Thus arose the question of the seat of this inner voice and the historic genesis of conscience.

2. Greek intellectualism was prone to seek the origin of this sense of obligation in the rational process. Plato represents Socrates as identifying all moral obligation with rational insight, and he himself taught that morality recognized the given heavenly types or norms of conduct in the eternal ideas of the good. And, though Aristotle parted company at this point with Plato, and saw the social and empiric character of the ethical norms, yet on the whole Greek intellectualism never succeeded in keeping clearly apart these two elements in every ethical situation—the code of morals to which a moral agent is bound and the inner compulsion by which he is bound. Hellenistic ethics thus swung between an uncritical intuitionalism and an equally uncritical empiric rationalism. It may now be taken for granted that, though the discursive reason is and always must be concerned in every ethical situation, and is more particularly interested in the critical analysis of every given code of ethics, nevertheless it is vain to seek the origin of the sense of moral obligation in the rational process alone. Nor can we successfully resolve moral obligation into clear rational insight into consequences of any kind.

3. Critical rationalism began with the work of Hobbes, Locke, and Hume. Locke had little difficulty in showing how untenable was the uncritical intuitionalism that sought for innate codes of morals. But both Hume and Hutcheson leave unanalyzed a 'moral sense' as something ultimate. This moral sense Adam Smith, in his brilliant ethical treatise, sought to resolve into sympathy, or at least to trace its origin to sympathy as a natural attribute of man. It was distinctly on the basis of this critical rationalism that Bentham and the two Mills made their famous analysis of the sense of moral obligation in terms of utility, and more especially of social utility. So far as this empiric rationalism dealt with the codes of morals found in human history, it was fruitful and stimulating in a high degree. At the same time, it became increasingly evident that empiric utilitarianism could build no bridge from the socially useful to the sense of personal responsibility to be socially useful. And, when John Stuart Mill conceded an intuitive capacity for estimating values as higher and lower, and thus also a capacity for the intuitive recognition of moral values as higher over against other types of value, clear-eyed critics of rational utilitarianism realized that Bentham's system had gone into bankruptcy.

4. Biological evolution, however, infused new life into the discussion as to whether the origin of the sense of moral obligation might not be found in the socially useful. It was suggested by Darwin himself that the conflict of instincts, and the survival of groups obeying the instincts that made for group-preservations, would in a long process of development link the socially useful with the morally right, and this line of inquiry has been followed up by Leslie Stephen, Alexander Sutherland, E. Westermarck, L. T. Hobhouse, and others. The exceedingly useful light that this line of research has thrown upon the gradual development of empiric codes of conduct has led to confusion of the two issues involved. It may be readily conceded that the socially useful has determined in a measure, perhaps we may say in large measure, what men consider morally right, but the origin of the category 'moral obligation' remains unexplained. Evolutionary analysis has not as yet succeeded in building a bridge between the socially useful and the sense of moral obligation to the group. Somewhere at some time such a sense must appear in unmoral life as a variation, and, this variation having been once assumed, law and morals link themselves with group purpose, as von Ihering abundantly shows (*Der Zweck im Recht*^{3}, esp. vol. i. ch. vi.), but the biological analogy has been distinctly overworked, and it is becoming increasingly evident that evolutionary philosophy must assume variations and does not explain them. Thus on the ethical field origins are no more explained than on the biological, and the sense of a moral obligation cannot so far be successfully analyzed into unmoral elements. Moreover, even in detail the sense of individual moral obligation presents many difficulties in connexion with the socially useful, for historically it is easy to show that the sense of moral obligation has time and again protected courses of conduct patently socially detrimental.

5. Critical intuitionalism is therefore in many different phases reasserting itself, and, especially on the ethical field, there are many attempts to re-state more satisfactorily the position of Kant and Lotze. There is some return to Jacobi and Fries, and the philosophies of Wundt, Eucken, Eisler, James, and Bergson are suggesting new formulations for the sense of moral obligation as a category of the practical reason incapable of further analysis —an empty concept, it is true, in this form, whose content is given in empiric experience and is subject to the laws of evolutionary process and progress, among which laws the socially useful is one of the most important factors. Thus from the psychological point of view Wundt and James, as well as Eisler and others, assume the capacity for moral distinction and the sense of moral obligation, without attempting to analyze the category further, while realizing that the content of moral appreciation is a subject for scientific examination, and has its own evolutionary history. From this point of view the feeling of moral obligation arises as a variation, and maintains itself by its social usefulness. Bergson has as yet given no development of his philosophy along ethical lines, but the revival of a critical intuitionalism has found support in his main contention, and followers of Fries and Jacobi see in the sense of moral obligation the evidence of a capacity for reaching beyond the phenomenal, and link this with a re-statement of the Kantian argument for God's existence. According to this school, the fundamental significance of the sense of moral obligation is the compelling power of the purposeful character of life. The unity of our mental and spiritual life demands that moral judgments be not irrational, even though complete rationalization may be beyond our power. However divergent the empiric codes of social behaviour may be, the existence of a moral obligation is an element everywhere; hence the very rational process itself is involved in a defence of the inherent validity of moral obligation.

6. Conclusion.—Moral obligation may then be said to so far defy any further ultimate analysis, and its origin is as mysterious as are all other origins and variations. It is a category of the practical reason, and is in so far super-rational, but the contents of the moral judgment are subject to the rational process, as in the sphere of the phenomenal. Thus the total ethical complex reveals rational, sympathetic, eudæmonistic, and hedonistic elements. But into no one of these can the fundamental sense of personal obligation be quite successfully resolved. Moreover, this sense of inner compulsion, covering as it does fields of action which no external coercion could regulate, is everywhere becoming the regulative principle of human society, displacing in the moral man outward law, and giving the sense of new freedom, because our obligation is the categorical imperative of the informed conscience, and has its seat within, and is not based upon, outward law with its concomitant of external coercion.

THOMAS C. HALL.

MORAL SENSE.—The term 'moral sense' is practically equivalent to 'conscience,' and shares the field of ethics with such principles as rectitude and duty, happiness and social health. In the form of *συνείδησις*, the term 'conscience' appears as early as Periander and Bios (Stobæus, p. 192. 21); as an approving and fortifying moral sense, Epictetus uses the synonym *συνειδός* (bk. iii. ch. xxii.), while the disapproval of *conscientia* is referred to by Cicero (*Laws*, i. 14). Upon the basis of a natural moral sense, St. Paul speaks of the Gentiles as those who performed by nature (*φύσει*) the works of the law, being guided by conscience (*συνείδησις*, Ro 2^{15}). The appreciation of an inner moral sense distinct from external commandment seems to have been indicated by Sophocles in the *Antigone*, where the heroine appeals to a higher principle of action, while she repudiates the established law; the Sophists' distinction between *φύσις* and *θέσις* further marks off the internal sanction of conduct from all forms of external statutes. However important the principle of a moral sense may appear to be, it cannot be denied that the most profound moral systems have been elaborated in independence of it. Socrates based Greek ethics upon the general principle of knowledge, whence Plato and Aristotle, Stoic and Epicurean, perfected the ancient ethical ideal, leaving the ethics of conscience to the minor moralists. The meagre development of ethical theory in mediæval times failed to develop the notion of a natural moral sense; it is in modern systems of ethics that the analysis of the moral sense is to be found; even here such ethical philosophies as those of Kant and Spinoza were perfected without appealing to a special sense of morality.

When modern ethics began with Hobbes, it was the opposition to relativism and egoism that led R. Cumberland (*de Legibus Naturæ*, London, 1672) to postulate conscience and benevolence as the true foci of conduct, although it was the latter principle that received chief emphasis. As a deist, Shaftesbury insisted upon a 'natural sense of right and wrong' (*Inquiry concerning Virtue*, London, 1699, bk. i. pt. iii. 2), which he identified with conscience, and thus spoke of 'religious conscience' and a 'displeasing consciousness' (bk. ii. pt. ii. 1). With F. Hutcheson the moral sense was discussed more æsthetically than ethically in the form of a disinterested regard for universal humanity, whence he inquires,

> 'If there is no moral sense . . . if all approbation be from the interest of the approver, What's Hecuba to *us* or *we* to Hecuba?' (*Inquiry concerning Moral Good and Evil*, London, 1725, sect. i. 2).

J. Butler was the first to subject the moral sense to exact psychological analysis, whence he regards conscience as the 'principle in man by which he approves or disapproves his heart, temper, and actions' (*Sermons upon Human Nature*, London, 1726, serm. i. [*Works*, ed. J. H. Bernard, London, 1900, i. 31]). This inward sense of approval and disapproval is further regarded as a principle of 'reflexion' whose essence is that of 'authority' (serm. ii.). Butler tends to complicate the problem when he asserts that the dictate of conscience is ever in accordance with the impulses of reasonable self-love, while the supreme sanction of the moral sense is found in the principle of harmony with nature.

Among the ethical idealists of the 18th cent., Richard Price and Kant opposed the notion of a moral sense as such, and sought in reason the ultimate moral authority. In his *Review of the Principal Questions and Difficulties in Morals* (London, 1758), Price denies the validity of Hutcheson's 'moral sense,' and appeals to the 'understanding' as the ground of ethical distinctions, although Price's treatment of the understanding makes it possible for him to depart from mere rationalism, and repose in a Platonistic 'intuition' (ch. i. sects. i., ii.). Kant, who derived moral distinctions autonomously from reason, whence also springs the categorical imperative, treats the moral sense with contempt when he says:

> 'As to moral feeling, this supposed special sense, the appeal to it is indeed superficial when those who cannot *think* believe that feeling will help them out, even in what concerns general laws' (*Metaphysic of Morals*, tr. T. K. Abbott, London, 1889, p. 61).

In its treatment of the moral sense, then, the Enlightenment (*q.v.*) insisted upon something even more rationalistic than conscience.

If the tendency of the 17th and 18th centuries was to regard the moral sense as something rational, the tendency of the 19th and 20th centuries has been to reduce the principle in question to the social. In the middle of the 18th cent. Adam Smith inaugurated the career of social ethics when he sought the source of moral sentiment in 'sympathy.' The first to raise the question concerning the *origin* of moral sense, Smith had no hesitation in founding the ideas of propriety, merit, and duty upon the instinct of natural sympathy (*Theory of Moral Sentiments*, London, 1759). A century later Darwin connected the moral with the biological, and thus made the moral sense dependent upon the predominance of the social tendency in man. To 'sociability' Darwin adds the principle of 'reflexion,' without which the social could not have become ethical, so that the ideals of Butler, to whom Darwin pays due tribute, have not been wholly lost to view (*Descent of Man*, London, 1871, ch. iii.). Equally significant with the departure from the rational is the change from the individualistic to the social; for, where Butler identified conscience and reasonable self-love, Darwin united conscience with the non-egoistic in human nature.

When biological ethics transferred the seat of the moral sense from the self to society, much of the phenomenology of conscience, shame, approval, obligation, etc., seemed intelligible; at any rate, 'scientific' ethics has assumed that the social is conclusive, as appears from such a work as L. Stephen's *Science of Ethics* (London, 1882), where biological, social, and ethical are firmly linked (ch. viii.). In opposition to Stephen, and in the general style of Butler, J. Martineau has insisted upon the rational and individualistic conception of the moral sense (*Types of Ethical Theory*, Oxford, 1885, vol. ii. bk. ii. ch. ii.).

Where the moral individualism of the 18th cent. has practically succumbed before the advance of social ethics, there has arisen an æsthetic individualism which, while not allying itself with the moral-sense theory, has not failed to make vigorous warfare upon the social conception of life. Beginning with the romanticism of Friedrich Schlegel and the realism of H. B. Stendhal, and advancing with the *Décadence* of C. P. Baudelaire, this anti-social view has come to a climax in Nietzsche, who stigmatizes the compunctions of the social moral sense as so much 'bad conscience' from whose terrors he would emancipate mankind (*A Genealogy of Morals*, tr. W. A. Haussmann and J. Gray, London, 1899, pt. ii.). In the same manner Ibsen speaks of the modern man as one who, suffering from 'sickly conscience,' stands in need of a 'robust conscience' (*The Master Builder*, tr. E. Gosse and W. Archer, London, 1893, act ii.), while H. Sudermann, with more direct reference to social ethics as such, speaks derisively of the 'conscience of the race' (*The Joy of Living*, tr. E. Wharton, London, 1903, act iv.). Similar expressions of anti-social immoralism may be found in Anatole France, August Strindberg, and Bernard

Shaw. Thus, the status of the moral sense in contemporary thought seems to consist of a dogmatic assertion of the social on the part of science and a violent repudiation of the principle by culture.

MORAVIANS.—**1. History.**—The Moravian Church, or the Unitas Fratrum, belongs to the historic Churches of Christendom. For more than four and a half centuries it has never wavered in its claim to be a part of the Catholic Church, possessing the historic episcopate and the three orders of the ministry, administering the sacraments and preaching the Word according to apostolic precept, laying special emphasis on the importance of Christian unity, the cultivation of personal religion, and the necessity of personal service.

Whatever obscurity surrounds certain points in its history, there is nothing doubtful as to its origin. It dates from the year 1457; Bohemia was the land of its birth; and the more spiritually-minded followers of John Hus were its first members. Hus, the gifted rector of the University of Prague, an earnest reformer and eloquent preacher, owed much of his religious enlightenment to the writings of Wyclif, introduced into Bohemia by the wife of Richard II., a princess of that country. After his martyrdom at Constance in 1415 the greater part of his followers took up the sword in defence of their religious liberties. Some were pacified by concessions, such as their partaking of the cup as well as of the bread at the Holy Supper; but others, whose convictions went deeper, the Puritans of their day, withdrew from political life, retired to a remote corner of the country, and settled down in the Barony of Lititz. Here they formed themselves into a religious community on NT lines, in which many of the institutions of the early Christian Church were revived, under the leadership of duly elected elders. At the Synod of Lhota in 1467 they further proceeded to elect their own ministers, and for these they obtained ordination from the Waldenses (*q.v.*), whose bishop, Stephen, consecrated Michael Bradacius as the first bishop of the Unitas. The episcopate was given and received in the conviction of its apostolic origin, coming from the Eastern, not the Western, Church, transmitted possibly through the so-called sects, such as the Euchites, the Paulicians, the Cathari, etc. The validity of these orders was recognized even by the enemies of the Unitas; and, as the step thus taken involved complete ecclesiastical separation from Rome, it resulted in fierce persecution, despite which, however, the membership increased, the congregations multiplied, and the Church's influence spread far and wide, not merely in Bohemia, but beyond its borders also. The name adopted was *Jednota Bratrská*, the Latin rendering of which, 'Unitas Fratrum,' fails to give the exact meaning; 'Ecclesia Fratrum,' 'the Church of the Brotherhood,' would be more correct. The leaders in those early days were Peter of Cheltcic, Gregory the patriarch, and Lucas of Prague—men of very different temperaments, but of equal devotion. The Church's doctrines soon became distinctly evangelical; thus, at the Synod of Reichenau in 1495, the Brethren decided the great question, 'How shall a man be justified before God?' by the answer, 'Through the faith of our Lord Jesus Christ and the righteousness which is of God.' They laid special stress on Christian character and conduct; hence their strict discipline, which later excited the admiration of the Reformers. By the year 1500 they had over 200 congregations with more than 100,000 members; and in 1535 these figures had doubled themselves. It was the Brethren who issued the first hymn-book in the vernacular, in 1501; they set up some of the finest printing-presses in Europe, and used them largely for the production of their own translation of the Bible, which is still the standard Bohemian version of to-day. Their schools had a well-deserved reputation; Bohemia's best literature was the product of their scholars. Their church music became famous, especially for the congregational part-singing. Family worship was a feature of their homes; the children were early grounded in the Scriptures; the catechisms were clear, concise, and practical. The Church government was Presbyterian, with the Synod as the supreme court. Under its authority the bishops controlled their own dioceses, and they alone ordained; the presbyters preached and administered the sacraments; the deacons acted as assistants. Infant-baptism was practised, followed by confirmation.

As the Church expanded, it came to include three separate branches, in Bohemia, Moravia, and Poland; yet the three remained organically one, and thus the Unitas became the earliest International Protestant Church. Its history during the greater part of the 16th and 17th centuries is one long record of persecution, broken by intervals of rest and of official favour. It suffered terribly during the period of the Counter-Reformation, especially after the disastrous battle of the White Mountain in 1620. A veritable 'Book of Martyrs' might be compiled dealing with the days when Rome set itself to exterminate the Unitas. Its foremost leaders among the nobility were executed, its clergy imprisoned, its members sent to the mines or kept in dungeons; its churches were closed, its schools destroyed, its Bibles and hymn-books, catechisms and histories were burned. More than 36,000 families fled from Bohemia, and with them their sole surviving bishop, John Amos Comenius, the herald of humanistic and religious training for the young. He was at that time the leading educationist in Europe, and his writings still rank among the standard authorities. His wanderings took him to Poland and Holland; and he was also invited to England to re-organize the very defective system of education which prevailed in that country. Much sympathy for the Bohemian martyrs had already been aroused during the Commonwealth, when Cromwell offered the Unitas a home in Ireland; and this continued afterwards also, when collections on its behalf were made in many of the Anglican churches. In the belief that the days of the Unitas were numbered Comenius drew up a remarkable document in which he says:

> 'As in such cases it is customary to make a Will, we hereby bequeath to our enemies the things of which they can dispossess us; but to you our friends (of the Church of England) we bequeath our dear Mother, the Church of the Brethren. It may be God's will to revive her in our country or elsewhere. You ought to love her even in her death, because in her life she has given you an example of Faith and Patience for more than two centuries' (*Ratio Disciplinæ*, Amsterdam, 1660, Dedication).

He also secured the episcopal succession, apart from the Polish branch in which it still continued, by having his son-in-law, Peter Jablonsky, consecrated as bishop by Bishop Bythner at Milenczyn in Poland.

With the death of Comenius in 1672 the first part of the history of the Unitas ends. The second part opens at Herrnhut, in Saxony, where in 1722 a company of fugitives from the Moravian border valleys, in which isolated families of the ancient Church had still preserved the faith of their fathers, found a refuge on the estate of a young nobleman, Count Nicolas Ludwig von Zinzendorf. They were soon joined by others from Bohemia; and in association with a number of German Pietists they formed themselves into a society similar to those which then existed within the Lutheran Church. But this did not satisfy the descendants of the Unitas; they insisted that they were not Lutherans, they belonged to a much older Church; and, being now in the possession of a certain amount of religious liberty, they desired its re-establishment. To this Zinzendorf was at first opposed, till from a chance copy of the writings of Comenius he learned what the history of the Unitas had been, how glorious its past, how evangelical its doctrine, how strict its discipline, how firm its faith and steadfastness under suffering. Almost unconsciously he found himself being led on to devote his life, his means, and his talents to the re-organization of this venerable Church, and its equipment for further service. But the Renewed Church was not of Zinzendorf's creation. Its points of contact with the Unitas lie in the personal descent of many of its members, in the church regulations which were again introduced, and, above all, in the orders of the ministry, which in 1735 were restored, when David Nitschman was consecrated bishop by Bishop Daniel Ernst Jablonsky, whose father had received the succession from Bythner with the written commission of Comenius.

The little community at Herrnhut rapidly increased and developed in spite of the banishment of Zinzendorf by order of the Saxon Government, on the ground of his having introduced unauthorized religious novelties and of teaching false doctrine. Its fame spread far and wide, since in it a striking union of spiritual life with good works and industrial activity was to be seen. The danger of a narrow type of Pietism (*q.v.*) was averted by a wonderful experience of revival and a wave of evangelizing zeal, which visited the Church in 1727, under the impulse of which it embarked on that particular work in the doing of which lay the pledge of its continued existence. At the beginning of the 18th cent. foreign missions were almost entirely unknown among the Reformed Churches; it was left to the Moravians to inaugurate the modern missionary movement. This dates from the year 1732, when two of the Brethren set out to evangelize the enslaved Negroes in St. Thomas, willing to become slaves themselves if that should be the only way of winning them for Christ. In the same spirit others went to the Eskimos in Greenland; others settled in S. America, and carried the gospel for the first time to the natives in the Dutch Colony of Surinam. Work was also begun among the N. American Indians, to whom David Zeisberger devoted sixty-three strenuous years of life. In S. Africa these early missionaries were to be found teaching Hottentots and Kaffirs the faith of Jesus. They penetrated to Persia and Ceylon, they preached in Egypt and Algiers, they established their stations on the Gold Coast and in eight of the W. India Islands, they started a mission to the Jews—and all this as pioneers, and within a few years after the founding of that little Saxon village whose inhabitants numbered only some 600. They formed the first Protestant Church that recognized and attempted to fulfil the duty of world evangelization; and in this effort they stood alone for sixty years. This early characteristic of the Renewed Church still remains its outstanding distinction; and that is why, alone among all others, it possesses no separate missionary society, since the whole Church is the society, and within it the principle prevails that 'to be a Moravian and to further missions are identical.'

From Herrnhut strong religious influences began to spread at home as well as abroad among the students in the German universities, the landowners in the Baltic provinces, the merchants of Amsterdam, and the military in Berlin. Zinzendorf and his Brethren were invited everywhere, and, as the result of their evangelistic work, societies or congregations, known as 'settlements,' sprang up in Denmark, Holland, Russia, and Switzerland, and in several of the German principalities. Each became, like Herrnhut, an industrial as well as a religious centre, for the apostolic rule of being 'diligent in business' as well as 'fervent in spirit' was insisted on. It was largely by means of these industrial undertakings, supplemented by the unstinted generosity of Zinzendorf, that the cost of the mission work was met—not to mention the fact that most of the missionaries provided for their own necessities.

The first official visit was paid to England in 1735; and here it was that Peter Böhler three years later met with John Wesley and became the means of his spiritual enlightenment. Here also the name 'Moravian' came into use; given originally as a convenient nickname (like 'Methodist'), it has now gained a kind of permanence, though it cannot be regarded as satisfactory, since it emphasizes only one point, and that a comparatively unimportant one, in the long history of the Unitas.

The Moravian influence was unquestionably one of the main factors in the early days of the Evangelical Revival; for a time it equalled that of the Methodists. Moravian evangelists preached throughout the length and breadth of the United Kingdom, leaving their mark especially in Yorkshire and the Midlands; and, through the preaching of John Cennick, to a yet greater degree in Ireland and the west of England.

In America also the Church took root in the middle of the 18th cent., around two centres, Bethlehem in Pennsylvania, and Salem in N. Carolina; and from each of these two places it spread rapidly. Thus the Church came to consist again of three distinct provinces, according to the different nationalities—German, English, and American. These form the home base, and, though widely separated, they are organically one. Each province is independent as regards the conduct of its own affairs, elects its own bishops, appoints its own administrative boards, and legislates for itself through its own synods. The main outward bond of union between the parts (and the seat of final authority) is the so-called General Synod, made up of delegates from all the provinces. This bond may seem a very slight one, yet through these many years the spirit of brotherhood in Christ has been strong enough to prevent any kind of schism in the body.

The death of Zinzendorf in 1760 had important results. It involved a severe financial strain which at one time threatened disaster and dissolution, but it also led to the framing of a distinctive system of church government, the settlement of its constitution, the definition of its doctrine, and the reorganization of its undertakings. The administrative centre still lay in Germany, where during the latter part of the 18th cent. the Moravians found themselves in the forefront of the controversy with rationalism; they became the recognized champions of orthodox Evangelicalism. Here also their influence was as far-reaching as in England, though in a different way. In this case it was due largely to the writings and the personality of Bishop August Gottlieb Spangenberg, originally a professor at Halle. It made itself felt in the universities; Schleiermacher learned his religion and gained his conception of the historic Christ at a Moravian college; and Kant, the philosopher of Königsberg, referred his students, when searching for peace, to 'the little Moravian church over the way; that,' he said, 'is the place in which to find peace.'

2. Characteristics.—(*a*) *Diaspora.*—A unique feature of the Church's work on the Continent was, and still is, the so-called Diaspora, an extensive agency for promoting spiritual life and fellowship within the National (Protestant) Churches. It is carried on in many parts of Germany, in Denmark, Norway, Sweden, Switzerland, and Russia; and, according to synodal resolution, no worker in it is allowed to seek converts for the Moravian Church from among the members of other communions. The effort is in the interests of the Kingdom of God as a whole, supplementary to the existing religious agencies, and is designed to strengthen and promote the unity of believers. This accounts to a great extent for the good-will shown to the Moravians by those who know the disinterested nature of their labours, and the catholicity of their spirit. Had there been more denominationalism, no doubt a larger numerical increase would have resulted, but it would have meant the loss of that kindliness of mutual feeling which has marked the Church's relationship to other Christian communities.

(*b*) *Education.*—Another Moravian characteristic is the educational system, officially recognized and regarded as belonging to the Church's work and responsibility. Love of education, and enthusiasm for it, formed a part of the inheritance which had come down from the days of the Unitas. It was held that, just as the Church had its mission to the heathen, who had never heard the gospel, so had it also a mission to the young to ground and train them in its divine precepts. To carry this out was a priceless privilege ordained of God, to be undertaken with prayer, and to be done for Him. In this spirit numerous boarding-schools were opened in Germany, Holland, England, Switzerland, and America; many of them have become famous, not only on account of the education given, but also by reason of the pupils who have gone forth from them, men distinguished in almost every calling and rank of life. The standard was high; and, if in many cases the discipline was strict, it was always blended with the kindly influences of a distinctly Christian atmosphere.

(*c*) *Missionary zeal.*—The third, and the most characteristic, feature of Moravianism is its missionary zeal. Never since the beginning of the work in 1732 has this waned; the Church has sent forth its sons and daughters in an unbroken stream, in some cases through five generations of the same family. Most of its congregations have their representatives in the missions, and through these living links the bond of sympathy with the foreign field is maintained. The Church's energies flow largely along this channel, in support of what represents, and is felt to be, its God-appointed work in the present as much as in the past, a glory that has not faded. Hence the surprisingly large number of Moravian missionaries in proportion to the membership; and also the relatively high standard of financial support. Whilst in the Protestant Churches at large the proportion of missionaries to members is about 1 to 5000, among the Moravians it is 1 to 60. These are the words of J. R. Mott on the subject:

> 'If members of the Churches in Great Britain and America gave in like proportion [as the Moravians], then the Missionary contributions would aggregate over £12,000,000 per annum instead of some £3,000,000. And if they went out as Missionaries in corresponding numbers, we should have a force of nearly 400,000 foreign workers, which is vastly more than the number of Missionaries estimated as necessary to achieve the evangelisation of the World' (*Report of New York Ecumenical Missionary Conference*, New York, 1900, i. 97).

The work abroad has to a great extent been among primitive races, some of them now approaching extinction, in out-of-the-way parts, in lands that are peculiarly unpromising and uninviting, and that have been neglected by every one else. These have been taken up by the Moravians in accordance with Zinzendorf's early desire and determination, when, as a school-boy, he established among his companions the so-called 'Order of the Mustard Seed,' for the purpose of seeking the conversion of the heathen, having in mind 'especially such as others would not trouble themselves about.' Thus the Moravian Brethren were the pioneers in work among the lepers, first in the Cape Colony, where as early as 1818 a missionary and his wife cut themselves off from their fellow-Europeans, and settled down in a lonely valley among the poor outcasts, in order to care for their bodies as well as their souls. The result was remarkable, for within six years over 90 of the lepers were converted and baptized. Afterwards the work was continued on Robben Island, a sandy stretch lying off Cape Town; and still later a spacious hospital has been built outside the walls of Jerusalem, where the aim is to gather all the lepers of Palestine, and to alleviate the sufferings caused by this dread disease.

Continuous expansion has marked the missionary enterprise of the Church, till now it is to be found in every continent. The fields are as follows: Labrador, Alaska, California, the W. Indies (Jamaica, St. Thomas, St. John, St. Croix, Antigua, St. Kitts, Barbadoes, Tobago, Trinidad, San Domingo), the Mosquito Coast, Nicaragua, Demerara (British Guiana), Surinam (Dutch Guiana), S. Africa, East and West, Nyasa and Unyamwezi (in German E. Africa), W. Himalaya, and N. Queensland—14 different countries, 343 stations, with 1503 preaching places. The workers include 367 European and American missionaries, among them doctors, educationists, deaconesses, etc., 48 ordained native ministers, 459 native evangelists, 1663 native helpers; with a total of 107,379 souls in their care. The annual expense amounts to £114,000, exclusive of the Leper Home, which costs an additional £1500 per annum. Mission colleges exist in England, Germany, America, the W. Indies, and S. Africa; hospitals in Labrador, Jerusalem, Surinam, and Kashmīr, where Zenana work is also carried on.

The above figures, if not large in themselves, are strikingly so when compared to the size of the home Church. This consists of the continental congregations, in Germany, Austria, Switzerland, France, Denmark, Russia, Sweden, and Norway; the British province (England, Scotland, Ireland, and Wales); and the American provinces, North and South. The last-named have 134 congregations; in Great Britain there are 45, and on the Continent 30—or 74, if the Diaspora centres are included. A joint undertaking of the whole Church, apart from the foreign enterprise, is the evangelization of the lands of its birth and early history, viz. Bohemia and Moravia. Work among the young is carried on in both day and boarding-schools; the home Sunday schools number 179, and have 23,000 scholars; abroad there are 189 schools, with 1430 teachers, and over 25,000 scholars. In England an agency known as the Rural Mission works on lines somewhat similar to the Diaspora on the Continent.

3. Worship.—The worship of the Church combines the liturgical element with a large measure of freedom in extempore prayer—a blending of order and liberty. The British Book of Worship includes two liturgies for public service, an alternate form of prayer, a confession of faith, and formularies for the baptism of infants and of adults, for confirmation, ordination, marriage, and burial—and combined with these is a newly-revised collection of hymns of all ages. It is the latest successor of the first Protestant hymn-book ever issued. The Church's ritual is marked by simplicity and directness of purpose, due largely to a wise caution in the use of symbolism, and also to a dislike of whatever would serve to quench the spiritual impulse of the moment. A stately dignity marks the special services and the doxologies in use at the consecration of bishops and the ordination of ministers. The same applies in a measure to the confirmation service, which, as in the Greek Church, is not considered an exclusively episcopal function, but may be performed by a presbyter. At all these services the surplice is worn, as well as at the administration of the sacraments. The Apostles' Creed is in use as representing the oldest, simplest, and most generally accepted expression of the faith of Christendom; and in addition a special confession, based on that compiled by Luther and made up mainly of a connected sequence of Scripture passages, is recited on the great Church festivals, such as Easter, Whitsunday, etc. In it the Trinitarian belief of the Church finds marked emphasis—the Fatherhood of God, the Creator of all things and the Author of salvation; the redemptive and mediatorial work of the Son in His perfect humanity, the 'Lamb of God' once slain, now risen and glorified; the presence and power of the Holy Spirit, 'Who proceedeth from the Father, and Whom our Lord Jesus Christ sent after that He went away . . . that He should abide with us for ever.'

4. **Doctrine.**—The main points of doctrine as held and taught are defined in the Church Book under the following heads: the doctrine of the total depravity of human nature; the doctrine of the love of God the Father; the doctrine of the real Godhead and the real humanity of Jesus Christ; the doctrine of our reconciliation unto God and our justification through the sacrifice of the Cross; the doctrine of good works as the evidence of faith; the doctrine of the fellowship of believers; the doctrine of the Second Coming of the Lord; and the doctrine of the Headship of Christ over the Church, which is His Body. Thus in essence the theological position is that of the Nicene Creed, the XXXIX Articles, the Augsburg and the Westminster Confessions; but, since no one Creed can be said to be a complete statement of the whole range of Christian dogma, liberty is allowed for difference of view in non-essentials. The Holy Scriptures are regarded as the only rule of faith and conduct, the basis of all teaching, and the final court of appeal. More stress is laid on Christian life and character than on perfect agreement of opinion. Devotion to Christ, and personal union with Him, form the foundation of the Brotherhood. The Church has kept itself free from anything approaching sectarian peculiarities of doctrine, and this because it came out from Rome on the broad ground of gospel truth and liberty, and did not separate itself from any other Evangelical Church.

5. **Constitution and government.**—The constitution and government of the Church, which at one time was something of an oligarchy, is now essentially democratic, as may be seen from the fact that in the General Synod, which meets every six years and controls the funds and the work of the entire body, the elected members outnumber those who have a seat in virtue of their office. The same applies to the provincial synods, and also to the authorities of the individual congregations. The principle at work in Church affairs is that of 'the government of the people, by the people, and for the people,' under the sole headship of Christ. The bishops have no administrative powers on account of their position, though, as a matter of fact, a bishop is almost invariably the president of the board of elders which directs the work of each province. These boards are elected by synod, the members holding office only during the inter-synodal period; they are responsible to the synod for their administrative doings. The foreign missions, as the concern of the whole Church, stand under the management of an international mission board, on which each of the home provinces, as well as the foreign field, is represented. This has at present its seat in Herrnhut, though it might just as well be located anywhere else. In addition there is a general directing board of the Unity, which has to see to the carrying out of the principles laid down by the General Synod in regard to constitution, doctrine, worship, orders, congregation rules, and discipline. It exercises also the functions of a court of appeal; it summons the General Synod, and acts as the standing representative of the Church in its entirety.

All appointments in the ministry are made by the directing boards of the respective provinces; each congregation is entitled to suggest names for the filling of a vacancy, and each minister has the right to accept or decline a call sent to him. The different provinces make their own arrangements for the training of their students, whilst in all the various colleges the standard is equally high. The normal course includes the work necessary for a University Degree in Arts, which each student is expected to gain; then follows a three years' study of theology. As a rule, some period is devoted to teaching in the boarding-schools. Later on comes ordination, in the first instance as a deacon when acting as assistant minister; and, on being appointed to a separate charge, a second ordination admits to the presbyterate. Thus the Church possesses and combines within itself many of the features which in other cases separate some of the larger religious bodies. Its orders are strictly episcopal, for only bishops can ordain, but its government is presbyterian. Its teaching is distinctly evangelical, though no formal subscription to any specific Creed is demanded, or expected, from ministers or members. The individual conscience is bound by no formularies; the bond of union lies not so much in a common Confession as in the exercise of mutual love as the supreme mark of discipleship. Infant-baptism and confirmation are practised; at the Holy Supper the wafer is generally used; the Church seasons are observed with very special stress on the services of Holy Week and Easter. In some of these observances there is a marked element of ritual, hallowed by the usage and tradition of past centuries; but at the same time the Church is as free from the bondage of form and ceremony as it is from all sacramentarianism.

The whole body, scattered over the world's surface, on the Continent, in Great Britain, in America, and in the 14 mission-fields, is still an organic Unity, each portion maintaining its own national characteristics, the Germans attached to their German ways, the English and Americans equally loyal to their own country's interests and customs. Jointly they form an international brotherhood, composed of men of many races and differing opinions, all banded together, not to propagate any special system of church government or any kind of ritual, or any particular point of doctrine, but to evidence and promote the oneness of believers in Christ, and to prove the possibility of a union, organic as well as spiritual, which rises above all barriers of nationality and opinion. The Moravian Church does not work in opposition to any other evangelical Church, nor does it seek to increase its membership by any system of proselytizing. Its aim is to gather into the fold of Christ those who are still outside, and then to further that growth in grace and that fruitfulness of service which are the divinely appointed means for the spread of the Kingdom of God among the children of men. It is above all else a missionary and a union Church.

E. R. HASSÉ.

MORBIDNESS.—The term 'morbidness' as applied to moral and religious states of mind is popular rather than scientific. It designates particularly any unduly depressed state connected with one's moral or religious status. Little effort has been made thus far to discover a scientific differentia for religious and moral disease or morbidness. One author,[1] essaying a moral pathology, treats largely of ordinary moral faults and classes as pathological even such habits as result from mistaken conceptions of the moral life. Here 'pathological' loses all definite meaning; as well might we class as morbid the misspelling of a word. On the other hand, neurologists and medical writers tend, on the whole, to limit moral and religious morbidness to certain phenomena of the insanities, such as the delusion that one is God or Jesus Christ, or that one has committed the unpardonable sin. While it is difficult to differentiate between sanity and insanity, a useful mark of the insane is that they are incapable, for the time being at least, of fulfilling their social functions. Thus, all the insanities are cases of moral inability and, in this sense, of moral morbidness.

There is, however, a broad expanse of moral morbidness that is neither insanity, on the one hand, nor, on the other, mere deflexion from a moral ideal through erroneous thinking or through the common instinctive impulsions. The best example is the moral distortions frequently found among adolescents. Under the stress of the neural and intellectual re-organization that is going on at this period of life, the following types of morbidness are not uncommon.

(1) Excessive or minute introspection of one's desires, motives, or choices, often with the application of excessively severe standards to one's self. In religious communions that emphasize such experiences as conversion, regeneration, and the witness of the Spirit, this introspection often consists in a search for signs of the divine presence or of divine operations within one's soul.

(2) Hypersensitiveness to moral and religious situations and distinctions. To be wrong at all is to be heinous; only perfection is really good—this is the attitude of mind. This is what is often called 'morbid conscience.' The victim of it is likely to put absurd emphasis upon the exact performance of trifles that seem to be duties. Habitual self-condemnation or censoriousness towards others may also appear.

(3) A passion for certitude, and refusal to live by the ordinary, commonsense assumptions, probabilities, and 'rule o' thumb' devices of mature practicality. Sometimes a sense of uncertainty becomes almost an obsession. The victim feels uncertain, for instance, whether he has locked the door, although he knows, in the ordinary sense of 'knowledge,' that he has done so. So, also, he may feel that he ought or ought not to do a certain thing, although he understands, in a way, that his feeling is unreasonable.

(4) Feverish or self-annihilating devotion to a person, a cause, or an ideal. Here morbidness consists partly in emotional excess, partly in the egregious self-assertion upon which the supposed sublimity of self-obliteration depends.

(5) In the four types thus far named we behold a sort of psychical congestion and soreness. A fifth type displays the opposite—insensibility and failure to function in the presence of normal stimuli. Callousness towards the pains and pleasures of others and lack of a sense of obligation are its marks. In less extreme cases the callousness appears only in spots, as towards some one person, human interest, or kind of duty.

These adolescent twists illuminate the whole subject of moral and religious morbidness. For, if the five types be broadly interpreted, they will be found to cover all cases of such morbidness at whatever stage of life. Here we have over- and under-sensitiveness, excess of action and defect of it, excess and defect of introspection, over- and under-caution, and disproportion in thinking. This is not normal or healthy, yet it includes no insane delusions and no such failure of practical adjustment as puts one outside the pale of social toleration.

The causation of morbidness in the sense that now grows towards definiteness includes two factors: neural depression (or at least lack of vitality), and some incidental experience that starts an unfortunate mental habit. The fundamental facts with which we have to deal are excess, defect, and distortion of emotion. Not infrequently morbid persons cherish a conviction that their mental processes are rational rather than emotional even though observers easily discover the lack of emotional balance. Conduct, and what passes as reason, are alike determined by some congestion or soreness, or by abnormal callousness. These emotional tendencies are primary psychical signs of neural conditions. The depression may be a hereditary or temperamental trait, an incident of a disease, or the product of an internal irritant, of a drug, or of fatigue. The reason why morbidness occurs so frequently in adolescence is that the pubertal change and the consequent re-organization of habits put extraordinary demands upon the nervous system. To this cause must be added the peculiar loads in school life, economic life, and social life that our occidental customs impose upon youth. Finally, in many cases sexual perversions and difficulties connected with the firm establishment of a healthy sexual life increase the tendencies to depression. In mature life the same general principles apply. Morbidness may safely be assumed, in practically all cases, to spring partly out of nerve depression, which, in turn, may have many causes.

The last of the five adolescent types enumerated does not readily reveal its neural basis. Moral insensibility, indeed, may not seem to require any special neural basis. May it not be a matter of mere habit? Habit might, perhaps, account for it in older persons, but, whenever a child or youth exhibits it, the presumption is that strength for a full social reaction is lacking. Let it be remembered that socialized conduct is an achievement that implies power to feel in particular ways, and to resist and organize impulses. In the games of children and youth 'foul play' is often simply the resort of individuals who have not sufficient muscular strength or mental power to hold their own while playing the game according to the rules. In social situations that present stimuli of normal strength a child of normal powers will react socially unless some positive counter training has preceded. Persistent unresponsiveness to social stimuli is strongly suggestive of constitutional weakness or of incidentally depressed vitality.

---

[1] A. E. Giles, *Moral Pathology*, London, 1895.

But the neural basis of morbid moral and religious states is not nearly the whole explanation of them. Neural depression is generic rather than specific; it puts consciousness into a minor key, but it does not of itself construct the melody. The particular reaction depends upon particular stimuli and upon incidental as well as permanent subjective conditions. The same neural background may be present in a person who worries about his soul's salvation and in one who worries about his health. Further, habit plays a leading rôle in the whole matter. A morbid reaction, once induced in a period of weakness, may become fixed as a habit, and so persist even after the original neural depression has been partly or wholly removed. The relation beween moral and religious morbidness and neurasthenia is often close. In both we find a general background of neural depression and a foreground of habitual ideas and practices, often highly systematized and therefore regarded as rational.

A gloomy theology or moral theory rarely, if ever, produces settled morbidness in the absence of predisposing nervous weakness or depression. Healthy and nervously strong persons, if they accept such doctrines at all, usually hold them in a theoretical way for the most part, or yield to their terrors only now and then when attention is specially directed to them. There is truth in the popular observation that, if men really believed in the grim theology that some of them profess, they would 'go wild.' The fact that, even in circles in which such theologies are accepted, men pursue and enjoy the common values of life, such as family, home, property, and social recognition, is direct evidence that any settled emotional realization of the prevailing belief depends upon something more than a set of ideas. If, however, any individual in such a circle has a tendency to nervous weakness, religious instruction may easily become the decisive factor in producing morbidness of a serious kind. In the aggregate the spiritual havoc thus wrought is undoubtedly large, although the cases of it are scattered. It is most unfortunate that among those who are susceptible to such injury are many persons whose sensitiveness and fineness of organization adapt them for high tasks. It is sometimes, no doubt, the possible prophet, poet, reformer, or thinker whose energies are fruitlessly introverted by depressing instruction.

LITERATURE.—G. Vorbrodt, 'Zur Religionspsychologie, Prinzipien und Pathologie,' *Theologische Studien*, Jena, 1906, pp. 237–303, argues against the view that religion as such is a morbid phenomenon. Josiah Moses, *Pathological Aspects of Religions*, Worcester, Mass., 1906, gives an extended analysis of religious extremes of various sorts. E. D. Starbuck, *The Psychology of Religion*, London, 1899, shows that conversion is, in general, a normal rather than abnormal phenomenon, chiefly of adolescence (ch. xiii.), but he presents numerous cases of adolescent doubt, brooding, depression, and introspection (ch. xvii.). G. A. Coe, *The Spiritual Life*, New York, 1900, also discusses adolescent difficulties, particularly doubts and morbid conscience. As already indicated, A. F. Giles, *Moral Pathology*, London, 1895, is not significant for our topic. A popular discussion of depressive states of the neurasthenic type will be found in E. Worcester and others, *Religion and Medicine*, New York, 1908. See also J. Bresler, *Religionshygiene* (pamphlet), Halle, 1907.

GEORGE A. COE.

MORDVINS.—1. Introduction and sources.—The Mordvins form a branch of the Finno-Ugrian race (cf. vol. vi. p. 22^b), and consist of two tribes called respectively the Erzä and the Moksha. Our knowledge of their ancient religion, coming, as it does, almost exclusively from a time when, in name at least, they had been converted to Christianity by the Russians, and when they could practise the rites of their earlier faith only in secret, is very scanty and defective. After the Mordvin people, as a whole, in consequence of the victory by which the Russians finally overthrew the Tatar khanate of Kazan (1552), had come under the sway of the conquerors, measures of a more or less violent nature were taken here and there to convert them, and were continued in the 17th century. It was not, however, till about 1740–50 that they came to submit *en masse* to the rite of Christian baptism, and the following decades witnessed the disappearance of the last vestiges of their heathenism. Yet for a long time their conversion was, in the main, a merely nominal change, and, accordingly, even in quite recent times the exploration of remote districts has yielded much valuable material for the elucidation of their ancient religion.

Our earliest information on the subject comes from an Italian traveller, G. Barbaro, who visited the district now called Eastern Russia in 1446, and who gives a short account of how the victim was dealt with in the horse-sacrifice of the Moksha tribe. The notes on the religion and sacrificial practices of the Mordvins made by N. Witsen, a Dutchman, at the close of the 17th cent. are altogether negligible; nor can we gather much of value from the accounts of P. J. Strahlenberg, K. Müller, I. Lepechin, J. G. Georgi, and P. S. Pallas, in the 18th century. A more useful source (in spite of errors due to misapprehension) is the Russian MS written by a land-surveyor named Miljkovič in 1783, and several times printed (most recently in *Tambovskija Eparchialjnyja Vědomosti*, no. 18, Petrograd, 1905, p. 815 ff.). From the middle of the 19th cent. we find in Russian newspapers and periodicals (especially those of the provinces), as in other publications, sporadic notices and descriptions of local conditions. Accounts of a more general character have been given by Meljnikov, Mainov, and Smirnov (cf. Literature at end). Meljnikov (writing *c.* 1850) draws his material mainly from MS sources; but, as regards the ideas of the gods, deals with his data too freely, and adds imaginative embellishments. The same may be said of Mainov, who, some thirty years later, devoted himself to the investigation of Mordvin ethnography, and even travelled over the Mordvin district; in many points he merely follows Meljnikov. A much more valuable production is that of Smirnov, who carefully utilizes the available literature as well as a number of MS sources, and also draws upon his own observations. The following account is based not only on the published sources, but also upon collections made by the present writer among the Mordvins themselves, and the fairly abundant MS material subsequently forwarded by native Mordvins to the Finno-Ugric Society in Helsingfors; it likewise draws upon some (in part very valuable) MSS dating from the middle of the 19th cent. and now in the keeping of the Imperial Geographical Society, or else deposited in the Asiatic Museum of the Imperial Academy of Sciences, Petrograd. The latter group of MSS had been already used in part, though very unscientifically, by Meljnikov and Mainov.

2. The dead.—Life after death was regarded as a direct continuation of earthly life. The departed in their graves live and occupy themselves in much the same way as they did upon earth—hence the articles required by them were placed beside their bodies in the grave. In death as in life kith and kin are still together, so that the graveyard is the counterpart of the village; there is no realm of the dead in a universal sense. From the graveyard the human-like shades come forth to visit the living. Each family worships its own dead, the foremost and mightiest of whom is the first who was buried in the particular graveyard, *i.e.* the progenitor of the family (together with his wife), who was often still spoken of by his own name and was honoured with the title of 'ruler of the graveyard' (*kalmon' kirdi*). The prevailing idea seems to be that this progenitor should not belong to too remote a past; thus among certain Erzä Mordvins in the government of Saratov, who migrated thither some 200 or 250 years ago, the earliest ancestors to whom worship is accorded are positively stated to have been the first settlers—the memory, and thus also the worship, of the earlier generations having faded away. Festivals in honour of departed individuals are celebrated during the first year after death—one immediately after burial, and others at specified times, as, *e.g.*, six weeks, or the fortieth day, after death, from which time onwards the shade of the dead becomes more closely attached to the corpse in the grave, while prior to that time it lingers chiefly in its former home or, it may be, in places which the living person had been accustomed to visit. At this festival the previously deceased members of the family are believed to be in attendance, and are implored to take the newly departed into their midst.

General festivals for all departed ancestors (*pokštšat babat*, or *at'at babat*, 'grandfathers and grandmothers' [=ancestors]), again, are celebrated at least twice a year, in spring and autumn (latterly the dates of both the individual and the general festivals were for the most part brought into accordance with those of the commemorative celebrations appointed by the Russian Church). The ancestors are invited in due form to a feast in the village, the several houses of the family-group being taken in rotation for this banquet of the living with the dead. According to a tradition from the beginning of the 17th cent., joint festivals for the dead were in an earlier period held by larger family-groups or clans also at intervals of some fifty years. Formerly, animal-sacrifices were offered at the celebrations, and the ceremonies connected with them contain features that seem to point to a still earlier practice of human sacrifice. The living approach the ancestors with prayers and gifts in all circumstances in which, as they think, they require the help of these ancestors either for their own benefit (particularly in cases of illness, which may be sent by the ancestors themselves, if angered) or in order to injure others. Moreover, at the sacrificial feasts which are held by the community in honour of the (nature-) gods, the ancestors are in some districts conjoined with these as objects of worship, being invoked in the prayers immediately after the deities, and besought for the same earthly blessings—success in tillage and cattle-rearing, good fortune, and health. The dead, when thus present by invitation, are welcome guests, from whose benignity all good things may be expected—though at the close of the festival, it is true, they are driven away, sometimes with threats—but, when they appear on their own initiative, they are greatly feared, especially as causing disease. Peculiar terrors are excited by the dead who perish by accident—*e.g.*, by drowning—or who for other reasons have not received proper burial, as also by those who die without surviving kindred; such unfortunates are, accordingly, attended to only in the festivals for their own ancestors.

In connexion with the ceremonial of this ancestor-worship, special mention must be made of the fact that at the festivals for deceased individuals, according to some older accounts, a wooden image or a doll representing the dead was set on the bench by the festal table; subsequently this was replaced by articles of clothing belonging to him. At these festivals, however, the departed has also a living representative, a person of the same sex and of about the same age, who acts his part, and is treated by those present as if he were the deceased. He presents himself in the clothes of the dead, and frequently is conducted from the graveyard, and then, at the end of the feast, taken back to it. According to some accounts, he never speaks at all, but partakes heartily of the banquet, and receives the tokens of respect accorded by those present. Other accounts inform us, however, that he carries on an active conversation with them: he tells them of the life of the under world, and of those who have gone there before him; he gives them good counsel, admonishing them to live in unity, to abstain from theft and excessive drinking, to look well after their cattle, and the like; he blesses man and beast, settles disputes regarding inheritance, etc.

According to some authorities, the dead, during their existence in the grave, undergo a second experience of death, passing thereby 'into a higher state,' in which they no longer maintain direct relations with those living upon the earth, but have intercourse only with those who have died once, and through the latter alone influence the fortunes of the living.

Although the ancestors are worshipped and invoked like the gods, and to some extent conjointly with them, the two classes are, nevertheless, rigidly distinguished from each other. Still, there seem to be cases where the people have quite forgotten the human origin of a dead person whom they worship, and he is invoked as a 'god' (*pas*). Among the Erzä in the governments of Kazan and Samara we find a deity called Staka pas, 'the heavy god,' who is honoured with special sacrificial festivals, and is entreated not to launch 'his heaviness' (*i.e.* evil generally) upon the people. In some parts a divine pair bearing various proper names—*e.g.*, Onto and Bonto (who are popularly supposed to be husband and wife)—are invoked by the epithet of Staka pas, while elsewhere the 'heavy god' is addressed in the sacrificial prayers also as Kan pas, Kuvan pas, and regarded as living 'in the black earth.' The word *kan*, the signification of which is now unknown to the people at large, is simply the Tatar *kan*, 'prince,' so that *kan pas* means 'the god-prince'; *kuvan*, again, is in all likelihood traceable to the Turkish princely title *kagan* in its Chuvash or Bulgar phonetic form *kogan* or *kugan* (with *o* or *u* instead of the common-Turk. *a*), which, though it has not come down to us, would correspond perfectly to the Mordvin *kuvan*. As the Mordvins, in part at least, were at one time among the subject peoples of the Volga Bulgars, the ancestors of the Chuvashes of to-day, we may be permitted to conjecture that the 'heavy god' was originally the spirit of a high Turkish ruler; similarly, the other heavy gods, such as Onto, etc., perhaps represent native princes of a bygone age.

With the Mordvin cult of the dead is probably connected in some way also the worship of the deity or spirit called Keremet (Erzä) or Kerämät, Kerämäd (Moksha), a name of Chuvash origin (in the Chuvash tongue of to-day, *Kirämät*, originally an Arab. word). Among the Mordvins this deity bears the title *soltan*, *salhta*, which is obviously the same as the Arabo-Turkish *sultān*. What is told of him among the Mordvins is meagre and inconsistent. Among the Moksha, according to an early account, he was a deity of great prestige and power, and superior to all others in his influence upon everyday life—in no sense a malign spirit, like Keremet among the Cheremisses. Although he bears a name of foreign origin, and was regarded by the Moksha as 'born and bred with the earth'—a fact which shows that the people had no idea of his human origin—it would seem, nevertheless, that his worship contains certain elements of a former native hero-cult. In the legal proceedings of the community oaths are taken in the name of Kerämät, and it is believed that he punishes those who are guilty of crime.

3. **Nature.**—(*a*) *Air and sky.*—In the Erzä tribe the deity of the sky is called Vere-pas, *i.e.* 'the god who is above.' We also find mention of Ški-pas and Niške-pas or Niške, the latter of whom, while now identified by some of the Erzä with Vere-pas, was originally in all likelihood a distinct god (probably of foreign origin). In a number of ancient MSS the name Niške occurs in the form Ineške, whence it appears that the name is really a synthesis of *ine*, 'great,' and the first element in the divine name Ški-pas just mentioned. *Ški*, again, is a participle of an obsolete verb *ška-*, meaning 'bear,' 'procreate,' so that Ški-pas signifies literally 'the generative god,' 'procreator-god,' and Niške, 'the great procreator.' The sky-god of the Moksha is called Škaj—a name corresponding exactly to the Erzä Ški—or, with the addition of the term for 'god,' which among the Moksha is still found in the more primitive dissyllabic form *pavas*, Škabavas (also Škabas and Škajbas), which accordingly corresponds in form with the Erzä Ški-pas. In the prayers he receives the designation Värdä, 'he who is above,' or Ot′s′u, 'the great one' (see above, the explanation of the Erzä name Niške). The Erzä Niške or Niške-pas has a consort named Niške-ava, 'Mother Niške,' who is worshipped at any rate by women in their homes (she is now often identified with the Virgin Mary, the Theotokos); he has also two daughters, Kastargo and Vezorgo, while in the songs we likewise hear of a son. Among the Moksha the wife of the sky-god is, so far as is known, mentioned, along with a daughter, only in a single song, where she is called Škabas-ava, 'Mother Škabas.' Strahlenberg states that the highest deity of the 'Mordvins' (by which term he obviously means the Erzä tribe) is Jumishipas; in the first portion of his name, *jumi*, we have perhaps a cognate form of the Cheremiss term Jumo, applied to both the sky-god and the sky, and of the stem in the Finnish *jumala*, 'god,' while the second element is either equivalent to Ši-pas, 'sun-god,' or, more probably, an incorrect form of Ški-pas (see above).

Among the Mordvins generally the sky-god ranks as supreme among the gods, and to him must frequently be offered the first sacrifice and prayer. It may be noted, however, that, according to a report from the middle of the 19th cent., the Moksha, or at least part of them, did not offer sacrifice to Skaj at all, but simply, at the beginning of every sacrificial festival, addressed him with a brief prayer for protection.

A special deity of thunder, who is worshipped in the communal sacrificial feasts, is found among the Erzä. He is named Pur′gine (lit. 'thunder'), or Pur′gine-pas ('the god Thunder,' 'thunder-god'), and the worshippers beseech him to send a beneficial rain, but not the noisome hail; his figure has been strongly influenced by that of the prophet Elijah in popular Russian belief. Among the Moksha thunder is called *at′am*, a derivative of *at′a*, 'grandfather,' 'old man,' and this, together with the fact that the rainbow is termed *at′am-jonks* (*jonks* = 'bow,' 'cross-bow'), seems to indicate that the Moksha also personified thunder, though the imperfect sources certainly say nothing of a thunder-cult among them.

In the prayers and elsewhere the sun as well as the moon is designated a god (*pas*, *pavas*), viz. Tši-pas (Erzä), Ši-bavas (Moksha), 'the god sun,' 'sun-god,' and Kov-bas, Kov-bavas, 'the god moon,' 'moon-god.' Special oblations are accorded to the sun at the sacrificial feasts. The worship of the moon seems to involve no more than that, when a person first descries the new moon, he bows before it with a prayer for good health, and promises it a whole (*i.e.* uncut) loaf. The morning and the evening glow are invoked, with Russian proper names attached to the terms, almost exclusively in magic formulæ—*e.g.* as 'morning-glow Mariya,' 'evening-glow Dariya'—and were probably derived, along with the formulæ themselves, from the Russians, resembling in this the spirits of midday and midnight, and others of similar character, which are likewise designated by Russian proper names in the magic formulæ.

Among the deities of the sky should perhaps be included a goddess styled Azĕr-ava, 'mistress,' who, in addition to Kerämät, was once highly revered among the Moksha, at least in some districts. She was said to dwell 'in the high place, in the upper parts of the atmosphere,' and bore the epithets 'rain-bringer' and 'corn-begetter'; she seems, however, to have been rather closely related in some way to Kerämät, as in the local law-courts oaths were taken in her name and in his (see above). Here, too, may be mentioned an obscure goddess named Ange-pate or Ange-pate pas (*pate*, more correctly *pat′a*, means 'elder sister'), who is said in one MS to have been worshipped among the so-called Teryuchans (Russianized Erzä in the government of Nijni Novgorod), but is otherwise unknown.

The name Ujsud or Ujvĕs′id—a word of obscure origin—is used among the Moksha to denote a host of spirits who move about in the upper atmosphere amid harmonious sounds (mingled, indeed, with inharmonious) and to whom girls make offerings of their hair. Should one who catches a glimpse of these spirits at once implore them to send him good fortune, he obtains his wish, though at times their gift may be death. With this host may be compared the celestial spirit known among the Chuvashes as Kčvak Xuppi, 'the gate of heaven'—the personification of some luminous appearance: 'when the gate of heaven opens, one obtains what one asks for.'

In some districts the Mordvins worshipped the wind, mostly under the name of Varma-ava, 'mother wind,' 'wind-mother,' both privately and at the communal sacrifices; and in her divine capacity she was specially implored not to damage the corn and hay crops. Worship, with offerings of food, was accorded also to frost, usually as Moroz-at′a or Kelme-at′a, 'old man frost,' but only within the house; the ceremonial of this cult is manifestly of Russian origin, as is probably also the spirit itself.

(*b*) *Earth, field, and grain.* — Mastor-ava, 'mother earth,' 'earth-mother,' especially among the Erzä, appears as one of the most revered of deities, being often named, indeed, immediately after the sky-god; thus in the songs we often find the set phrase, 'First he bowed before the sky-god, and then before mother earth.' At the communal sacrifices the Erzä besought her to give them a good harvest and to bestow good health upon the tillers of the field. She seems sometimes to have borne the epithet Mastor-pas, 'god earth,' 'earth-god,' although elsewhere Mastor-pas appears as a distinct (male) deity, whom people invoked in their imprecations to bring their enemies to destruction. The Moksha, too, had their Mastĕr-ava, 'mother earth,' but in their official worship her place is taken by Paks′-ava, 'mother field,' 'field-mother,' or Paks′-azĕrava, 'field-mistress,' 'field-hostess,' or, again, Noru-paks′ä, 'corn-field.' Among the Erzä there is little mention of the spirit of the tilled field; here, along with 'mother earth,' we find the place of that spirit usually taken by Norov-ava, 'mother corn,' 'corn-mother,' also designated Norov-pas, 'the god (goddess) corn,' to whom, among the Moksha, corresponds S′or-ava (or sometimes Noru-ava), 'mother corn'; S′or-ava, however, is found mainly in the magic formulæ and the songs. Each tilled field had its own particular spirits. For the meadow likewise there was a special presiding spirit, called Nar-azĕrava, 'mead-mistress,' or the like; but, as far as we know, she was not the object of a distinct cult, or, at most, she was presented before the hay harvest with a few pieces of bread, accompanied by a prayer for her protection.

(*c*) *Forest and tree.* — The forest-spirit — each forest has one of its own—is usually designated Vir-ava, 'mother forest,' 'forest-mother,' and is now generally an evil-disposed being, whose characteristics (with the exception of her sex and her large breasts) have been borrowed in detail from Lješyj, the evil forest-spirit of the Russians (on the Lješyj see *ERE* iv. 628); she is not worshipped. According to our older records, however, the forest-mother, who among the Moksha is also known as Vir-azĕrava, 'forest-hostess,' 'forest-mistress,' was a friendly deity, to whom hunters and those who gathered fruits, berries, or mushrooms prayed for protection against wild beasts, serpents, and ill-luck of all kinds, and for success in their efforts, presenting her at the same time with small oblations of food, drink, and money. Among the Moksha similar petitions are addressed also to Virĕ-pavas, 'the god forest.' While, according to the extant sources, the forest-spirits were not worshipped at the communal sacrifices, it seems likely from certain reports that such worship was paid to particular trees—oak, lime, birch, pine—which were entreated to grant prosperity to crops and cattle; we read, *e.g.*, of Tumo-pas, 'the god oak,' 'oak-god,' to whom were addressed prayers for rain. In the spells there is frequent mention of Čuvto-ava, 'tree-mother,' who, as in the case of many other spirits, was asked to pardon some supposed injury unwittingly done to her—*e.g.*, by a push—and who punished the offender by afflicting him with disease.

(*d*) *Water.*—The water-deity common to all the Mordvins is Ved-ava, Vedmastor-ava, 'mother water,' 'water-mother,' known among the Moksha also as Ved-azĕrava, 'water-hostess,' 'water-mistress.' She holds an important position in the cultus, principally as the spirit who presides over the fecundity of the earth, of women, and of cattle—though, at least latterly, less as the sender of fish, probably on account of the small importance of fishing as an industry. Each distinct body of water—river, brook, lake, fountain, well—has its special presiding spirit, who may bear a more definite name — *e.g.*, Rav-ava, 'mother Volga,' 'Volga-mother,' Äš-ava, 'mother fountain,' etc. In the songs we find mention also of a 'sea-mother' (Mor′ava), probably of Russian origin; with her should perhaps be identified the Ot′s′uved-azĕrava, 'sea-mistress' (*ot′s′u-ved*, lit. 'great water,' also 'sea'), of an older Moksha account, although our informant interprets her name as Ot′s′u ved′-azĕrava, 'the great water-mistress,' *i.e.* as denoting a universal supreme water-goddess, 'the ruler of all local waters.' In an Erzä sacrificial prayer we find Veden′-kan, 'khan or prince of water,' or Ved-kan, 'water-prince' (the sense of the word *kan*, which is of Tatar origin, is not known to the people generally); mention is made also of Lis′man′ girde pas, 'the god who presides over the well.' A special water-spirit is Ved-eräj, 'water-dweller,' or Vetsa-eräj, 'he who inhabits the water'; there are, in fact, many such spirits; they are malignant beings, who, like vampire spirits, lie in wait for newly-born children, devour the grain that has been cursed by an enemy, etc. So far as we know, they are not worshipped. It is probable that these water-spirits, our information regarding whom is very meagre, were originally the souls of persons who had been drowned.

(*e*) *Fire.*—Among the nature-spirits should also be included Tol-ava, 'fire-mother,' 'mother fire,' who is often named in magic formulæ and in songs, but of whose public worship we know virtually nothing.

4. House, court-yard, etc.; the village.—The spirit of the dwelling-house bears various names. Among the Moksha it appears as Kud-azĕrava or Kudži-azĕrava, 'house-mistress,' 'house-hostess,' and also as Kud-ava, 'house-mother,' and Kudži-pavas, 'house-god,' 'the god house'; while among the Erzä we find Kudon′-tšin′ pas, 'god of the house' (*tši*, *ši* or *ži* being the analogue of *kudo*, *kud*, 'house'), or Keren′ šotskon′ pas, 'god of the lime-bark and the beams,' 'lime-bark and beam-god,' sometimes (perhaps through a misunderstanding and corruption of the original name) Ker′an′ šotškon′ pas, 'the god of the hewn beam, *or* beams,' and in some districts also Kudo-jurtava, 'house-mother' (lit. 'dwelling-place-mother of the house').[1]

The dwelling-place as a whole, *i.e.* the court-yard, the dwelling-house, and its adjoining buildings, which the Mordvins designate by the name *jurt*, a word borrowed from the Tatar language, has a special spirit of its own, the Jurt-ava, 'dwelling-place-mother,' known among the Moksha also as Jurt-azĕrava, 'dwelling-place-mistress.' This spirit, especially among the Erzä, has in many cases dispossessed the above-mentioned household-spirit in the proper sense, and taken its place; in this capacity it is also called Kudo jurtava (see above) by way of distinguishing it from Kardas-jurtava, 'dwelling-place-mother of the yard,' and is represented as a dwarfish female being, or as a cat-like creature, which lives under the stove, being thus obviously connected with the Russian domestic spirit Domovoj (on which see *ERE* iv. 626 f.), which likewise lives near the stove, and has the form of a dwarf or a cat. Common to all the Erzä is a special spirit of the court-yard named Kardas-s′arko, 'court-*s′arko*' (a word of obscure meaning in this connexion), who lives beneath a stone situated in the court,[1] and is generally represented as a male, though sometimes as a female. Among some of the Moksha we hear of a court-spirit named Koram-ot′s′unä, 'the chief of the court,' while others speak of a special spirit called Kaldas-ava, 'cattleyard-mother.'

---

[1] More particularly in the magic formulæ we find a vast number of domestic spirits, *quasi*-personifications of various parts of and articles in the living-room, and generally described as 'mothers,' 'mistresses' or 'rulers'—*e.g.*, Pätnakud-azĕrava (Moksha), 'stove-mistress,' Uštuman′ kirdi (Erzä), 'ruler of the stove,' Kenkš-ava, 'door-mother,' etc. Among the Moksha Kujgĕrĕš, and among the Erzä T′r′amo, is a benevolent domestic sprite of dwarfish human form, who, however, is not worshipped. He brings to his master whatever of other people's property the latter may desire, but a task must be set for him every night, else he will begin to carry his master's goods to others. Those who wish to obtain such a spirit must keep an egg of a hen or a cock (!) from seven to twelve weeks in the armpit, remaining meanwhile under the floor; it is then hatched out. It is also possible to kill this spirit. The name T′r′amo seems to be derived from the verb *t′r′a*, 'to nourish,' while Kujgĕrĕš is probably a compound formed of *kuj*, 'serpent,' and *korĕš*, 'owl,' and thus originally meant 'serpent-owl'—though the Mordvins no longer think of it as having such a form. With this we may compare the fact that, *e.g.*, among the Lithuanians the analogous spirit, the Kaukas (on which cf. *ERE* iii. 696), is represented now as an owl and now as a fiery dragon; cf. also the myth of the basilisk.

To these house- and court-spirits sacrifices are offered by the individual family at stated seasons, and also on special occasions—the birth of a child, the birth of a cow's first calf, etc. At the legal tribunals held by the head of the household with his family, according to an early Moksha account, it was the practice to swear by the house- and the dwelling-place-spirits as well as by deceased ancestors. As protectors of the cattle we also find, sometimes even at the communal sacrifices, certain saints of the Russian Church—*e.g.*, Frollavrol (a distortion of two saints' names, Flor and Lavr), surnamed Alašan′-pas, 'horse-god,' Nastasija (Russ. Anastasia), with the epithet Reven′-pas, 'sleep-god(dess)'; Miljkovič mentions also a 'swine-god' (Tuon′-pas), etc. Moreover, the store-pit, the bathroom, the threshing-place, etc., had each its special presiding spirit, usually designated 'mother,' or (among the Moksha) 'mistress,' 'hostess,' as, *e.g.*, Ban′-ava, 'bathroom-mother,' or Ban′-azĕrava, 'bathroom-mistress,' and on certain definite occasions offerings of food and drink were presented to these spirits. Likewise the bee-garden, sometimes forming part of the house-garden, sometimes situated in the forest, had its particular spirit: Neškĕper-ava (Moksha), 'bee-garden-mother,' Neške-pas (Erzä), 'beehive-god,' etc. Mention is made even of an alley- or lane-god (Ul′t′s′a-pas). The village, too, had its spirit, named Vel-ava, 'village-mother,' or Vel-azĕrava, 'village-mistress,' or Velen′-pas, 'god *or* goddess of the village'; this spirit was worshipped at the communal sacrifices.

5. **Evil spirits.**—To this class belong the spirits called *šajt′an* ('Satan'; pl. *šajt′at*), who dwell in marshes and waters (especially in deep parts), but also on dry land, in caverns. They beget children; they appear in various forms, including that of a fish. In the Mordvin spells they are found also as servants of the wicked earth-god Mastor-pas (see above, p. 845^a). The Erzä believe in a distinct spirit of curses, 'the ruler of the curse,' called Ert, 'curse,' Ert-pas, 'curse-god,' 'the god curse' (also Erks), and is anthropomorphically figured as having a wife and a large family. Another evil spirit is Ávĕs′, or Jävĕs′ (Moksha), Eves′, Evs′ (Erzä), called also Idem-eves′ (*idem*, 'fierce'), etc. According to a Moksha account, this spirit and his wife produce seventy-seven children every year; every year, however, the whole family is killed by thunder except two, who in the following year beget other seventy-seven, and so on. The Erzä seem to regard this spirit as a wicked sorcerer, who flies in the air as a meteor. Numerous diseases are personified, and addressed as 'mother'; some of these disease-spirits, too, are thought of as married people, while others take the form of chickens, etc.

6. **General observations on Mordvin mythology.**—Among the Mordvins the personification of the deities (nature-spirits) is of a very feeble character, especially in the cultus—a fact signally attested by linguistic usage, and more particularly by that of the sacrificial prayers. Thus the 'rising and setting sun-god (god sun)' and 'the moon-god (god moon) who moves in a circle' are simply the sun and the moon in their visible form, but regarded as animate; in the sacrificial prayers there is nothing that would point to their personification, and, while in the mythology the sun is depicted as a maiden and the moon as a man, this is probably due to foreign influence. Nor can the designation 'mother' (*ava*), which—with the epithet *kirdi*, 'ruler' (fem.), *e.g.*, Mastoron′ Kirdi Mastor-ava, 'earth-mother, the ruler of the earth'—is the general term of most frequent occurrence in the names of the deities, be regarded as implying the attribution of personality to any particular deity;[1] these 'mothers,' in fact, are, especially in the sacrificial prayers, only the amorphous and indistinct 'souls' of natural objects, etc. Thus men 'dig' the earth-mother, and 'sow corn in her'; the field-mother—in place of whom the 'tilled field' is sometimes invoked—may 'be crushed by the horse's foot,' and 'carried away to another person's field'; the corn-mother, it is true, appears in a popular lyric as singing songs in the festive attire of a Mordvin woman, but this personification is not long maintained, for in her song the corn-mother speaks of herself thus: 'I was sown in the morning twilight, reaped in the evening twilight, thrown into the granary in order to be brewed into small beer at Easter, and baked into pastries at Christmas'; the water-mother 'streams,' or 'wells forth like silver'; the fire-mother 'blazes,' and so on. So, too, with the household-spirit, we can still to some extent distinctly trace the original idea that it is the animate dwelling-house itself, or, in other words, the amorphous soul of the house. Thus we find it said in a Moksha magic prayer, 'Kud-azĕrava ('house-mistress'), pardon him who built you and heats you'; in an Erzä petition of similar character we read, 'Kudo-jurtava ('house-mother'), above is thy lime-bark [the roof is thatched with this], beneath are thy beams'; while a parting utterance of a girl who has just been married runs, 'Dear house [=soul of the house], I have sojourned much in thy warm house.'

In conjunction with the spirits designated 'mothers' (*avat*) and 'mistresses' or 'hostesses' (*azĕr-avat*) are found the correlative (male) 'old ones' (*at′at*) and 'lords' or 'hosts' (*azĕrht*)—*e.g.*, Ved-at′a, 'water old one,' Ved-azĕr, 'water-lord,' Kud-at′a, 'house old one,' Kud-azĕr, 'house-lord.' They are for the most part absent from the sacrificial prayers, belonging rather to the sphere of the magic formulæ and of folklore, where such married couples are even represented as having children. Here we have obviously a later development, perhaps not unconnected with ancestor-worship, in which male and female progenitors are generally named together as married pairs. It is only in the case of the god of the sky and the god of thunder that personification has reached a more advanced stage. These two deities are always represented as human-like figures, and it is mainly with them that the few myths current among the Mordvins have to do. Thus, the thunder-god appears in the songs as the son-in-law of the sky-god Niške, while the latter, again, finds a wife for his son (of whom otherwise nothing has come down to us) in a Mordvin maiden whom he bears up to the sky in a silver cradle upon a chain. This myth-making process, which perhaps was to some extent due to foreign influence, does not, however, appear in the worship—the sacrificial prayers—at all, while among the Moksha the name of the sky-god, the form of which certainly suggests personification (*škaj*, 'procreator'; see above, p. 844^a), is also used as the designation of the natural sky—*e.g.*, in the phrase *škajs′ mazems′*, 'the sky reddens.' The older conception of nature as animate merely, but not personal, still tends to maintain its ground, and to impede the process of personification.

Virtually no limits were set to the practice of ascribing life to inanimate things. In the magic formulæ we find that, *e.g.*, plants, the claw of an otter, the handle of a pan, a distaff, a laundry beetle (the last three are invoked by the magician as his 'elder sisters'), are all endowed with life, and their aid is sought to expel disease.

---

[1] The blood of sacrificial animals is allowed to run into the cavity under this stone.

[1] Cf. the Mordvin name for the pupil of the eye: *s′elme-ava*, lit. 'eye-mother.'

It is manifest that, in the course of centuries, the religion and worship of the Mordvins have been affected by foreign (Aryan, Lithuanian, Turkish) influence, as is shown, for one thing, by a number of mythological terms—*e.g.*, *pavas*, *pas*, 'god' (cf. O. Ind. *bhagas*, O. Pers. *baga*), Pur′gine, the thunder[-god] (cf. Lith. *perkúnas*), Kerämät (=Chuvash Kirämät), Šajt′an, an evil spirit (cf. Tatar Šajtan, Chuvash Šujttan); in later times they have also been greatly influenced by Russian popular beliefs, especially in ancestor-worship.

7. **Worship.**—Besides the oblations performed at home by the individual family, usually under the direction of the head of the household or his wife, and accorded mainly to the domestic spirits and to ancestors, every village community held its own sacrificial feasts, in which the participants frequently arranged themselves in groups corresponding to their families or clans. From certain reports and indications, however, it would seem that at an earlier time there were joint sacrificial festivals for larger districts. The places at which sacrifices were paid to Kerämät appear to have been fenced in. On at least some of the sacrificial sites stood a simple building without windows, which, like the ordinary dwelling-house, was called *kudo*, and was used for religious purposes. The deities were not represented in material forms—the obscure indications of such likenesses found in Russian sources probably refer to representations of the dead. The offerings comprised all kinds of edible animals, from horses to fowls, while, as has already been said, allusions to an earlier practice of human sacrifice are not wholly absent from the tradition. Parts of the sacrificial animal—especially, but not exclusively, the inner parts—were presented to the deities, and in the sacrifices in honour of the dead the idea that the soul of the victim is to serve the dead person in his under-world life is brought out quite distinctly. There are indications that the colour of the animal sacrificed corresponded with that of the natural phenomenon or the object worshipped, so that the earth-spirit received a black animal, and so on. The ceremonial of the sacrifices to the nature-deities sometimes included magical actions (analogous magic), while the form of the prayer used occasionally recalls that of a magic formula—*e.g.*, 'Sky-god, may the corn prosper!' The ceremonies have, on the other hand, been noticeably influenced by the cult of the dead; thus, in the sacrificial feast, the sky-god, like the dead in the mortuary feast, had a human representative, who in his stead responded to the person praying.

The notices regarding the sacrificial priests show great divergences. According to some accounts, there were priests and priestesses—designated respectively *in-at′a*, 'great old man,' and *im-baba*, 'great old woman,' among the Moksha—who held a life appointment, and who did duty also at marriages and in the legal proceedings of the community, while other reports indicate that they were selected for definite periods of longer or shorter duration. In addition to the designations just given, we find the following: *at′a*, 'old man,' *voz-at′a*, meaning something like 'sacrificing old man,' *oznit′s′a*, 'he who sacrifices *or* prays,' *ozni-baba*, 'the old woman who sacrifices *or* prays,' and *pokš-baba*, 'great old woman.' In some of the sacrificial feasts both sexes took part, but there were also distinct festivals for males and females respectively. The public worship of the deities was connected in the closest way with agriculture, the principal employment of the people, and also with the related industry of cattle-rearing, and the deities were specially besought to grant success in these. In the cult of the nature-deities there is no trace whatever of an ethical element, prayers being addressed to them for earthly boons alone; but that element, as already indicated, does not seem to have been wholly absent from the cult of the dead, or from the worship of Kerämät (and the obscure Azĕr-ava), and the spirits of the house and the homestead.

8. **Magic.**—From the sacrificial priest should be distinguished the sorcerer and sorceress, although there is certainly a suggestion that the priests were selected from the family or caste of the sorcerers. The latter are now usually designated by a term borrowed from the Russian, viz. *orožija*, *voražjä* (Russ. *vorožeja*), but we find also a genuine native term, *sodit′s′a*, *sodaj*, 'he (she) who knows.' These sorcerers prophesy; they discover lost things; they find out the causes of disease and all misfortune with the aid of forty-one (or forty) beans or other objects like beans, or by gazing into water freshly drawn from a well in the early morning, or by looking into the face of the person afflicted; they cure diseases by magic spells and magic prayers conjoined with the appropriate offerings, and among these prayers there is a specially large number in which a spirit (*e.g.*, the earth-mother) is solicited to pardon a presumptive injury unwittingly done to him by a fall, a push, etc., and punished by a visitation of disease or other calamity. Other kinds of disease (disease-spirits) are driven out by threats and by magic practices, special magic formulæ serve to protect against the evil eye, and so on. Magic might, of course, be employed also to cause injury.

The magic formulæ and associated practices of the Mordvins show, on the whole, strong evidence of Russian influence, or, to speak more accurately, have for the most part been borrowed from the Russian people.

LITERATURE.—Besides the writings cited in § 1, cf. P. Meljnikov, 'Očerki Mordvy,' in *Russkij Věstnik*, v. xxi. [1867]; W. Mainov, 'Les Restes de la mythologie mordvine' (=*Journal de la société finno-ougrienne*, v.), Helsingfors, 1889; I. N. Smirnov, 'Mordva. Istoriko-etnografičeskij očerk,' in *Izvěstija Obščestva Archeologii, Istorii i Etnografii pri Imper. Kazanskom Universitetě*, x.–xii. (also separately, Kazan, 1895; contains abundant references to further literature; Fr. tr. P. Boyer, *Les Populations finnoises des bassins de la Volga et de la Kama*, Paris, 1898, pt. ii.); H. MOTHER.—See CHILDREN, FAMILY, MOTHER-RIGHT.

MOTHER OF THE GODS (Greek and Roman).—The Mother of the Gods was identified by Homer (*Il.* xv. 187) and Hesiod (*Theog.* 634) with Rhea, the wife of Cronos. She was famous in legend for having prevented Cronos from swallowing Zeus by providing him instead with a large stone which she had wrapped in swaddling-clothes (Hes. *Theog.* 485 ff.; Apollod. i. 5). The story was localized in Crete, which thus became the fabulous birth-place of Zeus. There is some evidence of an old-established cult of the Mother of the Gods at various places on the mainland, although the name Rhea scarcely appears in this connexion. Thus, there was an altar of the Mother of the Gods in the agora at Athens (Æschin. i. 60), and a sanctuary (μητρῷον [Paus. I. iii. 5]), which was used as a record office (Lycurg. 66). An ancient festival, known as Galaxia, on the occasion of which a barley cake was boiled in milk, was celebrated in her honour (I. Bekker, *Anecd. Græca*, Berlin, 1814–21, p. 229. 5). The ætiological legend which ascribes the foundation of the sanctuary to the expiation required for the murder of a Phrygian μητραγύρτης (schol. Aristoph. *Plut.* 431; Phot. *Lex.* p. 268. 7) shows clear traces of the later conviction that the worship of the Great Mother had been imported from Asia Minor. The same influence[1] may be present when Pindar speaks of a sanctuary of the Mother close to his own gate, where she was worshipped in conjunction with Pan (*Pyth.* iii. 77 ff. [137 ff.]), and the scholiast, who does not hesitate to identify her with Rhea, relates that Pindar himself set up her statue near his house in consequence of a stone image of the Mother of the Gods having fallen from the sky at his feet. Pausanias (VIII. xxx. 4) records the existence of a ruined temple of the Mother of the Gods at Megalopolis in Arcadia, and of another, which was roofless, close to the sources of the Eurotas and the Alpheus, and of two lions made of stone in its immediate neighbourhood (*ib.* xliv. 3). But the oldest of her temples in the Peloponnese, containing a stone image of the goddess herself, was at Acriæ in Laconia (*ib.* III. xxii. 4).[2] Yet another temple was at Corinth (*ib.* II. iv. 7) with a stone throne, and a stone image of the goddess.

From the 5th cent. at least Rhea came to be identified with the Phrygian Great Mother (Eur. *Bacch.* 58 ff., 127 ff.), whose influence in Greek religion was henceforth increasingly important. Already in the Homeric prelude (*Hymn* xiv.) the Mother of the Gods is addressed as rejoicing in the clash of cymbals, the beating of drums, the blare of pipes, and the roar of wolves and lions. In another passage (Soph. *Phil.* 391 ff.), where the name of Rhea is not mentioned, she is clearly referred to as the mother of Zeus, and is identified with the Phrygian Mountain-Mother, the mistress of the swift-slaughtering lions. She is there also addressed as 'all-fostering Earth,' and there are other passages in which the earth-goddess is described as Mother of the Gods (*Hym. Hom.* xxx. 17; Solon, frag. 36. 2; Soph. frag. 268)—a title which she might well have claimed as mother and wife of Uranus according to the Hesiodic theogony (117 ff.). But it is impossible to explain the worship of the Mother of the Gods as merely a development from the vague conception of a motherly earth. The identification of the Mother of the Gods by certain 5th cent. poets (Eur. *Hel.* 1301 ff.; Melanippides, frag. 10 [T. Bergk, *Poetæ Lyrici Græci*^{4}, Leipzig, 1878–82, iii. 592]; Pind. *Isthm.* vii. 4) with Demeter, who, according to the received genealogy, was a daughter of Rhea (Hes. *Theog.* 454), is a further cause of perplexity. The existence of a Metroum at Agræ (*FHG* i. 359; J. G. Frazer, *Pausanias*, London, 1898, ii. 204), where the lesser mysteries were celebrated in honour of Demeter, may assist those who maintain that the Athenian Mother was another form of Demeter Θεσμοφόρος (L. Preller and C. Robert, *Griech. Mythologie*, i.^{4}, Berlin, 1887, p. 651). Lastly, we must take into account the antiquity of the cult of the Mountain-Mother in Crete, which has been abundantly established by the archæological discoveries of recent years. Most significant in this connexion is the impression of a signet-ring found at Cnossos, which represents the goddess standing on the apex of a mountain and guarded on either side by a lion (see art. MOUNTAIN-MOTHER).

To disentangle the actual course of development from these extremely complicated facts is one of the most puzzling tasks within the sphere of Greek mythology. The leading consideration is that, though the name of Rhea was often associated with Cybele, the identity of the two goddesses was never so completely merged that the Rhea of the Greek theogonies did not remain distinct from the partner of Attis (Gruppe, *Griech. Mythologie*, p. 1521). Some modern investigators hold the opinion that the fusion did not take place until the period subsequent to the Persian Wars (J. Beloch, *Griech. Geschichte*, Strassburg, 1893–1904, ii. 5_3). Others, while maintaining that the cult of the Mother belonged to the oldest stratum of Greek religious thought, believe that her legend and ritual passed from Crete to the Greek settlements in Asia Minor, where she was completely assimilated to Cybele in the 7th cent. or earlier (Gruppe, p. 1526 f.). Beyond this lies the question whether the goddesses subsequently identified were in origin entirely distinct (Wilamowitz, in *Hermes*, xiv. [1879] 195), or whether the Phrygian Cybele and the Cretan Rhea both developed in their separate manifestations from an identical substratum of belief belonging to the pre-Hellenic and pre-Phrygian inhabitants of Crete and Asia Minor (P. Kretschmer, *Einleitung in die Gesch. der griech. Sprache*, Göttingen, 1896, p. 194 f.). Modern theory inclines to go further (A. Rapp, in Roscher, ii. 1660), and to distinguish from Rhea a Greek Mother of the Gods, whose relation to the Phrygian Mother is to be explained by the fact that she belonged to a period anterior to the separation of Greeks and Phrygians. It is argued that, though the evidence of the cult of Rhea is scanty, its existence as distinct from that of the Mother of the Gods is well attested in Arcadia (Paus. VIII. xxxvi. 2), at Olympia (schol. Pind. *Ol.* v. 10), and at Athens (Paus. I. xviii. 7). To this it has been replied (*CGS* iii. 296) that the double title justified the establishment of distinct sanctuaries, and that it was quite possible for Greek travellers who found in Crete the worship of a great maternal goddess of fertility, bearing the name of Rhea, to transfer her cult to the mainland, using sometimes her original name, and sometimes the title μήτηρ θεῶν, in reference to their own god Zeus, whom they affiliated to her. From this point of view it becomes significant that the cult of the Mother prevailed especially in districts which are known to have been affected by Cretan influences. Instances of such coincidence are the appearance of the Idæan Dactyls at Olympia (Paus. V. vii. 6) and the legendary connexion of Athens with Crete. Moreover, the result of recent Cretan discoveries enables us to gauge better the extent of the influence which Cretan civilization must have exercised in pre-historic times. On the other hand, although Cybele did not appear in myth as the Mother of the Gods, the supposition that she was originally distinct from Rhea, and that some accidental resemblance led to their coalescence, seems to be refuted by the remarkable agreement of the traditions relating to the two goddesses. Thus, the birth of Zeus in a cave on Mt. Ida in Crete corresponds to the worship of Cybele in the hollows of Trojan Ida (Eur. *Or.* 1449; Lucr. ii. 611 ff.); the stone which Rhea offered to Cronos to the sacred stone of Cybele at Pessinus (Livy, xxix. 11); the noisy rites of the Cretan Curetes to those of the Phrygian Corybantes (Lucian, *de Salt.* 8); and the Idæan Dactyls, the attendants of Rhea, were located both in Phrygia and in Crete (Soph. frag. 337).

---

[1] Pindar (frag. 80) is the earliest writer who is known to have given the name Cybele to the Mother of the Gods (cf. Aristoph. *Av.* 875 f.).

[2] The reference of Pausanias to Mt. Sipylus indicates the permanence of the belief that the μήτηρ θεῶν was identical with the goddess worshipped in Asia Minor. There is a curious reference to the cult of an anonymous Mother-goddess in Alexis, frag. 267, ii. 395 K.

Since it appears to be established that there was a primitive cult in Crete and Asia Minor, and to a lesser degree in Greece proper, devoted to the celebration of the Mother of the Gods, or Great Mother, but, on the other hand, the specifically Oriental features attending the ritual of Cybele were regarded as essentially foreign to Greek sentiment and were introduced to the mainland at a comparatively late period, it must be inferred that the character of the Asiatic cult had been largely modified by barbarian, especially Semitic, influences. The native Hellenic conception of the Mother is best illustrated by an Attic relief (now at Berlin) dated about 400 B.C. and in the form of a *ναΐσκος*, where the beautiful and benign figure of the goddess is represented enthroned and holding the tympanum, with lions couching at her feet (reproduced by Rapp, p. 1663, and by Farnell [*CGS* iii. pl. xxxiv.]).

The general characteristics of Cybele-worship have been described elsewhere (see artt. ATTIS, CYBELE), and consequently we may limit ourselves to the impression which it made upon Greek civilization at various epochs. Attis was a youth beloved by Cybele, and the story of their relations is parallel to that of Aphrodite and Adonis. According to the various narratives, none of which is earlier than the Hellenistic age, Attis was either a hunter who, like Adonis, was killed by a boar (Hermesianax, *ap.* Paus. VII. xvii. 9), or a hind (Theocr. xx. 40) that mutilated himself under a pine-tree and died from loss of blood (Ov. *Fast.* iv. 223 ff.). At the festival held in his honour a mimic representation of his death, burial, and resurrection took place, in which a pine-log was substituted for the corpse (*GB*² ii. 130 ff.).

The story, which attests the identification of Cybele with her Semitic counterpart Ishtar or Astarte (Lucian, *de Dea Syria*, 15), must have been current in Asia Minor from a very early date; for clear traces of Attis are recognizable in Herodotus's narrative of the death of Atys, the son of Crœsus, at a boar-hunt (Herod. i. 34 ff.), and the herdsman Anchises, the favourite of Aphrodite, is obviously a double of the herdsman Attis. Theopompus, the comic poet, whose plays belong to the end of the 5th and the beginning of the 4th cent., refers to the association of Attis with Cybele (frag. 27, i. 740 K.), and it is probable that the name is to be recognized in the cry *ὕης ἄττης* mentioned by Demosthenes (xviii. 260) in his famous account of the vulgar initiation-rites—doubtless of Asiatic origin—in which Æschines took part as an acolyte. In classical times these barbaric cults became familiar to the common people as a congeries of superstitious practices (C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, i. 116; Lucian, *Icarom.* 27, etc.), so that the worship of Attis and the Mother was apt to become confused with the observances proper to Dionysus (Strabo, p. 470), Sabazius (Aristoph. *Av.* 875), and Artemis (Diog. frag. 1 [A. Nauck, *Tragicorum Græcorum Fragmenta*², Leipzig, 1889, p. 776]). With Artemis in particular Cybele was associated as the protectress of lions, bears, panthers, and other wild beasts; and with Hecate, who was identified with Artemis at an early date, she shared the title Antæa (schol. Apoll. Rhod. i. 1141; Hesych. *s.v.*) as the sender of nocturnal apparitions (Gruppe, p. 1539).

The worship of the Mother was distinguished from the indigenous Greek cults chiefly by its emotional, ecstatic, and mystical character. Indeed Phintys the Pythagorean pronounced that participation in the rites of the Mother was inconsistent with the requirements of womanly modesty (Stob. *Floril.* lxxiv. 61). In the Corybantic initiation-rites the novice was placed on a chair (*θρόνωσις*), while the celebrants danced round him, accompanied by the wild notes of soul-stirring music (Plat. *Euthyd.* 277 D, *Legg.* 790 D). Although, in consequence of the syncretism already explained, the mysteries of Cybele are sometimes associated with the Eleusinian mysteries of Demeter, the symbolic words of initiation, as recorded by two of our authorities (Clem. Alex. *Protrept.* I. ii. 13, p. 14 P.; schol. Plat. *Gorg.* 497 C), are undoubtedly derived from the Phrygian worship of the Great Mother: 'I have eaten from the timbrel, I have drunk from the cymbal, I have borne the sacred vessel, I have entered into the bridal chamber' (J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Cambridge, 1903, p. 158). The last phrase relates to the mystical communion between the goddess and her lover, which was ritually enacted all over the East, whether in connexion with the names of Cybele and Attis, of Aphrodite and Adonis, or of Isis and Osiris (*GB*² iii. 159 ff.).[1] It was common to each of these legends that the lover was put to death and afterwards restored to life, if not always in the same incarnation. The mystical marriage may have been in its origin a magical process intended to stimulate the reproductive forces of nature, while the subsequent death and resurrection of the priest-king represented the annual decay and revival of vegetation.[2] The self-mutilation of Attis, which is, of course, the transference into myth of a primeval custom of priestly emasculation, though at first sight not easy to reconcile with the other data, probably belonged to the same circle of ideas. Whether we should regard the act in its primary intention as the final oblation by means of which the votary seeks to assimilate himself to the essential nature of the goddess (E. Meyer, *Gesch. des Altertums*², Stuttgart, 1907–09, I. ii. 649), or whether it was intended to secure the continued fruitfulness of the Earth-mother and the renewal of her crops (*GB*³, pt. iv., *Adonis, Attis, Osiris*, London, 1907, p. 224 ff.; Cumont, in Pauly-Wissowa, vii. 681), is not altogether certain, and the two ideas are not necessarily inconsistent with each other. Considerations bearing on the question may be deduced from the fact that the severed genitals were dedicated in the sanctuary of Rhea-Cybele (schol. Nicand. *Alex.* 8), and from the statement of Lucian that they were thrown into some particular house from which the Gallus received female raiment and ornaments (*de Dea Syria*, 51). Anyhow, it is unnecessary to suppose that the custom was introduced into the cult owing to a fresh impulse of mysticism which, moving from East to West, perhaps in the 6th cent., aimed at the liberation of the worshipper from the indulgence of sensual desires (Gruppe, p. 1542). Certainly asceticism was by no means characteristic of the begging priests of the Mother (*μητραγύρται*),[3] who earned their living by vulgar quackeries imposed upon the superstitious masses, and who, although they are first known to us from the fragments of the poets of the New Comedy (*Μητραγύρτης*, a play of Antiphanes, ii. 74 K.; cf. Menand. frag. 202, iii. 58 K.), were probably familiar figures in Athens at a much earlier date (R. C. Jebb, on Soph. *Œd. Tyr.* 388 [*Tragedies*, Cambridge, 1904]; cf. Plat. *Rep.* 364 C). It may be conjectured with some probability that the influence of this traffic was considerable, although the conception of the frenzied Galli who scourged themselves with whips (Plut. *adv. Colot.* 33, p. 1127 C), and lacerated their flesh with knives (*Anth. Pal.* vi. 94. 5), cannot be traced to an earlier source than the Alexandrian writers (Cumont, *op. cit.*, col. 675), and has become known to us chiefly through Latin literature (*e.g.*, Sen. *Agam.* 723; Lucr. ii. 614 ff.).

---

[1] Gruppe, p. 1541, points out that the names *θαλάμαι*, *καλύβαι*, and *παστάδες* given to sanctuaries of Cybele (schol. Nicand. *Alex.* 8; Hesych. *s.v.* Κύβελα; *Anth. Pal.* ix. 340. 4) are to be interpreted in the same way.

[2] The notion that Cybele and Attis stand for the generative principle and its terrestrial process survives in the Neo-Platonic treatise of Sallustius *περὶ θεῶν* (iv.; tr. G. Murray, *Four Stages of Greek Religion*, New York, 1912, p. 191 ff.).

[3] Some of these may have been eunuchs (Babrius, cxxxvii. 1).

In the year 205 B.C. a Sibylline oracle was discovered by the Decemviri, directing them, as a condition of success in the war, to introduce into Rome the worship of the Great Mother of Pessinus (Livy, xxix. 10). Accordingly, the sacred stone, which was then in the custody of Attalus, king of Pergamus, having been removed by him from its original home at Pessinus (L. Bloch, in *Philol.* lii. [1895] 580 ff.), was brought to Italy in circumstances of great ceremony, and reached its destination in the year 204. Strange happenings marked its arrival. The ship conveying the sacred object grounded on a sandbank in the Tiber. Then Claudia Quinta, a noble matron whose freedom of speech had provoked censorious tongues to slander, prayed to the goddess that her character might be cleared by the ordeal, if she succeeded in drawing off the ship after strong arms had failed. The ship at once began to follow her direction, and Claudia's innocence was triumphantly vindicated (Ov. *Fast.* iv. 291 ff.; Suet. *Tib.* 2; Tac. *Ann.* iv. 64). On the 4th of April the goddess was received as a temporary guest, until a permanent home could be provided for her, in the temple of Victory on the Palatine, and the day was set apart for a festival to be known as the Megalesia, on which gifts were presented to the shrine, and a *lectisternium* and public games were held (Livy, xxix. 14). Ten years later scenic performances were for the first time exhibited at the Megalesia (*ib.* xxxiv. 54). Subsequently, thirteen years after the contract had been placed, a temple on the Palatine for her sole and separate occupation was dedicated to the Magna Mater Idæa on the 10th of April 191, when the *Ludi Megalenses* were included for the first time in the State calendar (*ib.* xxxvi. 36). Somewhat later, if not immediately, they were extended so as to occupy the entire interval between the 4th and 10th of April (*CIL* i.^{2} 314). On the first day of the festival the *prætor urbanus* made a solemn offering to the goddess in her temple (Dion. Hal. *Ant. Rom.* ii. 19). The third day was reserved for the performance of stage-plays (Ov. *Fast.* iv. 377), and we know that four of the extant works of Terence were presented on this occasion. Races (*circenses*) were held on the last day (Marquardt, *Röm. Staatsverwaltung*^{2}, iii. 501), and in the age of Nero and Domitian these had become by far the most popular feature of the whole celebration (Juv. xi. 193). The recurrence of the festival was marked by general merrymaking and licence; clubs were formed to promote social enjoyment (Cic. *de Senect.* 45); and so lavish was the expenditure of the upper classes on reciprocal hospitalities that in 161 a sumptuary law was found necessary to restrain it (Aul. Gell. ii. 24).

In the last two centuries of the Republic the participation of State officials in the cult was limited to the extent already described; but, dating from the time of Augustus, who restored the temple of the Magna Mater after it had been burned down in A.D. 3, there is evidence of a further ceremony of a primitive character which took place on the 27th of March. This was known as the *lavatio*, when the symbolic stone and possibly also the knife of the Gallus (Mart. III. xlvii. 2) were conveyed, by the direction of the Quindecimviri, through the Porta Capena, and washed in the waters of the Almo, which debouches into the Tiber just outside the city (Ov. *Fast.* iv. 337; Lucan, i. 599). In all other respects the administration of the cult was left in the hands of its foreign ministers, particularly the Galli with their Archigallus (*CIL* vi. 2183), and no Roman citizen was allowed to acquire any official status in relation to it. The Phrygian priests, however, were permitted on stated occasions to march in procession through the city in their sacerdotal dress, singing their wild songs to the accompaniment of flutes and tympana (Dion. Hal. *loc. cit.*), and collecting alms from the bystanders (Cic. *de Leg.* ii. 22).

In the latter part of the 2nd cent. a complete re-organization of the cult seems to have taken place. Henceforth, as the evidence of numerous inscriptions shows, Roman citizens were permitted to assume priestly offices subject to the approval of the Quindecimviri, but the privilege was exercised chiefly by the freedman class. To the ceremony of the *lavatio* on March 27th there was now added a further festival of five days, the opening ceremony of which on March 15th was denoted *Canna intrat* on the Calendar of Philocalus (*CIL* i.^{2} 264), while the remaining four days, the 22nd, 24th, 25th, and 26th of March, were designated respectively *Arbor intrat*, *Sanguen*, *Hilaria*, and *Requietio*. The ceremonial represented in detail the various incidents of the story of Attis with which we are already familiar. On the 22nd the procession of reed-bearers (Cannophori) which entered the city was intended to recall the fact that Attis as a child was exposed among the bulrushes of the river Gallus (Julian, *Or.* v. 165 B). Similarly on March 22nd the Dendrophori carried to the temple on the Palatine a pine-tree, encircled with fillets of wool and adorned with violets, as a representation of the tree under which Attis mutilated himself. The day of blood (24th) was given up to lamentation for the death of the god, and, whereas originally the act of self-mutilation was then performed by the priest, subsequently it was sufficient for the Archigallus to make an incision in his arm and symbolically to sprinkle his blood (Tert. *Apol.* 25). The climax of the festival was reached in the rejoicings over the resurrection of the god which occupied the day of the *Hilaria*. It was recognized in antiquity that the renewal of the sun's power after the vernal equinox was hereby symbolized (Macrob. *Sat.* I. xxi. 10), and that the whole festival was devised to celebrate the decay and re-birth of vegetation (cf. Plut. *de Is. et Osir.* 69 [378 F]). Modern scholars have noticed the parallel presented by our Lenten and Easter services, which occupy a corresponding position in the calendar (*CGS* iii. 301).

It remains to mention the rite known as *taurobolium*, performed on 28th March, the existence of which is attested by a series of inscriptions extending from the 2nd to the end of the 4th century. Although during this period it was invariably linked to the service of the Great Mother, there is no doubt that it belonged originally to the cult of some other deity, and it has been conjectured that this was the Persian goddess Anāhita, who had been identified with Ἄρτεμις Ταυροπόλος (F. Cumont, *Rev. archéol.* xii. [1888] 132 ff.). There is also much obscurity in the details of the rite. In the earlier period the chief incident of the *taurobolium* and of the certainly similar *criobolium* was the sacrifice of a bull or a ram; but at a later date, according to both the epigraphic (*e.g.*, *CIL* vi. 511) and the literary (Prudent. *Peristeph.* x. 1011 ff.) records, the recipient of the *taurobolium* stood in a cavity having a perforated roof through which the blood of the bull was poured over him so that he might suffer a 're-birth.' The whole ceremony was under the control of the Quindecimviri.

In the Roman Imperial period the cult of the

Great Mother, by passing under State control, lost many of its original characteristics; but the power of the Roman organization was such that, by the adoption of suitable accretions from outside, and by its association with the cults of Isis and Mithra, it exercised during the last days of paganism a wider and more potent influence than at any earlier time.

A. C. PEARSON.

MOTHER-RIGHT.—1. Introduction.—Mother-right is a form of social organization in which the rights of a person in relation to other members of his community and to the community as a whole are determined by relationship traced through the mother. In this condition the duties which a person owes to society, the privileges which he enjoys, and the restrictions to which he is subject are regulated, and their scope is determined, by the relations in which the person stands to his mother's relatives and his mother's social group.

Mother-right is a highly complex condition in which a large number of social processes are involved. The following are the chief elements that can be distinguished.

(1) *Descent.*—This term should be limited to the process which regulates membership of the social group, such as clan, caste, family, etc. In mother-right descent is matrilineal; a person belongs to the social group of his mother. The use of the term is most appropriate when the community is divided into distinct social groups, and this distinctness is most pronounced in the clan-organization in which the practice of exogamy separates the social groups called clans clearly from one another. The social organizations based on the family or kindred are made up of social groups less clearly distinguishable from one another, and, though we may speak of descent in the family whether in the limited or extended sense, the term is here less appropriate.

(2) *Kinship.*—In a community based purely on mother-right kinship would be traced solely through the mother and would not be recognized with the relatives of the father. Everywhere in the world, but especially among peoples who possess the clan-organization, kinship carries with it a large mass of social duties, privileges, and restrictions (*ERE* vii. 705), and in a typical condition of mother-right these social functions would exist only in connexion with the mother's relatives. We have no evidence, however, of the existence of any society in which kinship is not recognized with the relatives of the father, although in many cases the functions are very restricted as compared with those of relationship traced through the mother, good examples being those in which marriage is allowed with any of the father's relatives, but is strictly forbidden with equally near relatives on the mother's side.

(3) *Inheritance.*—In a condition of typical mother-right children would inherit nothing from the father; their rights to property would be determined solely by relationships through the mother. Mother-right does not imply that rights in property should be vested either mainly or exclusively in women. On the contrary, in many cases in which children inherit nothing from the father, women are debarred from holding property, though they form the channel by which it is transmitted from one member of the community to another. The usual rule of inheritance in mother-right is that the property of a man passes to his brother or his sister's son. Often it passes from brother to brother, and, on the death of the last surviving brother, to a sister's son.

(4) *Succession.*—This term is most conveniently used for the process whereby rank, office, or other social distinction is transmitted. In mother-right succession usually follows the same rules as inheritance, a chief, priest, or other holder of rank or office being succeeded either by his brother or by his sister's child.

(5) *Authority.*—Mother-right has often been supposed to imply mother-rule, but in the great majority of the societies which furnish us with examples of mother-right authority is definitely vested in the male—in the father or oldest male as the head of the household, and in the chief as the head of the tribe or corresponding social group. In some societies, however, authority in the household is vested in the mother's brother, giving rise to a form of social organization which has been called the 'avunculate,' and the authority of the mother's brother in one form or another is very common, not only associated with other features of mother-right, but in societies in which descent, inheritance, and succession are patrilineal. Only very rarely is authority in the household vested in the mother or oldest female. The term 'matriarchate,' which is often used loosely as the equivalent of mother-right, should be limited in its scope to this condition of mother-rule. Many societies exist in which women are chiefs or monarchs, but, as a rule, this condition is not associated with mother-right. Among peoples over whom women rule the father is usually the head of the household.

(6) *Marriage.*—Mother-right in its typical form is associated with a mode of marriage, most suitably called 'matrilocal,' in which the husband lives with his wife's people. In its extreme form the husband may be only an occasional visitor to his wife's home, so that the children grow up with little or no social obligation towards their father, and live under the authority of the mother and the mother's brother.

In a state of typical mother-right a person would belong to his mother's social group. He would not recognize the existence of any kind of social duty except towards his mother's relatives, and would ignore the relatives of his father; property, rank and office would pass solely through women. It is not a necessary feature of mother-right, however, that authority should be vested in the woman. It might be so vested, but, if the woman is not the ruler, it would be vested in her brothers. In mother-right in its most typical form the father should have no authority in the household.

The condition thus described as typical mother-right occurs very rarely, being found most purely among such people as the Iroquois and Seri Indians of N. America and the Khasis of Assam. In many cases which have been regarded as examples of mother-right some of the social processes included under this head depend on the tie with the mother, while others are determined by relationship traced through the father, producing social conditions of the most varied kinds. Thus, while descent is matrilineal, succession may be patrilineal. Kinship is everywhere, so far as we know, recognized through the father as well as through the mother, and authority in the household is often paternal where descent, inheritance, and succession are all matrilineal. Moreover, a mixture of social groupings may be present, one of which may be patrilineal while the other is matrilineal, this being especially the case when local organizations accompany different forms of exogamous grouping.

There are cases in which matrilineal processes show themselves only in certain departments of social life. Thus, a people who possess patrilineal institutions in general may yet show the presence of matrilineal practices in connexion with slavery. The children of a free father and a slave mother may be slaves even if the father is of high rank, while the children of a free mother and a slave father may be free, and even noble, if the mother belongs to the nobility.

Another condition in accordance with mother-right is that in which marriage between half-brother and sister is allowed when they are the offspring of one father and different mothers, while it is forbidden when they are of the same mother by different fathers. The form of marriage which is forbidden would be impossible with mother-right, while that which is allowed would be natural, provided that the mothers belonged to different exogamous groups.

Another large group of matrilineal practices is characterized by the authority of the mother's brother. Among a people who practise patrilineal descent, inheritance, and succession the mother's brother has sometimes more authority than the father, and this authority may be accompanied by a number of other social functions which show that the tie with the mother's brother is closer than that with the father. Thus, mother's brother and sister's son may hold their property in common, or the sister's son may take the goods of his uncle without restraint. The mother's brother may act as the special guardian and instructor of his nephew, he may initiate him into the mysteries of secret societies, or may take the leading part in such rites as circumcision and its variants, ear-boring, knocking out teeth, and other operations.

2. Distribution and varieties.—Owing to ignorance or neglect of the complexity of mother-right on the part of ethnographers, the available evidence often leaves us uncertain how far the social processes of a people correspond with those of mother-right.

(1) *America.*—Mother-right[1] exists in America in an especially pure form. Not only are descent, inheritance, and succession purely matrilineal among many of its peoples, but the woman takes a place in social life which would justify the use of the term 'matriarchy.' A striking example of this condition is found among the Iroquois and Hurons,[2] where women are the heads of the households, elect the chiefs, and form the majority of the tribal council. Almost as striking an example occurs among the Pueblo Indians, where, with the exception of the Tewa,[3] descent is matrilineal, the house is the property of the woman, marriage is matrilocal, and the children are regarded as belonging to the mother. Other purely or predominantly matrilineal stocks are the Caddoan (Pawnee, Arikara), the Muskhogean (Creek, Choctaw, Seminole), the Yuchi, and the Timucua.

In other cases matrilineal and patrilineal tribes are found among one stock. Thus, though the Siouan tribes are mainly patrilineal, the Biloxi, Tutelo, Crow, Hidatsa, Oto, and Mandan are matrilineal; while among the Winnebago the sister's son formerly succeeded, a woman could be chief, and the mother's brother exercised much authority.[4] Again, though the majority of Algonquians are patrilineal, the Mohegans are matrilineal, succession formerly passed to the sister's son among the Ojibwa,[1] and there is evidence of matrilineal inheritance and of the authority of the mother's brother among the Menomini.[2] Another stock with both modes of descent is the Athapascan. While the outlying Navaho and Apache in the south are matrilineal, the main body of the people in the north vary. The western tribes, such as the Loucheux, Takulli, Tahltan, and Knaiakhotana, have matrilineal moieties or clans with inheritance and succession in the female line. The eastern tribes, on the other hand, are made up of bands within which social rights pass patrilineally.[3] The tribes of California, broken up into a large number of linguistic stocks, are organized in villages. Marriage is often matrilocal, but inheritance and succession are patrilineal. A totemic clan-organization has been recorded among the Miwok, and the totemic organization of the Yokut is said to be associated with matrilineal descent.[4] The Yuman stock practise patrilineal descent, but have also another form of social grouping which may stand in some relation to mother-right.[5] The local form of organization seems to prevail in the Shoshonean stock, except among the Hopi, who are, however, Pueblo Indians in general culture though they speak a Shoshonean language. This form of organization also extends northwards as far as the Salish, beyond whom the Kwakiutl form an intermediate link with the matrilineal Heiltsuk, Haida, Tsimshian, and Tlingit. The Tsimshian show traces of a mixture of matrilineal and patrilineal modes; for, though a man belongs to his mother's clan, he takes the name of his father's totemic crest as part of his personal name.[6] This mixture is still more evident among the Kwakiutl, where a man belongs to his father's clan, but takes the totemic crest of his wife's father when he marries, and transmits it to his son, who bears it till his marriage, when, in his turn, he takes the crest of his father-in-law.[7]

It is very doubtful whether the Eskimos possess any form of clan-organization. The chief social unit seems to be the family, the social rights of which pass from a father to his children.

Southward of the United States, the Seri Indians possess mother-right in a most complete form.[8] Women take the chief place in government, sometimes putting their decisions into execution themselves, while in other cases their brothers execute their wishes and are consulted by them in cases of difficulty. The husband only visits his wife and takes a very unimportant place in her household, though he may occupy a leading place in another household in his capacity of mother's brother.

We have little knowledge of the social organization of the peoples of Central America, but the Aztecs appear to have been matrilineal, at any rate so far as succession was concerned, the ruler being followed by his brother or by his sister's son.

Our knowledge of the social organization of S. America is more fragmentary than in any other part of the world, but there are definite records of the presence of mother-right in several regions and facts which suggest its presence elsewhere. One centre of the practice is the Santa Marta peninsula in Colombia,[9] where the Goajiro are organized in totemic clans with matrilineal descent. Property passes to the sister's sons, and compensation for injury goes chiefly to relatives on the mother's side. Among the Aruacs, who are said to have been the original inhabitants of the peninsula, we have no record of the nature of the social organization; but the people trace their descent to an ancestress, and women take an important place in social life.[1] Another centre of mother-right is in British Guiana,[2] where the Arawaks practise matrilineal descent and matrilocal marriage. The neighbouring Warau and Makusi are also said to be matrilineal. If a Makusi woman marries a man of another tribe, the children will belong to the Makusi; but, as it is said that these people may marry the daughter of the sister, it is improbable that they have a matrilineal clan-organization. Apparently this region is in an intermediate condition, and the presence of patrilineal succession among the Siusi,[3] a branch of the Arawaks, also points in this direction. The Arawaks who have wandered into Brazil are matrilineal,[4] and there is another centre of mother-right in this country on the Kulisehu branch of the Xingu River.[5] The Bakaïri of this region are matrilineal in that the children of the Bakaïri woman who marries a man of another tribe belong to the Bakaïri, and this is true of other tribes; but, as in British Guiana, we do not know of any definite matrilineal clan-organization. Succession appears to be in an intermediate condition, a chief being succeeded by his son, his sister's son, or his daughter's husband. The mother's brother shares the exercise of authority with the father.

[9] F. A. A. Simons, *Proc. Roy. Geogr. Soc.* vii. [1885] 789; F L Nicholas, *Amer. Anth.* iii. [1901] 606.

Among other peoples of S. America, such as the Caingang[6] and the Tsoroti,[7] there is matrilocal marriage; but we do not know whether this custom is associated with other features of mother-right.

(2) *Oceania.*—Since the great majority of Polynesians do not possess any form of clan-system, and we know little of their local organization, the nature of descent is doubtful; but where the clan-organization exists, as in Tikopia, it is definitely patrilineal.[8] The communism of the people also makes the nature of inheritance doubtful, but there is certainly no evidence of any of the modes of transmission which accompany mother-right. Chiefs are usually succeeded by their children, and this mode of succession also holds of hereditary occupations. In Tonga, however, succession may pass to the sister's son, and a woman may be chief in several parts of Polynesia. As a rule, the father has authority in the household; in some islands, such as Tonga and Tikopia, the mother's brother has certain social functions, but not of a kind that shows any special exercise of authority. In New Zealand,[9] and perhaps elsewhere, matrilocal marriage is frequent.

Micronesia, on the other hand, is the seat of definite mother-right. In the Marshall and Mortlock Islands and in the Carolines, with the exception of the island of Yap, the matrilineal mode of transmission is general.[10] In Ponape there are exogamous clans with matrilineal descent, and property passes to the sister's sons.[1] Only in Yap does the son follow his father, who elsewhere is said to be a stranger to his children. Marriage appears to be largely matrilocal. In the Marianne Islands all that we are told is that the woman commands absolutely in the house.[2] In the Pelew Islands there are exogamous totemic clans with matrilineal descent.[3]

Melanesia has usually been regarded as one of the most definite examples of mother-right; but, even where descent is matrilineal, its social organization departs so widely from the typical condition as to make it doubtful whether the term should properly be used.[4] Descent is often matrilineal, but follows the father in New Caledonia, and in many islands of the New Hebrides as well as in one part of Santa Cruz. In other places, such as most parts of Fiji and one region of the Solomons, the absence of a clan-organization makes the nature of descent doubtful. Chieftainship is always patrilineal where it is hereditary at all, and inheritance is in an intermediate condition. Property passes to the children in some places and to the sisters' children in others, while elsewhere different kinds of property follow different rules of inheritance. In Santo in the New Hebrides, people take the totem of the father as part of the personal name, but belong to the mother's clan, and in Vanua Levu in Fiji, where there is matrilineal descent, a man pays special respect to the totem of his father, though he belongs to his mother's clan and inherits her sacred land.[5] Matrilocal marriage is not frequent even where descent is matrilineal, and there are often definite social relations between a man and his mother's brother, though not always of a kind to show any special exercise of authority on the part of the uncle.

(3) *Australia.*—There are at least four forms of social grouping in this continent: the moiety, the matrimonial class, the local group, and the totemic group; since two or more of these may co-exist, there may be more than one rule of descent.

Wherever there is a simple dual organization, as among the Dieri and Ngarabana (Urabunna) of Central Australia, descent is matrilineal so far as the moiety is concerned.

The peculiarity of descent in the case of the matrimonial class is that it is neither patrilineal nor matrilineal, but the child belongs to a class different from that of either father or mother. Where marriages follow the orthodox rule, it is not possible to tell definitely the nature either of descent of the class or of the moieties of which the classes may be regarded as subdivisions. Marriages do not always follow the ordinary rules, however, and A. R. Brown has used the exceptional marriages of certain eight-class tribes as the means of detecting the true nature of descent.[6] By means of evidence provided by R. H. Mathews he shows that among the Arunta the children of the chief form of irregular marriage belong to the class to which they would have belonged if they had been the children of the man by a regular marriage, thus showing that descent among this people is determined by the father. Among the Tjingilli, on the other hand, the children of an irregular marriage belong to the group to which they would have belonged if they had been the offspring of the union of their mother with a husband married according to rule, showing that here descent is properly matrilineal so far as the class is concerned.

The local group is probably always patrilineal, but this form of social grouping has been largely neglected by ethnographers, and we must await further information to show whether this mode of descent is universal.

The totemic grouping shows great variety of descent. Sometimes the totemic group corresponds with the local group, and where this is so descent is necessarily patrilineal. In other cases, where the totemic groups form subdivisions of the matrilineal moieties, they are of equal necessity matrilineal. Among the Dieri there are two forms of totemic organization: one kind of totem, called *pintara*, is transmitted from father to son together with special knowledge of legends and rites, while a man takes another kind of totem called *madu* (the *murdu* of Howitt) from his mother. The intermediate condition of the people between matrilineal and patrilineal transmission of the totem is shown by the fact that the father often transmits his *madu* as well as his *pintara* to his son. Each man also obtains from his mother or her relatives special knowledge of legends, etc., relating to his maternal ancestors.[1]

The communistic habits and the poor development of personal property in Australia make the subject of inheritance of little importance, but in so far as it exists it seems to follow the same lines as descent of the moiety or class. Thus, among the Arunta, whose irregular marriages point to patrilineal descent, certain objects, and especially *churinga*, or ancestral bull-roarers, pass from a man to his son, or, if he has no son, to his brother and his brother's son. Among the Tjingilli and other tribes whose irregular marriages show them to have matrilineal descent, property passes into the possession of the mother's brothers or the daughter's husbands, the inheritors being men of the moiety of the mother of the dead man. The latter mode of inheritance also occurs among some of the tribes of the northern territory.[2]

Since the Australians have neither chiefs nor priests, the subject of succession is also quite unimportant. The special powers of a wizard or leech are acquired by special processes of initiation. Perhaps the topic which comes most definitely under this head is the knowledge of native legends and rites, the double character of which among the Dieri has already been considered. Elsewhere this kind of knowledge is closely connected with totemism, and probably follows the laws of transmission of the totem.

(4) *New Guinea*.—The most definite example of mother-right in this region occurs among the Massim of the south-eastern islands.[3] This people, who speak a Melanesian language, practise mother-right in a purer form than is found anywhere in Melanesia proper. Not only does a man belong to the totemic clan of his mother, but property passes to his sister's children in some localities, and everywhere a chief is succeeded by his brother or his sister's son. In parts of the Papuan Gulf descent is probably matrilineal, but succession to the rank of chief is patrilineal. Another locality where mother-right apparently prevails is on the Mamberamo River, in the Dutch portion of New Guinea,[4] where a boy belongs to his mother's tribe, and wears its distinctive dress, even when he lives with his father's people.

Elsewhere in New Guinea patrilineal customs are found, though here and there indications of mother-right occur. Thus in the Mekeo district, which has a form of the dual organization, descent sometimes passes in the female line, and among the neighbouring Pokao descent is sometimes matrilineal, and a woman may be chief and be succeeded by her child. Among the Koita, Motu, Roro, and Mekeo peoples the mother's brother has certain social functions, and these functions are highly developed in the western islands of Torres Straits, where, side by side with patrilineal descent, inheritance, and succession, the mother's brother has more authority than the father.[1]

(5) *Indonesia*.—Father-right prevails throughout the greater part of the Malay Archipelago. There is a peculiar form of matrilocal marriage in one part of the Timor,[2] in which the husband returns to his own home after a time, leaving behind him his children, who inherit their mother's property.

In several parts of Sumatra mother-right is present in its most definite form.[3] Among the Malays of Minangkabau, of Upper Padang, and certain other districts there are matrilineal clans and the extreme form of matrilocal marriage in which the husband continues to dwell in his mother's house and only visits his wife. The people live in long houses, which accommodate a family in the extended sense, consisting of persons descended from one woman, the head of the household being the eldest brother of the leading woman. He takes the place of a father to his sister's children, who inherit his property after it has been enjoyed by his brothers and sisters. A form of organization intermediate between the condition of Minangkabau and father-right occurs in Tiga Loereng, where husband and wife live together, but the father has little power over his children, authority being exercised by their mother's eldest brother. Property belonging to husband or wife at the time of marriage passes to their respective clans, but that acquired by them after marriage is divided between their children and their sisters' children.

(6) *Asia*.—There are no examples of mother-right in E. Asia, with the possible exception of the Ainus in the north and Cambodia in the south. Among the Ainus relationship through the mother is said to be more important than that through the father, and the mother's brother is the most important member of the family group, but we have no definite information about descent or inheritance. The peoples of Siberia are usually organized in patrilineal clans, but matrilocal marriage is frequently present.[4]

In India there are two centres of mother-right. One of these, represented by the Khasis and Synteng of Assam, affords a most definite example of the condition.[5] Descent is matrilineal in the clan, which is traced back to an ancestress and embraces kindred groups consisting of the female descendants of a great-grandmother. The house and other property belong to the women, and the husband or father has no authority except in those cases in which, at some time after marriage, he removes his wife and children to another house. Property is inherited by daughters, the house and its contents go to the youngest daughter, and, in default of daughters, the inheritance passes to a daughter of a mother's sister. The *siem*, or chief, is a man, except in Khyrim, but is succeeded by his brother or the son of his eldest sister. The neighbouring Wár people show an intermediate form in that both men and women inherit, but the youngest daughter obtains an additional share. The Gāros, who live to the west of the Khasis, and the Megam, or Lynngam, who are a fusion of Khasi and Gāro, practise a form of mother-right closely resembling that of the Khasis. Though a man cannot inherit property and can possess only that acquired by his own exertions, he nevertheless exercises some control over the property of his wife, and can even appoint a member of his clan, usually his sister's son, to exercise this control in the event of his death.[1] Among the Kochs of N. Bengal, who are in contact with the Gāros, marriage is matrilocal, and a man is said to obey his wife and her mother.[2]

The other Indian centre of mother-right is on the Malabar coast, where matrilineal descent, inheritance, and succession are practised by the Nāyars, northern Tīyans, and other peoples, including even the Muhammadan Māppilas, or Moplahs, of N. Malabar. This system of law, known as *marumakkatāyam*, is closely connected with the so-called polyandry of this part of India. In the unions of Nāyar women with Nambutiri (Nambūri) men, which are habitual in this region, the father has so little to do with his own children that he cannot touch them without pollution.

Elsewhere in S. India where descent, inheritance, and succession are patrilineal, matrilocal marriage occasionally occurs in the form known as *illatam*. This custom is especially followed in families where there is no son, male heirs being obtained by the daughter staying at her own home after marriage. Matrilocal marriage also occurs in Ceylon.

Several peoples of the Caucasus show traces of mother-right. Thus, in marriages between slaves and free persons the child follows the station of the mother, and a woman may habitually go to her father's house for the birth of her children.[3] The maternal uncle has much authority, and in Georgia takes the leading part in all that concerns blood-revenge.[4]

The earliest record of mother-right comes from Lycia, where, according to Herodotus, the people took the mother's name, and the status of children in marriage between free and slave was determined by the condition of the mother.

Among the Arabs of Yemen succession passes to the sister's son, and many records of the Semites of Arabia and Palestine have been regarded as evidence of an early condition of mother-right.[5] The marriage between half-brother and sister, of which the story of Abraham affords an example, accompanies mother-right elsewhere, and several passages in the OT, such as Gn 31^{43} and Jg 8^{19}, suggest this form of social organization.

At the present time the mother's brother has some degree of authority in Palestine, and a formula used in the Bedu (Bedawī) marriage ceremony shows that great importance is attached to motherhood.[6]

(7) *Africa.*—The Semites of N. Africa are definitely patrilineal, but in some Arab tribes of the Anglo-Egyptian Sūdān the wife returns to her own home for the birth of every child—a custom probably connected with matrilocal marriage. Though the Hamitic Beja are now patrilineal, there are records which show that five centuries ago they counted genealogies in the female line and practised succession to the sons of sister and daughter.[1] Among the Bogo, Barea, and other allied Hamitic or partially Hamitic peoples the mother's brother takes an important place in social life, though the patrilineal character of their institutions is otherwise very definite.[2]

The Nubas of S. Kordofan form a striking exception to the patrilineal institutions of most of the mixed Hamitic and Negro Nilotic peoples, such as the Shilluks and Dinkas; as boys grow up, they spend more and more time with their mothers' brothers, who are held to be more closely related to them than their fathers. Property is transmitted to the sister's sons, and a man lives for some time with his wife's people.[3] The Māsai, Nandi, Suk, and other partially Hamitic peoples of the northern part of tropical E. Africa are purely patrilineal.

The Bantu peoples show much variety in the mode of transmission of social rights. About Lake Nyasa and the Rovuma River[4] there are a number of definitely matrilineal tribes, such as the Wa-Yao, Achewa, Wa-Makonde, and Wa-Makua. The children take the totem of the mother, a chief is succeeded by his sister's son, and the mother's brother is regarded as the nearest relative and the natural guardian of his sister's children. The Anyanja practise both modes of descent, but the patrilineal sections are said to have derived this form of transmission from the Angoni, a branch of the Ama-Zulu. This people, together with the Ama-Xosa,[5] Ba-Suto,[6] Ba-Thonga,[7] and other Bantu peoples of S.E. Africa, are definitely patrilineal, though the mother's brother exercises much authority.

Passing northwards from Lake Nyasa, we find a more or less gradual change from matrilineal to patrilineal descent.[8] The Wa-Sagara and Wa-Digo are definitely matrilineal, while among the tribes about Lindi inheritance and succession pass to the sister's children. In other tribes, such as the Wa-Niamwesi and Wa-Jagga, the mode of descent varies according as the bride-price has or has not been paid, the children belonging to the mother's people in the latter case and to that of the father in the former. In general in this region the social institutions tend to become more patrilineal on passing from the coast to the interior.

The Ba-Ganda, Ba-Hima, Ba-Nyoro, and other Bantu peoples of Uganda are definitely patrilineal.[9] The only exceptional feature is that, while the mode of succession is purely patrilineal, the king of Uganda belongs to the totemic clan of his mother, though he also takes certain other totems connected with royalty.

The Bantu of the northern part of the Belgian Congo are mainly patrilineal.[10] Among the Ba-Ngala children inherit, but the mode of descent is determined by a family council, which usually ordains that a child shall take the totem of its father. Here the same rule holds as in E. Africa; social institutions become more matrilineal on passing from the interior towards the coast. Mother-right also occurs in Loango and Angola.[1]

Among a group of Bantu peoples in the S.W. Free Congo[2] property and rank are transmitted to the brother or the sister's son, and among one of these peoples, the Ba-Mbala, kinship is said to be counted farther in the female than in the male line. Not only is succession matrilineal, but the mother of the chief enjoys great esteem, if not authority. We are not told of any definite social groups with either line of descent, but respect is shown to animals by not eating their flesh, and this *ikina bari* is transmitted from father to son. This institution is almost certainly a kind of totemic grouping, so that these people show a condition almost exactly the reverse of that found in Melanesia, descent being patrilineal, while inheritance and succession are mainly matrilineal. If, as seems almost certain, the *ikina bari* is a form of totem, we have here an example of the connexion of totemism with patrilineal descent, and this association comes out still more strongly among the Ova-Herero of S.W. Africa. This people possess two distinct forms of social grouping, one matrilineal and the other patrilineal, and the most recent and trustworthy account[3] shows that, while there is no definite association of animals or plants with the matrilineal *eanda*, the patrilineal *oruzo* is definitely totemic.

In Nigeria and the countries west of it, we find an interesting series of transitions between mother- and father-right. The westernmost people of whom we have knowledge are the Tshi-speaking peoples of the Gold Coast.[4] They have totemic groups with matrilineal descent, property passes to the eldest brother born of the same mother, and, in default of brothers, to the eldest sister's son. Only if there are no nephews does the son inherit; and, if there is no son, the chief slave inherits. Succession passes to the brother and the sister's son. In addition to the totemic clans, called *abusua*, there are also groups, called *ntoro*, which appear to have a totemic character.[5] In these groups descent is in the male line, or, as the people themselves put it, 'a person takes the fetish of his father and the family of his mother,' the condition thus having a remarkable resemblance to the two totemic groupings of the Dieri of Australia. Among the neighbouring Fanti-speaking peoples the son inherits only the property of the mother, a slave inheriting the property of a man if he has no sister's son.

Among the Ewe-speaking peoples of Dahomey[6] kinship is counted through females in the lower, and through males in the upper, classes. Among the former property passes to the brother and to the sister's son, while a chief is succeeded by his son. The Ewe of Togoland are said to count relationship through the father rather than through the mother, but the mother's brother is the proper heir. It is noteworthy that the knowledge of the art of circumcision is transmitted from father to son.[7] Among the next people, passing eastwards, the Yoruba,[8] we do not know of any definite rule of descent, but the people are said to trace kinship in both lines, and a chief is succeeded by his son. That kinship through the mother is regarded as of great importance is shown by the fact that children of one father by different mothers are scarcely considered as blood-relatives. The property of a man passes to his sons, and that of a woman to her daughters. Next to the Yoruba come the Edo,[1] who practise two forms of marriage. In one, the *amoiya* marriage, apparently the more regular, the children belong to the clan of the father, while in the other, called *isomi*, they belong to the mother's clan, unless they are bought by the father, or unless in later life they elect to stay in their father's country. In the Sobo country, whence the Edo are said to have come, there is matrilocal marriage. The Ibo,[2] still farther eastward, practise male descent, and property passes to the sons, except in the *idebwe* form of marriage, corresponding with the *isomi* marriage of the Edo, in which the children belong to their mother's clan and are the heirs of their mother's father. As a rule, a man allows his daughter to contract this form of marriage only when he has no son, the custom thus resembling the *illatam* of S. India.

(8) *Europe.*—There is hardly a European people of antiquity to whom some form of mother-right has not been ascribed.[3] Perhaps the clearest evidence comes from the Basques, among many of whom the father has little authority, whereas women hold property, and transmit rights to their children, even when they cannot exercise them themselves.[4] According to Strabo,[5] women were the heads of families in Spain, and the Picts are said to have been matrilineal,[6] the chief line of evidence being that where the fathers of kings are mentioned they are neither kings nor Picts, but belong to neighbouring tribes. Among the Celts the king and magician are said to have been succeeded by the sister's son.[7] In Ireland the sister's son was important,[8] and the frequent mention of this relative in English ballads has led F. B. Gummere[9] to infer the close relation between a man and his mother's brother which is one of the features of mother-right. The account by Tacitus[10] of the authority of the mother's brother affords the chief evidence in favour of mother-right among the Teutons, but the position of a woman at the head of the genealogical tree of the Lombards and passages in the *Nibelungenlied* and *Edda* point in the same direction.[11] The inscriptions on tombs and other facts point to the prevalence of some form of mother-right among the Etruscans,[12] and this form of organization has also been claimed for the early inhabitants of Latium.[13] The evidence for matrilineal institutions among different elements of the population of Greece has been much discussed.[14] Perhaps the

strongest evidence is that in Athens half-brother and sister were allowed to marry when by the same father. Lastly, though in, rather than of, Europe, may be mentioned the Gypsies of Transylvania,[1] among whom a father shows little interest in his children, who remain with their mother's people if their mother dies and their father, as usual, marries a woman of another 'clan.'

3. Mixture-forms.—The preceding survey has shown not only that descent may follow one mode of transmission, while other social processes, such as inheritance and succession, may follow another, but that there may also be two kinds of descent. This is especially frequent where a local grouping is combined with exogamous clans or moieties, the usual rule being that the local grouping is patrilineal, while the grouping in clan or moiety is matrilineal. Another kind of mixture is that found among the Dieri of Australia and the Tshi of W. Africa, in which there are two forms of totemism with different modes of descent. The condition of the Ova-Herero of S. Africa, where a patrilineal totemic grouping is combined with matrilineal clans which are probably non-totemic, affords another example of the combination of two modes of descent. A less definite condition is that in which, combined with one or other definite mode of descent, there are customs which bring a person into definite social relations with relatives on the side from which descent is not counted. An interesting example occurs among the widely separated Tsimshian of N. America and the people of Santo in the New Hebrides. In both of these localities a person belongs to the totemic clan of his mother, but takes the totem of his father as part of his personal name. Another form of totemism which shows mixture of the two modes of transmission is found among the Massim of New Guinea and the people of Vanua Levu in Fiji, where persons belonging to the social group of the mother pay special respect to the totem of the father. A still more eccentric example is that of the Kwakiutl of the N.W. Pacific coast, who belong to the clan of the father, but are indirectly brought into relation with the clan of the mother by receiving from the father the totemic crest which he had adopted from the father of his wife when he married.

4. Associated conditions.—It is not at present possible to connect mother-right with race. It occurs side by side with father-right and with intermediate forms among many peoples, including the Australian, Melanesian, Indonesian, Bantu, W. African Negro, and N. American Indian. At the present time it is absent among Caucasian and Mongolian peoples, but it is doubtful if this has always been so. There is more reason to connect mother-right with scale of culture. Most of the peoples who practise it rank low in the scale, but there are definite exceptions to this generalization in the Khasis of Assam, the people of the west coast of India, the Minangkabau Malays of Sumatra, and many tribes of N. America.

As already pointed out, mother-right in its purest form can occur only in conjunction with the clan-organization, but it is not connected with any special form of this organization. The dual system, in which the whole community forms two exogamous moieties, is always matrilineal in Melanesia and, where not complicated with a class-system, in Australia, but the dual systems of N. America are sometimes patrilineal.

Totemism is still less habitually associated with either form of descent. As was said above, one people may even possess two forms of totemism, one associated with matrilineal and the other with patrilineal descent. The special regard for the father's totem which accompanies some cases of matrilineal transmission suggests a peculiar connexion of totemism with father-right, and other considerations also imply that the totemic organization tends to be patrilineal.[1] Social organizations founded on a local basis, especially those with local exogamy, are usually patrilineal, and in societies devoid of the clan-organization, in which kinship is equally important on the two sides, it is exceptional for inheritance and succession to be matrilineal.

If mother-right is especially connected with the clan-organization, we should expect to find it associated with the classificatory, or 'clan,' system of relationship, and so it is. We do not know of any people with definite mother-right who do not use the classificatory system. The correlation is especially striking in Africa, in more than one part of which classificatory and kindred systems exist side by side. Thus, in the Anglo-Egyptian Sūdān the only people who use the classificatory system are the Nubas, and they are also the only people to practise mother-right. Again, in the series of peoples of W. Africa who show so definite a transition from matrilineal to patrilineal institutions (see above, p. 856ª) it is the Tshi, with their classificatory system, whose social institutions are most clearly matrilineal.

There is some reason to suppose that mother-right may be peculiarly associated with agriculture. In N. America typical clan-systems are found especially in the maize country,[2] and in Africa mother-right seems to be present especially among peoples who live chiefly by agriculture, while father-right is associated with pastoral life. The association is, however, by no means universal.

5. Survivals of mother-right.—By this expression is meant social customs found in societies organized on a patrilineal basis which are the natural concomitants of mother-right and are, therefore, assumed to be vestiges of the earlier presence of this form of society. The most prominent of the customs which have been so regarded is the relation between a man and his mother's brother. Many peoples among whom descent, inheritance, and succession are patrilineal show the existence of just such relations between a man and his sister's child as are prominent among the social practices of mother-right. That they are such survivals is especially probable where they show the authority of the mother's brother, while the power of the nephew to take any of the property of his uncle is also a natural survival of a social condition in which the sister's son is heir to his uncle's goods. Advocates of the view that these relations between a man and his mother's brother are survivals of mother-right regard it as psychologically natural that such rights to authority or property would not easily be relinquished, but would persist in one form or another long after the formal laws of the community had ordained a different disposition of authority or property.

The marriage of half-brother and sister when of the same father but different mothers has also been regarded as a survival of mother-right. In a society which attached any great importance to kinship through the father such a marriage would be impossible, while it is natural among people who pay special regard to kinship through the mother. When, therefore, this form of marriage is found among a patrilineal people, it has been held to point to an antecedent condition of mother-right.

Other survivals of mother-right have been seen in tradition and myth. It is frequently the case among matrilineal peoples that the descent of the clan or tribe is ascribed to a female ancestor, and the belief in a female ancestor among a patrilineal people has been regarded as a survival of mother-right. A similar supposed survival is the wide-spread mythological theme of unwitting patricide.[1] This absence of knowledge of the father would be natural in the more pronounced forms of matrilocal marriage, and, in consequence, the occurrence of the theme in the mythology of a people has been regarded as evidence that the people were once in a stage of mother-right. Amazon-legends have also been interpreted as relics of mother-right.

[1] For Melanesia see Rivers, ii. 337.

[2] Swanton, *Amer. Anth.* vii. 671.

Less direct is the relation of certain social customs, such as the *couvade* and the cross-cousin marriage. According to one theory, the *couvade* is associated with the desire on the part of the father to assert his rights over his child, and those who adopt this explanation of the custom will regard it as a survival of mother-right when it is found in a patrilineal society. Again, there is reason to believe that in some parts of the world the cross-cousin marriage (see above, p. 425 f.) has come into existence through the desire of a father that his son shall acquire his property by marrying a woman who would be one of his heirs under a condition of mother-right. Another custom which may be a survival of mother-right is the rule found in several parts of Africa that the daughter or sister of a king shall not bear children. Such a prohibition would put an end to succession by the sister's son.

Etymology has also been called upon for evidence of former mother-right. Thus, the fact that the Chinese word for clan-name means 'born of a woman' has been held to point to matrilineal descent in China,[2] and the derivation of the Arabic word for 'clan' has been adduced to support a similar conclusion in the case of early Semitic society.[3]

6. History.—In several parts of the world we have definite evidence that a condition of mother-right has changed either into one of father-right or into a form of social organization in which social rights are recognized with the relatives of both father and mother. Thus there is evidence that some form of mother-right once existed in Europe, while in the Sūdān there is historical proof that five hundred years ago the Beja, who are now definitely patrilineal, kept their genealogies in the female line and transmitted property to the sons of sister or daughter. In Melanesia, again, and in some parts of America, there is positive evidence of a change from matrilineal to patrilineal institutions, the transition being still in progress in some parts of Melanesia. On the other hand, there is no unequivocal evidence from any part of the world of a change having taken place in the opposite direction. Consequently, it has been held by many students that the change from matrilineal to patrilineal institutions has been a universal feature of the history of human society, and this proposition has become a dogma among many anthropologists.

This dogma has recently been attacked from two quarters. The idea of the priority of mother-right is supported in many parts of the world by the low state of culture of the peoples who possess this form of social organization, but, as already pointed out, this is not universally true, and students of the ethnology of N. America have been led to question the dogma, largely because the matrilineal Iroquois and Pueblo Indians are among the most advanced peoples of the continent. The other line of attack is closely connected with a change which has recently taken place in the attitude of many students towards the history of social institutions. The idea that any product of human society, such as mother-right, has been universal is closely connected with the belief that human society as a whole has been the product of a relatively simple process of evolution which has proceeded everywhere on similar lines and passed through similar stages. To those inspired by this belief it was only necessary to show that mother-right has often changed into father-right, and it followed that this order must have been universal. Among many students, however, the conviction has been growing that human society is not the product of a simple process of evolution, but has been built up by a highly complex process in which a vast variety of forms have been produced by blending of cultures. If the transitions between mother-right and father-right have arisen as the result of the mixture of peoples, we should not expect to find that one form has always preceded the other, but it is probable that in the vast complexity of human progress matrilineal should sometimes have been superposed on patrilineal institutions, and that sometimes father-right would have changed into mother-right. One school of students who have adopted this point of view, viz. that of which F. Graebner and W. Schmidt are the most distinguished adherents, believe that in most parts of the world matrilineal migrants have settled among earlier patrilineal peoples, so that the main change has been from father-right to mother-right, and not in the reverse direction. According to them, people possessing the dual organization with matrilineal descent have settled among patrilineal totemic peoples, and have thus produced the various forms intermediate between the two kinds of society which are found in so many parts of the world. According to this school, the undoubted changes from matrilineal to patrilineal institutions which are found in certain regions are the result of later movements, the change in Melanesia, *e.g.*, being due to relatively late Polynesian settlements, and that in N. America to European influence.

There is much reason to suppose that Graebner and Schmidt have gone too far in their reaction against the prevailing view, and that the evidence on which they base their opinions is fallacious. But, while it is almost certain that by far the most frequent process throughout the world has been a transition from mother- to father-right, the reverse change may have occurred. The region which presents the strongest evidence of a change in this direction is N. America. Not only do some of its matrilineal peoples, such as the Iroquois and Pueblo Indians, possess the most advanced cultures of the continent, but, where one people, such as the Déné or northern Athapascans, practise both lines of descent, it is the less cultured who use the patrilineal mode. Moreover, it is said that there is definite evidence that matrilineal institutions have been taken over from others by people who were previously patrilineal or were devoid of any form of clan-organization. Several peoples of N. America possess a custom which provides a mechanism for changing one mode of descent into another. Personal names are often definitely connected with a moiety or clan, each social group having names especially reserved for its members. Among some matrilineal people of N. America, such as the Shawnees, a father gives his own clan-name to his child, thus taking a definite step towards the transference of the child to his own social group. This or some similar mechanism might well have come into play to assist a change in the opposite direction.

One of the cases most often put forward by

[2] H. A. Giles, *China and the Chinese*, New York, 1902, p. 27.

[3] Wilken, Germ. ed. p. 38.

American ethnologists as an example of change from father- to mother-right is that of the Kwakiutl.[1] This people practise patrilineal descent, but the peculiar system by which a man takes the crest of his wife's father has been ascribed to the influence of their northern matrilineal neighbours, the Tsimshian and Haida. Other examples are the Athapascan tribes bordering on the Tlingit, who are said to have adopted the matrilineal dual organization of the people, and the Babine branch of the Takulli, another Athapascan tribe who are said to have taken their matrilineal four-clan system from the Tsimshian.

In other parts of the world there is definite evidence that the change has been from the matrilineal to the patrilineal mode. There is a large body of evidence pointing to the change having been in this direction in Melanesia ;[2] but even here it is possible that certain conditions, such as the highly developed mother-right of the Massim of New Guinea, may have been assisted by some later matrilineal influence. In Africa, again, there is much reason to believe that the change has been in the patrilineal direction. The transition from matrilineal to patrilineal institutions which occurs among the peoples of W. Africa from the Tshi to the Ibo points to the gradual infiltration of immigrants coming from the north-east, who became the chiefs of those among whom they settled. While introducing their patrilineal institutions completely in the east, they did not succeed in altering descent among the general body of the people as they progressed westwards. The transitions found among the Bantu and the association of patrilineal transmission with high development of culture among such people as the Ba-Ganda and Ama-Zulu would seem to be the result of the settlement of a patrilineal pastoral people among a matrilineal population who, till then, had thriven upon agriculture.

7. Origin.—Until we know the history of this form of social organization, it is hardly profitable to discuss its origin at length, but some of the leading views which have been put forward may be mentioned.

In the first place, mother-right has been widely held to be the natural consequence of sexual promiscuity and group-marriage. The less important is fatherhood in a society, the more will that society be driven to base its social rights upon the mother. Another view is that matrilineal descent is a secondary consequence of matrilocal marriage. Where a husband merely visits his wife and is only an outsider in her household, descent and other social processes must be expected to rest on the relation between mother and child. A third view regards mother-right as a social state which has resulted from the dominance of woman, and especially from her importance in agriculture. As already seen, there is reason to connect mother-right with a high development of the art of agriculture, especially in N. America, and it is noteworthy that it is in this continent that we have our clearest evidence of the dominance of the woman.

W. H. R. RIVERS.

MOTIVE.—1. Different senses.—The term 'motive' is used in philosophy and psychology in four different senses.

(1) In the first and most general sense it means any force, of an internal or mental character, which impels to action or prevents some kind of action, be the force conscious or unconscious, and the action voluntary or non-voluntary. Thus Bentham defines motive as 'any thing that can contribute to give birth to, or even to prevent, any kind of action' (*Principles of Morals and Legislation*, p. 46). In this sense motive includes what Reid calls mechanical principles of action, such as instinct and habit, and also what Bentham calls 'speculative' motives, which influence acts that rest purely in the understanding.

(2) In a second sense 'motive' is taken with a more restricted signification, as limited to some end which we present to ourselves and of which we are conscious. Bentham has this meaning in view when he defines motive as 'any thing whatsoever, which, by influencing the will of a sensitive being, is supposed to serve as a means of determining him to act, or voluntarily to forbear to act, upon any occasion' (*ib.*). Such motives are termed by Bentham 'practical,' and are, he holds, ultimately reducible to pleasure and pain, though whether it be the expectation of the pain or the pain which accompanies that expectation that is the motive he leaves undetermined (p. 47, note). This contains the germ of an important distinction. In motives in this sense we may distinguish two things: a subjective and affective element, sometimes called affect, a spring of action, *Triebfeder*; and an objective, presented or intellectual element. Whether this subjective element is reducible to pleasure or pain, or includes more, and in what relation it stands to the objective, intellectual element and to the conative factor in mind, are among the most difficult questions in the psychology of the feelings. Here it is taken as standing in relation to certain volitions as a spring of action (see Morell, *Outlines of Mental Philosophy*, pt. vii. chs. i. and ii.; Baldwin, *Handbook of Psychology*, ii. 313–315, 332 f., 354; Stout, *Manual of Psychology*^{3}, bk. i. ch. i.; Mellone and Drummond, *Elements of Psychology*, Edinburgh and London, 1907, ch. iv.). Cf. Bentham's figurative and unfigurative motives (*infra*).

(3) A third sense of the word 'motive' occurs in the writings of Green and his followers. According to the teaching of Green, something more is required to constitute a motive than the conscious presentation of an end. In the analysis of one of Green's followers, the voluntary satisfaction of a want involves five things:

> '(1) The want. (2) The feeling of the want. (3) An idea of an object by which the want can be satisfied. (4) An idea of the satisfaction actually taking place, the work of the imagination. (5) The presentation of this satisfaction as, under the circumstances, the greatest good. The self identifying itself with the attainment of the object; finding in the realisation of the idea, not the satisfaction of a want merely, but the satisfaction of self' (D'Arcy, *Short Study of Ethics*^{2}, p. 32).

It is only to this last stage (5) that Green and D'Arcy apply the term 'motive.' Hence the doctrines that a conflict of motives is impossible and a strongest motive an absurdity (Green, *Prolegomena to Ethics*, bk. ii. ch. i.).

(4) A fourth sense of the word 'motive' belongs to Kant. Kant reserves the term *Bewegungsgrund* for the objective ground of the volition, which he opposes to the subjective ground of the desire, or the spring (*Triebfeder*). The objective ground of the self-determination of the will is the end which is assigned by reason alone, and is free from all

---

[1] F. Boas, *Rep. U.S. Nat. Mus.*, 1895, p. 334.

[2] Rivers, ii. 90, 319.

mixture of passion and sensuous affection (*Werke*, ed. Rosenkranz and Schubert, viii. 55; Abbott, *Kant's Theory of Ethics*^{6}, London, 1909, p. 45). Such objective ends are common to us with all rational beings, and are to be distinguished from subjective ends, to which we are impelled by natural disposition. Unlike all inclination and fear, respect or reverence for the moral law is an effect, not a cause (Kant, *Werke*, viii. 21, note). Regarded as a spring, this feeling acts negatively only.

In these four senses of the word 'motive' we see a progressive change of meaning from that of a mere impelling force, not even necessarily accompanied by consciousness, to that of an internal impulsion to the existence of which consciousness is essential; passing thence to the idea of an object which gives satisfaction; finally ending in Kant in the conception of motive as an object which is free from, and even opposed to, all subjective ground of desire. Green's view, though later in point of time, seems not so developed as that of Kant, since in Green the object is still made to be a motive by relation to a want or internal principle of desire, though such want or desire is again conceived as dependent on the object with which the self identifies itself. Kant's distinction of motive and spring and relegation of these terms to different classes of action get rid of the wavering between contradictory points of view implicit in Green's doctrine.

Whether we shall give to the term 'motive' the extensive signification contained under (1) may appear a mere question of the use of language; but, as is the case in most questions of terminology, important issues lie concealed beneath the purely verbal discussion. This extensive use of the word early aroused dissent. Reid in 1793, criticizing Crombie's 'Essay on Philosophical Necessity,' said:

> 'I understood a motive, when applied to a human being, to be that for the sake of which he acts, and, therefore, that what he never was conscious of, can no more be a motive to determine his will, than it can be an argument to convince his judgment.
>
> Now, I learn that any circumstance arising from habit, or some mechanical instinctive cause, may be a motive, though it never entered into the thought of the agent.
>
> From this reinforcement of motives, of which we are unconscious, every volition may be supplied with a motive, and even a predominant one, when it is wanted' (Reid, *Works*, ed. Hamilton, p. 87).

Reid then acutely remarks that 'this addition to his [Crombie's] defensive force takes just as much from his offensive,' since it undermines the evidence for the necessary action of motives known or felt. In other words, necessitation by efficient is fatal to necessitation by final causes. At this stage the distinction seems to turn upon the presence or absence of consciousness. But, even if we regard consciousness as the condition of the existence of motive in sense (2), this does not prevent the motivation or impelling force being essentially mechanical as when non-voluntary in sense (1). Green's doctrine tries to evade this by assigning to self-consciousness the power of determining the predominance of the motive which actually does succeed, while still admitting that the end to which we thus determine ourselves is assigned by the pathological or affective element. Kant, on the other hand, assigns to reason a power of determining action to an end, which is quite independent of, and even opposed to, the pathological feeling. 'Motive' in this sense has passed over entirely from the meaning of an impelling force to that of an object determined and decided upon by reason.

These distinctions are closely bound up with the inquiry regarding the freedom of the will. If our will is possessed of an original power by which it can control the direction in which it utters itself, then the causal action of motives must be distinct from mechanical impulsion; they may induce, or incline, but do not determine, according to inevitable law. If, on the other hand, our will has no such power, what we call inducing and inclining must be merely the subjective side of the collision of predestined forces, of which we are the theatre or rather the play itself. If this be the case, the appearance of a causation, which may yield to conscious motives, but is not controlled by them, must be an illusion. The illusion demands explanation. This Münsterberg undertook to furnish in his *Willenshandlung* (1879). In *Man's Place in the Cosmos* (^{2} Edinburgh and London, 1902), J. Seth Pringle-Pattison gives an acute analysis of Münsterberg's views. According to Münsterberg, the will is only a complex of sensations. Our activity, whether the inner activity of attention or the outer activity of muscular contraction, appears to us to be free, just because the result of the activity is already present in idea, and is, in all cases, accompanied by the sensations flowing from previous motor innervation. The feeling of innervation itself is 'just the memory-idea of the movement, anticipating the movement itself.' In the *Grundzüge der Psychologie* (1900) Münsterberg's position is modified by a Fichtean point of view. The 'action theory of mind' here put forward makes the consciousness of sensation dependent on motor discharge. It, therefore, precludes any theory of action other than that of mechanical causation. Nor is this conclusion altered by the theory of taking an attitude (*Stellungnahme*) towards the world, which Münsterberg puts forward. Such activity as lying outside consciousness could not even give rise to the illusion of voluntary activity.

It was maintained by Hartley (*Observations on Man*, London, 1810, i. 522) that 'to prove that a man has free will in the sense opposite to mechanism, he ought to feel that he can do different things while the motives remain precisely the same,' and that here 'the internal feelings are entirely against free will where the motives are of a sufficient magnitude to be evident,' while he admits a power of resisting motives. Such a power, on Hartley's view, can come only from some other and stronger motive; that is, there is no intrinsic power of resisting motives. The attribution to the self of an intrinsic power of strengthening indefinitely certain desires, which then become motives (in Green's sense), seems the essence of the third theory of motives. There is an illusory atmosphere of determinism about Green's theory. The will is determined by motives. That desire only is a motive which is successful. There is no conflict of motives, nor any strongest motive. But then the strongest desire is made to be the strongest, *i.e.* to be a motive by the action of the eternal consciousness which is perpetually reproducing itself in us, and which helps to constitute, in cognition and action, all the objects of knowing and will. Is now this action of the eternal consciousness something from all eternity, unalterably the same? The result is practically identical with Hartley's—the only freedom in it is that the ego, since it determines the motive, is consequently, in being determined by the motive, determined by itself. This is only Spinozistic necessity. But, if the action of the eternal ego on the finite ego is not so predetermined, is something which, at the moment of decision, may fall out differently on different occasions, notwithstanding identity of desire and circumstances, then such action is not different from free will in the ordinary sense, and implies a surplus of undetermined or self-determined free activity of the ego, as in the Kantian doctrine.

Green's theory of motives must be carefully distinguished from a modern psychological doctrine, to which it bears a strong verbal resemblance. Green says (*Proleg. to Ethics*, p. 93) that an appetite or want 'only becomes a motive, so far as upon the want there supervenes the presentation of the want by a self-conscious subject to himself and with it the idea of a self-satisfaction to be attained in the filling of the want.' Stout, too, says (*Manual of Psychology*^{3}, p. 709):

> 'Motives are not mere impulses. They come before consciousness as reasons why *I* should act in this or that way. They are not independent forces fighting out a battle among themselves, while the Ego remains a mere spectator. On the contrary, the motives are motives only in so far as they arise from the nature of the Self, and pre-suppose the conception of the Self as a determining factor. From this it follows that the recognised reasons for a decision can never constitute the entire cause of decision. Behind them there always lies the Self as a whole, and what this involves can never be completely analysed or stated in the form of definite reasons or special motives.'

The great verbal similarity of this to what Green says is evident. But to Green the self-conscious subject, through determination by which a want becomes a motive, is 'a principle of other than natural origin,' is, in fact, an entity of a sort. To Stout the self as a whole, even if what it involves can never be completely analyzed or stated, is not an entitative principle eternal or otherwise, but, rather, the 'thought of the self.' In deliberation, he says, 'the concept of the Self as a whole will not directly tend to reinforce or suppress a desire' (p. 708).

> 'A certain line of action being suggested as possible, I contemplate myself as I shall be if I put it in execution, so as to make it part of my actual life-history, and on the other hand I contemplate myself as I shall be if I leave it undone. I follow out this representation of a hypothetical Self in more or less detail until that turning-point in the process which is called Voluntary Decision emerges' (*ib.* p. 709).

This theory, that motives arise and are constituted by relation to the conception of self, whether we take it in Green's metaphysical or in Stout's psychological form, as a *general* theory of motives, seems not to be true. That very many motives are determined by conscious relating of the end in view to the self is true—notably the self-regarding ones. But it is difficult to regard altruistic motives as necessarily related to the concept of self. They may sometimes be so, but not necessarily or universally. The highest moral ends are disinterested. The disinterested character of æsthetic emotion has been emphasized by Burke and Kant, Hegel and Schopenhauer. Molinos, Fénelon, and Madame Guyon have maintained the possibility of a disinterested love of God. It must, therefore, be admitted that, while the analysis of the term 'motive' given under (2) and (3) is in many cases a correct and complete analysis, there are other cases where, even if impelled towards the end by some subjective affective element, the self-conscious satisfaction of this impulse need form no part of the objective end in view nor even of the subjective impelling force.

It is when we come to the fourth sense of the term 'motive'—the strict sense given to it by Kant—that we find the most striking detachment of the term from all association with the subjective self. It may still bear relation to something universal, common to the individual selves, but the ends are then ends in which the individual self loses its individuality. They are objective. This is the essential of morality to Kant, and the point which separates the ethics of Kant from the ethics of Green. It was to retain in the moral motive the reference to self that Green was compelled to characterize the good as the 'perfection of human character' or 'self-devotion to the perfecting of man.' D'Arcy (*Short Study of Ethics*^{2}, p. 277) has seen this defect in the ethics of Green. The defect is, however, a necessary outcome of Green's initial position. To Kant, on the other hand, reason, not the mere self, is able to give itself an end, which, though realized in the matter of desire, is independent of the relation of that matter to the particular self. Kant is often criticized as if the categorical imperative set up ends, detached from all the material of desire and inclination, as if purely formal ends existed by themselves. It is the impenetration of particular desires and inclinations by the categorical law of duty that gives to the individual the absolute value expressed in that form of the categorical imperative which is expressed: 'so treat humanity whether in thine own person or that of another always as an end and never as a means.'

We have, therefore, in our highest ends, moral, æsthetic, and religious, the singular paradox that in them an element, which comes into existence only through particular feelings and inclinations, becomes, as regards its essential character, independent of these and a motive of selfless and disinterested action.

In the above discussion we have considered the several distinct senses in which the term 'motive' may be used. There are, however, some ambiguities connected with its use which, while not really adding to the multiplicity of senses, might nevertheless appear to do so. Bentham says:

> 'Owing to the poverty and unsettled state of language, the word *motive* is employed indiscriminately to denote two kinds of objects, which, for the better understanding of the subject, it is necessary should be distinguished. On some occasions it is employed to denote any of those really existing incidents from whence the act in question is supposed to take its rise. The sense it bears on these occasions may be styled its literal or *unfigurative* sense. On other occasions it is employed to denote a certain fictitious entity, a passion, an affection of the mind, an ideal being, which upon the happening of any such incident is considered as operating upon the mind, and prompting it to take that course, towards which it is impelled by the influence of such incident. Motives of this class are Avarice, Indolence, Benevolence, and so forth. . . . This latter may be styled the *figurative* sense of the term *motive*' (p. 46 f.).

The real incidents—motives in the unfigurative sense—are:

> '1. The *internal* perception of any individual lot of pleasure or pain, the expectation of which is looked upon as calculated to determine you to act in such or such a manner; 2, any *external* event, the happening whereof is regarded as having a tendency to bring about the perception of such pleasure or such pain.'

Each of these is further distinguished according as it is in *prospect* or in *esse*, meaning by the former the posterior possible object which is looked forward to as the consequence of his action [or inaction], by the latter, the present existing object or event which takes place upon a man's looking forward to the other.

These distinctions partly depend on Bentham's doctrine that the only motives are pleasure and pain, which has been ably criticized by Sidgwick (*Methods of Ethics*, bk. i. ch. iv.). They may be reduced to those drawn by Fleming (*Manual of Moral Philosophy*, ed. London, 1870, p. 176) between 'the external object, the internal principle, and the state or affection of mind resulting from the one being addressed to the other.' The internal principle may be dismissed as, at any rate for the purposes of this article, a 'fictitious entity.' The distinction, however, between the external object and the resulting state or affection of mind has an important bearing on the foregoing discussion. It might seem plausible to say, as Fleming says, that 'speaking strictly it [the term 'motive'] should be applied to the terminating state or affection of mind which arises from a principle of human nature having been addressed by an object adapted to it; because it is this state or affection of mind which prompts to action.' This is true in all cases where an affection is the spring of action. But there are cases in which the affection does not exist, or the action takes place without, or contrary to, its prompting. In the 'beautiful soul' in Schiller's *Anmuth und Würde*, affection produces moral results, but, to Kant, true moral action is independent of such affection. In art, however much feeling may guide, it cannot be considered as the motive. In true art it cannot even be said that there is a conscious image or ideal which impels the artist to produce. In art, as Schelling says, the ego is unconscious in regard to its product (*System des transcendentalen Idealismus*, vi., Tübingen, 1800 [*Sämmtl. Werke*, Stuttgart, 1856–61, iii.]).

An important distinction is that between motive and intention. The nature of intentionality is thus stated by Bentham:

> ‘Let us observe the connexion there is between intentionality and consciousness. When the act itself is intentional, and with respect to the existence of all the circumstances *advised*, as also with respect to the materiality of those circumstances, in relation to a given consequence, and there is no mis-supposal with regard to any preventive circumstance, that consequence must also be intentional. In other words, advisedness, with respect to the circumstances, if clear from the mis-supposal of any preventive circumstance, extends the intentionality from the act to the consequences’ (p. 44).

The distinction itself is most clearly expressed by Martineau (*Types of Ethical Theory*^{2}, ii. 272):

> ‘The *Intention* comprises the whole contemplated operations of the act, both those for the sake of which, and those in spite of which, we do it. The *Motive* comprises only the former.’

Dividing the intention as Martineau does into persuasives, dissuasives, and neutral consequences, it is only the first that fall under the heading of ‘motive’ (cf. Mill, *Utilitarianism*, London, 1879, ch. ii. p. 27; Muirhead, *Elements of Ethics*^{2}, p. 61; Mackenzie, *Manual of Ethics*, p. 64 ff.).

This excludes from intention all motives in sense (1) which are unconscious or involuntary. It includes motives in senses (2) and (3). It is more difficult to say whether it includes motives in sense (4). The particular object or end is certainly included in the intention, but the law which the will gives to itself, while controlling and determining the intention, seems not necessarily to form part of it. The act, even if done for the sake of the law, has not the law in its universality as its end. To make Martineau's statement true we must understand ‘persuasives’ in an affective sense.

2. **Classification of motives.**—The various classifications reflect the difficulties which have attended the foregoing discussions. Our impulses or active principles are classified by Reid into mechanical, animal, and rational; but only to the last two does he apply the term ‘motives.’ Stewart has criticized this classification on the grounds that ‘mechanical’ cannot be applied to instincts and habits (which is done by Reid), nor to any of our active principles. It is capricious to call our appetites animal principles, because common to man and brutes, and to distinguish our instincts as mechanical, in regard to which our nature bears so strong an analogy to the lower animals. Mechanical principles of action produce their effect without any will or intention on our part. Animal principles of action require intention and will, but not judgment. Rational principles of action require not only intention or will, but judgment or reason. Stewart censures Reid for including under animal principles of action the desire of knowledge, of esteem, pity, patriotism, etc.

Stewart's own classification falls under five heads: (1) appetites, (2) desires, (3) affections, (4) self-love, (5) moral faculty. This classification has been ably criticized by Martineau (ii. 134).

McCosh gives the following classification of the orective or motive powers, or, as he prefers to say, of the motive and moral powers:

i. The native appetencies of the mind leading to emotions. These include: (1) the inclination to exercise every native power voluntarily or involuntarily; (2) the desire to receive pleasure and avoid pain; (3) the appetites: tendencies to seek for knowledge, esteem, society, power, property; (4) an inward principle that impels to seek for the beautiful; (5) the moral power as a prompting energy; (6) unselfish motives prompting to action in relation to other beings, *e.g.* sympathy.

ii. The will not as furnishing incitements, inducements, or motives, but as seated above these, sanctioning, restraining, and deciding among them.

iii. The conscience—a cognitive power involving certain beliefs and judgments (*Intuitions of the Mind*, p. 242 ff.).

More important than any of these classifications is that of Martineau (ii. 129–175). He begins by distinguishing between two sets of impelling principles in man: (1) ‘those which urge him, in the way of unreflecting instinct, to appropriate objects or natural expression,’ and (2) ‘those which supervene upon self-knowledge and experience, and in which the preconception is present of an end gratifying to some recognized feeling’ (p. 135). The former he calls primary springs of action, the latter secondary. Under the primary come—(1) propensions: including organic appetites and animal spontaneity; (2) passions: antipathy, fear, anger; these do not arise as forces from the needs of our own nature, but are rather what we suffer at the hands of objects; (3) affections: parental, social, compassionate; these operate as attractions towards other persons; (4) sentiments: wonder, admiration, reverence; these direct themselves upon *ideal relations*, objects of apprehension or thought that are above us, yet potentially ours.

Under the secondary principles which are characterized by their *interested* nature or invariable aim to produce certain states of ourselves come—(1) secondary propensions: love of pleasure, money, power; (2) secondary passions: malice, vindictiveness, suspiciousness; (3) secondary affections: sentimentality; (4) secondary sentiments: self-culture, æstheticism, interest in religion.

The secondary series is the self-conscious counterpart of the primary series. These principles give rise to ulterior combinations, such as love of praise, emulation, fellow-feeling. In addition to these are prudence and conscience, but neither is, according to Martineau, a positive principle, so as to range in the series of impulses. Each exercises a judicial function—prudence among the secondary principles, conscience over the whole.

If we examine these various classifications, we shall find much to confirm the wide view of motives which we have taken. Martineau's distinction of primary and secondary springs of action directly contradicts the narrow view of motives taken by Green, which would limit motives to those associated with the notion of self. Such association gives rise to secondary springs of action. Again, some of these classifications rightly regard conscience and the moral faculty as motive powers prompting to action and yet *per se* incapable of being identified with an affective element. In Martineau's theory the moral element consists in relative position in a scale of excellence intuitively discerned. Other moralists might seek to analyze further in what this excellence consists, and this analysis might be dangerous to the intuitive scale, might show that the position of a spring varies with circumstances; but the insight that the moral element is not an affective spring of action, in either the primary or secondary form, remains; and with it remains the necessity of recognizing a fourth form of motive, the motivity of which, whether proceeding from an autonomy of the will itself or from a recognition of an intrinsic authority in certain imperatives of action, or from a recognition of superiority or authority in inward springs or outward courses of conduct, demands a unique position for itself in the classification of those forces which impel the human will to action.

G. J. STOKES.

MOUNTAINS, MOUNTAIN-GODS.

—There are few peoples who have not looked upon mountains with awe and reverence, or who have not paid worship to them or to gods or spirits associated with them in various ways. Their height, their vastness, the mystery of their recesses, the veil of mist or cloud now shrouding them, now dispersed from them, the strange noises which the wind makes in their gorges, the crash of a fall of rock, or the effect of the echo, their suggestion of power, their appearance of watching the intruder upon their solitude—all give to them an air of personality, and easily inspire an attitude of reverence and eventually of worship. They are next thought to have a spirit akin to, yet greater than, man's, and such a spirit may become separate from the mountain and exist as a god of the mountain. The natural dangers encountered by the traveller or mountain-dweller, as well as the mystery of gorge, precipice, or cavern, suggest the presence of spirits, dangerous or at times beneficent, and in many cases also ghosts of the dead are thought to haunt the mountains. Their summits, being near the sky and often surrounded by cloud, suggest their connexion with gods of sky or rain; or the remoteness and mystery of their peaks cause them to be regarded as dwellings of gods or of ghosts.

Sporadically we find no cult of mountains or mountain-spirits, but that is generally where no cult of nature exists, or, of course, where no mountains exist. Where they are feared, it is generally as much because of the demons supposed to infest them as because of their own suggestion of terror. The horror of mountains found in writers from Waller to the time of Scott, Byron, and Wordsworth was perhaps a literary affectation as much as genuine lack of appreciation. Wordsworth's 'voice of the mountains' has generally made a strong appeal to men and has given a great impulse to the imagination.

1. The personification of mountains.—The various impressions which mountains made upon men's minds led to their being regarded as alive, or possessed of a power lurking behind their massive forms, and, finally, to their personification in a greater or less degree. The next stage was that the mountain-god—the personified mountain which received worship—became a god of the mountain, separate from it, yet connected with it. It is difficult in particular cases to say which of these stages is intended, or to disentangle them, since the human mind so easily adopts either attitude; and, even where a god of the mountain is worshipped, the mountain itself still looms vast and, as it were, personal. In this section we shall examine instances where the mountain seems to be worshipped for itself alone or to be regarded as sacred and to some extent personal.

The Choles of Itza regarded one particular hill as god of all the mountains, and on it burned a perpetual fire.[1] To the Huichol Indians every hill and rock of peculiar shape is a deity,[2] and hills as well as lakes, rain, etc., are tribal gods of the Thompson Indians.[3] The Mexicans had gods of mountains (§ 2), but they regarded all mountains as divine and personified them. Iztaccihuatl was the wife of Popocatepetl. Molina describes the hill Huanacauri as the chief *huaca* of the Incas.[4] In Korea mountains are personified, and the idea of guardianship, *e.g.*, of towns, is associated with them (cf. § 5). Yet there are also spirits of mountains.[5] In Japan the term *kami*, applied to deities, is likewise applied to mountains, which are supposed to possess great power.[6] Similarly in China, where spirits of mountains have always been worshipped, mountains themselves are included among the *shen*, or beneficent gods. There are ten principal mountains included among the *t'i-ki*, or earth-gods—the five *yoh*, of which the greatest is T'ai Shan in Shantung, and the five *chen*.[1] Of each of these there is one in each chief cardinal point (the four mountains), and one in the centre. The chief minister of Yâo was called 'president of the mountains.'[2] To these, or to their spirits, sacrifices are made on the great altar of the earth at the summer solstice. Other mountains are also included in the category of gods and in the official worship (see also § 7).[3] In Tibet Mt. Kanchinjunga was once an object of worship, but is now regarded as the dwelling of a god of the same name. There are four great deified mountains in Tibet.[4] In Media and in Phrygia gods were identified with mountains, and a cult was paid to them on their summits.[5] Among the Celts a cult of mountains, as well as of gods of mountains, is to be traced. One inscription was 'To the Mountains'; the mountains are often invoked in spell or prayer or invocation in Irish texts; and Gildas speaks of the 'blind people' who adored mountains and other parts of nature.[6] While the Greeks adored divinities associated with mountains, some mountains still retained a degree of personification—*e.g.*, Mt. Ida as a nymph.[7] In India as early as the Rigveda (VII. xxxv. 8) there is a direct appeal to the mountains: 'May the mountains be propitious to us.' The Himālaya is king of mountains, the great divine range *par excellence*, pre-eminently sacred. It 'cannot be shaken,' and it is the abode of the dead, of mighty creatures, and of living saints and ascetics, as well as the haunt of demons of all kinds. But its own virtues are supreme. To think of it is to gain vast merit; to see it is to have one's sins removed. It was personified as Himavat or Harivaṁśa, father of Gaṅgā and Umā Devī, or Pārvatī, the mountain-goddess, identified with one of the peaks.[8]

An ancient story tells how Pārvatī covered up the eyes of Mahādeva when he was performing *tapas* on Himavat. Flame burst from his forehead and scorched the mountain; but, when she assumed a submissive attitude, her father was restored to his former condition.[9]

Among the aboriginal tribes of India mountains are personified. The Santāls sacrifice to Marang Burū, at once a mountain and a god. Other tribes have no other gods but mountains, rivers, and the dead.[10] Among the Semites mountains and hills had been personified, and many of them were regarded as peculiarly sacred—the dwelling-place or seat of a god (§ 5). But the evidence is mainly that of cults upon hills or high places to a god associated with these (§ 7). The pagan Slavs are described as worshipping mountains.[11]

Where a god associated with a hill or mountain bears a name similar to it, it is probable that the mountain personified gave this name to the subsequent god of the mountain. A Celtic god Poeninus was god of the Pennine Alps, Vosegus was god of the Vosges mountains. Cf. other examples above.

Evidence of the personification of mountains is also to be found in the sporadic cases of alleged descent from mountains, possibly because these mark the region whence some tribe took its origin or migrated.

The Navahos thought that they came from the bowels of a great mountain near the San Juan.[12] Some Mexicans regarded the mountain Cacalepei as their mother.[13] The Iranian kings were supposed to have descended from the mountain Ushidarena.[14]

2. Gods and mountains.—Besides being personified, mountains are associated with clearly defined gods, either as their occasional or as their more permanent seats or abodes, or there are gods of the mountains distinct from these as personified.

The house of the Māsai god Ngai (Eñ-ai) is in the snows of Kilimanjaro.[15] Among the Yoruba there is a god of the mountains called Oke. In Hawaii several distinct deities of the volcano Kilauea were recognized, each of these being connected with some part of it.[16] Among the Todas most deities are associated with hills, each occupying a separate peak, on the summit of which is a stone circle, barrow, or cairn.[17] The

Khonds worship a god of hills, and among the Kols the great deity Marang Burū, or 'Great Mountain,' is the rain-god, Marang Burū being a conspicuous peak in Chotā Nāgpur which is either the god himself or his dwelling-place. Before the time of rain elaborate ceremonies take place on the mountain for rain and a fruitful season.[1] Mt. Shasta is thought by American Indian tribes to have been made of snow and ice by the Great Spirit from the sky, after which he stepped down upon it and hollowed it out as a wigwam where he might live on his visits to earth.[2] Among the Thompson Indians the 'Old Man' is a being living on high mountains, and there making rain or snow by scratching himself.[3] The Master of Life is thought by other tribes to dwell in the Rocky Mountains.[4] The Mexicans thought that Tlaloc, god of rain, dwelt on the highest mountain-tops where the clouds gather. Other gods, his lieutenants, bearing his name, dwelt in hills and were worshipped as gods of water and of mountains. The cult of Tlaloc was of great importance, and was connected with festivals of the first rank.[5] In Central India the sun-god is supposed to dwell on hills, and isolated rounded hills are hence called 'sun-rays.' Several outstanding peaks of the Himālaya are the seat of gods—Kailāsa of Śiva and Kubera—and a title of Śiva is the 'mountain-god.' Other mountain chains or peaks are associated with divinities—*e.g.*, the Vindhya ranges with Mahārāṇī Vindhyeśwarī, the goddess of the range. In earlier times Rudra was believed to dwell among the mountains, or on their tops, and Durgā was called 'the dweller in Mandara.'[6] Manu is said to have descended on a slope of the Himālaya called 'Manu's Descent,' and to have tied his ship to a peak after the flood.[7] As has been seen, there is a constant confusion between the mountains personified and the personal gods of mountains in India. In Greece certain gods were closely associated with mountains. The habitual cult of Zeus on mountain-tops, like that of the Mexican Tlaloc, shows his earlier connexion with rain, cloud, and lightning sent down from the heights, and he probably had been identified with and had absorbed similar earlier gods there worshipped—*e.g.*, at Mt. Lykaion in Arcadia (Zeus Lykaios). In several other instances the mountain where the cult took place gave a title to the god—*e.g.*, Zeus Olympios (here the cult no longer was observed), Zeus Laphystos (Bœotia); on Mt. Pelion he was worshipped as Zeus Akraios.[8] Clouds resting on peaks where Zeus as rain-god was worshipped were a sign of rain.[9] Hermes had a temple on the summit of Mt. Cyllene, and Apollo on the hill of Phigaleia. Artemis was also worshipped on high places in Arcadia. The Cretan Mother-goddess, like the Phrygian Cybele (*q.v.*), was represented standing on a hill (cf. art. MOUNTAIN-MOTHER). Cybele was the Mountain-mother (*μήτηρ ὀρεία*),[10] and she loved the mountain and its recesses, called by her name *Κύβελα*.[11] Another divinity associated with mountains was Pan, who was born on Mt. Lykaios and had one of his sanctuaries there. Several mountains—*e.g.*, Mt. Mænalus, Mt. Lampea—were sacred to him. There he loved to hunt, and there he might be heard piping.[12] The personalized nymphs were also of the mountains, and were worshipped there. They had caves on Mt. Cithæron, and gave oracles from them. Certain nymphs, called *Ὀρεστιάδες* or *Ὀρειάδες*, presided over mountains, and were companions of Artemis.[13] Mt. Olympus was supposed to be the seat of the gods, with the palace of Zeus on its summit. In Cappadocia, according to Strabo,[14] a mountain was called after a god Omanos. Some Babylonian gods were called 'ruler of the mountains,' and Enlil is described as 'the great Earth-Mountain'—a reference to Babylonian cosmogony and to the belief that he was god of all the forces of life. For his worship, and later that of all the gods, an artificial mountain was erected in the plain.[15] The world-mountain was the seat of the gods. Among the Celts gods were associated with hills, where some cult was offered to them, or with mounds. Within these they were believed to have retired on the coming of Christianity, and there they live as fairies.[16]

For Berbers see *ERE* ii. 506.

3. Ghosts dwelling on mountains.—To some extent the belief that ghosts haunt mountains or that the Other-world of the dead is situated on a mountain-top may have arisen from the custom of burying the dead on hills, but the belief often exists where this custom is not found. It was doubtless connected with the fact that mountains are lofty and touch the clouds or are swathed at times in mists. They are near the sky-land which is so often associated with the dead. They are lofty and mysterious; and, as they are the dwelling-place of gods and spirits other than human, it was natural enough to regard them as also the habitation of ghosts.

Burial on hills is only one of many methods of disposing of the dead, and is by no means universal. It is found among the Comanches, Arapahos, and other N. American tribes, the Caribs and Patagonians, in Arabia and Tibet, and among the Parsis where no *dakhma* exists (the body is surrounded by stones, not buried). Hill-burial was also favoured by the Norsemen.[1]

In Melanesia the idea that ghosts dwell on mountains is frequently found—*e.g.*, in British New Guinea (life like that of earth [Koita]; a blissful Elysium [Aroma]; ghosts as a light or a fungus [Roro-speaking tribes]), and among the Kai of German New Guinea (ghosts as animals haunting wild glens). In the D'Entrecasteaux group is the spirit-mountain Bwebweso, the happy spirit-land which the ghosts reach by a snake-bridge over a chasm. No mortal dare climb it or speak above a whisper when passing it.[2] In Tahiti the heaven of the dead, Tamahani, is on a mountain on the north-west side of Raiatua, and frequently in Polynesia a mountain-top or rocky defile or the surrounding mists are the abode or resort of ghosts.[3] In the Shortland Islands the dead go to certain mountains, and, after remaining there for some time, depart to a volcano.[4] Among the Dayaks of Borneo hill-tops are associated with ghosts. The heaven of the Idaans and other tribes is on the top of Kina Balu, and the ghosts feed on the moss on its sides. Among the Sea Dayaks a hero who becomes the object of a cult is buried in a lonely spot on the crest of a hill.[5] Various African tribes have similar beliefs.

The Akamba think that ghosts dwell on hills, and that volcanic veins are their paths. Sacrifice is made to them there, and they fear to approach the hill among the woods of which the ghosts dwell.[6] Among the Kagoro ghosts dwell in groves or on mountains.[7] The Bondei god, Mlinga, is a mountain, and souls go thither, storms come from it, and in war drums are heard upon it. Death is the penalty for trespassing on it.[8] The Anyanja hear the ghosts talking on their spirit-hill, or drums beating. To hear these is dangerous.[9] Malagasy ghosts and animal spirits reside in a great mountain in the north.[10]

In N. America the Sonora Indians thought that ghosts dwelt in caves and rocks, the echo being their voices.[11] Of other tribes it is said that souls of the dead go to Wakondah, who dwells in the Rocky Mountains, and there live in bliss.[12] Tlalocan, a Mexican Elysium in the mountains, was the place of souls of those sacrificed to Tlaloc and of those who died of leprosy or by drowning or lightning.[13] The Hindus regarded the Himālaya as the home of the sainted dead.[14] One Chinese paradise is in the Kuen-lun mountains, and is for those who attain holiness or divinity; many tales are told of its wonders.[15] Similar beliefs lingered on in the W. Highlands. Certain clans had hills 'to which the spirits of their departed friends had a peculiar attachment,' and which were supernaturally lit when a member of the clan died.[16]

In pagan Slavic belief the dead must climb a steep glass mountain, on whose top is paradise, and in *Märchen*, Scandinavian and Slavic, this idea reappears as the rescue of a princess or a fair being from the top of a glass mountain by a hero.[17]

The road which the soul has to traverse to the region of the dead is often a difficult one, and in some savage instances it passes over mountains, or the entrance to the Other-world is from a cave in a volcanic vent (see DESCENT TO HADES [Ethnic], § I).

In Mexican belief the soul of one dying a peaceful death had to pass between two mountains which threatened to meet and crush him, if he were not armed with a passport.[1] Mt. Demavend in Persia was the resting-place of the blessed on their way to paradise,[2] and Mt. Albūrz was one of the supports of the Chinvat bridge. In ancient Egyptian belief the 'Mountain of the West,' through which lay the road to the region of the dead, was guarded by Taûrt or Hathor, who is represented emerging from the mountain,[3] where Rā also sits. At the tomb the coffin was set on a small sandhill, representing the mountain.[4]

Many folk-tales and myths tell of a deliverer, some *rex quondam, rex futurus*, like Arthur, who is one day to return as the saviour of his people.[5] In some of these he is in fairyland or heaven, but 'the cruder and more archaic belief is that he sleeps within the hills.'[6] Sometimes he is seen there by one who has been able to penetrate into the hill. Such tales are told of Arthur, Merlin, Fionn, Bruce, and many another hero, and there are innumerable Celtic, Teutonic, and Slavic instances.[7] The story is also found in Korea.[8] Hartland suggests that these heroes are gods of the earlier faiths, vanquished by Christianity but not destroyed.[9] So in Irish myth the Tuatha Dé Danann had retired within the hills.[10] But, while this is not impossible, the idea seems to be linked more directly with that of the dead being alive in grave or barrow or in hills (as in Scandinavian belief), whence they might come in the hour of their people's need.

4. Mountains as the abode of spirits.—Besides being the seat of gods, mountains are also peopled, like other parts of nature, by spirits, or are haunted by fierce demons.

In Australia Twanjirika is the mountain-spirit of the S. Arunta, and in the Lake Macquarie district Yaho lived on the tops of high mountains and was hostile to the blacks. The Arunta also fear spirits called *oruntja*, dwelling on a hill.[11] In British New Guinea the Koita dread a spirit living on a hill which they will not approach, but a spear made from a tree growing near it is peculiarly effective.[12] In Polynesia spirits people the mountains and are generally dangerous.[13] The *yaku* of the Veddas people rocks and hill-tops, among other places, and are named from them. They send disease, and are much feared. Some of these *yaku* are spirits of the dead—of headmen or their wives. They also have a dangerous aspect—sending sickness or stealing children—and are placated by offerings.[14] The Kayans and other tribes of Borneo believe in spirits manifesting themselves in parts of nature—*e.g.*, mountains. Spirits of this kind are called *toh*, and are malevolent; hence people are careful not to offend them. The most dangerous are found on the most rugged summits, which the natives will hardly approach.[15] Among the Lushei Kuki clans *lashi* are beings dwelling in precipices and controlling animals, but demons people hills, streams, etc., and cause much trouble.[16] In Chitral bad spirits with feet turned backwards dwell on Tirich Mir.[17] Among the Oraons every rock and natural feature is haunted by demons, and this is true of every part of India.[18] The Himālaya is the dwelling of innumerable beings, its recesses the haunt of demons, its caves of witches and fairies. Other hills are equally infested and consequently feared. As early as Vedic times such beliefs are found, and in the *Mahābhārata* witches are said to live in mountains.[19] In Korea the spirits of mountains are duly worshipped by sacrifices, and on every pass is a shrine where prayer is made to them or an offering laid. They control tigers and give the hunter power to catch them.[1] In China mountain spectres are much feared, and evil spirits haunt mountains, their power being proportionate to the size of these. Only on certain days should mountains be crossed, and only after fasting and purification. The genii of mountains are more friendly and have a regular cult (§ 7).[2] In Indo-China the Thai believe in the *phi* dwelling on steep mountains, who have the power of imitating storms by night.[3] In Annam female spirits or fairies called *chu vi* dwell in forests and mountains, and for each hill there are genii good and bad.[4] Among the Bantu of S.E. Africa demons haunting mountains are much feared.[5] On the other hand, the Awemba believe in guardian spirits attached to hills, etc., who send rain and fertility.[6] For similar Berber beliefs see *ERE* ii. 506b. The Babylonians thought that evil spirits dwelt on mountain-tops.[7] In Persia Demavend is the home of genii and demons,[8] and wizards assemble there. It is a general Muhammadan belief that the mountains of Qāf, supposed to be the circular boundary of the earth, are the chief abode of *jinn* and *ifrīts*.[9] European folklore makes hills and mountains one of the dwelling-places of elves, fairies, dwarfs, and similar beings,[10] and the *devs* (demons) of Armenian folk-belief live in mountains,[11] while fairyland is often within a hollow hill (see art. FAIRY, § 11). So the Serbian *vilas*[12] and the Nereids of modern Greece haunt hills and mountains. Certain mountains were trysting-places of spirits, demons, and witches—*e.g.*, the Horselberg, the Brocken, the Puy de Dôme, and innumerable others in every part of Europe, these gatherings probably being reminiscent of sacrificial rites in pagan times on the same spots.[13]

5. Sacred mountains.—Wherever mountains are personified or associated with gods or are the seat of a cult, their sacredness is obvious. But some mountains have a peculiar sanctity. Legend clusters thickly round them, and they are places of pilgrimage or sources of merit.

Among the Western Nandi there is a sacred hill called Chepel-oi, the hill to which the spirits set fire. Ghosts are supposed to fire the grass there annually, and no Nandi will go near it.[14] In Japan Fuji-yama is the sacred mountain, regarded as a goddess or connected with a goddess of the same name.[15] Pilgrims ascend its summit in vast numbers annually, and it is a frequent object of Japanese art. The Kwan-lun mountains are the sacred mountains of Taoism, and have given rise to numerous fanciful legends.[16] In early Hinduism Mt. Mandara in Bihār was a kind of Olympus. It formed the stick with which the gods churned the ocean for ambrosia. But more usually Himavat (Himālaya) is the sacred mountain-chain, 'the divine mountain, beloved of the gods.' As has been seen, it is extolled as a god. There are many temples on it, and it is the object of innumerable pilgrimages. It is inhabited by beings whose mere presence adds value to the merit of the penances of ascetics (see also § 1). Other mountains are sacred—*e.g.*, the Vindhya range—an object of devotion and prayer, and have their temples or shrines.[17] In ancient Persia Albūrz or Hara Berezaiti was peculiarly sacred, the first of mountains. The sun and stars revolved round it; light came from it and returned there; on it was no night or darkness, no cold, no wind, no sickness; on it the Amesha Spentas built a dwelling for Mithra, and he looks upon all the material world from it; below it was the Chinvat bridge. All mountains are said to have grown from its roots.[18] In the Qur'ān Ṣafa and Marwah are said to be 'beacons of God,' and pilgrims are advised to compass them about. Idols formerly stood upon them and were worshipped, but Muhammad ordered their destruction, though the visitation of the mountains is an important part of the Hajj rites.[19] Mt. Sinai was also regarded as sacred, and oaths were taken by it.[20] Among the Semites several mountains were sacred as the dwelling- or resting-place of gods or the scene of a cult (§ 7). Sinai was sacred before Israel received the Law from it, and it is specifically called the mount of God in OT (Ex 3^{1} 4^{27} 24^{13}, 1 K 19^{8}). Several other sacred mountains are also mentioned there—Moriah, Nebo (perhaps originally the seat of the god Nebo), Hor, and Zion (Gn 22^{14}, Dt 32^{49}, Nu $20^{22ff.}$, Is $2^{2f.}$ 25^{6}). The last remained sacred in much later times as the central seat of worship, and was regarded as God's holy mountain, the 'mountain of the Lord's house.'[1] In ancient times Mt. Atlas in Morocco was held in great reverence. Religious fear seized those who approached it, and the Libyans are said to have regarded it as a temple and a god, the object by which they swore, and a statue.[2]

In China mountains have a curious importance, especially the two groups of five already referred to and other sacred mountains. According to the doctrine of *feng-shui* (*q.v.*), every house, temple, field, etc., should be so situated that the beneficent influences of the universe may be freely exercised upon it. These influences are modified by the configuration of the earth. Hence hills intercept noxious influences—*e.g.*, bad winds—or they send far and wide the beneficent influences of water, the chief element in nature; or they are bearers of heavenly influences to man; or, standing around a town, they symbolize the animals of the four quarters, and bring it prosperity. The shape of hills or of any part of them may also influence a village or its inhabitants for good or evil. Hence it is important to select a site near a favourable contour, or a hill or rock in which there is a beneficial combination of elements, as given in the books of geomancy.[3] Similar ideas are found in Korea. Towns, houses, and graves must have their guardian peaks, and care must be taken to avoid or to counteract hostile influences from a hill. People are born according to the nature of the hill on which graves of ancestors are—*e.g.*, a craggy hill denotes a warrior. There are currents or veins of influence in mountains, and prosperity depends on the proper circulation of these.[4] In India it is held that mountains as well as rivers or temples are places which destroy sin, this being especially true of Himavat.[5] In the *Laws of Manu*, however, it is said that a student who has completed his term is not to reside long on a mountain.[6] In Zoroastrianism mountains are said to have been created by outgrowth from the root of Albūrz, the first mountain, in 18 years, after their substance was formed in the earth during 1000 years. High mountains, being near heaven, are apt to become seats of heavenly beings. On the top of one Ahura revealed the law,[7] and mountains are said by the Spirit of Wisdom to be moderators of wind, warders-off, rest-places, and supports of rain-clouds, smiters of Ahriman and the demons, and maintainers and vivifiers of the creation of Ahura Mazda.[8] Of 'him who goes to the lofty mountains' their glory is said to 'bless him and be friendly' (cf. Himavat, § 1).[9] Some are said to have been made by Ahura Mazda.[10] Yet their creation is connected in the *Bundahišn* with the rushing in of the spirit of evil,[11] and at the restoration of all things earth is to receive its original perfect state of a level plain, because mountains are the work of the evil spirit.[12] Even Albūrz, whose summit supports the Chinvat bridge, will no longer exist.[13] Perhaps also this conception accounts for the tabu in the *Sad-dar* against women after child-birth looking at a hill.[14] J. H. Moulton regards this idea, so contrary to Parsi and Aryan notions of the sacredness of mountains, as one of the beliefs brought in by Magian influences, neither Aryan nor Semitic, and superimposed upon Zoroastrianism.[15] A similar idea is seen in the description of the Buddhist paradise, Sukhāvatī, which will be level and contain 'no black mountains nor jewel mountains, nor Sumerus, king of mountains, nor Chakravāṭas, great kings of mountains.'[16] The friendly influence of the hills is especially marked in the OT, as is natural where so many of them were sacred, and Zion was in particular the seat of God's house.[17] They are symbols of God's might, yet are subject to Him. They melt like wax before Him or smoke at His touch. They rejoice with the worshipper, or are bidden to do so, or they break forth into singing before the return of the exiles. They are symbols of God's righteousness; they bring peace and righteousness to the people.

---

6. Fabulous mountains. — As the preceding section has shown, actual mountains are often regarded in a mythical light — *e.g.*, Albūrz in Zoroastrian belief, Himavat in Hindu, Kwan-lun in Taoist. Some mythologies, however, have invented mythical mountains, mainly in connexion with cosmogony.

Among such is the Bab. 'mountain of the world' (§ 9 (*b*)). In Hindu and, more particularly, Buddhist mythology Meru or Sumeru, the abode of the gods, occupies a prominent place. It is the primeval and the chief of mountains, the 'golden mountain.' It holds fast the earth, yet it swayed at the coming of Buddha.[1] It is 84,000 miles high, and is surmounted by the heavens. Seven concentric rings of vast mountains surround it, with intervening seas. Between these and an eighth outmost ring are the four continents.[2] Round Meru the sun, moon, and planets revolve. In Tibet the Lāmas offer to the Buddhas daily the universe in effigy; Meru is represented by a dole of rice in the middle.[3] In Muhammadan belief the mountains of Qāf are believed to encompass the earth and its surrounding ocean like a ring, as Albūrz was held to do in Zoroastrian belief.[4] They are of green chrysolite, and are the chief abode of the *jinn*. Our earth is one of seven successive earths, rising above each other, and supported by a rock communicating with Qāf by veins or roots, the origin of earthly mountains. In Malay belief Qāf (which may = the Caucasus) is being bored through by people called Yājūj and Mājūj, and, when they succeed, the world will come to an end. The Malays believe in the existence of a central mountain Mahameru—a borrowing from Hindu belief.[5]

7. Cult of mountains.—A cult offered to mountains or to divinities connected with them cannot be sharply divided from a cult on mountains, whether that is to such gods or to others. In some cases, no doubt, mountain-tops were selected for altars, shrines, or temples because of their supposed nearness to heaven—one seat of the gods.[6] Here and there, however, the difference can be seen even in the same religion.

Among the Nandi, after harvest the people of each geographical division hold a feast on the top of a hill, and in drought people look to Tindiret or Chepusio hill every morning and say, 'Rain, Tindiret!'[7] The savage Malays of Malacca sacrifice to the mountain-spirits on the summits, make a wish, addressing the spirit, and then partake of the sacrifice. This may be done three times, if not successful; should a third visit fail, another mountain is visited.[8] Among the American Indian tribes Bancroft says that a direct worship of hills was unusual, but there was a liking for hills and mounds as places of worship.[9] The Thompson Indians, however, offered the first berries of the year to the mountains, an old man dancing and holding the offering up to them.[10] The Mexicans worshipped mountains and mountain-gods, and, when no hills were available for temples, made artificial mounds, or *teocalli*, for worship. Effigies of the mountains were made of dough and eaten in connexion with human sacrifices to the Tlalocs and mountains.[11] Infants and hairless dogs were also sacrificed on high mountains.[12] In China from ancient times mountains and rivers share with heaven the reverence of the State. There are many historical notices in the sacred books of this or that emperor or king worshipping towards the hills or going to famous hills and sacrificing the appropriate sacrifices to them, usually to the five mountains (§ 1), or to the spirits of the hills.[13] This was done on festivals, at the successful conclusion of war,[14] or on the occasion of a progress through the kingdom. In this way rest was given to the spirits of the hills.[15] Omission to sacrifice to any of these spirits was an act of irreverence, and the ruler was deprived of part of his territory.[16] At Peking is the great altar of 'Empress Earth,' and here at the summer solstice, when sacrifices to heaven are made, the emperor sacrifices to earth's chief components—mountains, rivers, and seas. Similar sacrifices are offered to the ten mountains on other State occasions, as well as to the ranges dominating the site of the imperial mausoleums.[17]

In India from early times a cult has been paid to or on mountains (§ 1). The *Institutes of Viṣṇu* say that mountains are excellent places for performing *śrāddhas*,[1] and the *Gṛhyasūtras* speak of an oblation of butter made on a mountain to east or north.[2] The cult of sacred mountains, on which shrines or temples are commonly built, has already been referred to. Aboriginal tribes attach a high importance to this cult, and many sacrifices and rites take place upon hills and mountains (Santāls, Korwas, Kols, etc.).[3] In Korea people go once a year to worship the popular god of hills. Pilgrims ascend mountains for merit, and carry a pebble, which is placed on the heap at the top dedicated to this god.[4] In ancient Persia there are frequent references in the sacred books to worship and sacrifice being offered to mountains 'glorious with sanctity,' or 'brilliant with holiness.'[5] The mountains which give understanding are worshipped with libations, as part of the liturgical service.[6] The *Yasna* mentions worship of Sraosha by Haoma on 'the highest height of high Haraiti,'[7] and Herodotus speaks of the custom of ascending the highest peaks and offering sacrifices to Zeus, calling the whole vault of the sky Zeus, probably some Zoroastrian sky-god representing the primitive Indo-European god of the sky.[8] In Greece numerous mountains were crowned by temples dedicated to some particular god, but no deity was so much worshipped on mountain-tops as Zeus, who from his heights was supposed to rule the world. The Greek cults on high places were of ancient date, and perhaps concerned gods supposed to dwell in heaven, rather than gods of the heights. In modern Greece monasteries often stand on the site of these ancient mountain-shrines.[9]

Pausanias describes the cult of Zeus on Mt. Lycaon. There was a mound of heaped-up earth for an altar with two pillars facing the rising sun. Here also and on Mt. Tmolus the priest performed certain rites for the production of rain.[10] In ancient Anatolia festivals in honour of Cybele were celebrated on the tops of Ida and Berecyntus, where she was supposed to reside, and where the trees were sacred to her and never cut down.[11]

Among the Samogitæ on a certain mountain-top there was a perpetual fire in honour of the god Pargn, who controlled thunder and tempest.[12] Among the Semites hills or high places were favourite places of worship, and are frequently referred to in OT in connexion both with pagan tribes or peoples and with Israel. Jahweh was commonly worshipped on high places, and was supposed to dwell there, according to an older stratum of thought, while Israel also offered sacrifice and incense on them to the local gods—the B^{e}ālîm of hills—or other gods from time to time (cf. Hos 4^{13}, Jer 2^{20} 3^{6} 17^{2}, Ezk 20^{28}, 1 K 11^{7} 14^{23} 2 K 16^{4} 17^{10}). For the Canaanite cults see Dt 12^{2}, Nu 33^{52}; Moab, Is 15^{2} 16^{12}; cf. Nu 22^{41}–23. The references to the worship of Jahweh on high places, whether natural or artificial, are frequent—*e.g.*, 1 S $7^{1.17}$ $9^{12f.}$, 2 S 15^{32}, 1 K 3^{4} $18^{20f.}$, Jg 6^{26}, Dt 27^{4}.

Archæological research has discovered remains of many 'high places,' often on hills, and even now remains of temples and sacred groves are to be seen on Hermon and other mountains. On some mountains worship and sacrifice still take place, and circular enclosures of stone crown the summits.

Aaron has a shrine on Mt. Hor, and is supposed to visit it twice a week. Muhammadan saints have also shrines on hilltops.[13] In European folk-survivals from earlier paganism, ritual acts—*e.g.*, 'hill-wakes' or bonfires at May-day or midsummer—often take place on hills.[14]

Many high places are probably artificial constructions.

The Bab. temple-tower (*ziqqurat*) was an earthly copy of the world-mountain, and served the purpose of the worshippers, whose ancestors had been accustomed to worship on heights, gaining nearer access to heaven (cf. *ERE* i. 690^{b}). The Mexicans and other American peoples built mounds, pyramids, or *teocalli*, where no hills were available for worship. Some of these mounds were of great size. On them sacred buildings were erected, and the higher these could be placed the more sacred they seemed. *Teocalli* were also erected on high mountains. The mounds are found in the bottom lands, though occasionally on higher ground.[1]

Heaps of stones, often dedicated to the local genius on the highest point of mountain-passes, to which every traveller adds a stone, are found in all parts of the world and at all stages of culture. The added stone may be an offering (in Ladakh the mountain-spirit is said to be offended if no stone is given[2]), or may carry off weariness (it is often alleged that weariness leaves the traveller when he offers it), or the contagion of evil, or it may drive away evil spirits, or it may be a materialization of the prayer made at the moment. See LANDMARKS, vol. vii. p. 794 f.; *GB*^{3}, pt. vi., *The Scapegoat*, London, 1913, p. 11 ff.

In all religions which have encouraged asceticism men have chosen to live a solitary life among mountains, partly because of their loneliness, partly because of their sacred associations. Their living there tended to increase the sacred aspect of some mountains.

In India Himavat has always been the resort of saints and ascetics.[3] Buddhist monasteries in Tibet are often on almost inaccessible heights, like many in Eastern Christian regions. Taoist hermits have been fond of mountains,[4] as also have Christian ascetics.

8. Symbolism.—Mountains are everywhere symbolic of strength and everlastingness (cf. the frequent phrase in OT 'the everlasting hills,' though compared with Jahweh they are as nothing). To the Hebrews they were symbols of Jahweh's righteousness, His kindness, His guardianship.[5] In the *Yî King* a mountain is a symbol of resoluteness.[6] The Bab. Bel is called 'the great mountain,' or 'the great Earth-Mountain.'[7] The Zulus speak of their king as being 'high as the mountain,' or address him as 'Yon mountain,'[8] and elsewhere 'mountain' is a title of honour.[9] Buddha is said to be composed and firm as Sumeru, or he is called 'the golden mountain,' and he is illustrious among men as Sumeru among mountains.[10] The name *montagne* was given to the extreme French Revolutionists, who occupied the higher part of the hall where the Assembly met.

9. Mountains in cosmogony.—(*a*) The creation of mountains is referred to in some cosmogonies.

In an American Indian myth they were made by the crow and the hawk from mud brought up by a duck.[11] In W. Australia one myth tells how they were made from a heap of roots which a man kicked in all directions.[12] A Maori myth describes how the mountains and valleys of New Zealand were carved out by the knives of Maui's brothers, and an Australian myth of the god Bunjil and his knife is like this.[13] Scandinavian, Cochin-Chinese, and Orphic myths recount how the mountains were made from the bones of a giant or of Zeus.[14] An Indian myth regards certain mountains as offshoots from the Himālaya, brought for Rāma when he was building a bridge[15] (see also §§ 5, 6).

(*b*) As to the ordinary observer the sky seems near the tops of mountains, so many myths regard it as so near as to be easily reached from them;[16] or, again, the mountains, real or mythical, support the sky or the heavens.

Mt. Atlas was formerly known as 'the Pillar of Heaven.'[1] In Bab. cosmogony the sky rested on the 'mountain of the world,' *i.e.* the world itself conceived as a hemispherical mountain with gently sloping sides.[2] In Hindu and Buddhist cosmogony the various heavens are arranged on and above the mythical Mt. Meru in an ascending series (see COSMOGONY [Buddhist], [Hindu]). Fragments of Celtic myth suggest that with the Celts also a mountain supported the sky—*e.g.*, a mountain near the sources of the Rhone was called 'the column of the sun,' perhaps bearing up the sky while the sun revolved round it.[3] We may note the Greek myth of the Titans piling Mt. Ossa on Olympus, and Pelion on Ossa, in order to scale heaven.[4]

(*c*) In Hebrew story the ark rested on Mt. Ararat after the Flood (Gn 8^4). So in Bab. myth the 'mountain of the land of Nitsir' held the ship fast and did not let it slip, and on its top Utnapishtim offered sacrifice and incense to the gods.[5] The Hindu flood-myth tells how the fish bade the seven *ṛṣis* bind the ship to the highest peak of Himavat. Manu descended from it on Himavat; hence the northern mountain is called 'Manu's descent'[6] (cf. DELUGE).

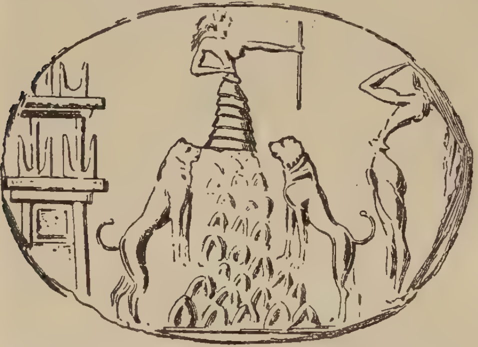
MOUNTAIN-MOTHER.

MOUNTAIN-MOTHER. — The Mountain-Mother is the only Greek divinity certainly known to be of pre-historic origin. In the accompanying figure we have a seal-impression of late Minoan style (*c.* 1500 B.C.) found at Knossos.[7] It is of cardinal importance and embodies, indeed, nearly all that we certainly know of the Mother. She wears the typical flounced Minoan skirt, and, holding either sceptre or lance, stands flanked by guardian lions on the peak of her own mountain. To the left is a Minoan shrine with pillars and 'horns of consecration'—the symbols that connect her with plant and animal life, the pillar being only a shaped and stylized tree. The mountain stood for earth, and the earth is Mother because she gives life to plants, animals, and man. 'Earth sends up fruits, so praise we Earth the Mother' (Γᾶ καρποὺς ἀνίει, διὸ κλῄζετε ματέρα γαῖαν) was the litany chanted by the priestesses of Dodona.[8]



Impression of signet-ring showing Mountain-Mother and pillar-shrine.

On the seal figured here the Mother rules alone, with an ecstatic male worshipper before her, but on other gems a male divinity appears, sometimes descending from the sky. It is noticeable, however, that he is always young and manifestly subordinate. In Cretan religion the male divinity is sometimes a child, the necessary attribute of motherhood, sometimes a young man, and sometimes a sky-power fertilizing Mother Earth; but always the Mother is dominant. This dominance of the Mother divinity is of prime importance, and is in marked contrast to the Olympian system of Homer, where Zeus the Father reigns supreme. The Mother- and the Father-cults are, in fact, characteristic of the two strata that go to the making of Greek religion—the southern (Ægean or Anatolian) stratum has the dominant Mother-god, the northern (Indo-European) the dominant Father-god, the head of a patriarchal family, who is, ostensibly at least, the monogamous husband of a subordinate wife. The northern religion obviously reflects patrilinear, the southern matrilinear, social conditions. A further distinction is of importance—the Homeric patriarchal Olympus is the outcome of a 'heroic' condition of society; it emphasizes the individual; it is the result of warlike and migratory conditions; the worship of the Mother focuses on the facts of fertility, and emphasizes the race and its continuance rather than the individual and his prowess. Mother-worship is of the group rather than of the single worshipper. We find the Mother and her subordinate son or lover attended always by groups of dæmonic personages—Kouretes, Korybantes, Telchines, Dactyls, Satyrs, and the like.

A further characteristic of this southern matrilinear group-worship of the Mother is that it is mystical and orgiastic. The mysteries all centre not on Zeus the Father, but on the Mother and the subordinate son—Demeter in Greece, whose daughter, Kore, is but her younger form, and Rhea or some other form of the great Mother; the Dionysos of the mysteries is son of the Earth-Mother. The reason is simple; mysteries are now known to be simply magical ceremonies, dramatic representations of birth, marriage, and death, enacted with a view to promoting fertility. Mysteries, in fact, spell magic, and the mysteries of the Mother stand again in marked contrast to the rational worship of the Olympian Father. In the Olympian system the worshipper approaches his god as he would his fellow-man, with prayer, praise, and presents; his action is rational and anthropomorphic, not magical, not mysterious, not orgiastic.

The mysteries of the Mother are based, like all other mysteries, on initiation-ceremonies, which have for their object to prepare the boy for adult life and especially for marriage (see INITIATION [Greek] and KOURETES AND KORYBANTES). Each young man, each member of the band of Kouretes, or grown youths, became by initiation not only the son but the prince-consort of the Mother; he went through a mystical and magical ἱερὸς γάμος.[1] This explains at once the expression used by Euripides (*Bacchæ*, 120), ὦ θαλάμευμα Κουρήτων. It also elucidates the confession made by the Orphic initiate, Δεσποίνας δὲ ὑπὸ κόλπον ἔδυν χθονίας βασιλείας.[2] Marriage is the mystery *par excellence*. In the matrilinear worship of the Mother the series of consorts was perennial. In Crete the fructifying of the Mother was mimetic and dramatic; in some Asia Minor cults it was attended by the horrors of castration.[3] In the *Cretans* of Euripides (frag. 472, Nauck) the mystic 'held aloft the torches of the Mountain-Mother' (μητρί τ' ὀρείῳ δᾷδας ἀνασχών), the blazing torch being a familiar fertilizer and purifier of fields and crops.

To the Olympos of Homer—a product of the Achæan heroic age—the Mother was never admitted; even Demeter had there only a precarious footing. But in post-Homeric days, when north and south were fused, a place was found for her in a more elastic pantheon as Mother of the Gods.

[3] For an explanation of the practice see J. G. Frazer, *Adonis, Attis, Osiris*², London, 1907, p. 224.

She lent many of her sacred animals, attributes, and traits to the women-goddesses of Greece—to Hera her *ἱερὸς γάμος*, and sometimes her lion, to Artemis her function as *πότνια θηρῶν*, to Aphrodite her dove, to Athene and the Erinyes her snakes, to Demeter her mysteries. How far these several goddesses were indigenous forms of the Mother, how far they were directly immigrant from Crete, cannot certainly be stated, but undoubtedly the dominant Mother with the male attendant—*e.g.*, Attis and Adonis—half son, half lover, is echoed in Hellenic mythology in the figures of the great patroness-goddesses with the heroes whom they protect, in Hera and Jason, in Athene and Perseus. The Mother has many names—Rhea, Cybele, Dindymene, Ma—but her functions remain the same; her characteristic attributes and sacred animals—lion, bull, and goat—vary with the culture and local surroundings of her worshippers. Cf., further, art. MOTHER OF THE GODS (Greek and Roman).

J. E. HARRISON.

MOURNING.—See DEATH AND DISPOSAL OF THE DEAD.

MOUSE.—See ANIMALS.

MOUTH.—In many ways the mouth is of importance from a religious point of view. It is that by which man speaks to the gods in prayer, or utters or sings their praises; many wind instruments used in sacred rites are blown by its means (see MUSIC); sacred things and persons are kissed with the lips, and the kiss has an important part to play not only in sexual but in social and religious life, while it has also a large folklore of its own.[1] Silence is sometimes even more important than speech with the lips in religion and magic as well as in social affairs.[2] Laughter is also a function of the mouth, and plays a large part in life, while it has likewise a ritual and folklore aspect.[3] The *Bhagavad-Gītā* regards the body as 'the city of nine portals,' of which the mouth is one.[4] Voice and breath are two of the immortal parts of the body, according to the *Śatapatha Brāhmaṇa*, and it calls Indra the breath and Sarasvatī the tongue.[5] On the lips sit the seven *ṛṣis* (the senses), and the tongue is an eighth which communicates with Brahman.[6] In the account of the creation of the different classes in the Rigveda, priests are said to be from the mouth of the primeval man.[7] In the Egyptian *Book of the Dead* the god Anubis has charge of the lips, as other gods have of other parts of the body.[8]

Hell is often conceived in Christian literature and art as a monster with a vast mouth into which souls fall and are swallowed, as already Sheol in Hebrew thought (Pr 1^{12}; cf. Nu $16^{32f.}$). In Scandinavian mythology Hel has also a gaping mouth. Mythology often makes night a monster which devours the light or the sun. Cf. Skr. *rajanimukha*, 'the mouth of night,' evening.

1. The mouth and the soul.—Whether the soul is regarded as a breath, a mannikin, or a tiny animal, the mouth is one of the orifices by which it may leave the body either during life or at death.[1] Popular sayings like 'to have one's heart in one's mouth' or 'the soul on the lips' illustrate this.[2] It is also seen in the precaution taken by the Hindus of snapping the thumbs to keep the soul back[3] when any one yawns. The soul may escape from the mouth during sleep, as is illustrated by many tales where, in the form of a small animal, it has been seen doing so. By preventing its re-entering one can cause the death of its owner.[4] At death, in the belief of many peoples, the soul finally makes its exit by the mouth. In the *Mahābhārata* (iii. 297) Yama opens the mouth of Satyavīn while he sleeps and draws out his soul, which is afterwards given to his wife, who replaces it in his mouth. Ovid tells how Hylonome applied her lips to those of the dying Cyllarus to prevent his breath leaving him.[5] Homer says that life cannot return once it has passed the lips.[6] On the frescoes of the Campo Santo, Pisa, the soul is depicted as a sexless child leaving the body by the mouth. Similar beliefs are common among savages and with the folk everywhere. Hence, where the soul as a ghost is feared, precautions are sometimes taken to prevent its egress from the mouth. The mouth and other orifices are forcibly closed or stopped up, as among the S. Australians, Itonamas and Cayuvavas (S. America), Malays, New Caledonians, and Marquesas Islanders.[7] In some cases the jaws are bound for the same purpose, and it is possible that, where this is done merely to keep the mouth closed, its real origin may be traced here.[8] The Ainus bind the mouth of a fox when killed first at a hunt, lest its ghost come forth and warn other animals of the hunter's coming.[9]

On the other hand, the desire of recalling the soul to the body gives rise to certain practices connected with the mouth. In China it is stuffed with things endued with vital energy, so that, if the soul returns, revival of the body may be aided and decomposition prevented. Among these are certain minerals, cowries, pearls, grain, and coins, and a ritual is prescribed for the purpose.[10] Similar practices are found in Bali (gold ring on tongue), in Tongking (gold and silver in mouth), and elsewhere.[11] De Groot holds that the placing of a coin in the mouth of the dead had the same purpose. This practice is best known from its use among the Greeks and Romans, but it is also recorded in India (small pieces of gold in mouth, etc., or melted butter allowed to trickle down [Hindus]; coin, etc., placed with dead [non-Aryan tribes]), and among the Litu-Slavs and Teutons.[12] This has been generally regarded either as a fee for the ghostly ferryman, as held by Greeks and Romans themselves, or as part of a gift to the dead, or a commutation of such a gift.[13] The Chinese practice, however, throws new light on the subject, and points to a possible origin for the same practice elsewhere, though it came to be regarded otherwise.

[13] A gold coin was put in the dead man's coffin in the W. Isles to pay the ferryman, but the reason is perhaps a classical borrowing (A. Carmichael, *Carmina Gadelica*, Edinburgh, 1900, ii. 238).

To the same origin may be ascribed the practice of filling the mouth of the corpse with food before burial. This, often regarded as a sacrificial feeding of the dead, may have been intended as a means of recalling the soul, though each instance must be examined in its own context, and it must be admitted that quite different reasons are often given by those who practise this rite. Yet, if the dead used earthly food, this would keep them from eating the food of the Other-world, which binds the eater to that world. Thus they might be able to return.[1]

It is found among the Thô of Tongking (*ERE* iv. 418^{a}), some Papuan and Polynesian tribes, and the Badayas (de Groot, i. 357 f.). In the Panjāb leaves of the *tulasi* plant and Ganges water are placed in the mouth as offerings to Yama, that he may be merciful to the dead (*PR* ii. 69). In S.E. India the Kumi fill the corpse's mouth with rice and rice-beer (T. H. Lewin, *Wild Races of S.E. India*, London, 1870, p. 230). At the funeral feast of the father among the Kukis food is placed beside him and his pipe is put in his mouth, and he is bidden to eat because he is going on a long journey (*ib.* p. 273). The ancient Persians dropped *haoma* juice, which produces immortality, or some pomegranate seeds into the mouth of the dying (*ERE* iv. 502^{b}). With this may be compared the practice of putting the Host in the mouth of the dead, which was condemned at the 3rd Council of Carthage and at other councils and synods (J. Bingham, *Origines Ecclesiasticæ*, London, 1829, v. 338, vii. 344).

Of course, if the dead are to be fed at all, it is most natural to place food in the mouth, and in some instances a tube connected with the mouth is made to protrude from the grave so that nourishment may be poured down through it.[2] Where head-hunting is practised, the heads or, rather, the spirits connected with them are often fed by having food placed in the mouth.[3] The Egyptian ceremony of 'opening the mouth and eyes' was performed that the deceased might see and eat the food offerings and utter the right words in the right manner.

As a preparatory rite the mouth and eyes of the mummy or statue representing the deceased were rubbed with part of the food to excite the appetite. Then the *sem* priest addressed the deceased: 'I have set in order for thee thy mouth and thy teeth. I open for thee thy mouth, I open for thee thy two eyes. I have opened thy mouth with the instrument of Anubis, the iron instrument with which the mouths of the gods were opened.' Mouth and eyes were touched with this instrument, and Horus was asked to open the mouth of the deceased as he had opened that of Osiris. With another instrument the lips were touched so that right words might be spoken. Then the mouth was touched with other articles to give life and colour to the lips, and touched again so that the jaw-bones might be established; and, finally, food was then placed in the mouth.[4]

The establishing of the jaw-bones probably refers to an old custom of dismemberment. Various texts speak of restoring the jaw-bones and the mouth in the reconstituted body. The lists of the members of Osiris include lips, mouth, and jaw-bones,[5] and there may have been an ancient rite of cutting out the jaw-bone and preserving it separately. This is done by some African and Melanesian tribes.

In Uganda the king's jaw-bone is cut out and preserved in a special house, where it is consulted as an oracle, as the spirit is supposed to attach itself to it.[6] Widows among the tribes of the Hood peninsula carry the husband's jaw-bone.[1] The Tamos of German New Guinea exhume the corpse after some months and with great ceremony remove and preserve the lower jaw. Similar customs are observed by other tribes of this region.[2] Again, the Saa (Solomon Islands) preserve it with the skull in a hollow wooden image of a fish or in the public canoe-house.[3] In New Britain the jaw-bone is worn by a relative as a means of obtaining its owner's help.[4]

These customs are perhaps akin to that of making trophies of the jaw-bone or lips of enemies, as in Ashanti, Dahomey, Tahiti, etc. (see HEAD, vol. vi. p. 534^{b}), if the purpose is to secure power over the ghost of the dead man.

The Egyptian custom should be compared with the 'way of purifying the three deeds'—body, mouth, and heart—as practised on the deceased by the Shingon sect in Japan.[5] Among the Basoga the lips of the dead are smeared with oil.[6]

2. Hostile spirits and the mouth.—The mouth as a spirit-opening is naturally one which is exposed to the entry of hostile spirits which take possession of a man. In India *bhūts* are thought to enter by the mouth, and in Egypt in common opinion all kinds of evil spirits try to do the same. Various customs are more or less clearly connected with this belief, and have for their object the warding off of such noxious influences. Eating in private is one of these; uttering a charm or performing some ritual act after yawning is another; scrupulous teeth-cleaning, as with the Hindus, is a third; veiling the face is a fourth.[7] Probably the wide-spread custom of knocking out or filing the teeth, usually at puberty, is also connected with these dangers at initiation to man's food.[8] Though, from the savage point of view, tatuing the lips or boring one or both lips and inserting feathers or a wooden or metal plug, which is often increased to large dimensions, is regarded as ornamental, the origin of the practice is perhaps magical. The lip-ornament is a protective charm against spirits entering by the mouth door, or perhaps also against the escape of the soul. This custom is found among the Eskimos, Haidas, and other N. American tribes, and very commonly in S. America (the most extravagant use of it being among the Botocudoes), as well as among many African tribes.[9]

3. The mouth and the breath.—As the soul or life is so often connected with the breath—whether breath in general, or, as has been suggested, the last breath—which may be expelled by a sneeze or yawn, and which leaves the body finally at death,[10] certain rites in connexion with the mouth have arisen. In some instances a relative receives the last breath into his own mouth, by application of his lips to the dying man's, or by a kiss.[11] The Alfoors, on the other hand, close the mouths of animals at a birth lest they swallow the infant's soul, and the mother and others in the house must keep the mouth shut.[12] The breath, again, may have life-giving properties. Hence the Eskimo *angekok* will breathe on a sick man to cure him or give him a new soul;[13] or, as among the Bribri Indians, the medicine-man purifies a woman after child-birth by breathing on her.[1] Healing by breathing or blowing upon a patient is also found among American Indian medicine-men and in Oriental countries. On the other hand, the breath as connected with the life may contaminate sacred objects. Hence these must not be breathed upon, or the mouth must be covered when one is near them.

In Timor the common people, in addressing the Raja, place the hand before the mouth, lest they profane him by their breath.[2] Among the Parsis the priest must cover his mouth and nose with a thick veil—the *paitidāna*—on approaching the sacred fire and other sacred objects.[3] Giraldus Cambrensis relates of the sacred fire in the shrine of St. Brigit at Kildare that it must not be breathed on by those who tended it—probably an earlier pagan Celtic tabu.[4] Similarly the *Laws of Manu* forbid the Brāhman to blow the sacred fire with his mouth.[5] A tabu of this kind is found among the Balkan Slavs in connexion with the sacred house-fire on the hearth.[6] Shinto priests have also to veil their mouths when cooking the sacrificial food, and so have the cooks in the Mikado's kitchen.[7] Saxo Grammaticus tells of a shrine at Rügen so sacred that the priest might not breathe in it, but had to go to the door for that purpose.[8] On the other hand, a Maori chief would not blow upon a fire lest his sacred power should pass to it and so to the food cooked on it, and then to the eater of the food, causing his death.[9]

The old custom of 'scoring above the breath,' *i.e.* making an incision on a witch's forehead to neutralize her evil power, may have been connected with the idea that her evil life-influence came forth with the breath.[10] Saliva, as connected with the mouth, is at once a tabued thing and a source of danger and magic influences and also a safeguard—*e.g.*, against witchcraft—as well as of use in healing rites (see SALIVA).[11]

MUGGLETONIANS.—The followers of the London prophets, John Reeve (1608–58) and his cousin Lodowicke Muggleton (1609–98), were designated 'Muggletonians.' Both Reeve and Muggleton were originally Puritans, but Reeve became a Ranter and Muggleton dropped all public worship, being attracted by Boehme's writings and by the prophecies of John Robins and Thomas Tany. In 1651 Muggleton had inward revelations interpreting the Scriptures; Reeve had the same experience next year, and on 3rd–5th Feb. 1652 Reeve announced an audible commission urging him to rebuke Robins and Tany and constituting him the last messenger of the third and final dispensation, Muggleton being his 'mouth.' They were the two witnesses of Rev 11, to announce a new body of doctrine and to declare the eternal destiny of individuals. By 27th July 1652 their *Transcendent Spirituall Treatise* was complete for publication. They declared that all succession had ceased for 1300 years, and, when challenged to prove their new commission, their last resort was to curse their opponents; a few accidents or deaths from fear established their credit. Being imprisoned for blasphemy in 1653, they issued two more pamphlets. Demands for new truth were met by Reeve laying down six principles, published 15th Aug. 1656, as to the person of God, person of angels, person of devils, condition of Adam at his creation and how he lost his estate, heaven and glory, hell and death. The same year a full exposition appeared in *The Divine Looking Glass, or the Third and Last Testament*, printed in the style of the AV.

The leading doctrines run thus. Matter is eternal and independent of God; this earth is the centre of the universe, sun and moon being fixed in the firmament about as big as we see them. God is one and eternal, with a material body rather larger than human, clear as crystal. The One God came to earth as Jesus, entrusting the temporary charge of the universe to Elijah. Angels have spiritual bodies and rational natures; Adam's body was natural, and his soul spiritual. Eve, however, is the important person; one angel and one only fell; he tempted her, entered bodily into her, and there dissolved, whence was born Cain. Eve tempted Adam to carnal intercourse, and thence arose Abel and Seth. Thus in the world are two distinct races, cursed and blessed. The soul is mortal, generated with the body, and returning to dust, whence it shall rise with the body. At the resurrection each person shall be re-created where he died, the wicked lying immovable in eternal lonely misery.

Reeve died in 1658, and Lawrence Clarkson aspired to fill his place, publishing three works. At the Restoration Muggleton was abandoned by many, but he regained his influence, even over Clarkson. He added the new doctrine that God has ceased intervening in the world, so that prayer is useless. For the next few years he was at war with the Friends, till William Penn, in 1672, published his *New Witnesses Proved Old Heretics.* A second secession took place in 1670 in consequence of his Nine Assertions, but Alexander Delamaine and John Saddington vigorously supported him. In 1676 G. Sheldon found some followers near Ashford. Next year he was again indicted for blasphemy, pilloried, imprisoned, and fined. He then wrote his autobiography, and, though no new revelation came, he was highly respected during the rest of his life for practical counsel. An anonymous attack by Bishop J. Williams in 1694 was promptly repelled by Thomas Tomkinson, who, in 1699, published his correspondence and autobiography, under the title *Acts of the Witnesses.*

Though one early revelation was quite explicit, that the end of the world was imminent, belief persisted. Many works were reprinted in 1756, after Swedenborg announced a kindred system, and others were written. Then James Birch led a reformation back to the views of Reeve; but, in 1778, he claimed direct inspiration, so that a secession took place, known especially in Pembroke and Bristol, as well as in London till 1871. A revival occurred about 1829–31, resulting in a fine edition of the primary works in three quarto volumes; and *The Looking Glass* was reprinted even in 1846. Prayer and preaching not being practised, public worship was confined to reading the standard books aloud, and singing the *Divine Songs*; the chief reading-room was in New Street, off Bishopsgate Street. Since 1870 worship seems to have ceased, though annual meetings were held at Denby in Derbyshire within living memory.

W. T. WHITLEY.

MUHAMMAD.—I. Historical sources.—Muhammad († 7th June A.D. 632; called also Aḥmad, and by poets Maḥmūd) Abu'l-Qāsim, sometimes localized as Al-Tihāmī (‘of the Tihāmah’ [Mutanabbī, ed. F. Dieterici, Berlin, 1861, p. 331]), known by his followers as ‘the Apostle *or* the Prophet of Allāh,’ and also by numerous other names, variously estimated at 30, 300, or even 1000 (see the collection in Qasṭallānī’s *Mawāhib Laduniyyah*, Cairo, 1278, iii. 133–179), was the founder of the religious and political system called in Europe after him, but named by him Islām or Ḥanīfism. The event in his life which furnishes his followers with an era, viz. his migration (*hijrah*) from Mecca to Medīna, is fixed by synchronism with the Jewish Day of Atonement for 20th September, A.D. 622. That era was introduced several years after his death, and, indeed, for the purpose of arranging the events in his career, by his second successor ʿOmar I. (Mubarrad [† 285 A.H.], *Kāmil*, Cairo, 1308, i. 325), whereas the calendar on which it is based uses a lunar year of 354 days, introduced by the Prophet near the end of his life. Since both the calendars and the eras previously employed in Central Arabia are only vaguely known, and the story of ʿOmar implies that he had not before heard of an era (which perhaps is confirmed by the fact that the word used for ‘era’ signifies ‘month-making’), accurate dating of events in the Prophet’s life is impossible. There is, however, an allusion in the Qur’ān (xxx. 1) to the victory of Chosroes in the Nearer East, which took place A.D. 616, and this agrees with the tradition that Muhammad preached for some ten years in Mecca before his migration. Probably the earliest written account of him is that in the Armenian *Chronicle of Sebeos* (Armen. text, Petrograd, 1879, pp. 104–106; Russ. tr. by K. Patkanian, do. 1862, pp. 116–118), of the 7th cent.; it is very scanty, giving little more than the statement that he was an Ishmaelite who taught his countrymen to return to the religion of Abraham and claim the promises made to the descendants of Ishmael. His career may, therefore, be said to be known entirely from Islāmic sources, which contain no biography that is quite contemporary. The earliest work that was intended to be a chronicle of his life is that by Muḥammad b. Isḥāq (*c.* 150 A.H.), who composed his *Sīrah* (‘Biography’) for the ʿAbbāsid Khalīfah Manṣūr (136–158 A.H. = A.D. 754–775) at least a century and a quarter after the death of his subject. This work does not appear to exist in its entirety, though probably the bulk is preserved in the *Compendium* of Ibn Ḥishām († 218 A.H.) and the *Chronicle* of Ṭabarī († 310 A.H.). Its author was in communication with eminent members of the Prophet’s family, but is said to have been a man of indifferent morals, besides being a Shīʿite and a Qadarī (believer in the freedom of the will); he employed versifiers to compose poems to be put into the mouths of the personages who figure in his narrative; and his credibility was otherwise impugned.[1] Contemporary with Ibn Isḥāq was Mūsā b. ʿUqbah († 141), whose collection of *Campaigns* was studied in Cairo as late as the 15th cent., but of which hitherto only some fragments have been discovered (ed. E. Sachau, *SBAW*, 1904), and those of little value. Shāfiʿī († 204) quotes this author once for what is clearly an edifying fable (*Umm*, Cairo, 1321, iii. 100). Later by some fifty years is the work of Wāqidī († 204), which to some extent embodies the same materials as the work of Ibn Isḥāq; and somewhat later still the encyclopædic work of Ibn Saʿd († 230), secretary of Wāqidī, on the Prophet, his family, and his followers. The memoirs or table-talk of the Prophet’s associates were collected and tabulated (with infinite repetitions) by the jurist Aḥmad b. Ḥanbal († 241), and the recollections of these persons, after being critically sifted, were arranged in the order of subjects for the use of lawyers by numerous authors shortly after this date, and by some considerably earlier. Very little of this material has historical value. In the main, then, our knowledge of the Prophet’s career comes from the work of Ibn Isḥāq.

There is reason for thinking that shortly after Muhammad’s death some sketch of his life, comparable to the Christian *paradosis*, was communicated orally to those who embraced Islām, enabling them to understand allusions in the Qur’ān; but this is likely to have been brief, and statements in early law-books indicate that considerable uncertainty prevailed with regard to events of primary importance in the Prophet’s biography. It is of interest that the Khalīfah ʿAbd al-Malik (65–86 A.H.) wrote to ʿUrwah b. Zubair (born 22) for an account of the battle of Badr, and his letter in reply is preserved by Ṭabarī (i. 1284)—as usual, not from a copy but from oral tradition. This personage was born twenty years after the event, and appears in treating the subject to have consulted the Qur’ān. Another letter of this jurist in reply to a question about the sense of the Qur’ān has the appearance of a conjecture as to its meaning rather than of a historical tradition (Ṭabarī, *Commentary*, xxviii. 24). The general suspicion of and objection to written matter other than the Sacred Book which prevailed prior to the foundation of Baghdād, and indeed for some time after, prevented the perpetuation of memoranda or memoirs which would have formed a secure basis for the biography. Although the work of Ibn Isḥāq contains a certain number of ostensibly contemporary documents—*e.g.*, letters and State-papers—their authenticity seems in every case liable to question, not only on internal grounds, but because different authorities are in disagreement about them. It is, indeed, clear that no official collection was ever made of Muhammad’s correspondence, treaties, and rescripts; Shāfiʿī († 204), who appears to have made accurate search in Arabia, could find nothing in writing referable to the Prophet except the Qur’ān and one apocryphal document, of which he knew only by hearsay. Contemporary treaties, produced in ancient and modern times, have been shown to be fabrications by the anachronisms which they contain (see Yāqūt, i. 248).

The Qur’ān appears to be for the most part authentic, but those who collected it avoided chronological arrangement as much as possible, combining in the same *sūrahs*, or chapters, matter belonging to widely different periods. In order to use it for historical purposes the reader has to interpret it by Ibn Isḥāq’s biography; but there are many cases in which that biography appears to be conjectural interpretation of the Qur’ān. It is true that the commentaries on the latter, of which one on an enormous scale was compiled by the historian Ṭabarī in the middle of the 3rd Islāmic cent., profess to locate most or all of the texts; but, unfortunately, they give a variety of locations, and leave on the mind the impression that nothing was certainly known or remembered about the ‘occasions of revelation’ beyond what the texts themselves imply.

If, in spite of these considerations, the general trustworthiness of Ibn Isḥāq’s narrative is probably to be maintained, there are three reasons for this. (1) The practice ascribed to the second Khalīfah of assigning pensions to the Muslims, which varied with the length of time during which they had been members of the community, accounts for the existence of lists of fighters in various battles, and for the preservation of the chronological order of those battles, since each was followed by some accessions. (2) The biography rarely has recourse to the supernatural, and, when this element is introduced, it does not appear to affect the causation; where, *e.g.*, angels or the devil take part in battles, they do not really contribute to the result. (3) The character which the narrator ascribes to his prophet is, on the whole, exceedingly repulsive. To this may be added the fact that, although Ibn Isḥāq wrote for an ʿAbbāsid patron, he takes very little trouble to glorify his ancestor ʿAbbās, whereas he paints a pleasing picture of Abū Ṭālib, the uncle of the Prophet, whose son ʿAlī was the head of a family which also claimed to succeed the Prophet. Hence it is clear that this biographer has not as a rule yielded to the temptations which lead astray men in his position.

---

2. Life.—For the present purpose the briefest sketch of the Prophet's career, as Ibn Isḥāq narrates it, will suffice.

It is not possible to throw any serious doubt on the location of Muhammad as a member of a numerous Meccan family, though the name of his father excites suspicion, since ʻAbdallāh' (the equivalent of ʻsome one') is used at a later period as a substitute for an unknown name; perhaps it is in this case a substitute for a name of which the second element was that of a pagan deity. Few have accepted the suggestion of Sprenger[1] that the name ʻMuḥammad' itself was adopted by the Prophet when he entered on his prophetic career; for the name is found in pre-Islāmic inscriptions, and its connexion with the prophecy Hag 2^7, ʻand the desire (*ḥemdath*) of all nations shall come,' seems to be an afterthought; there is therefore no reason for supposing that this name or its variants had Messianic associations. According to the biography, the life of Muhammad falls into four periods. (1) For forty years he lived as a pagan at Mecca (which comes into history with his enterprise, not having been mentioned previously). At the age of twenty-five he married a woman much older than himself, who bore him one or more sons (who died in infancy) and four daughters. In his fortieth year he became the recipient of revelations, wherein the office of prophet was conferred upon him. (2) For three years he carried on private propaganda, winning some adherents in his own family, among his private friends, and among the humbler classes in the town. (3) For ten years he carried on his mission publicly in Mecca, for the greater part of the time under the protection of his uncle Abū Ṭālib, who was not a believer; after his death the mission had for a time to be transferred to Ṭā'if, until another protector could be found among the Meccan magnates. Meanwhile a temporary refuge had been obtained for the Prophet's persecuted followers in Christian Abyssinia. Towards the end of this period the continuance of civil war at Yathrib (Medīna) suggested to some of the inhabitants the desirability of securing a prophet to settle their disputes. Muhammad was invited to undertake this task, and accepted; but he wisely sent his followers before him to Yathrib to serve as a bodyguard when he arrived; he himself escaped with difficulty from Mecca, where danger was anticipated from this move. (4) Once in Medīna, he proceeded to organize his followers as an army, ruthlessly suppressed internal opposition, secured the alliance of various Arabian tribes, and started raiding the Meccan caravans. Involved in war with his former fellow-citizens, he inflicted on them a series of defeats, culminating in the capture of the city in the eighth year of his migration. By the end of his life he had imposed his doctrine on the whole of Arabia, exterminating the Jewish communities, with few exceptions, rendering the Christian communities tributary, and abolishing paganism.

So far as this career is that of a military and political adventurer, countless parallels could be adduced. A man who can organize an armed force and lead it to victory may rise from obscurity to autocracy anywhere. Probably every century of Islām has its tale of such personages. The ʿAbbāsid, Fāṭimid, Buwaihid, Seljūq, and Ottoman dynasties all arose in this way; and in most of these the religious appeal played an important part. The success of the founders was clearly due not to the objective truth of the doctrines with which they were associated, but to their skill as organizers and military leaders. In Muhammad's case, owing to the amount of information which we possess about him, it is easier to analyze the qualities which produced success than where the records are scantier. In the first place, his ability to gauge the capacities of others was abnormal; hence in the choice of subordinates he seems to have made no mistakes. In the second place, he was thoroughly familiar with the foibles of the Arabs, and utilized them to the utmost advantage. The stories of his successes as told by Ibn Isḥāq indicate a complete absence of moral scruple; but they also show a combination of patience, courage, and caution, ability to seize opportunities, and distrust of loyalty when not backed by interest, which fully explain the certainty with which results were won. If his age is correctly recorded, and no events of great importance in his early life concealed, his military career began when he was over fifty; this seems astonishingly late, yet analogies, if not parallels, can be found. Surprise is also excited by the ease with which the Arabs abandoned their gods and goddesses, readily accepting the logic of the stricken field; for, though new prophets arose after Muhammad's death, there appears to have been no recrudescence of paganism. Yet to this, too, some analogies can be discovered. The fact of primary importance in the rise of Islām is that the movement became considerable only when its originator was able to draw the sword and handle it successfully. That he was summoned to Yathrib was doubtless due in part to the presence of a Jewish element in that community, intellectually further advanced than the Arab tribes, which at first evidently favoured this advocate of monotheism; that he was able to make the fullest use of that opportunity was due to his own ability. The only difficulties which are to be found in his career are, therefore, those which render all history difficult. It is impossible to say why one man should be more gifted than his fellows, or why opportunities should occur for the development of special talents.

According to the Qur'ān (xliii. 30), he was not a ʻgreat man' in his city, and, if the words of xciii. are to be taken literally, he lost his parents at an early age, and at some period was poor and burdened with a family. The question whether he could read and write has been much discussed, and it is unfortunate that we do not know certainly whether those accomplishments formed the basis of education in Mecca when he was a lad; there is, however, some slight reason for supposing that they did. The evidence indicates that he could do both of them, but not well. Thus, when he records the charge made against him of copying the ancient history which he reproduced in the Qur'ān from dictation (xxv. 5 f.), he does not rebut it by the assertion that he could not write. The tradition makes him a tradesman, and can even name his partner and the goods in which he dealt. Some have tried to find evidence of this in the language of the Qur'ān, which undoubtedly takes metaphors from sale and barter, profit and loss; but whether it does so to a greater extent than other books may be doubted. Some stories say that he was employed by his first wife Khadījah in the conduct of a caravan; and others tell of him following this occupation early in life.

It is, on the whole, probable that he travelled in his youth, for, though the geography of the Qur'ān is vague, the descriptions of travel which it contains seem to be based on personal experiences. Moreover, the charge of ignorance which is repeatedly made against the people of Mecca is more likely to have been brought by one who had some acquaintance with a higher civilization.

3. Origins and development of system.—The tradition does, indeed, name precursors of Muhammad at Mecca, among them a relative of his wife who had either copied or translated a portion of a gospel. Since Christianity had made progress in both N. and S. Arabia, it is not unlikely either that missionaries had found their way to Central Arabia, or that travellers thence had had their curiosity aroused and made inquiries into the system. The phenomena of the Qur'ān on the whole render it improbable that any part of it is based on book-learning; for, though in one place the Psalms are quoted with fair accuracy (xxi. 105 = Ps 37^{29}), the nature of the references is ordinarily explicable only as the reproduction of hearsay. Thus it cites (liii. 37 f., lxxxvii. 19) 'the Scrolls of Moses and Abraham' for maxims that are analogous to those occurring in the Prophets or the NT, though not quite identical with them; and the mode of quotation implies that the writer had a vague notion of the book cited, such as actual perusal would have corrected. Further, the form assumed by the proper names and the religious technicalities indicates a great variety of linguistic sources; for in these Ethiopic, Greek, Syriac, Hebrew, and perhaps other languages are represented. Some of the proper names are not at present traceable to any version of the Scriptures—*e.g.*, Ṭālūt for Saul, ʿĪsā for Jesus. Moreover, from the manner in which the Biblical narratives are told it is difficult to imagine that the writer was acquainted with the continuous history of the Bible; he knows only stories out of it. All this points to the probability that Muhammad heard the stories from narrators of different nationalities, who translated them orally into Arabic, leaving on their hearer a decidedly vague impression, in spite of the fact that they interested him keenly. Besides the canonical books, various uncanonical works contribute to the matter of the Qur'ān, which, in addition, refers to prophets not mentioned elsewhere. The Prophet was charged with employing as mentor a resident in Mecca, and after the migration to Medīna, where there were Jews, he may have been able to utilize the Biblical learning of one or other among his converts. But it seems probable that what was reproduced during the Meccan period had been heard from travelling companions or from Jews and Christians whom he had met in foreign parts.

---

[1] *Das Leben und die Lehre des Mohammad*, i. 158.

Prior to his call Muhammad is said to have practised ascetic retirement on Mt. Ḥirā, and for this an old technicality, *taḥannuth*, is preserved, which is said to mean 'to acquire merit,' and certainly has nothing to do with the Heb. *tᵉḥinnôth*, 'supplications.' The call itself evidently took the form of a command to read, which the Prophet reluctantly obeyed. The communications embodied in the Qur'ān were, according to the tradition, made to the Prophet and uttered by him in trance; he would wrap himself in a blanket and perspire copiously at the time. A certain number of these stories may be inference from *sūrahs* lxxiii. and lxxiv., where the Prophet is addressed as 'Thou that art wrapped up,' combined with *sūrah* xcvi. (supposed to be the first revelation), where he is bidden 'read.'

The form of the utterances at times approaches verse, *i.e.* a series of sentences in which the same quantity and quality of syllables are reproduced, the termination of each unit being marked by rhyme, whereas more usually rhyme only, and this of a somewhat loose character, is observed. The relation of this Qur'ānic style to the verse and rhymed prose of classical Arabic is an enigma which cannot at present be solved. An artifice based on the recurrence of letters is obviously literary; *i.e.*, it depends for its existence on the practice of writing, since only those who are accustomed to read and write think of their words as agglomerations of letters; to the illiterate the word, if not the sentence, is the unit. Indeed, in what is supposed to be the earliest revelation the deity is said to have taught with the *calamus*, or reed-pen. The existence of poets before the Qur'ān is attested by a *sūrah* which is directed against them (xxvi.) and a text in which the deity states that He had not taught Muhammad poetry (xxxvi. 69). If the poetry which existed before the Qur'ān was analogous to the classical poetry, the people of Mecca cannot have been in the state of naive ignorance with which the Qur'ān credits them; yet the poetry which is ascribed to the Umayyad period—*i.e.* the second half of the 1st Islāmic cent.—is to a great extent clearly authentic, while its authors represent the continuance of a pagan tradition. With regard to rhymed prose, probably we have nothing in this style that is certainly genuine and older than the 2nd cent. of Islām. It is, however, a much easier performance than verse, though no less dependent on writing. Oracles are supposed to have been delivered in it by pre-Muhammadan wizards.

Now the respect of ignorance for knowledge is a well-attested phenomenon, displayed in the desire of the Prophet that Jews and Christians should not be molested in the exercise of their creeds. It is therefore unlikely that the poets and wizards who preceded Muhammad presented a higher stage of education; hence, according to natural sequence, the style of the Qur'ān would seem to come between such naive jingles as may have counted for versification in Arabia and the highly artificial products with which we meet in the Umayyad period. It would follow that all the pre-Islāmic poetry as well as all that ostensibly belongs to the time of the Prophet and his immediate successors is spurious; but, as has been seen, the spuriousness of that which is incorporated in the Prophet's biography is otherwise attested; and the most distinguished philologists of the early ʿAbbāsid period, to whose labours we owe our collections of early poetry, were unscrupulous fabricators.

The Prophet, then, claimed to introduce literature into his native language, and the form was probably modelled on the quasi-poetic experiments which had preceded the Qur'ān. It is, however, very noticeable that in his lifetime his book resembled a newspaper in having a fluid rather than a stationary existence; it was as a whole continuous, but each number had ephemeral importance. The theory was gradually evolved that it was a reproduction of a divine archetype, first as a series of copies, then as a single copy. The complete development of this theory was not possible before the collection of the Qur'ān; and the Prophet himself never thought of attempting such an undertaking.

The difference between his first conception of a prophet and that current in ancient Israel, before the literary prophet had arisen, was perhaps not very great. The oracles were partly spontaneous, partly required for emergencies; their form differed from that of ordinary speech by the presence of an artifice; and the prophet delivered them in what spiritualists call 'the superior condition.' At times the oracles were supplemented by dreams. Further, the Hebrew prophet was a 'warner,' which is one of the epithets applied by Muhammad to himself; he foretold misfortunes, which, however, were ordinarily contingent, since it was his business to indicate the line of conduct whereby they could be averted. Muhammad's notions of prophecy seem to have been chiefly influenced by those cases in which the prophet also claimed to be the head of the community, its priest and its king.

Attempts have been made by Sprenger and others to specify the epileptic fits which in Muhammad's case ostensibly accompanied the revelations; but it is doubtful how far these are to be regarded as real occurrences. It is clear that he was a man of great physical strength, since his life as tyrant of Medīna was spent in constant military expeditions, added to the cares of a rapidly increasing community, of which he was at once priest, legislator, ruler, and judge. Yet we never hear of his health breaking down under the strain. The 'fits' seem to have been experienced only when they were required for the delivery of the revelations, and in no case to have interfered with his activities.

A message must have matter as well as form, and, when Muhammad became head of a State, his Qur'ān served as government organ, containing rescripts and something like an official chronicle of important events, with comments upon them. But before the migration the matter was not so easily supplied. To a certain extent it reproduces narratives from the Christian Bible, which *ex hypothesi* could not have been known to Muhammad from books, and therefore must have been communicated to him by direct inspiration, and so are a proof of the miraculous character of the whole work. The chief purpose of these and of the other messages is to insist on the importance of obeying God's messengers implicitly.

It is not easy to say whether Muhammad had any desire to inculcate any particular doctrine, for there appears to be none which he was not prepared to abandon under political pressure, and the tradition represents his followers as far more attached than himself to the dogmas. The main doctrines of the early teaching are the future life, the unity of God, and the folly of idolatry. Since he ultimately retained in his system the kissing of the Black Stone (cf. *ERE* vii. 743^a), it is difficult to treat the campaign against idolatry as quite serious. The doctrine of the future life was preached in the early days as a warning of the approaching end of the world and the Day of Judgment; yet he had afterwards to make the martyrs in his cause enter paradise at once, and his enemies enter hell immediately after death—a belief not easily reconciled with the former. According to Ṭabarī, during the Meccan period he at one time, under stress, issued a revelation admitting the Meccan goddesses to his pantheon; and, though this text was expunged from the Qur'ān, the apology for it, viz. that it was the devil's interpolation, remains (liii. 19–23, xxii. 51; see *ERE* vii. 150). He even consented at one time to erase his title 'Apostle of God' from a document, when it stood in the way of the ratification of a treaty. Even the formula with which the *sūrahs* and other documents commence shows clear signs of compromise: 'In the name of Allah the Raḥmān the Merciful.' Since the last adjective is an Arabic rendering of the second, which is Aramaic, used as a divine name by Jews and pagans, and in Arabic not an epithet, but a name, some mystery must lie behind the employment of this name with a translation following it. The tradition suggests that the name 'Allāh' was familiar to the Meccans, but not the name 'Raḥmān,' which, indeed, had been adopted by one or more false Messiahs. In certain parts of the Qur'ān, however, it may be said to be dominant. This formula, then, was doubly accommodated to Meccan prejudices.

The tradition does not conceal the fact that the 'canons of Islām' were of slow growth; it is probable that the part of the programme which never varied was the restoration of the religion of Abraham. One of Muhammad's precursors, Zaid b. 'Amr, is represented as travelling with the view of discovering the religion of this patriarch, from whom the tribes of N. Arabia, according to Genesis, are descended. It is not probable that his name was known in Mecca before Muhammad introduced it; but in doing so he was treading on safe ground, since the 'people of learning,' *i.e.* Jews and Christians, were agreed about the relationship. If the tradition is to be trusted, the new system was called by the Meccans 'Ṣābism,' a name connected historically with Ḥarrān, where a cult of Abraham is likely to have existed; the Ḥarrānians appear to have been called Ḥanpē, 'heathens,' by their Christian neighbours, and possibly this is the solution of the puzzling name 'Ḥanīf' applied in the Qur'ān to the religion of Abraham, and synonymous with 'Muslim,' which, according to the same book (vi. 163), was a title invented by the patriarch. The Qur'ānic tales about Abraham are traceable to the Jewish Midrash; what is chiefly known about his religion is that he was an iconoclast, and was not one of the *mushrikūn*, *i.e.* polytheists. When the Prophet decided to make the Meccan pilgrimage part of his system, he ascribed the building of the Ka'bah to Abraham and Ishmael (ii. 119 ff.), and brought the prayer-ceremonial into connexion with the former. It is probable, though not certain, that both that ceremonial and the fasting month are Ḥarrānian.

There is reason for thinking that, besides the prohibition of idolatry, the earliest form of Islām enjoined certain daily ceremonies which were afterwards developed and regulated until they became stereotyped as the five *ṣalawāt*; and it is not easy to dissociate from these the theory of legal purity, which, however, seems to have existed in parts of pagan Arabia, since some of the technicalities are found in Sabæan inscriptions. Of the actual growth of the ritual or liturgy nothing certain is known; the prayer which corresponds with the *Paternoster*, and is called the *Fātiḥah* ('Opener') because it is prefixed to the Qur'ān, contains polemical references to Jews and Christians ('those who have incurred anger and those who go astray'), which point to a late period in the Prophet's career; for his hostilities with the Jews did not commence until after the migration, and those with Christians were some years later. Moreover, the prayer-ceremonies were connected with military drill, which is unlikely to have been required before the raising of an army was contemplated.

The other canons or main institutions of Islām—the pilgrimage, the fasting month, and the tax called 'alms' (*zakāt* or *ṣadaqah*)—belong to the Medīna period, though they cannot be precisely dated. The establishment of the first indicates the Prophet's resolve to conciliate so far as possible the pagans of Mecca, and to abandon Judaism, which on his arrival at Medīna he was inclined to adopt; it belongs to the same policy as that which dictated his making the Meccan temple the direction of prayer instead of Jerusalem (ii. 139 f.). The fasting month, whatever its origin, is evidently a military exercise; on the one hand, it accustoms the fighting men to endure privation, and, on the other, it trains them to turn night into day. The alms or income-tax of 2½ per cent is organized poor relief. An innovation which is at least as important as the canons, though it is not termed one, is the tabu on intoxicants (ii. 218, v. 92), which is said to have been introduced in the third year of the migration, and appears to belong to military discipline. There may, however, be some truth in the idea of W. G. Palgrave[1] that this tabu is definitely anti-Christian in intent.

It is probable, then, that the positive parts of Islāmic teaching belong to the period after the migration, and that these were largely suggested by the Judaism which the Prophet got to know there. His usual plan when he adopted institutions was to disguise the borrowing; but he also introduced serious modifications. Thus, in the case of the Sabbath he not only shifted the day from Saturday to Friday, but reduced the time when business might not be transacted to the period occupied by the mid-day religious service (lxii. 9 f.). Instead of the elaborate system of food-tabus which occupies so prominent a place in the Mosaic code, he adopted the minimum retained by the Council of Jerusalem, recorded in Ac 15, with the tabu on swine's flesh which some think was originally to be found in those regulations (ii. 168, v. 4, xvi. 116). He held that each of the communities (Jewish and Muslim) might eat the food of the other, and, indeed, went out of his way to record in the Qur'ān what he supposed to be the Jewish rules on the subject (vi. 147).

---

[1] *Central and Eastern Arabia*, London, 1865, i. 428.

From Christianity he appears to have taken very little in the way of either doctrine or practice. His first relations with Christians seem to have been friendly, and, as has been seen, during the Meccan period he is said to have found a refuge for persecuted followers at Christian Axum; at a later period he used eulogistic language of Christian monks whom the Qur'ān had affected to tears (v. 85 ff.). He supposed (v. 116) the Christians to worship three deities, Allāh, the Virgin Mariam, and 'Īsā, whom he identified with the spirit of God, but also called 'a Word' (iv. 169). When he became acquainted with the division of Christendom on the subject of the nature of Christ, he conceived that it was his mission to settle the dispute; it is noticeable that he fully accepted the Virgin-birth and the Ascension, though not the Resurrection, as he denied that Christ had been crucified; but he rejected with vehemence the doctrine of the divinity of Christ (xix. 17 ff., iii. 40 ff., iv. 156). Sprenger fancies that he horrified his Christian visitors by his *ḥarīm* as much as he shocked his Jewish subjects by his ignorance of the OT;[1] what is certain is that the embassy from Christian Najrān which waited on him in Medīna, when his power was making progress in Arabia, ultimately eschewed religious discussion and resigned themselves to the payment of tribute.

4. **Relation of system to paganism.**—Comparison between Muhammad's system and that of those which it displaced in non-Christian Arabia is difficult owing to the fragmentary nature of our information about the latter. The name applied to the heathen Arabs in the Qur'ān, *mushrikūn*, if it really means 'those who assign associates to Allāh,' would imply that these pagans were to some extent monotheists, *i.e.* recognized one Supreme Power; but it is curious that the subordinate deities are called 'their' partners, *i.e.* of their worshippers (vi. 138). It is likely that the communities had their tribal and local cults, the abolition of which was regarded as a preliminary for the political union of Arabia. In order to employ monotheism for a political and, indeed, imperialistic object the deity had to be treated as a tribal god, favouring one community and hostile to all others. The men whose accession to Islām after the migration led to its great military successes, especially Khālid b. al-Walīd and 'Amr b. al-'Āṣ, appear to have had little or no religious conviction, but to have been moved by admiration for the Prophet's military and diplomatic skill, and anxious to serve under so able a chief. So far as religion entered into their consideration, they probably thought of the god of the community as leading it in war, and found the deity of the Muslim society able to defeat the others. More devout members of that society regarded the Prophet as able to call in the divine aid whenever he was in need of it. As the political programme increased, doctrine diminished in importance; and the institution of practices seems to have been based on the desire to give the new system the equivalent of what other systems possessed, in order that those others might have no rival attractions.

5. **The Prophet's sincerity.**—The question of Muhammad's sincerity in his claim to be the spokesman or *προφήτης* of the deity has often been discussed, and various views have been held on the subject; as examples we may quote that of Sprenger, who regards Muhammad's assertions on this subject as a case of epileptic mendacity,[1] while L. Caetani finds no contradiction between his supposed elaborate preparation of revelations and his ascription of them to direct communication from the deity.[2] The former view, as has already been seen, is scarcely tenable; nor does the latter correspond with the facts, for the revelations furnish little indication of elaborate preparation, and, when once delivered, they appear to have been neglected; there are, indeed, traditions of collections of revelations having been made by some of his followers, but it seems certain that Muhammad himself kept no such collection. Caetani's theory, however, is probably sound to this extent, that in Muhammad's case, as in those of many other men of vast energy and ability, there was a belief or consciousness of being directed by the deity, which, however, by no means led to his trusting anything to chance; and, while the angels whom he declared to have won his battles were partly pious, partly poetical personifications of the heroism of his followers, he was fully conscious of the value of attributing his victories to these supernatural auxiliaries; to be defeated by angelic cavalry was no discredit to any foe. He was also quite conscious of the value attaching to the right to dictate the moral law.

6. **Moral reforms.**—As a moral reformer Muhammad has to his credit the abolition of infanticide, which, if we may trust the Qur'ān (xvi. 61 f., lxxxi. 8 f.), was commonly practised in Arabia in the case of female infants. On the other hand, serious evil was caused by his institution (v. 91) of compensation for oaths, *i.e.* the principle that an oath might be violated at the pleasure of the person who had sworn it, if he performed some sort of penance. While the Qur'ān scarcely formulates any general principles of morals, it on the whole insists on *moderation*, and probably aimed at no considerable departure from current notions on these matters. Hence it tolerates polygamy and unlimited concubinage, and assumes the institution of slavery. In the matter of the blood-feud Muhammad did not contemplate complete abolition, but he endeavoured to mitigate its consequences and favoured mild reprisals (ii. 173–175). With the institution of private property and the acquisition of wealth he found no fault, and he deprecated extravagance in almsgiving as in other matters. The quality of personal courage he rated very high, and, though he often inspired it by the promise of paradise, it is clear that his followers were largely persons who required no such stimulus to make them brave. The ascetic morality afterwards taught by Ṣūfī preachers and, if the tradition is to be believed, approved by some of Muhammad's early adherents finds little support in any interpretation of the Qur'ān that is reasonably literal, and clearly receives no countenance from the Prophet's own career, if any credibility attaches to his biography. Like other sovereigns, he claimed a large share of the booty won in his raids as his perquisite, and appropriated territory as his domain.

It is not clear, then, that Muhammad can be credited with any considerable reform except in the matter of infanticide, whereas in the subordination of the family tie to the religious brotherhood he appears to have weakened one social sanction without introducing any other equally strong by way of compensation. The history of this subordination can be traced in the Qur'ān rather more continuously than most institutions.

[1] i. 207 ff.

[2] *Annali dell' Islamo*, Milan, 1905 ff., i. 204 ff.

Where moral codes are drawn up, as is the case in several *sūrahs*, honour to parents is given a high place in the list of commandments. When Abraham is first introduced, he prays for his parents; then he becomes involved in a dispute with his father on the subject of idolatry, but promises to pray for him; and this, when Abraham next comes on the scene, he actually does. But after the migration, when the younger generation were joining Muhammad against the wishes of their parents, such filial duty towards their unbelieving parents was thought undesirable; hence they are forbidden to pray for the latter, and Abraham's conduct is excused on the ground that he had made the promise; finally, Abraham himself is represented as repudiating all parental claims, and his conduct is declared exemplary except for his undertaking to pray for his father (xiv. 42, xix. 42–49, xxvi. 70 ff., xliii. 25, lx. 115, lx. 4).

This is only one example of the movement in the direction of intolerance which the Qur'ān exhibits as it proceeds. The Prophet undoubtedly wished to make Muslim life as sacrosanct within the Muslim world as in the old tribal system the tribesman's life had been within the tribe; but in this he failed, since his first followers eventually waged civil war with each other, and in the history of Islām the victims of massacres by Muslim Sulṭāns have frequently been Muslim communities, and, indeed, families claiming descent from the Prophet himself.

7. Toleration.—On the question of religious toleration the Qur'ān contains a series of utterances belonging to different periods, and varying from large-minded tolerance to extreme fanaticism. In one text (v. 73) future happiness is promised to four communities—believers, Jews, Ṣābians, and Christians—on condition of their believing in Allāh and the last day, and doing good works; in another the last three communities are mentioned with the pagans and the Mazdæans in a context which implies that the prospect before them is less satisfactory (xxii. 17). At times no form even of controversy is permitted except rivalry in kindness; elsewhere the Muslims are told to fight with other communities relentlessly until they accept Islām or pay tribute, which they are to bring in humiliation. Friendship with members of other communities is forbidden. The most intolerant utterances are the latest ones, but the progress in this direction does not seem to have been regular. The permission granted the Muslims to conceal their faith if confession is dangerous (iii. 27, as ordinarily explained) is characteristic of a system which is more political than religious. The ultimate system adopted was to permit the existence of communities which professed to follow a revealed book, but to disarm them and make them tributary; this condition is identified by some jurists with that of slaves. The existence of communities to which this description did not apply was forbidden. Since the chief Christian doctrine is said in the Qur'ān (xix. 92) to be so blasphemous as to be calculated to produce a general convulsion of nature, this toleration, though praiseworthy, is clearly illogical; for we can scarcely conceive a convulsion of nature being averted by the payment of a moderate poll-tax.

8. Legislation. — As a legislator Muhammad probably perpetuated current practice rather than introduced a fresh system, and the Qur'ān is on many grounds ill-suited for a basis of jurisprudence. It is imperfect, self-contradictory, and destitute of order. So far as any principle can be traced in its arrangement, the collector seems to have been anxious to avoid any semblance of chronological order, whence, in the case of conflicting enactments, it has to be supplemented by tradition. Where there is anything like systematic treatment of any topic—*e.g.*, the laws of inheritance in *sūrah* iv.—the signs of improvisation are very apparent; and even a little consideration should have shown the barbarity and folly of the punishment of hand-cutting for theft (v. 42). There is a curious tradition that on his death-bed Muhammad desired to frame a code for the guidance of the community; but to those who supposed that they had in the Qur'ān the actual word of God this utterance not unnaturally seemed delirious. The State, however, suffered very seriously for the want of guidance in the matter of appointing successors to the sovereign; and until the introduction of European codes it was never able to get rid of the doctrine that all law was to be got from the Qur'ān or the Prophet's equally inspired conduct, and so lacked the power to legislate on a sound basis.

9. Philosophy.—Though it is not probable that Muhammad had any liking for metaphysical speculation, the rôle which he had assumed rendered it necessary for him to formulate views on various matters which any form of religious propaganda brings to the front. The reduction of these questions and their answers to precise and philosophical form probably belongs to a later age, and, indeed, in the tradition Muhammad names sects which came into existence a century or more after his death; but in a vaguer form the Qur'ān deals with them, and so furnishes a basis for theology, though one of doubtful firmness. His theory of the deity is, on the whole, naively anthropomorphic; the Allāh of the Qur'ān has been compared to a magnified Oriental despot. A royal court is formed by the angels; Jibrīl conveys messages to the Prophet (ii. 91), whereas others are sent, mounted on horses, to fight the Prophet's battles (iii. 125, viii. 9, ix. 26, 40). Other intelligent beings are the *jinn*, or *shaiṭāns*, whose prince is Iblīs; the second word is taken from the Ethiopic, the third from the Syriac transliteration of the Greek; the *δ* of *διάβολος* was mistaken for the Syriac sign of the genitive, somewhat as Ὀδύσσεια gets transformed into *Liber essentiæ*. To these the Prophet preaches (perhaps through a vague reminiscence of 1 P 3^{19}), and some are converted (xlvi. 28–30, lxxii. 1 ff.). Satan himself is the power that makes for evil, causes men to forget, and even interpolates the oracles of prophets. He has the divine permission to mislead mankind for a season (xv. 37–39). The Qur'ān, on the whole, seems to favour the theory of predestination, but there are passages which contradict it, and to those who impugn it an evasive answer rather than a rejoinder is given (see art. FATE [Muslim]). The resurrection of the body is taught in a crude form, and the future life is thought of as one of bodily pains and pleasures; hence metaphysical questions concerning the soul are scarcely touched. The creation is narrated mainly as in Gn 1, but with the addition of some apocryphal matter. The teleological argument for the existence of God is often emphasized.

10. The Prophet's apologists.—The distinction drawn in the case of the founder of Christianity by D. F. Strauss[1] between the historical and the mythical can be accommodated to that of the founder of Islām, though as regards Muhammad we have not so much to sift canonical documents as to contrast the impressions left by the biography of Ibn Isḥāq with the character of the Prophet as it appears at later periods of Islām. That biography, as will be seen, left room for some important supplements and called for modification in certain respects.

The character attributed to Muhammad in the biography of Ibn Isḥāq is, as has been seen, exceedingly unfavourable. In order to gain his ends he recoils from no expedient, and he approves of similar unscrupulousness on the part of his adherents, when exercised in his interest. He profits

[1] *Das Leben Jesu für das deutsche Volk bearbeitet*, Leipzig 1864, p. xxiv.

to the utmost from the chivalry of the Meccans, but rarely requites it with the like. He organizes assassinations and wholesale massacres. His career as tyrant of Medīna is that of a robber-chief, whose political economy consists in securing and dividing plunder, the distribution of the latter being at times carried out on principles which fail to satisfy his followers' ideas of justice. He is himself an unbridled libertine and encourages the same passion in his followers. For whatever he does he is prepared to plead the express authorization of the deity. It is, however, impossible to find any doctrine which he is not prepared to abandon in order to secure a political end. At different points in his career he abandons the unity of God and his claim to the title Prophet.

This is a disagreeable picture for the founder of a religion, and it cannot be pleaded that it is a picture drawn by an enemy; and, though Ibn Isḥāq's name was for some reason held in low esteem by the classical traditionalists of the 3rd Islāmic cent., they make no attempt to discredit those portions of the biography which bear hardest on the character of their Prophet. The theory that this person's conduct was a model for his followers has in consequence done serious mischief.

Apologies for Muhammad were started in the 18th cent. by H. de Boulainvilliers,[1] who was favoured by Gibbon because this apology provided some instruments against Christianity. More importance was attached to the lecture of Carlyle on 'The Hero as Prophet,' incorporated in the collection called *On Heroes and Hero-Worship* (London, 1841), in which Muhammad was taken as the type of a heroic prophet, just as Odin was made the type of a heroic divinity, the author's knowledge of the two personalities being about equal. Another apologist who acquired some popularity was Bosworth Smith,[2] who, too, was satisfied with superficial and second-hand information, and committed the error of basing his estimate of Muhammad's character and aims on the ill-recorded Meccan period instead of on the far more accurately chronicled period of Medīna. No European apologist for Muhammad seems to have possessed any proper acquaintance with the Arabic sources. Only after the definite assertion of European superiority over the world of Islām, which may be dated from the Napoleonic invasion of Egypt, and the acquisition of European nationality or its equivalent by large numbers of Muslims, has the necessity for apologies made itself felt in Muslim communities. The most prominent writer on this side is Syed Ameer Ali,[3] but there are many others. These apologists endeavour to discredit the biography of Ibn Isḥāq where it shocks the European reader; and, where this cannot easily be done, they suggest honourable motives or suppose the course followed by the Prophet to have been the least objectionable of those that were open to him at the time. Thus his toleration of polygamy is declared to have been a limitation with the view of ultimate suppression, and his attitude towards slavery is regarded as similarly intended to lead to its abolition. He has even been made to set an example of monogamy, but the ingenuity required for this is so great that the result is unconvincing.

But, while Muslim dogma, by assuming that whatever the Prophet did must necessarily have been right, renders apology unnecessary, from the earliest times there has been much edifying fiction in which the Prophet is shown to have practised all the virtues which mankind agree in admiring. The lines on which the historical character has been distorted and a mythical character substituted have in the main been three.

(1) In the Qur'ān Muhammad on the whole disclaims the character of thaumaturge, arguing that his predecessors were ordinary men, though he accepts the most important of the miracles ascribed to Moses, Jesus, and others (*e.g.*, vii. 160, iii. 43). The miracles which he claims are victories in the field, won by the assistance of angels, and the Qur'ān itself, which is a miracle either as containing historical matter to which the Prophet had no natural access or as being of unattainable eloquence (cf. xlvi. 1 ff., liii. 1 ff.). To these it is possible that one case of foretelling the future, viz. the recovery by the Romans of the territory seized by the Persians in the Nearer East (xxx. 2 f.), should be added, though the text of the Qur'ān does not insist on this as evidence of mysterious knowledge. Since the miracles of earlier prophets are attested by the Qur'ān, this scarcity of the miraculous doubtless from the first constituted a serious difficulty to Muslim controversialists, and it is likely that in Muhammad's lifetime many miracles were attributed to him which he did not himself claim; in time he was credited with the analogue of every miracle of consequence in either OT or NT, with the exception of raising the dead, which perhaps was not ascribed to him on the ground that his own resurrection never became a dogma of Islām. In works of the 4th cent. of Islām these miracles are collected and, as is usual in Muslim works, attested by chains of witnesses, under the title 'Proofs of the Mission.' The most frequently narrated of these miracles is the 'splitting of the moon,' for which it seems possible to adduce Qur'ānic attestation (liv. 1), though perhaps the text should be taken hypothetically rather than as an assertion. Another form of miracle which was popularly attributed to him was foretelling the future; even the reverse which he sustained at Uḥud was, according to the tradition, revealed to him in a dream, though the official account of that affair in *sūrah* iii. 133 ff. makes no allusion to the warning. Of marvellous experiences that which has attracted most attention is his supposed 'ascent into heaven,' which grew up round a text of the Qur'ān (xvii. 1), which merely says that God took His servant by night from the sacred place of prostration to the furthest place of prostration, usually supposed to mean from Mecca to Jerusalem. It is probable that this is the dream to which reference is made in the same *sūrah* (xvii. 62), where it is coupled with 'the accursed tree in the Qur'ān' as a temptation to the people, *i.e.* a stumbling-block to those whose faith was weak. Nothing more is known of this 'dream,' of which we should gather that the Qur'ān had contained an account which was afterwards expunged; but in the tradition it has been so expanded as to form the analogue on the one hand of the Christian Transfiguration, on the other of the colloquy of Moses on Sinai. There is even a tendency to ascribe to this ascent into heaven such non-Qur'ānic legislation as is generally adopted by Islām, in the same way as analogous Jewish legislation is called 'rules given to Moses on Sinai.' In the story that the Prophet was transferred from Mecca to Jerusalem and from Jerusalem to heaven we probably have a combination of glosses on the expression 'the furthest place of prostration,' the meaning of which is obviously obscure.

(2) The Prophet's sayings and doings were made into a source of law, corresponding with the Oral Law of the Jews, and, like the latter, not at first written down. The great collections of these precedents or rulings date from the second half of the 3rd Islāmic cent., but their accumulation goes back to the 1st cent. of the migration, when the

[3] *Life and Teachings of Muhammad*, London, 1891.

system of jurisprudence began to be established by the labours of jurists of Medīna. The impartial criticism of these traditions seems to lead to a purely negative result; the practice of inventing scenes in which the Prophet delivered some judgment or of fathering sayings upon him was so common from the very beginning of the Islāmic empire that any genuine sayings of his are inextricably mixed up with such as are apocryphal. The native criticism of this tradition consisted in ascertaining if possible the credibility of the persons who had handed it down. This was by no means easy, and various motives prevented those who endeavoured to criticize it from exercising their judgment freely; hence the chains which are technically regarded as strong appear to the non-Muslim critic fatally weak. The Prophet's merits as a legislator must, therefore, be judged exclusively by the Qur'ān; for, though the rest of the 'sacred code' is ascribed to him, there is little reason for thinking it to be his.

(3) The Prophet is supposed to have expressed opinions upon all sorts of subjects—*e.g.*, medicine —and writers of essays usually start by quoting these dicta. Those which have to do with the commendation of various virtues or the condemnation of vices were collected on a considerable scale by Ghazālī († 505 A.H.) in his *Revival of the Religious Sciences* (Cairo, 1282 A.H.), the standard text-book of orthodox Islāmic theology; he was, however, criticized severely for employing so many spurious dicta, many of which could be traced to fabricators.

11. The Prophet's Companions.—No account of Muhammad, however brief, could omit all notice of his Companions, the persons by whose instrumentality he accomplished so much. Many of these became historical figures, as sovereigns, governors, or generals; it is remarkable that none of them undertook the office of biographer or even collector of memoirs. The tradition implies that certain institutions were suggested to the Prophet by one or other of these adherents; but there is no evidence that he was seriously influenced by any one of them, and we should gather that their attitude towards him was that of worshippers. Although the later parts of the Qur'ān approach the character of official documents, and we actually have a State paper inserted in *sūrah* ix., it is not clear that these associates had any share in their composition. Indeed, such participation would have been at variance with the theory that the *sūrahs* were direct communications from the deity. The tradition represents Abū Bakr and 'Omar, both of whom gave their daughters to the Prophet, as the innermost cabinet; the former is said to have been regularly in favour of mild, the latter of severe, measures. Of emissaries sent to teach we hear very little; an agent was sent to Medīna to prepare for the arrival of the Prophet, but the duties of this person were probably political, at least as much as religious; and, when the policy of winning the Arab tribes had commenced, missionaries were sent to teach neophytes those portions of the Qur'ān which were to be employed in the liturgy; these missionaries appear, however, to have had in part military character. When the time had come to extend the mission outside Arabia, envoys were sent bearing copies of the Prophet's letter to all monarchs known to him; but, as these contained a command to adopt Islām on pain of being attacked, there was no occasion for the messengers to endeavour to persuade.

The theory that Islām is primarily a political adventure is borne out by the subsequent careers of its most distinguished adherents. They accumulated fortunes, and otherwise obtained conspicuous worldly success; 'Omar is credited by some historians with consummate statesmanship, and several others displayed talents as commanders of armies; but there was much rivalry for the first place, and a quarter of a century after the Prophet's death different groups of Companions led armies against each other. The later legend transforms all of them into saints and preachers, and sometimes into ascetics. This is done in particular in the case of 'Alī, of whom a sort of cult arose, especially in Persia; history, however, presents him as an ambitious libertine, endowed with personal courage, but little else that merits admiration.

12. His domestic affairs.—The women of the Prophet's family enter into the story of his career somewhat as they enter into the subsequent history; the tradition makes the first wife, Khadījah, a woman of wealth, whose acceptance of her husband's claim to a supernatural mission was an important element in determining its success. Her death is said to have occurred shortly before the migration. Since his followers at Mecca were at least to some extent persons who required temporal support, it is likely that her wealth (whatever that term may have meant) was devoted to this purpose and, indeed, consumed therein. After her death the Prophet began that course of polygamy and concubinage which has given offence to European students of his career, but does not appear to have scandalized his Arabian contemporaries, except, indeed, in the case of his marriage with the wife of his adopted son, which is defended in a Qur'ānic revelation (xxxiii. 4). On two other occasions the pages of the sacred book are devoted to the Prophet's domestic troubles—once when his girl-wife 'Ā'ishah had incurred the suspicion of unfaithfulness, and was defended by a special oracle (xxiv. 11 ff.); and another time, when, owing to the introduction of a Coptic concubine to the *ḥarīm*, the remaining members of it were so embittered that the Prophet threatened to divorce them all, and the revelation which he produced assured him that he would be able to find adequate substitutes (lxvi. 1 ff.). Since matters no less private and delicate find a place in the prophetic books of the OT (Hosea and Isaiah), perhaps their presence in the Qur'ān ought not to shock us; nevertheless the tradition states that, according to 'Ā'ishah, the Qur'ān would have profited by the omission of the affair of the adopted son, and this criticism might be extended to the others. In several of these marriages it is easy to see that political considerations were dominant. Muhammad, like other leaders, wished to unite his chief helpers to himself by as many bonds as possible, and to get a hold on dangerous opponents. Had he had sons, he would probably have utilized them in the pursuit of this policy. Of these women 'Ā'ishah, the daughter of his most faithful follower, Abū Bakr, played a historical part of great consequence, and in the first civil war herself took the field. The descendants of the Prophet, distinguished since the year 773 A.H. by green turbans, all trace their pedigree to Fāṭimah, his daughter by Khadījah; the other daughters appear to have died without issue. Fāṭimah herself, the wife of 'Alī, seems to have been cruelly treated by the first successor, and died six months after her father, being called to play a political part for which she was unfitted in supporting her husband's claim to the succession. It is curious that the exact number of his sons is unknown, though it is certain that all died in infancy. Of one, born late in his life of a Coptic concubine, sent as a present by the Byzantine governor of Egypt, the death synchronized with an eclipse of the sun, supposed to be that of 27th Jan 632.

LITERATURE.—This, in both the Islāmic and the Christian languages, is enormous, and even a list of important works would be lengthy. Besides the sources enumerated above, the Islāmic general histories mostly devote a great deal of space to the Prophet's biography—*e.g.*, Ismā'īl Abu'l-Fidā († 722 A.H.), whose account, ed. with Lat. tr. by J. Gagnier, Oxford, 1723, was for more than a century the basis of European researches. Many Arabic monographs in prose and verse are enumerated by Ḥājjī Khalīfah, ed. G. Flügel, Leipzig, 1835–58, iii. 634–636. To these should be added the work called *Insān al-'Uyūn* of Burhān al-dīn al-Ḥalabī († 1044 A.H.), published Cairo, 1292, with the biography by a modern writer of Mecca, Aḥmad Zaini Dahlan, on the margin. The modern European study of the subject was started by G. Weil, *Mohammed der Prophet*, Stuttgart, 1843; it was popularized in English by Washington Irving, *Lives of Mahomet and his Successors*, London, 1850. The work of A. Sprenger, *Das Leben und die Lehre des Mohammad*, Berlin, 1869, claimed to be based mainly on new materials; much the same were simultaneously employed by W. Muir, *Life of Mahomet and Hist. of Islam*, London, 1856–61, reprinted in an abridged form, 1877, and ed. T. H. Weir, 1912. More recent biographies are those by H. Grimme, *Mohammed*, Munich, 1904, and D. S. Margoliouth, *Mohammed and the Rise of Islam*, London, 1905.

Besides biographies, numerous works deal with either the prophetic character of Muhammad or certain aspects of his work. One of the most popular of the former sort is the *Shifā fī ḥuqūq al-Muṣṭafā* of the *qāḍī* 'Iyāḍ († 544 A.H.), on which there is a vast literature, described by Ḥājjī Khalīfah, iv. 56–61; the ed. of Constantinople, 1315, in 4 vols. with the commentary of Khafājī († 1069 A.H.), is probably the best. Somewhat similar is the *Mawāhib Laduniyyah* of Qasṭallānī († 923 A.H.) with the commentary of Zurqānī, 8 vols., Cairo, 1278. Of European works mention may be made of O. Pautz, *Mohammeds Lehre von der Offenbarung*, Leipzig, 1898; O. Procksch, *Über die Blutrache und Mohammeds Stellung zu ihr*, do. 1899; P. Casanova, *Mohammed et la fin du monde*, Paris, 1911; H. Lammens, *Mohamet, fut-il sincère?*, Paris, 1914. The ninth volume of V. Chauvin's *Bibliographie des ouvrages arabes*, etc., Liége, 1908, contains a list of all European works on the subject from 1810 to 1885.

MUHAMMADANISM (in Central Africa).—Muhammadanism is said to have reached Central Africa from three sources—Egypt by the Nile and its affluents, Tripoli *via* Ghadames to Timbuktu, and Algeria *via* Wargla. Certain details of the dates of its introduction into various communities were collected by the traveller, H. Barth; about A.D. 1000 it found its way into Songhi, near the end of the 11th cent. into Kanem, about 1500 into Bagirmi, and not much later into Katsena. It was introduced into Logon about the beginning of the 19th century. In 1907 it was computed that the number of indigenous Muslims in British Central Africa was 50,000 as compared with 950,000 fetishists. Its introduction in certain places is connected with the names of historical personages; the chief missionary for Central Negroland was one Muḥammad b. 'Abd al-Karīm b. Maghili, a native of Buda in Tạwat, who flourished about 1500.

The Islām of Central Africa seems to be everywhere of the Mālikite school; and, if it has produced a literature, few monuments of it have as yet come to light. In *Revue du monde musulman*, xii. [1910] 197 Ismaël Hamet gives a summary of the *Kitāb al-Ṭarā'if* by Muḥammad b. al-Mukhtār of the Kounta tribe of Azawad; this personage died in 1826, twenty years after the completion of his work, which consists of an edifying biography of his parents, containing the kind of matter which is usually found in hagiographies. In *Revue du monde musulman*, xiv. [1911], Hamet gives extracts from the works of a somewhat earlier writer Sīdī Muḥammad al-Yaddālī († 1752), a poem by whom in praise of the Prophet was published by L. Massignon (*ib.* viii. [1909] 199). Some contemporary poems (satires) by one Bakai were published by Barth. There appears to be nothing in these specimens that is distinctly African. In the same magazine (viii. 409) Massignon published the catalogue of a library belonging to a Central African chieftain Shaikh Sidia; the editor notices the absence of books bearing on philosophy, alchemy, and music, but otherwise it does not differ in character from other Islāmic libraries, and the want of representation of these subjects may be due to accident.

LITERATURE.—I. Hamet, 'La Civilisation arabe en Afrique centrale,' in *Revue du monde musulman*, xiv. [1911] 1–35.

D. S. MARGOLIOUTH.

MUHAMMADANISM (in N. Africa). — I. History. — The introduction of Islām into N. Africa commenced shortly after the conquest of Egypt by 'Amr b. al-'Āṣ, who in A.D. 641 penetrated as far as Barca, and in the following year took Tripoli by storm. It was not till the autumn of 647, however, that an expedition on a great scale was organized for the subjugation of Africa, where the Patricius Gregory had declared himself independent of the Byzantine emperor, and made Sbeitla (in Tunisia) his seat of government. The Arab invader, 'Abdallāh b. Abī Sarḥ, who had advanced through the interior, defeated the forces collected by Gregory in the battle of Akuba, where Gregory himself perished, took and pillaged Sbeitla, and proceeded to devastate the country southwards as far as Gafsa and Jerid and northwards as far as Marmajanna. Permanent occupation was not yet contemplated, and the conquerors were satisfied with a heavy money payment, on the receipt of which they withdrew; certain conversions, however, were made. The civil war which followed the death of 'Uthmān delayed the activities of the Muslims in this region for a time, but in 665 the first Umayyad Khalīfah, Mu'āwiyah, dispatched an expedition thither, which overcame the troops sent by the Byzantine emperor, and in 669 established a province Ifrīqiyyah, with 'Uqbah b. Nāfi' for its first governor, who for the first time employed Berber converts as soldiers, and founded the city of Kairawan. Since the Islāmic programme was carried out by this governor, who threatened the pagans with extermination, the religion began to spread fast among the Berber tribes. In 675 'Uqbah was replaced by a less vigorous governor; but he was sent back to his province by Yazīd I. shortly after his accession, and proceeded to organize an expedition which finally reached Ceuta in the extreme west of Africa, whence he turned south and saw the Atlantic before starting homeward; but he did not again reach Kairawan, as his army was attacked by superior forces and annihilated at Tehuda, N.E. of Biscra. His defeat and death (683) were followed by a general revolt of the Africans from Arab rule, and an independent Berber state, with Kairawan for capital, was able to maintain itself for five years. In 690 this city was re-taken by the Arabs, who, however, evacuated the province, which lapsed into anarchy. An end was put to this by Mūsāh b. Nuṣair, sent in 705 to Kairawan as governor of Ifrīqiyyah, who traversed as far as Ceuta the country previously invaded by 'Uqbah, penetrated as far south as the Oasis of Sijilmasa, took Tangiers, and installed a Berber convert there as governor. He returned to Kairawan in 708, having definitely won N. Africa to Islām, and put an end to Christian domination, where it still existed. The pious Umayyad ʿOmar II. is said to have manifested zeal in the propagation of Islām among the inhabitants of these territories.

The Khārijites, who were giving much trouble in the eastern dominions of the Khalīfahs, also sent missionaries to the west, where they found a ready hearing among the recently converted tribes. The Ṣufrī doctrine spread among the westerly tribes, the Ibāḍī in Ifrīqiyyah proper. In 740 a revolt broke out in the extreme west against the Umayyad ruler in favour of the Khārijite doctrine, and, as it met with some initial success, it spread over Muslim Africa; a Syrian force sent by the Khalīfah Hishām to quell the rebellion was defeated on the Sebu. Another force headed by the governor of Egypt in 742 was more fortunate; but, though Kairawan was rendered secure, the Khārijites maintained themselves at Tlemsen and in the neighbouring parts of the modern Morocco, and various independent Khārijite communities established themselves to the west of the continent.

At the beginning of the 9th cent., while the dynasty of the Aghlabites was establishing itself at Kairawan, under the nominal suzerainty of the Khalīfahs of Baghdād, but virtually independent, an ʿAlid dynasty called the Idrīsid became dominant in the west, and in 808 founded the city of Fez. Other petty dynasties were also established in various places. The great event in the history of Muslim Africa during this century was the arrival of the Fāṭimid missionary Abū ʿAbdallāh, who won adherents among the Ketama, and by skilful organization and strategy was able to overthrow the Aghlabites, and install at Kairawan a Shīʿah dynasty, which presently substituted for Kairawan a new city, Mahdiyah, as metropolis. The petty principalities to the west of Kairawan alternated in their allegiance between the Umayyads of Spain and the Fāṭimids of Mahdiyah, but the latter remained the dominant power in N. Africa until they, having conquered Egypt, transferred their capital to Cairo, leaving in possession of Mahdiyah a dependent dynasty called the Zirids, who in the middle of the 11th cent. threw off Fāṭimid suzerainty. As the 11th cent. neared its end, the Almoravid dynasty, founded by an adventurer named Yūsuf b. Tāshifīn, with its capital at Morocco, obtained the hegemony; and this, in the middle of the 12th cent., was displaced by that of the Almohads founded by Ibn Tūmart, which under its first actual sovereign, ʿAbd al-Mu'min, obtained possession of all N. Africa as well as Spain. This dynasty lasted one century only, and was succeeded by three—the Merinids with their capital at Fez, the Ziyanids with theirs at Tlemsen, and the Ḥafṣids, with theirs at Tunis—whose constant disputes kept N. Africa in a state of turbulence for some two centuries. In the 16th cent. various points on the north and west coasts were seized by Portuguese and Spanish forces and then by Turks; the three native dynasties gradually disappeared, and, whereas that of Tunis gave way to Ottoman domination, which had Algiers for its centre, in the west a new empire, that of the Sharīfs, arose. The capital of the Sharīfs was at different times Morocco and Fez, and sometimes Meknes; their first dynasty, that of the Saʿdians, lasted from 1520 until 1654, when it was ousted by that of the Ḥassānians, which became prominent in 1633. The Sharīfs and the Turks succeeded in ousting the Christian invaders from the places which they had occupied, but in 1830 Algiers was occupied by the French, whose empire has ever since been extending in N. Africa. The connexion of the Turkish settlements in N. Africa with the government of Constantinople grew constantly looser from the time of their establishment, and the pasha of Algiers had difficulty in maintaining his authority over the territories which lay to the west of that place.

The population forming the Islāmic communities has remained Berber in the main, but, besides the influx of Arabs at the time of the original invasion, the introduction of the Arab tribes Hilal and Sulaim in the 11th cent. has been of great importance for the political development of the country. These tribes, which had been located in Egypt, were, it is said, sent westwards by the Fāṭimid Khalīfah Mustanṣir, by way of avenging himself on the Zirid Muʿizz, who in 1048 had accepted the suzerainty of the ʿAbbāsid Khalīfah, destroyed the Ismāʿīlia college at Kairawan, where the Shīʿite doctrine was taught, and burned in public all that was indicative of Shīʿism. The Arabs advanced victoriously, and compelled the Berber sovereigns to make terms with them; under the Almohads some of the divisions of these tribes were introduced into the western provinces and employed by the government as a military force.

> 'Far from attaching themselves to the soil as the al-Mohads had hoped, these tribes continued to live in the nomad state and to annoy the government by their turbulence' (E. Michaux-Bellaire, 'Les Tribus arabes de la vallée du Lekkous,' in *Archives marocaines*, iv. [1905] 59).

Indeed, their risings form many a chapter in the history of N. Africa. Towards the end of the 17th cent. the Ḥassānid Sharīf Ismāʿīl purchased or procured a great number of Negroes, of whom he formed agricultural colonies, chiefly in the neighbourhood of Morocco, enjoying various privileges, but bound to place all male children from the age of ten at the disposal of the sovereign, to be trained for his guard, while various employments were also found for the females. By the end of his reign as many as 150,000 of these black soldiers were registered in his lists; they were placed under the patronage of Bukhārī, the author of the chief collection of traditions, whose sanctity in certain parts of the Islāmic world approaches or even exceeds that of the Prophet. The purpose of this scheme was to provide the Sulṭān with a guard unconnected with the native population, on whose fidelity he could rely. A Turkish and a Levantine element, neither very considerable in magnitude, were introduced into the eastern provinces by the Ottoman conquests.

2. Sects and orders.—It will have been seen from this sketch that during the first four centuries of Islām both Khārijite and Shīʿite opinions held sway in different parts of N. Africa. The former are still represented by certain isolated communities (see art. KHAWĀRIJ); when the Zirids asserted their independence of the Fāṭimids, Shīʿite opinions were condemned, and a general persecution of those who held them took place (1014); some years later (1045), on the occasion of a further dispute between the Zirid and the Fāṭimid monarchs, the former asserted the legitimacy of the ʿAbbāsid Khalīfate and proclaimed the orthodoxy of the Mālikite system, upon which the Almoravids also insisted. The founder of the Almohad dynasty was a follower of the Ashʿarite theology, and himself propagated it in Africa, displacing that of the Zahirites (Qalqashandī, *Ṣubḥ al-Aʿshā*, Cairo, 1915, v. 191). The further changes of dynasty appear to have produced no alteration in the dominance of these systems. The historians of the earlier period call attention to two purely African sects, both of which obtained some hold. The first of these was that founded by Ṣāliḥ b. Ṭarīf, prophet of the Bargwata in Temessna, who about A.D. 750 promulgated a Qur'ān containing *sūrahs* named after 'the Cock,' 'the Elephant,' 'the Asses,' 'Adam,' etc., and was recognized by his tribe. After a reign of forty-seven years he departed to the East, promising to return under the seventh sovereign of his dynasty and leaving his son Elias to continue his work. This successor reigned, we are told, fifty years, professing Islām, but secretly harbouring his father's heresy, which was openly professed by the third of the line, Yūnus. Yūnus endeavoured to enforce its acceptance under penalty of death, and is said to have razed numerous cities and massacred crowds of his subjects in his endeavour to propagate the doctrine. The doctrine seems to have differed from orthodox Islām in matters of ceremony chiefly. It substituted Rajab as fasting month for Ramaḍān; it prescribed ten daily and nightly prayers instead of five; its sacrificial day was 11th Muḥarram; its alms-tax was a tithe of all fruits; its ceremonial cleansing was much more elaborate than the orthodox; some of the prayers consisted of gestures without bending of the body; and the formulæ were in the vernacular of the tribe. The cock served instead of *mu'adhdhin*; its flesh was a forbidden food, whereas that of the hen was only disapproved. Eggs also were forbidden. The sect survived till the middle of the 11th cent., when it was exterminated by the Almoravids.

Another Berber author of a Qur'ān was Ḥāmīm, prophet of the Ghumarah near Tetuan, who came forward in A.D. 925; in his system prayer was only twice a day, and the only attitude adopted in it was an inclination in which the ground was touched with the back of the hands. He prescribed fasting all Thursday, and on Wednesday till noon. He reduced the fast of Ramaḍān by a number of days, abolished pilgrimage, purification, and the total ablution, and permitted sow's flesh to be eaten, on the ground that the Qur'ān of Muhammad forbade that of the boar only. Specimens of his Qur'ān, which was in the Berber language, are given in the *Kitāb al-istibṣār* (tr. E. Fagnan, Constantine, 1900, p. 143), and relics of the sect which he founded existed in the time of the historian Ibn Khaldūn (*c.* A.D. 1400), who asserts that the greater number of sorcerers came from the Jabal Ḥāmīm, which took its name from this personage, whose actual career appears to have been very short. He was defeated in the neighbourhood of Tangiers by a force sent by the Spanish Umayyad al-Nāṣir in the year 927, and his head was sent to Cordova.

In the year 1228 another prophet arose among the Ghumarah, called Muḥammad b. Abī'l-Ṭawājin, who performed miracles and instituted a code; he was, however, cursed by the saint and ascetic 'Abd al-Salām b. Mashīsh, in consequence of which most of his Berber followers withdrew from him. The prophet in retaliation caused the saint to be assassinated, but was himself shortly afterwards defeated by the garrison of Ceuta, and killed by a Berber; his descendants are still to be found in the neighbourhood of the Wad Ras, where, however, they are under a sort of ban, and forbidden access to the Jabal Alam, where the saint Ibn Mashīsh dwelt, of whose cult hatred for the Bani Ṭawājin forms a part (*Archives marocaines*, ii. [1905] 24). Ibn Khaldūn gives no details of the system which this prophet tried to establish (*History*, ed. Cairo, 1284, vi. 222). The title 'Mahdī' is said to have been taken by the first of these prophets, and, being less likely to offend popular prejudice than the title 'Prophet,' it has been assumed by many pretenders in Africa—*e.g.*, the founders of the Fāṭimid and Almohad dynasties, a contemporary of the former, 'a young man' at the commencement of the reign of the Fāṭimid Manṣūr (A.D. 946). It is noticeable that the Almohad Ma'mūn, at his triumphal entry into Morocco in 1230, definitely rejected the claim of the founder of his dynasty to this title, asserting that the only Mahdī was Jesus the Son of Mary, and that the ascription of it to Ibn Tūmart was a fable. Numerous claimants to it have risen since that time (see art. MAHDĪ).

Of an obscure sect called the Baḍadwa, located on the right bank of the Sebu, an account is given by G. Salmon in *Archives marocaines*, ii. [1905] 358–363. A branch of these called 'the sect of Yūsuf' is mentioned as having arisen in the 10th century (*ib.* xix. [1913] 214). Apparently they base their system on the Qur'ān, but differ from other Muslims in points of ritual.

The general dominance of the Mālikite code, of which the most familiar compendium is that of Sīdī Khalīl (Abū Ḍiyā), was not affected by the dynastic changes, except that in the provinces governed by Turks the official system of the Ottomans, that of Abū Ḥanīfah, was introduced without displacing the other; in these regions there were two *qāḍīs*. In the cities of N. Africa there were theological schools which produced orthodox writers and teachers of eminence, and such were to be found as far south as Timbuktu, which was made subject to Morocco in 1590; one of the prisoners then taken, Aḥmad Bābā, who belonged to a family of theologians, complained that the conquerors had pillaged his library, which, though containing 1600 volumes, was smaller than others which belonged to his relatives. The Islām of N. Africa was greatly influenced by the introduction of the form of Ṣūfīism connected with the name of 'Abd al-Qādir al-Jīlānī ([*q.v.*] † 561 A.H.), to whom the establishment of orders is traced. In one of the earliest European accounts of the orders (E. de Neveu, *Les Khouan: Ordres religieux chez les Musulmans de l'Algérie*, Paris, 1846) various popular beliefs about this personage are collected.

> 'He it is whose name is ceaselessly repeated by beggars demanding alms, and whose name is invoked by all whom any accident befalls. When a man falls, the bystanders and he himself cry out, "Ah, my lord 'Abd al-Qādir!" The miserable in their sufferings, and women in travail, pray him to intercede for them. In the month Ṣafar 380,000 evils of all sorts descend from the sky; of these he bears three-quarters himself' (p. 23 f.).

Lists of the orders established in N. Africa were made by this writer, and more complete registers were later drawn up by L. Rinn, O. Depont, and X. Coppolani. Some of these either originated in Africa or are only known to exist there.

In the 15th cent. Shādhilīism was propagated in Morocco by Muḥammad b. Sulaimān al-Jazūlī, who counts as the starting-point of all the orders and *zāwiyahs* of this region. An account of this personage, who died in 1464, and is famous throughout Islām as the author of the *Dalā'il al-Khairāt*, is given in *Archives marocaines*, xix. 277 ff., as an appendix to the treatise *Da'wat al-Nāshir* of Ibn 'Askar, which contains the lives of ascetics of Morocco; A. Graulle, who is the translator of this work, added to it as a continuation in vol. xxi. [1913] the *Nashr al-Mathānī* of Muḥammad b. al-Ṭayyib al-Qādirī, and proposes to add as another supplement the *Ghurb al-Muhtaḍar* of Ja'far al-Kittanī. The *Salwat al-anfās*, published at Fez in 1316, is of similar import. The amount of historical matter contained in these lives is small; their purpose is chiefly to edify. The growth of the orders throughout N. Africa, ultimately (according to French authorities) rendering possible a territorial division by *zāwiyahs* like parishes, does not appear to have at any time had a beneficial effect either on the religion or on the morals of the inhabitants. In an essay, 'Sur la Mentalité religieuse dans la region de Rabat et de Sale' (*Archives marocaines*, vi. [1906] 423–435), E. Mercier describes the effects which he witnessed in two towns which count as sacred.

'The people are fanatics rather than believers, haters of the non-Muslim rather than religious'; the member of an order shares the superstitions of the ignorant, but is more bigoted and, having secured his own salvation, looks down on others who are less fortunate. 'Convinced of his immense superiority, he shuts himself up in a strict formalism, scrupulous and punctual observation of the rites which take up his time and save him the trouble of reflecting' (p. 4).

It is asserted that religion occupies a much larger share of Berber than of Arab life, and the names of the dynasties, Almoravids, Almohads, bear this out. In the 16th cent. the devotees (called *murābiṭ*, or *marabout*) begin to play a political rôle of great importance; their *zāwiyahs*, or hermitages, which at times were like towns in magnitude, are regularly employed as refuges; they themselves in times of peace (so far as there were any) enjoyed divers privileges—*e.g.*, under Turkish rule the marabouts of the Amokran family in the neighbourhood of Jijeli had the right to direct the provision of timber for shipbuilding, and others had a share in the proceeds of the piracy; they were employed as envoys, as mediators, and, at times, as regents. Most frequently we hear of them as heading insurrections. The dynasty of the Saʿdian Sharīfs is said to have commenced by the inhabitants of Sus at the time of the Portuguese settlements betaking themselves to a marabout named Ibn Mubārak, whom they implored to place himself at their head and march against the Christian invaders; he referred them to the Sharīf Abu ʿAbdallāh al-Qaim, then residing at Tagmadaret, whose sons undertook the duty. In 1612 the Saʿdian Sharīf al-Ma'mūn, who, in order to regain his throne, had handed over Al-Araish to the Spaniards, was assassinated by the *muqaddam* (abbot) Muḥammad b. Abī' l-Lif, at the instance, it is said, of the marabout Abū'l-Mahalli, who belonged to the Raḥmānī order, and even proclaimed himself Mahdi. This personage was able to take Morocco, where he established himself as sovereign until defeated by another marabout Yaḥyā, who espoused the cause of the Saʿdian Zaidan, and was then, not without difficulty, persuaded to return to his monastery. In 1619 an insurrection in the province Habt was headed by a marabout al-Ḥasan b. Raisun, also in favour of a Saʿdian, who undertook to restore orthodox practice; and early in the 17th cent. the marabouts of Dela, Sale, and Sijilmasa headed political parties in different parts of the Saʿdian empire. In 1639 a Turkish force dispatched from Algiers which was entrapped in the Kabiliyah was saved by the intervention of a marabout, who obtained reasonable terms from the natives for it. In 1641 the Algerian pasha Yūsuf, starting an expedition for the suppression of anarchy in the province of Constantine, obtained the good offices of the marabout Ibn Sasi of Bone. In 1664 one named Sīdī Hamud obtained a passage for the Algerian troops marching to the relief of Jijeli, which had been occupied by the French. In 1668 the marabouts of Dela were at war with the Ḥassānian Sharīf Rashīd, who defeated them and stormed their *zāwiyah*, which had grown into a populous and sumptuous town. His brother and successor, Ismāʿīl, had to face an insurrection headed by one of the survivors from this monastery, named Aḥmad b. ʿAbdallāh, who was defeated in the neighbourhood of Tedla. Their activity was no less marked in the 18th century. In 1757 a marabout raised the standard of revolt against the Ḥassānian Sharīf Muḥammad b. ʿAbdallāh in the country of the Ghumarah. In 1777 an insurrection was started at Tlemsen by a fanatic of the Derkawī order, named Muḥammad b. ʿAbdallāh, whose followers were ultimately bought off. In 1787 Salah Bey of Constantine conducted a series of campaigns, not all of them successful, against the heads of *zāwiyahs* in this province. In 1803 another Derkawī, Ibn al-Ahrash, said to be favoured by the British Government, established himself at Jijeli, and organized the natives against the bey of Constantine, whom he defeated and killed; and in 1805 the Derkawīs revolted in the province of Oran and besieged Oran itself. In 1818 the marabouts of this province gave further trouble, and many more recent instances of their activity are recorded.

In general the ostensible aim of these devotees has been to free the soil of Africa from Christian occupation; but this has not invariably been the case, as there are instances of the marabouts compromising with the Christians or even invoking their assistance against rivals (*Archives marocaines*, ii. 46).

3. **Cult of saints.**—Closely connected with the orders is the cult of saints, which is wide-spread in N. Africa. The tomb of Idrīs, founder of the Idrīsī dynasty, is a common place of pilgrimage, and both it and other tombs figure in the history as places of refuge. The tomb of Ibn Mashīsh (see above, p. 882^a) is visited in the month Shaʿbān, and comprehends a series of visits to those of his ancestors and descendants (*Archives marocaines*, ii. 24). A list of the tombs visited in the Gharb is given in *Archives marocaines*, xx. [1913] 246–278; of the saints thus venerated the most popular is Sīdi Qāsim b. Lallūsha († A.D. 1666). 'What is certain is that he has two sanctuaries, one on the left and one on the right bank of the Sebu' (p. 261), and that he has several festivals in the year, one of which lasts three days. A list for the province Habt is given in *Archives marocaines*, xvii. [1911] 481 ff. These saints have functions corresponding closely with those of the patron saints of Christianity.

'The *zāwiyah* Sharqāwiyah of Bū'l-Ja'd is not only a religious centre, but likewise a centre of preparation for the sacred war, and the greater number of the horsemen and shooters of the Gharb are placed under the patronage of Sīdi Bū Abīd al-Sharqāwi. In this region one frequently finds the name Bū Abīd, which is considered to be of good omen for horsemen. Parents often give their children the name of a marabout under whose patronage some military exercise is placed' (*ib.* xx. 39).

An account is given (*ib.* p. 276 ff.) of various Maraboutic 'tribes,' *i.e.* groups of villages attached to some saintly cult, and not, like the *zāwiyahs*, isolated villages.

Much material is to be found in *Revue africaine*, nos. 1–293 [1856–1915], *Mémoires de la société archéologique de Constantine*, vols. i.–xlv. [1853–1912], *Archives marocaines*, vols. i.–xxi. [1904–13]. See also I. Hamet, *Les Musulmans français au nord de l'Afrique*, Paris, 1906; T. H. Weir, *The Shaikhs of Morocco*, London, 1904.

D. S. MARGOLIOUTH.

MUHAMMADANISM (in Arabia).—One of the results of the taking of Mecca by Muhammad was a determination on his part no longer to tolerate paganism in Arabia, and the destruction of the ancient cults took place throughout the peninsula with extraordinary rapidity; the ease with which the fetishes were discarded by their worshippers has elicited expressions of wonder from some who have chronicled the period. It is indeed suggested at times that there are still unexplored regions in Arabia whither Islām has not penetrated, but of these rumours there appears to be no confirmation. So far as the authorities before us warrant, every tradition of the older religions appears to have perished; statements about them which meet us in Arabic literature are ordinarily fictions based on Qur'ānic texts, and the so-called 'pre-Islāmic poetry' must, if genuine, have undergone wholesale expurgation. Even the revolts in Arabia which followed the Prophet's death do not appear to exhibit any recrudescence of paganism, but merely a desire for liberation from some of the more onerous exactions of Islām; and permanent relief in one matter (the number of daily prayers) is said to have been obtained by one of the rebellious tribes, though the revolt was otherwise a failure. It is worthy of notice that these rebellions were led by prophets who aimed at re-enacting Muhammad's part, not by priests or other representatives of the fallen idols. The liberation of Arabia from paganism was speedily followed by the penalizing therein of all non-Islāmic cults, even the Jews and Christians, whose rights had been respected by the Prophet, being either banished or forcibly converted in the time of the second Khalīfah.

The murder of the third of these rulers in the year 35 A.H. was an event of the greatest importance for both Arabia and Islām. On the one hand, as some of the far-sighted are said to have urged at the time, it split the community into sects; complete unity has never been restored. On the other hand, the political centre of Islām was thereby shifted to a point outside Arabia; the Assassins came from Egypt, and the battles for the succession were fought from Baṣra, Kūfa, and Damascus. These cities became the capitals of the rival claimants, and Medīna was never restored to the position which it had once held. Arabia has, therefore, ever since been a province, at a distance from the seat of government; and such principalities as have asserted their independence within the peninsula have been mediocre both in magnitude and in importance. Such talent as Arabia produced has been attracted to the political centre, whereas the persons attracted to it from outside have been mainly devotees.

There are, however, certain ways in which the influence of Arabia upon Islām has been constant or permanent. On the one hand, Mecca has maintained its position throughout history as the greatest Islāmic sanctuary; some sovereigns are said to have contemplated substituting either Jerusalem or Baghdād, but to have abandoned the idea as impracticable. This place has not only served to perpetuate the traditions which Islām took on from older times, but has also served as a rallying ground for the sects; and only occasionally has its sanctity been violated. Mecca is the place where the Islāmic world as a whole can be most easily addressed, and to this day revivalist movements, which are usually reactionary, have a tendency to materialize there.

On the other hand, Medīna remained the chief seat of Islāmic learning some generations after it had ceased to be the political capital. At this place, the residence of the Prophet's widows, several of whom survived him for many decades, and the theatre of his most eventful years, the science of tradition came into existence, and this speedily became the most important source of law, though not first in the list. In the 1st cent. of Islām Medīna produced a school of jurists who, though they left nothing in writing, by their labours prepared the way for the codes whose publication followed shortly after the foundation of Baghdād. In the middle of the 2nd cent. it was the home of the jurist Mālik, where he received as pupil Shāfiʿī; Shāfiʿī in later life went to Baghdād, where alone conspicuous ability could find its reward. With the names of these personages two of the three great Islāmic codes are connected. It is, therefore, Arabian (and indeed Medīnese) law that theoretically is observed throughout Islām, though in the more civilized States the civil and criminal portions have given way to the Code Napoléon.

The development of the other Islāmic sciences has little to do with Arabia, which in these matters has lagged behind the other provinces. The chief battles of the sects, too, have been fought outside Arabia; they could not, however, cut quite adrift from the sacred territory, where they did not, as a rule, win many enthusiastic adherents. There has, however, been always a smouldering desire to recover that hegemony which was lost after the murder of Othmān; hence there has generally been disaffection towards the ruling power. Perhaps the most serious attempt made at recovering the lost hegemony was when in the early ʿAbbāsid period ʿAbdallāh, son of Zubair, was able to maintain the two sacred cities for a time against the Umayyad generals. His cause perished with him; and rebellions which have since taken place in Arabia have had for their object recovery of independence within the peninsula rather than reestablishment of the political headquarters of the empire.

An account of the religious condition of Arabia in the 4th cent. of Islām is given by the geographer Muqaddasī (ed. M. J. de Goeje, Leyden, 1877, p. 96). The three great political sects, the Sunnīs, Shīʿahs, and Khārijīs (called by him Shurāt), were represented in different parts of the peninsula. One sect which has since disappeared, the Qarmaṭīs, was dominant in Hajr. The Sunnī schools were not then restricted to four, and, besides the systems of Abū Ḥanīfah and Mālik, those of Dāwūd the Ẓāhirī, Sufyān al-Thaurī, and Ibn al-Mundhir had adherents. The Shīʿites in parts of the country were also distinguished as Muʿtazilites.

Of the rise of the Khārijī power in Oman an account has been given in the art. IBĀḌĪS. Of a Khārijite who maintained himself in Yemen from 538 to 569 A.H. a notice is given by Ibn Khaldūn (tr. H. C. Kay, *Omarah's History of Yemen*, London, 1892, pp. 161–165). The branch of the Shīʿah which has maintained itself permanently in S. Arabia is the Zaidī (*q.v.*). It is called after a descendant of ʿAlī, Zaid, who perished in an abortive rising of the year 122 A.H. For its history, references may be given to the work of H. C. Kay (pp. 184–190), and Khazrajī's *History of the Rasúlí Dynasty of Yaman* (tr. J. W. Redhouse, London, 1907). An account of the Qarmaṭīs in Yemen by Janadī is also translated in the work of Kay (pp. 190–212). Other sects were either at one time represented in Arabia or are still to be found there; of a Shīʿite sect called Sabʿiyyah representatives are to be found in a Yemenite community called Yām (Aḥmad Rāshid, *History of Yemen and Ṣanʿā* [Turkish], Constantinople, 1291 A.H., ii. 87); their views appear to be similar to those of ʿAzāqirī (Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1907–13, i. 301).

Probably the most important religious movement which has taken place in Arabia since the rise of Islām is that called Wahhābī (*q.v.*), the origin and course of which have been described by the English travellers W. G. Palgrave, Lady Anne Blunt, C. M. Doughty, and the Austrian traveller E. Nolde.

So far as the literature of these sects has hitherto been made accessible, it would appear that they have had to adopt and modify the results of the labours carried on at the great Islāmic centres, and have themselves been incapable of producing original works of any consequence. One of the few specimens as yet accessible of purely Arabian theology, *Al-ʿIlm al-Shāmikh*, by Ṣāliḥ b. Mahdī of Yemen († 1108 A.H.), in which an endeavour is made to find a common ground for the sects by going behind the supposed innovations of the founders, appears to rest entirely on the older theological works, already known in Europe, the authors of which were natives of extra-Arabian provinces. We learn from this work that the Ṣūfī orders and practices, which originated in Baghdād and Baṣra, were in the author's time well represented in S. Arabia. Against these the Wahhābī movement in the centre and north of the peninsula was to some extent a revolt.

From the statements of the few travellers who have spent much time in the peninsula and have been able to familiarize themselves with its conditions, it would appear that the great bulk of the population are, in theory at any rate, fiercely Muhammadan, but that the observation of the practices which the system enjoins is much more regular in the towns than in the desert. There is, however, considerable difference between the statements of different travellers, and much variety has doubtless been occasioned by local, temporal, and personal factors. When K. Niebuhr (in the latter half of the 18th cent.) visited S. Arabia, he found that a Christian was there treated somewhat as a Jew was treated in Europe—as an inferior being, but not necessarily to be molested.[1] Perhaps the greater number of visitors in the 19th cent. either adopted or simulated Islām; and this, indeed, has been a necessity in the sacred territory, where the presence of unbelievers is not tolerated by the government. In the Wahhābī States the tendency seems to have been in the direction of intolerance; yet on this matter almost contemporary accounts are inconsistent, and it would appear that the demeanour of the traveller has largely determined the conduct of his entertainers; even a missionary who went to Ḥaiel with the avowed object of circulating the NT was only sent under escort out of the Wahhābī territory. The explorers of S. Arabia appear to have undergone little molestation on religious grounds; intertribal wars and international politics have interfered with them much more. It is worth noticing that the Cairene journal which is conducted ostensibly in the interest of the Muslim chieftains of S. Arabia has for its proprietor and editor a Christian with the unmistakable name ʿAbd al-Masīḥ, 'Slave of Christ.'

LITERATURE.—This is sufficiently quoted throughout the article.

D. S. MARGOLIOUTH.

MUHAMMADANISM (in Central Asia).—In sketching the peculiarities of Islām in Central Asia, it is necessary to begin with the impression which the difference between the religious life in western and middle Asia must make upon any one who has occasion to study these wide-spread portions of the Muhammadan world. From Constantinople east a gradually increasing fanaticism and ignorance will be observed, and the deeper the penetration into Asia, the more outspoken and intense become the hatred and aversion of the believer to the adherents of a foreign creed, and the less is it possible to ignore the points of divergence separating men of various religions. In Turkey, where Christians and Muslims have lived for centuries in close proximity, a long existing and continuous intercourse with the European world has undoubtedly smoothed away many asperities, and has, to a certain extent, prepared for a mutual understanding. In spite of the temporary outbreaks of enmity between Kurds and Armenians, caused by the predatory habits of the Kurds and not by their religion—for they are very lax Muslims—the relations between Christians and Muhammadans are fair, and would be much better if the misrule of the central government on the Bosphorus and the political instigations from without did not steadily envenom the situation. In Persia Islām presents itself in quite a different form. There first appears the deep-rooted enmity between Shīʿites and Sunnites, and the fire which this schism kindled more than 1200 years ago is still raging. As for the life of the Shīʿite sect, what the present writer saw and heard during his wanderings as a dervish in Īrān gave him a very poor opinion of their piety and the moral effect of their teachings. Outward appearance and formalities, hypocrisy and fanaticism, hatred and implacability, are the main characteristics of the national religion of Persia; and, whereas in Turkey a good deal of the hierarchical power is invested in the hands of the Sulṭān, in Persia we find the clergy the supreme arbiters of the spiritual life, unchecked by the secular government, and very frequently its rival. During the more than 100 years' rule of the present Persian dynasty the Shāhs have striven in vain to curtail the influence of the priests; the Imām Jumʿa of Iṣfahān and Karbalā were and are their equals if not superiors in power, and the Shāh's ordinances are nil without their consent.

If we turn now to Central Asia, the difference will at once appear which separates Islām there not only from Irān—which is very natural—but also from the western portion of the Muhammadan world, in spite of their common Sunnite character and common Ḥanīfite rite. For it is only in E. Turkestan that adherents of the Shāfiʿite rite are to be met with. There we find a distinctly different religious life, the manners and customs of which do not resemble those of W. Asia. There everything bears the special stamp of extravagant fanaticism, of an exalted conception of the value of ritual trivialities, and of a deep hatred against innovations. In observing the Central Asian Muslim in his daily life, his social intercourse, his trade, and his attitude towards his government, one is tempted to believe oneself not in the 14th, but in the 2nd cent. of the Hijrah, and probably even then the prescriptions of the Qur'ān and the Sunnah were hardly so rigorously observed as they are to-day in Central Asia. Nearly one-third of the day is devoted to religious practices. Every good Muhammadan has in his room a quadrangular depression for the ritual ablutions, a niche in the wall in which to keep the Qur'ān, and a special place reserved for the *sajjādah*, or prayer carpet. Like most Orientals, he is careful to have his dress in harmony with the prescripts of his religion, and not the slightest alteration has taken place in the cut and shape of his inner and outer garments. Any deviation from the old custom, be it only in button or braid, is looked upon as an infringement of the spirit of the law. Even the material of his dress is under rigorous rule; and, as the use of pure silk is prohibited by orthodox Islām, the silk stuffs manufactured in Bukhārā and Khoqand are intermixed with a few threads of cotton. The turban, also, the *jubbah*, or overcoat, and many other garments have undergone no change for centuries, there being a predominant desire to imitate and reproduce the usage of the Muslim world of bygone ages, and particularly of Baghdād, Damascus, and the holy cities of Arabia. The case is similar as to the relations between the sexes. The separation is much more strict, and women are looked upon as mere chattels and slaves in the hand of a tyrannical master, in spite of the milder views of the Qur'ān and its expounders. They not only cover their faces with a thick impenetrable veil, but they are literally shrouded in a cloak of greater length and width than their body; and, in order not to attract the covetous glance of men, young girls even have to feign the appearance of old decrepit matrons, and very often walk leaning on a stick, as if bowed down by age or infirmities. The prohibition, also, of alcoholic drinks is very naturally more rigorously enforced than elsewhere in Islām, although in former times the ruling classes were noted for indulging freely in spirits; during the epoch of the Tīmūrids princes are mentioned who died of *delirium tremens*; and Bābar and his followers transported this vice to the court of the Mughals. This, however, could not be said of the masses. In the present writer's time (1862–64) they were rigorously abstemious, and it is only since the annexation by Russia that the use of brandy and beer has begun to spread among the inhabitants of the towns.

---

[1] *Description de l'Arabie*, Amsterdam, 1774, p. ix.

In the observance, then, of the ruling prescripts of the Qur'ān and Sunnah the Muhammadan in Turkestan surpasses all his co-religionists elsewhere; his creed is the moving power in his spiritual and material life; by it he is guided in all his undertakings, thoughts, deeds, and wishes. His Muslim brother in Turkey and Persia is satisfied when he is able to perform his five daily prayers, consisting of a certain number of *rak'ahs* (bowings), and has spent three to six minutes at *murāqabah* (contemplation). The religious man in Central Asia must go far beyond this, for he has to add a few *nāfilah* (additional) *rak'ahs*; he remains from ten to fifteen minutes in contemplation, and, after having performed this extra prayer, he has to read in the forenoon either the *sūrah Yā Sīn* (xxxvi.) or *Innā Fataḥnā* (xlviii.), and in the afternoon he has to recite a portion of the *Mathnavī* of Jalāl al-Dīn Rūmī (*q.v.*), or to chant a few *ilāhīs* (hymns). This form of devotion is obligatory on every educated and respectable man, whereas the performance of the five prayers is indispensable for every Muslim irrespective of sex, age, or calling; and whoever neglects this duty, or remains ignorant of the elementary teachings of Islām, cannot escape every kind of vexation and reprobation on the part of the authorities. For this purpose a special functionary called *ra'īs* (chief) is appointed, who, accompanied by one or two servants, has to traverse the bazaars and the public places with the *dirrah*, a whip made of twisted thongs, in his hand, and, whenever he notices any one who does not go to the mosque on the first sounds of the *mu'adhdhin* (the public crier who assembles the people to prayer), he is entitled to beat the lingerer with the whip, or to put him in prison. The *ra'īs* plays, besides, the part of a public examiner: he stops at random any one in the street, puts to him a question concerning the main prescriptions of Islām, and the individual unable to answer is sent at once to school without consideration of age or profession. Full-grown and even grey-bearded men are sent to school by the religious police to learn their lesson by heart before being allowed to go. The *ra'īs*, whose office is a survival from the early Khalīfate, nonexistent elsewhere in Islām, also superintends the laws of public morality. Women indecently dressed are publicly rebuked and sent home, and even children are subjected to his control. What he is still for Central Asia that the *muḥtasib* (police inspector) was for all Islām in former times; but at present, when modern European institutions are gaining ground, the office is but a nominal one in Persia as well as in Turkey. Further, not only are the prescripts of the Qur'ān more rigorously kept; they are also differently expounded. In Turkey, *e.g.*, the cutting or shaving of the beard has been practised at all times, whereas in Central Asia it is looked upon as a deadly sin, or even as apostasy. In Turkey, again, and everywhere in Islām, it suffices for the believer to wash certain parts of his body after relieving nature; in Central Asia this is much more circumstantial, for he must apply *istinjā* (cleaning with a flint or with a clod), *istinqā'* (washing with water), and *istibrā* (drying). For this purpose he conceals a few clods in the fold of his turban.

But these and many other peculiarities of Islām in Central Asia are of secondary importance in comparison with one salient phase of the religious life, namely, the wide-spread and highly influential religious orders which dominate the situation, and have ever been the main moving power of the spiritual life. During many years' intimate acquaintance with the Muhammadans of Turkey and Persia, the present writer never observed such strict adherence to the rites of the different orders and such veneration for their members, generally called dervishes, as in Turkestan. In the Ottoman empire—and this is particularly the case with the genuine Turks—the Maulavī, the Baqṭāshī, the Rifā'ī, and the Qādirī orders have many votaries among the lower classes, and the respective dervishes are looked upon as saints. But the better classes, *i.e.* the Efendis and the higher dignitaries, very rarely manifest the same degree of attachment. They visit the convents on Friday afternoons, they attend the sacred ceremonies, they take advice sometimes on both worldly and spiritual matters; but they have long ago ceased to be weak instruments in the hand of the Shaikhs, and particularly of the Baqṭāshīs, who, having acted as revolutionary factors against the innovations in the time of Sulṭān Maḥmūd II., are officially interdicted and only secretly followed. Somewhat similar is the case in Persia, where the conflicts between Shī'ites and Sunnites engage too much attention to leave room for the orders, although the Shaikhīs and 'Alī Illāhīs find followers among the lower classes. The host of dervishes to be met with in towns and villages are either vagabonds, living upon the credulity and superstition of the people, or harmless idlers who conceal their laziness under the *khirqah* (mantle) of religious exaltation.

In the settled parts of Central Asia, and even among the nomads, the orders play a very different and a far more important part. There they have taken hold of the entire population; they have pushed aside the secular clergy, *i.e.* the *'ulamā*, or priests educated in the *madrasahs*, and appointed as such by the government. These, of course, are continually at war with the members of the orders, among whom the Naqshbandis, founded by Bahā al-Dīn, best known as the author of the *Rashahat 'ain al-ḥayāt* ('Drops from the Fountain of Life'), occupy the foremost place. Having associated with the Naqshbandī dervishes during his stay in Central Asia, the present writer found among them various subdivisions, the character of which is expressed partly in outer appearance, partly in the way in which they fulfil their obligations. They begin as *murīds* (disciples), and as such they must forsake all worldly purposes and, clad in the *khirqah* and *kulāh* (conical hat), holding in one hand the *'aṣā* (staff) and in the other the *kashkūl* (a bowl made of a half coco-nut), have to wander about singing hymns or taking part in the *dhikr* (mentioning the name of God) and *tawḥīd* (acknowledgment of the unity of God). As the majority of the dervishes are illiterate, they learn a certain number of hymns by heart and recite them in chorus, accompanying the monotonous melody with frantic gesticulations and wild exclamations. Public places are usually selected for such performances, in order to attract attention and to collect contributions; for the dervishes, although forbidden to accept money, often betray the greatest greed, and their obtrusiveness has become proverbial. Once or twice the present writer tried to join such a howling company, but he could hardly stand the fatigue for more than an hour, whereas these adepts wander about for days without becoming exhausted. What struck him most was the endurance manifested during the *dhikrs*, and he remembers having seen one dervish crying for two nights without interruption the *Yā Hū, Yā Ḥaqq* ('He is the true and the right') without exhaustion. This, of course, refers to the lower degree of dervishes, who very rarely attain the rank of *khalīfah*, a kind of graduate, entitled to preside over a *takyah* or *khānqāh* (convent), and to lead the ritual proceedings. The title of *khalīfah* is mostly given to learned dervishes, who afterwards are addressed as *īshān* ('they,' as a polite expression instead of 'thou'), and have always a group of followers, who either stay continually with them or call on them once or twice a week. The *takyah* or *khānqāh* is really a kind of lodging-house in which there are always a few stationary dervishes, while the majority of the inmates are wandering members of the respective orders, who get a temporary shelter in an empty cell without any furniture or bedding and no regular food, except from time to time a *pilau* (rice dish), and, if deprived of all means, a piece of bread. The guests and inmates of the *takyah* regard it as a duty to assemble round the chief at the time of the five daily prayers and also at the particular exercises of the dervishes, such as the *talqīn* (recitation or instruction) and the *ḥalqah* (ring). The latter is a circle of dervishes, presided over by the *īshān*, who sing and cry so long and so vehemently that they pass into a state of excitement and hallucination; their eyes turn wildly, their mouths foam, they tremble in all their limbs, and whoever touches a dervish in this state of ecstasy is believed to have a share in his devotion, and to be cured of all kinds of infirmities. Strange to say, the spiritual leader, who presides over the exercise, always remains quiet and motionless, unaffected by the eccentricities of his disciples, and expressing his satisfaction only by a complacent nodding. Old and young women, children, greybeards, and particularly ailing people, press around; they spasmodically seize the dervishes by their arms, head, or shoulders, they cling round their necks and embrace them, crying and sobbing; and some of them actually surpass the dervishes in their ecstasies. In Turkey this excitement, bordering on madness, is seldom or never seen, nor is there a similar participation on the part of the public.

In this and in many other respects the Islām of Central Asia stands alone. Everything in it bears the stamp of extravagance, unbridled passion, and weirdness of aspect. The believer is expected to follow blindly the tenets of the Qur'ān; no discussion or explanation is permitted, nor any effort to attract. Hence we see that, whereas in Western Islām the *adhān* (call to prayer) is given from the top of a minaret in a sweet melodious song, the *mu'adhdhin* in Turkestan summons the faithful in rough and half-articulated words from the flat roof of the mosque. The performance of religious duty, they say, does not require any allurement. Austerity and draconic rigour, too, prevail with regard to neglect or trespass of the laws of Islām. In the present writer's time a Muslim convicted of the use of alcoholic drinks was sentenced to death by being hurled from a tower, and a woman caught in adultery had to undergo the penalty of *rajm* (being stoned to death). Strange to say, the Central Asians are themselves fully alive to the exceptional position which they occupy in Islām; they are even proud of it, asserting that they are the most rigorous executors of the ordinances of the Prophet, and the only Muslims whose religious belief has not been contaminated by foreign influence, but has remained as pure as in the time of the Prophet, which they call *waqt-i-sa'ādat* (the period of happiness). Accordingly, the spiritual leaders and teachers in Central Asia form a distinct class, and enjoy greater fame and reputation in Turkestan and the neighbouring countries than in the West. This refers particularly to the saints (*auliyā*), religious teachers (*khwājahs*), and chiefs of orders (*pīrs*), and not to the learned in general. They are peculiarly esteemed and venerated in Central Asia proper, and, though not unknown in the rest of Islām, may be styled the eminently national or Central Asian Muslim worthies. As such they have taken hold of the religious spirit of the people of Turkestan, Afghānistān, and India. A few of these may be mentioned here, and, first, the previously named **Bahā al-Dīn Naqshbandī**. He was Muḥammad ibn Muḥammad al-Bukhārī, and, as a pupil of Sayyid Amīr Kulāl, he was early known for his great learning and piety in Bukhārā, then the centre of Muslim letters. There he founded the order named after him. During his lifetime he became the object of great veneration, and after his death the Amīr 'Abd al-'Azīz Khān erected over his tomb in the year 1544 the famous mausoleum and convent near Bukhārā, which has since become the greatest place of pilgrimage in Central Asia, and of such sanctity that three visits to it are deemed equal to a pilgrimage to Mecca. Next to Bahā al-Dīn ranks **Khwājah Kāshānī**, known as Makhdūm A'ẓam ('the greatest lord'), born in the village of Kāshān near Andijān (Farghāna), who died A.H. 949 (A.D. 1542), and was buried in Dehbid, a village near Samarqand. In the early part of his life he acted as governor of various places, but later he devoted himself exclusively to religious contemplation and theological studies, and aroused so high a veneration that his children reached princely rank. Of these the most noted was the great saint of E. Turkestan, **Khwājah Axath** (his proper name was Hidāyat Allāh), the founder of a ruling dynasty, members of which still exist in Kashgar. Frequently mentioned and highly venerated also is **Khwājah 'Ubaid Allāh Ahrār**, one of the greatest theologians of his time († A.D. 1489 at Kumaghiran, a village near Samarqand), whose grave is still a place of pilgrimage. Similarly with the tomb at Ghijduvān of **Khwājah 'Abd al-Khāliq**, a pupil of Khwājah Kāshānī († A.H. 1010). Others are **Khwājah Abūfer Parsah**, a pupil of Bahā al-Dīn († A.H. 845), whose grave in Balkh is a place of pilgrimage, particularly for Afghans; **Khwājah 'Abd Allāh Hātifī**, a famous poet and mystic, who spent much time in India with Bābar, the founder of the Mughal dynasty, and died there in A.H. 927 (A.D. 1520); and Juibarī († A.H. 997 [A.D. 1588]), whose grave is in Bukhārā.

Apart from these great theological scholars, saints, and mystics, there are a number of popular spiritual worthies who are venerated by the lower classes, sedentary and nomadic, and whose plain, unadorned, and more intelligible works are the favourite reading of the masses. To these belongs **Khwājah Aḥmad Yesevī**, the Kirghiz patron-saint of the 12th cent. A.D.; his grave in Ḥadrat-i-Turkestan, surrounded by a huge dome now in decay, is a place of pilgrimage famous through all Central Asia. His religious poems, known as *Ḥikmat* ('Wisdom,' 'Philosophy'), are still much esteemed, although their language, mixed with Arabic and Persian expressions, is not easily understood by the uninstructed nomads. What Yesevī is to the northern part of Turkestan, **Mashrab** (personal name, Raḥīm Bābā) is for the east and south. He was a native of Namangan in Khoqand, and known as a *dīvānah*, a religious madman. A *dīvānah* wanders from place to place, behaves like a man insane, but, possessed of divine powers, works miracles, and has consequently an extraordinary influence over the ignorant masses. The present writer's own observation of these *dīvānahs* or *faqīrs* (poor) has led him to the conviction that most of them are cunning men with a lust for adventure, ready to exploit the plain people, and unwilling to submit to the sometimes rigorous monastic regulations of the orders to which they belong, or disliking the individuality of their *īshān*, or spiritual chief. It was chiefly in the villages and in the tents of the nomads that he met with these religious vagabonds; there they are highly reverenced. The *mullās*, on the other hand, accuse them of ignorance, and of breaking the precept of Islām—*Lā ruhbān fī'l-Islām*, 'There are no monks in Islām.' The majority of them are illiterate, but the present writer has met with *dīvānahs* who were versed in religious lore, had studied in *madrasahs*, and had been moved simply by wandering propensities to renounce the regular and sedentary life of a priest. Among these dervishes there is also a certain Turk-dīvānah, a Turk by origin, as the name indicates (date unknown), who is very often spoken of by the nomads as a saint, and who interceded with Allāh for sinful humanity. He asked Him to deliver mankind from hell, to which Allāh replied that He would when peace, justice, charity, etc., reigned supreme in the world. Further, among the latter dervishes there are many of local celebrity, though others coming from distant countries have their own influence; in fact, the farther a dervish has wandered, the greater is deemed his supernatural power, and the stronger is his grip on the masses. The reason for this extraordinary influence of the beggar-dervishes does not lie merely in the utter ignorance of the people, but rather in the tyrannic rule of the governing classes, who, lay and ecclesiastic, are everywhere hated. These unofficial servants of God, then, discredited and despised by the *mullās*, are regarded by the lower class as of themselves; they thus very naturally become popular favourites, and frequently play the part of publicly avowed protectors against oppression.

In Western Islām there is hardly a trace to be found of these roaming saints, and those whom the traveller accidentally meets in the Balkan countries, in Asia Minor, and in Syria are mostly foreigners, and principally adventurers from Central Asia, India, or Persia. The Turk himself is too lazy, too easy-tempered, and too much given to a quiet life to find pleasure in the eccentricities of the wandering dervish. The Ottoman Turk, like the Kurd and the Arab, clings with great attachment to his faith; but he is very far from giving way to the religious ecstasy and wild fanaticism which are imputed to him by his detractors. In this respect the Western Muhammadan is many hundred years ahead of his fellow-believer in Central Asia; for the latter has remained absolutely in the position of the first centuries of Islām, and, indeed, at the beginning of the past century was even more fanatical and orthodox than in the time of Hārūn al-Rashīd and al-Ma'mūn. Such, however, was not always the case. As long as the Iranian element was predominant beyond the Oxus, worldly science found many votaries, and during the reign of the Sāmānids and later Central Asia was the birthplace of literary celebrities of high standing. But with the increase of the Turkish population and under the rule of warlike Turkish chieftains, mostly of nomadic origin, a great change has set in. The place of scientific culture has been taken by exclusively theological studies and mystic speculation. There has been no want of richly endowed colleges and schools; but the students, flocking from all parts of Central Asia and India, have turned their attention to purely religious questions, neglecting even such subjects as philosophy, law, and philology, which are still cultivated in the colleges of Western Islām. Naturally, then, scientific inquiry having been gradually banished, religious eccentricity has taken its place, and Central Asia has long been the seat of fanaticism. Jalāl al-Dīn Rūmī, the author of the *Mathnavī*, was right in saying:

> 'Thou wilt to Bukhārā? O fool for thy pains!
> Thither thou goest, to be put into chains.'

Similar things were said to the present writer by his learned friends in Turkey and Persia when they heard of his intended visit to Central Asia; and when, on returning, he related to them his experiences, many of them disdainfully criticized and laughed at the overheated religious zeal of their fellow-believers. Another reason for this great difference is to be sought in the belt of dreary sand steppes, infested by nomadic robbers, which surrounds Central Asia, and has always been a great hindrance to its communication with the rest of the Muhammadan world. Whilst Western Islām has undergone essential changes in the course of time, Islām in Central Asia has remained stationary, unaffected by the temporary intellectual movements in the West, and checked by the strong conservatism of a fanatical clergy and a despotic form of government. If Shī'ite Persia had not produced its great cleft in the general Muslim body, extending from W. China to the shores of the Adriatic, Islām in Central Asia could hardly have retained its fanaticism or degenerated into these aberrations, often censured by pious Muslims of other countries, but extolled by the Central Asians themselves, who accuse their co-religionists in Turkey and Arabia of levity of mind, and proclaim with pride: 'Bukhārā is the real strength of Islām and of the faith.' This difference becomes still more important when we observe that the spirit of zealotism has extended into N. India, and has particularly infected the barbarous mountaineers of Afghānistān. When we hear of a murderous attack by some Paṭhān or Khaibarī on an unoffending British officer, we have always to think of one of those fanatics, who, anxious to become a *ghāzī*, a warrior for the faith, is ready to sacrifice his life for the title of martyr, and for the prospect of a place in Paradise. The existence of such *ghāzīs* was formerly reported among the adherents of Shaikh Shamil in the fierce struggle between the Russians and Lesghians in the N.W. Caucasus, but nowhere else in Islām. It is, therefore, to the wild influence of the Islām of Central Asia that their appearance in the north of India must be ascribed.

A. VAMBÉRY.

MUHAMMADANISM (in China).—**1. Historical.**—China, regarded as a portion of the Muhammadan world, may be divided into (1) China proper (the 'Eighteen Provinces'), and (2) the external provinces (Turkestan, Tibet, and Mongolia). Of the external provinces only Turkestan need concern us here, for the Muhammadans resident in Tibet and Mongolia have never been more than an insignificant fraction. According to H. d'Ollone, *Revue du monde musulman*,[1] v. [1908] 94, they are to be found all along the highway to India through Tibet; thus, *e.g.*, there is a mosque at Tatsienlu for the hundred or so Muslim families living in the vicinity, while mosques are found also in Batang and Lhāsa, those in the latter city being attended, it is said, by Hindu Muhammadans. The Lāmas of Tibet are in no way hostile to Islām—a fact that need excite no surprise, since the adherents of the two religions have a common political interest in making all possible resistance to the domination of China. Nevertheless, there is no prospect of any considerable expansion of Islām in Tibet (cf. *RMM* v. 458). Hitherto, at all events, the commercial relations between Muhammadans and Tibetans have brought about no conversions to Islām, though the commercial bond is far from being insignificant. In particular, the Muslims of Sung-pʻan-tʻing in Sze-chuan carry on with Tibet an important traffic in tea, but in this locality the d'Ollone expedition of 1907 found only a single Tibetan convert to Islām, who, moreover, was rather lukewarm in his adherence (*RMM* v. 458 f.); on the other hand, several cases of conversion to Christianity were met with in Sung-pʻan-tʻing.

---

[1] Hereafter cited as *RMM*.

Muhammadanism was introduced into Turkestan at the time when the powerful kingdom of the Sāmānids was pressing towards the east. According to the tradition—interwoven with many legendary features—which is given in the *Tezkiret al-Boghra* (extracts in R. B. Shaw, *Sketch of the Turki Language*, Calcutta, 1878–80), the Turki prince Satak Boghra was converted to Islām at the age of twelve (A.D. 966; he reigned till 1047) by a certain Abū Naṣr Sāmānī, who came from the west. It is a fact of history that the descendants of Satak Boghra, known as the Boghraids or Ilekids, maintained their power till the year 1103, and in 1070, during the reign of Tapghach (one of that dynasty), Yūsuf Khass Hajib finished his great didactic poem *Qudatku Bilik* ('Joy-giving Science'), a work imbued with the spirit of Islām. Probably the diffusion of the Persian language and civilization among the Turki population had contributed to the spread of Islām in that region. But, if Islām was here the recognized religion of the rulers, it certainly was no more than tolerated in the adjacent Turki kingdom to the east—the land of the Uigurs. Nor can the position of the Muslims have undergone any essential change by the time when the Kara-Khitai overthrew the Ilekid kingdom, since the conquered people were left in full exercise of their religious freedom as long as they paid tribute to the victors. Similar methods were practised by the Mongol conqueror Jenghiz Khān and his immediate successors. At the division of his empire Turkestan fell to his grandson, Jagatai, whose successors soon embraced Islām. Even at a later time, however, as the records conclusively show, the adherence of princes and people alike to the new faith was half-hearted, and the ideas and usages of Lāmaism (*q.v.*) were quite common among the professed Muslims. The blind superstition of the people facilitated the usurping tactics of the philosophically gifted descendants of Makhdūm ʻAẓam, who at first ruled as the spiritual advisers of the dispossessed house of Jagatai, and eventually in their own name. The dissensions that arose within the family of Makhdūm, their struggle with the Kalmuks of Zungaria, and the internal wars of the Kalmuk kingdom led (*c.* 1750) to the conquest of Zungaria by the Chinese, who shortly thereafter won Kashgaria as well, and joined the two territories together as the 'New Province' (Hsin-chian). Ever since that time the Chinese have been the ruling power there, and various attempts at revolt have proved abortive. Only for a short period, from 1864 to 1877, did the country—as Altyshahr ('Six Cities'), and subsequently Yettishahr ('Seven Cities')—figure as an independent Muhammadan State under the savage but politically capable Yaʻqūb Beg, who recognized the suzerainty of the Sulṭān of Constantinople as Khalīfah; *e.g.*, the coinage was stamped with his name. The Muhammadans of these districts are nearly all Turki, though an insignificant number are Dungans (see below, pp. 891^{a}, 892^{a}) or Chinese, and the total population is estimated at from 1,000,000 to 1,500,000.

In China proper there existed no considerable groups of Muhammadans before the Mongolian period, and the reports of an earlier immigration are altogether legendary. Chinese tradition says that Islām found its way into the country by land and sea. It tells of a maternal uncle of the Prophet, Wahb Abū Kabshah, who landed at Canton in A.D. 628 or 629, bearing presents from Muhammad to the emperor of China, together with an invitation to embrace Islām, and who then proceeded to Hsi-an-fu. Other reports say that the earliest message was brought by Saʻd Ibn Abī Waqqāṣ, whose tomb may be seen in Canton. The tradition attaches special importance to an expedition of 4000 Muslim troops which the Khalīfah Manṣūr is said to have sent to assist the emperor in a struggle with rebels (A.D. 755). The emperor permitted them to settle in the chief cities of the country; they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

These traditions find no corroboration in the writings of Arabian historians. China and Islām, as a matter of fact, were brought into contact with each other as a result of the conditions prevailing in either sphere. About 620 a new power in Nearer Asia emerged, and another in China, each characterized by a remarkable ambition for conquest, and, advancing respectively eastwards and westwards, at length came into contact. Just as Islām (*c.* 720) conquered Transoxania, which it had been attacking incessantly after the conquest of Khurāsān, so Tʻai Tsung (627–649), the second emperor of the Tʻang dynasty, made himself master of Kashgaria. Of the more general incentives to mutual intercourse the strongest was commerce,[1] which was strenuously fostered by the later emperors of the Sui dynasty; another connecting link was the work of Christian missionaries, of whose bold advance into China the Nestorian stele of Hsi-an-fu (dating from 781) affords telling evidence. Against these influences, however, must be placed the impediment to intercourse arising from the tendency of both empires to rest content with their gains, and so to limit their frontiers. The emperor Tʻai Tsung showed caution in rejecting the appeal of Yazdagird III. for assistance (as may be inferred from Ṭabarī, i. 2669 f., though the report of the ambassador is a fabrication; cf. i. 2876). The Muslims became more aggressive after their able general Qutaiba Ibn Muslim had subjugated Farghāna, but his expedition against Kashgar in 713 was unsuccessful. A comparison of the sources (Ṭabarī, i. 1275–1279) shows that Kashgar remained unconquered. The sending of ambassadors to the emperor of China (Hsüan Tsung, 712–756), however, is probably historical, though, as narrated by Ṭabarī (ii. 1277 ff.) in the traditional form, it is garnished with all the conventional features.[2] Under the Umayyads the Muslims had, indirectly, a good deal to do with China, since the *khāqān* of the Turki, and also the *jabghu*,[3] were vassals of the emperor. A time-honoured tale is that of the scene between Naizak and the *jabghu* on the one side, and the *shadd* (the *shad* of the Orchonian records) and the *sebel* (probably to be identified with the *ziebel* of Theophanes; cf. E. Chavannes, *Documents sur les Tou-kiue (Turcs) orientaux*, Petrograd, 1903, p. 228) on the other, in which the *shadd* makes the kow-tow before the *jabghu* (Ṭabarī, ii. 1224, year 91 [= A.D. 710]). The *jabghu*

[1] Notwithstanding the surreptitious introduction of silk-culture into the Byzantine empire under Justinian, the silk merchandise of China was largely imported into Nearer Asia. It was conveyed on land by the ancient 'iter ad Seres,' or by sea through the Persian Gulf, on the north shore of which Al'ubulla (Ṭabarī, ed. Leyden, 1879–1901, i. 2384), and afterwards Sīrāf (references in G. Le Strange, *The Lands of the Eastern Caliphate*, Calcutta, 1905, p. 258 f.), was the port for such products.

[2] Nothing is said, however, of an embassy from the Chinese side. At an earlier date, in the reign of Chosroës Anūshirvān there were Chinese at the Sasanian court (Ṭabarī, i. 899; cf. T. Nöldeke, *Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 167).

[3] In Ṭabarī this term is always mutilated to *jīghūyah*.

was sent to Damascus, and was probably the first Chinese, or Chinese Turki, that the Syrians had ever seen. It may be regarded as certain that it was Chinese statecraft that abetted the opposition of the Turki *khāqān* and that of the smaller nationalities in Transoxania dependent upon him or upon China itself, so that the Muslims had to maintain a ceaseless struggle. The Khottal, who are probably to be located in the Pamirs, were not dislodged till A.D. 750 (Ṭabarī, iii. 74), while Al'ikhrid, king of Kashsh, was slain in 751, his treasures—costly Chinese ware—being conveyed to Abū Muslim at Samarqand (Ṭabarī, iii. 79 f.). When with the downfall of the Arabian empire the vigour of Muslim expansion had somewhat relaxed, and the central authority was busy with the maintenance and organization of what had been won, and when contemporaneously the central power of China under the T'ang emperors showed symptoms of decline, the interjacent territory was soon occupied by strong buffer States—first of all by the Uigurs, and then by the Ilekids (see above). Islām was thus placed in a very unfavourable position for making an advance into China. Weak as were the dynasties that followed the T'ang emperors, the people held firmly to the maxim, 'No foreign religion in China.' Buddhism, it is true, had made a successful entry in the face of vigorous opposition, but this is explained by the facts that (1) Buddhism was to some extent in harmony with the cult of reason (*li*), which, if hardly to be called a religion, was more widely diffused than any other, and (2) it assimilated certain elements of the national spirit and so adapted itself to the prevailing sentiment (see art. CHINA [Buddhism in]). Islām, which with its rigid doctrine of uniformity does not on principle express itself in creeds, and tends to repel by the defiant and arrogant tone of its adherents, and which, above all, contrasts with Buddhism in its being essentially a political religion, could not strike root in China save under the protection of the strong hand. The required protection was first provided by the rulers of the Mongol empire founded by Jenghiz Khān. These potentates had no religion—nothing at all events beyond the worship of their lucky star, conjoined with the egregious ambition to bring this star down from heaven. Jenghiz Khān himself saw only the advantages of a huge centralization of human beings, and, wherever it suited his purposes, he intermingled detached fragments of races without regard for nationality or religion. As a Mongol, his leading aim was the disintegration of the Chinese element and the fusion of the population, so that he might have nothing to fear from the formation of any powerful alliance against him. He found his auxiliaries—apart from his own countrymen—in the various Muslim tribes of the West, a race renowned for their courage. Among these the Turki took precedence, alike in numbers, in importance, in capacity for bearing arms, and in discipline. We shall hardly err in adding Afghan mercenaries; for the Afghans—the Paṭhāns of India—were always willing to serve for pay; and bands of warriors may also have flocked to him from the mountains of Persia—the fastnesses of the Kurds—though not the Persians in the narrower sense, the inhabitants of the plains, who had small reputation for bravery. Yet we can hardly look for definite information regarding the composition of his armies, or those of his successors, for the great Mongol rulers were not the people to lend themselves to the statistician, their great concern being with men, not with the keeping of trim muster-rolls. We may venture to assume, however, that the largest hordes of their followers were supplied by the countries lying nearest the scene of their conquests, viz. besides the land of the Turki between the Great Wall and the mountain barrier of the Thian Shan (Chinese Turkestan), Transoxania and Khurāsān. This explains also the curious phenomenon that from that day till the present Persian has been regarded by the Muslims of China as the language of polite education, and that the vernacular Chinese written by these Muslims is mixed with scraps of Persian.[1] In elucidation of this it has been supposed that at some time or other Persian immigrants had settled in the country, losing their mother tongue, but retaining vestiges of it in these numerous fragments. This, however, is certainly erroneous,[2] for the intermixture of Persian in the Muslim idiom of Chinese is due rather to the superstitious regard for the Persian language entertained by the barbarian and semi-barbarian hordes of Nearer Asia who swarmed to the camps of the Mongolian Khāns. Moreover, as soon as Kublai Khān had established his sway in China, he brought Persians in great numbers to fill the offices connected with the government and the court. Both Marco Polo and the Arabian traveller Ibn Baṭūṭah supply full information regarding these foreigners in the Chinese services.[3] To a great extent they would be full-blooded Persians, and they no doubt helped to enhance the respect accorded to their language, and to keep it alive in the very heart of the country.

As to the numbers of Muslims brought into China by the Mongol emperors, we can hardly even hazard a conjecture, although an incident now to hand may throw light upon such importations. In A.D. 1226 a young Muslim warrior, a native of Bukhārā, who claimed to be a descendant of the Prophet—a Sayyid—placed himself at the disposal of Jenghiz Khān. The latter perceived at once the outstanding ability of the youth, and, attaching him to his bodyguard, soon began to employ him on commissions of a special kind. His successor, Kublai Khān, entrusted this Sayyid (who appears as Sayyid-i Ajall in the work of Rashīd-al-Dīn, and as Sai-tien-ch'e in the Chinese sources) with the task of subjugating the province of Yün-nan, and for six years the affairs of that province were administered by this talented Muslim. He died in office, and his two tombs—the first in Yün-nan-fu, the other near Hsi-an-fu—were discovered almost simultaneously by French explorers.[4] The official employment of this Muslim from Bukhārā, who, of course, did not come single-handed, but was attended by a company of armed men, is of special interest, because his soldiers were sent on service to Yün-nan, while he himself was installed as viceroy of that province. We may accordingly infer that the influx of Islām into Yün-nan began at that time, for that it reached

[1] An excellent specimen of this idiom is found in the short Chinese MS (MS Sin. Hartmann 1 of the Royal Library, Berlin) ed. A. Forke, which contains a Chinese text in Arab. script (*T'oung-pao*, II. viii. [1907] no. 8). From the nature of the language Forke inferred—wrongly, as the present writer thinks—the Persian origin of the Dungans.

[2] It is no argument against the theory, however, to say that it would involve a wider diffusion of Shī'ism than we actually find, for the introduction of Shī'ism as the national religion of Persia and the dissemination of the Shī'ite principle among the people did not take place till a later period. There is also a tendency to regard all Persian writings as of Shī'ite origin—an utterly mistaken idea, as even the widely-read work, *Ma'ārij al-Nubuwwat*, 'Life of the Prophet,' by Mu'īn al-Dīn al-Miskīn († A.D. 1501), is Sunnite in character.

[3] One of these officials made himself very obnoxious—Achmath [Aḥmad] 'the Bailo,' whose story is given not only in the Chinese sources (cf. J. A. M. de M. de Mailla, *Hist. générale de la Chine*, Paris, 1777–85, ix. 412 f. [tr. of *Tong-Kien-Kang-Mou*]), which might naturally be expected to take a prejudiced view, but also in a straightforward account by Marco Polo (cf. H. Yule, *The Book of Ser Marco Polo*^{3}, London, 1903, i. 415 ff.).

[4] For reports of these discoveries see P. Berthelot, 'Note sur des inscriptions arabes, persanes et chinoises du Chen-si, du Ho-nan, et du Chan-toung,' *CAIBL*, Paris, 1905. A. Vissière has wrought the facts into a graphic and ingenious sketch (*RMM* iv. [1907] 330 ff.).

that province by sea is in the highest degree unlikely.

Now, when we take into consideration the number of Muslims in China at the present day and the isolated movement just mentioned—the only known instance of the systematic migration of Muslims into China, and there was certainly no other—we are prompted to ask how the Muslim element has attained to such vast proportions. The total number of Muslims who settled in China from the date of the earliest campaigns of Jenghiz Khān (*c.* A.D. 1200) to the fall of the Mongol dominion (*c.* A.D. 1367) cannot certainly be reckoned at more than 1,000,000. At the present day, however, the Muslims resident in China amount on the lowest estimate to 4,000,000. That this vast expansion is due entirely to natural increase is inconceivable; we must therefore look for other possible factors. (1) From time to time fresh companies of Muslims came to China, as, *e.g.*, in the retinue of Turki princesses of Muslim faith who entered the *ḥarim* of the Chinese emperors.[1] (2) Chinese-born children were, and still are, sometimes made Muslims. (3) When great devastations occurred among the Chinese, the vacant places were filled by Muslims, as the latter, being endowed with superior vigour, were better qualified to grapple with the manifold misfortunes which throughout the centuries have fallen upon this ill-governed country. It has already been noted that the Muslims are represented as stately, strong, and brave. The high appreciation accorded to their eminent qualities by the Chinese government is shown by a recently-issued decree to the effect that Muslims are to be employed in the cultivation of sections of land adjoining the projected Ordos Road. Against these favourable conditions, however, must be set certain drawbacks. For one thing, the Chinese government has frequently been stricken with fear of the Muslims, the power of whose politico-religious organization it has good reason to know. Then there is the antagonism that arose between the Muslims of China and their co-religionists in the West; and, finally, their internal conflicts must be taken into account (see p. 894).

A word may be added regarding the names applied to the Muslims of China. It is a common notion that they are all called Dungans, and in point of fact the present writer has noted the use of this designation in Kashgar and Yarkand; by the Turki all Chinese-speaking Muslims are called ‘Dungan(lar).’[2] They themselves do not use that name, but term themselves ‘Hui-hui’ or ‘Hui-tzŭ,’ and this appellation is applied by the Chinese to all Muslims, whether resident in China proper or in Turkestan. The Turki offer strong resistance to this usage, and desire to be called ‘Chan-tu,’ ‘the turbaned,’ lit. ‘head-bound.’

A few details will now be given regarding the several provinces:

(1) *Kan-su.*—In this province the Muslims, according to P. Dabry (*Le Mahométisme en Chine et dans le Turkestan oriental*, Paris, 1878), number 8,350,000, *i.e.* about 85·6 per cent. The capital, Lan-chou (G. M. H. Playfair, *The Cities and Towns of China*, Hongkong, 1879, ^{2}Shanghai, 1910, p. 3992), took no part in the insurrections of 1863–74 and 1895, and the Muslim residents received no damage. They possess a relatively high degree of culture. Lan-chou, as the terminus of the great trade-route from the West, is frequently visited by Muslims from India, Persia, and both divisions of Turkestan. Ho-chou and Kin-ki pu (of which, however, the Chinese name is Ning-ling-t‘ing; in Fu, Ning-hsia [Playfair, p. 5226]) are celebrated as centres of religious activity.[1] Kin-ki-pu was the nucleus of the sect of Ma-hua-lung (see p. 894). Hsi-ning-fu, not far from Kokonor, is a place of special interest on account of its mixed population; it affords a most fertile field for the student of ethnology and philology, since, being situated on the frontier between China and Tibet, it gives an opportunity for observing the most heterogeneous elements such as seldom occurs elsewhere. With reference to the Salars, who live compactly in twelve townships around Hsün-hua-t‘ing, see below, p. 892^{b}. In Kan-su there are also Mongolian Muslims (cf. F. Grenard, ‘Note sur l'ethnographie du Kansu,’ in *Mission scientifique dans la Haute Asie*, Paris, 1897–98, ii. ‘Mission Dutreuil de Rhins,’ p. 456).

(2) *Shen-si.*—According to Dabry, the Muslim population of Shen-si—probably largely overestimated—is 6,500,000, *i.e.* 76·7 per cent. Hsi-an-fu, the capital (Playfair, p. 2620), according to a report of the Futai (1782) to the emperor Ch‘ien-lung, then contained 50,000 Muslim families (Dabry, p. 41 f.), with 7 large mosques. According to Gabriel Maurice (in H. Havret, *La Stèle chrétienne de Si-Ngan-Fou*, ii. [*Variétés sinologiques*, Shanghai, 1892–1902, no. 12] 115 ff.), the total population, including that of the four suburbs, is estimated—by mere guess-work—at some 400,000; of these one-tenth are Tatars, two-tenths Muslims, and seven-tenths Chinese. According to the tradition regarding General Kuo-tzŭ-i (697–781), who is said to have been a Christian, the Muslims had settled on the banks of the Yü-ho. When the great insurrection broke out in 1863, the Muslims of Shen-si wrought considerable damage, and, after they were overpowered, were expelled from the province. The people of Hsi-an-fu, the only city in which Muslims are now found, were kept under too strict a watch to take any part in the movement, and the Muslims were allowed to remain.

(3) *Shan-si.*—In this province the Muslims (including those of S. Mongolia) number, according to Dabry, 50,000, *i.e.* 0·41 per cent; exact data are lacking.

(4) *Chi-li.*—The available data for the Muhammadan population refer only to the Muslims in Peking, who are said to number 20,000 families, say 100,000 persons, with 11 mosques.

(5) *Shan-tung.*—Muslims are found in many towns on the Great Canal, one of their centres being the important commercial city of Lin-ch‘ing-chou (Playfair, p. 4276), where there is an academy (*madrasah*), in which most of the *mullās* of Peking are trained. There are said to be 325 mosques in Shan-tung.

(6) *Sze-chuan.*—In this province the Muslims, according to *RMM* v. 91 ff., number about 70,000 families (300,000 persons), with about 400 mosques, 11 of these being in Ch‘eng-tu alone (Playfair, p. 572). During the insurrections in Kan-su and Yün-nan, Sze-chuan remained passive. Visitors from Turkestan are numerous. The town of Sung-p‘an-t‘ing, already mentioned, is in this province; its 10,000 inhabitants, according to *RMM* v. 458, include 4000 Muslims, with 3 mosques, and about 100 *ahongs*.

(7) *Ho-nan.*—The Muslim population, according to Dabry, is 200,000.

(8) *Yün-nan.*—The Muslims here, according to Dabry, number from 350,000 to 400,000. With reference to the history of this province, the Muslim settlement of which we can trace from its starting-point, see above, p. 890^{b}; for its more recent history we have the monograph of E. Rocher, *La Province chinoise du Yün-Nan*, Paris, 1880; cf. also d'Ollone, ‘L'Islam au Yunnan,’ in *RMM* iv. 285–290.

(9) In the remaining provinces Muslims are found in relatively small numbers. Dabry furnishes the following figures: Hu-nan (with Hu-pei), 50,000; Kiang-hsi, 4000; Kiang-hsu (with An-hui), 150,000; Kuang-tung, 21,000; Kuang-hsi, 15,000; Kuei-chou, 40,000; Che-kiang (with Fo-kien), 30,000. These numbers, however, are not reliable; cf. Dabry's estimate (40,000) with d'Ollone's (300,000) for the province of Sze-chuan.

2. Descriptive.—If we may regard the Muslims of China as forming a single social complex, we may indicate the main features of that complex as follows.

(*a*) *Race and language.*—Whatever be the origin of the various Muslim groups, they must all be described at the present day as Chinese. The extent to which they share the distinctive qualities of the Chinese peoples cannot be precisely determined, the requisite data not being available. In any case they all speak the language of their adopted country; they share the variation of idiom, and resemble the real Chinese in their ways of thinking, while in writing also they use almost exclusively the national language. At the same time they are differentiated from the Chinese by important characteristics, and the division of the people as a whole—exclusive, however, of the Tatars

---

[1] The leading instance of this is furnished by the still existing colony of Turkish Muslims which can be traced back to the reception of a Turkish princess into the *ḥarim* of the emperor Ch‘ien-lung; cf. O. Arendt, ‘Peking und die westlichen Berge,’ *Mitteil. der geograph. Gesellschaft Hamburg*, 1889–90, p. 64.

[2] This term may signify ‘those who have come home,’ *i.e.* those who have returned to the true faith, the implication being that all human beings come into the world as adherents of Islām, though some are alienated from it by their parents, and so become Jews or Christians. The word corresponds, therefore, to the Osmanic *dönmeh*, the name applied to the Jews of Saloniki who have been converted to Islām. The designation Dungan would thus seem to imply that the majority of Chinese Muslims have been converts.

[1] With reference to the history of Ho-chou see *RMM* ix. [1909] 530 ff.; cf. Kin-ki-pu, *ib.* p. 564.

(Mongols) and the aborigines of the south (Lotos, Miaotze)—into Chinese and Muslims holds good throughout. The name Dungans is applied to a large section of the Chinese Muslims, who, however, as was said above, term themselves simply Hui-hui or Hui-tzŭ, and repudiate the appellation Dungans; but they would never think of calling themselves Han ('Chinese'), nor are they ever designated so. They form, in fact, a distinct racial aggregate, co-ordinate with the Chinese and the Manchus. The name Dungans is sometimes erroneously extended also to the Turki of Turkestan, but in reality there exists a marked contrast between Dungans and Turki. The Dungans who speak Turkish—they are by no means few—use a peculiar dialect of that language; and, as regards the Chinese spoken by the Dungans, it should further be noted that the document of Dungan origin in the Berlin Royal Library (see above, p. 890^b) is composed in a very corrupt Chinese. In Forke's opinion, however, its solecisms are not such as might be perpetrated by an uneducated Chinese, but are in many cases not Chinese at all, suggesting that the Dungans are of alien origin. As a special illustration of the intercourse between the Chinese Muslims and the Turki, cf. the story of Hidāyat-Allāh (Apaq Khojam) of Kāshghar, who came to Hsi-ning-fu, in MS Hartmann 1 (Forke, p. 65 f.).

The process which dominates everything found within the Great Wall is one of adaptation to Chinese standards, of assimilation to the character of the yellow race—or 'black-heads,' as they like to call themselves. This process overcame the Manchus and many other peoples who invaded the country, and it was impossible that the Muslims should altogether elude its operation. The Chinese have a capacity for dissolving racial characteristics. This holds good even of physical qualities, for Chinese sentiment does not discountenance the affiancing of native women with foreigners, while Muslim women cannot legally be given in marriage to non-Muslims. The resultant diffusion of Chinese blood among the Muslims is of vast importance, and we cannot but admire the tenacity with which the latter have kept themselves from complete absorption by the Chinese. In spite of a considerable degree of assimilation in external matters, the two peoples look at things from a fundamentally different standpoint. For the Chinese reason (*li*) is supreme; for the Muslims tradition is all. Notable, too, is the contrast in certain traits of character. The Chinese is patient to a degree, and will put up with a great deal; the Dungan has an intense self-esteem, and is a dangerous man to offend. The difference reveals itself also in the outward bearing. The Chinese not seldom gives one the impression of being a dejected and downtrodden man; the Muslim carries himself proudly, and faces the world with a frank and open countenance. The relative physical debility of the Chinese may be due in part to the opium habit. Among the Muslims this is but rarely found; tobacco smoking is prohibited, and the drinking of wine and other intoxicants, which the stringent interdict of the law does not prevent in Western Islām, is quite inconsiderable among the Muslims of China. All this testifies to a very real cleavage between the Chinese and the Muslims, and is a constant reminder that the latter are not Han-yen, but something else.

What, then, are the Muslims of China, ethnologically considered? To this question there is no answer, whether or not we postulate a connexion between the name Hui-hui (Hui-tzŭ) and the name Uigur, with all its various transcriptions in the Chinese language (Chavannes, pp. 87–94). From the time of the earliest considerable incursions of Muslims, this region of many races has been overwhelmed with so many devastations that it is now impossible to speak of any single racial type. In addition to this we must also take into account the Muslim policy of incorporating people of other faiths, notably purchased children (cf. the present writer's note in his *Der islamische Orient*, i. [Leipzig, 1905]; more recently d'Ollone, in *RMM* ix.). Such absorption of foreign elements must be regarded as a very important factor. In this connexion we should note the suggestive remark of d'Ollone to the effect that the purchased Chinese children do not exhibit a uniform Chinese type, and that the homogeneity of the Chinese 'race' is simply one of those *fables convenues* that cannot be too vehemently opposed, since in point of fact many who are not Muslims at all are no more Chinese than the Muslims themselves.

A distinct ethnological group is formed by the Salars, who live in Hsün-hua-t'ing (Playfair, p. 3110) on the right bank of the Hoang-ho, and in the surrounding villages, and who are also found on a section of the road between Hsi-ning-fu and Ho-chou. They show a racial character markedly divergent from the ordinary Chinese Muslims. In figure they are tall and spare, with nose large but not broad, eyes black and set horizontally, cheekbones not very prominent, face longish, eyebrows bushy, beard black and abundant, forehead receding, skull flattened behind, skin brown but not in any sense yellow. The Salars thus bear a striking resemblance to the Turki of Chinese Turkestan. Their chief peculiarity is their language, which may be described as a degenerate Turkish. Their style of dress is Chinese, but they shave the head completely and wear a polygonal cap (*tübe*) of white colour. In religion they are strict Ḥanīfites, and show the utmost respect to their spiritual guides (*akhons*), many of whom speak and write the Persian language; but they are given to the use of strong drink. Even the lower classes are acquainted with the Arabic script. They do not burn incense in worship, nor do they tolerate the emperor's portrait in their mosques. This form of the Muslim faith is said to have emanated from a reformer named Ma-ming-hsin (Muhammad Emin), who preached to the Salars *c.* 1750, laying great stress on the practice of praying aloud (see below, p. 894^b), which led to serious disturbances. The Salars are daring brigands, and fraternize with the rabble of the upper Hoang-ho, with whom they also share a fierce hatred of the Chinese.[1]

(*b*) *Marriage, family, kinship.*—The external aspects of the sexual relation among the Muslims of China are regulated by the *sharī'ah*—in the scholastic form developed in the Ḥanīfite school—which applies to all Islām, though here the separate ordinances are not very well known to the people at large, nor, even where they are known, are they very strictly observed. As to the degree in which the Chinese environment has brought about modifications in practice, we do not possess the necessary details of information; nor would such details yield a complete and uniform picture, since the influence varies greatly in different localities.[2]

---

[1] Our authority for these particulars is Grenard, *Mission*, ii. 457 f. A somewhat different account is given by d'Ollone (*RMM* ix. 538 ff.), who says that the Salars are confined to twelve villages in the district of Hsün-hua-t'ing on the right bank of the Hoang-ho, but that the bulk of their traffic is with the left bank, especially the town of Hsi-ning, in which, however, there reside only five Salar families; they do not shave the head completely, but retain the pigtail; they wear, not the polygonal cap, but the turban-like head-dress of the Chinese; they have taken part in various risings; and they assert that their original home was Samarqand.

[2] With reference to the well-known canon allowing the Muslim to marry as many as four wives, and to have slaves as concubines, Dabry (ii. 266, n. 1) writes: 'In China the Muslims are forced to submit to the laws of the land regarding marriage.' This is undoubtedly a mistake in so far as it implies that

The like is true of the position of women in general. According to d'Ollone, the so-called law of veiling is not observed by Muslim women in China, who walk abroad without reserve (*RMM* ix. 540); Grenard had indicated the fact, but noted an exception in the case of the wealthier classes. In Ho-chou, however, d'Ollone found a different practice, the women there wearing a veil of black silk below the eyes (a custom which seems to the present writer to be connected with the sect of Ma-hua-lung); further, they go on the street on horseback instead of in carriages. As regards foot-binding, d'Ollone notices no difference between Muslim women and Chinese women; in Kan-su especially the practice is very common. That a Muslim should take in marriage one of alien faith is not objected to; it is rather deemed a meritorious act thus to bring an unbeliever to the true religion. The Muslim woman, on the other hand, must not be given in marriage to a non-Muslim; such a union is regarded as the most heinous of sins. In this matter, however, compromises are sometimes made with heaven: the marriage of a Turki princess with the emperor Ch'ien-lung has already been referred to; and, when the present writer passed through Minjol (a day's journey west of Kashgar) in 1902, a Chinese with a Turki wife (? concubine) was presented to him. Illicit intercourse is not punished here, any more than in other Muslim countries, with the strict legal penalty (forty whip-lashes, or stoning), but it must not be supposed that any unusual laxity of morals prevails, and the unnatural vices common among the Chinese (see an instructive chapter in J. J. Mantignon, *Superstition, crime et misère en Chine*^{4}, Lyons, 1902, p. 185 ff.) are less prevalent among the Muslims. No special attention is devoted to the education of children (for the schools see below (*d*)). Two very prominent features of family life are filial piety and ancestor-worship. The former is extolled in the narrative given in the Chinese-Arabic MS edited by Forke; the latter finds expression in the liturgical prayers for parents and ancestors, while use is also made of pictures of ancestors after the Chinese manner. Social distinctions are not inevitably fixed by descent, except in the case of the Prophet's descendants. The mischief wrought in other Muslim countries by surreptitious enrolment in the sacred lineage does not seem to be extensive among the Muslims of China. Nor does the veneration of Sayyids appear to have assumed any unusual forms on Chinese soil, apart at least from the case of the schismatic Ma-hua-lung, who claimed to be a Sayyid, but who failed to win such prestige as the notorious sons and grandsons of Makhdūm 'Aẓam (see above, p. 889^a). The relative indifference to Sayyids (Sharīfs) in China is explained by the popular belief that they are for the most part converts to Islām or the descendants of converts (Dungans).

(*c*) *Industries.*—The industries in which the Chinese Muslims are engaged are (1) agriculture, (2) commerce (including handicraft and traffic in goods), and (3) transit-trade. The Muslims do not take naturally to agriculture, but here the environment has asserted itself, inasmuch as the Chinese are pre-eminently an agricultural people, and have in great measure the faculty of infecting the alien population with their own habits. Accordingly, the Chinese Muslim is everywhere one of the most industrious tillers of the soil, so that it was recently reported that those employed in colonizing the part of S. Mongolia which is to be opened by the railway-line between Kalgan and Kuei-hua-ch'eng are predominantly Muslims (*Bull. Com. Asie Franç.*, Oct. 1909, p. 456). While commerce as such is almost wholly in the hands of Chinese, who combine the qualities of the hard-working peasant with those of the astute merchant, yet the Muslims very largely monopolize the related branches of mercantile industry—the conveyance of goods from place to place and the retailing of products of their own or others' labour. Thus the Mafus, *i.e.* horse-hirers and horse-dealers, as also carriers throughout the whole of China, are principally adherents of Islām, while certain trades—especially that of slaughtering animals (not including the pig, of course)—are largely in the hands of Muslims. Their special preference, however, is for official life, though in this department they are faced by a great obstacle, viz. the number and difficulty of the examinations to be passed by aspirants to the Chinese civil service. The Muslims who could successfully undergo these tests must always have been very few. This in itself, however, does not carry any discredit, for it simply means that the Muslims have not the required degree of plodding dullness for such ordeals. On the other hand, the most capable and energetic of them were doubtless able to fulfil the conditions of entrance into the Chinese army, and to work their way to the higher ranks. From the Mongolian period onwards Muslims have often filled the more distinguished military positions. As recent instances of this, mention may be made of General Tung-fu-hsiang (see below (*d*)), as well as of Ma-ti-kai, of Yün-nan, nephew of Ma-hua-lung, and commander-general of the forces in Sze-chuan.

(*d*) *Cultus, education, etc.*—The religious attitude of the Chinese Muslims is—outwardly, at least—characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property, and the most capable and resolute of those who enter the government service take part in the ceremonial of the national cult. The hatred of foreigners sometimes shown by Muslim officers of high rank, like that displayed by the Chinese themselves, is to be referred, not to religious motives, but to the exasperation provoked by the high-handed way in which foreigners interfere with the internal affairs of the country. In not a few cases, indeed, the conduct of the Muslim generals is to be traced simply to a vulgar hankering after rank and wealth, as has now been made clear by the observations of d'Ollone (*RMM* vi. [1908] 7 ff., controverting the misleading note in *RMM* iv. 441 f.). Tung-fu-hsiang, *e.g.*, was in no sense a 'fanatical Muslim,' but a mere adventurer, who gained a following amid the chaos caused by the rising of 1861–74, and who, in return for the gift of a mandarinate, made himself the tool of the viceroy, Tso-tsung-t'ang, and of General Lu-song-shan. He caused Ma-hua-lung, the prime mover of the revolt, and the prophet of the 'new doctrine,' who fell into his hands in a sortie from the rebel city of Kin-ki-pu, to be beheaded. At that time Tung acquired landed estates of enormous extent. It was he also who crushed the rebellion of 1895 in Hsi-ning-fu and Ho-chou, enriching himself, as usual, with the spoils filched from his co-religionists. He received the title of 'generalissimo' (*ta jue*), and was in effect king of the country. When the Boxer rising broke out at Peking in 1900, Tung hurried thither with his henchmen—the foremost of whom was the infamous Ma-an-liang, Tongling of Ho-chou—and made himself conspicuous by his violent and malicious proceedings against the foreigners, who saw in him only a Muslim at the head of a horde of Muslims,

---

Chinese law would intrude upon this domain of personal rights, though it may perhaps be necessary to assert the universal validity of the imperial ordinances. These ordinances are lucidly set forth in Pierre Hoang, *Le Mariage chinois au point de vue légale* (*Var. Sinol.*, no. 14), Shanghai, 1898. The present writer has not succeeded in discovering among them anything that formally concedes an exceptional position to the Muslims.

and were quite unaware of his real relation to Islām. Having been ostensibly punished by 'banishment' to Kan-su, he lived there like a *sulṭān*. He held two fortified castles near Kin-ki-pu, and had a bodyguard of 500 veterans—as tenants of the surrounding estates which he had taken from Muslims. The local councils of Kin-ki-pu and Lin-chou could not lift a finger without his approval. After his death in February 1908, all his titles, of which he had been deprived at the instance of the European Powers, were restored, and his remains were buried with the highest honours at Kon-yuen, his birth-place (*RMM* vi. 700 ff.). Apart from adventurers of this stamp, whom probably the majority of Muslims would regard as apostates, there is a far-reaching antagonism between the indigenous and the immigrant peoples. The Chinese realize the danger involved in the Muslim aspiration of an *imperium in imperio*, while the Muslims, enjoined as they are by the Qur'ān to fight against the unbeliever, feel the ascendancy of the latter as a heavy infliction, and from time to time the strain has found expression in open revolt. The most notable and most serious of such outbreaks have been those of the north (Kan-su and Shen-si) in 1861–74, and of the south (Yün-nan) in 1856–72. It would be a mistake, however, to attribute these ruinous insurrections to religious motives alone, for racial antagonisms and the conflicting interests of different social classes were certainly no less potent factors.

The mosques resemble pagodas, the *miḥrāb* and *minbar* alone proclaiming their Muslim origin. We sometimes meet with Indo-Arabic styles, as, *e.g.*, the two cupolas above the porch of each of the mosques in Sui-fu. For occasions of prayer the *akhons* (Pers. *ākhūnd*, 'learned one'; in China, 'mosque-minister') don the white tunic; the rest of the faithful wear for the time a cap never otherwise used, which is encircled by the turban, and may be of various colours—white, blue, green, or red. This cap has two shapes: the Meccan—a round, low cowl, wholly covered by the turban—not worn by many; and the Bukharian—polygonal, being formed of four or six pieces—which hangs out from beneath the turban. It is identical with the *tübe*, or *topa*, worn by all Muslims in Russian and Chinese Turkestan.

The disruptive tendencies so common in Islām generally have made themselves felt in China. Ma-hua-lung, who was put to death during the rebellion in Kan-su, was the founder of a new sect, and his followers in Kan-su, where they are numerous, and in Sze-chuan, where as yet they are but few, regard him as the true successor of Muhammad. His descendants and disciples claim to possess superhuman powers. His teaching is called *hsin chiao*, 'new doctrine,' in contradistinction to *lao chiao*, 'ancient doctrine' (*RMM* v. 93). The nature of this new doctrine is something of a mystery. There is a tendency to regard it as an endorsement to Shīʿism, or perhaps an unusually bold representation of Ṣūfīism, but the notices of d'Ollone (*RMM* ix. 571 ff.) show that in reality it is of genuinely Sunnite character, and not a degenerate variety of the mystical philosophy so widely diffused throughout Central Asia. Ma-hua-lung was undoubtedly one of that class of visionary impostors represented in Chinese Turkestan by the Khodyas, *i.e.* the descendants of Makhdūm ʿAẓam, of whose ecclesiastico-political organization the present writer has given a detailed account in 'Ein Kirchenstaat im Islam' (in *Der islamische Orient*, i. 195 ff.). It remains an open question whether the Mahdistic idea played any part in the project of Ma-hua-lung; the reports of d'Ollone make no distinct reference to it. In any case, the pretender was regarded as an incarnation of the Spirit—a *sheng jen* ('holy man,' 'prophet') equal to, or even higher than, Muhammad himself. It speaks well for the Muslims of Kan-su that only the lower classes were duped by this charlatan, who, wholly destitute of learning, presumed to know everything, and had his answer ready for every question. As the founder of a new sect, he had to enjoin certain external forms by which his adherents might be distinguished from others. For this purpose he chose the practice of praying aloud and of holding the hands straight open and horizontal in the *qiyām* (at prayer), in contrast to the general custom of silent prayer with the hands rounded and hollow. From this practice of audible prayer is derived the usual name of the sect, viz. Ẓāhirīyah (corrupted to Chaiherinye), 'those who pray openly,' as contrasted with the Khāfīyah (vernacularly 'Hufeye'), 'those who pray secretly.' In these externals Ma-hua-lung shows a certain affinity with a movement in the West which had found its way into China at an earlier date. About 150 years previously a reformer had appeared among the Salars (see above, p. 892^b) in the person of Muhammad Emin, known in China as Ma-ming-hsin, who introduced the custom of praying aloud, and thereby gave occasion for serious disturbances (Grenard, *loc. cit.*). Mu-hua-lung did not actually forbid his followers to attend the mosque, but he allowed prayer to be performed at home—in the 'common hall'—without special ceremonial garments. Usually three or four houses have a place of prayer in common, *i.e.* a single room set apart for worship, this arrangement being designed, it is said, to familiarize the adherents with the practice of prayer (*RMM* ix. 571). In Sung-pʻan-tʻing, according to *RMM* v. 462, the followers of the new faith attend the same mosques as those of the old, while in Shen-tu, on the other hand, the breach is complete (*RMM* v. 462, ix. 561). The d'Ollone expedition had a very uncivil reception in the mosque at Chʻêng-tu; the people of the 'new doctrine' have the name of being hostile to Europeans, while the Muslims in general are friendly. After Ma-hua-lung's death in 1871, a rupture took place within the sect. His son-in-law, Ma-ta-hsi, and his grandson, Ma-mih-hsi, fought with each other for the sacred inheritance. Ma-ta-hsi, who is now (1915) sixty-two years old, has the advantage in numbers, and his place of residence, Cha-kou, near Ku-yuen, is an important religious centre, and has a *madrasah*. Ma-hua-lung's teaching was introduced into Yün-nan by his younger brother (or nephew) Talasan or Talamasan, who fell in a struggle with Ma-ju-lung. In Yün-nan, however, the sect has apparently a smaller following than in Sze-chuan, where d'Ollone met with adherents of the Hsin chiao from the boundaries of Yün-nan to Sung-pʻan-tʻing on the border of Kan-su.

Alongside of the two groups of Hufeye and Chaiherinye are found two others, viz. Kuberinye and Katerinye. The meaning of 'Kuberinye' cannot be precisely determined—the word may possibly stand for Kubārī ('great'); 'Katerinye' is undoubtedly equivalent to 'Qādirīyah,' signifying the adherents of ʿAbd al-Qādir al-Jīlānī (*q.v.*). It is maintained by a certain *akhon* that these four sects are respectively connected with the first four *khalīfahs*, each of whom is said to have inaugurated a particular ritual, viz. Abū Bakr that of the Hufeye, Othmān that of the Chaiherinye, ʿOmar that of the Kuberinye, and ʿAlī that of the Katerinye. The last-mentioned name is said to be applied also to those who venerate graves. In China, as elsewhere on Muslim soil, peculiar honour is accorded to the tombs of the eminently pious—those who have given credentials of saintship

Thus, *e.g.*, within a mile to the north of Sung-p'an-t'ing is to be seen the tomb of an *akhon* from Medīna, who came to Sung-p'an-t'ing in 1668, lived for a time in Shen-si, and by his prayers saved the land from a drought in 1673. He died in 1680, and his tomb is guarded by an *akhon*. Another tomb, somewhat smaller, is found within the mausoleum. The orthodox *mullās* inveigh strongly against this practice (*RMM* v. 459). D'Ollone thinks that the veneration of graves is also a characteristic of the Hsin chiao sect (*RMM* ix. 533 ff.); but this cannot be admitted, and, indeed, it conflicts with other statements of the same writer. As a matter of fact, the veneration of graves is a world-wide custom, and naturally prevails here too; and that Ho-chou, the rallying-point of the new doctrine, should also contain an unusual number of sacrosanct tombs is a mere coincidence. Moreover, with reference to the name Kumbe chiao, which d'Ollone mentions as being applied to the 'new doctrine,' and upon which he bases his conclusions (*RMM* ix. 533), it remains to be shown whether the term (='grave-doctrine') is meant to indicate the distinctive characteristic of the sect. As regards the religious position of the ethnologically distinct Salars see above, p. 892^{b}.

The idea of a *khalīfah* as a single individual invested with authority over Islām as a whole is unknown to the vast majority of Chinese Muslims (*RMM* ix. 561 f.). Yet the efforts directed from Stamboul in the latter half of last century were not altogether without result. Ya'qūb Beg recognized 'Abd-al-'Azīz as commander of the faithful, while Sulaimān, the Muslim king of Yün-nan, appealed to him, as *khalīfah*—in vain, it is true—for assistance.

As the intellectual life of the Muslims bears the closest possible relation to their religion, the aim of elementary education is to inculcate the rudiments of religious doctrine, the children being taught by readings from the Qur'ān and by short catechisms. In these exercises two languages are employed—both the national language and that of the Qur'ān (or a mixed Perso-Arabic dialect). There is a considerable circulation of anthologies from the Qur'ān, either with or without a Chinese translation, and booklets containing the leading elements of doctrine in both languages are also found.[1] The life of the Chinese Muslims has no place for art. To anything in the nature of artistic activity only a single field is open—the Arabic script, which is often elaborated in pedantic forms suggestive of the Chinese method of writing, angles and loops being formed as in the native calligraphy (especially in epitaphs). The Muslims also erect ornately written Arabic tablets, which, however, often show such a divergence from the common script that they are very difficult to read. Even the experienced E. Blochet mistook an *r* for a *y* (*RMM* v. 291).

(*e*) *Political relations.*—In China proper the Muslims have never secured an independent political existence, while in Turkestan, since its annexation (*c.* 1750), they succeeded in establishing only the short-lived Muslim government of Ya'qūb Beg (see above, p. 889^{a}). The object of the Muslim rising in Kan-su and Shen-si (1863–74), which was among the contributing causes of Ya'qūb Beg's success, was likewise independence; but the movement proved abortive, and, in fact, no other issue was to be expected. The necessary condition of a permanent political organization is that it shall have a basis of nationality, and no such thing exists among the Chinese Muslims. The latter, as interspersed among the Han (Chinese), form, not a national, but merely a religious, aggregate, and all history teaches that political establishments based upon religion are ephemeral. It has certainly been hinted that the Muslims of China may possibly force their religion upon the rest of the population, and thus evolve a powerful Islāmo-Chinese kingdom. It is indubitable that such an ambition is not wanting among the Muslims, and that it will continue to act in certain localities as a source of insurgent movements against the imperial government. It is regrettable that the idea has been exploited for the double purpose of acquiring religious influence among the Chinese Muslims and of furthering political ends. Considerable efforts in this direction were made—though without the least success—by Sulṭān 'Abd-al-Ḥamīd in the latter part of 1900; and minor attempts at a later date proved equally fruitless, though hopes were not abandoned even after the deposition of the Sulṭān.

M. HARTMANN.

MUHAMMADANISM (in Īndia).—Islām was introduced into India by the Arab invaders who entered Sind under Muḥammad ibn Qāsim in A.D. 712 and founded a Muhammadan State which was eventually absorbed in the Mughal empire; but this early Arab occupation was confined to Sind, and the Muhammadan conquest of the rest of India did not begin until nearly three centuries later, with the raids of Sabuktagīn and Maḥmūd of Ghazna; when, however, Maḥmūd died in 1030, the province of Lahore was the only part of Indian territory that he bequeathed to his successor. The permanent extension of Muslim rule in India dates from the latter part of the 12th cent., when the conquests of Muḥammad Ghorī resulted in the establishment of a Muhammadan dynasty in Dihli, which continued to be a Muhammadan capital up to the extinction of the Mughal empire in 1858. The scope of this article being limited to religion and ethics, no account of the political history can be given, though the intimate connexion between Islām as a religious system and the Muhammadan governments in India makes it difficult to consider them apart. A brief reference must be made, however, to the relations between the Muslim rulers and their non-Muslim subjects. The Muhammadan invaders at times during the early stages of the conquest exhibited a brutal intolerance towards the Hindus who opposed their armies, and ruthlessly massacred Brāhmans and razed temples to the ground; but, after the savageries of conquest were over, a certain amount of toleration was allowed to their Hindu subjects. The Arabs in Sind left the Hindus in undisturbed exercise of their religion and in the enjoyment of their old rights and privileges, and the later conquerors who founded kingdoms in N. India and the Deccan were generally too much occupied with the military consolidation of their own power, or felt too little interest in spiritual matters, to turn their attention to the propagation of their own faith. Even under the settled rule of the Mughals, dynastic and financial considerations dictated their policy rather than consideration of the interests of Islām. On the other hand, the reigns of several monarchs were signalized by outbursts of fanaticism and the cruel oppression of unbelievers, their temples being destroyed and many of them converted by force. In Gujarāt Sulṭān Maḥmūd III. (1537–53) was hated by the Hindus for the stringency of his enactments against them. In Kashmīr Sulṭān Sikandar (1393–1417) acquired the designation Butshikan ('idol-smasher') by his ruthless destruction of Hindu idols and temples, and in Bengal Jalāl al-Dīn Muḥammad Shāh (1414–31) made himself notorious by his persecution of unbelievers. Aurangzīb's (1659–1707) attempt to carry out a policy of unification led to several acts of repression, and tradition attributes to him the destruction of temples and the forcible conversion of Hindus in various districts throughout the whole extent of the Mughal empire. The latest example of such fanaticism on the part of a Muhammadan ruler was that of Tīpū Sulṭān (1782–99), whose barbarities outdid anything recorded of previous monarchs after the first conquerors. Apart from such outbursts of fanaticism, the rule of the Muhammadans has generally been characterized by an attitude of toleration towards their Hindu subjects, and the adherents of the rival religions have often been closely drawn together by a spirit of amity and mutual respect.

---

[1] The present writer possesses a copy of such a bilingual catechism.

The fact that the Muhammadan dynasties in India were almost entirely founded by foreign invaders was of great importance in the history of Islām; they brought with them a large number of foreign troops, and attracted to their courts military adventurers, poets, scholars, and others, who ultimately settled in the country. The foreign immigrants and their descendants—Arabs, Persians, Turks, Mughals, and Paṭhāns—formed an important element in the total Muhammadan population, and exercised a preponderating influence in the administration, the social organization, and the religious life. They received grants of land from the Muhammadan governments, or in times of political unrest arrogated to themselves rights of ownership, and thus formed the nucleus of an aristocracy that looked down with contempt on the native converts. The missionaries, to whose proselytizing efforts the conversion of whole tribes is attributed, and the saints, whose tombs are still venerated throughout all parts of Muslim India, were for the most part of foreign extraction. The shrines of these saints are still centres of religious influence and attract thousands of pilgrims every year; among the most famous are those of Khwājah Mu'īn al-Dīn Chishtī († 1236) at Ajmīr, Farīd al-Dīn Shakarganj († 1269) at Pākpattan, Niẓām al-Dīn Awliyā († 1325) at Dihli, and Shāh 'Ālam († 1475) near Aḥmadābād. The great family of Bukhārī Sayyids, who settled in Uch in the 13th cent., may be taken as a typical example of the wide-spread influence exercised by some of these foreign immigrants. The effect of this constant stream of foreign immigration has been to keep India in close contact with the main currents of theological thought and speculation in Islām, and the religious beliefs and practices of the educated section at least of the Muslim population, whether Sunnī or Shī'ah, have tended to conform to those in other parts of the Muslim world. A large part of the religious literature has been written in Arabic, and still more in Persian—both languages foreign to India—and the study of these languages has kept the theologians acquainted with the writings of Muslim thinkers outside India. These foreign influences have thus prevented Islām in India from taking on a provincial character, so far at least as the literate are concerned. But among the uneducated converts and the descendants of converts, of Hindu origin, especially in the country districts remote from the centres of Muslim culture, many survivals of older cults are to be found, and there the Muhammadan differs little but in name from his Hindu neighbour. He continues to worship the gods of his ancestors—particularly the village godlings, whose rites are associated with the cultivation of the soil, and the deities of disease, especially Sītalā, the dreaded goddess of smallpox—and to take part in the Hindu festivals connected with the changes of the season, such as Holi, the festival of the spring equinox, and Dasahrā, the festival of the autumn equinox. Against such Hindu beliefs and practices the orthodox have at all times protested, but the first active campaign against them appears to have been started by Sayyid Aḥmad and Ḥājī Sharī'at Allāh, who in the second decade of the 19th cent. began to disseminate in India the doctrines of the Wahhābī reforming movement. The writings of a later religious reformer, Maulavī Karāmat 'Alī († 1874), were especially influential in combating the observance of Hindu rites and ceremonies by Muhammadans. In more recent years, the greater facilities of communication between one part of the country and another, the spread of education, and the consequent growing influence of theological text-books have increased the tendency towards an orthodox uniformity, but the low level of education among the mass of the Indian Muhammadans still keeps a large proportion of them ignorant of the tenets of the faith which they profess.

The abiding influence of Hindu institutions on the converts to Islām is still further shown by their rejection of the *sharī'ah* in favour of their old tribal ordinances in regard to marriage and inheritance. As is well known, Islām is not merely a body of religious dogma but also a system of legislation, but the Muhammadanized Rājputs and Jāṭs in the Panjāb and the Mappillas on the west coast of S. India have always continued to follow the customs of their Hindu ancestors in preference to the Muslim law of succession.

The influence of Islām in India has not been confined to the Musalmāns themselves, but may be observed in sections of the population that stand outside the Muslim community. There can be little doubt that the Hindu reform movements of the 15th and 16th centuries, especially those connected with the names of Kabīr and Nānak, owed much to Muslim influences. Many low-caste Hindus, especially in N. India, worship Muhammadan saints; these saints are sometimes legendary, like Sakhī Sarwar and Shāh Mādār, or historical personages such as Pīr Shams Tabrīz of Multān, or sometimes a mixture of both as in certain enumerations of the Pañch Pīr ('five holy men'), who are represented by some thousands of Hindus to be the only divinities that they worship. An influence of a different character was that of the Mughal court upon the higher ranks of Hindu society, resulting in the adoption of many Muhammadan habits and observances such as are generally significant of adherence to the faith of Islām.

As an ethical system Islām in India presents in many ways a strong contrast to Hinduism. Both, it is true, cherish an ascetic ideal, pursued by the few, and Hindu and Muslim ascetics have often found that they have much in common, and both have often received the veneration of pious adherents of the rival creed. But the stern Puritanism of Islām has set its face rigidly against those characteristics of Hindu conduct which are set forth in the *Kāmaśāstras* and illustrated on such Hindu temples as have escaped the iconoclastic wrath of outraged Muslim sentiment. This austerity of Muslim morals runs through the whole of their social life, and lends to their outward bearing an aspect of dignity and self-respect such as springs from a constant recognition of moral obligation; at the same time it relegates women to the seclusion of the zenana, depriving social intercourse of the charm of their society, and deprecates amusements that other countries find harmless, such as dancing and card-playing. This moral fervour is capable of producing such types as that of the judge who cut himself off from all human associations lest his judgment might be influenced by consideration for a friend, the hard-worked administrative officer who gave away the whole of his official salary in charity, and the scholar who repented in bitter tears because he had made a profit out of the sale of a work on religion. The moral sanction is sought in religion, and moral precepts are based on the Qur'ān, the traditions, and the works of authoritative theologians; maxims of conduct are also frequently quoted from the poets and Ṣūfī writers. Treatises on ethics, such as *Akhlāq-i-Nāṣirī*, *Akhlāq-i-Muhsinī*, etc., are read by the learned, and similar works—*e.g.*, *Akhlāq-i-Jahāngīrī*—were compiled in India, but acquaintance with them has been too restricted for them to have exercised much influence on the general moral consciousness of the Indian Musalmāns. This legal and didactic view of ethics may at times degenerate into formalism, and a low level of moral achievement may subsist side by side with fervid professions of piety; but the tendency of modern Muslim society in India is towards a more distinctively ethical basis for conduct and less dependence upon religious authority.

Within the narrow limits of this article it has not been possible to do more than briefly indicate some of the main characteristics of Islām in India. See, further, MISSIONS (Muhammadan), SECTS (Muhammadan).

LITERATURE.—No comprehensive work has yet been written on the religion and ethics of the Indian Muhammadans. The reader will find articles bearing on these subjects in such periodicals as *JASB* (Calcutta, 1832 ff.); *Calcutta Review* (Calcutta, 1844 ff.); *Journal of the Moslem Institute* (Calcutta, 1905 ff.); *Revue du monde musulman* (Paris, 1906 ff.); *EI* (Leyden, 1908 ff.). For the bibliography of historical works see *The History of India as told by its own Historians; The Muhammedan Period*, ed. from the papers of H. M. Elliot by John Dowson, London, 1867–77. A vast amount of material is to be found scattered throughout the official publications of the Government of India; for bibliography see F. Campbell, *Index-Catalogue of Indian Official Publications in the Library, British Museum*, do. 1900. Among separate works may be mentioned: J. H. Garcin de Tassy, *Mémoire sur les particularités de la religion musulmane dans l'Inde*², Paris, 1869; Mrs. Meer Hassan Ali, *Observations on the Mussulmauns of India*, London, 1832; W. W. Hunter, *The Indian Musalmans*, do. 1871; Jaffur Shurreef, *Qanoon-e-Islam, or the Customs of the Mussulmans of India*, tr. G. A. Herklots², Madras, 1863; Syed Ameer Ali, *The Spirit of Islam, or the Life and Teachings of Mohammed*², London, 1896; S. Khuda Bukhsh, *Essays Indian and Islamic*, do. 1912. A more detailed bibliography will be found in the present writer's art. 'India' in *EI*.

T. W. ARNOLD.

MUHAMMADANISM (in Persia).—Islām began in Persia very early. Within a year of Muhammad's death the Muslim armies came into collision with the Persian power, and the conflict lasted for thirty years, extending from the Tigris to the Oxus. The last Zoroastrian dynasty was overthrown in A.D. 750 in the region south of the Caspian. The conversion to Islām was a slower process, and the disappearance of Zoroastrianism was gradual. The intellectual life of Islām was very soon enriched by Persian scholars. It is significant that after the Arab conquest Nestorian missions were successfully prosecuted among Iranians described as pagans.[1] Still, Islām was identified with a foreign invasion—a fact that influenced subsequent history.

The cause of ʿAlī gained adherents in Persia from the first, perhaps because Ḥusain married a Sasanian princess. In the Umayyad period revolts were frequent, many of them Khārijite in origin. The ʿAbbāsid conspiracy was begun in Persia; Abū Muslim, the chief conspirator, was a Persian; and the battle of the Zāb, which decided the contest, was fought on the border of Īrān. Although revolts were common, the authority of the ʿAbbāsids was generally recognized by the ruling dynasties in Persia, few of which were Shīʿite. The most determined and powerful attempt to establish Shīʿite Islām was that of the Ismāʿīlians, or Assassins (*q.v.*). Persia was the greatest sufferer of all in the ruin wrought by the heathen Mongols, and Islām seemed about to perish; Tīmūr was a Sunnite Muslim, but he had mercy on none. With the rise of Ṣafawī kings (A.D. 1500) Shīʿite Islām of the Twelve was established as the State religion—a position challenged since only by the audacious Nādir († 1747), who proposed to make Shīʿite Islām a fifth sect co-ordinate with the four recognized divisions of Sunnite Islām. The paper constitution of modern Persia recognizes Shīʿite Islām as the religion of the realm.

The inner development of Shīʿite Islām has never been adequately described. From the first many Persians refused to believe that the cycle of revelation had closed with Muhammad, and the deification of ʿAlī seems to have begun even before his death.[1] This mystical belief in a continuous revelation and a divine presence, different in kind from anything found in the Qur'ān, developed into the doctrine of the *imāmat* (cf. art. INCARNATION [Muslim]). In the process of the elaboration of this doctrine sects were formed, the most remarkable being that of the Ismāʿīlians, which, strangely, has left scarcely a trace in modern Persia. The cult of ʿAlī, and especially of Ḥusain in the celebration of ʿĀshūrā (the 10th of Muḥarram), is still in process of growth. Another line of theological development has been Ṣūfiism, the great names in which are Persian (though not all Shīʿite), and which has greater influence to-day in Persia than in any other land. Important events in recent Shīʿite Islām have been the growth of Shaikhiism, the birth of Bahāism, and the attempt to join Western constitutional government to Islām.

The influence of Persia in Islām is a larger subject than Islām in Persia. Traces of Zoroastrian influence are to be found in the Qur'ān, and still more in the developed Muslim theology.

> 'The victory of the Abbasids was, in a sense, a conquest of the Arabs by the Persians . . . the battles of al-Qadisiya and Nahawand were avenged; Persian ideas and Persian religion began slowly to work on the faith of Muhammad.'[2]

What Islām owes to Persian Sunnites in formal theology, as well as to the dervish orders and Ṣūfiism, may be indicated by mentioning the names of al-Ghazālī, ʿAbd al-Qādir al-Jīlānī, and Jalāl al-Dīn Rūmī (*qq.v.*).

Modern Persia is the resultant of the interaction of complex forces through a long period, and religiously it is far from homogeneous in character. Sunnites number a million or more. The majority of these are Kurds, some are Arabs, some Turks in Ādharbaijān, and some are Persians in the Gulf region. Among them the most numerous sect is the Shāfiʿite. Shīʿites are believers in the Twelve Imāms. Sects that are numerous and wide-spread enough to merit attention are the Mutasharīʿs, the Shaikhīs, and the Zahabīs. Other sects that should be mentioned are the ʿAlī Illāhīs and the Bahāīs. Ṣūfiism, influential as it is, cannot be regarded as a separate sect. The dervishes are an institution that cannot be neglected (cf. art. DERVISH). The following figures are given as an approximation: Sunnites, 1,000,000; Shīʿites, Persians, Lūrs, etc., 5,000,000; Tatars, 2,000,000; ʿAlī Illāhīs, 300,000; Bahāīs, 100,000.

[2] D. B. Macdonald, *Development of Muslim Theology, Jurisprudence, and Constitutional Theory*, London, 1903, p. 133.

Even among the Sunnites (especially the Kurds) religion centres much in the cult of the Shaikhs, who are credited with miraculous powers. Many of these are connected with the dervish orders, especially the Naqshbandīs.

The great religious principle of the Shīʽites is the veneration of the family of ʽAlī and the doctrine of the *imāmat*. While every community numbers its *ḥajjīs*, the great shrine for pilgrimage of the living and burial of the dead is Karbalā, which, moreover, is the place of religious authority, the seat of the chief *mujtahids*, and the centre of theological education and learning. In every city there is a *madrasah* (college), but an ambitious student completes his training at Karbalā, or at one of the neighbouring shrines that share in its importance. The unifying power of such a centre is very important. The other shrine of importance is Mashad. For the mass of the people the great religious observance is the commemoration of the battle of Karbalā on the 10th of Muḥarram and preceding days. On the spectacular side it is the carnival of the populace, and the timid disapproval of the educated is unavailing to check continual increase of the excesses of grief in cutting the head and beating the breast. Regular passion-plays are uncommon (cf. art. DRAMA [Persian]). Preaching has an important place in the mosque life, and the great topic for sermons is the life of the Imāms. Ghadīr Bairām (when Muhammad is supposed to have designated ʽAlī as his successor) is at least equal to Qurbān Bairām in popular estimation. The *ḥadīth* (traditions) deal with the sayings and doings of the Imāms as well as of the Prophet, the most popular collections being those of Mullā Baqir Majlisī of Iṣfahān, made three hundred years ago. The expectation of the reappearance of the Twelfth Imām as al-Mahdī is general. The Sayyids rival the *mullās* in authority and claim the fifth of field and herd. So far the description applies to all Shīʽite sects.

The Mutasharīʽs, who are by far the most numerous sect, regard the *mujtahids* as the only representative of the Qā'im, or hidden Imām, and only inasmuch as they interpret the *sharīʽah* (canon law). They are conservatives and traditionalists. The Shaikhīs, Zahābīs, and minor sects hold that there is always a representative of the Imām, who possesses in some degree his divine authority. They differ as to who that representative is, and in other matters. The Shaikhīs are the intellectual mystics, interpreting, *e.g.*, the *miʽrāj* (Muhammad's ascent to heaven, deduced from Qur'ān, xvii. 1) in a spiritual way. Zahābīs resemble the dervishes in ascetic practices and in the use of the *dhikr*, both *lafẓī* and *qalbī* (spoken and silent).

ʽAlī Illāhīs and Bahāīs, widely different in other respects, may be classed together as being Muslim in only a modified sense. The former recognize none of the Imāms except ʽAlī, care nothing for the *sharīʽah*, pay no attention to Ramaḍān or the prayers, and have their own yearly feast, in connexion with which a common religious meal is eaten. Among Shīʽites they conform more or less, but in private they claim that they are not Shīʽite. They believe in an incarnation, but it is not very clear whether the connexion with ʽAlī is not a blind. They call themselves Ahl-i Ḥaqīqah ('people of the Truth'). In practical life the reverence paid to the Sayyids, or *pīrs*, is great. Their religious centre, where the head of the sect lives, is near Kirmānshāh. They are numerous both north and south, among Kurds, Turks, and Persians, and especially in the villages and among the nomads, and are found in smaller numbers in the cities. The Bahāīs are too well known to require description. For them Muhammad and the *sharīʽah* are superseded. They are found in the cities and among the more educated classes, less often in the villages, and not at all among the nomads. They are increasing. Though only a fraction of the less numerous classes of society, their influence is not to be measured by their numbers. The Azalīs are practically extinct, and the Bahāīs, with insignificant exceptions, follow ʽAbbās Efendi. Both these sects practise *taqiyyah*, or religious deception.

The Ṣūfīs (or ʽĀrifs, 'γνωστικοί') are the philosophical and intellectual devotees of religion, belonging, it may be, to some sect, but not often to the Mutasharīʽs. Among them are many dervishes. They usually recognize some one as their guide (*murshid*). The most popular poets among them are Jalāl al-Dīn, Shams-i-Tabrīz, Farīd al-Din ʽAṭṭār, and Ḥāfiẓ. Dervishes in Persia are loosely organized, and monasteries are almost unknown. Many dervishes will claim to be *khāksārī* ('abject,' 'humble'), others to be followers of Shāh Naʽmat-Allāh or of Ṣafī ʽAlī Shāh, a saint of recent date.

The organization of religion is democratic, and in the last analysis it is popularity that determines rank and authority. The government exercises a control by granting titles and recognition, and the *mullās* and *mujtahids*, both as authorized expounders of the *sharīʽah* and as popular leaders, influence government. They are from the people and are susceptible to the influences that affect the people. Low birth is no bar to ecclesiastical advancement. The dervishes are to some extent controlled by the appointment from them of a *naqīb*, or civil head, in each city. Curiously, he has charge also of jugglers, mountebanks, snake-charmers, etc.

The influence of religion in moral and social matters is not easily estimated. Of course it is pervasive. The only education open to most of the people is that in the mosque schools. The pilgrimages promote intelligence and national unity. On the other hand, the shrines are centres of vice, the *mullās* are notorious for venality, the *sharīʽah* is an obstacle to progress, and religious teaching often makes wrongdoing easy rather than difficult. It may be doubted whether those who desire moral or social reform look to religion for inspiration and aid. The least religious classes are the educated and the nomads.

An influence at work that must affect the future of Islām is the rationalization of religion. It takes the form of reducing religion to the minimum of doctrine, equalizing all forms of revelation by admitting truth in each, but granting finality to none. Another tendency is what the Persians call *ṭabīʽī* ('naturalistic'), denying all revelation and taking an agnostic position on the question of God's existence. Another growing influence is the renascence of Turkish literature in the Ādharbaijān dialect in Tiflis and Baku. The reaction due to foreign dominance is also to be reckoned with. The influence of Western civilization is in many ways disintegrating. The influence of Christianity mediated by commerce, politics and literature, and missionary effort must not be forgotten. This had its part in Bābism and still more in Bahāism.

See, further, artt. BĀB, BĀBĪS, SHĪʽAHS, ṢŪFIISM.

LITERATURE.—Besides the works cited in the article, see T. W. Arnold, *The Preaching of Islam*², London, 1913; E. G. Browne, *Literary History of Persia*, 2 vols., do. 1902–06, *A Year among the Persians*, do. 1893.

W. A. SHEDD.

MUHAMMADANISM (in Syria, Egypt, and Mesopotamia).—*A. SYRIA.*—Syria and Palestine have always formed one of the outlets for the superfluous population of Arabia. The invasion of the country by the Arabs in the first half of the 7th cent. A.D. was only one of a series of incursions which had been going on from time immemorial. The conquest, which took place in the Caliphate of ʿOmar, only a year or two after the death of Muhammad, occupied a few years (13–15 A.H.), and was facilitated by the fact that the people of Syria came, to a large extent, both in origin and in language, of Semitic stock. The kingdom of Ghassān, which, with that of Hīra on the other side of the Syrian desert, formed a buffer State between the empires of Rome and Persia, was of pure Arab blood. When, therefore, the Arabs made their inroads into the country, they were not invading a foreign people, but rather attacking the governing classes only, the representatives of the Eastern Roman empire. Moreover, it was only a score of years since the Persians had wrested the country from the Greeks and held it for ten years. The Persian Wars had depleted the exchequer of Constantinople, and Heraclius had been compelled to withdraw the wonted subsidies from the frontier tribes—a fact which made them all the less unwilling to throw in their lot with the Arabs. When, therefore, ʿOmar's forces entered the country, they did not come altogether as invaders, and to the indigenous population the issue was not subjection so much as a change of masters; and it was not impossible that the new masters might be more gentle than the old.

To the Arabs the conquest of Chaldæa was motived by the lust of plunder, the conquest of Egypt was to a large extent a necessity—had it been acquired a year or two earlier Medina would have been saved from famine—but the conquest of Syria was largely a matter of sentiment. Within its borders were contained nearly all the holy places of Islām. Hūd and Ṣāliḥ had ministered to tribes within the boundaries of Arabia, but nearly all the remaining prophets—Abraham, Solomon, but above all Jesus—had lived and died in Palestine. Muhammad, too, had visited Syria, once as a mere boy, with his uncle Abu Ṭālib, and again as the agent of Khadījah. Jerusalem had been the goal of his mysterious night-journey, from which he had ascended to the Divine Presence, and it was from Damascus that he had turned away, saying that one could not enter Paradise twice. The reverence of the Arabs for Jerusalem is shown by the fact that it was towards it that the Muslims turned in prayer during the first two years after the arrival of Muhammad at Medīna, and that the capitulation of the city in 637 was accepted by the Caliph in person. On this occasion ʿOmar visited most of the sacred places, under the guidance of the patriarch Sophronius. He is said to have identified the site of Solomon's temple, and he erected a small mosque, probably of wood and clay, for the worship of the Muslims. Jerusalem did not become the political capital of the province of Palestine. For that Ramleh was founded somewhat later. But the sacred character attributed to the ancient city by the Arabs appears in the name Bait al-Maqdis ('holy house') by which their historians always call it, or in the shortened form Al-Quds, by which it is known at the present day.

The sanctity in the eyes of the Muslims even of Jerusalem is, however, surpassed by that of Hebron, the home and place of burial of Abraham, Isaac, and Jacob, with their wives, as well as of Joseph. Hence it used to be named Masjid Ibrāhīm ('Abraham's mosque'), but now it is always called Al-Khalīl ('the friend'), abbreviated from 'the city of the friend of God.' Hebron fell into the hands of the Crusaders in A.D. 1099 and remained so until it was retaken by Saladin in 1187. The Crusaders do not seem to have had much scruple about entering the sepulchral chambers, but the curiosity of the Muslim does not exceed his sense of reverence, and one of them mentions with a feeling of the deepest awe that he had conversed with one who had with his own eyes seen Abraham. At the present day Europeans are not permitted to enter the mosque (originally a Crusaders' church), with very rare exceptions, and then only by a special *firmān*.

Under the Umayyads (A.D. 661–750) Syria attained to the hegemony of all the Arab States, and Damascus became the capital of an empire stretching from India to Spain. Muʿāwiya, the first of the line, had been governor of the country under the Caliph ʿOthmān: it was to the Arabs of Syria that his dynasty owed its birth and stability, and the Caliphs of the line naturally wished to do all in their power to strengthen the position and precedency of their adopted country. Hence it was that, after the assassination of ʿAlī, Muʿāwiya proclaimed himself Caliph, not at Medīna, which had been the political as well as the religious capital under the first three Caliphs, but at Jerusalem. When, on the death of his son Yazīd, the rest of the Muslim world did homage to the rival Caliph Ibn Zubair in Mecca, it was no doubt in some measure owing to the possession of the sacred city of Jerusalem and the tombs of the patriarchs at Hebron that the Umayyads were still able to maintain their position in Syria. And, whilst their rival was engaged in rebuilding the holy house at Mecca, which their armies had besieged, the Umayyad ʿAbd al-Malik was building the famous Dome of the Rock upon the site of the Temple of Solomon, as the inscription, in spite of its mutilation under the ʿAbbāsids, still bears witness; and it was only after the building was finished, and a substitute for the Kaʿbah had been provided to which the pious Muslim might make his pilgrimage, that the rival Caliph was crushed and the Muslim world once again united under one head. Muʿāwiya had already wished to remove the pulpit of the Prophet at Medīna to his new mosque, but in deference to the religious feelings of the people he refrained from doing so. There is no reason to suppose that the Umayyad Caliph acted in this matter from merely pecuniary motives, because he wished to divert the commerce arising out of the pilgrimage to the Hijāz into his own coffers; because, as soon as he was undisputed Caliph, it would not have mattered which town became the object of pilgrimage (J. Wellhausen, *Das arabische Reich*, Berlin, 1902, p. 132 f.).

The truth is that the Umayyad Caliphs, with the exception of the pious ʿOmar II., were not Muslims at heart. They sprang from the old aristocracy of Mecca, the bitterest opponents of the Prophet, who submitted to him only at the last possible moment. They did not scruple to attack and plunder the city of Medīna where he had lived and died, and even to destroy the Kaʿbah itself, and they had well-nigh exterminated the family of the Prophet. They were a purely civil dynasty ruling in the name of religion, and they did not care what means they used to attain their ends. The great bulk of the population of Syria were Christians. They were, many of them, well educated, and in every way, except in fighting, more useful to the dynasty than the Arabs themselves. All the clerks in the government offices were Christians, and the State archives were written at first in Greek. A similar state of things existed in Persia and in Egypt. It was only under ʿAbd al-Malik that the Arabic language began to be used exclusively, and even then the clerks continued to be non-Arabs. Some of the most influential persons about the Caliphs were also Christians. John of Damascus, as well as his father, held high office under these Arab rulers of his native city, and the panegyrist of the Umayyads was the Christian poet al-Akhṭal. Moreover, it was not that these Caliphs merely made use of their Christian subjects, whilst ignoring their religious creed. Questions of theology seem to have been discussed by the two parties in the presence of the more liberal Caliphs upon equal terms. Al-Akhtal made no attempt to conceal either his religious belief or the external emblems of his faith, when he stood before ʻAbd al-Malik; and John of Damascus was an ardent defender of the use of images in divine worship, wherein he stood in opposition not only to the Caliph but to the Greek emperor as well. Such a state of things could not but react upon Muhammadanism itself, and there is little doubt that some of the less strict ways of thinking which began to prevail were due to this cause. It was to condone the delinquencies of the Umayyads that the Murjites professed to believe that there was no deadly sin for any one who made the profession of Islām, or that at any rate the sinner would not be punished until the Day of Judgment. Belief in divine predestination also began to be modified in the direction of an admission of free will. This tendency towards freedom of thought culminated in the Muʻtazilite movement under the ʻAbbāsids (see SECTS [Muhammadan]). Nor was it only on the religious side that Christianity moulded Muslim life. Hishām, one of the last and best of the Umayyad Caliphs, was a notable agriculturist. His governor over ʻIrāq was Khālid al-Qasrī, who was also a farmer on a grand scale. Khālid's mother was a Christian, and he built her a chapel beside the mosque at Kūfa. He employed Christians and other non-Muslim peoples in preference to Muslims, as he no doubt found them more intelligent and capable. In Hishām's days the doctrine that the Qurʼān is not eternal, which became the accepted creed for a short time under the ʻAbbāsids, began to be professed. The century and more during which the Umayyads ruled the Muslim world from Damascus was the most glorious in Arabian annals, and it is not without significance that it was after the last Caliph of the line had removed the capital to his native town of Ḥarrān that the dynasty fell and was replaced by that of the ʻAbbāsids.

With the fall of the Umayyads the Arabs ceased to be the ruling race and Syria became one of the provinces of the empire, not specially distinguished in the religious aspect from the rest. On the break-up of the Caliphate, with its resulting chaos, Syria became, with its many holy places, the battle-ground of Christianity and Islām. When it was prosperous and well-governed, it was generally as a dependency of Egypt, under Fāṭimid, Ayyūbid, or Mamlūk rulers. For the last four hundred years it has formed a province of Turkey.

LITERATURE.—There are no reliable reports published officially by the government. Much information is obtainable from daily and other periodicals appearing in Beirūt, mostly edited by Christians. See also A. I. S. de Sacy, *Exposé de la religion des Druzes*, Paris, 1838; G. Le Strange, *Palestine under the Moslems*, London, 1890; G. W. Chasseaud, *The Druses of the Lebanon*, do. 1855; C. H. Churchill, *Mount Lebanon*, do. 1853; J. Finn, *Stirring Times; Records from Jerusalem Consular Chronicles, 1853–56*, do. 1878; J. E. Hanauer, *Folklore of the Holy Land*, do. 1910; P. G. Masterman, 'The Modern Inhabitants of Palestine,' in *PEFSt*, 1904 (p. 150 ff.) and foll. years.

B. EGYPT.—Since its conquest by the Arabs about the year A.D. 640, Egypt has, owing partly to its natural wealth and partly to its possession of the Azhar University and its frequent sovereignty over the holy places, played a leading part in the material and spiritual progress of Islām, and especially during the last hundred years it has outstripped all other countries in the direction of the Europeanizing of the faith. The people of Egypt have always been subservient to those of another race. At the beginning of the 7th cent. they had to endure twelve years of Persian domination. After the conquest was over, however, the Persians ruled, as they generally did, with moderation and tolerance, and, when the country was recovered for the Eastern empire by the conquests of Heraclius, the change of masters was a change for the worse. The natural craving of the Egyptian for a strong arm on which to lean had shown itself in the sphere of theology in their deification of Jesus Christ, which was the basis of their whole-hearted attachment to the Monophysite doctrine; when, therefore, Heraclius sought, through his instrument Cyrus, to force upon them the orthodox formula, and at the same time to increase the revenues obtained from the taxation of the country, the attempt was met by the Copts with dogged resistance, culminating in the flight of their patriarch Benjamin. It was owing to this prevailing discontent that the conquest of the country by the Arabs was a comparatively easy matter, accomplished within a couple of years, and with not more than a handful of troops. ʻAmr, who had planned and carried out the expedition, became the first governor of the country. He at once granted religious toleration to the people, whose disputes he did not understand; he restored the Coptic patriarch to his office; and he, at any rate, did not increase the burden of taxation. The seat of government was removed from Alexandria to the fortress of Babylon, close to the modern Cairo, around which a town, called Fustāt, soon sprang up. The southern boundary of the province was at Philæ, the limit of the Christian kingdom of Nubia, with which the Arabs concluded a treaty.

The Copts did not at once go over to the faith of the conquerors. Probably they believed that the occupation would be temporary, as that of the Persians had been. Their only motives in becoming converts to Islām would have been those of self-interest, for Muslims were not subject to taxation. But it was not by any means the interest of the Arab that the subject populations should become converts to the faith, as that would endanger the source from which they drew their stipends, and lead to the bankruptcy of the government. The policy of the Arab rulers, in Egypt as elsewhere, was one of non-interference and continuity. The administration of the conquered territories was carried on, as nearly as possible, as it had been under their previous rulers. The Arabs formed a ruling class, corresponding as closely as may be to the British in India. Their business was, not to make converts to their religion, but to maintain public order, to see that justice was executed, and to collect the revenues. This was pre-eminently the case in Egypt, to such an extent that the newcomers, professed unitarians as they were, to whom images and pictures were abhorrent, did not scruple to take over even the seals of their predecessors in office, on which was frequently engraved the figure of a wolf or other animal—a rather hard nut for modern writers of Hebrew history to crack. The wise tolerance of the Arabs is shown by the fact that not only were their official documents written in Greek and Coptic as well as in Arabic, but many important positions in the government were filled by Christian natives of the country. No doubt, complaints of oppression were not wanting, but what oppression there was seems to have been due to the system which the Byzantines had bequeathed to the Arabs rather than to the manner in which the system was carried out by the latter, and sometimes the fault lay with the native intermediary.

Once more it fell to ʻAmr to become the conqueror of Egypt, this time on behalf of the Umayyads, in whose hands it remained for nearly a century (A.D. 658–750). The tragic fall of the Umayyad dynasty and the massacre of their house made a deep impression upon the Christian population of Egypt, and it is not without significance that it was in Egypt that the last of the Umayyad Caliphs sought shelter from his enemies. For a century the ʿAbbāsids continued to send Arab governors to Egypt, and it was not until the year 586 that non-Arab, practically independent dynasties began to be set up in the country.

Under the two centuries of Arab sway Egypt appears to have enjoyed a period of comparative prosperity and good government. The governors are no doubt often abused, but generally without justice. This is especially the case with Qurrah ibn Sharīk, who is usually described as an oppressor and persecutor, but whom numerous papyri show to have been a just, if strict, ruler. Moreover, not only was there no religious persecution of the Christians by the Arabs, but these had rescued the native Jacobite church from the hands of their co-religionists, the Greek Malkites, the free-lance nature of the Bedawī always leading him to support the more heretical side—a course which subserved his own interests also. The Arabs even discriminated in the taxation in favour of the Jacobites as against the Malkites to such an extent that not a few of the latter went over to the native church. The Arabs found Egypt in a state of feudalism. The people were serfs attached to the land, and many of the papyri are taken up with the capture of some fugitive who has escaped from his own domain. Not the least benefit which the Arabs conferred upon the Egyptians was to deliver them from their feudal lords, by converting these into mere tax-gatherers for the government.

The purely Arab government under the direct sovereignty of the Caliph was followed by a succession of dynasties of Turkish origin, the Ṭūlūnids (A.D. 868–905), whose capital Qaṭāʾiʿ, between Fusṭāṭ (*i.e.* Latin *fossatum*) and modern Cairo, was famous for its splendour, and who for a quarter of a century ruled Syria as well as Egypt; and, after a brief interval, the Ikhshīdids (A.D. 935–969), who also ruled both Syria and the holy cities of the Hijāz, Mecca and Medīna.

The Arabs did not leave behind them much in the way of architecture to tell the visitor of their occupation of the country. The so-called 'mosque of ʿAmr' may at least indicate the site on which that of the first conqueror of the country was built, but the latter was a building of very much more modest dimensions than the present spacious place of worship, and not a trace of it remains.[1] Indeed, the original Arab town of Fusṭāṭ, although it maintained an independent importance for many centuries, is now regarded as merely a part, and not the most flourishing part, of its younger sister, Cairo.

The dynasty of Ibn Ṭūlūn, on the other hand, left many memorials of their supremacy. The mosque of Ibn Ṭūlūn, said to be an imitation of the Kaʿbah designed by a Christian architect, but with a dome superimposed and a minaret round which winds an external staircase resembling that of the Church of the Redeemer in Copenhagen, is still one of the sights of Cairo. Ibn Ṭūlūn's brilliant but unfortunate son also resembled the late Khedive Ismāʿīl in his devotion to building and public works.

It was, however, under the Fāṭimids that Egypt rose to the height of its greatness. Claiming descent from Fāṭimah, the daughter of the Prophet, these sectaries, as they were held to be by the orthodox ʿAbbāsid Caliphs, took their origin, like so many other movements, both political and religious, in N. Africa, from which they conquered Egypt (A.D. 969–1171). Muʿizz, the fourth of the dynasty, proclaimed himself Caliph, in opposition to the ʿAbbāsid Caliph in Baghdād, and founded a new city close to the old capital, which he called Al-Qāhira ('the victorious'), the modern Cairo. The name bears a curious resemblance in sound to that of the ancient Egyptian town of Khere-ohe in the same neighbourhood. Like most heterodox peoples, the Fāṭimids were enlightened rulers. In spite of famine at home and the inroads of the Carmaṭians (*q.v.*) from Syria, they quickly consolidated their empire over all the countries bordering upon the shores of the Mediterranean, from Algeria to Syria, the holy cities of Arabia also acknowledging their sway. Security of life and property led to a great increase of population. Commerce was flourishing, and the trade of India, which had up till now passed through Baghdād, began to flow into Egypt, and from this period begins the decadence of the ʿAbbāsid capital and the resulting aggrandizement of Cairo. ʿAzīz, the son of Muʿizz, was especially distinguished for his enlightenment and religious tolerance. His reign is the culminating point of the dynasty, although it was considerably later that the prayers were said in the name of the Fāṭimid Caliphs in the ʿAbbāsid capital itself, but only for one year (A.D. 1059). Under Ḥākim, the son and successor of ʿAzīz, the free thinking of the Fāṭimid régime ran riot: under the malign influence of the Persian Darazi the Caliph proclaimed himself an incarnation of ʿAlī, and claimed divine honours. He disappeared, but his doctrines were propagated in the sect of the Druses (see Sects [Christian]). A persecution was also instituted against both Jews and Christians, in spirit not unlike those which the early Christians suffered for refusing to acknowledge the deification of Domitian and other Roman emperors.

The most enduring benefit which the Fāṭimids conferred upon Egypt and upon the whole Muslim world was the founding of the Azhar College. It was begun immediately after the conquest of the country, and opened in the year A.D. 972. The text of the inscription commemorating the opening has been preserved (M. van Berchem, *Corp. Inscr. Arab.*, i. [Paris, 1904] 43, no. 20). It received its name ('the fair') from an epithet of the alleged ancestress of the dynasty. Originally built as a mosque, it was transformed into a college and hospital for the poor by ʿAzīz. Under the Fāṭimids the instruction imparted was naturally Shīʿite, but of this period little is known, and by a curious irony the college did not attain to full usefulness until it came under the rule of Sunnī, or orthodox, masters.

The annexation of Egypt by Saladin in the year 1169 and the consequent supersession of the Fāṭimid by the Ayyūbid dynasty, naturally led to the immediate abolition of the Shīʿite faith of the descendants of ʿAlī and the establishment of the orthodox Sunnī profession, not only in the Azhar College but throughout Egypt (1171–1250). This was the more easy of accomplishment as the Egyptian Muslims were always Sunnites at heart, and had submitted to the faith of their Fāṭimid rulers only through compulsion or for the sake of peace. But, if the Fāṭimid form of faith vanished with their dynasty, they have left behind them monuments which show till the present day the greatness of their race. In addition to the Azhar mosque, the ancient city gates which are shown to the tourist date from the Fāṭimid period, as also does the mosque of Ḥākīm, modelled on that of Ibn Ṭūlūn, situated between the Bāb Nasr and the Bāb Futūḥ. But their best memorial is the city of Cairo itself.

Of the four schools of doctrine which are recognized as orthodox by the Sunnite Muslims, the one

PACIFIC BIBLE SEMINARY
EAST

which first prevailed in Egypt was that of Mālik ibn Anas († A.D. 804). It is still the accepted rite of the rest of N. Africa, but in Egypt itself it has been replaced by that of his friend and disciple Shāfi'ī, who died in Fustāt in the year A.D. 819, and whose tomb is visited still by the pious near the foot of the Mokattam Hills. With a view to rooting out the Shī'ah doctrines and planting in their stead the orthodox faith, Saladin despoiled the Azhar of many of its privileges and endowments, and founded in its place a mosque and college round the tomb of the Imām Shāfi'ī (A.D. 1191), at the same time instituting missions to the outlying districts for the propagation of the true faith. The Azhar, however, quickly rose again into favour with the great and benevolent, and it is from the Ayyūbid rather than from the Fāṭimid period that its career of brilliance and usefulness takes its beginning. With the coming of the Mamlūks (1250–1517), who succeeded the Ayyūbids, the Ḥanīfite school (called after Abu Ḥanīfah, † in Baghdād, A.D. 767) came into prominence, and still more under the Ottoman Turks (from 1517 on). Being the least strict of the four schools and also the most inclined to monarchy, it was naturally favoured by the government, whilst the Shāfi'ite remained the popular school. As for the Ḥanbalī, the last of the four orthodox schools (founded by the fanatical Ibn Ḥanbal, † 855), it has never taken hold in Egypt, and its students in the Azhar have never been more than a handful at the most.

Meantime the Azhar University, which may be considered the intellectual barometer of Egypt, grew in importance and splendour by leaps and bounds. In the West the conquests of the Christians ending in the expulsion of the Moors from Spain by Ferdinand and Isabella in 1498, and the incursions of Jenghiz Khān at the beginning of the 13th cent. and of Tīmūr Lenk (Tamerlane) at the end of the 14th in the East, left Egypt untouched. Thus, when its rivals in Cordova and in Baghdād had been swept away, Cairo remained the undisputed mistress of Muslim learning and culture. Both its professors and students were drawn from all parts of the Muslim world, a preference even being given in some cases to those whose homes were most remote. The Muslim man of learning is cosmopolitan in his habits; he visits all countries where he may hope to pick up some crumbs of knowledge or obtain a diploma from some world-famous doctor; and the fame of the Azhar and its instructors naturally led many of these travelling students to settle in Cairo, and sometimes to lecture in its college. The best known of these is probably the philosopher-historian Ibn Khaldūn, who was a native of Tunis and was given posts in the government not only of that country, but also of Fez and Granada. He then came to Cairo, where he was given the office of *qāḍī* of the Malikis. From there he paid a visit to Tīmūr Lenk at his camp in Syria, and finally died in Cairo in A.D. 1406.

But, while the Azhar may be considered as holding aloft the torch of learning to the whole world, both Muslim and Christian, up to the period of the Renaissance in Europe, it must be confessed that after that epoch it became a stronghold of obscurantism. This is evident from the books which continued to be studied there. The ancient poetry, which is the whole literature of pre-Islāmic Arabia, was unheard of, and even the *Assemblies* of the inimitable Ḥarīrī[1] were neglected. All study was theological (including jurisprudence) or grammatical. Even the original texts of the Qur'ān and the *Traditions* of Bukhārī were not studied so much as commentaries and super-commentaries upon these. Mathematics, natural philosophy, history, and geography were ignored. In other words, the Azhar, like the 'University' of Fez, continued to be a mediæval school after the Middle Ages had passed away.

Egypt was one of the first homes of Christian monasticism, and this religious tendency of its people showed itself also after they had largely gone over to Islām. One of the earliest and most typical mystics of Egypt is called Dhū'l-Nūn (a name of the prophet Jonah, meaning 'he of the fish'), who flourished in the first half of the 9th cent. A.D.; but perhaps the most famous is Ibn al-Fāriḍ, who is considered the greatest of all the poets of the mystics. He was born in Cairo in 1181, and died there in A.D. 1235. He was buried on the Mokattam Hills near the tomb-mosque of Shāfi'ī. His principal poem, in 671 lines, has been translated by J. von Hammer-Purgstall (Vienna, 1854). Already under Saladin not only cells and monasteries, but even convents (for divorced wives and other women), began to multiply rapidly. Būṣīrī († A.D. 1279), the author of the famous 'Ode of the Mantle,' which is known all over the Muhammadan world and has been often printed and translated into many languages, was, as his name implies, of Egyptian origin.

Although Islām is theoretically a strictly monotheistic religion, there is perhaps no faith in which the worship of saints plays a larger part. The prayer-book of Jazūlī, a native of Morocco who died in A.D. 1465, consisting of litanies in which the Arabian Prophet is a being certainly more than human, is used wherever his followers are found, and not least in Egypt. The whole of N. Africa, and indeed the Muslim world generally, is honey-combed with secret societies or brotherhoods (*ikhwān*), mostly religious in character. They form each an *ecclesia in ecclesia.* In Egypt there are four such orders named after four mystic or Ṣūfī (see ṢŪFĪISM) saints of the highest rank called 'poles' (*qutb*). The most famous of these is the Shaikh 'Abd al-Qādir al-Jīlānī († 1165), whose shrine is to this day a place of visitation in Baghdād; but the best known locally is Aḥmad al-Badawī, a native of Tunis of the 12th cent., whose tomb-mosque is at Tanta, a town of some 60,000 inhabitants, on the railway line about halfway between Alexandria and Cairo. A fair is held there annually on his saint's-day, during which the population swells to half a million, drawn from all the neighbouring countries. It resembles a fair elsewhere, shows of all kinds predominating over whatever religious motive ever existed. In Morocco the four recognized 'poles' differ from those acknowledged in Egypt, and one of them, Shādhilī, a native of the country († A.D. 1258), is also the eponym of one of the more important brotherhoods. In these shrines the room containing the catafalque of the saint is lined with banners, rosaries, ostrich eggs, and votive offerings of every description. Where the shrine has fallen into ruin and consists of four bare walls, rags and pieces of cloth are often tied to a neighbouring tree. These pious emblems represent the prayers of the faithful to the saint to intercede for them in order to obtain some much-desired object, recovery from sickness or, often, the birth of a son. The saints' tombs, which are such a marked feature of the landscape in all Muhammadan countries, are the emblems of an ineradicable superstition, and, it is said, in many cases the haunts of crime.

With the French expedition of 1798 a new era began in the history of Egypt, owing to the attempts of the Khedives to transform it into a European State. Muḥammad 'Alī sent the youth of the ruling classes to be educated in Paris, from which they too often returned imbued with the vices rather than the virtues of Europe. Ismāʿīl laid down railway and telegraph lines all over the country. Under Taufīq slavery largely disappeared, and polygamy is fast becoming a thing of the past. From Taufīq also dates the liberty of the Egyptian newspaper press, a liberty which has been mostly abused. Indeed, the number of newspapers printed in Cairo is out of all proportion to the number of readers. They are, as might be expected, for the most part published in the interest of some political propaganda, nationalist (which generally means Turkish), conservative, or progressive. The best Christian newspapers are edited by Syrian immigrants. There are three or four journals published by and for women.

---

[1] Tr. T. Chenery and F. Steingass, London, 1898.

The progressive movement initiated by the Khedives naturally reacted on that stronghold of conservatism, the Azhar University. Incredible as it may appear, the instruction given there continued on the same lines as in the 13th century. To meet present-day needs the Gordon College was founded at Khartūm, and also a modern university in Cairo, but the latter has practically no students. Meanwhile the students of the Azhar, who have always been more or less inclined to take the law into their own hands, in 1909 went out on strike, with the result that some concessions were made to modern ideas. The last century in Egypt, however, can hardly be fairly considered as an example of Muhammadan rule, as all the ideas were European, although the instruments putting them in force were Muslim.

On the whole, it may be affirmed that Muhammadanism in Egypt has, considering the times and country, been enlightened and a source of enlightenment. Even at the period of conquest they did not put in force the iconoclastic theory of their faith, and under the Mamlūks, and even under the Fāṭimids, stone and metal work are, as may be seen by the specimens of the latter in the museum at South Kensington, of a very high order. Neither was there any scruple about making representations of living creatures. Ibn Ṭūlūn caused two plaster lions to be set over one of his gateways. Saladin introduced the eagle as an ornament in design. On one ewer, of the year A.D. 1232, in the British Museum there are over one hundred animal figures. It was from the Mamlūk artists of Egypt and Syria that this art passed into Europe. In architecture also the Mamlūks excelled. Nearly all the mosques of Cairo originated in their period, and certainly all the finest, not the least remarkable buildings being those of one of the last of the Mamlūks, Kait Bey (1468–96); yet it is on two of the oldest mosques, those of Ibn Ṭūlūn and of Ḥākim, that are found the supposed beginnings of Gothic architecture. With the coming of the Turks a period of decadence supervened, which was only intensified under the Khedives.

With regard to their moral qualities it can be said that the Muslim rulers of Egypt, with the exception of the Caliph Ḥākim, were not worse than Muslim rulers elsewhere; Saladin and a few other masters of the country were admirable rulers. The ancient monuments of Egypt still witness to the fact that the Arab conquerors of the country were not ruthless fanatics. The Coptic Church was not exterminated, as Zoroastrianism practically was in Persia, or Protestantism in Christian Spain. The native churches in Cairo are more magnificent than the mosques. One can only hope that the accounts of the persecution, especially under Ḥākim, have been exaggerated; but, even if they are literally true, they would not prove that the Muslims treated Jews and Christians much worse than they treated one another. It is certainly remarkable and significant that, at the time of the British occupation, the Copts took the side of their former masters, thus bringing about an inrush of educated Syrian Christians. British writers do not give the Copts a very high character, and much prefer the Muhammadan in many ways; but this may be the result of ages of subordination. For the present, it is more than doubtful whether a Coptic government would not be more corrupt than the Muhammadan has been. The amusements of the people consist in smoking *ḥashīsh* (*Cannabis Indica*), which, being intoxicating, is forbidden, watching public dancers, and listening to songs and stories. All these are degrading to both spectators and performers, and it would be well if they could be put down by the government. The great want of Egypt, as of all Muslim countries, is books of fiction which are at once amusing and decent, but it would take a generation or two before a taste for such literature could be cultivated in the mind of the youthful Egyptian.

LITERATURE.—The most reliable information in regard to present-day Egypt is to be obtained from Lord Cromer's *Modern Egypt*, London, 1908, and from his and his successors' annual Reports to the British Government (1888 ff.), as well as those of the Education and other Departments of the Government of Egypt; see also A. M. Milner, *English in Egypt*, London, 1892. Much information is also obtainable from E. W. Lane's notes to his tr. of *The Thousand and One Nights*, London, 1839, and his *Manners and Customs of the Modern Egyptians*, do. 1836; also Ibrahim Hilmi, *Literature of Egypt and the Sudan*, do. 1886–88; H. Jolowicz, *Bibliotheca Aegyptiaca*, Leipzig, 1858–61; M. Beiram, *Treatise on the History of the Azhar*, Cairo, 1321 A.H.; K. Vollers, in *Minerva* for 1894 (under 'Cairo'); M. Hartmann, *The Arabic Press of Egypt*, London, 1899; Artin Pasha, *L'Instruction publique en Egypte*, Paris, 1890; W. E. Jennings-Bramley, 'The Bedouins of the Sinaitic Peninsula,' *PEFSt*, 1905 (p. 126 ff.) and foll. years; T. W. Arnold, *The Preaching of Islam*^{2}, London, 1913; J. Ohrwalder, *Ten Years' Captivity in the Mahdi's Camp*, ed. F. R. Wingate, do. 1892; R. C. Slatin, *Fire and Sword in the Sudan*, tr. F. R. Wingate, do. 1898.

C. MESOPOTAMIA.—In the first quarter of the 7th cent. A.D. the Persians had conquered Egypt and Syria, and the Eastern Roman empire was, for the moment, almost limited by the walls of Constantinople. By a mighty effort, however, Heraclius drove the enemy from his provinces and the Persian empire was in its turn completely broken. This was the opportunity of the Arabs. Chaldæa became an easy prey, and in half a dozen years the empire, which under one dynasty and another had withstood the might of Greece and Rome for a millennium, had ceased to be.

The sudden collapse of Persia is explained by Arab writers by the decadent condition of the country, the effeminacy of the people, the tyranny of the great landowners, and the chaotic state of the government when brought face to face with the hardy nature and simple habits of the Arabs. But equally important is the fact that the population of Chaldæa was itself Arab. The Lakhmid kings, whose capital was at Hīra, near the ancient Kūfa and the present Najaf, were, like the Ghassānids on the other side of the Syrian desert, immigrants from Southern Arabia. Mesopotamia itself was peopled by the tribes of Taghlib, Iyād, and, further to the west, Nimar; and at Dūma, in the Jauf, on the route leading from Medīna to the Euphrates, was settled a branch of Kelb, the tribe which so influenced the Umayyads in Syria. All these tribes made a profession of Christianity; but how lightly their religion sat on them is clear from the nonchalance with which the tribe of Taghlib fell in with ʿOmar's stipulation that they should not bring up their children in the Christian faith. Accordingly, when the Muslims set out to invade Mesopotamia, they met with little opposition and with some assistance from these tribes. The ties of blood proved stronger than those of religion.

Thus Mesopotamia quickly became a Muhammadan country, and, being peopled largely by

Arabs of the tribe of Quraish, it rapidly assumed a leading place in the Muslim world, and remained for three centuries, even when the political capital was Damascus, the intellectual and religious centre of Islām. It was generally divided into two provinces—'Irāq, the southern half, its most northerly town being Takrīt, and the northern portion, Jazīra (the Peninsula). Much the more important of the two provinces, from the point of view of the history of the faith, is 'Irāq. It has always been the storm centre of S.W. Asia, from which the majority of the great schisms and disruptions arose, and it remains to-day the seat of the Shī'ah, or party of 'Alī. Even in the days of 'Alī himself it produced the Khawārij (or Seceders), whose main principle was to oppose the established order of belief and of society, and to clamour for a theocracy, by which they really meant anarchy and nihilism. Often apparently exterminated, they continued to be a thorn in the side of the recognized Caliphate for many a day. Baghdād itself was originally built and fortified to protect the person of the Caliph against the fanatical Rawandīs, a sect of Khurāsān (A.D. 762). In the first half of the 9th cent. three of the 'Abbāsid Caliphs threw in their lot with the Mu'tazilah, or party of freedom of thought, and instituted a vigorous persecution of the orthodox believers; and in the second half of the same century a servile war broke out in the country to the north of the Persian Gulf and continued for fifteen years before it was quelled. With the 10th cent. the incursions of the terrible Carmaṭians began, who, though originating in Bahrain, quickly overspread and devastated Mesopotamia, Syria, and Egypt (see CARMAṬIANS). Meanwhile the Turkish slave-soldiers of the Caliphs had become so out of hand that the court was compelled to quit Baghdād and establish itself at Sāmarrā, some seventy-five miles further up the Tigris, and remain there for fifty-five years. By the time they returned the glory had departed from the Caliphate, and the supreme pontiff of Islām had become a puppet in the hands of the military power which happened to be supreme at the moment, until the last semblance of authority was swept away by the Mongol invasion.

But, whilst 'Irāq was the principal seat of heresy and sedition, it became for that very reason a stronghold of orthodoxy and firm government. Its turbulent population required the best brains and the strongest arm to keep them in check, and their very opinionativeness led to the necessary evolution of the particular view which eventually became accepted by the civil power. Just as some of the Caliphs liked to send their worst governors to the holy city of Medīna, so some of the best, from the point of view of the Caliph, were sent to 'Irāq. Such governors were, under the Umayyads, Ziyād, half-brother of the Caliph Mu'āwiya; the famous, if bloodthirsty, Hajjāj ibn Yūsuf, and Khālid al-Qasrī. 'Irāq, too, produced Ḥasan al-Baṣrī († 728), a commentator on the Qur'ān and collector of traditions about Muhammad, to whom the mystics trace their origin; and Abu'l-Ḥasan al-Ash'arī, who at first a Mu'tazilite, ended by reducing the faith to a system which was quickly acknowledged as orthodox and remains so at the present day.

The twin cities of Baṣra and Kūfa were founded immediately after the conquest of Mesopotamia by the Arabs (about A.D. 638). They were at first cantonments for the Arab garrison stationed in the territory conquered by them. These two cities, however, quickly lost their military character, and became what may be called the university towns of Islām. They have been well compared to Oxford and Cambridge, not only in their mutual rivalry, but also in the wide-spread authority which attached to their dicta. Their scholars laid down the principles of Arabic grammar, and decided, or at least pronounced upon, the proper reading of the text of the Qur'ān, those of one city often taking the view opposed to that advocated by the other. Baṣra especially was the home of free-thinking. It was there that the Arab encyclopædists published their tracts, and nowhere could the *Assemblies* of Ḥarīrī († 1122), with their airy use of expressions from the sacred volume, have been so fitly written. The Zanj and the Carmaṭian insurrections, which devastated 'Irāq, brought ruin to both towns; but, whilst Baṣra, under the enlightened 'open door' policy of native rulers, rose again, and is likely to continue an important commercial city, Kūfa never recovered.

One of the most curious facts in connexion with the history of Islām in Mesopotamia is the continuance of idolatrous rites in the midst of the true Faith at the city of Ḥarrān. Originally the seat of the worship of the moon-god, and best known from its mention in the Biblical story of Abraham, this city, from the time of Alexander, became a centre of Greek civilization. Long after Mesopotamia had become a Muslim province, Babylonian magic and Greek wisdom, Syrian paganism and Christian rites, all combined into one system of religion, continued to flourish there. Muslim governors were either kept in ignorance of these practices or bribed to remain silent regarding them. It was only in the year 830 that the Caliph Ma'mūn, when on an expedition against the Byzantines he passed by Ḥarrān, was struck by their strange garb and long hair. Then for the first time their existence became known to the central government. They were offered the alternatives of Islām—one of the tolerated sects or the sword. After some delay they declared that they were the Christians ect of the Ṣābians to whom toleration is granted in the Qur'ān. No doubt the Caliph was only too glad to let them be, as they were one of the chief means of introducing Greek learning into Islām. They produced many writers and translators, of whom perhaps the best known is Ṭābit ibn Qurrah († 901).

The 'Abbāsid was essentially a Persian dynasty. The cause had its beginnings in Khurāsān. One Caliph even wished to make the capital there. But the claims of the West were still too great for that, and so 'Irāq, the meeting-point of Semite and Persian, became and remained the seat of government. Baghdād was founded by Manṣūr in the year 762, and quickly eclipsed in grandeur all the other cities of the empire. Originally built on the west bank of the Tigris, the government offices and residence of the Caliph were later removed to the east. The insubordination of the Turkish guards at one time necessitated the withdrawal of the court to the small town of Sāmarrā further up the river. There it remained for over half a century (836–892). During this and the subsequent period nearly all the 'Abbāsid Caliphs came to a violent end at the hands of their own prætorians. Order was somewhat restored when the temporal power of the Caliphs was taken over by the Buwaihids (A.D. 945). These princes were, however, Shī'ites, whereas the population of Baghdād were Sunnites. Thus religious strife was added to civil, and was arrested only on the coming of the Seljūqs (A.D. 1055). Mesopotamia had been split up under innumerable petty chieftains, but now all Asia from Egypt to Afghanistan was under one strong ruler. The proclamation of the Fāṭimid Caliph in Baghdād in A.D. 1058 was merely a passing incident, and did not stay the march of events. The Buwaihids had already restored the old royal palace of the Khuld and turned it into a hospital, and now under the Seljūqs many colleges sprang up in Baghdād. Their famous Wazīr Niẓām al-Mulk, among his other benefactions, founded the college named after him the Niẓāmīya, which continued to be the principal college in Baghdād, until it was replaced by that of the second last of the Caliphs, Mustanṣir (A.D. 1226–42). Meantime the commercial importance of Baghdād had passed away at the same time as the temporal power of the Caliphs, and it was not the spiritual head of Islām, but the Seljūq Sulṭāns, and later Saladin, that proved the chief obstacle to the crusader.

After the fall of Baghdād and the extinction of the Caliphate by the Mongols, Mesopotamia came under the sway of Persia until these were driven back by the Ottoman Turks, who have held it for the last four hundred years. Thus the old rivalry of Constantinople and Īrān has been revived, with the added bitterness of the hatred of Shīʽah and Sunnah. To the Persian Muslim Mesopotamia is the most sacred country upon earth, holding as it does the dust of ʽAlī and his son Ḥusain. ʽAlī was assassinated in Kūfa in A.D. 661, but it was not until 791 that the place of his burial was discovered by Hārūn al-Rashīd, and even the authority for this statement is much later. To ʽAlī were quickly attributed superhuman qualities, until he came not merely to be regarded as not inferior to the Prophet himself, but even to occupy the place of the second person in the Christian Trinity. Najaf or Mashhad ʽAlī ('ʽAlī's shrine'), some four miles to the west of Kūfa, and Karbalā, the scene of the battle in which Ḥusain and most of his family perished in A.D. 680, some fifteen miles to the north of Najaf, are held, by the Persian protagonists of the divine right of Caliphs, to surpass in sacredness Medīna itself, whilst to the Turk, who now rules the land, as to some of the ʽAbbāsid Caliphs, this devotion is nothing less than idolatry.

Mesopotamia, like N. Africa, has always been and still remains a forcing-house for religious fanaticism. In the strife of sects this fair province, one of the richest in the world, has almost gone out of cultivation. There is some prospect, however, that with the construction of the Euphrates valley railway and the annexation of Baṣra, the efforts to repair the system of canals, which were recently begun under W. Willcocks, will have the effect of restoring the country to what it was under its Sāsānid and Arabian rulers.

LITERATURE.—There are no reliable official reports. J. B. Fraser, *Mesopotamia and Assyria*, Edinburgh, 1842; Justin Perkins, *Eight Years in Persia*, Andover, 1843; F. R. Chesney, *Survey of Euphrates and Tigris*, London, 1850; V. Cuinet, *La Turquie d'Asie*, Paris, 1890; E. Sachau, *Am Euphrat und Tigris*, Leipzig, 1900; M. von Oppenheim, *Vom Mittelmeer zum persischen Golf*, Berlin, 1900; G. Le Strange, *Lands of the Eastern Caliphate*, Cambridge, 1905, pp. 1–126; R. P. A. Dozy and M. J. de Goeje, 'Nouveaux Documents pour l'étude de la religion des Harraniens,' in *Actes du viᵉ Congrès internat. des orientalistes*, Leyden, 1888, ii. 281 f.

T. H. WEIR.

MUHAMMADANISM (in Turkey).—**1. Statistics.**—Statistics relating to Turkish conditions have hitherto been of very limited value, and in the circumstances of to-day it is virtually impossible to obtain them. The most recent computations will be found in *Die Welt des Islams*, I. i. [Berlin, 1913] 32, with which should be compared 'L'Islam en Bulgarie et dans la Roumelie orientale,' in *Revue du monde musulman*,[1] v. [1908] 482. It is unquestionable, however, that the decline of Islām in the Balkan Peninsula proceeds swiftly, and the rapidity with which the numerical decrease of a Muslim population may take place under Christian rule can be estimated from the data relating to Thessaly given by Franchet d'Espérey in *RMM* xiii. [1911] 87; thus, while in 1881 the 330,000 inhabitants of that district included 50,000 Muslims, in the present population of 381,000 there are only 3000. This shrinkage in numbers can be traced, though not in the same degree, also in Cyprus, Crete, Bulgaria, and Bosnia. It would seem to be doubtful, indeed, if the number of Muslims in the entire peninsula, even including such as are no longer Turkish subjects, would now amount to 3,000,000. As an offset, it is likely enough that there has been an increase in Anatolia. In the Muslim population of Asia Minor those of Turkish blood number about 11,000,000.

2. Development.—It is a manifest fact that the Turks as a people have not played so important a part in the formation of doctrine as in the popular religion. The share which they have had in the later development of Islām cannot as yet be determined, since the necessary scientific investigations have not so far been made. Nor has the protracted struggle which Sunnite orthodoxy has had to wage in Turkey with the Shīʽite faction and various sectarian movements been as yet examined in detail. On the other hand, the innovations introduced during the last century as a result of European influence have been in a measure exhaustively studied. While it is true that many of the proposed improvements were but imperfectly carried out, or were not carried out at all, they nevertheless form the most significant effort made in recent times to modernize Islām. At the outset they were ostensibly to be put in practice in the spirit of Islām, but in many cases, as a matter of fact, they ran counter to it. We are here concerned only with the reforms which come into conflict with the provisions of the *sharīʽah*, or Muhammadan law, and thus bear upon Islām as a religion. Besides a number of laws and regulations of the most diverse types there were in particular two decrees issued by the Sulṭān which, promulgated in a peculiarly impressive form, may be regarded as the pivots of modern Turkish life. These were respectively the *Ḥaṭṭ-i-sharīf* of Gulḥānah, issued on 5th Nov. 1839, and the *Ḥaṭṭ-i-humāyūn*, 18th Feb. 1856—both belonging, therefore, to the administration of ʽAbd al-Majīd. While the former made promise, in a merely general way, of sundry reforms which should be in harmony with the spirit of the *sharīʽah*, the latter pledged the government to various changes in certain ordinances laid down by that legal system. These changes related to the legal oath and the military service of Christians, and to the abolition of the capital penalty for apostasy from Islām. In connexion with these points a new penal code was issued, and the suppression of slavery resolved upon, in 1858.[1]

None of these reforms sprang from the will of the Turkish people themselves; on the contrary, they were effected at the instigation of the European Powers, especially of Great Britain, and were introduced only after long temporizing on the part of the higher governing classes in Turkey. When the Western Powers had succeeded in saving Turkey in the Crimean War, they demanded, as an act of gratitude, the abrogation of the ordinances which could not but be humiliating to the Christian mind. They likewise expected that the changes would serve to intensify the nationalistic consciousness of the non-Muhammadan elements in Turkey, and thus provide a barrier to the growing influence of Russia. The Turkish administration was not blind to the difficulty of the undertaking, and to some extent evaded it in a very adroit fashion.

---

[1] Hereafter cited as *RMM*.

[1] These laws were published in the *Dustūr* (Constantinople, A.H. 1289 [=A.D. 1872], 4 vols. and a supplementary vol., consisting of four books [Turkish]; Fr. version in Aristarchi Bey, *Législation ottomane*, 7 vols., do. 1873–88). The laws passed since 1908 have appeared in the *Taqwīm-i-waqāyʽ*; Fr. version in *Législation ottomane depuis le rétablissement de la constitution*, ed. A. Biliotti and Ahmed Sedad, Paris, 1912, i. Other useful works are: G. Young, *Corps de droit ottoman*, Oxford, 1905–06; E. Engelhardt, *La Turquie et le Tanzimat*, Paris, 1882–84; F. Eichmann, *Die Reformen des osman. Reiches*, Berlin, 1858.

The various points were settled as follows:

In order to permit Christians to take oaths as witnesses—a privilege denied to them by the *sharī'ah*—an entirely new judicature, upon which experts had been at work for a number of years, was established. In addition to the jurisdiction of the *sharī'ah*, which thenceforward retained its competence only in certain cases arising out of the personal status of Muhammadans—such as, *e.g.*, affairs relating to marriage, alimony, divorce, inheritance, etc.—the *maḥākim-i-niẓāmīyah* were introduced, organized on European models. At these courts, instead of the sworn evidence permitted by the *sharī'ah*, documentary evidence alone was received as valid, so that it was now possible for a Christian to give his testimony even against a Muhammadan.

The abolition of capital punishment for defection from the Muslim faith was conceded in the following terms: 'As every religion and sect in my empire may practise its form of worship with complete freedom, no one shall be obstructed or molested in practising the worship of the religion to which he belongs, and no one shall be compelled to change his religion or sect' (Fr. text, § 8).

The abolition of *ḫarāj* (poll-tax) and the introduction of military service for non-Muhammadans were effected in name, but commutation (*badal-i-'askarī*) was still to be allowed (cf. the present writer's art. 'Bedel-i-'askerī,' in *EI*). In reality, therefore, the state of affairs remained as it was, the only modification being that the term *ḫarāj* was replaced by the expression *badal-i-'askarī*. It was not till the Revolution of 1908 that military service was actually imposed upon all Turkish subjects quite independently of their religious profession—a measure certainly not conducive to the national welfare.

Similarly, the new penal code was altogether at variance with the criminal law of the *sharī'ah*. It was framed by the simple process of taking over the French *code pénal* in 1858, although as early as 1839 the *Ḫaṭṭ-i-sharīf* had promised that such a code would be drawn up, and this had in some measure been attempted. The new penal law was at length modernized by the supplementary decrees of 4th April 1911. The later code, however, did not supersede the penal ordinances of the ancient *sharī'ah*; on the contrary, the two sets of laws remain in operation side by side, and offences can be tried by either (cf. E. Nord, *Das türkische Strafgesetzbuch*, Berlin, 1912, and A. Heidborn, *Droit public et administratif de l'empire ottoman*, i., Vienna, 1909, p. 354). Of the other reforms, reference need here be made only to the enactments relating to the slave-trade. An irade of 1st Oct. 1854 forbade the buying and selling of Georgian slaves; various ministerial ordinances, dating from the years 1868, 1870, 1871, 1879, and 1889, prohibited all commerce in slaves whatsoever; since 1892 the trade has been regarded as smuggling. From 1890 Turkey has taken part in the International Conferences for the suppression of the slave-trade in Africa at Brussels.

While it is true that many of these reforms were very imperfectly carried out, or not carried out at all, yet their importance should not be underrated. In not a few cases they made a breach in the fabric of the *sharī'ah* alike in theory and in practice. A consistent application of the new laws would serve to bring Islām into line with modern ideas; but to what extent this may be effected without great religious wars, and how far Muslim theology is able and willing to deal with the fresh problems involved, the future alone can show. Hitherto Muslim theology has tacitly submitted to the reforms, and has not expressed itself openly regarding them. It is only within recent years that the aspirations of the young Turks have won support among the theologians, but no attempt has been made as yet to produce works of importance in the field of scientific theology. The views of this liberal tendency—if we may so call it—in theology find expression in the *Ṣirāṭ-i-Mustaqīm*, a periodical founded immediately after the Revolution, and from no. 183 (8th March 1912) continued under the name of *Sabīl al-Rashād* (cf. L. Bouvat, in *RMM* xx. [1912] 282–304; M. Hartmann, *Unpolitische Briefe aus der Türkei*, Leipzig, 1910, p 137).

3. Religious organization. — Apart from the theological group just referred to, the religious ranks of Islām in Turkey have no liking for innovation. The name by which the entire class, as well as the individual member of it, is known is *'ulamā* (the plural of *'alīm*, 'learned'). This long-established organization, as still existing with but little change in its main features, was founded in the reign of Sulṭān Muhammad II., the Conqueror (1451–81) (cf. J. von Hammer-Purgstall, *Des osmanischen Reichs Staatsverfassung und Staatsverwaltung*, pt. ii., Vienna, 1815, p. 373 ff.; W. Gibb, *A Hist. of Ottoman Poetry*, London 1900–09, ii. 394; C. d'Ohsson, *Tableau général de l'empire othoman*, iv. 2, Paris, 1791, p. 482 ff.). At its head stands the Shaikh al-Islām, whose office, as now constituted, was created for him by Sulṭān Sūlaimān I. the Magnificent (1520–66), though the title had been conferred by Muhammad I., the Conqueror, upon the mufti of Constantinople. In consequence of the reforms, and especially the creation of the *maḥākim-i-niẓāmīyah* (see above), his authority has suffered a considerable decline; he now controls only the religious schools and the *sharī'ah*. The board over which he presides is called *Bāb-i-mashaiḫat-i-islāmīyah*, *Bāb-i-fatwā-panāhī*, or, popularly, *Shē-islāmqapusu*, and consists of the following departments:

(*a*) *Administrative boards*: (1) *Majlis-i-intiḫāb-i-hukkyām-i-shar'*), the commission for the selection of spiritual judges; (2) *Majlis-i-imtiḥān*, commission for the entrance examination for the *maktab-i-nuwāb* and the *mudarrislik*, presided over by the *dars vakīlī*; (3) *Majlis-i-maṣāliḥ-i-ṭalabah*, commission for the affairs of students; (4) *Majlis-i-mashāiḫ*, commission for the affairs of the dervish orders; (5) *Majlis-imtiḥān-i-qurrā*, commission for examining *madrasah* students with a view to their exemption from military service; (6) *Ma'mūrīn-i-'ilmīyah tāqa 'ud ṣandīghi*, superannuation fund for spiritual officials; (7) board for the administration of the property of wards. (*b*) *Judicial boards*: (1) *Rūmīlī qāḍī askarī*, the kadiasker of Rumelia; (2) *Anātūlī qāḍī 'askarī*, the kadiasker of Anatolia; (3) *Istāmbūl qāḍī 'askarī*, the *qāḍī* of Constantinople; (4) *I'lāmāt ōtasī*, the office for verdicts; (5) *Majlis tadqīqāt sharī'ah*, commission for revisal of the decisions of the *sharī'ah*. (*c*) *Fatvāḫānah*, office for the legal decisions of the *sharī'ah* (cf. Heidborn, i. 252 ff.).

While the standing of the Shaikh al-Islām, as of the *'ulamā* generally, is now greatly inferior to what it once was, their influence among large masses of the people is still very considerable, and to this day they form a power which cannot safely be ignored by the politicians.

4. The dervish orders. — Perhaps an even greater influence among the people is enjoyed by the dervish orders. From the foundation of the Ottoman empire they have played a great rôle in Asia Minor, as they did to some extent even before. As a matter of fact, the gradual Muslimization of the Christian elements in Turkey has been their work; in their indifference towards the existing forms of religion, views of the most diverse character could find a refuge in their midst. Their ideas have come, in course of time, to be assimilated to those of the official and national religious organization. The order of the highest repute at the present day is the Maulavī, so called from the name of its founder, Maulānā Jalāl al-Dīn Rūmī (*q.v.*), and known in the west as the 'dancing dervishes.' The next in general regard are the Rufā'ī—the so-called 'howling dervishes.' Certain orders which at one time occupied a powerful position—*e.g.*, the Naqshbandī, the Halvatī, the Qādirī, etc.—have now sunk to a lower level; others, again, have been of late gradually growing in prestige—*e.g.*, the Malāmī (cf. Hartmann, Index).

The Baqṭāshī, an order which at one time, owing to its close connexion with the Janizaries, held a position of special prominence, sank into the background after the suppression of that force by Sulṭān Maḥmūd in 1826, but have quite recently begun to display a more active spirit. In Asia Minor, and even more decidedly in Albania, this order is constantly adding to its strength. By reason of its heterodox views it should hardly be regarded as belonging to Islām at all, but it certainly makes this claim.

It has been methodically dealt with in several recent works of great reliability, such as G. Jacob, *Beiträge zur Kenntnis des*

Derwischordens der Bektaschis, Berlin, 1908, and *Die Bektaschijje in ihrem Verhältnis zu verwandten Erscheinungen*, Munich, 1909; C. Huart, 'Les Derviches bektachis,' in *RMM* ix. [1909] 235, *Textes persans relatifs à la secte des Houroûfis*, Leyden, 1909; Ryfqy, *Bektāšī sirri*, Constantinople, A.H. 1325.

Of literature relating to the orders there is not much of a serviceable kind. J. P. Brown, *The Dervishes*, London, 1868, contains many valuable items of information, but must be read with extreme caution; and the same may be said of A. de Chatelier, *Les Confréries musulmanes du Hedjaz*, Paris, 1887.

We need not deal here with such sects as the Yezīdīs (*q.v.*), the Nuṣairīs, the Taḫtaji, the Kizil Bash (*q.v.*), etc., which, though professing certain Muslim doctrines, cannot now be included under Islām. In contrast to the Baqṭāshī, who, as has been said, still claim to rank as Muslims, these sects in general renounce the name. As the Shīʻites proper have no real standing in Turkey, they, too, lie outside the scope of this article.

5. Superstition and popular religion.—Superstition is extremely prevalent among the masses, and popular thought exhibits residua of the most diverse forms of religion. We find survivals of the ancient shamanism of the Turki peoples, as well as of Christian and Jewish superstition. This interesting side of Turkish Islām has not yet been exhaustively dealt with, but there are several compilations from which we may glean an adequate impression of it.

Besides a number of shorter papers, as, *e.g.*, F. Schrader, 'Zum vorderasiatischen Volksglauben,' in the Supplement to *AZ*, 25th Sept. 1903, the following deserve special mention: F. Mészáros, 'Osmanisch türkischer Volksglaube,' in *Keleti Szemle*, vii. [1906] 48, 140; Wladimir Gordlewski, 'Osmanskiya skazaniya i legendy,' in *Ethnographic Review*, Moscow, 1912 (Russ., reviewed by T. Menzel in *Der Islam*, iv. [1913] 123, and F. Schrader in *Osmanischer Lloyd*, 31 Jan. 1913).

There is evidence to show, moreover, that the worship of saints (*avlīyā*) and their places of pilgrimage (*ziyāratgāh*) has a predominant place in Turkish popular belief. A large number of these saints can be traced to personages held sacred in ancient Byzantium, the names being in some cases greatly corrupted—*e.g.*, 'Toglu Dede' from St. Thekla—and the places of pilgrimage are still found on the Byzantine sites.

The religious needs of the common people, and more especially of the women, are served by a large mass of devotional literature. The principal works of this class are among the oldest literary monuments of the Osmanli Turks, and their idiom is thus frequently unintelligible to the readers of to-day—a fact which, of course, in no way detracts from their popularity. Pre-eminent among these are the *Muḥammadīyah* and the *Aḥmadīyah*, as also the *History of Junus Imre* (cf. Gibb, i. 164, 389; Hartmann, Index, *s.v.* 'Junus Imre'). For the study of Turkish literary history these works are all of importance, but their theological value is of the slightest, and their contents need not further concern us here. Similarly, the *ʻIlm-i-ḥal* literature requires but the briefest mention; it consists of booklets which, like our modern catechisms, set forth the leading religious doctrines in the form of question and answer.

LITERATURE.—There is as yet no systematic account of Islām in Turkey. Studies dealing with special aspects of the subject have been cited throughout the article in connexion with the particular points, and the older literature will be found in them. The numerous works designed for the general public do not fall to be mentioned here, but we may name as the best of them C. N. E. Eliot, *Turkey in Europe*, new ed., London, 1908.

F. GIESE.

MUḤYĪ AL-DĪN IBN AL-ʻARABĪ.—Muḥyī al-dīn ibn al-ʻArabī, the celebrated Muhammadan mystic, who is generally known by the name of Ibn al-ʻArabī or Ibn ʻArabī, was born at Murcia in S. Spain in A.D. 1165. Much of his youth was spent in Seville, where he devoted himself to literary, theological, and mystical studies. After visiting Granada and other Spanish towns, as well as Tunis, Fez, and Morocco, he set out in 1201 for the East by way of Egypt, whence he made the pilgrimage to Mecca. He did not return to Spain. Many of the remaining years of his life were passed in the neighbourhood of Mecca, but he also travelled extensively in Babylonia, Asia Minor, and Syria, everywhere gaining disciples and spreading his doctrines in conversation with high and low, while, as behoved a good Muslim in the period of the Crusades, he called for repressive measures against the Christian population and encouraged his fellow-Muhammadans to persevere in their faith. He died at Damascus in A.D. 1240.

Whether we regard the extent of his theosophical writings or their influence on the subsequent development of Islāmic mysticism, Ibn al-ʻArabī can justly claim the supreme position among Ṣūfī authors which posterity has accorded to him, and which is attested by the title, 'al-Shaikh al-Akbar,' conferred on him by the almost unanimous voice of those who are best qualified to judge. The list of his works drawn up by himself contains 289 titles (Brockelmann, *Gesch. der arab. Litteratur*, i. 442), and some of them are of enormous length. The most famous and important is the *Futūḥāt al-Makkīya* (4 vols., Būlāq, 1876, comprising about 3300 pages). In this, as in many of his works, Ibn al-ʻArabī professes to communicate mysteries revealed to him in ecstatic vision by prophets, angels, and even God Himself (a brief résumé of part of the contents of the *Futūḥāt* will be found in H. O. Fleischer and F. Delitzsch, *Catalogus librorum manuscr. bibliothecæ senator. Lipsiensis*, Grimma, 1838, pp. 490–495). Another book, of smaller compass but equally celebrated, is the *Fuṣūṣ al-Ḥikam*, in which the author discourses upon the nature and significance of the divine revelations imparted to twenty-seven prophets, beginning with Adam and ending with Muhammad. Besides the *Futūḥāt* and the *Fuṣūṣ*, both of which contain a considerable quantity of verse, his prose writings include a mystical commentary on the Qurʼān, a collection of definitions of Ṣūfiistic technical terms, which has been edited by G. Fluegel, (Leipzig, 1845), and a short treatise on mystical psychology (Arab. text with Span. tr. by Asín Palacios, in *Actes du xiv^e Congrès internat. des orientalistes*, iii. 151 f.). He also produced several volumes of mystical poems, one of which, the *Tarjumān al-ashwāq* (ed. with Eng. tr. by the present writer, London, 1911), has a curious history. The erotic style in which it is written gave rise to scandal, and in order to refute his accusers Ibn al-ʻArabī published a second edition accompanied by a commentary in which the mystical sense of each verse is explained. Although his interpretations are often far-fetched, the poems themselves supply evidence that there was no ground for the charge brought against him, plausible as it might appear to the uninitiated. The question of his orthodoxy was keenly disputed, and, if many Muslims saw in him a dangerous heretic, others had no doubt that he was a great saint; but even his admirers recognized that the outward sense of his writings was frequently ambiguous, and that the study of them should be permitted only to mystics of ripe experience. At first sight, it seems hard to reconcile Ibn al-ʻArabī's extreme conservatism in the sphere of religious law with his remarkably bold and fantastic speculations in the domain of theosophy. He belonged to the Ẓāhirite school, which rejects opinion, analogy, and authority, and takes its stand on the external (*ẓāhir*), literal meaning of the Qurʼān and the traditions. But, while his attitude in regard to legal and ritual practice was that of the literalist (*ẓāhirī*), who looks only at the outward form, in all matters of doctrine and belief he was pre-eminently the mystic (*bāṭinī*), who fixes his gaze on the inward spirit and seeks to discover the reality of which the words and letters are a symbol. As I. Goldziher has shown (*Die Ẓâhiriten*, Leipzig, 1884, p. 179 ff.), the two points of view are not mutually exclusive. The Ẓāhirite practice appealed to many Ṣūfīs, who found in it an expression of their own dislike for the hair-splitting pedantry of the rival schools of law, for the acceptance of external authority as the standard of truth, and for the method of logical demonstration as opposed to intuitive knowledge.

Ibn al-‘Arabī, like other Ṣūfīs before and after him, endeavours to combine the Ash‘arite theology with philosophical ideas which, in his case, are mainly derived from Plotinus and the Neo-Platonic circle. Thus he has to deal with two different conceptions of God: (1) the Allāh of the Qur’ān, endowed with attributes that are superadded to His essence, and (2) the One Being which is devoid of every attribute, quality, and relation, and which is all that exists. His God retains the attributes of Allāh, but these are reduced to mere relations, having no real existence; hence, although they are the archetypes of the sensible world, they do not affect the essential unity of God, in whom all contraries are identified. In his attempt to explain how plurality can proceed from the Simple One, Ibn al-‘Arabī employs the same metaphors as Plotinus, his favourite illustration being the diffusion of light. The intelligible world is constituted by a series of seven realities: (1) God, the One Essence; (2) the First Intelligence or Universal Reason, which comprises every species of divine knowledge and, in Qur’ānic language, is the Pen that inscribes on the Tablet of Universal Soul the divine ideas whereof created things are a copy; (3) Universal Soul; (4) Universal Nature; (5) Universal Matter; (6) Universal Body; (7) Universal Figure. The entire phenomenal universe is the manifestation of those realities, which, before their manifestation, exist potentially—or, as Ibn al-‘Arabī says, are non-existent—in the luminous darkness that hides eternally the essence of the Godhead. Manifestation involves relativity, and the relation of the universe to God is that of the determined to the Absolute, of the shadow to the sun. All existence is constituted by form (*ṣūrah*) and spirit (*rūḥ*). Form answers to the Aristotelian definition of matter; *i.e.*, it is essentially potential and imperfect. Spirit, on the other hand, is what Aristotle calls ‘form,’ the principle that gives reality and perfection to the forms produced by Universal Nature, which take their place in the order of existence according to their capacity for receiving and manifesting the life of the Universal Spirit that animates the whole. Of these forms the highest is man, who, in virtue of the microcosmic function assigned to him by his Creator, unites and displays all the divine names and attributes, so that he is the mirror in which God beholds and reveals Himself as He really is. This description refers only to the supreme type of humanity, ‘the perfect man’ (*al-insān al-kāmil*), whom Ibn al-‘Arabī identifies with Adam as representing the class of men—prophets, saints, and theosophists—that possess a unique knowledge of God (*Fuṣūṣ al-Ḥikam*, ch. i.; cf. *EI*, art. ‘al-Insān al-Kāmil’). Knowledge is a process of reminiscence. In proportion as each particular soul is purified, it receives illumination from Universal Reason by means of revelation (*waḥy*), and from Universal Soul by means of inspiration (*ilhām*). The organ of this knowledge is the reasonable soul (*al-nafs al-nāṭiqah*), which must be distinguished from the vital or animal soul (*al-rūḥ al-ḥayawānī*). While the former has only an accidental connexion with the body and is incapable of sin, the animal soul, though not consciously evil, is naturally corrupt, and suffers punishment for sins committed in the flesh.

The system of Ibn al-‘Arabī may be described as a pantheistic monism. God and the world are two correlative and complementary aspects of one Absolute Reality: the world could not exist apart from God, and, if the world did not exist, God could not be manifested and known. The terms ‘creator’ (*al-Ḥaqq*) and ‘creature’ (*khalq*) are logically involved in one another as moments of the Absolute Being, not indeed of equal worth—since *al-Ḥaqq* is eternal, while *khalq* is contingent (*i.e.* eternal in the knowledge of God, and originated in respect of its manifestation)—but interchangeable subjects of predication (cf. L. Massignon, *Kitāb al-Ṭawāsīn*, Paris, 1912, p. 139 ff.). Ibn al-‘Arabī delights in the daring paradoxes which this line of thought suggests to him—*e.g.*,

> ‘He praises me and I praise Him,
> And He worships me and I worship Him.
> In one state I acknowledge Him,
> But in the objects of sense I deny Him.
> He knows me and I know Him not,
> And I know Him and behold Him.
> How can He be independent,
> When I help and aid Him?
> For that cause God brought me into existence,
> Therefore I know Him and bring Him into existence’
> (*Fuṣūṣ*, Cairo, 1321 A.H., ch. v. p. 78).

Although the contrary might be inferred from some passages of his writings, he makes a distinction between the divine and human natures, and his pantheism does not lead to the doctrine of incarnation (*ḥulūl*) or identification (*ittiḥād*). Man can never say with Ḥallāj, ‘I am God’ (*Ana ’l-Ḥaqq*), because, owing to the constitution of his mind, he is unable to think all objects of knowledge simultaneously, as God thinks them; therefore he is only ‘a truth’ (*ḥaqq*), not ‘the Truth’ (*al-Ḥaqq*), who is the counterpart of the whole universe of created things (cf. Massignon, p. 182 f.).

In view of the scanty attention that Ibn al-‘Arabī has hitherto received from European scholars, it would be impossible to give a detailed account of his doctrines, and premature to make a more definite statement concerning the character of his theosophy as a whole. Much of it, of course, belongs to the common stock of Ṣūfiistic speculation, but there is also a great deal that appears to be original and based upon the immense store of his own mystical experiences, which he has so copiously recorded and analyzed (for his theory of ecstasy and the seven degrees of ‘passing-away’ [*fanā*] which he enumerates, see Asín Palacios, ‘La Psicología segun Mohidín Abenarabi,’ in *Actes du xiv^e Congrès internat. des orientalistes*, iii. 125 ff.). Among the twenty-four heretical doctrines attributed to him by ‘Alī al-Qārī’ (*Risālah fī waḥdat al-wujūd*, Constantinople, 1294 A.H.) the following are noteworthy:

(*a*) That man stands to God in the same relation as the pupil of the eye, which is the instrument of vision, to the eye; *i.e.*, man is the means whereby God beholds His creation and knows Himself; and that we (mankind) are ourselves the attributes with which we endow God—excepting only the attribute of necessary and essential being—so that, ‘when we contemplate Him, we contemplate ourselves, and when He contemplates us, He contemplates Himself’ (*Fuṣūṣ*, ch. i.). Elsewhere Ibn al-‘Arabī says: ‘We are the food that sustains the being of God, and He is our food’—a further instance of the way in which he turns the principle of logical correlation to pantheistic uses.

(*b*) That God is the ‘self’ (‘*ain*) of the things that He brought into existence, for He is the ‘self’ of things in manifestation, though He is not the ‘self’ of things in their essences. Therefore Ibn al-‘Arabī holds that the true mystic, combining the doctrines of *tanzīh* and *tashbīh*, worships God both as absolutely transcendent and as externalized in nature (*Fuṣūṣ*, ch. iii.).

(*c*) That all forms of religious belief are relatively true. This follows from the proposition that God is the ‘self’ of all created things, whether they be sensible or intelligible. Every sectary forms some notion of God, and in praising the god which he has made he praises himself, while at the same time he blames the gods of other sects and individuals. It would be more wise and just if he perceived God in every form and in every belief, according to the verse (Qur’ān, ii. 109), ‘ Wheresoever ye turn, there is the face, *i.e.* the reality, of Allah’ (*Fuṣūṣ*, chs. x. and xxvii.; cf. *Tarjumān al-ashwāq*, Preface, p. vi).

(*d*) That, even if the infidels shall remain in hell for ever, their torments will ultimately be transmuted into such pleasure as is enjoyed by the blessed in paradise. ʿAbd al-Karīm al-Jīlī develops this theory in his *Insān al-Kāmil* (see the present writer’s article, ‘A Moslem Philosophy of Religion,’ in *Muséon*, 3rd ser. I. i. [1915] 83 ff.). Evidently there is no room in Ibn al-ʿArabī’s system for the Muhammadan scheme of rewards and punishments. The fullness of the divine wisdom as manifested in creation requires that the spiritual capacities of human souls shall be infinitely various, and salvation and perdition are the effects that correspond with the capacity eternally implicit in God’s knowledge of every human soul before its individualization in the material world. Ibn al-ʿArabī proceeds to argue that, inasmuch as knowledge is a relation dependent on the object known, viz. the soul and its potential capacity, each individual is responsible for the good and evil which are produced by that capacity (*Fuṣūṣ*, ch. v.); but in another passage of the same work (ch. viii.) he declares that it is a more profoundly mystical thought to regard the soul as a mode of God, and its recompense as a divine illumination (*tajallī*) in the form of pleasure or pain which are felt by God Himself.

(*e*) That the saints are superior to the prophets. Ibn al-ʿArabī does not state the doctrine in this absolute way. The prophets, he says, may be viewed in three aspects: as apostles, they bring a religious code to their people; as prophets, they inform them about God in proportion to their own knowledge; and, as saints, they pass away in God and abide in Him. Saintship is the inward, mystical, everlasting element in prophecy. Hence the prophet *qua* saint ranks above the prophet *qua* religious legislator or preacher of divine truth (*Fuṣūṣ*, ch. xiv.). According to ʿAlī al-Qārīʾ, Ibn al-ʿArabī claimed to be the Seal of the Saints (*Khātam al-auliyā*), as Muhammad is the Seal of the Prophets.

LITERATURE.—The best general survey of Ibn al-ʿArabī’s theosophy is contained in two papers by Asín Palacios—‘La Psicología segun Mohidín Abenarabi,’ in *Actes du xiv^e Congrès internat. des orientalistes*, Algiers, 1905, iii. 79–150, and ‘Mohidín,’ in *Homenaje á Menéndez y Pelayo*, Madrid, 1899, ii. 217–256. The latter volume (pp. 191–216) includes an essay by Julián Ribera, ‘Origenes de la filosofía de Raimundo Lulio,’ which gives much information concerning the life of Ibn al-ʿArabī and the influence of his ideas upon those of Lull. See also A. von Kremer, *Gesch. der herrschenden Ideen des Islams*, Leipzig, 1868, p. 102 ff.; C. Brockelmann, *Gesch. der arab. Litteratur*, Weimar, 1898–1902, i. 441 ff.; R. A. Nicholson, *Literary History of the Arabs*, London, 1907, p. 399 ff.; D. B. Macdonald, *Development of Muslim Theology*, do. 1903, p. 261 ff.

MULLĀ.—*Mullā* is a title of varied usage, given to officials of different ranks, but invariably to men who have received some degree of education in a *madrasah*, or higher mosque school, and hold certificates testifying thereto; it is also a generic term applied to such officials as a class.

Mullā is a proper pronunciation of the Turkish *mevla*, the Arab. *maulā* (lit. ‘lord,’ ‘master,’ ‘patron’; also ‘slave,’ ‘client’; any one standing in any sort of fixed relationship to another); it is used commonly among the Muhammadans of Turkey, Persia, Russia, India, and their spiritual dependencies. In India, however, the form *maulavī* or *mūlvī* is also used in reference to the *mullās* of the lower grades, below the rank of *ʿālim* (plural = *ʿulamā*). The form *mevlānā* (‘our lord’) is applied to the most eminent *ʿulamā*, and also to eminent Ṣūfī leaders. In Turkish a distinction is further made by affixing instead of prefixing *mullā* to the name of a judge of a higher court. In Arabic-speaking countries *mullā* as a generic term is not so frequently used; in the term ‘Mullā of Jerusalem,’ ‘of Cairo,’ ‘of Medīna,’ etc., the reference is to the chief justice of the Muhammadan religious court of each city; while *shaikh*, a title of older usage in Muhammadanism, has persisted especially in application to a religious teacher of authority. The term ‘Mad Mulla’ has sometimes been applied to certain fanatical religious leaders in India and the Sūdān who, having proclaimed themselves the *Mahdī* (*q.v.*), have led revolts against the established government.

The characteristics of the *mullās* as a class are determined largely by the education which they receive. The ranks are recruited normally from the lower, less often from the middle, classes. Between the ages of eleven and fifteen, having passed through the *maktab* (‘elementary school’), students are admitted as *softas* (‘undergraduates’) to the *madrasah* (higher mosque school). The curriculum offers training mainly in dialectics, theology, and the canon law based on the Qur’ān and traditions (*ḥadīth*); it is that of a theological seminary of the orthodox type. The Oriental languages are also taught, and in previous centuries there were *mullās* who became famous in the field of *belles-lettres*; but in more recent times the graduates have been only lawyer-theologians. The complete curriculum requires at least fifteen, in practice generally eighteen, years for fulfilment; but very few students succeed in completing the course and passing the various examinations which entitle them to a place in the higher ranks of the *ʿulamā* and to appointment to the higher judicial and university positions. Owing to the Oriental veneration for scholars, as well as to certain privileges which they enjoy (such as exemption from military service, and free, though very simple, food and lodgings), many students enter the *madrasah* who are physically unable to bear the hardships of the student life and mentally unfitted for the full curriculum. Accordingly, the majority leave the *madrasah* after from one to five years of study, during which any tendency to independent thought and investigation has been discouraged and a blind devotion to traditional Muhammadanism has been made the fixed principle of life. At the end of each year’s work or the completion of each professor’s course, the student receives a certificate testifying to his fitness to hold some position demanding that amount of learning. Leaving the *madrasah*, he is now in the *mullā* class, and receives the support of that class in the appointment to some minor office, generally in some village or small town in the provinces. He may become an *imām*, ‘leader in prayer’ (though this office is not reserved exclusively for the *mullā* class), or a teacher in a primary school (and the incapacity of such teachers in the Orient is proverbial), or a lecturer in some small *madrasah*, or even a judge of one of the minor courts. It is the *mullā* as provincial mosque preacher who is regarded as typical of the class. Once in office, the *mullā* is sure of a position for life, though he may be transferred from one school or mosque to another.

Without any fixed organization, the *mullās* nevertheless form almost a caste; they are distinguished by the large turban and the flowing robe, though neither is prescribed. In influence over the masses and in devotion to formal religion, the *mullā* class has often been likened to a priesthood —a comparison which fails in accuracy only in so far as the *mullā* receives no special consecration to office, does not in any way replace the individual in offering prayer or sacrifice, cannot grant absolution, and performs no necessary part in the rites connected with birth, circumcision, marriage, or death. But, in being the teacher of these rights and duties and the accepted adviser in questions of faith as well as of daily life, the *mullā* considers himself in a position above that of the other Oriental clergy—whose equal at least he generally is in learning and whose superior he is in the persuasive powers of his dialectics.

In their conservative and reactionary tendencies the *mullās* have generally given their support to the absolutism of temporal authorities—in Turkey especially to the Sulṭān as head of both the Church and the State—and they have opposed the introduction of Western culture as encouraging religious indifferentism and ceremonial laxity, and as substituting rationalism for their own fatalism. In Persia, however, where the Shīʿitic form of Muhammadanism prevails, and where, consequently, the temporal ruler is not regarded as the head of the Church, the *mullās* often exercise their popular power against the State authority, matching the despotism of the latter with their own extreme fanaticism. There the house of the *mullā*, like mosques and shrines in all Muhammadan lands, is an inviolable place of refuge; and Persian *mullās* have often been charged with harbouring outlaws, whose services they have then used in furthering their own designs. The power of the *mullās* is sometimes checked to a certain extent by that of the dervish orders, and in Turkey, India, and Egypt by the secular courts instituted in more recent times to administer the so-called ʿ*urf* ('customary law').

The *mullās* in general, being sincere in their devotion to their calling, are seldom guilty of infractions of the moral law; indeed, they have generally been held to contrast favourably with the lower priesthood of other faiths. Moral probity is less marked among the Persian *mullās*, however, who, at heart more devoted to Persian poetry than to Muhammadan theology, hold their own functions in light esteem. In one respect, too, the *mullās* everywhere, especially those who fill the office of minor judge, are not above reproach; inasmuch as the stipend furnished by the mosque endowments, and official salaries in general, are very small, the practice of usury and acceptance of bribes is frequent—an abuse which early Muhammadanism attempted to avoid by the principle that religious teachers should always have some other means of gaining a livelihood.

Despite the reactionary tendencies and the corruptibility generally ascribed to the *mullā*, the history of Muhammadanism contains the names of many *mullās* conspicuous for nobility of character and devotion to absolute justice, who have risked their lives to rebuke the corruption and tyranny of rulers. To-day, too, the number of clear-headed, honest leaders among the Turkish, Arabic, and Indian ʿ*ulamā* is steadily increasing; not a few *softas* have been sent from Turkey to receive part of their education in Europe; in India the *mūlvīs* have sometimes warmly advocated the innovations of the English; and everywhere in the larger cities subjected to European influence the traditional type of *mullā* is being combated by advanced Muhammadans who, even when they are rationalists, at the same time deny that they are guilty of any defection from the fundamental principles of Muhammadanism; and fatalism is often taught, practically if not logically, as a doctrine which induces fortitude in bearing the accidents and misfortunes of life, without permitting the cessation of righteous endeavour in any cause as long as Allāh has not shown, by making its failure a *fait accompli*, that His will and decree are opposed thereto.
